till two years after his chief's departure for Vienna that Stratford Canning, with rare diplomatic skill, brought about the settlement of the differences between the Porte and the Czar in the Treaty of Bukharest, May, 1812, whereby the Pruth was created the boundary between the two empires, and the Russian army was released from the Danube in time to operate against the common enemy Napoleon. Freed from this most pressing peril, the young Sultan was able to devote his energies to the internal affairs of his dominions. He did not share the voluptuous indolence which had characterised most of his immediate predecessors: he threw aside the pleasures of the seraglio, and faced the dangers of his position like a brave and sagacious statesman. The very disjointedness of his empire brought about to some extent its own cure, for the semi-independence of the great pashas, while presenting a danger in itself, tended to suppress inferior rebellion in the provinces under their control, and thus to restore order. [EGYPT; 'ALY PASHA.] Mahmūd had to deal with three pressing internal dangers: first, the menacing power of the great pashas and feudal landholders; secondly, the tyranny of the Corps of Janissaries; thirdly, the insubordination of the subject populations, especially the Greeks and Servians. In the first he succeeded perfectly; 'Aly of Jannina was killed in 1822, and the other Turkish governors and feudatories were brought into subjection, save Mohammed 'Aly, who maintained his virtual independence. The great event of the earlier part of Mahmūd's reign was the Greek War of Independence; and in 1825, finding the reduction of Greece a task beyond his powers, Mahmūd summoned the Egyptians to his aid, and the trained battalions of Mohammed 'Aly, led by his indomitable son Ibrahim Pasha, routed the Greeks at every encounter; Missolonghi fell in 1826, and Athens surrendered in the following year. Before this Mahmūd had taken the most important step of his whole career; in June, 1826, occurred the famous massacre of the Janissaries, and the most dangerous element in the State was thus prudently abolished for ever. Just when this danger was over, when Servia was quiet, Greece helpless and disunited, Mohammed 'Aly friendly, and the Albanians, Mamluks, and Wahhabis subdued—when Mahmūd could look forward to years of tranquil development of the organisation and resources of his empire, European diplomacy stepped in and undid all the good that patient and resolute statesmanship had effected. First Russia took advantage of the military weakness which followed the fall of the Janissaries to exact the Treaty of Akkerman; and then the cause of Greece was espoused. George Canning represented the English sentiment in favour of the Greeks. At the moment when Turkey was supreme, England, France, and

Russia, acting by a Convention previously suggested by Canning, and concluded by Wellington, pressed upon the Porte the claims of Greek independence. This intervention, backed by the allied fleet and emphasised by the "untoward event" of Navarino in 1827, precipitated the climax: the Sultan was exasperated and issued an injudicious manifesto—Russia seized her advantage, the Russo-Turkish War of 1828-9 ensued, and the Treaty of Adrianople gave Greece the advantages demanded for her. Through all this the Sultan maintained a bold front. Even when, by Diebitch's daring exploit in crossing the Balkans, Turkey seemed at the feet of Russia, Mahmūd was induced to consent to the humiliating terms of that treaty only by the pressure of the Powers. The series of events which culminated in the extorted Treaty of Adrianople was the death-warning of the Ottoman Empire. Nevertheless, Mahmūd remained firm and steadfast, busied himself with reorganising his new army, introduced various reforms in favour of his Christian subjects, and improved the system of taxation. He was his own minister to a large extent, attended the divans in person, and took a minute and individual interest in whatever was going forward. Whatever good was done during his reign was done by himself, and had he but enjoyed a fair field and no favour, Turkey would perhaps have entered upon a new lease of life. As it was, the paralysing effects of the Russo-Turkish War of 1828-9, the loss of prestige involved in the concessions of Adrianople, followed by the war with Egypt in 1832-3—in which Ibrahim, the son of Mohammed 'Aly, won three decisive victories over the Turks, and so menaced Constantinople that the help of Russia (England having refused) was called in, and further humiliations were experienced by the Sultan—all these adverse circumstances led to the weakening of the empire. Yet the years following the settlement of the differences with the Egyptian Viceroy were spent by Mahmūd, not in apathetic resignation, but in strenuous organisation. The result of this courageous and spirited policy was seen when war broke out again between the Porte and its Egyptian vassal in 1839. England had then seen her mistake, and her sympathies were wholly with the gallant Sultan. But Mahmūd did not live to see England interpose to save his empire from Mohammed 'Aly. Before the news of the shameful defeat of his traitorous troops at Nezib had reached Constantinople, Mahmūd had finished his fight with outrageous fortune.

Cressy, *Hist. Ott. Empire*. [S. L.-P.]

Mahony, FRANCIS (b. 1804, d. 1866), man of letters, generally known as "Father Prout," was a native of Cork, entered the Roman Catholic priesthood, and officiated for some time at the chapel of the Bavarian legation,

London. He began in 1834 to contribute the *Prout Papers* to *Fraser's Magazine*, translations for the most part of English songs into Latin, French, or Italian verse, or renderings of Continental songs into English. His original verse, for instance *The Bells of Shandon* and *The Lady of Lee*, has considerable command of pathos. He went to Rome in 1846 as special correspondent of the *Daily News*, and during the last period of his life wrote to the *Globe* from Paris.

Biographical Preface to the *Bentley Ballads*, by Sheehan; *Reliques of Father Prout* (1880 and 1876).

* **Maine**, SIR HENRY JAMES SUMNER, K.C.S.I., F.R.S., D.C.L. (b. 1822), historical jurist, the son of the late Dr. James Maine, was educated at Pembroke College, Cambridge, where he took an exceptionally brilliant degree in 1842. He subsequently became a tutor of Trinity Hall, and in 1847 was elected Regius professor of civil law at Cambridge University. In 1850 he was called to the bar at Lincoln's Inn, and also at Middle Temple, and four years later he was appointed reader of jurisprudence at the Temple, when he resigned his chair at Cambridge. He had already begun his researches into the ancient law, and in 1856 he wrote *Roman Law and Legal Education* in the *Cambridge Essays*, which was followed up in 1861 by his great work on *Ancient Law*. In 1862 he joined the Supreme Council of India as a law member, and after a seven years' stay in India, returned to become Corpus professor of jurisprudence at Oxford (1870). He next became a member of the Council of the Secretary of State for India, when he was created K.C.S.I. (1871), in which year also he published his lectures on *Village Communities in the East and West*. In 1877 he was elected master of Trinity Hall, Cambridge, and in the following year resigned his professorship at Oxford. Besides the works already mentioned, Sir Henry Maine has produced *The Early History of Institutions* (1875), and *Dissertations on Early Law Custom* (1883). Sir Henry Maine's works have effected a considerable revolution in historical and juridical thought. In evolving a science of law he chooses sovereignty as the starting-point, and patriarchal power as the germ from which society developed. Fixing on archaic Roman law as the proper medium of thought, he penetrates back along the lines travelled by ancestor worship, marriage customs, and early juridical ideas to something like a definite conclusion as to the origin of society. Though the validity of many of his researches has been disputed, his works, based as they are upon original sources of information, are of untold value to students of social archaeology.

Makart, HANS (b. 1840, d. 1884), painter, was born at Salzburg, and in his youth studied art at the Academy in Vienna, m.w.—23*

from which, however, he was dismissed as showing no promise of talent. Proceeding to Munich in 1859 under the protection of Schiffmann, he became a pupil of Piloty in 1861, and in the same year first attracted attention by his picture of *Lavoisier in Prison*. In 1868 he exhibited two pictures that secured him notoriety if not fame: one was *A Trilogy of Modern Amorettes*; the other, *The Plague in Florence*, or, according to its original title, *The Seven Deadly Sins*. In the following year he was invited to Vienna by the Emperor, and a studio was built for him at public expense. The two symbolic figures of *Abundance*, or *Earth and Sea*, were his next important work, and in 1873 he exhibited *Katharina Cornaro at Venice*. In 1875-6 he visited Egypt and the East, and in 1878 completed one of his most elaborate works, the *Entrance of Charles V. into Antwerp*, for the Paris Exhibition. It is now in Hamburg, and numerous photographs have made it familiar in England. The same may be said of the symbolical representations of the *Five Senses* (1879). *Diana's Chase*, one of his few truly imaginative works, was painted in 1880. For the remaining years of his life he worked incessantly, chiefly at decorative frescoes for his studio and the imperial residences at Linz and elsewhere. At the time of his death he was engaged on a series of illustrations for the *Nibelungenlied*. Makart, though not the greatest, was perhaps the most characteristic and typical of modern German artists. Careless of form, and too impatient for finish, delighting in flesh as flesh, he united in himself the two great tendencies of German art, pedantic symbolism and rebellious materialism. Even his delight in life, and the boasted magnificence of colour, in which critics have discovered a second Titian, could not make a genuine artist of the man whose highest conception of truth was the ideal of the scene-painter.

Malcolm, SIR JOHN (b. 1769, d. 1833), soldier, diplomatist, and historian, a native of Dumfriesshire, entered the Indian army at the age of twelve, and landed at Madras in 1783. In 1798 he was appointed by Lord Wellesley assistant to the Resident at Hyderabad, and placed in command of the Nizam's regular troops. In 1800 he negotiated a treaty with Persia, by which the Shah agreed to abandon the French alliance. At the close of the Mahratta War he negotiated an important treaty with Sindhia [Gwalior], and one with Holkar [Indore] in 1806. Again in 1810 he succeeded in re-establishing friendly relations between England and Persia, and in thwarting French intrigues in that quarter. He returned to England in 1811, and wrote his valuable *History of Persia* (1815), in which he incorporated his own observations. On his return to India in 1817 he served as brigadier-general against the Mahrattas and

Pindharris, and in 1818 superintended the annexation of the dominions of the Peishwah to the Company's territory. From 1827 to 1831 he was Governor of Bombay. His minor works include *Sketch of the Political History of India* (1811 and 1826), *A Memoir of Central India* (1823), and a posthumous *Life of Lord Olive*.

Sir J. W. Kaye, *Life and Correspondence of Sir John Malcolm*.

Malibran, MARIA FELICITA (b. 1808, d. 1836), singer, was the daughter of Manuel Garcia (q.v.). She made her first appearance on the stage of the Italian Opera in 1825; and soon afterwards, while her father was attempting to introduce the Italian opera into the United States, she married M. Malibran, an elderly French merchant, who soon became bankrupt. She returned to the stage; and her beautiful mezzo-soprano voice, combined with intelligent acting, soon gained for her a European reputation; while her charity made her generally beloved. Her energy and industry were almost incredible. In 1836 she was freed from her union with M. Malibran, and married M. de Beriot, the violinist, but soon afterwards died at Manchester from her exertions at the musical festival. Malibran was also no mean composer; and her conversation is described as exceedingly charming.

Countess of Merlen, *Memoir of Malibran*.

Malmesbury, JAMES HARRIS, 1ST EARL OF (b. 1746, d. 1820), diplomatist and statesman, was the eldest son of James Harris, of Orcheston St. George, in Wiltshire, author of *Hermes*, well known in the literary world of his age, and described by Dr. Johnson as "a sound, sullen scholar." His son was educated at Winchester and at Oxford. On leaving Oxford, as the fashion then was, young Harris went to Leyden for a year, where he studied international law, and gained a good knowledge of the Dutch language. In the autumn of 1767 he was appointed secretary of embassy at the court at Madrid, and in 1770, in the absence of his chief, Sir James Gray, he conducted the negotiations relating to the Falkland Islands, in which he displayed so much ability that immediately afterwards he was appointed to the embassy at Berlin. Here he remained for four years, and in 1775 was sent as minister to the court of the Empress Catherine II. In 1783 he was obliged to leave Russia on account of his health, and two years afterwards received the appointment of minister at the Hague. He remained here till 1788, a period of great difficulty and danger owing to the intrigues of France with the republican party in Holland; these intrigues he succeeded in completely baffling by the treaty which he negotiated between England, Holland, and Prussia: an arrangement, however, which did not survive the outbreak of the French Revolution. On

his return from Prussia he was created Baron Malmesbury, and took his seat in the House of Lords as a supporter of Mr. Fox, with whom he voted on the Regency Bill. But in 1794 he joined the party of seceders who rallied round the banner of Mr. Pitt. In the same year Lord Malmesbury was employed to bring home the Princess Caroline of Brunswick to be married to the Prince of Wales, and it was to him that the Prince addressed the celebrated request on first seeing his bride, "Harris, get me a glass of brandy." In 1796 and 1797 he went to Paris and to Lisle to endeavour to negotiate a peace with the French Directory, but all his efforts were fruitless, and returning to England once more he was created an earl in 1800, and, owing to increasing deafness, retired from official life. *Lord Malmesbury's Diary*, which extends from 1767 to 1809, is among the most valuable political memoirs which we possess: especially the latter part of it, which relates to all the party changes and intrigues that occurred in England between the Fox and North coalition, in 1783, and the resignation of the Duke of Portland in 1809. The letters which passed between himself and his brother-in-law, Mr. Gilbert Elliot, about this period are of the deepest interest. Together with others from Burke and Windham, they are to be found in *The Life and Letters of the First Earl of Minto*, published by the Countess of Minto in 1874: and throw great light on the part played by Lord Malmesbury during the latter years of his life. From his early connection with the Whig party, whose friendship he had not forfeited by his alliance with Pitt, he was looked up to by Whigs as well as Tories as a kind of political mediator: and all the negotiations for a union between Pitt and Fox; for the reconciliation of Pitt with Addington; and for the junction of Canning with Lord Grenville, in 1806; for the formation of the Portland and Perceval administrations in 1806 and 1809; and for a union of Wellesley, Grenville, and Grey with Liverpool and Castlereagh in 1811 and 1812, passed through his hands. He does not seem to have carried into politics at home the diplomatic arts which he practised without scruple when abroad. The papers that he left behind him will always hold their place in the front rank of political memoirs, and will never cease to be indispensable to the student of modern history. His lordship was succeeded in his title and estates by his oldest son, Lord Harris, who died in 1841.

[T. E. K.]

* **Malmesbury**, THE RIGHT HON. JAMES HOWARD HARRIS, 3RD EARL OF (b. Mar. 25th, 1807), grandson of the above, was educated at a private school at Wimborne till he was thirteen, when he went to Eton. From Eton, after a short interval, he proceeded to Oriel, where he was contemporary with the late

Bishop Wilberforce. He took his degree in 1827, and in June, 1828, he set out upon his first foreign tour, returning to England in September, 1829. At the general election of 1837 he unsuccessfully contested the borough of Portsmouth; and when he was returned for Wilton, in 1841, he had hardly taken his seat when, by the death of his brother, he was removed to the Upper House. For some years Lord Malmesbury continued to pay pretty frequent visits to Paris, where he became well acquainted with the French court, and the leading French statesmen. In 1847 he was again in Germany and Italy; so that by the time of Lord Derby's first ministry, in 1852, he probably knew more of foreign countries and their value than the majority of English ministers have done when called for the first time to the office of Foreign Secretary. Lord Malmesbury had known Louis Napoleon very well in London society, and by his recognition of him after the *coup-d'état* secured his friendship for the country during twenty very eventful years. In 1858 Lord Derby had no hesitation in offering him the same department again, and his official correspondence with the European courts during that anxious time which preceded the Franco-Austrian War of 1859 is a standing proof of his tact, judgment, and moral courage. When Lord Derby, after being defeated on the Reform Bill, dissolved Parliament in the April of that year, war had not broken out. But it did so soon after the elections had commenced, and it was everywhere made a great ground of complaint against the Government that their Foreign Secretary had not only failed to prevent war, but by encouraging Austria in her demands had actually done much to precipitate it. This unfounded charge cost Lord Derby a good many seats; and when Parliament re-assembled it cost him his place. But as soon as the Blue Books were published, twelve or fifteen members of the Liberal party, among them Mr. Cobden, declared that they had been deceived, and that if they had seen the papers before the division was taken they would have voted for the Government. Lord Malmesbury's name has thus become associated with what is likely to remain for some time, if not for ever, an unsolved mystery of modern politics. The papers were already printed, but for some reason or other Mr. Disraeli was unwilling to have them laid upon the table. Lord Malmesbury himself says, in his *Diary*, that he never knew Mr. Disraeli's reasons for withholding them, and no explanation of the circumstance has ever yet been given. In 1866 Lord Malmesbury did not feel strong enough to return to his old place at the Foreign Office, and became Keeper of the Privy Seal, a place to which he returned on the formation of Mr. Disraeli's Government in 1874. He resigned it, however, in 1876, and from that time forward took little active part in politics. Lord Malmesbury in 1844 pub-

lished the diaries and correspondence of his grandfather, the first Lord Malmesbury, and in 1870, two volumes of letters entitled *Lord Malmesbury and his Friends (1745-1820)*. In 1884 he published his own diary, under the title of *Memoirs of an Ex-Minister*, which is not only one of the most interesting, but also one of the most valuable publications of the kind that have recently been published. The diary, to which an introductory memoir is attached, begins in 1832, and comes down to 1873, the death of the ex-Emperor of the French being the last thing recorded in it. It is, of course, full of notices of all the most celebrated people of the period covered.

Malthus, THOMAS ROBERT (b. 1766, d. 1834), economic writer, the son of a small Surrey landowner, was educated at Cambridge. In 1797, after gaining a fellowship at Jesus College, and before he settled in the parish of which he was incumbent, he spent some time at his father's house. Father and son discussed the questions of the day, the younger man attacking Jacobinism, the elder defending it. David Malthus, the father, had been a friend and executor of Rousseau, and was an ardent believer in human progress. Godwin, Condorcet, and others were dazzling the working classes with visionary systems of equality, and there prevailed a system of dealing with pauperism that not only degraded labour, but threatened the whole country with ruin. The result of all this was the *Essay on the Principle of Population* (1798; 6th ed., 1826). The work made a powerful impression; and while fiercely assailed on one side on the ground of its supposed immorality, was considered, for awhile, on the other to have exhausted the important department of the science of which it treats. It had, however, but few claims to attention on the score of originality. Malthus's fundamental principle that population never fails to rise to the level of subsistence had already been set forth in the clearest light by many writers. But he did not stop here. He contended that population has a necessary tendency to outrun the means of subsistence, and that unless this tendency be effectually counteracted by the prudence and forethought of the mass of the people it must keep the lower classes in a state of want and destitution. The theory embodies a large admixture of truth; but the reasoning is often faulty from exaggeration. The work was chiefly valuable for the attention which it drew to the subject of population, and for its demonstrating the evil effects of the poor laws of that time. Malthus wrote on several other economic subjects, his views on rent being of real importance. *An Inquiry into the Nature and Principles of Political Economy* was published in 1815. In 1805 he was appointed professor of political economy and history at the East India

Company's College at Haileybury. He was a founder of the Political Economy Club.

Memoir, by Bishop Otter, prefixed to *Malthus's Principles of Political Economy*; James Bonar, *Malthus and his Work*. [W. M.]

Malus, ÉTIENNE LOUIS (b. 1775, d. 1812), French optician, was educated at the École Polytechnique, accompanied the French army to Egypt in 1798 in the capacity of engineer, and on his return to France in 1801 devoted himself to the study of optics. In 1808, while competing for the prize offered by the institute on the double refraction of crystals, he discovered the great theory of the polarisation of light by reflection. He was elected to the institute, and in 1811 received the Rumford medal of the Royal Society of London.

Arago, Notices Historiques; Biot in the *Nouvelle Biographie Générale*.

Manin, DANIELE (b. 1804, d. 1857), Italian patriot, a native of Venice, was educated as an advocate, and practised the law, striving the while for the liberation of his country, though by constitutional means rather than by arms. In 1848 he was arrested by the Austrian Government, but on the outbreak of the Revolution was set free by the populace, and declared President of the Republic of St. Mark (March 28th). He disapproved of the unification of Venice and Piedmont under Charles Albert of Sardinia, but was recalled to the head of affairs during the siege of Venice by the Austrians, 1848-49, and supported the spirits of his countrymen during that heroic struggle. He went into exile after the fall of Venice, and died in Paris.

Henri Martin, *D. Manin and L'Unité Italienne*.

* **Manners, THE RIGHT HON. LORD JOHN JAMES ROBERT** (b. 1818), second son of the fifth Duke of Rutland, was educated at Eton and at Trinity College, Cambridge (graduating B.A. in 1840). Having imbibed the principles of the "Young England" party, Lord John Manners was in 1841 returned for Newark, as a colleague of Mr. Gladstone, but in 1847 was defeated at Liverpool, and again in 1849 when he stood for the City of London. He sat for Colchester from 1850 to 1857, North Leicestershire from 1857 to 1885, and in 1885 was first returned for East Leicestershire (Melton division). Lord John first received office in Lord Derby's ministry of 1852, when he was First Commissioner of Works, and he held the same office in 1858-9 and in 1866-7, when he had a seat in the Cabinet. From 1874 to 1880 he was Postmaster-General, an office which he held from 1885 to January, 1886, during which period he carried a measure for the introduction of sixpenny telegrams. In 1886 he became Chancellor of the Duchy of Lancaster. He is one of the most effective speakers on the Conservative side of the House. His publications include some juvenile poems, sketches of travel, and speeches.

* **Manning, HIS EMINENCE, HENRY**

EDWARD (b. July 15th, 1808), Cardinal Priest of the Holy Roman Church and Archbishop of Westminster, son of the late Mr. William Manning, M.P., was educated at Harrow and at Balliol College, Oxford (B.A., with a double first, 1830), and became a fellow of Merton College. Appointed rector of Lavington and Graffham, in Sussex, in 1834, he became Archdeacon of Chichester, in 1840. He eagerly threw himself into the Tractarian movement, which claimed for the Church of England the true heirship of the apostolic succession, but was disgusted by the subjection to secular authority established by the Gorham judgment, and by the failure of the Bishop of London to procure for the prelates the final decision on matters of doctrine. In 1851, soon after the arrival in England of Cardinal Wiseman with the title of Archbishop of Westminster, and the passing of Earl Russell's futile Ecclesiastical Titles Bill, Mr. Manning seceded to the Church of Rome. His *Grounds of Faith* appeared in 1852 (3rd edition, 1881). On the death of Cardinal Wiseman, in 1865, Mr. Manning succeeded him as Archbishop of Westminster. An ardent Ultramontane, Archbishop Manning approved the introduction of the dogma of papal infallibility at the Vatican Council of 1869, and wrote freely on the subject. A pastoral on *The Œcumenical Council and the Infallibility of the Roman Pontiff* appeared in 1869, and another pastoral on *The Vatican Council* in 1870. He replied to Mr. Gladstone's "ex-postulation" by the *Vatican Decrees* (1875). *The True Story of the Vatican Council* appeared in the *Nineteenth Century* of 1877. In 1875 Archbishop Manning was created Cardinal Priest of SS. Andrew and Gregory on the Cœlian Hill, thus fulfilling the prophecy of Mr. Disraeli, made of him in *Lothair* as Cardinal Gandison. In politics he has taken but little part, except in their bearing upon social questions; thus, in 1885, he urged Roman Catholics to support Conservative candidates at the general election because of the Radical attack on religious education. He is an ardent supporter of total abstinence, and sat on the Commission for the Housing of the Poor of 1884-5, and the Education Commission of 1886. Cardinal Manning's peculiar combination of the ascetic, the devotee, and the man of the world make him a unique figure in English society. Some selections from his sermons, entitled *Devotional Readings*, appeared in 1868; *Miscellanies* in 1877; and *Characteristics*, edited by W. S. Lilly, in 1885.

Mansel, HENRY LONGUEVILLE (b. 1820, d. 1871), Dean of St. Paul's, London, was the son of the Rev. H. L. Mansel, rector of Cosgrove, Northamptonshire, and was educated at the Merchant Taylors' School and at Oxford. In 1849 Mansel's *Aldrich* made its first appearance, to be followed, in 1851, by the *Prolegomena Logica*. Thus it was that in 1855 Mr.

Mansel's reputation justified his appointment to the Waynflete readership in moral and metaphysical philosophy, which in 1859 became the Waynflete professorship. In this interval appeared the important article on *Metaphysics* in the *Encyclopædia Britannica* (8th ed.), and also a little work on the *Philosophy of Kant*. The well-known Bampton Lectures under the title of *Limits of Religious Thought*, upon which his fame mainly rests, were delivered in 1858. In 1867 he succeeded Dean Stanley in the chair of ecclesiastical history, an appointment which met with some opposition, and in 1869 he became Dean of St. Paul's, having brought out his *Philosophy of the Conditioned* in 1866. The principles of Mansel's system are exhibited in the *Prolegomena Logica* and *Metaphysics*. In general a disciple of Hamilton, he sharply distinguishes thought from the other and lower kinds of knowledge, and insists on an immediate knowledge of the *ego* as against Kant and Hamilton. He also dissects from Hamilton's explanation of the nature of causation, and the grounds of our belief in its universal applicability, and makes the ultimate test of conditioned in the concept and judgment to be the possible combination of the elements of each in a single presentative object. His moral speculations are applied in detail to theology in the *Limits of Religious Thought*, and at the time of publication occasioned active discussion between those who accepted and those who rejected their teachings.

Sketch of his Life, by the Earl of Carnarvon, prefixed to Mansel's *Gnostic Heresies of the First and Second Centuries*, edited by J. B. Lightfoot (1875).

Manteuffel, EDWIN HANS CARL, VISCOUNT VON (b. 1809, d. 1885), Field-Marshal of the German army, was born at Dresden, and was the son of Hans Carl von Manteuffel (d. 1844), who held various high official positions under the Saxon and Prussian Governments, especially at Magdeburg. Edwin von Manteuffel, as he is always called, was brought up with his cousin Otto (q.v.) till he began the regular military training as one of the dragoon guards in 1827. He was appointed adjutant to General von Müffling in 1837, and from 1839 to 1848 acted as adjutant to Prince Albrecht of Prussia. Owing to his energetic support to the loyalist cause in the troubles of 1848, Frederick William IV. attached him to his own person, and used his diplomatic skill in several important missions. In 1857 he was appointed to the invidious position of Chief of the Military Cabinet, and in 1860 gave a hearty support to the Prince Regent's plans for army reorganisation. As Lieutenant-General he took part in the Danish campaign of 1864, and in 1865 was appointed Governor of Schleswig, owing his appointment, it is said, to a manoeuvre of Bismarck's, who wished to show that even a friend of Austria

like Manteuffel could not insure a lasting peace. The claims of the house of Augustenburg (q.v.) were a further danger. Accordingly, in 1866, Manteuffel took the initiative by the invasion of Holstein and the ejection of the Austrian troops. He then marched into Hanover, joined Falckenstein's army, forced the Hanoverians to capitulate, and was appointed to succeed Falckenstein in command of the army of the Main. After a series of victories over the South German army, he occupied Würzburg, and thus paralysed the Alliance. At the conclusion of the war he was sent on a special embassy to St. Petersburg to explain the position to the Czar. At the outbreak of the Franco-German War in 1870 he was attached to the First Army under Steinmetz. Having distinguished himself in several actions around Metz, especially by the repulse of Bazaine at Noisseville, he was appointed to succeed Steinmetz as Commander-in-Chief of the First Army (Oct. 27th), with orders to advance on Rouen, and hold the north in check. After a brilliant victory at Amiens (Nov. 27th) he occupied Rouen on Dec. 5th, and having been appointed Commander-in-Chief of the newly formed South Army a month later (Jan. 7th), he succeeded in driving General Bourbaki's army across the frontier into Switzerland, and forcing them to lay down their arms. The South Army being disbanded, he became Commander-in-Chief of the Second Army. From June, 1871, to July, 1873, he held command of the Army of Occupation in France, overcoming the extreme difficulties of such a position with remarkable tact and diplomatic skill. He was rewarded by the title of Field-Marshal, and in 1879 was appointed Governor-General of Alsace-Lorraine, where, if he did not earn the impossible success of popularity—and Manteuffel was, indeed, never a popular hero even in Prussia—he at least succeeded in maintaining justice, and developing the material resources of the provinces.

Aus dem Leben des Gen. Feldmarschall's Edwin Freiherrn von Manteuffel (Berlin, 1874); *The Times*, June 18th, 1885.

Manteuffel, OTTO THEODOR, VISCOUNT VON (b. 1805, d. 1882), Prussian statesman, the son of Otto Gottlob von Manteuffel, a Saxon official, was born near Niederlausitz, and after his father's death (1812) was brought up with his first cousin, the future Field-Marshal. Having studied law at the University of Halle, he occupied various important legal positions at Frankfurt-on-Oder (1830), Königsberg (1841), and Breslau (1844). In 1847 he came forward as one of the chief opponents of the Liberal proposals, and in November of the following year, as Minister of the Interior, he became practically the leading member of the so-called "ministry of action." For the next ten years

he was, in fact, the powerful representative of the *Junkerthum* (Squirearchy). To him was due the maintenance of the state of siege, and the suppression of the revolutionists in 1849, besides the ultra-Conservative tendency of Frederick William IV.'s last years. In these measures he undoubtedly received the support of Bismarck. But Manteuffel's name is chiefly remembered for the fatal mistake, as it was generally considered, of the submission to Austria at the conference of Olmütz (November, 1850). The disturbed state of Cassel, and Prussia's proposals for a new German *Bund* under the Parliament at Erfurt, had brought Austria and Prussia to the verge of hostilities. Manteuffel, almost alone of the Prussian ministry, advocated peace even at the cost of large concessions. Austria thus retained her predominant position in Germany for another sixteen years, but Prussia meantime was enabled to recruit her strength. Having with difficulty succeeded in maintaining neutrality during the Crimean War, Manteuffel quitted office in 1858, when the Prince of Prussia became regent owing to the king's insanity.

Manzoni, COUNT ALESSANDRO (b. 1784, d. 1883), Italian poet and novelist, was born in Milan. His mother was the daughter of the Marquis Cesare Beccaria, author of the celebrated treatise *On Crimes and their Punishment*. Manzoni was educated by the Regular Clerks of the Congregation of Somasca, and at the University of Pavia. His intellect was somewhat slow in arriving at maturity, but at the age of fifteen he manifested a great taste for poetry. Having lost his father in early youth, in 1805 he went to join his mother in Paris, where she was residing and devoting herself to literary pursuits. In 1808 Manzoni married the daughter of a Genoese banker, and with her led a retired life, dividing his time between literature and the practice of good works. Unfortunately through the dishonesty of an agent they lost the greater part of their fortune, and Manzoni was compelled to sell his inheritance, including the villa at Galeatto, where he spent his childhood, and which he afterwards immortalised in his works. Between 1815 and 1822 he published in Milan his religious hymns, chiefly devoted to celebrate the chief ecclesiastical festivals, which in originality and elegance are far superior to any other of his compositions; but, curiously enough, they remained unnoticed by the Italian literary world until he brought out that famous ode on the death of Napoleon I., *Il Cinque Maggio* (1823). He was then greeted as one of the most brilliant poets of the age. In the dramatic field Manzoni was not less successful. His *Conte di Carmagnola* and *Adelchi* are fine productions. The political events of 1821, the death of some friends, and the imprisonment of others by the Austrian Government weighed so much on

Manzoni's mind, that he retired from Milan, and sought distraction in historical studies. This led him to compose a very beautiful historical romance, *I Promessi Sposi*, or *The Betrothed* (1827), in which he offers a graphic sketch of Italian social life in the seventeenth century, set in the simple history of the joys and sorrows of two country lovers parted by the intrigues and villany of a depraved nobleman. From domestic affliction he sought conciliation in religion, and shortly after published his *Osservazioni sulla Morale Cattolica* (1831), which was translated into English under the title of *A Vindication of Catholic Morality*. This was the last work of any importance which came from Manzoni's pen. In 1838 he married again, but his second wife as well as seven out of his nine children preceded him to the grave. Manzoni loved his country ardently, and was profoundly interested in the regeneration of Italy, but during the last forty years of his life he took no active part in political affairs. In 1860 he was made a senator of the kingdom of Italy, and he assisted at the advanced age of eighty-four in drawing up a statement of the best means of abolishing separate dialects, and establishing throughout the whole of Italy a uniform language, of which the Tuscan would be the basis. The loss of his eldest and favourite son, which occurred on April 28th, 1873, was a blow from which Manzoni never recovered, and in less than a month he followed him to the grave.

[A. O.]

Margary, AUGUSTUS RAYMOND (b. 1846, d. 1875), explorer of China, the third son of Major-General Margary, R.E., was born at Belgaum, in the Bombay presidency, and was educated in France, at Brighton College, and at University College, London. In 1867, having obtained a student interpreter-ship, he was sent to China, and was attached to the legation at Peking until 1870, when he was despatched to take charge of the consulate in the island of Formosa. In 1872 he returned to England, and made some valuable contributions to the Royal Geographical Society on Formosa (*Transactions* of that Society for 1872-3). Returning to Shanghai in 1873, he received in August, 1874, instructions from H.B.M.'s minister at Peking to proceed at once through the vast provinces of China to await at one of the passes on the frontier of Yunnan the arrival of Colonel Browne's mission, to which he was to act as interpreter and guide in its endeavour to reopen the great overland trade route between India and China. Margary undertook the task, and travelled from Shanghai to Bhamo, a distance of 1,800 miles, in six months, being the first Englishman who had

succeeded in traversing this route. At the head of the mission he immediately retraced his steps, but they had not gone far when reports met them of dangers ahead. Margary went on in advance of the mission, reaching Manwyne, the chief city of the province of Yunnan, where he was well received. On the following day, Feb. 21st, 1875, however, he and his servants were treacherously murdered. Mr. Margary's *Journey from Hankow to Ta-Li Fu* (1875), and his *Journey from Shanghai to Bhamo* (1876), have been published since his death.

Biographical Preface to the Journey from Shanghai to Bhamo; Dr. Anderson, Mandalay to Mowien.

Maria da Gloria of PORTUGAL. [PORTUGAL.]

Maria Louisa, EMPRESS OF FRANCE (*b.* 1791, *d.* 1847), the eldest daughter of Francis I., Emperor of Austria, became the wife of Napoleon I. on April 1st, 1810, when his desire for an heir had induced him to divorce Josephine, and the victory of Wagram had placed Austria at his feet. The marriage was an unpopular one with the French nation, but on March 20th, 1811, Napoleon was gratified by the birth of an heir, who received the title of the King of Rome. The empress's indifference to her husband and his interests was shown by the apathetic manner in which she discharged the duties of Empress-Regent during his absence with the army, and still more by her behaviour after his fall. She saw him for the last time on Jan. 23rd, 1814, and, as the allies advanced on Paris, departed, and, refusing to follow her husband's brothers beyond the Loire, repaired to her father at Rambouillet, and retired to Vienna, where she addressed, in the following year, a protest to the congress against the restoration of the Bourbons. She bore the separation from her husband and child with marked equanimity, and consoled herself with an intrigue with an obscure Austrian general, Count Neipperg, to whom she was married after Napoleon's death, and bore three children. In 1816 she took possession of the duchies of Parma, Placentia, and Guastalla, whence an insurrection in 1831 forced her to retire until restored to her dominions by Austrian intervention. Oddly enough Napoleon entertained an unshaken belief in his wife's devotion to the last. He used to say of his two wives, that while Josephine possessed art and grace, Maria Louisa was all innocence and simplicity.

Mariette, AUGUSTE FERDINAND FRANÇOIS (*b.* 1821, *d.* 1881), orientalist, was a native of Boulogne, and was educated at the municipal college of that town. In 1840 he took his bachelor's degree at Douai, and became professor at the municipal college of Boulogne. His attention was turned to

Egyptology through the papers of his cousin, Nestor L'Hôte, who had been a companion of Champollion, being entrusted to his care. He studied with great energy, and in 1849 was given an appointment in the Egyptian museum at the Louvre. In the following year he was sent to Egypt at the expense of the French Government, and at Memphis made by excavation the remarkable discovery of the temple of Serapis, and the tombs of the Apis-bulls. The discovery of a temple of older date than the second pyramid near the great Sphinx, and the statue of Cephren, followed, and he returned to France in 1854. The next few years were occupied in the publication of his *Choix de Monuments et de Dessins découverts ou exécutés pendant le Déblaiement du Sérapéum de Memphis*, and *Le Sérapéum découvert et décrit* (1857). In the last year he was called to Egypt, created a Bey, and made Inspector-General of the Egyptian monuments. In 1863, the museum at Boulak, of which he was director, was opened, and became the home of an incomparable collection of Egyptian antiquities. In 1864 he published his invaluable *Aperçu de l'Histoire d'Égypte*. His great work on *Abydos* began to appear in 1869, that on *Dendérah* in 1870, and that on *Les Monuments divers recueillis en Égypte et en Nubie* in 1872. Meanwhile, Mariette was continuing his excavations, and spending part of each year in France. *Karnak*, a monumental work, was published in 1875, but *Le Sérapéum de Memphis* (1882), the work on which Mariette set the highest store, was not published during his life-time. He became a member of the French Academy in 1878, and a Pasha in 1879. Mariette was a man of marvellous assiduity and great intelligence. Some of his discoveries were of vast importance to Egyptology, particularly the geographical lists deciphered at Karnak.

E. Deseille, *Auguste Mariette*; H. Wallon, *Mariette-Pasha*.

Mario, GIUSEPPE, MARCHESI DI CANDIA (*b.* 1808, *d.* 1883), singer, was a native of Turin. He began life as a soldier, holding rank in the Piedmontese Guard. Barrack life led to his becoming a good amateur tenor, and as such he attracted the attention of Duponchel, the director of the Paris Opera, who, it is said, offered the soldier-musician as much as 1,500 francs a month to sign his name to the theatre contract. It was on November 30th, 1838, at the Académie, Paris, that Mario swallowed his aristocratic pride, and made his first public appearance. The rôle was Robert in *Robert le Diable*, and the Parisians were not slow to recognise the personal charm and merit of the new-comer. A year afterwards Mario was secured for Italian opera. On June 6th, 1839, he made his *début* in London in *Lucrezia Borgia*. His voice at this time was beautiful, and the compass extensive, but there was an evident distinction as the result

of the head and chest productions. Nor had he the cultivation which was remembered in Rubini, and when later on in this same season he essayed the part of Pollione in Bellini's *Norma*, it was apparent that while he lacked the finish of Rubini he had not yet acquired the execution of Donzelli. Yet the public remained true to Mario, and season after season he divided his time between London, Paris, and St. Petersburg. With a few years of stage experience, the genius of Mario developed itself in a remarkable degree. Every year he returned seemingly more handsome than ever, with his voice decidedly more beautiful, unrivalled by any living tenor, and his acting powers correspondingly improved. His operatic appearance was positively charming, and history will paint him as the most fascinating lover the lyric stage has yet seen. It is remarkable that throughout so long and sustained a stage experience it fell to Mario's lot to create little in the way of new parts, the chief exception being the lover in Donizetti's *Don Pasquale*, where he would render the serenata, "Com'è gentil," with all the charm and grace of his style. Yet he identified himself as a Raoul; the part of Almaviva in Rossini's *Barbiere* he could render as it had never been rendered before or since; and the same may be said of his personation of Raimbaldo in Meyerbeer's *Roberto il Diavolo*. His singing in these characters, his artistic triumphs in the fourth act of *Les Huguenots*—above all, the wealth of dramatic genius and beauty of voice which he incorporated into such works as *La Favorita* and *L'Elisir d'Amore*—stamp him as the greatest operatic tenor of recent years. His retirement in 1867 created a blank which has never been filled up. Mario was one of the famous set (Grisi, Persiani, Tamburini, and others) who, in 1846, seceded from Her Majesty's Theatre, and with their late conductor, Costa, opened a rival establishment distinguished as the "Royal Italian Opera." The famous tenor married Grisi, by whom he had three daughters. When he finally left the London stage, July 19th, 1871, he possessed an ample fortune, and went to reside in Paris and subsequently in Rome. By disastrous speculations he lost all, and old age brought with it a change of circumstances, partly alleviated by means of a benefit concert given in London (May, 1878), when the substantial sum of £1,000 was handed to the veteran artist. [F. J. C.]

Marlborough, THE RIGHT HON. JOHN WINSTON SPENCER-CHURCHILL, SEVENTH DUKE OF (b. 1822, d. 1883), statesman, was the eldest son of George, sixth Duke, and was educated at Eton and Oxford. In 1844, when Marquis of Blandford, he entered the House of Commons as Tory member for Woodstock, but having incurred family displeasure through advocating the repeal of the Corn Laws by

Sir Robert Peel, he resigned his seat in 1845. Two years later he was again returned for Woodstock, and in 1857 became Duke of Marlborough on the death of his father. In Parliament he took a lively interest in increasing the usefulness of the Established Church, and cordially co-operated with Peel in the Acts he passed for that purpose. The New Parishes Act, the object of which was to re-arrange parochial divisions for ecclesiastical purposes, is especially associated with his name. He was Lord President of the Council in the first Disraeli administration of 1867, and was Viceroy of Ireland in succession to the Duke of Abercorn from 1876 till 1880 in the second Disraeli ministry. The last months of his administration were memorable for the commencement of a formidable agrarian agitation, which eventually developed into the Land League organisation. He died suddenly of *angina pectoris* on July 5th.

The Times, July 6th and 9th, 1883.

Marmont, AUGUSTE FRÉDÉRIC LOUIS VIESSE DE, DUC DE RAGUSE (b. 1774, d. 1852), Marshal of France, entered the army as sub-lieutenant in 1789, passed into the artillery in 1794, and subsequently showed some skill in the siege of Toulon, whereby he introduced himself to the notice of Napoleon. A captain in 1795, he accompanied Napoleon as principal aide-de-camp in the Italian campaign of 1796. After service in the Mediterranean he became, in 1799, a councillor of state, and commander-in-chief of the artillery reserve, in which latter capacity he undertook the famous crossing of the Great St. Bernard in the spring of 1800. He gained the battle of Marengo in June of that year, defeated the Montenegrins at Castel-Nuovo in 1806, and was ennobled with the title of Duc de Raguse in 1808 for the able manner in which he governed the Duchy of Dalmatia. In 1809 he was promoted Marshal for his success at Wagram. He next commanded in Portugal, and was defeated by Wellington at Salamanca in 1812. In the campaign of 1813 he was entrusted with the defence of Paris, and resisted the entrance of the allied forces until he was overborne by the numbers of the enemy. Gallant as his conduct was, however, it created so much odium that Napoleon on his return from Elba was forced to except his name from the general amnesty. After the battle of Waterloo he became a major-general of the royal guard, and in the Revolution of 1830 he commanded the royal troops against the insurgents, but desisted from the attack when he saw that there was little prospect of stamping out the insurrection. On the expulsion of Charles X. his name was struck off the list of Marshals. He retired to Venice, and wrote his *Espit des Institutions Militaires* (Paris, 1845).

Autobiographical Memoirs.

Marmora, ALFONSO FERRERO, MARQUIS DELLA (b. 1804, d. 1878), Italian general and statesman, was the youngest son of the Prince of Masserano. He was born in Turin, and educated in the military academy of his native town. In 1823 he entered the artillery as lieutenant, and during the following twenty-five years rose through the intermediate grades until he obtained the rank of major-general. He distinguished himself very much in the war between Austria and Sardinia during the years 1848-9. After the disastrous battle of Novara, and the abdication of Charles Albert, King of Sardinia, he was sent to Genoa to put down the revolt which the partisans of Mazzini had caused to burst out in that town. He succeeded in that task with great tact and very little bloodshed, and was raised by the new king, Victor Emmanuel, to the rank of lieutenant-general. He was afterwards appointed Minister of War, and often held at the same time the portfolio of Minister of Marine, and in both these capacities he reorganised in the most efficient way the shattered forces of the kingdom. When, in January, 1855, an alliance was concluded between England, France, and Sardinia, and 18,000 Piedmontese soldiers were sent to the Crimea, General della Marmora was entrusted with their command, and at the battle of Tchernaya essentially contributed to the victory of the allies. He then resumed his office as Minister of War in Cavour's administration, and carried out all the necessary preparations for the struggle against Austria in 1859. After the Peace of Villafranca, General della Marmora was sent abroad on various diplomatic missions, and in 1862 was appointed Prefect of Naples. During the years 1864-6 he was twice Prime Minister of Italy, and in this capacity was instrumental in the transfer of the capital from Turin to Florence, in upholding the treaty for the evacuation of Rome by the French, and in concluding an offensive and defensive alliance between Prussia and Italy. In 1866 he took an active part in the brief war against Austria, as general and chief of the staff, and had the misfortune to be defeated at the battle of Custoza. In the Chamber of the Deputies he tried to exculpate himself from the responsibility of that disaster. After the entry of the Italian army into Rome he was appointed commander-in-chief of that capital and province. In 1871 General della Marmora retired into private life, and published soon after his somewhat indiscreet work, *Un Poco Più di Luce sugli Eventi Politici dell'anno 1866* (*A Little more Light on the Political Events of 1866*), and this book was followed by *I Segreti di Stato nel Governo Costituzionale* (*The State Secrets in a Constitutional Government*). They caused considerable stir in diplomatic circles, and made the veteran the object of many bitter attacks. He died at Florence. The value of General della Marmora's reorganisa-

tion of the Sardinian and Italian armies to the cause of Italian unity cannot be overstated.

Biografia Contemporanea Italiana degli Uomini Illustri; *Gazzetta Piemontese* (1848-59); *Giornale Ufficiale del Regno d'Italia* (1860-78).

[A. O.]

Marochetti, CHARLES, BARON (b. 1805, d. 1867), Italian sculptor, a native of Turin, studied his art in Paris, and in 1835 executed an equestrian statue of Emmanuel Philibert of Savoy, considered by some his masterpiece. Among his other works were one of the bas-reliefs on the Arc de l'Étoile and the tomb of Bellini at Père-la-Chaise. In 1848 he accompanied the exiled Bourbons to England, and in 1851 his spirited model of an equestrian statue of Richard I. attracted general admiration at the Great Exhibition. It was afterwards executed in bronze and erected outside the House of Lords at the cost of the nation. Baron Marochetti also executed the Crimean memorial (1856), and the statue of Lord Clyde in Waterloo Place (1867). He was elected an R.A. in 1866. The inequality of Marochetti's work has caused the estimates of his talents to be extremely varied, but there can be no doubt that when at his best he takes a high rank.

Marryat, FREDERICK, F.R.S. (b. 1792, d. 1848), was born in London. His father was a wealthy gentleman, who for many years sat in Parliament as the representative of Horsham and of Sandwich. At school the son did not distinguish himself except by repeatedly running away. On such occasions he invariably made towards the sea. Finally his father consented to his following the bent indicated, and at the age of fourteen the youth entered the navy. In September, 1806, he started on his first voyage in H.M.S. *Impérieuse*, then under the command of that brilliant seaman Lord Cochrane. His experiences as a midshipman appear to have been the reverse of agreeable. He says "There was no species of tyranny, injustice, and persecution, to which youngsters were not compelled to submit from those who were their superiors in bodily strength." During two years and a half he had experience of every kind of service. His courage and ability were soon recognised, and more than once he was commended in Lord Cochrane's despatches for bravery in action. On Dec. 26th, 1812, Marryat received his lieutenant's commission. Before the general peace of 1815, he added considerably to his reputation, and on June 13th of that year he was appointed commander. In 1818 the Humane Society awarded him the gold medal "for saving at least a dozen lives." In January, 1819, Captain Marryat married Catherine, second daughter of Sir Stephen Shairp, Knt. In the same year he was elected a fellow of the Royal Society. In the Burmese War of 1824-5, he was actively employed. He first took up the

novelist's pen whilst cruising in the Western Islands, and produced *Frank Mildmay* (1829). Marryat did not formally adopt a literary career until he had relinquished the naval profession. His next book was *The King's Own* (1830). *Newton Forster* appeared in 1832, in the *Metropolitan Magazine*, a periodical which Marryat edited for four years, and in which several of his works were first published. These included *Peter Simple*, *The Pacha of Many Tales*, *Japhet in Search of a Father*, *Jacob Faithful*, *The Diary of a Blasé*, and the fugitive pieces afterwards published under the name of *Olla Podrida*, besides a comedy in three acts, entitled, *The Gipsy*, and *The Cavalier of Seville*, a tragedy. For his first novel he received £400, and for *Mr. Midshipman Easy* (1834) £1,200. *The Pirate and Three Cutters* appeared in 1835, and *Snarley-Yow, or the Dog Fiend*, in 1837. Captain Marryat never surpassed this latter work in story-telling art, humour, and richness of incident. *The Phantom Ship* appeared in 1839, and in quick succession came *A Diary in America* (1839), *Poor Jack* (1840), *Masterman Ready* (1841), *Joseph Rushbrook* (1841), *Percival Keene* (1842), *Monsieur Violet* (1842), *The Settlers in Canada* (1843), *The Privateer's Man* (1844); *The Mission, or Scenes in Africa* (1845), *The Children of the New Forest* (1847), *The Little Savage* (1847), and *Valerie*, which was not completed by Marryat (1849). At the latter end of 1847, Captain Marryat's health broke down. He proceeded to Hastings, but the news of the loss of H.M. steam frigate, *Avenger*, on which his eldest son was lieutenant, gave him such a shock that all chance of his recovery faded away. Captain Marryat was the inventor of a code of signals which was immediately and extensively adopted, and for which Louis Philippe bestowed upon him the cross of the Legion of Honour.

Florence Marryat (Mrs. Ross Church), *Life and Letters of Captain Marryat* (2 vols., 1872).
[R. H. C.]

Mars, ANNE FRANÇOISE (b. 1779, d. 1841), French actress, was the daughter of an actor named Monvel, but took her mother's name, and appeared on the stage in 1792 in juvenile parts. Her talents soon gained recognition. In 1799 she became *sociétaire* of the Comédie Française, and in 1800 took Paris by storm in her creation of the deaf-mute in *L'Abbé de l'Épée*. First as *ingénue*, afterwards as *grande coquette*, she played with perfect good taste and intelligence, being able, through the marvellous resources of her toilet, to represent youthful characters when well advanced in years. She was unequalled in Molière and Marivaux, and of the contemporary dramatists played chiefly in the comedies of Scribe and Delavigne from 1820 to 1830, and afterwards in the plays of Victor Hugo and Alexandre Dumas. She was *Dona*

Sol in the former's *Hernani*, and took the *title-rôle* in the latter's *Madame de Belleisle*. Her Bonapartist sympathies caused her to be persecuted after the Restoration, but the stories of her retorts upon her audiences are very variously told. Her last appearance was in 1841.

Mme. de Bawr, *Mes Souvenirs*; R. de Beauvois, *Souvenirs de Mlle. Mars*; Lireux, *Mlle. Mars*; Véroü, *Mémoires d'un Bourgeois de Paris*.

Marschner, HEINRICH (b. 1796, d. 1861), German musician, was a native of Saxony, and adopting music as a profession, obtained, in 1823, the post of Joint-Capellmeister at the Opera, Dresden, through the influence of Weber, who had seen his *Heinrich IV*. At Leipzig he produced *Der Vampyr* in 1828, and the opera, in spite of its uncanny subject, was a great success. His masterpiece, *Hans Heiling*, was produced at Hanover in 1831. This brilliant follower of Weber is now chiefly remembered by these two works and some *Lieder*, though the oblivion into which most of his other compositions have fallen is undeserved.

Marsden, WILLIAM (b. 1754, d. 1836), numismatist, was a native of Dublin, and having received his education at Trinity College, entered the service of the East India Company. During his stay in the East, he was stationed in Sumatra, and after his return to England published the *History of Sumatra* (1782). From 1795 to 1807 he was Secretary to the Admiralty; and then, retiring into private life, wrote a *Grammar and Dictionary of the Malay Language* (1812), and translated the *Travels of Marco Polo*. It is, however, as a numismatist that he is best known. His valuable work, *Numismata Orientalia* was published between 1823 and 1826, and his name is perpetuated in the magnificent collection of coins presented to the British Museum in 1834. His library, which contains some valuable Oriental MSS., was also presented to King's College, London.

Martignac, JEAN BAPTISTE GAYE, VICOMTE DE (b. 1776, d. 1832), French statesman, entered public life as deputy for Lot-et-Garonne in 1821, and in 1828 became Minister of the Interior, and head of a professedly Liberal ministry, by the aid of which Charles X. hoped to stave off revolution. The king, however, only looked upon the arrangement as provisional. Martignac, unsupported by the Ultra-Royalists, was defeated in the Chamber, resigned in August, 1829, and was replaced by the Prince de Polignac at the head of a fighting ministry. His last effort was a brilliant defence of his fallen rival at the trial before the Chamber of Peers.

Martin, BON LOUIS HENRI, dit HENRI (b. 1810, d. 1883), French historian, was a native of St. Quentin, and was sent to Paris to study law, but abandoned it for history. He

commenced his literary career by writing verses for periodicals, but soon took to historical romance, and produced some now forgotten novels, chiefly in the Fronde period—*Wolfthurn* (1830), *La Vieille Fronde* (1832), *Tanorède de Rohan* (1832), and *Le Libelliste* (1833). Martin's first essay in history was a little history of Germany, Switzerland, and the Netherlands in the *Bibliothèque populaire*, and from 1833 to 1836 he produced, at first in conjunction with Paul Lacroix (the "Bibliophile Jacob"), and afterwards alone, a collection of extracts from French chronicles and histories. Having written the first volume of a history of Soissons, Martin began to prepare his great work on the history of France, *Histoire de France depuis les Temps les plus reculés jusqu'en 1789* (19 vols., 1838-53). A decided disciple of Alphonse Thierry, his aim was to reconstruct the origins of French history, but when he came down to the period of written records he carefully restricted himself to fact, unlike Michelet, whose imagination was too apt to run riot. His history, therefore, from the Carolingian period and onwards is the authoritative French history, taken as a whole, although it is being rapidly superseded in parts by subsequent specialism. Whatever may be thought of the value of his theories on the early history of Gaul, in which the Druids were accounted the originators of much of mediæval chivalry, their ingenuity can hardly be called in question. The new editions of the work were really new editions, incorporating every recent discovery. In 1878 and 1879 he published a supplementary *Histoire de France depuis 1789 jusqu'à nos Jours*, which, in spite of its accuracy, is rather disappointing. Among Martin's minor works may be mentioned a drama on *Vercingetorix* (1863), a life of Manin, and a work on Italian unity. He was, in fact, no mere bookworm, but took the utmost interest in politics, both European and French. A confirmed Republican, he opposed the second Empire tooth and nail, but was allowed to live peaceably under it. After its fall he became mayor of the 16th arrondissement of Paris in 1870, a deputy in 1871, and senator in 1876. His election to the French Academy, in 1878, in succession to M. Thiers, was rather stormy, M. Émile Ollivier being prevented from making his speech of welcome.

L. Maynard and P. Bugnet, *Henri Martin, sa Vie, ses Œuvres, son Rôle* (1884); *The Academy*, Dec., 1883.

Martin, JOHN (b. 1789, d. 1854), English painter, studied art under Bonifacio Masso, and in 1815 obtained the prize at the British Institution for *Joshua Commanding the Sun to Stand Still*. It was followed by *The Fall of Babylon* (1818), *Belshazzar's Feast* (1821), *The Fall of Nineveh* (1828), *The Eve of the Deluge* (1841), and others. Martin was much interested in schemes for the improvement of London. Our grandfathers, who preferred

art for quantity rather than quality, admired him, but to the present generation his works appear faulty, pretentious, and incorrect.

* **Martin, SIR THEODORE, K.C.B.** (b. 1816), miscellaneous writer, the son of an Edinburgh solicitor, was educated at the Royal High School and the University of Edinburgh. After practising for some time as a solicitor in Edinburgh, he repaired to London in 1846 to become senior partner in the firm of Martin and Leslie, parliamentary agents, from which, however, he has since retired. Amongst his earliest publications in book form was *The Book of Ballads* (1856), which were brought out under the pseudonym of "Bon Gaultier" in conjunction with Professor Aytoun, of Edinburgh, whose *Memoir* he wrote in 1867. He is also the author of the well-known *Life of the late Prince Consort* (1874), and *Life of Lord Lyndhurst* (1883), and has written some fine translations of works of the Danish poets, Hendrick Hertz and Oehlenschläger, as well as of the *Odes of Horace* (1860), of *Calullus* (1860, 2nd ed. 1875), of Dante's *Vita Nuova* (1862), of Goethe's poems and ballads (1860) and *Faust* (1865), and of Heine's poems and ballads (1878). In 1851 he married Helen Faucit, the celebrated actress; in 1875 was created C.B.; in 1880 K.C.B.; and in November of the same year was elected Lord Rector of St. Andrews University (1880-3). His *Sketch of the Life of Princess Alice* appeared in 1885.

Martineau, HARRIET (b. 1802, d. 1876), miscellaneous writer, born at Norwich, was descended from a Huguenot family which had taken refuge in the east of England on the revocation of the Edict of Nantes. Her father was a manufacturer, and died early, leaving eight children unprovided for, of whom Harriet was the youngest. Harriet received a good education under the supervision of her uncle, one of the most eminent surgeons in the east of England, but, being poor, she was forced to choose some way by which to earn her bread. She chose literature. At nineteen she sent some papers to the *Monthly Repository*, and in 1823 she published *Devotional Exercises for Young Persons*, on the model of the Unitarian school. The two tales, *Christmas Day* and its sequel *The Friend*, appeared in 1824, which were followed up by several other stories dealing with social subjects, and more especially illustrating, by argument and example, the rights and interests of the working classes. For the next thirty years few English writers exercised so much influence on public opinion. In 1831 she began her series of *Illustrations of Political Economy*, in which she popularised by familiar and practical illustrations and examples the principles which Adam Smith and others had laid down. These she followed up by two similar series in illustration

of taxation and the poor laws. In 1834 she met with a cordial reception from the leaders of thought and action in America, whither she had gone on a visit; and on her return she published *Society in America*, and her observations on the natural aspects of the Western World and its leading personages under that of *A Retrospect of Western Travel*. She next wrote *How to Observe*, and a large number of other works in Charles Knight's popular series of publications, and with the object of lightening her literary labours by variety, she employed her pen on a series of tales for children, which she gave to the world under the title of the *Playfellow*. From 1838 to 1844 her energetic pen was practically at rest on account of a lingering illness, but in the latter year she resumed her favourite themes, and published three volumes illustrative of the evil effects of the *Forest and Game Laws*, and a somewhat fanciful work entitled *The Billow and the Rock*. The literary result of a visit to the East, in 1846, was *Eastern Life: its Past and Present*. In 1851 she published *Letters on the Laws of Man's Nature and Development*, which had passed between herself and a philosophic friend named Atkinson. This work gave, along with Mr. Lewes's volume, nearly the first impulse to the formation of a Positive school in England. Two or three years later she still more thoroughly identified herself with this school of thought and faith by giving to the world a condensed version of Comte's *Positive Philosophy*. But while thus employed in the study of scientific and semi-religious subjects she found time to devote to her *History of England during the Thirty Years' Peace*, together with an introductory volume covering the years 1800-15, a work which is to be admired for its singular clearness, but which is curiously unreflective, and is, in fact, little better than a very good compilation. In 1852 Miss Martineau began her connection with the *Daily News*, to which she contributed leading articles and biographical and other papers. Many of these papers have since been separately published, e.g. *Biographical Sketches* (1876). Miss Martineau cordially co-operated with Florence Nightingale in her schemes of army reform. She died at her picturesque villa at Ambleside, leaving behind her at the *Daily News* office a singularly just and modest estimate of her accumulative but unoriginal character.

Maria Weston Chapman, *Autobiography, with Memorials* (3 vols., 1877); Mrs. Fenwick Miller, *Harriet Martineau, in the Eminent Women Series*. [W. M.]

* **Martineau, THE REV. JAMES, D.D.** (b. 1805), metaphysician and theologian, the younger brother of Harriet Martineau, was born at Norwich, and educated originally for the profession of civil engineer. Perhaps owing to the influence of Dr. Lant Carpenter, to whose charge his education was for a time entrusted, he turned to philosophic and theological

studies, and after 1828 he acted, for a time, as a minister in a Presbyterian meeting-house in Dublin. In 1832 he was removed to Liverpool, and there he became known as a rising supporter of the English school of philosophy as developed by Priestley, Bentham, and the two Mills. In 1840 he was accordingly appointed professor of mental and moral philosophy in the Manchester New College, Manchester. About this time, driven by moral consciousness to maintain the necessity of an ethical alternative, he began gradually to abandon the English philosophic position, and the tendency towards the Neo-Kantian metaphysic was confirmed by a visit to Germany in 1848-9, during which he attended Trendelenburg's lectures. Since that time Dr. Martineau has been one of the most prominent writers in England on philosophic theology and ethics. Having come to London in 1857, he occupied the Portland Street Chapel pulpit from 1859 to 1872, and in 1869 was appointed principal of Manchester New College, London, a position from which he retired in 1886. The following are the names of some of his more important works:—*The Demand of the Present Age for an Enlightened Christian Ministry* (1836), *Hymns for the Christian Church and Home* (1840), *Endeavours after the Christian Life* (1843), *Religion as affected by Modern Materialism* (1874), *Hours of Thought on Sacred Things* (1876), *Essays, Philosophical and Theological* (1879), *A Study of Spinoza* (1882), and *Types of Ethical Theory* (1885).

Martyn, HENRY (b. 1781, d. 1812), missionary, was the son of a miner, and born near Truro. Educated at St. John's College, Cambridge, he graduated as senior wrangler, and became a curate of the Rev. Charles Simeon. In 1805 he went out to India as a military chaplain, and in 1811 transferred the seat of his missionary labours to Persia. He died on Oct. 16th, 1812, at Tokat, in Asia Minor, while on his return to Europe. Martyn's heroism was intensified by the weakness of his health, and the habitual sadness of his disposition, caused by an unrequited affection. He translated the New Testament into Persian and Hindustani.

Sir J. W. Kaye, J. Sargent, and S. Wilberforce, *Lives of Martyn*.

Marr, KARL (b. 1818, d. 1883), socialist, economist, and revolutionist, was the son of a Christian Jewish lawyer, of Trèves, holding a high post in the Civil Service. He was educated at the Universities of Bonn and Berlin, where he studied jurisprudence and philosophy. While preparing to qualify as lecturer at Bonn, a deep impression was made upon his mind by the teaching of the Young Hegelian school, and their "Religion of Man," which led him to take an active part in the Liberal movement of 1840. His vigorous criticism of the provincial Landtag in the *Rhenish Gazette* of Cologne, induced

its founders, Kamphausen and Hausemann, to offer him the editorship in 1842, and he abandoned his university career. The public activity of Karl Marx falls into three periods : 1. **REVOLUTIONARY AGITATION, 1842-9.**—The *Rhenish Gazette*, having by the subtlety of its criticism persistently baffled the censor told off to watch it, was suppressed by the Prussian administration in 1843. Marx then went to Paris, and became co-editor with Arnold Ruge of the *Deutsche Französische Jahrbücher*, where he published his famous articles upon the *Hegelian Philosophy of Right*, and the *Jewish Question*. He afterwards contributed with Engels, Heine, etc., to *Vorwärts*, and with Engels published a pamphlet (*Die Heilige Familie*) in reply to Bruno Bauer, champion of the old or idealistic Hegelians. In 1844 he was expelled by Guizot from France, at the request of the Prussian Government, and retired to Brussels, where he published his *Discours sur le Libre-Échange* (1846), *Misère de la Philosophie*, a reply to Proudhon's *Philosophie de la Misère* (1847), and continued his attacks on the Prussian administration in the *Brussels Gazette*. In 1847 Marx and Engels were invited by the Communist League (founded at Paris, 1836, for the spread of communism amongst the workers; head-quarters removed to London, 1840), to draw up a new programme. In this "Communist Manifesto," the earliest public declaration of International Democratic Socialism, Marx traced the historical growth of the middle class and the proletariat, and from it deduced the development of the future Social Democratic State, which must necessarily abolish class, and universalise the benefits of social union. This famous manifesto was circulated during 1848 in almost every European language. On the outbreak of the revolution, Marx was expelled from Brussels, and invited to Paris by the Provisional Government, whence he returned to Cologne, and with Wolff, Engels, and Freiligrath started (June, 1848) the *New Rhenish Gazette*, which became the soul of the working-class revolutionary movement. When (Nov.) the Prussian Parliament was dissolved, Marx's paper called upon the people to meet violence with violence, and refuse to pay their taxes; in consequence, it was twice prosecuted, and acquitted. Finally (June, 1849), after the Dresden insurrection, it was suppressed. 2. **LITERARY LABOURS, 1850-64.**—After the failure of the revolution, Marx went to London and devoted himself to the study of economics, of which the firstfruits appeared in his *Kritik der Politischen Ökonomie* (1857). He also wrote for the *New York Tribune*, and published pamphlets on Napoleon III., Lord Palmerston, and the Cologne Communist Trial, and a polemic with Karl Vogt. 3. **THE INTERNATIONAL, 1864-73.**—When, at a meeting of English and foreign working-class delegates at St. Martin's Hall, London, under the presidency of Professor Beesley (Nov., 1864),

to support the Polish insurrection, it was decided to found an International Working Men's Association, the committee appointed Marx corresponding secretary for Germany and Russia, and commissioned him to draw up the rules and inaugural address for the first Congress (Geneva, 1866). The object of the International, like that of the Communist League of 1847, of which it was a revival, was the alliance of the proletariat of all nations for the emancipation of labour. Marx was practically the organiser, "the brain" of the Association, until the secession of Bakounine and the Anarchist party (Congress of the Hague, 1872), and the removal of the central committee from London to New York in 1873 virtually dissolved it. From that time Marx took no part in public life, but devoted himself, amid increasing ill-health, to the completion of his great book on political economy, the second and third volumes of which he left in MS. Marx died in Paris. His reputation as an economist rests upon his *Das Capital*, of which the first volume was published at Hamburg in 1867. Vol. I. contains, firstly, a re-statement and development of Ricardo's theory of labour as the source of wealth and measure of value; the average value in exchange of any useful commodity, during any given period, is finally determined by the average duration of social labour, of average intensity, under average conditions, required to produce it. Secondly, it gives an analysis of capital, i.e. the surplus value produced by labour after it has reproduced the expenditure in raw material, wear and tear, and labour force (also a commodity sold at its cost of production); this surplus value is retained by the monopolists of the instrument of production, and is the fund from which are drawn rent, profits, and interest, and which supports all members of the community not engaged in productive labour. The rest of this volume is devoted to the historical development and social results of the "system of capitalist production." The remainder of *Das Capital*, only part of which has as yet been published, treats of the distribution of surplus value. Marx is the central figure, both as thinker and organiser, of the Social Democratic movement in Europe and America. He brought the humanism of the Hegelian philosophy of historical development into the science of economics, and evolved from the theory of the absolute dependence of social life upon the growth of economic conditions, the gigantic conception of the democratic labour state of the future, founded upon the collective* ownership of the means of production, and controlled by the "centralised administration of productive processes." He devoted his life to working out this idea in

* Hence the school of Marx is often called *Collectivists*.

theory, and to organising the proletariat to prepare its advent in practice by the acquisition of political power.

Richard Ely, *French and German Socialism in Modern Times*; John Rae, *Contemporary Socialism*; Eleanor Marx, *Karl Marx (in Progress, for May and June, 1883)*. [C. M. W.]

* **Maspero**, GASTON CAMILLE CHARLES (b. 1846), Egyptologist, was trained in the Ecole Normale Supérieure at Paris, his native city, and was in 1868 appointed reader on Egyptology in the new École des Hautes Etudes, and also succeeded Rougès at the Collège de France. After founding, in the name of the French Government, a school of archaeology at Cairo in 1880, he succeeded Mariette in the following year as director of explorations and curator of the Boulak Museum, while retaining his professorship at Paris. M. Maspero's pupils in the school of archaeology are engaged every year in systematic study and registration of the Egyptian monuments, and the director himself lives, during the greater part of the year, on the Nile, in his official Nile boat, and is thus able to use his authority and learning to the best advantage in repressing spoliation and protecting the monuments. M. Maspero has unearthed many treasures in the Nile valley. Among his chief results may be mentioned the opening of several hitherto sealed pyramids; the discovery, along with Dr. E. Brugsch of the famous treasure and royal mummies of Deyr-el-Bahri; and the clearing of the Sphinx from the sand which had encumbered it. He also encouraged the work of the Egypt Exploration Fund in the Delta, at Pithom, Tanis, and Naucratis. As a scholarly writer, Maspero takes high rank. His *Histoire ancienne des Peuples de l'Orient*, a standard work, and far the best of its kind, reached a ninth edition in 1885; *Les Contes populaires de l'Égypte ancienne* (1882) is a valuable and charmingly written contribution to the study of folk-lore. More technical are his treatises on pure Egyptology, as *La Conjugaison en Égyptien* (1871); *Une Enquête Judiciaire à Thebes* (1872); *Du Genre Epistolaire* (1873); *Sur quelques Papyrus du Louvre* (1875), *Études Égyptiennes* (1880, etc.). No more useful work of his can be mentioned than his visitors' *Guide* to the Boulak Museum; and his greatest discovery has found a minute and exhaustive record in his elaborate volume, *La Trouaille de Deyr-el-Bahri*. In 1883 he was elected a member of the Académie des Inscriptions. [S. L.-P.]

Masséna, ANDRÉ, DUC DE RIVOLI, AND PRINCE OF ESSLING (b. 1758, d. 1817), the greatest of Napoleon's marshals, was the son of a wine-merchant of Nice, entered the Italian regiment in 1775, and in 1792 fought in a volunteer battalion. By 1793 he had risen to general of division, and in 1794 and 1795 won the important victories of Saorgio and Loano over the Austrians. During the

Italian campaign (1796 and 1797) he covered himself with glory, culminating with the victory of Rivoli. As commander of the Papal States the faults of his character, rapacity and moroseness, appeared; and he was recalled. In 1799 his campaign as commander of the army of Switzerland was a masterpiece of genius, notably his dash upon Suvaroff at Zurich. Created a marshal of France in 1804, he crushed the Archduke Charles at Caldiero shortly after the surrender of Mack at Ulm. In 1809 he saved Napoleon from defeat at Aspern by holding the village of Essling, and commanded the right at Wagram. In 1810 he first experienced defeat when he was sent to oppose Wellington in the Peninsula. Advancing upon Lisbon he met the English and Portuguese on the ridge of Busaco, and was completely defeated (Sept. 29th). Nevertheless he arrived at the lines of Torres Vedras, which defended Lisbon, and doggedly began a blockade. Provisions failing short, he was compelled to withdraw, and effected a brilliant retreat, though defeated at Fuentes d'Onoro. This was his last service; he remained inactive during the Hundred Days, and died after the second restoration, his end being undoubtedly hastened by the annoyances to which he was subjected for refusing to sit in judgment upon his old comrade Ney.

Koch, *Mémoires de Masséna*; Napier's *Peninsular War*.

Massey, THE RIGHT HON. WILLIAM NATHANIEL (b. 1809, d. 1881), politician and historian, called to the bar at the Inner Temple in 1844, entered Parliament as member for Newport, Isle of Wight, in the Liberal interest in 1852, was member for Salford from 1857 to 1865, and for Tiverton from 1872 until his death. He was appointed Recorder of Portsmouth, 1852, and of Plymouth, 1855. From 1855 to 1858 he was Under-Secretary for the Home Department, Chairman of Committees in 1859, and from 1865 to 1868 was a member of the Council of India and Finance Minister. Mr. Massey's chief literary work was a *History of England under George III.* (4 vols., 1855-63). This work, which terminates with the Peace of Amiens in 1801, is one of considerable value, although it will not bear comparison with Mr. Lecky's history. It is accurate, sober, and fairly complete, but in reflection seldom rises above commonplace.

* **Masson**, DAVID, LL.D. (b. 1822), man of letters, was educated at Marischal College, Aberdeen, his native town, and at Edinburgh University. In 1841 he became editor of a Scottish newspaper, but subsequently entered the literary department of Chambers's publishing house at Edinburgh. In 1847 he repaired to London to follow literature, and in 1852 became professor of English literature in University College, London. Here he projected his great *Life of Milton* (1859-80)

in 6 vols., the especial value of which is that the historical portions of the work, no less than the biography itself, are the results of original and independent survey and inquiry. In 1859 he became editor of *Macmillan's Magazine*, and in 1865 professor of English literature in Edinburgh University. Mr. Maason next published a critical review of *Recent British Philosophy* (1865, 3rd ed. 1877), and in 1874 collected his periodical contributions on English poets in *Essays, Biographical and Critical*, in 3 vols. Since 1879 he has acted as editor of the *Registry* of the Privy Council of Scotland, to each volume of which he writes a fascinating introduction. He has also written a biography of the Scottish poet *Drummond of Hawthornden* (1873), *A Memoir of Goldsmith* (1879), *The Three Devils, Luther's, Milton's, and Goethe's* (1874), and *De Quincey* (1878) in the *English Men of Letters Series*. His edition of *Milton* (1877) is of high value.

Quasi Cursores (Edinburgh, 1884).

Mathew, THEOHALD (b. 1790, d. 1856), better known as Father Mathew, the Irish temperance reformer and philanthropist, born at Thomastown, Tipperary, was connected with the family of Lord Llandaff, and was entered, in 1807, as a student for orders at Maynooth. He was not long there, however, when he was summarily removed for a breach of discipline, but shortly afterwards Dr. Murray, the tolerant Bishop of Dublin, admitted him to orders, when he settled as a sort of curate under Father Donovan in the chapel attached to the Capuchin friary at Cork. For eighteen years he laboured among the poor of Cork; and, struck with how large a share the vice of drunkenness had in pauperising and degrading his countrymen, he determined to embrace the principle of total abstinence. In 1838 he began his crusade. In three months 25,000 persons had joined his standard; and before the close of the year we are assured that his followers had increased to 150,000. Early in 1839 the "movement" assumed more formidable proportions throughout the south and west of Ireland; it spread throughout England and Scotland; and in 1849 he carried the cross to America. In 1847 he was elected by the clergy of the diocese to the bishopric of Cork, but the decision of the Pope was against him. He reckoned his converts by millions. But before this time shadows had appeared in Mathew's path. His indiscriminate generosity had landed him largely in debt, for which he was put under arrest; and the Irish famine of 1846-8 worked sad mischief to the temperance cause in Ireland. Father Mathew could not look unmoved upon the partial overthrow of his great work, and with the decay of the movement began the break-up of his constitution. He lingered on in feeble health till December, 1856, when he

died. A government pension of £300, as well as several life-policies, went to defray his debts.

J. F. Maguire, M.P., *Father Mathew, a Biography* (1868); Harriet Martineau, *Biographical Sketches*.

Mathews, CHARLES (b. 1776, d. 1835), actor, was the son of a Wesleyan bookseller, and was educated at the Merchant Taylors' School. Though intended for his father's business, he took to the stage in 1798, and in 1802 first appeared before a London audience at the Haymarket. He was a marvellous mimic, and his "At Homes," begun at the Lyceum Theatre in 1818, were enormously popular.

Memoirs of Charles Mathews, by Mrs. Mathews, partly autobiographical.

Mathews, CHARLES JAMES (b. 1803, d. 1878), actor, son of the above, was educated at the Merchant Taylors' School, and at one time articulated as an architect under Pugin. This profession he abandoned in 1835, having in the meantime obtained great success in amateur theatricals. His first appearance on the public stage was at the Adelphi, and in November his appearance in his own play, *The Humpbacked Lover*, stamped him as a master of light comedy. He married Madame Vestris, the lessee of the Olympic, in 1838. As a manager he did not shine; and his ventures at Covent Garden (1838-41), and afterwards at the Lyceum (1847-55), terminated in bankruptcy and temporary imprisonment. After the death of Madame Vestris, in 1857, he married again. From this time forward Mathews abandoned management and confined himself to acting. He acted before a French audience in an adaptation of *As Cool as a Cucumber*, in 1863, and made a tour of the world (1869-72). His favourite pieces were:—*Used Up*, *As Cool as a Cucumber*, *Little Toddekins*, *Patter and Clatter*, and *My Awful Dad*, a piece by H. J. Byron, in which he appeared until within a fortnight of his death at Manchester.

Life of C. J. Mathews, edited by Charles Dickens.

Mathisson, FRIEDRICH VON (b. 1761, d. 1831), the author of *Adelaide*, was born in a village near Magdeburg, where his father was a country parson. Having proceeded to the University of Halle, he there published his first collection of poems (*Lieder*, 1781), and for the next few years was one of the teachers at the institution of Philanthropin, near Dessau, for education on Basedow's principles. Leaving this in 1784 he became a private tutor, and in 1795 attached himself to the court of the Princess Luise of Anhalt-Dessau. On her death in 1811 he entered the service of the Würtemberg Court. Though of high reputation at one time, and intimate with all the great names of Germany, Mathisson is now only remembered through the genius of Beethoven. *Adelaide* was written

in 1788. His other songs and poems are not very numerous, and of no great importance. He belongs properly to a period earlier than his date. His prose works are chiefly descriptions of his numerous tours and travelings through Germany and Italy.

Leben by Döring in the *Schriften* of 1835; *Nachlass* (1832).

* **Matthews**, THE RIGHT HON. HENRY, Q.C. (b. 1826), a native of Ceylon, was educated on the Continent and in England. He studied law at University College, London, and in 1849 graduated LL.B., at the University of London. In 1850 he was called to the bar at Lincoln's Inn. In 1868 he was created a Q.C., and became a bencher of Lincoln's Inn. In the same year he was returned to Parliament by Dungarvan, which constituency he represented till the dissolution of 1874. From 1872 to 1876 he was examiner in Common Law to the Council of Legal Education. After the dissolution of 1874 he three times unsuccessfully contested Dungarvan—in 1874, 1876, and 1880—and in 1885 he contested North Birmingham with the same result. In 1886, however, this latter constituency returned him as a Conservative, and he was appointed by Lord Salisbury Chief Secretary of State for the Home Office, with a seat in the Cabinet. Among the many important cases in which Mr. Matthews has acted as counsel are the Tichborne trial (1871-2), and the Crawford v. Crawford divorce suit (1886).

* **Maudsley**, HENRY, M.D., LL.D. (b. 1835), was educated at Giggleswick Grammar School, and entered upon the study of medicine at University College, London. He graduated M.D. at the University of London in 1856, with the title of University Medical Scholar. Selecting mental pathology as his speciality, he was from 1859 to 1862 superintendent of the Manchester Royal Lunatic Hospital. In 1862 he returned to London and became a consulting physician. He was elected F.R.C.P. in 1869, and was appointed Gulstonian lecturer in 1870. He is LL.D., Edinburgh, consulting physician at the West London Hospital, and was during the years 1869-79 professor of medical jurisprudence at University College, London, where he was elected fellow in 1867. His most important work is *The Physiology and Pathology of the Mind* (1st ed. 1867), an exposition of mental phenomena in their organic relations. His *Gulstonian Lectures on the Body and Mind* have gone through several editions. *Responsibility in Mental Disease* (1872) attracted much attention, also an essay on *Body and Will* (1883); *Natural Causes and Supernatural Seemings* appeared in 1886. He was for many years co-editor of the *Journal of Mental Science*.

Maurice, THE REV. JOHN FREDERICK DENISON, D.D. (b. 1805, d. 1872), theologian and social reformer, was the son of a Unitarian minister, and was born at Normanstone, near

Lowestoft. In 1814 the family removed to Frenchay, near Bristol, and soon afterwards was divided owing to the adoption of Evangelical doctrines by some of its members. In 1823 Maurice entered at Trinity College, Cambridge, but migrated after a short time to Trinity Hall. Four years later he came to London with a view to the bar or literature, and in 1828 he became editor of the *London Literary Chronicle* and *Athenæum*. In the following year, however, his father was ruined, the *Athenæum* passed into other hands, and Maurice went to reside for a time in Oxford (1830), where he studied theology, and produced *Eustace Conway* (published 1835), one of the thoughtful essays in romantic disguise so much in favour at the time. Having been baptised into the English Church in 1831, he gained some experience of parochial work at Lympham and Bubbenhall, near Leamington, and was ordained to a curacy at the latter village in 1834. In the following year he wrote *Subscription no Bondage*, in defence of his position in the English Church. It was his first theological utterance that attracted general attention. In the same year he also published the article on *Moral and Metaphysical Philosophy*, that formed the basis of his later works on the subject. In 1836 he was appointed chaplain to Guy's Hospital, and in the course of the next few years he published twelve tracts on the *Kingdom of Christ*, one of which, *On Baptism*, was the immediate occasion of his final breach with Pusey and the Oxford party. Whilst continuing his work at Guy's, he became editor of the *Educational Magazine* (1839), professor of English literature at Cambridge (1840), Boyle lecturer (1845), and in the same year Warburton professor of theology at King's College, London. In 1846 he was removed from Guy's Hospital to Lincoln's Inn, and the years of his highest influence began. In 1848 he was one of the prime movers in the foundation of Queen's College, and with the support of Kingsley, Hughes, and other social reformers, published the seventeen numbers of the *Politics for the People*, and organised the early movement of 1850 in favour of co-operation and "Christian Socialism." Having thus incurred the apprehensive scorn of Liberals and Tories alike, he further exposed himself to the hostility of theologians by his series of *Theological Essays*, published in 1853. His expulsion from his professorship at King's College was the inevitable result. Released from theology, he had leisure in the following year to organise the Working Men's College in Great Ormond Street, but unfortunately Dean Mansel's University sermons, in 1858, tempted him back into the region of controversy, and his treatise entitled *What is Revelation?* was the result. In 1860 he was presented with the living of St. Peter's, Vere Street, and next year issued the last part

of his *Moral and Metaphysical Philosophy*. In 1866 he was appointed Grote's successor as Knightsbridge Professor in Cambridge, and three years later he resigned his office at St. Peter's. He was twice married; first to Anna Barton, the sister-in-law of John Stirling (1836), and in 1849 to a half-sister of Julius Hare. Though belonging properly to no definite section or party of the English Church, he occupied an important and distinct position in her recent annals. He was among the first to maintain the right of her clergy to intellectual freedom, and by his inspiration even more than by his example to direct the attention of the younger generation that surrounded him towards the solution of social rather than intellectual or theological problems.

The Life of F. D. Maurice, chiefly told in his own Letters, edited by his son, F. Maurice (1884). [H. W. N.]

Maximilian OF BAVARIA. [BAVARIA.]

Maximilian OF MEXICO. [MEXICO.]

Maxwell, JAMES CLERK, F.R.S. (b. 1831, d. 1879), a physicist, was a native of Kirkcudbright. After receiving his preliminary education in Edinburgh Academy and University, he entered St. Peter's College, Cambridge, from which he soon migrated to Trinity, where in 1854 he graduated as second wrangler, and was bracketed with the Smith's Prizeman in a subsequent competition. From 1856 to 1860 he was professor of natural philosophy in Marischal College, Aberdeen, and from 1860 to 1868 he occupied the Chair of physics and astronomy in King's College, London. After three years' retirement he accepted the professorship of physics in Cambridge, and there he continued, leading an uneventful life, concerned solely with his pupils, the completion and extension of the Cavendish Laboratory, and the numerous researches with which his name is connected, until his too early death. Yet his career as an original investigator and writer extended over fully thirty-three years of his short life; for his first paper—on a mechanical method of treating Cartesian ovals—was communicated to the Royal Society of Edinburgh when he was fifteen years of age, and while still a student he contributed to the *Transactions* of this society two valuable papers, in one of which he indicated the germ of that discovery of the double refraction produced in viscous liquids by strong stress, which in after-life added so much to his fame. Again, immediately after taking his degree he communicated to the Cambridge Philosophical Society a memoir on the *Transformation of Surfaces by Bending*, the abstract researches in which were made during his undergraduate career. This was a purely mathematical paper. All of his work was more or less of this nature, but in most of it mathematics are made subservient to the elucidation of questions in electricity, astronomy, and various other de-

partments of physics. In 1859 the Adams prize was awarded him for his essay on the *Stability of Saturn's Rings*. From 1855 to 1872 colour and colour blindness absorbed much of his attention, and for the inquiries into these questions he received the Rumford medal of the Royal Society, into which he had been early elected. The *Kinetic Theory of Gases* enabled him to still further extend the discoveries of Bernoulli, Herapath, Joule and Clausius, and in his work on *Faraday's Lines of Force*, he developed the views of both Faraday and Thomson in overturning the idea that in the phenomena of statical electricity, there is not, as Poisson and Gauss tried to show, mere attraction and repulsion exerted at a distance. The theory he worked out more fully in his treatise on *Electricity and Magnetism* (1873), in which he shows that all electric and magnetic phenomena may be reduced to "stresses and motions of a material medium." This is one of his greatest achievements. In his *Electrical Researches of the Hon. Henry Cavendish* he showed how deeply electrical science was indebted to this famous physicist and chemist, and in his numerous contributions to the *Encyclopædia Britannica* (where Professor Tait has sketched the leading points of his discoveries), he has compiled an almost exhaustive treatise on physics, so far as these compendia go. He also published a text-book on the *Theory of Heat*, and another of a more elementary character on *Matter and Motion*, besides a great number of papers on physics which cannot be even noted. In a quasi-anonymous work which he wrote in conjunction with Professor Tait, he makes a vigorous protest against scientific materialism, in favour of the received tenets of religion, his belief in which continued unshaken by the doctrines which came into vogue soon after he had begun his active career as an investigator.

His personal character, which is described as most lovable, has been sketched in sufficient detail in Professor Campbell's *Life* (1882), while the memorial edition of his principal works, issued from the Pitt Press, will remain a monument of one of the most laborious and successful of modern investigators. [R. B.]

Maxwell, SIR WILLIAM STIRLING, BART. (b. 1818, d. 1878), art historian, was the only son of Mr. Archibald Stirling, of Keir, Perthshire, and was educated at Cambridge, where he graduated in 1839. He afterwards travelled extensively in France and Spain. In 1847 he produced a volume of verse, *Songs of the Holy Land*, which he followed up with several volumes (mostly issued for private circulation only) containing costly reproductions of old engravings, along with valuable explanatory matter. In 1848 he brought out *Annals of the Artists of Spain* (2nd ed. 1853), and in 1852 *The Cloister Life of Charles I.* (3rd ed. 1853). In the same year (1852) he represented Perthshire in Parliament as an advanced Conservative, and was several times

re-elected; and in 1865, on the death of his uncle, he succeeded to the baronetcy and estate of Pollok, in Renfrewshire, when he assumed the additional surname of Maxwell. In 1855 Sir William published the exquisite volume, *Velasquez and his Works*, in 1877 *Solymen the Magnificent*, and in 1883 appeared from his posthumous papers a life of *Don John of Austria*. All his works are characterised by thoroughness of workmanship and refinement of literary taste. In 1875 he was elected Chancellor of Glasgow University, and died suddenly at Venice.

Glasgow Herald, Jan. 20th, 1878.

MAY, THE RIGHT HON. THOMAS ERSKINE, BARON FARNBOROUGH, K.C.B., D.C.L. (b. 1815, d. 1886), official and historian, was educated at Bedford Grammar School, became assistant librarian to the House of Commons in 1831, and was called to the bar in 1838. Appointed Examiner of Petitions for Private Bills in 1846, he became Assistant-Clerk in 1856, and Clerk to the House of Commons in 1871. In 1885 he became Chairman of the Statute Law Committee. He was created C.B. in 1860 and K.C.B. in 1866. Sir Erskine May was best known to the outside world as an antiquarian and historian. His *Rules, Orders, and Forms of the House of Commons* was printed by command of the House in 1854, *Remarks to Facilitate Public Business in Parliament* appeared in 1849, and *On the Consolidation of Election Laws* in 1850. He is, however, more widely famous as the author of *A Treatise on the Law, Privileges, Proceedings, and Usage of Parliament* (1844), which has passed through some nine editions, and is an invaluable mine of information for the historical student, and the *Constitutional History of England since the Accession of George III. (1760-1880)*, which was published in 1861-3, and has been brought down to the present time in subsequent editions. It continues the great work of Hallam, and, although somewhat unequal, is a work characterised by clear judgment, patient investigation, and earnest sympathy with political progress. Distinctly readable, it has all the good qualities of a popular constitutional history. The best chapters are those on the Press and Liberty of Opinion, and the Liberty of the Subject. *Democracy in Europe; a History*, appeared in 1877, but it is perhaps not unjust to say that it hardly added to the writer's reputation. Sir Erskine May was a contributor to Charles Knight's publications and to the reviews and law journals. In 1886, shortly after his retirement from office, he was raised to the peerage with the title of Baron Farnborough, but he died within a few days.

Mayer, JULIUS ROBERT VON (b. 1814, d. 1878), German physicist, was a native of Heilbronn, studied medicine at the University of Tübingen, and passed some time in the hospitals of Munich and Paris. As a ship's

surgeon in a Dutch India vessel he went to sea, and in 1840, while at Java, he remarked that the venous blood in some of his patients was of a singularly bright red colour, owing, he thought, to the fact that a smaller amount of oxidation sufficed to keep up the temperature of the body in a hot climate. From this he went on to consider the question of animal heat, and on his return to Heilbronn he contributed a paper to the *Annalen of Liebig* (1842), which contained the germ of his great theory, "the mechanical equivalent of heat," i.e., the mutual interchangeability of heat and mechanical energy, towards which Dr. Joule had been simultaneously feeling his way with considerably more regard for evidence and caution. In 1845 his brochure on *Organic Movement in Connection with the Transformation of Matter* gave a detailed account of the new theory, and in 1848 it was applied to the sun (*Celestial Dynamics*), in which he accounts for the supply of solar heat by the action of gravity. It was followed by *Remarks on the Mechanical Equivalent of Heat* (1851), a collected edition of his writings, *Die Mechanik der Wärme* (1867, 2nd ed. 1874), *Naturwissenschaftliche Vorträge* (1871), and two papers under the title of *Die Torricelli'sche Leere und Ueber Auflösung*. The long and painful dispute with Dr. Joule as to priority of discovery seriously affected the mind of Dr. Mayer, and caused him to be confined in an asylum for a brief period. It has also caused his place in science to be a matter of some dispute.

Professor Tyndall's paper in *Nature*, vol. v.; memoir in *Nature*, vol. xvii.

MAYO, RICHARD SOUTHWELL BOURKE, 6TH EARL OF (b. Feb. 21st, 1822, d. Feb. 8th, 1872), 4th Viceroy of India, was a son of the 5th Earl and a member of the illustrious family of Burke or de Burgh. He was educated at Trinity College, Dublin, where he took his degree in 1842, and then travelled in Russia, the result being a descriptive work entitled *St. Petersburg and Moscow* (1845). In 1847 he entered Parliament as member for County Kildare in the Conservative interest, and in 1849 he received the courtesy title of Viscount Naas. He sat in the House of Commons until his father's death in 1867, having been elected for Coleraine in 1852 and for Corkermouth in 1857. Always entertaining a genuine enthusiasm for Ireland, he was a popular chief secretary during the three Derby Administrations (March to December, 1852, February, 1858, to June, 1859, and June, 1866, to May, 1868), and held that office under Mr. Disraeli until the end of 1868, when he was appointed Viceroy of India. Hitherto, Lord Mayo, a somewhat reserved man, had not attracted very much attention in England, with the exception of his proposal for an endowed Catholic University, made in 1867, which was severely criticised and eventually

abandoned. His appointment as Viceroy was criticised as something like a job, especially when the tottering state of the ministry became evident. On his arrival in India, however, Lord Mayo speedily developed the highest administrative qualities. He had done his utmost to master the duties of his new position, and was earnest, resourceful, and vigilant. His frontier policy was one of non-annexation, the feudatory princes were treated with friendly confidence. His object was to create a cordon of friendly states round our northern frontier, and with that object he held an important durbar at Umballa with Shere Ali, the Ameer of Afghanistan, in 1869, in which that potentate was sent away satisfied with courteous words. He sent a mission to Yarkand in 1870, kept on good terms with the Shah, opened up trade with Cashmere, enforced respect for the British power upon the Burmese, and received the King of Siam at Calcutta in Jan., 1872, with great ceremony. His internal administration formed an important era of financial reform, a surplus was produced where there had been a deficit, and the powers of the local governments were enlarged. Much was also done in the way of legal codification, in irrigation works and canals, in providing education for the Mahometan population, and in improving jail discipline. In all these things Lord Mayo took a personal part, and was universally beloved for his considerateness, truthfulness, and strength. In Jan., 1872, he began to inspect the convict colony in the Andaman Islands, and on Feb. 8th was assassinated at Fort Blair by a convict from the Punjaub, whose motive was one of revenge against the British Government.

Dr. W. W. Hunter, *Life of the Earl of Mayo*.
[L. C. S.]

***Mayor**, THE REV. JOHN EDWARD BICKERSTETH (b. 1825), was educated at Shrewsbury School and at St. John's College, Cambridge, where he became a Fellow in 1849. He was assistant-master at Marlborough College (1849-53), lecturer at St. John's College (1853), librarian of Cambridge University (1863-7), and was appointed Professor of Latin at Cambridge in 1872. Professor Mayor's learning is wide as well as deep, and he is equally a master of the origins of our history and of the classics. He is, however, best known as the editor of Juvenal, and his work, *Thirteen Satires of Juvenal* (1853), is one of the ripest products of English scholarship, and has gone through numerous editions. His *Juvenal for Schools* appeared in 1879, and he has also edited *Cicero's Second Philippic* (1861), *Homer's Odyssey*, ix.-xii. (1872 and 1884), *Quintilian Inst. Or.* (1872), *Pliny's Letters* (1880), *Cicero's De Natura Deorum* (1880), and some Latin exercises.

Mazzini, GIUSEPPE (b. 1808, d. 1872), an Italian patriot and cosmopolitan agitator, was

born at Genoa, where his father, an eminent physician, was professor of medicine in the University. In 1826 he graduated LL.D. in the University of Genoa, and plunged into politics. Between 1820 and 1830 Italy was in a state of political degradation, but there was all over the peninsula a fervent aspiration for liberty. In Genoa the discontent was greater than elsewhere, the inhabitants having been so recently incorporated, against their will, into the Sardinian kingdom. The agitation found expression in Mazzini, who became the centre of a circle of young men, to whom he communicated his spirit and his ideas. He joined at first the secret sect of the *Carbonari*, who, at that time, pervaded all Italy, and was entrusted by them with a special mission to Tuscany; but very soon the aimlessness of the sect and their mysterious and useless forms disgusted him. His movements, writings, and speeches had aroused, in the meanwhile, the suspicions of the Sardinian Government, and shortly after the French Revolution of 1830, he was arrested and confined to the fortress of Savona. It was there that he conceived the work to which he afterwards consecrated himself heart and soul. He saw that Carbonarism and every other organisation for revolutionary purposes had failed for want of an aim. Beyond the expulsion of the tyrants, who were at that time oppressing Italy, and except the defence of the rights of man and the salvation of the individual, they had no other object in view. Mazzini planned an association, the gospel of which was to be the duty of man, and the aim of the members of it was to be the liberation of Italy from every foreign and domestic tyranny and its unification under a republican form of government. All was to be achieved by the people and for the people. The revolution should acknowledge no leaders save only such as might spring from its own bosom. The sect was to be called *La Giovine Italia* (Young Italy), and *Dio e Popolo* (God and People) should be its watchword. No sooner had Mazzini been acquitted by the judges, for want of evidence, than he plunged directly into political action. The revolution of the Roman States of 1831 had just broken out, and Mazzini directed his steps towards France to arouse the spirits of the Italians, who resided in great numbers in Marseilles and all over Provence; but he did not succeed in persuading them to follow him. He then wrote a letter from Marseilles to Charles Albert, the new King of Sardinia, inviting him not to disappoint the expectations he had raised in Italy in 1820, when while heir to the throne he was hailed as King of Italy. The King, however, who was only allowed to ascend the throne with the express condition that he was to act in accordance with the will and orders of Austria, was compelled, in reply to Mazzini's address, to sign a decree banishing him for ever from the

Sardinian States. This endeared Mazzini the more to the youth of Italy. A manifesto proclaiming *La Giovine Italia* and a journal of the same name embodying and developing the principles of the new sect appeared in Marseilles towards the end of 1831. Mazzini wrote them, and both manifesto and journal were smuggled in large numbers into Italy. Several congregations of followers of Young Italy were established in Genoa, Leghorn, and other towns. The various Italian governments asked, in consequence, from Louis-Philippe the expulsion of Mazzini from France, which was granted at once. He was therefore compelled to retire to Switzerland, but, having been implicated in the Sardinian revolution of 1833, a sentence of death in *contumaciam* was pronounced against him. At Geneva he edited *L'Europe Centrale*, in which the emancipation of Savoy was advocated. A large number of German, Polish, and Italian exiles, under the guidance of General Ramorino, a Genoese, was sent to invade the Duchy; Mazzini himself took part in the expedition, but the attack broke down disgracefully. Anyone else would have withdrawn from active life after such defeat; not so Mazzini. He threw all the blame upon Ramorino, and applied himself to give the utmost extension to his plans, creating: *Young France*, *Young Poland*, *Young Switzerland*, and, last of all, *Young Europe*. In connection with *Young Switzerland* (*La Jeune Suisse*), a paper of the same name was started by Mazzini in 1834, and a confederation proclaimed of Switzerland, Tyrol, Savoy, and other Alpine districts. But the Swiss Government in less than a year stopped the publication of the paper, and in 1836 Mazzini himself was expelled from Switzerland. Humbled, but not disheartened, he went to England, arriving in London during January, 1837, and continued to keep a close correspondence with his party in Italy. Having succeeded in mastering the English language, he wrote articles for several London reviews on literary subjects. He founded and conducted personally a school for mendicant organ-boys, and in 1840 originated an association of Italian workmen. In conjunction with it appeared a weekly paper under the name of *L'Apostolato Popolare*, and Mazzini published in the same his popular treatise, *Sui Doveri degli Uomini* (On the Duties of Man). Through the opening of Mazzini's letters by the English Government the plot of the unfortunate young brothers Bandiera for invading the Neapolitan kingdom was discovered in 1844. The King of Naples was informed of it, and in consequence the poor Bandieras were arrested on landing in Calabria and shot. Mazzini, however, always declared that he was in no way connected with that ill-fated expedition, and that he had exhorted the unhappy youths to wait for better opportunities. After the revolution of Palermo and Milan, in 1848,

Mazzini went to Italy with the view of giving to the Italian movement a turn in conformity with his republican ideas. He actually bore arms under Garibaldi during the war against Austria, but, in fact, Mazzini and his party divided the Italian forces and concurred, to a great extent, in nullifying the exertions and efforts of Charles Albert against Austria. In 1849 Mazzini was nominated member of the short-lived provisional government of Tuscany. After the flight of Pius IX. from Rome he was declared a member of the Constituent Assembly, and afterwards appointed with Saffi and Armellini a member of the Roman Triumvirate. The arrival of the French expeditionary corps compelled him, after a desperate resistance, to return to London. In 1850 he became president there of the National Italian Committee, through which he promoted the risings of 1852 and 1853, and directed personally the preparations for the abortive revolution of Genoa in 1857. From thence he fled, and was again condemned in *contumaciam* to death. Having returned to London for a short time, he published a new journal, *Pensiero ed Azione* (Thought and Action). But the old high-minded followers of the great conspirator had abandoned him one by one long ago; the hopes of the lovers of Italy being now grounded in practical and statesmanlike measures. He took no part in the great Italian national events of 1859-60, and actually tried to hinder, rather than to help, their development. When the kingdom of Italy was proclaimed he was elected by the people of Messina their deputy to the Italian Parliament; he refused, however, to take his seat. In 1866 the sentence of death against Mazzini was cancelled, but he flatly refused the pardon. Nothing remarkable took place in the rest of Mazzini's life, except that in 1869 and 1870 he tried unsuccessfully to excite revolts in different parts of Italy. He died at Pisa. The works of Mazzini are very numerous, and are almost all of a political and social character: the fullest collection of them was begun by the author himself and continued by Saffi (*Scritti editi ed inediti di Giuseppe Mazzini*, 10 vols.). Mazzini was, doubtless, a man of really transcendent abilities and of elevated character; but like many other conspirators he had an absolute inability to distinguish between the ideally perfect and the practically possible. Thus he involved himself in rash attempts, followed by persons who could neither comprehend nor aid him. He was a man born to rule; of the same stuff of which, under favourable circumstances, Napoleons are made. But the patriot gradually changed into the humanitarian, and, in the end, the humanitarian was looked upon as an utopian, and set down as a visionary.

Mazzini's Life and Writings (London, 1847-70, 6 vols.). [A. O.]

Meagher, THOMAS FRANCIS (b. 1823, d. 1867), known as "Meagher of the Sword," was the son of a merchant of Waterford, of which town he was at various times mayor and M.P. Meagher was educated first at the Jesuit College of Clongowes Wood, Kildare, and afterwards at Stonyhurst. At the age of about twenty-two he entered public life, and joined the "Young Ireland" movement at the time when that party was becoming estranged from O'Connell. He was a member of the "'82 club," and soon made himself conspicuous by his extraordinary eloquence. "He was destined," says Sir Charles Gavan Duffy, "to rival Vergniaud in the suddenness and splendour of his success as an orator." When O'Connell called on the Young Ireland party to join in formally renouncing the right to resort to force, Meagher bitterly denounced him. In 1848 he and Smith O'Brien headed a deputation to Lamartine, who received them very coolly. John Mitchel then came to the front and headed the party of action; he started the *United Irishman* in opposition to the more moderate *Nation*. The government arrested him, with Meagher and O'Brien, for seditious speeches and writings; but under the ordinary law they were entitled to bail, and continued their course as before until the trial, at which they were acquitted. An Act was then passed against inciting to revolt, and under it Mitchel was condemned and transported. This precipitated the outbreak. The forward party, now calling themselves "Confederates," drilled men; the Government suspended the *Habeas Corpus* Act, and issued warrants for the arrest of Meagher and O'Brien. Then came the rising at Ballinacorney, and Meagher after a few days' wandering in the Tipperary mountains was taken, and tried by the special commission at Clonmel in September, 1848. He was convicted, and sentenced to be hanged, drawn, and quartered, but the sentence was commuted, and he, with the others, was transported to Van Diemen's Land. Escaping thence in 1852, by a quibbling withdrawal of parole, he reached Pernambuco, and thence went to New York. He lectured up and down the United States, chiefly on Australia and Ireland, and published his speeches in 1853. He also explored Costa Rica, and published the results in *Harper's Magazine*. In September, 1855, he was called to the New York bar, but did not practise much. Always a Democrat, he nevertheless sided with the North on the outbreak of the war. He first of all raised a company of 145 zouaves for the 69th regiment, and was elected captain of the company, and then, after Bull Run, raised the Irish Brigade, and was appointed brigadier-general (Feb. 3rd, 1862). He fought from the battle of Fair Oaks to that of Chancellorsville, but resigned May 5th, 1863. He was then, in November, 1864, appointed by President Lincoln acting major-general in command

of the Etowah district, during Sherman's march to the sea; and by President Johnson in July, 1865, to be secretary and acting-governor of Montana Territory. There he was strongly opposed as a Democrat by the local Republican party, but continued to hold that post until, on July 1st, 1867, he fell into the Missouri at Fort Benton, whither he had gone to meet his wife, was carried away by the swift stream and drowned.

Lyons, *Life of Meagher*; J. McCarthy's *History of Our Own Times*; Sir C. Gavan Duffy's *Young Ireland*. [J. A. H.]

Mehemet-Ali. [EGYPT.]

Mehemet Ali Pasha (b. 1827, d. 1878), Turkish soldier, was the son of German parents, and was originally called Charles Detroit. He entered the merchant service of Mecklenburg, but deserted owing to ill-treatment, and fled to Constantinople, where he became a Mahometan. Entering the army, he served during the Crimean War under Omar Pasha, and came out of it lieutenant-colonel, in 1867 he became pasha and brigadier-general. In 1873 he suppressed brigandage along the Greek frontier, and shortly before the declaration of war by Russia in 1877 he was sent to operate against the Montenegrins at the head of a *corps d'armée*. After the first Turkish disasters he replaced Abd-el-Kerim Pasha (q.v.) as commander-in-chief, and led off with some important successes on the Lom in August and September, but was driven behind that river on September 21st, and was then recalled to Constantinople. Sent to the relief of Osman Pasha at Plevna at the head of a miserably equipped force he was beaten off at Orkanieh (Oct. 23rd). Together with Karatheodori Pasha (q.v.) he was Turkish plenipotentiary at the Congress of Berlin (1878), and acquitted himself with credit. Immediately afterwards he was sent by the Sultan to pacify Albania, but fell a victim to an assassin on Sept. 7th, at Yankovan.

Meilhac, H. [HALÉVY.]

* **Meissonier, JEAN LOUIS ERNEST** (b. 1815), one of the most celebrated of modern French *genre* painters, and the son of a retail tradesman, was born at Lyons. He went to Paris when quite young, and studied art under Léon Cogniet, and in 1834 exhibited the picture now known as the *Visite chez le Bourgmestre*. It was followed by a number of similar pictures, among which *La Partie d'Échecs* (1841) and *La Partie de Boules* are the most celebrated. Though devoid of real genius, and at times almost finikin in execution, his art became extremely popular in France, and honours poured upon the painter, who received the grand medal in 1855 and 1867, became an officer of the Legion of Honour in 1855, and member of the Institute in 1863. His tiny canvases, generally

eight by ten, or at most fifteen inches, with their marvellous finish, elaboration, and almost photographic fidelity, commanded prices equal to those of Gérôme, a fact to be accounted for by the supposition that Delacroix and Delaroche had wearied the public of the impressionist school of art, and that recourse was accordingly had to this entirely new departure in art so far as France was concerned—although it was really only a reproduction of the Dutch school—as a refreshing novelty. Meissonnier's most famous pictures in his style, besides those mentioned, are *The Reader*, *A Game of Piquet*, *The Lecture at Diderot's*, and *The Smoker*. Later on he began to enlarge the size of his canvases, and produced a number of military pieces, all characterised by the patient elaboration of detail which distinguishes his smaller works. *The Emperor at Solferino*, exhibited in 1864; *A Charge of Cavalry* in 1867; and 1806 in 1868, are among the most celebrated of his works in this later manner. They have commanded gigantic prices; the American millionaire, A. T. Stewart, giving 300,000 francs for 1806; indeed, the Americans have always entertained a vast admiration for Meissonnier, both in *genre* and portraiture. His patient industry has also been exhibited to excellent effect in drawings on wood, notably in illustration of Balzac's *Comédie Humaine* and of *Paul et Virginie*. M. Meissonnier is somewhat of a man of action, having been present at the Italian campaign, the earlier battles of the Franco-German War, and having fought with the rank of colonel at the defence of Paris.

Melbourne, WILLIAM LAMB, 2ND VISCOUNT (b. March 15th, 1779, d. Nov. 24th, 1848), was the second son of Penistone Lamb, 1st Lord Melbourne of Kilmore, county Cavan, by Elizabeth, only daughter of Sir Ralph Milbanke of Halnaby, in Yorkshire. He was entered at Eton in 1790, and on July 7th, 1796, became, as was the fashion among Whig families of quality, a fellow-commoner of Trinity College, Cambridge. In 1798 he won a declamation prize on "the progressive improvements of mankind," and having matriculated on June 29th, 1799, a form which had somehow been omitted in its proper course, he took his B.A. degree on July 1st. Throughout his college career he was studious and diligent, and although no mathematician he became a good classical scholar. Meantime he had been preparing for the bar. He was entered at Lincoln's Inn in 1797; was called in Michaelmas term, 1804, and joined the northern circuit and Lancashire sessions. One brief he got—a prosecution—and then his prospects completely changed, and he quitted the law for ever. In 1805 his elder brother, Penistone, died, and left him heir to the peerage. He was at once embarked on a political career.

A seat was found for him at Leominster, but except for moving the address on Dec. 19th, 1806, he for some time made no particular figure in Parliament. In 1810, however, he gave his support to Romilly in his endeavours to reform the then barbarous criminal law, and, when in the same year it became necessary to invest the Prince of Wales with the royal powers as regent during the insanity of George III., Lamb, in an able speech, moved an amendment to the resolution, which proposed strictly to limit the regent's powers. Lamb was a personal friend of the Prince of Wales and his circle, and was at one time intimate with Brummel, dissimilar as the two men were. At an early period in his political life he began to lean towards the Liberal-Conservatism of Canning, and this, and other circumstances, lost him his seat for Leominster at the general election in 1812. In 1805 he had married Lady Caroline Ponsonby, daughter of the Earl of Bessborough, a woman, perhaps ill-regulated and vain, but of great talents and attractions. Their only son was born Aug. 11th, 1807, and although he lived until 1836, the object of his father's earnest care and affection, he was always an invalid, and a source of domestic trouble. In the years 1812 and 1813 Lady Caroline became acquainted with Lord Byron, then the idol of society, and an intimacy sprang up between them, which at last amounted almost to an infatuation on her part. On hearing the news of Byron's death, she was so much affected as to retire from society, and to become, if not insane, almost unbearably capricious. After long forbearance Lamb was forced to separate from her. When he went to Ireland in 1827 she remained in England, and, her health steadily declining, died in November of that year. During these years of withdrawal from Parliament, Lamb devoted himself to the desultory study, which was the one keen passion of his life. From the time when he was at Cambridge he had always affected to be indolent, and he studied an indifference and unconventionality of manner deliberately and of set purpose. These habits in time came to be strongly dominant over his mind, and, although his reading was laborious and wide, his taste fine, and his memory retentive, he produced no literary work. On the death of Sheridan, for whom he had a great admiration, he conceived the design of being his biographer, and with this view he read extensively in English comedy, and had even completed the first chapter of a life of Sheridan. But he shrank from the effort, and at length turned over his materials to Moore. It is, however, perhaps singular that his favourite study was theology. In 1816 he re-entered Parliament as member for the pocket-borough of Portarlington, and in the following year a vacancy occurring in the representation of Peterborough, was elected member

for that borough. He now took part frequently in debate, and was subsequently elected for Hertfordshire. Although he did not vote in the divisions upon the royal divorce on the side of the queen, he sympathised with her cause, and began from this time a close and admiring friendship with Brougham. One of the first signs of Canning's influence after he became Foreign Secretary was to secure, in 1823, Huskisson's entrance into the Cabinet as President of the Board of Trade, and Lamb, who was a close friend of Huskisson's, and much in his company, became so tinged with Canningite views, that the Whigs began to doubt his allegiance to them. Lord Liverpool even offered him subordinate office in the government, but the offer was refused, at some cost to himself, for Lamb, never a thrifty man, was now considerably in debt. Although his father had been created, in 1815, a baron of the United Kingdom, he still continued to restrict his son to the same allowance which he had made him on entering life. During the contests upon measures for suppressing the Catholic emancipation agitation Lamb took so liberal and unpopular a part that he endangered his seat, and, Tom Duncombe being brought out in opposition to him, lost Hertfordshire at the election in 1826. At length on April 12th, 1827, the reluctant king yielded to the inevitable, and Canning became Premier. Lamb was invited to take office, and on April 27th, was elected member for Newport, and appointed Secretary to the Lord Lieutenant of Ireland. This post he continued to hold under Lord Goderich and the Duke of Wellington, but when Huskisson resigned upon the dispute about the redistribution of the East Retford seat, Lamb decided to retire also. On July 22nd, 1828, old Lord Melbourne died, and William Lamb succeeded to the title. On Feb. 1st he took his seat in the House of Lords. In July, 1830, overtures were made to Melbourne, along with Grey and Palmerston, to join the government, and after Huskisson's death these were renewed. Melbourne, however, gradually became more and more decided in support of reform, and resumed his old position definitely among the Whigs. On Nov. 16th, Lord Grey was called on to form his administration, and the Home Office was offered to, and accepted by, Lord Melbourne, who was a favourite with the king, as being, in his phrase, "a great gentleman," unaffected, loyal, and sincere. The times were difficult, and in all the stress of the reform agitation Melbourne was responsible for the peace of the country. One of his first acts was to call on all magistrates to take prompt and decided steps for the repression of disorder, and when, upon the rejection of the Reform Bill by the House of Lords in the autumn, the Bristol riots took place, he took instant and active measures to restore order. He was, however, in favour of dealing

with the reform question in a large and liberal spirit. "I am for a low figure," he observed in the Cabinet, "on the amount of the franchise qualifications; unless we have a large basis to work on we shall do nothing." In the Upper House Melbourne now had charge of all the Government Bills sent up from the Commons, and as Home Secretary it fell to him to prepare and introduce, in 1833, a Factory Act, to protect young children employed in labour. Upon the resignation of Lord Grey, Melbourne, greatly to his surprise, was sent for, and was desired to form a coalition with the Duke of Wellington. This he declined to do, and on July 14th, 1834, he formed a Whig administration, with Brougham as Lord Chancellor, and Althorp Chancellor of the Exchequer, and leader of the House of Commons. From this time Melbourne's political history is that of the Whig Government. On Nov. 10th, Lord Spencer dying, Lord Althorp succeeded to the title, and was removed to the House of Lords. Deprived thus of his chief support in the House of Commons Lord Melbourne found himself in a position of embarrassment, and with, perhaps, indiscreet candour confessed as much to the king at an interview at Brighton. The king taking advantage of the admission summarily dismissed the Ministry and sent for the Duke of Wellington. Melbourne returning to town saw Brougham by accident and informed him of their dismissal, and Brougham betrayed the secret to the *Times* the same night. The king, indignant at what he took to be a trick of Melbourne's to coerce him, insisted that the Duke of Wellington should relieve him from the Whigs, and the Duke undertook to carry on the government provisionally until Sir Robert Peel could be summoned from Rome. Peel's administration was, however, short-lived. When the new Parliament met in February, 1835, he sustained defeats, first upon the election of a Speaker, and then upon Lord John Russell's motion for the disposal of the surplus revenues of the Irish Church. Peel then resigned, and Melbourne returned to office, Brougham, however, being left out of the administration. Melbourne met, at first, with considerable difficulties, partly through the conduct of Lord Durham, partly through the attitude of O'Connell. The latter, however, although disappointed of the Irish Attorney-Generalship, was conciliated, and supported the Whigs for some years. In 1835 Melbourne carried his great measure of municipal reform. In the following year he was harassed by the action brought against him by Mr. Norton, whom he had befriended, for alleged misconduct with Mrs. Norton, with whom he had been on terms of friendship since 1833. The trial, however, resulted in his favour, and Mr. Norton's conduct was believed to have been prompted by motives of political antagonism. On June 20th, the

following year, William IV. died, and on the accession of Queen Victoria the delicate task of guiding and instructing her in the royal duties fell to Melbourne. This he accomplished with singular judgment, devotion, and discretion. He almost took up his residence at Windsor, and withdrew from London society, and for some time even discharged the functions of the Queen's Private Secretary. The Government, however, grew steadily weaker and more discredited, and at length, on May 7th, 1839, finding themselves in a majority of five only in a full house upon their Jamaica Bill, they resigned. Sir Robert Peel undertook to form a Government, but gave up the attempt on account of the bed-chamber question, and Lord Melbourne resumed office, and continued Minister until, in 1841, his Government being defeated on a question of finance, Parliament was dissolved. The elections, however, proved unfavourable, and he resigned, and Sir Robert Peel came in. From this time a great change came over him. Although, in 1843, he continued to lead the Opposition, he found himself neglected and disregarded. After Sir Robert Peel's fall, no application was made to him to form an administration. His health was failing, and he was visibly a broken man. He still devoted himself to his books, but read half-unconsciously, talked aloud to himself, and wrote and spoke at times barely intelligibly. His last vote was given upon the Jewish Disabilities question on May 25th, 1848, and on Nov. 24th of the same year he died, leaving no issue.

McCallagh Torrens, *Memoir of Lord Melbourne*; *Greville Memoirs*. [J. A. H.]

* **Melikoff**, COUNT LORIS (b. 1824), Russian general, of Armenian origin, entered the Russian army, and greatly distinguished himself during the Crimean War at the capture of Kars. Appointed general and commandant of the town, he remained attached to the army of the Caucasus until 1859, and was sent as Governor to Circassia in 1860. On the outbreak of the Russo-Turkish war, in 1877, he was appointed second in command to the Grand Duke Michael, the Commander-in-Chief of the Army of the Caucasus. To him is entirely due the credit of the brilliant operations by which Moukhtar Pasha (q.v.), the Turkish Commander-in-Chief, was forced to evacuate Kars and was blockaded in Erzeroum. In 1878 Melikoff, now a count, became Governor of Astrakhan, and in Feb., 1880, he was summoned by the Czar to St. Petersburg, and appointed chief of a supreme executive commission for the preservation of order, and soon afterwards Minister of the Interior. An attempt was promptly made to murder him by a Nihilist, but it failed, and the Count's crusade against Nihilism appeared entirely successful until

on March 13th, 1881, occurred the assassination of Alexander. His system of mingled coercion and moderate reform having broken down, Count Melikoff resigned in May, and was succeeded by General Ignatieff.

Melville, HENRY DUNDAS, VISCOUNT, and BARON DUNIRA (b. 1741, d. 1811), was called to the Scotch bar in 1763, and rose to be successively Solicitor-General, Lord-Advocate and Keeper of the Great Seal for Scotland. In 1774 he was returned to Parliament for the County of Edinburgh, and though at first a member of the Opposition, went over to Lord North, whom he supported in the coercion of the American colonies. He continued in office under Rockingham, and was Shelburne's Treasurer of the Navy, but refused to join the Fox and North coalition. When Pitt came to the front, Dundas attached himself to his fortunes, became President of the Board of Control in 1784, and at the same time Treasurer of the Navy, and had the entire direction of Scottish affairs. His use of this enormous patronage was by no means above suspicion. In 1791 he became Home Secretary, retaining most of his other offices, and applied himself with great energy to the formation of volunteer forces for the defence of the Kingdom. He resigned with Pitt in 1801, and when Addington came into power was raised to the peerage. In Pitt's last Ministry he became First Lord of the Admiralty. The Opposition in the Commons, selecting him as a target for attack, moved, in 1805, a vote of censure upon his conduct of the navy in Pitt's first administration, and carried it by the casting vote of the Speaker, Abbot. Large sums were certainly unaccounted for, and the accounts had been kept with culpable laxity, but Melville's defence, that the money had been used for secret service, was probably just. The House of Lords acquitted him on all charges in 1806, but Melville's public career was at an end, and his fall had undoubtedly hastened the death of Pitt.

Melville, J. G. WHYTE. [WHYTE-MELVILLE.]

Mendelssohn-Bartholdy, FELIX (b. Feb. 3rd, 1809, d. Nov. 4th, 1847), was of Jewish origin and a native of Hamburg. The son of a wealthy banker, every facility was afforded for the development of the musical gift which evidenced itself quite early in Mendelssohn. His mother imparted to him his first music lessons, and at ten years of age he had a complete command of the keyboard of the pianoforte, and was well acquainted with some of the best musical works. At this period his father quitted Hamburg for Berlin, where the young musician came under the care of Berger for the pianoforte and Zelter for theory of music. The creative power of the boy-master began now (1825) to

assert itself with a force and productiveness which astonished everyone. The earliest compositions had already included a symphony in C minor; two one-act operas, the *Two Schoolmasters* and the *Wandering Minstrels*; an opera, *The Wedding of Camacho*, produced at the Berlin Theatre Royal (1825), when the youth of sixteen also gave to the world that unequalled example of early musical talent, the overture to the *Midsummer Night's Dream*. The year 1828 saw the production of another descriptive overture, *The Calm Sea and Prosperous Voyage*, a work in which, as in the *Midsummer Night's Dream* overture, Mendelssohn's personality displays itself with an irresistible charm and grace. In the next year he visited England; having first paid a debt of gratitude to Berlin by resuscitating, after a hundred years' sleep, Bach's *chef-d'œuvre*, the *Matthäus Passion*, and this met with a success which will be ever memorable to the musical world. The stir caused in London musical circles by the arrival (on the 20th April) of the youthful *maestro* may be imagined, but the pitch of excitement was reached at the Philharmonic Society's concert on May 25th, when he made his first bow to an English audience and wielded the *bâton* in conducting his C minor symphony and the *Midsummer Night's Dream* overture. His next works were the *Scottish* symphony and overture to *Fingal's Cave*, both of which works breathe the romantic scenery which had fed his cultivated mind during a visit to Scotland. Bent on travel and the gathering in of impressions, Mendelssohn undertook a journey to Italy in 1830, and some of the happiest of his music resulted from this journey. Under the Italian sun he painted the glorious colours of Goethe's *Walpurgis Night* music, the *Italian* symphony, and the *Reformation* symphony. After a brief stay in Paris in 1831 Mendelssohn paid a second visit to London in April, 1832, one chiefly associated with the production of his G minor concerto by the Philharmonic Society. Its composer interpreted the pianoforte part on this occasion, and the work created so extraordinary an impression that the society performed it at their following concert, an occurrence without precedent. In 1833 he was offered and accepted the post of Director of the Düsseldorf Theatre and Concerts. At this period he composed his overture to *St. Paul* and many of the charming *Lieder ohne Worte*. In 1837 Mendelssohn married Cecilia Jean Renaud, the daughter of a Protestant clergyman at Frankfort, a union of unbroken bliss during the short ten years that it lasted. This same year saw the production of *St. Paul* at the Birmingham Musical Festival, when the work met with a most enthusiastic reception. Returning with his young wife to their home at Leipzig, he continued to pour forth fresh inspirations, notable among which stands the *Ruy Blas* overture in C minor, with its vigorous and gorgeous instrumentation; the

M.W.—24

trio in D minor for pianoforte, violin, and violoncello; and *When Israel out of Egypt Came*. The year 1840 gave birth to the *Lobgesang*, or Hymn of Praise, written for the Fourth Centenary of the Invention of Printing, shortly after which it was produced at the Birmingham Festival. Summoned by the King of Prussia to Berlin, Mendelssohn journeyed there in 1841 to take over the directorship of music at the Academy of Arts and to conduct the great instrumental concerts held at Berlin. The acceptance of this post led to the composition of his famous *Antigone* music, first performed in the new palace at Potsdam, 6th Nov., 1841—music which the scholar Böckh declared to be "in perfect harmony with his conceptions of Greek life and character and with the muse of Sophocles." It was at this period that he completed the vigorous sonata in D major for piano and 'cello, and despite his time being much occupied with the inauguration of the Leipzig Conservatoire, opened on the 3rd April, 1843, he turned out the fine settings of the 42nd and 43rd Psalms for eight part choirs, four grand organ sonatas, the overture to *Athalie*, and the splendid violin concerto in E minor. Never was more busy life or ready pen. He paid a flying visit in 1844 to London, where he conducted six of the Philharmonic concerts, rendered *St. Paul* at Exeter Hall, and made his famous appearance at Moscheles' farewell concert, executing there an extempore cadenza, which for grandeur of conception and prodigious difficulties exceeded any parallel effort in the recollection of living musicians. Nevertheless, in 1846 the world was richer by the splendid cantata, *Lauda Sion*, and that consummate stroke of musical conception, the *Elijah* oratorio. Overpowering as has been the enthusiasm upon many an important occasion in the history of the Birmingham Festivals, never probably did greater excitement burst its bonds than when, on the morning of the 25th August, exactly at the appointed time, Mendelssohn was seen approaching his seat to conduct his latest work. Ever since it has gone on increasing in popularity until it has become second only to *The Messiah* in the hearts of English musical people. Practically the *Elijah* was Mendelssohn's last work, and it is fitting that such a career should be crowned with so supreme an effort. Returning to Frankfort after the first performance of the *Elijah* in London at Exeter Hall, on April 23rd, 1847, Mendelssohn seemed more active in composition than ever. An oratorio, *Christus*, and the opera *Lorelei*, two great works, were begun, but were destined to remain unfinished. Suddenly the brilliant light went out, and the current of Mendelssohn's musical power was stopped for all time. At the age of thirty-eight—an age when most reputations assert themselves—this brightest star of the musical firmament disappeared for ever. Concerning Mendels-

sohn's influence upon music and his place in art it is yet early to speak decidedly. The closing years of a century tack too closely upon the career of its greatest musical light to permit of a gauge being taken of the artistic results of such a worker. Whether there will be a consensus of opinion on the part of a later generation it is impossible to predict, but it would certainly be erroneous to say that such exists now. Already parties are divided. The popular ear claims him and evidences a sympathy for his music which has had no equal, save in the case of Handel, throughout music's annals. This is especially the case in England, where Mendelssohn's lyrical strength, his great *forte*, has won for him admirers who would be quite unequal to judge of his contrapuntal skill and vast orchestral resources. There is, however another, and smaller, yet not less discerning element, that sees in this lyricism a surface resource which has been employed even to monotony: until, indeed, it has proved a positive weakness, and this in the works which most hit the popular taste—his oratorios *St. Paul* and *Elijah*. If we except the *Lieder ohne Worte*, a form which we justly owe to Mendelssohn—though this is sometimes assigned to the credit of Beethoven in his sonatas and of Field in his nocturnes—Mendelssohn did nothing towards creating new forms. It is not here, then, that his followers can hope to raise him to the rank of Beethoven, Mozart, Handel, or Bach. Nor as a composer of oratorio had he such scanty materials to work upon as fell to Bach and Handel. Mendelssohn was endowed with a keen artistic perception, and it was this which led him to so deep a study of the Thuringian and Saxon masters. But for them the *St. Paul* and *Elijah* oratorios might never have been written, just as no opera has fallen from this active pen. As it is, we have his oratorios, and in viewing them with the older models, Mendelssohn's great indebtedness cannot be disputed. Yet the melodic genius of Mendelssohn has rounded off in a marvellous fashion the sharp corners of the older masters. Moreover, his refined feeling, his sweet grace, the fuller and rarely ill-judged orchestral resources and combinations at his command—these qualities have stamped with an individuality this modern master. It is by the freshness of muse and the charm of easy grace and buoyancy that Mendelssohn is most distinguished. He has probably reached his highest dramatic pitch in the Carmel scene of *Elijah*, but such a strength could not convey him through the passionate conflicts and struggles which constitute the bases of a successful opera. Mendelssohn had versatility of talent enough, even if we consider him as a man apart from the musician, but he had not the universality of musical resource which idolising followers would grant to him. His power of creating new works absorbs perhaps all his other greatnesses,

and it speaks well for their composer that after fifty years one can rarely meet with a concert programme in which the name of Mendelssohn is not represented. Mendelssohn's influence upon piano music cannot be gainsaid. His *Songs without Words* have quite driven the "firework" school of pieces off the piano, and this is not to be regretted. The "variations" and "arrangements" which followed so fast upon the advent of Moscheles and other brilliant performers of his class have now quite disappeared. Thousands of small composers have copied Mendelssohn's *Lieder ohne Worte* form, and their originator will have done much for art if a future generation knows him for nothing better than this. But his meed will be greater. Melody will be, as it always has been, the guide of the English people, and while this is so Mendelssohn will have the popular ear.

Mendelssohn's *Reisebriefen* (1861 Eng. trans. 1863): Hiller, *Briefe und Erinnerungen*; Devrient, *Erinnerungen an F. Mendelssohn Bartholdy*; Lampadius, *Leben des Mendelssohn-Bartholdy*.

Mendoon Men. [BURMAH.]

Menschikoff, ALEXANDER SEIGEIEVITCH (b. 1787, d. 1869), Russian general, the great-grandson of the right-hand man of Peter the Great, was at first in the diplomatic service as attaché at Vienna. He, however, accompanied the Czar Alexander I. in his campaigns against Napoleon, and by the peace of 1815 he had attained the rank of general. In 1823 he retired from the army, and proceeded to reorganise the Russian navy. Before the Crimean war he was deputed to lay the Russian demands before the Porte. On the outbreak of the war he was appointed Commander-in-Chief, but proved extremely incompetent, and was defeated at the Alma (Sept. 20th, 1854), in a position which he believed to be impregnable. As soon as Nicholas died, March, 1855, he was recalled, and spent the remainder of his days in retirement.

Menzel, WOLFGANG (b. 1789, d. 1873), the critic, was born at Waldenburg, in Siberia, where his father was a doctor. After attending the Gymnasium at Breslau, he studied at the University of Jena, where he became a prominent leader of the new Burschenschaft movement. Obligated to leave Jena after the murder of Kotzebue, he went for a time to Bonn, and thence to Switzerland. Having already become known for his vigorous articles in various journals, he was in 1825 appointed editor of a literary and critical weekly paper at Stuttgart, and at once became celebrated as the typical German philistine, the bitterest foe of enlightenment. Having remorselessly attacked not only every variety of Rationalist, but all the greatest names in German literature and philosophy, Goethe, Schelling, and Hegel, he turned the full blasts of his blustering wrath upon the small band

of "Young Germany," and it is through the eloquent scorn of their self-defence that his name is now best remembered.

Menzel's autobiographical *Denkwürdigkeiten*: but see especially Börne's *Menzel der Franzosenfresser*; Heine, *Ueber den Denuncianten*; and Gutzkow's works; also the articles on these writers.

Mercadante, SAVERIO (b. 1797; d. Dec. 13th, 1870), entered the Conservatorio San Sebastiano while Zingarelli was principal, and for the first few years devoted his attention chiefly to instrumental music, studying the flute and violin. His compositions at this period began to attract the attention of Zingarelli, who saw the composer's gift in the military airs, ballet music, and overtures which young Mercadante threw off. Following the advice of his chief he turned his attention to vocal composition, and produced in rapid succession a cantata, *L'Unione degli Belli Arte* (1818), and the opera, *L'Apoteosi d'Ercole* (1819), both of which met with considerable success. This determined Mercadante's career as a composer, and in the same year he was executing a commission for the Teatro Nuovo, entitled *Violenza e Costanza*—his first opera buffa. Still successful, he strengthened his position musically and financially by producing several works in opera seria form: *Anacreonte in Samo*, produced at San Carlo (1820); *Scipione in Cartagina* (1821), first given at the Teatro Argentino at Rome during the carnival; *Maria Stuart*, given in Bologna the same year; *Elisa e Claudio* (Milan, 1822); and *Andronico*—in which occurs the charming duet *Vanne so alberghi in petto*—for the attractions of the Teatro Fenice at Venice during the carnival of this same year. His fame rested not in his own country. Strong in either comic or serious opera, and excelling in a peculiarly fresh and pleasing musical vein, his music and many of his melodies quickly found the ear of musical Europe. Thus he visited Vienna in 1824, remaining in that city some two years. In 1827 he was in Madrid, then Cadiz, then back again in Naples. In 1833 an honour was thrust upon him in the shape of an appointment as *maestro di capella* at the cathedral of Novaro, a post which had been vacated by Generali. His vast creative powers, however, did not long remain idle, for in 1836 he produced in Paris one of his finest works, *I Briganti*—a subject with which his many wanderings in Spain had made him not unfamiliar. His next great work, and one of two on which his fame mainly rests, was *Il Giuramento*, containing the beautiful tenor aria *Bella, adorata Incognita*, first given at Milan in 1837. Here, too, must be mentioned his famous opera buffa, *I due Illustri Rivali*, in which Mercadante is charged by some writers with changing his style, because in this work he is seen employing his brass instruments for strongly marking the accents—a course which

many subsequent composers have copied, especially the modern Italian school. The music of this opera, however, well represents its composer, while his chaste melodic gifts and fancy may be easily ascertained by a reference to some of his works. From this period Mercadante, through weakness of sight, slackened his work as a composer. In 1862 total blindness set in, and continued to the year of his death, much burdening the last eight years of an unusually active life.

[F. J. C.]

* **Meredith**, GEORGE (b. 1828), novelist and poet, is said to have been educated on the Continent, and to have been originally intended for the legal profession. His first appearance in literature was as a poet with a volume of *Poems* (1851), which was followed by *Poems and Ballads* (1862), and *Poems and Lyrics of the Joy of Earth* (1883). *The Shaving of Shagpat* (1856) is a humorous extravaganza in the style of an Arabian storyteller, and *Farina* (1857) is a short prose story setting forth a legend of Cologne. Mr. Meredith's first novel was the *Ordeal of Richard Feverel* (1859), dealing with the philosophical side of education; *Evan Harrington* (1861) followed; and then came the remarkable *Emilia in England* (1864), now *Sandra Belloni*, a wonderfully vivid account of the adventures of a young foreigner absolutely devoid of culture, with nothing but her divine voice, who makes for herself a career, with *Vittoria* (1866) for a sequel. Almost as powerful in their different spheres are *Rhoda Fleming* (1865), *The Adventures of Harry Richmond* (1871), the subtle and witty *Egoist* (1879), and *The Tragic Comedians* (1881), a novel founded on the fate of the German Socialist Lassalle (q.v.); but perhaps of all Mr. Meredith's later works two may be selected for especial mention, namely, *Beauchamp's Career* (1876) and *Diana of the Crossways* (1885). The first is a young aristocratic Radical, the second is Mrs. Norton (q.v.) transported from the period of Lord Melbourne to that of the repeal of the Corn Laws. They reveal Mr. Meredith at his very best, philosophically analysing the phenomena of social or moral perplexities and distresses, and treating them sometimes with a hint of deep sympathy, but more often with a thoughtful and subdued humour. His men of the world, particularly those of a not very high class intellect, are inimitable. Mr. Meredith's style is weighted with thought and full of concentrated phraseology.

Merimée, PROSPER (b. 1803, d. 1870), French man of letters, first studied for the law, but soon relinquishing this for the profession of literature, made his *début* with two literary mystifications—*Le Théâtre de Clara Gazul*, *Comédienne Espagnole* (1825), and *Gusla* (1827), a collection of pretended Illyrian songs by one Hyacinthe Naglanoivitch. The

first of these gave a decided impulse to the romantic movement in French literature, and they were followed by the anonymous publications, *La Jacquerie*, *Scènes Féodales* (1828), *La Famille Carvayal* (1828), and *Un Chronique de Charles IX.* (1829). He received (1831) the office of Inspector-General of Historic Monuments, and the travels undertaken in this capacity bore fruit in the works, *Dans le Midi de France* (1835), *Dans l'Ouest* (1836), *En Auvergne et Limousin* (1838), and *En Corse* (1840). An intimate friend of the Countess Montijo, afterwards Empress of the French, he was naturally bound to the fortunes of the Bonapartes, and was a welcome visitor at the Tuileries during the Second Empire. In 1853 he became a member of the senate and Chief of the Ministry of Marine, and in 1858 President of the Commission for the Reorganisation of the Imperial Library. He was admitted to the Academy in 1844. Of the works published in his own name, we have *Monuments Historiques* (1843); *Études sur l'Histoire Romaine* (1844); *Histoire de Don Pédre I., Roi de Castille* (1848); *Don Quichotte, ou les Deux Héritiers* (1850); *Le Faux Démétrius* (1853); *Mélanges Historiques et Littéraires* (1855); *Les Cosaques d'Autrefois* (1865). *Mosaïques* (1833), *Contes et Nouvelles* (1846), *Nouvelles* (1852), and *Dernières Nouvelles* (1874), contain his novels and short stories. Mérimée's literary career ended as it began with a mystification. In 1873 appeared the two volumes of *Lettres à Une Inconnue*, followed in 1875 by *Lettres à Une autre Inconnue*, which gave rise to great controversy as to the identity of the person to whom they were addressed, and how far the letters were genuine or fictitious. The purity, elegance of style, and culture shown in Mérimée's works recommend them to a large class of refined readers, while their originality, and the truthfulness of local colouring give them a deep interest. Oddly enough this last characteristic does not hold good of the majority of his historical works. The man, as revealed in his posthumous letters and in his works, has met with various and widely different judgments. Some see under the cold, cynical exterior a really sensitive and benevolent nature, while others take him at his own representation—a shallow, polished, and selfish libertine, whose merit consisted in shining with only a reflected light.

[A. M. C.]

* **Merivale**, THE VERY REV. CHARLES, D.D. (b. 1808), the historian of Rome, is the son of Mr. J. H. Merivale, the translator of Schiller's minor poems, and was educated at Harrow and St. John's College, Cambridge. In 1828 he made his first appearance in literature with his *Carmen Latinum*, Cæsar at the Rubicon; and in 1830 took his degree with honours. Having taken orders he was select preacher before the University of Cambridge from 1838 to 1840, one of the

preachers at Whitehall from 1839 to 1841, and delivered the Hulsean lectures at Cambridge in 1861, and the Boyle lectures (which he has published) in 1864 and 1865. In 1848 he was appointed rector of Lawford, Essex, and the result of his researches in the field of Roman history appeared in his *History of the Romans under the Empire* (1850-62). In 1863 he became chaplain to the Speaker of the House of Commons, and in 1869 was installed in the deanery of Ely, having a few months before published a rhyming translation of Homer's *Iliad*. Continuing his studies in Roman history he brought out, in 1875, his *General History of Rome* from the foundation of the city in b.c. 753 to the fall of Augustulus in a.d. 476, and has since published, amongst other works, his lectures on *Early Church History* (1879) and *The Contrast between Pagan and Christian Society* (1880).

Merivale, HERMAN, C.B. (b. 1806, d. 1874), brother of the above, was educated at Harrow and Trinity College, Oxford, and was elected Fellow of Balliol. He was called to the Bar in 1832, and in 1837 became Professor of Political Economy at Oxford University. His able lectures on *Colonisation and Colonies* attracted the notice of Earl Grey; and in 1847 Mr. Merivale was appointed Assistant Under-Secretary, and soon afterwards Permanent Under-Secretary for the Colonies. In 1860 he became Permanent Under-Secretary for India, and spent the remainder of his professional career in that capacity. His chief literary works are *Historical Studies* (1868) and completions of Parkes's *Life of Sir Philip Frances*, and Sir H. Edwards's *Life of Sir H. Laurence*.

Méryon, CHARLES (b. 1821, d. 1868), a French etcher, was the son of an English physician, his mother being a ballet dancer. She, it appears, was passionately fond of him; but her surroundings, when Méryon's father had left her, were not of the happiest, and Méryon was no doubt without that part of education which consists of the long lesson of self-control. His early life was spent in the navy. In the French corvette *Le Rhin* he made the tour of the world, and being even then fond of drawing as a pastime, he took the sketches in and about New Zealand, and the admirable sketch of the choragic monument of Lysicrates, at Athens, which served him for some of his later etchings. Deeming himself not strong enough for naval service, he wished to become an artist. In the autumn of 1846 he accordingly gave in his resignation as lieutenant, and, provided for, for the time, by the possession of about eight hundred pounds left him by his mother, he established himself in Paris, and took lessons in drawing from the round and in painting. Presently he found he was colour-blind, and thereupon he decided to devote himself to engraving and etching, and entered

the studio of Bléry, to whom in after life he addressed a set of verses, "*à toi Bléry, mon maître.*" Méryon's first etchings were copies of those of Zeeman, and some other Dutchmen. It was in 1850 that he began his Paris set, the work on which his fame rests; and it was finished in 1854, though he made isolated engravings of Parisian subjects now and then for several years afterwards. His Paris series has been rightly described as a "sombre epic." It is characteristic of Méryon's melancholy, that the Morgue should have been the earliest important subject chosen for his work. His *Stryge* looks down with satisfaction on the suffering and wrong that lies below. His *Rue des Mauvais Garçons*—which was a favourite with Baudelaire—suggests the inquiry which Méryon expressly makes in the verses engraved on it. The *Abside de Notre Dame*, which is accounted the masterpiece of the etcher, is not much more cheerful, for on one or two impressions of it Méryon pencilled some lines descriptive of his conviction that, vast as the cathedral was, it would not contain even "the *élite*" of the sinners of the town. Still, however sad and discouraged his own thought, he contrived to fill his work with infinite loveliness and abounding strength. His method of etching—to speak for a moment of technicalities—was very varied; but among all the varieties it displays, the free line, which is the sign of a great sketcher in etching, is generally absent. Méryon was a "great original engraver"—more than a free etcher, as Mr. Seymour Haden has already skilfully pointed out. But Méryon preserved in the long-laboured plate the concentration and the first intention manifested generally in the first sketch, and often confined to it. To resume the story of his life. When he had finished these monumental etchings, which are as imaginative as they are accurate, he took them round to the printsellers. The printsellers could not sell them, and Méryon had few private friends to help him as purchasers of his works. But Monsieur Destailleur, the architect, M. de Solicis, M. Niel, of the Ministry of the Interior, and M. Wasset, then a humbler employé at the Ministry of War—a bachelor collector, amassing rarities in a narrow apartment in the Rue Jacob—formed collections of his work; and presently M. Burty, a critic then attached to the *Gazette des Beaux-Arts*, devoted two articles to the etcher in whom he perceived a genius. Baudelaire—attracted, no doubt, by whatever was morbid in Méryon—also sung his praises more briefly; but Méryon was for the most part ignored. Two or three of his best etchings were refused at the Salon. Disappointment began to tell upon him. Habitually poor, and much too often hopelessly in love, his mind at length gave way. Finally, he had to be taken to the public lunatic asylum of Charenton. But after a while a cure was effected, and Méryon was released. By

this time several friendly amateurs of the art whose glories he had done so much to revive gave him commissions, but these were generally for subjects which their convenience at the moment prompted them to desire, and, for the matter of that, the sources of Méryon's inspiration were dried up. His later work, even where it is sane and unobjectionable, is but of small account. His brain gave way again, and for the second time he was lodged at Charenton, where he died. In the character of this now unquestioned genius there was much that was lovable—he was simple, affectionate, indomitably persevering. These qualities ensured him a warm corner in the remembrance of his friends; and after his death fame came to him gradually in England and in France. A fine impression of his finest subject, for which he cheerfully accepted one and threepence from M. Wasset, is now worth not much less than thirty pounds, and it is not improbable this price will be increased; for the real amateurs of Art, in Paris, London, and New York, know that the *Abside* of Méryon holds its own against the *Melancholia* of Dürer, against the *Goldweiger's Field*, the *Ephraim Bonus*, the *Clément de Jonge* of Rembrandt. An exhibition of Méryon's etchings was held at the Museum of Fine Arts, Boston (Mass.), in the spring of 1886.

Metcalfe, CHARLES THEOPHILUS, BARON (b. 1785, d. 1846), colonial administrator, was the second son of Major Thomas Theophilus Metcalfe, of the Bengal army, who afterwards became a director of the East India Company, and was created a baronet in 1802. At the age of fifteen young Metcalfe entered the East India Company's service as a cadet, and in 1808 was selected by Lord Minto for the difficult post of envoy to the court of Runjet Singh, at Lahore, where in the spring of 1809 he concluded the important treaty securing the independence of the Sikh states between the Sutlej and the Jumna. By indefatigable zeal and painstaking perseverance young Metcalfe went through the several stages of promotion, becoming a member of the Supreme Council in 1827, and in the beginning of 1835 succeeded Lord William Bentinck in the governor-generalship. His administration (1835-6) is marked by several liberal measures, the chief of which was perhaps the emancipation of the press. This measure, however, although universally popular in India, so complicated his relations with the directors at home that he was forced to withdraw from the company's service in 1838. In 1839 he was sent to Jamaica as governor, and

did good work in carrying out the Negro Emancipation Act, but resigned in 1842, owing to ill-health. In 1843 he was nominated governor-general of Canada. In 1845, on his return home, for his able services he was rewarded with a peerage, but died shortly afterwards.

Sir J. W. Kaye, *Life and Correspondence of Charles Lord Metcalfe*, 1854.

Metternich, CLEMENS WENCESLAUS NEPOMUK LOTHAR, PRINCE VON (b. May 15th, 1773; d. June 5th, 1859), Austrian diplomatist and statesman, was born at Coblenz, and studied at the university of Strasburg. It was during his student years that the French Revolution broke out, and he was himself an eye-witness of a revolutionary riot, an event which left an indelible impression upon him. In 1790 he quitted Strasburg to take an important part in the ceremony which accompanied the coronation of Leopold II. After a brief period of further study at Mayence, he travelled in England and Holland to prepare himself for the diplomatic career. In 1795 he married the Princess Eleanor Kaunitz, a granddaughter of the celebrated minister. In 1798 he accompanied his father to the congress of Rastadt, where he represented the Westphalian nobles whose estates were to be transferred to the French Republic. In 1801 he was Austrian Ambassador at Dresden, and in 1803 was transferred to Berlin. Here the skill with which he managed the delicate negotiations by which Austria was attempting to gain over Prussia to the alliance against France, soon brought him into prominence. In 1806 he was appointed Austrian Ambassador in France. He succeeded in keeping on good terms with Napoleon during the trying period between 1806 and 1809, though he was vehemently urging on the Austrian Government the resumption of hostilities. After the peace of Vienna (1809), Metternich superseded Stadion as Austrian Foreign Minister and Chancellor; and it was under his auspices that the marriage between Napoleon and Maria Louisa, and the temporary alliance between Austria and France, were negotiated. During the next four years he took advantage of his position to restore the armed strength of Austria, while he skilfully managed to make Austria the arbiter of the fate of Europe. In the Russian campaign of 1812, Austria was nominally in alliance with France; but Metternich took care not to impede the success of the Russians. In the following year he offered the armed mediation of Austria between France, Prussia, and Russia. On the 28th of June, a celebrated interview, which lasted for six hours, took place between Napoleon and Metternich at Dresden. The Emperor rejected the Austrian conditions, which, under the circumstances, were extremely favourable to France. On the 10th of August, he signed the document

which pledged Austria to join in the "War of Liberation." In October, Metternich was created a Prince of the Empire. After the successful campaign in Germany, Metternich (who was not at all favourable to the patriotic movement in Germany) still attempted to make peace with France, on terms which were comparatively easy for that power; Napoleon, however, rejected his overtures. At the Congress of Vienna, Metternich, while securing large extensions of territory for Austria, succeeded in extinguishing the hopes of the Prussian statesmen who had expected that the result of the War of Liberation would be an united Germany. The German confederation, which was formed under Metternich's auspices, was so devised as to secure the independence of the minor German sovereigns, while the new diet was no more representative of the German nation than the old Imperial diet which it replaced. Italy was to remain a "geographical expression," made up of a large number of semi-independent states under the hegemony of the Hapsburg Emperor. During the long era of peace which followed the Treaties of 1815, Metternich was, perhaps, the most prominent figure in European politics. Hitherto, he had been an Austrian statesman pure and simple. He now comes forward as the champion of the Conservative principle in continental Europe generally. In the French Revolution he saw the prime foe to order, good government, and the gradation of classes on which society depends; and he looked upon Liberalism as nothing but a step towards Revolution. Consequently he used all the influence which his diplomatic abilities and his commanding position as chief minister of the second power of the Continent gave him, to check all movements towards the extension of national liberty and constitutional progress. At the congresses of Aix-la-Chapelle (1818), and Carlsbad (1819), and subsequently at Troppau and Laibach, he formed and strengthened a league of sovereigns for upholding the *status quo* in Europe, and obtained their authorisation to the reactionary measures by which he muzzled the German press and suppressed free speech at the universities. In 1821 an Austrian army marched into Naples to force the Neapolitans to restore their old despotic constitution, and a revolutionary outbreak in Piedmont was speedily suppressed. In 1822 the representatives of the allied Powers met at Verona, and it was decided, at Metternich's instigation, to suppress the new Spanish constitution. When the Greek question came to the front, Metternich, as usual, was opposed to the party of revolt; but his efforts were completely foiled, chiefly by the energetic diplomacy of Canning. After the July Revolution of 1830, his influence as Grand Conservator of European politics gradually declined. He reluctantly recognised Louis Philippe, and did not hesitate to suppress the revolutionary

movement in the Papal states by force, at the risk of a war with France. But France and England were now in alliance, and Nicholas of Russia was much less easily wielded by Metternich than Alexander. Metternich's influence was henceforth chiefly confined to Austria and Germany. In 1835 the Emperor Francis died, and under his weaker successor Metternich had unfettered control of Austrian State affairs. The great convulsion of 1848 showed that his policy of shutting down the safety valve had failed. He was compelled to resign office, and to seek safety from the violence of the mob in flight. He came to England, and afterwards spent some time at Brussels. In 1851 he returned to Vienna, and was occasionally consulted by the young Emperor, Francis Joseph, and his advisers; but he never held office. Metternich's public career has been the subject of excessive and even extravagant censure. It is not possible here to enter on the question of his policy, or to discuss the pleas which may be urged in his defence. But it may be pointed out that, as an Austrian minister, he was successful in maintaining the preponderance of his country during a long and critical period. Whatever may be thought of his policy, it must be acknowledged that in diplomacy he has few equals among the statesmen of the nineteenth century. Prince Metternich was thrice married. In private life he was amiable, kind-hearted, and sincerely attached to his children, and a few intimate friends.

Memoirs of Prince Metternich, edited by Prince Richard Metternich (Eng. translation by Mrs. Napier; London, 1880, etc.); Wachalla, *Der Reichskanzler Fürst v. Metternich* (1872); Hornmayer, *Kaiser Franz und Metternich* (1848); Varnhagen von Ense, *Denkwürdigkeiten; Die Correspondence of Gentz and Alexander von Humboldt*. [S. J. L.]

Mexico, MAXIMILIAN, EMPEROR OF (Ferdinand Maximilian Joseph) (b. 1832, d. 1867), the younger brother of Francis Joseph, Emperor of Austria, was born at Vienna, and as a boy displayed love for study and retirement. He entered the navy in 1846, and in 1854 was made rear-admiral, and placed in command of the Austrian fleet. From 1857 to 1859 he was Viceroy of Lombardy and Venice, and proved a vigorous and popular ruler. He lived happily with his wife, the Princess Charlotte of Belgium, whom he had married in 1857, until 1863, when he was asked to become emperor by Napoleon III., who had sent an expedition to Mexico, and knew not how to withdraw it with dignity. With great reluctance he accepted the crown, landed at Vera Cruz in May, 1864, and as long as he was supported by the French managed to maintain himself against the Republican party and its leader, Juarez (q.v.). In 1866, however, the French troops were withdrawn, owing to the threats of the United States, and Maximilian was left to struggle on as he could. The desperate mission of the empress

to Europe produced no aid, and she lost her reason. Maximilian committed the great blunder of issuing a decree, that all who resisted him in arms should be shot, and in consequence, when he was taken prisoner by Juarez, was himself put to death as a traitor (June, 1867). There was a great outcry throughout Europe and America, but no retaliatory steps were taken.

Meyerbeer, GIACOMO (b. Sept. 5th, 1794; d. May 2nd, 1863), musician, had for his masters Lauska and Clementi for the piano, Zelter, and subsequently Bernard Weber, and Vogler for theory. The creative genius soon asserted itself in Meyerbeer, and settings of the *Songs of Klopstock*, an oratorio *God and Sacred Nature*, *Alimélek* a comic opera, and *Jephtha's Vow* an opera, succeeded each other with astonishing rapidity. At the age of eighteen he went to Vienna, and attracted some notice as a pianoforte player, until an opportunity presented itself of composing an opera for the Imperial Court. The result was *The Two Caliphs*, which proved too learned for an assemblage saturated with the traditions of the Italian style. Meyerbeer found a friend in Salieri, who advised a journey to Italy and a strict attention to Italian style and song; and eventually this was undertaken. He drank copiously at the fount of Italian Art, and then wrote *Romilda e Costanza* (1815), *Eduardo e Christina* (1820), *Margherita d'Anjou* (1820), *L'Esule di Granata* (1823), *Il Crociato in Egitto* (1824), and others. All these enjoyed only an ephemeral success. At the instance of Comte de Rochefoucauld he now (1826) visited Paris. His next step was to complete the unfinished score of *Robert le Diable*, which was to be performed at the Académie Royale. With this opera, produced on Nov. 18th, 1831, Meyerbeer entered upon a career of unparalleled success. *Robert le Diable*, the first real fruit of his Italian experiences, was a complete metamorphosis of style. Its pleasing melodies and tuneful music, the fresh and original modulations, above all the rich and effective instrumentation, won learned and unlearned alike, and made the fortune of the Paris Opera. Five years later, on Feb. 29th, 1836, he produced *Les Huguenots*, and subsequently in 1849 his *Le Prophète*. In 1848 an Italian version of it was successfully brought out at the Royal Italian Opera, London, with Madame Viardot, Mario, and Tamburini in the principal parts. It has ever since kept the stage, indeed no opera can compare with it in this respect. *Le Prophète* was not a less majestic work, and contains much of the grandest music Meyerbeer wrote, notably that of the cathedral and coronation scene. On the other hand, it must be admitted that trivialities present themselves which could not be forgotten but for the consummate skill with which all is blended into a most gorgeous whole.

In 1854 Meyerbeer essayed a lighter form of art, and produced at the Opéra Comique, *L'Etoile du Nord*, which was followed by *Le Pardon de Ploermel*, known here as *Dinorah*, works which if they did not add to his fame, served to show his versatility of genius. Another great work, *L'Africaine*, was now (1861) being finally rehearsed, having been in hand since 1838, when Scribe placed his libretto in Meyerbeer's hands. Before it was produced, however, the most successful composer of this century had passed away. It is a work upon which Meyerbeer spent more time and labour than he did on any other work, with the result that many consider it his most beautiful production, and musically considered, it is probably the most melodious and poetical of all his operas. Of Meyerbeer's influence upon music it is perhaps too early yet to speak. In one respect he has had no equal, no composer before him or since having so dexterously welded together the best elements of Italian, French, and German art. In this faculty he stands alone, and an intellect which could thus blend together the characteristics of a great, yet scattered art, and impress the result with the stamp of his own individuality as Meyerbeer has done, must have been something more than a "miserable music maker, a Jew banker, to whom it occurred to write operas," which is the measure Wagner would have us take of the composer of *Les Huguenots*. And this power rarely, if ever, disappears in his works. If it fades, it is only that it may break out afresh in more glowing colour and with more surprising effect. His great creations may be so many musical "patchworks"; nevertheless, the result is a very acceptable whole, and one that does infinite honour to its maker. Whatever may have been Meyerbeer's feelings concerning art, history will charge him with seeking personal success and ambition rather than the advancement of music. It can never blame him, however, for not succeeding in his project. To properly appreciate Meyerbeer one has only to reflect upon what modern opera would have been without him. *Les Huguenots*, *Le Prophète*, and *L'Africaine* have saved the modern operatic stage, improving it in a dramatic sense, and giving a great impulse to the external surroundings of lyric art. These three great works may be trusted to preserve their composer's fame, standing as they do, unsurpassed for their effectiveness and rare combinations of the beautiful and splendid amid a positive wealth of vocal and instrumental contrivance.

H. Mendel, *G. Meyerbeer* (1869).

[F. J. C.]

Miall, EDWARD (b. 1809, d. 1881), Nonconformist writer, began life as a school assistant; from 1831-4 he was pastor of an Independent church at Ware, and from 1834-40

at Leicester, when he resigned to found and edit the *Nonconformist* newspaper, which began to appear in 1841. He took part in the Chartist agitation in so far as it supported an extension of the suffrage. In 1844 he was the chief founder of the British Anti-State Church Association, since known as the Liberation Society. In 1852 he was elected for Rochdale, but lost his seat in 1867, and from 1869 to 1874 sat for Bradford. In the House he spoke frequently in favour of Disestablishment. On his retirement he was presented with ten thousand guineas. Of Mr. Miall's works, which were chiefly polemical, the most popular was *Title-deeds of the Church of England to her Parochial Endowments* (1861).

A. Miall, *Life of Edward Miall* (1894).

Michael, OBRENOVITCH II., OF SERBIA.
[SERVIA.]

Michaud, JOSEPH (b. 1767, d. 1839), French historian, began life as a journalist, and during the French Revolution edited the *Quotidienne*, a Royalist journal. From 1797 to 1799 he was an exile from France on account of his principles, but flourished under the empire, originating the well known *Biographie Universelle* in 1811, and publishing the first volume of his monumental *Histoire des Croisades* in 1808. It was eventually published in 6 vols. in 1841, and formed an important contribution to the growing school of French history. It was supplemented by *Correspondance d'Orient* (1832-5), a correspondence with a fellow Eastern explorer, Ponjoulat, and the *Bibliothèque des Croisades*, containing the documents upon which he relied. He also edited a collection of French memoirs in conjunction with Ponjoulat (1836-44). Michaud was rewarded after the restoration by the office of king's reader, but had to resign in 1827, in consequence of his dislike of the proposed press law.

Sainte-Beuve, *Causeries de Lundi*, vol. 7.

* **Michel, LOUISE** (b. 1830), the well-known French revolutionary leader, first distinguished herself by her poetical and musical abilities. Her earliest attempts at verse appeared in the *Écho de la Haute-Marne*, revealing in their spirit and form the influence of Victor Hugo, who encouraged her to persevere in these efforts. In 1850 Louise and her mother quitted Vroncourt, her birthplace, and the former taught for some time at Audeloncourt, where she soon began to grow notorious by reason of her advanced theories. After various vicissitudes they established themselves in Paris about 1860, and Louise kept a school in the Quartier Montmartre. On the establishment of the Commune (1870), she took a prominent part in the movement, was taken prisoner and sentenced on Dec. 16th, 1871, to lifelong transportation to some fortified place. Before

her judges Louise Michel delivered a speech of great eloquence. She was removed to New Caledonia, where she resumed teaching until the general amnesty of 1880 allowed her to return to Paris. She continued to take part in popular assemblies. After the trials and sentences following the disturbances at Montreuil in 1882, Louise Michel visited England (January, 1883), where she gave a course of lectures at the Steinway Hall, London, for the double purpose of revolutionary propaganda and to gather funds in aid of political prisoners and the distressed poor. Accused of inciting the people to pillage the bakers' shops at Paris, she was arrested (Mar. 9th, 1883) and condemned to six years' imprisonment and ten years' police supervision, was liberated in 1885 to be reimprisoned in 1886.

Mémoires de Louise Michel, écrites par elle-même ;
Lissagaray, *Histoire de la Commune*.

* **Michelet, CARL LUDWIG** (b. 1801), German philosopher, came of a French family that had been settled in Germany for more than a century, and was born at Berlin. Having attended the university, he devoted himself in the first place to the study of Aristotle, whose *Ethics* he edited with elaborate care (1829-35). In 1829 he was nominated Extraordinary Professor of Philosophy, and having become an enthusiastic disciple of Hegel, he edited his master's works in 1832, and, in his succeeding writings, further extended Hegel's theories in their spiritual and quasi-theological tendencies. Michelet may, in fact, be regarded as the leader of the idealistic party among Hegel's followers. His position was expounded in a series of philosophic works, of which the following may be mentioned: *Anthropology and Psychology* (1840); *History of the Development of the most recent German Philosophy* (1843); *History of Mankind's Development since the year 1775* (1859); *Hegel, the Philosopher Uncontroverted (Hegel der Unwiderlegte Philosoph, 1870)*, and the great work which forms the summary and consummation of all his teaching, *A System of Philosophy as an Exact Science*, containing the three main divisions of logic, natural philosophy, and psychology (1876-81). Professor Michelet sided actively with the Liberal party in 1848, and published several papers on constitutional reform.

Michelet, JULES (b. 1798, d. 1874), an eminent French historian and man of letters, was the son of a Paris printer. After a brilliant school and university career, he was appointed, in 1821, professor of history in the Collège Rollin. In 1824 he married his first wife, and in 1827 he was made *maître de conférences* in the École Normale. He had already published several school books, and had become an ardent politician when the Revolution of 1830 gave him a place in the Record Office, and a sub-professorship of history in the university. In 1838 he became

professor of history in the Collège de France, a post which he retained until his dismissal by Napoleon III., to whom he always manifested an extreme hostility, although, unlike most political professors, he had never aspired to take an active part in public life, even during the stirring times of 1848. During the empire Michelet—who now married his second wife, a literary lady of some distinction—resided partly in France and partly in Italy. He failed, in 1870, to obtain his restoration to his professorship in the Collège de France. But he was now old, and in failing health, and in 1874 he died at Hyères, a place where he had for many years generally spent the winter. Michelet was a very brilliant and a very voluminous writer, of very striking and original characteristics both in style and thought. The great work of his life was his *Histoire de France*, originally issued in seventeen volumes, the first of which appeared in 1836, and the last thirty years later. As a series of picturesque tableaux of such episodes of French history as excited his interest and fascinated his imagination, it is a work of extraordinary merit. The brilliancy of the style and colouring, the warm enthusiasm which at times conquered even his prejudices, the strong imaginative and poetical power which it everywhere displays are abundant proofs of the high genius of its author. It is always alive, always interesting and pregnant. Its style, singularly unlike the measured and rhythmical periods of classical French prose, has sometimes suggested the comparison of Carlyle. Even from a more strictly historical standpoint it will bear examination. Though in a work covering so many centuries it is impossible for the research to be always equally minute and exhaustive, Michelet was a real student who devoted his life to the teaching and study of history. Yet as a complete narrative of national development it is somewhat inadequate. Michelet's lack of historical perspective leads him sometimes to descend at inordinate length on issues foreign to his main task, and at others to make a small incident the turning point of a great crisis; while, occasionally, a whole group of important facts, or a whole aspect of national development is entirely left out of sight. Again, though Michelet strives to be impartial, he can never forget that he is a republican and a freethinker of the nineteenth century. Except when his love of the picturesque gets the better of his prejudices, his very efforts to look favourably on kings, priests, Englishmen, and other rooted aversions are indications of the depth of his pre-suppositions. Of course, as a patriotic Frenchman he always holds a brief for his country. But worse than all his other defects is the rather one-sided and defective view of history which sprang naturally from his peculiar temperament. He is, in a

sense, the most suggestive of historical writers, but no one's suggestions are more often misleading. He saw everything through a rose-coloured medium of picturesque sentimentality. History is with him a series of brilliant pictures, each standing out vividly, but in little relation to antecedent or succeeding events. Michelet's other works are almost too numerous for enumeration. They include an *Introduction to Universal History* (1831), the first book which manifested his peculiar characteristics; an edition of *Vico*; the *Memoirs of Luther, written by Himself* (1835); a *History of the Roman Republic* (1839); a *History of the French Revolution* (1847-53), which continues his history, but is by no means in his happiest style, and a *History of the Nineteenth Century*, on which he was engaged at the time of his death. He also obtained fame by his lectures, which when treating of such subjects as the Jesuits, were by no means confined within strictly historical limits. Indeed, his polemical volumes, *Du Prêtre de la Femme et de la Famille* (1845) and *Du Peuple* (1846), largely contain the results of his academic discourses. But his anti-clerical and republican propaganda is often very wearisome. Very curious as illustrating his versatility, and not destitute of charms of their own, are the series of books on natural history, the composition of which lightened his more severe labours on his great history. Such are *L'Oiseau*, *L'Insecte*, and *La Mer*. Side by side with these appeared other small works, generally suggested by some episode in his French history, but often very discursive in their treatment. *La Sorcière*, which is regarded as one of the most remarkable of his lesser books, is one of this class. He has also published an autobiographical fragment, *Ma Jeunesse*. His collected works number at least fifty volumes. Many of them have been translated into English, including the more striking of his minor works, and the earlier part of his French history. [T. F. T.]

Midhat Pasha (b. 1822, d. 1884), Turkish statesman, the son of a Turkish civil judge, was born at Constantinople, and in 1845 was appointed secretary to a commission for the reform of the districts about Konieh. His ability being recognised, he was appointed Chief Director of Confidential Reports, and after suppressing brigandage in Roumelia, and a rebellion in Bulgaria, he made a tour of Europe, and in 1860 was created Secretary to the Grand Council. Raised to the rank of Pasha he was sent to govern the Vilayet of Nisch, and his reforms attracted so much attention that he was summoned to Constantinople to aid in drawing up the law of departmental reforms known as the Law of the Vilayets. From 1864 to 1866 he was governor of the Vilayet of the Danube (Bulgaria), and ruled well,

developing its resources by extensive public works. Despatched from Constantinople, whither he had gone in 1866 as President of the Council, he crushed a rebellion in Bulgaria, and acted in similar fashion at Bagdad. In 1872 he succeeded in displacing the Grand Vizier Mahmud Nedim Pasha, but only for a few months, and held various subordinate positions until May, 1876, when, in conjunction with the Grand Vizier, Hussein Avni, he deposed Abd-el-Aziz, who refused to introduce reforms into his dominions, and imprisoned him in one of his palaces, where he was found dead on June 4th. The new sultan, Murad V., being imbecile, he was replaced by Abd-el-Hamid, who made Midhat his Grand-Vizier (Dec. 19th, 1876). Midhat Pasha's new constitution, however, which established parliamentary government in Turkey, came too late; for the Bulgarian atrocities, and the failure of the conference at Constantinople made Russia decide to declare war, and Midhat fell in February, 1877. He travelled for some time in Europe, and in September, 1878, was sent into honourable exile as Governor of Syria. In 1881 he was arrested on the by no means improbable charge of being concerned in the murder of Abd-el-Aziz, and condemned to death in July, a sentence commuted for banishment to Arabia, where he died. Midhat Pasha was probably sincere in his Liberalism; he was certainly unscrupulous in his actions.

Mignet, François Auguste (b. 1796, d. 1884), French man of letters, a native of Aix, studied at the College of Avignon, and in 1818 was admitted as an advocate at the same time as his fellow-student, M. Theiers, whose friendship he kept through life. Mignet soon became known as a Liberal journalist, and in 1824 appeared his *Histoire de la Révolution Française*, which, by its very impartiality and reserve, soon became a power in the state, and was by no means the weakest of the impulsive forces which hurried on the July revolution. As his sole reward he chose the office of Director of the Archives at the Foreign Office, and held this post from 1830 to 1848, when Lamartine, the Minister of Foreign Affairs, deprived him of the appointment, and caused him to retire into private life. The access to the State papers was turned by him to admirable account, and a series of works appeared which are the result of conscientious research into unedited documents. They are *Négociations Relatives à la Succession d'Espagne sous Louis XIV.* in the Collection des Documents Inédits (4 vols., 1836-42), the result of a secret mission to Madrid in 1833; *Antonio Perez et Philippe II.* (1846); *Vie de Franklin* (1848); *Histoire de Marie Stuart* (1851), *Charles Quint, son Abdication, etc.* (1854), and *La Rivalité de François Ier et de Charles Quint* (1875). He was elected to the Académie

Française in 1836, and in 1837 made secretary to the historical section of the institute, in which capacity he pronounced the *éloges* on deceased members (published 1843 and 1864). His later years were occupied in a history of the Reformation, which he did not live to complete, and though he rejoiced at the establishment of the Republic in 1870, he made no attempt to re-enter political life.

Academy, April 5th, 1884.

Miguel, DON MARIA EVARISTO (b. 1802, d. 1866), a Portuguese Prince, was the younger son of John VI. of Portugal. He became the head of the Absolutist party, and having tried to overthrow his father was sent into exile (1824). After the death of John, his eldest son, Pedro, succeeded, but speedily renounced the throne of Portugal in favour of his daughter, Maria da Gloria, on condition that she should marry her uncle, Miguel. He, however, usurped the throne of Portugal in 1828, and had himself proclaimed sole legitimate king. He abused his power in the most tyrannical manner, and his private life was characterised by the wildest excesses. The partisans of the young queen maintained her title by arms (1832), and in this they were supported by England. Miguel capitulated at Evora in 1834, and spent the remainder of his life first at Rome and afterwards in Baden.

Owen, *Civil War in Portugal and the Siege of Oporto* (1835).

Milan OF SERVIA. [SERVIA.]

Mill, JAMES (b. 1773, d. 1836), philosopher, was the eldest son of James Mill, a shoemaker of Northwater Bridge, Forfar, by his wife, Isabel Fenton, and was educated first at the parish school, and afterwards at Montrose Academy, whence he went to the college of Edinburgh in 1790. He had previously become tutor to the only daughter of Sir John Stuart, of Fettercairn, and retained his friendship in after years. At Edinburgh he obtained distinction in Greek, and was deeply impressed by the teaching of Dugald Stewart in philosophy. He was licensed as a preacher in October, 1798, but was chiefly occupied with study and teaching until 1802. In that year he quitted Scotland for London, where he engaged in literature. He originated the *Literary Journal* in January, 1803, which was published by Baldwin, and wrote in it largely on history, political economy, and philosophy. He continued to edit it until 1806, and from 1805 till about 1807, he also edited a Conservative paper, the *St. James's Chronicle*, which belonged to Baldwin. In 1804 he wrote a pamphlet on the corn trade; in 1805 a translation of Villers' *Reformation*, with notes, and in 1806 he began his great *History of India*, which occupied him almost continuously for twelve years. From 1806 onwards he was an indefatigable writer for various periodicals, the *Anti-Jacobin Review*, the *British*

Review, and the *Eclectic Review*. His connection with the *Edinburgh Review* began in 1808, and he continued to write for it until 1813. These contributions included articles 'on Spanish America and China in 1809, on the East India Company in 1810, and also on the Lancasterian method of education. He was also a contributor to the *Annual Review*, and wrote largely in the *Philanthropist*. He contributed many articles to the fifth edition of the *Encyclopædia Britannica*, the most notable of which is the article on Government. The completion and great success of his *History of India* in 1818 had important results, both for James Mill and his son. In consequence of the reputation it brought him, in 1819 he received an examinership of correspondence in the India Office, and eventually, in 1830, became head of the office, and in 1831 was largely occupied in advocating the company's claim for a renewal of its charter. He also obtained a post in the office for his son John. Mill had long been intimately acquainted with Bentham. Their friendship began in 1808, and in order to accommodate his friend, Bentham gave him first a house adjoining his own, and afterwards, in 1814, a house in Queen's Square, Westminster, where Mill resided till 1831. He had also lived with Bentham in Ford Abbey, Somersetshire, during a great part of the years 1814 to 1817, and was indebted to him for assistance in some of his articles in the *Encyclopædia Britannica*. In 1824 Bentham began the *Westminster Review*, and for some years Mill wrote in it very largely. This was the period of his greatest philosophic activity. Besides writing for the *Westminster Review* and the *London Review*, he published, in 1829, his *Analysis of the Human Mind*, and in 1835 his last work, the *Fragment on Mackintosh*. James Mill played a considerable part in the intellectual society of his time. He was the founder of "Philosophic Radicalism," and, through his connection with the India Office, largely and beneficially influenced the government of India. In political economy he was a follower of his friend, Ricardo, and in psychology he worked out from the basis of the then Scotch metaphysics the principle of association. His attainments in scholarship and general information, and his personal influence on all who came in contact with him, were very great, but the chief characteristic of his mind was its merciless logic, its constant effort to obtain clear definitions and lucid statement, and to avoid every form of fallacy. He was perhaps as amiable as was compatible with such vast knowledge and such vigorous powers, but his son's portrait of him is unconsciously somewhat repellent.

J. S. Mill, *Autobiography*; *Life of James Mill*, and art. in *Enc. Brit.*, by Prof. Bain.

[J. A. H.]

Mill, JOHN STUART (b. 1806, d. 1873), philosopher, was the eldest son of James Mill

and Harriet Burrow, his wife, and was born in Rodney Street, Pentonville. His education, perhaps the most rigid on record, was conducted entirely by his father, and with extraordinary assiduity. He himself gives a full account of it in his *Autobiography*. At three years of age he was learning the Greek alphabet, and at eight had read in the original many Greek authors; he then began to learn Euclid, Algebra, and Latin, and was constituted the teacher of the younger members of the family. At the age of twelve he was engaged with scholastic logic and Aristotle, and at thirteen political economy. He was his father's constant companion, a man who discouraged all sentiment and emotion, and constantly kept his son's intellectual and moral faculties at full stretch. At the age of fifteen he spent about a year in France in the family of General Sir Samuel Bentham, and on his return to England, being then intended for the bar, read Roman law with Austin (q.v.). In 1823, however, he obtained a clerkship in the Examiner's office at the India House, and became assistant examiner in 1828. From 1836 to 1853 he had practically sole control of the company's relations with native States, a most arduous and responsible office, and in 1856 became head of the examiner's office. In 1858 it fell to him to prepare the case for the company against the proposed transfer of the government of India to the Crown. He was personally very strongly opposed to that measure of Lord Palmerston's, and when it was carried out, he accepted the liberal compensation which was offered to him and retired. Subsequently a seat on the new Indian Council was offered to him, first by Lord Stanley, and afterwards by the council itself, but on both occasions was declined. To return to his youth, an immense epoch in his mental life was formed by reading the statement of Bentham's philosophy in Dumont's *Traité de Legislation*. He then first adopted a creed and view in philosophy of his own. Through his father he had long been intimate with Bentham, as well as with Ricardo and Joseph Hume. He formed a society of young men, which he called the Utilitarian Society, to debate philosophical subjects, and now began his literary labours. He wrote letters on the prosecution of Richard Carlile in the *Chronicle*, and began contributing to the *Westminster Review* in 1824, and to the *Parliamentary History and Review* in 1825. He also undertook to edit for Bentham his *Rationale of Judicial Evidence*, the materials for which Dumont had returned. He was, and continued to be till 1829, an eager debater in the Speculative Society, which met at Grote's house. But in 1826 his literary activity became less. He was profoundly troubled in that year with doubts as to the happiness and end of life. After a time he found relief in the study of Wordsworth, and gradually resumed his literary work. He

wrote in 1828 a review of Whately's *Logic* in the *Westminster Review*, in which he appears as the champion of the scholastic against inductive logic. Having been in Paris just after the Revolution of July, and become acquainted with some of the younger leaders, he wrote in the autumn of 1830 for the *Examiner* an article on the *Prospects in France*, and again, in 1831, a series of letters on the *Spirit of the Age*, which greatly impressed Thomas Carlyle. With their common friend, Sterling, Mill was intimate. He had ceased in 1828 to contribute to the *Westminster Review*, his last article being an answer to the view of the French Revolution put forward by Sir Walter Scott. In preparation for this he made such extensive notes and collections that he had some thoughts of writing a history of the French Revolution himself. That, however, was undertaken by Carlyle, at whose service Mill placed his materials. Carlyle's first volume when in MS. was lent to Mill to read, and by a maid's carelessness burnt. Mill was deeply distressed, and Carlyle, for a time, was in despair. Afterwards, however, when the work was completed, Mill had an opportunity of repairing the injury; for, as editor of the *Westminster Review*, he immediately inserted a highly laudatory notice, which called attention to Carlyle's merits before any other critic had spoken, and greatly helped the immediate popularity of the book. During 1832 and 1833 Mill contributed to the *Jurist*, *Tait's Magazine*, and the *Monthly Repository*, and took a lively interest in the reform controversy. When the *London Review* was started in 1835 he edited it, and continued to do so for four years after its amalgamation with the *Westminster Review* in 1836. The growth of his logical views began in 1837. Reading Whewell's *Inductive Sciences*, and re-reading Herschell, he saw his way to harmonising the old with the newer logic. His work on *Logic*, an invaluable if not strikingly original book, appeared in 1843. "Technically," says Minto, "it attempted to fuse the practical tests of truth set forth in Herschell's *Discourses on Natural Philosophy*, with the theoretic view of induction propounded in Whately's *Logic*," but its chief achievement was "to educe from the practice of men of science the principles on which they proceed in testing and proving their speculations concerning cause and effect in the physical world, and to see whether the same principles could not be applied in testing and proving speculations concerning cause and effect in the moral world." His next great study was political economy. In 1844 he published his *Essays on Unsettled Questions in Political Economy*, written some years before, and chiefly following the principles of Ricardo. His treatise on political economy was published in 1848. He directs more attention than his predecessors to the practical side of

his science, and in particular deals more extensively with various forms of socialist theory; above all, he recognises and defines the relations of political economy to political and moral science, and enforces its limitations. In 1846 and 1847 he advocated peasant proprietorship as a remedy for Irish distress in a series of letters in the *Morning Chronicle*, and also in reviewing Michelet, Guizot, and Grote, wrote long articles in the *Edinburgh Review* on French and Greek history. In 1851 he married Mrs. Taylor, with whom he had been intimately acquainted since 1830. To her intellectual sympathy and collaboration his mind and work were very greatly indebted. During the next seven years he planned and in great part completed with her his four great contributions to political philosophy, *On Liberty*, *On Parliamentary Reform*, *on the Subjection of Women*, and *on Utilitarianism*. They were not, however, published for some years. In 1858 Mrs. Mill died, and Mill, though greatly distressed, found refuge as usual in work. In that year he published the essay *On Liberty*, with a dedication to her; and believing in the need for checks upon a democracy, advocated Hare's minority representation scheme in *Fraser's Magazine*. In the same magazine he published his *Utilitarianism* in 1861, the title of which he adopted almost thirty-five years before from one of Galt's novels. The *Representative Government* had appeared in the previous year. The *Subjection of Women* was not published till 1869. His attention was now diverted to mental philosophy. He had reviewed Bain's two volumes, *The Senses and the Intellect*, and *The Emotions and the Will*, in the *Edinburgh Review* in 1859; in 1865, after some years' labour, he published his *Examination of Sir William Hamilton's Philosophy*, a work which, by its outspokenness, excited very great attention; and a year or two afterwards he issued his father's *Analysis of the Human Mind*, with notes of his own. In 1865 his brief political career began. During the American War he had been an ardent advocate of the unpopular cause of the Northern States, and he was invited to contest Westminster. He accepted the invitation, but upon his own terms. He would neither canvass, pay canvassers, nor busy himself with the local business of his constituency. He hardly made any great effort in the way of election speeches. He was, however, returned, and represented the borough till 1868. He was a ready debater, though a hesitating speaker. He earnestly advocated the duty of interfering with British influence in Continental affairs upon the side of freedom; and he took an active part in the debates on Mr. Disraeli's Reform Bill. During this period he was chosen rector of St. Andrews University, and for a time assisted in editing the *Reader*, which he, with others, was anxious to keep alive as the exponent of freedom of opinion. In this, however, he failed; that

periodical expired. At the general election of 1868 he was rejected at Westminster, the electors in all probability having never really understood him. Oidium was excited against him for the share he took in the exposure of Mr. Eyre's conduct as Governor of Jamaica, and for his subscription to Mr. Bradlaugh's election expenses. He took his defeat with perfect composure, and retired to Avignon, where he had a house. He gave himself up to leisure and study, and to the pursuit of botany, for which he had always had a keen enthusiasm. His step-daughter, Miss Helen Taylor, lived with him. His last public act was to found the Land Tenure Reform Association, which he hoped might serve to mitigate the struggle which he foresaw between labour and capital. He died at Avignon. If not a great and original mind, Mill's was yet one of great power, lucidity, and precision. Few men have influenced the intellectual life of their time more widely. The range of his capacity was equalled only by his industry. With all his father's logic and clearness he had far greater sympathy and attractiveness. His contributions to logic and political economy, have done much to popularise and advance those sciences, and though many deny to his Utilitarianism the title of philosophy, it has had a very wide influence on modern political thought. His moral standard was exceedingly high, though in religion he took up a negative position.

Mill's *Autobiography*; Bain's *Personal Recollections*, &c. [J. A. H.]

* **Millais**, SIR JOHN EVERETT, BART., R.A. (b. 1829), a native of Southampton, and descendant of an old Jersey family, began his art education unusually early; for it is recorded that at the age of eleven he was entered as a student at the Royal Academy. He was seventeen when his first picture was exhibited. When he was nineteen he wrought a canvas which made a certain mark; this was the *Isabella of Keats*. As a student he, with others, rebelled against the conventional teaching of the schools, influenced notably by prints of the works of Giotto, and casts from those of Ghiberti. In modern art truth was too often sacrificed for beauty. Millais and his companions (Holman Hunt, Dante Gabriel Rossetti) determined to follow the example set them by the masters of the mediæval school, and depict nature as they saw it. Their untiring fidelity and conscientiousness formed a most remarkable contrast to the "scrappy" and unreal work of their contemporaries. Their name, "Pre-Raphaelite," was chosen by a leader of their band, Dante G. Rossetti; their paintings were signed by the mystic letters P. R. B., or Pre-Raphaelite Brother. The movement met with the most virulent abuse from all sections of the press, but generally won its due recognition, partly owing to the enthusiastic

support it received from the eloquent pen of the author of *Modern Painters*. Millais, unlike Rossetti and Holman Hunt, has not remained faithful to the methods of the school as he has grown older. In 1852 he painted his *Huguenot* and *Ophelia*; then followed the *Order of Release* and the *Proscribed Royalist*. In 1856 came *Autumn Leaves*, and in 1860 the *Vale of Rest*. These are very memorable pictures; for while they do not exhibit the bold and masterly brush-work of his after years, they display a sufficient command of technical resources, united to a poetical feeling and an indescribable sense of the pathos and mystery of life—*Autumn Leaves* depicts some ruddy and meditative children round a bonfire, in an enclosed garden, and under the gleams of a wild and saddened sky. The *Vale of Rest*, which was painted from a scene actually beheld by the artist as he was driving through France, shows the garden of a convent, with nuns digging a grave. That was about the end of Millais's deeply poetic painting in the Pre-Raphaelite manner. Then we had *My First Sermon* (1863) and *My Second Sermon* (1864); the models in both were the children of the painter. Then followed certain fancy subjects, or subjects presumably suggested by literary history or the greater fiction. *Stella* (1868), and *Vanessa* (1869), had, however, at bottom nothing to do with the ladies whom Swift too prudently adored. In 1870, and thereabouts, Millais's range appeared to widen, for not only did he, in the *Knight Errant*, make a triumphant essay in the nude—rendering the grace of youthful form and the delicacy of golden-blond flesh—but he addressed himself with a success, more popular, if not as real, to the problems of landscape, and in doing so he occupied ground which he has never wholly quitted. For to the *Chill October* (1871), with its vision of the sombre woods behind the broad-flowing Scottish stream, there succeeded, in due time, *Flowing to the River*, *Flowing to the Sea* (1872), and *The Fringe of the Moor* (1874); and this was in part the result of the pleasure which Sir John Millais, a sportsman and a lover of the country, takes in the wilder scenes of the North. In his art, his next move was to be towards portraiture. Now and again, indeed, as in 1874, for example, with his noble *North-West Passage*, he would paint a great picture of incident, and incident professedly occupied him in the *Ornithologist* of 1885. Yet even in these pictures direct portraiture fascinated and engaged him—the old sailor of the *North-West Passage* was Mr. Trelawny, the friend of Shelley, and the invalid ornithologist was Mr. Barlow, the engraver—and gradually he became more and more occupied with portraits. In 1880 came a magnificent portrait of Mr. Bright. In 1881, an inevitably unfortunate portrait of Lord Beaconsfield, who had given an insufficient number of sittings; in 1882, a worthy

vision of the pearl and rose-coloured complexion, the silver hair, and the serene eyes of Cardinal Newman. Then, again, there was, in 1883, a noble portrait of Lord Salisbury. Sir John Millais has painted two or three pretty ladies, and one or two important women of society. He has painted Mrs. Budgett, Mrs. Jopling, Mrs. Bischoffsheim, and Mrs. Langtry ("A Jersey Lily"). Among Millais's greatest claims to distinction are his range, his manliness, his vigour. If in his later years he has been more insensible to that which is considered poetry, he has learnt, at all events, a nobler perception of fact. He is an expressive draughtsman: a good, if not a great, colourist; and, even when in latest middle life, and on the verge, it might be thought, of passing into the conservatism of an elderly man, his vision of the model remains profoundly fresh, and the vivacity and surprise of his brush-work outdo in attractiveness that of the youths who have learnt all excellence in the course of a one year's training in the studios of France. He was made an A.R.A. in 1853, and R.A. in 1863, and a baronet in 1886. [F. W.]

Miller, HUGH (b. 1802, d. 1856), geologist and popular miscellaneous writer, was born in Cromarty, of Scandinavian descent. Through the death of his father in 1807, his upbringing was superintended by his maternal uncles. He became a stonemason. In 1823 he sent some verses to the *Inverness Courier*, which were rejected. Piqued at this, Miller determined to publish them separately, and in 1829 he brought out his *Poems* anonymously as the productions of a "journeyman mason." Although remarkable in many ways, they had little of poetry in them, and did not succeed. His efforts in prose were more successful. His *Letters on Herring Fishing* had the characteristics of his later works—it was clear, succinct, elegant. He had now a certain celebrity in the north; but his writings brought him little money. He had got married, trade was bad, and Miller was forced to give up his favourite stonemasonry, and became a clerk. Shortly afterwards he brought out his *Scenes and Legends of the North of Scotland*, under the advice of Sir T. Dick Lauder. Already the ten years' ecclesiastical conflict in Scotland had begun, and the decision of the House of Lords on the right of patronage occasioned the two able pamphlets by Miller—*A Letter to Lord Brougham and Whiggism of the Old School*, supporting the principles and opinions afterwards embodied in vigorous action in the Free Church. These productions commanded immediate notice. The Non-Intrusion Party was in want of a journal to espouse its cause against a press all but universally hostile. *The Witness*, a bi-weekly newspaper, was established in 1840, and Hugh Miller became its editor, and removed to Edinburgh. His controversial

writings in this journal were able, varied, picturesque, sometimes philosophical, but too often bitter, and not unfrequently wanting that taste and refinement in which on other subjects he never failed. To the same journal he contributed those works which now constitute his fame—*The Old Red Sandstone*, *First Impressions of England and its People*, *Footprints of the Creator*, and *My Schools and Schoolmasters*, besides many occasional papers on literature and science. In 1856 he published *The Testimony of the Rocks*, the ablest and most argumentative of all his works, and shortly after his death appeared the *Cruise of the Betsy* (1858).

My Schools and Schoolmasters is autobiographical; *Edinburgh Review*, July, 1858; *Professor Masson in Macmillan's Magazine*, May, 1865; *Peter Bayne, Life and Letters of Hugh Miller* (1871).

* **Miller**, JOAQUIN (b. 1841), is the pseudonym of Cincinnatus Heine Miller, the American poet. He was born in Indiana, and spent most of his life in Oregon, where, with an interval of rough labour at the California mines, he worked in succession as a newspaper editor, a pony messenger, a lawyer's clerk, and county judge in Canzon city. In 1870 his wife, who, under the name of "Minnie Myrtle" (d. 1883), was known as a writer of considerable powers, applied for a divorce in a moment of caprice, and Miller left Oregon for a visit to England. It was thus that, though under the name of Joaquin he had written some short sketches and poems before, his first book that made any mark was published in London, and was called *Songs from the Sierras* (1871). About the same time the *Pacific Poems* were published, and after his return to America several collections of poems and short tales or essays in prose succeeded one another at intervals, the following being the most important: *Life among the Madocs* (1873), *First Fam'lies in the Sierras* (1875), *The One Fair Woman* (1876), *Songs of far-away Lands* and *Songs of Italy* (1878), and *Memorie and Rime* (1884). Joaquin Miller undoubtedly holds a high, if not the highest, place among the poets of America. Whilst distinctly belonging to the most modern and most exact school of poetry in English, he has gained a certain breadth and freedom from the energetic reality of his life, and the grandeur of his surroundings. In beauty of description, pathos, and straightforward narrative few modern poems can equal *General Walker in Nicaragua*.

Memorie and Rime is largely autobiographical.

Millet, JEAN FRANÇOIS (b. 1814, d. 1875), French artist, came of a peasant family of La Manche, and exhibiting promise as a painter was placed under Delaroche through the generosity of the town of Cherbourg. He, however, fell out with Delaroche, and for many years lived in dire poverty, working manfully and conscientiously at his art, and encouraged in his

trials by his wife and friends, chief of whom was Rousseau, the painter. In 1848 he settled in a cottage at Barbizon, near Fontainebleau, and by the year 1860 had placed himself in prosperous circumstances. Millet was, above all things, the painter of peasant life, which he neither flattered nor decried overmuch, but truthfully represented just as he had known it from boyhood upwards, dwelling rather upon its sad than upon its joyous side. His execution of the human figure was at all times exquisite. Among his more famous pictures are *The Milkwoman*, his first picture to attract notice (1844); after which came *The Winnow* (1848); *Girls Sewing* (1852); *Potato Planters* (1863); *Butter-making* (1871), and *Angelus-Evening* (1875). *The Brothers*, now in the Louvre, is perhaps the masterpiece of this illustrious child of the people.

A. Sensier, *Vie et Œuvre de J. F. Millet*.

Milman, THE VERY REV. HENRY HART, D.D., Dean of St. Paul's (b. 1791, d. 1868), historian and divine, the son of Sir Francis Milman, Bart., physician to George III., was educated at Dr. Burney's school at Greenwich, Eton, and Brasenose College, Oxford, where, after gaining four university prizes, including the Newdigate, with the fine poem *Apollo Belvedere*, he took his degree in 1813. In 1815 he became a fellow of his college, was ordained in 1816, and became a curate at Reading. At first he won celebrity as a poet; his parishioners were somewhat scandalised when his tragedy, *Fazio* (1815), was performed without his permission at Covent Garden, but his religious epic, *Samor, Lord of the Bright City* (1818), and his dramas, *The Fall of Jerusalem* (1820) and *The Martyr of Antioch* (1821), were received with a devouring enthusiasm, which despite occasional passages of splendid imagery was undoubtedly somewhat overcharged. They gained for him the professorship of poetry at Oxford, and were followed by the dramas, *Belshazzar* and *Anne Boleyn*. A collected edition of Milman's poems appeared in 1840, including the exquisitely pathetic hymns *Brother thou art gone before Us* and *When our Heads are bowed with Woe*. In 1827 Milman was Bampton Lecturer, and in 1829 he published his *History of the Jews*. To the present generation it seems a most moderate and, at the same time, enlightened work; it was hailed on its appearance by a chorus of indignant remonstrance from those who objected to the application of criticism to the Bible at all, and who, as Dean Stanley says, were horrified at the description of Abraham as a "sheik." Milman bore these attacks with calm silence, and in spite of obloquy he became, in 1835, rector of St. Margaret's, Westminster, and canon of Westminster. In 1840 he published the *History of Christianity under the Empire*, in which he courageously said what he thought, and with a lofty Liberalism that is all the more striking when contrasted with the

carping bitterness of Gibbon, exposed the first period of the Church's history to the dry light of searching investigation. In 1849, this time with general approval, he was appointed, on the recommendation of Lord John Russell, Dean of St. Paul's. His *magnum opus*, *The History of Latin Christianity* (1854-5), contains, as Dean Stanley well says, "a complete epic and philosophy of mediæval Christendom," terminating with the papacy of Nicholas V. One of the soundest historical works in our literature, it will long remain a monument of the learning and impartiality of the English establishment, and though some of its details may be overthrown by the apologists or assailants of individual popes or politicians, its general conclusions are not likely to be materially modified. Dean Milman's other works were an illustrated and critical edition of Horace, with a biographical preface (1849), and an annotated edition of Gibbon, in which to that historian's inaccuracies is dealt a chastisement by no means undeserved. His tenure of office at St. Paul's was signalised by the commencement of the decoration of the interior, and the introduction of the popular, but none the less impressive, services in the dome. In his last public appearance of moment, when he preached a sermon before the University of Oxford on Hebrew Prophecy, Dean Milman proudly announced that he still adhered to the opinions of his youth. He was a noble example of ecclesiastical Liberalism—one of his latest speeches was in favour of the abolition of subscription to the articles—a poet, scholar, man of the world, but, above all things, a divine. Whether or no the reported saying of himself, "I am the last learned man in the Church," be true, it well defines his position.

Dean Stanley in *Macmillan's Magazine*, vol. 19; *Fraser's Magazine*, vol. 78; *Blackwood*, vol. 104. [L. C. S.]

Milne-Edwards, HENRI (b. 1800, d. 1885), zoologist, was born at Bruges of English parents, studied medicine at Paris, and at first practised as a doctor, but eventually became exclusively a writer and teacher of science. In 1838 he was elected to succeed F. Cuvier at the Académie des Sciences, became professor of entomology in the Muséum in 1841, and in 1843 professor of entomology and of comparative physiology in the Faculté des Sciences, of which he became dean, retiring in 1876. He received, among other honours, the Copley medal in 1856. As long ago as 1827 he propounded the principle that the more an animal exhibits in its organs a "division of labour," the higher is it in the scale of organisation, and his labours in the lower forms of animal life did much to reconstitute zoology. Besides numerous text-books, he published a monumental work in fourteen volumes, *Leçons sur la Physiologie et l'Anatomie Comparée* (1857-81). His son, *ALPHONSE MILNE-EDWARDS (b. 1835), his successor at

the Muséum, honourably carries on his father's work.

Minghetti, MARCO (b. 1818, d. 1886), statesman, of a rich merchant family, travelled in youth, and in particular paid attention to agricultural economics. He joined Pius IX.'s liberal ministry in 1848 as Minister of Public Works, and when it was speedily dismissed, entered the service of Charles Albert of Sardinia, and became the intimate friend of Cavour. An important treatise, *Della Economia Pubblica*, was published by him in 1859. He became Minister of the Interior in Cavour's last Cabinet (1860), but resigned under Ricasoli, having failed to carry a project for the internal organisation of Italy which strongly favoured decentralisation. In 1861 he became Vice-President of the Italian Parliament; and in 1863 President of the Council and Minister of Finance, a post he held with considerable credit until 1868. After being ambassador in London and at Vienna, he formed a Conservative ministry in 1873, in which he was Minister of Finance. It lasted until March, 1876, when it was overthrown by a coalition of parties, never having commanded much support. Signor Minghetti thereupon became a leader of the Conservative opposition, and in 1883 rendered valuable assistance to his Liberal successor, Signor Depretis, against the attacks of the Radicals. He carried on the traditions of his master, Cavour.

Minto, GILBERT ELLIOT, 1ST EARL OF (b. 1751, d. 1814). Governor-General of India, the son of Sir Gilbert Elliot, Bart, M.P., was educated at Christ Church, Oxford, and was called to the bar at Lincoln's Inn. In 1774 he entered Parliament as member for Morpeth, and at first supported Lord North, but afterwards attached himself to the Whig Opposition under Fox, only, however, to go over to Pitt after the outbreak of the French Revolution. During the brief occupation of Corsica by the British (1794-6) Sir Gilbert Elliot was viceroy of the island, and was created Baron Minto in 1797. Sent as envoy extraordinary to Vienna he did good service as a diplomatist until 1801. He was for a few months president of the Board of Control, and in 1807 went to India as Governor-General in succession to Lord Cornwallis. His administration lasted until 1813, when he returned to England with an earldom. It was marked chiefly by the establishment of the authority of the company in the newly annexed districts, the conquest from the French of the Isles of France and Bourbon in 1810, the conquest of Java in 1811, and the establishment of diplomatic intercourse with Persia, Afghanistan, and the Punjab. In 1809 a formidable sepoy mutiny at Seringapatam was decisively quelled. After his return to England in 1814 his health rapidly gave way, and he

died on June 21st. His son, Gilbert Elliot, the second Earl Minto (b. 1782, d. 1859), was from 1846-52 Lord Privy Seal.

Countess of Minto, *Life and Letters of Lord Minto* (1874); *Lord Minto in India* (1880).

Mitchel, JOHN (b. 1815, d. 1875), Irish patriot, was the son of a Nonconformist minister in County Derry, was educated at Trinity College, Dublin, and afterwards practised for some time as a solicitor. Sympathising with the suffering Irish, he threw in his lot with the Nationalist party, and in 1845 became editor of the *Nation* newspaper, the organ of that party. In 1847 his political views no longer coinciding with those advocated in the *Nation*, he resigned the editorship, and started the *United Irishman*, a journal advocating "physical force." His writings in this paper were considered seditious; he was arrested, convicted, and transported to Van Diemen's Land for fourteen years in May, 1848. He subsequently escaped to the United States, and conducted the *Citizen* newspaper. In 1875 he was returned to Parliament for Tipperary, at a bye-election; but the election was petitioned against, as he was a felon who had not worked out his sentence. While the constitutional question was being discussed Mitchel suddenly died. John Mitchel was the author of several works of merit, among which may be mentioned *Life of Aodh O'Neil, Jail Journal* (an account of his life in Van Diemen's Land), and the *Last Conquest of Ireland (perhaps)*.

Mitchell, SIR THOMAS LIVINGSTONE (b. 1792, d. 1855), explorer, a native of Stirlingshire, entered the army, and fought in the Peninsular War from 1808 to 1815. In 1827 he was appointed deputy surveyor-general, and soon after surveyor-general, of New South Wales. His explorations did much to open up the country, to the hitherto unexplored portion of which he gave the name of Australia Felix. The courses of the Darling and Glenelg were traced by him, and he was one of the first discoverers of gold and diamonds. His *Three Expeditions into the Interior of East Australia* appeared in 1838, and *Journal of an Expedition into the Interior of Tropical Australia* in 1848. His last expedition, made in 1851, was to the Bathurst gold-fields. His *Australian Geography* was published in 1850.

Mitford, MARY RUSSELL (b. 1786, d. 1855), dramatic writer and novelist, was the only child of a Hampshire physician. Family misfortunes forced her to take up her pen, and she wrote in 1806 a volume of poems, which were abused in the *Quarterly*. She fared better with *Watlington Hill, a Poem* (1812), which commemorates a courting meeting in that locality. But her passion as an authoress was dramatic composition, and her principal works which made their way to the public stage were *Julian* (1823), *Foscari* (1826), *Rienzi* (1828), and *Charles the*

First, which was suppressed by George Colman, the licenser, as being of dangerous principles. She relates in her *Reminiscences*, with great frankness, many interesting details connected with the production of these pieces. It was, however, in the sketches of *Our Village* that she hit upon the vein most favourable for her literary reputation. These sketches of English rural life, which first began to appear in *The Lady's Magazine* in 1824, are pervaded by a cheerful tone of domesticity, and are remarkable for their veracity in detail. Her last, and perhaps her best, novel was *Atherton*, which appeared in 1854.

Life and Letters, edited by A. G. L'Estrange.

Mitford, WILLIAM (b. 1744, d. 1827), historian, studied law for some time at the Middle Temple, but on his succeeding to the family estates abandoned that profession. In 1774 he brought out a little work on *Harmony in Languages*, next wrote a treatise on *The Military Force*, and subsequently sat for several years in the House of Commons in the Tory interest. He was engaged at his *History of Greece* from 1780 to 1818, the best result of which work was, perhaps, that it caused Grote and Thirlwall to write theirs. In politics Mr. Mitford was an unbending Tory; and this turn of thinking affects seriously the fairness of the estimate which he forms both of characters and of events in his work. He did, however, throw some light upon many parts of Grecian history.

* **Mivart, ST. GEORGE, F.R.S.** (b. 1827), man of science, was educated at Harrow, King's College, London, and St. Mary's College, Oscott, a Roman Catholic establishment. He was called to the bar in 1851, but has chiefly occupied himself with teaching and writing about science. Mr. Mivart became lecturer on zoology and comparative anatomy and professor of biology at University College (R.C.), Kensington, from 1862-84, and has been secretary to the Linnean Society, and is vice-president of the Zoological Society. His researches have chiefly been published in the journals of the learned societies, the reviews, and the magazines; but he has also published the following well-known volumes:—*The Genesis of Species* (1871), in which he combats the Darwinian theory of "natural selection" with arguments of great weight, as Darwin himself was the first to acknowledge; *Lessons in Elementary Anatomy* (1872), *Man and Apes* (1873), *Contemporary Evolution* (1876), *Lessons from Nature as Manifested in Mind and Matter* (1876), *The Cat*, an introduction to the study of back-boned animals (1881), and *Nature and Thought* (1883). His little *Philosophical Catechism* appeared in 1884.

* **Modjeska, HELENA** (b. circa 1843), Polish actress, a native of Cracow, married her guardian, M. Modjeski, at the age of seventeen, and in 1868, three years after his death, married a second time, M. Chlapowski,

a Polish patriot and journalist. Having become celebrated as a player in amateur theatricals she began to practise acting as a profession in 1862, starting with a travelling company. In 1868 she appeared before a Warsaw audience in a version of *Adrienne Lecouvreur*, and at once became a popular favourite. Driven from Poland by professional jealousy, in 1876 she emigrated to America with her husband, and tried farm life in California without pecuniary success. She accordingly determined to return to the stage, and having learnt English, appeared as Adrienne before a San Francisco audience in August, 1877. Her success was immediate, and an equal triumph awaited her at New York in a version of *La Dame aux Camélias*. She was now recognised as one of the finest emotional actresses of her time, and after a visit to Poland appeared before a London audience at the Court Theatre in Mr. Mortimer's *Heartsease*, a fresh version of *La Dame aux Camélias* (1880), which was followed by *Adrienne Lecouvreur*, *Romeo and Juliet*, and the less successful *Juana*, and *Frou-Frou* at the Princess's. After making a great hit at the Haymarket (June, 1882), in a version of Sardou's *Odette*, she went back to America, where her Rosalind was very well received (December, 1882). In the spring of 1885, she appeared for a brief season at the Lyceum in her favourite impersonations.

Moffat, ROBERT, D.D. (b. 1796, d. 1883), missionary, was a native of East Lothian, and worked for some time as a gardener, and in a situation at Manchester. In 1815 he became inspired with a desire to become a missionary, and was ordained at the Surrey Chapel in 1816. He sailed for Capetown under the auspices of the London Missionary Society, and worked among the Bechuanas and Kurumans, with but small intervals of repose, until he returned to England in 1870. In 1872 he became D.D. of Edinburgh, and in 1882 vice-president of the Foreign Bible Society. He translated portions of the Bible and Bunyan's *Pilgrim's Progress* into Bechuana, and was the author of a *History of Missionary Labours in South Africa* (1842). His name is commemorated in the Moffat Institute, at Shosung, for training native priests [LIVINGSTONE.]

R. S. Moffat, Robert and Mary Moffat.

Mohl, JULIUS (b. 1800, d. 1876), Orientalist, was a native of Stuttgart, and after the usual gymnasium education he went to Tübingen to study theology, and there met Baur and Strauss. The study of Hebrew led him, however, not to theology, but to Oriental learning. He resigned the clerical living to which he was appointed, and proceeded, in 1823, to Paris, where he became the pupil of De Sacy in Arabic and Persian, and of Abel Remusat in Chinese, and the friend of Humboldt, Cuvier, and other brilliant stars of

French society. In 1826 he was appointed to the professorship of Oriental languages at Tübingen, but with permission at the same time to pursue his studies at Paris, which (with visits to England) henceforth became his home. In 1844 he was chosen a member of the French Institute; in 1847 he was appointed professor of Persian at the Collège de France; and in 1852 inspector of the Oriental Department of the Imperial Press. Mohl's published work falls into two divisions. The first consists of editions of classical Eastern texts, of which the chief (besides some Chinese editions) was the Persian *Shah Nameh* of Firdusi. This was an immense undertaking, begun in 1833 and published in six gigantic volumes from 1838 to 1868, with a posthumous seventh concluding the work. The French translation accompanying this monumental edition of the Epic of Kings was reprinted in seven octavo volumes by Mme. Mohl (1878), an Englishwoman of remarkable powers. The other part of Mohl's work consisted in his annual reports to the Société Asiatique (1840-67). In these invaluable surveys of contemporary research we see the comprehensive character of the scholar's mind. The great desire of Mohl's life was to obtain for oriental studies the same recognition which had always been accorded to the so-called classical literatures, and to co-ordinate the various branches of oriental study till a comprehensive and general view of Eastern thought and civilisation should be attained. His whole life was a protest against extreme specialism and a plea for co-ordination, and his twenty-seven annual reports are a series of ascending steps in this direction. The *Rapports Annuels* were collected by Mme. Mohl, and published (in 2 vols., 1879-80) under the title of *Sept Ans d'Histoire des Études Orientales*. No such valuable, impartial, and instructive record of a brilliant period of Eastern study and discovery exists in any language. At the Institut, at the Société Asiatique, of which he was long secretary, and continually president, and in the celebrated *salon* of Mme. Mohl, the genial Orientalist exercised a potent influence upon the literary world of Paris.

Max Müller, *Biographical Essays*; *Saturday Review*, June 19th, 1881. [S. L. P.]

Moldavia, PRINCES OF. [ROUMANIA.]

Molesworth, SIR WILLIAM, BART. (b. 1810, d. 1855), author, philosopher, and politician, belonged to an old Northamptonshire family, and was educated at Edinburgh University and in Germany. His father having died in 1822, the son succeeded to the baronetcy, and in 1832 was returned to the first reformed parliament for the eastern division of Cornwall. He subsequently sat for Leeds and Southwark. In 1853 he became First Commissioner of Works, and shortly afterwards Colonial Secretary. In Parliament

he was not a great debater, but the worth of his speeches, especially those on colonial and social reform, is partly testified by the large number which were separately published and widely circulated. But Sir William had also a literary reputation. In 1835 he started, in conjunction with Mr. Roebuck, the *London Review*, as an organ for the Philosophic Radicals, and subsequently became the proprietor and editor of the *Westminster Review*. Anticipating Mr. Croom Robertson (q.v.) in his admiration of Hobbes, he commenced, in 1839, and afterwards completed at a cost of £6,000, a reprint of the entire works of the "philosopher of Malmesbury," and was far advanced with his biography when he died, at the early age of forty-five. The biographies of Mill, Cobden, Grote, Panizzi, and Carlyle will give an idea of the loss England sustained by the early death of Sir William Molesworth.

Thomas Woolcombe, *Notices of the late Sir William Molesworth, Bart.* (1857).

* **Moltke**, HELMUTH KARL BERNHARD, COUNT VON (b. 1800), Field-marshal and Chief of the Staff of the German army, was born at Parchim, near Mecklenburg, and was the son of an ex-officer in the Prussian army. The family in 1811 removed to Copenhagen, where Moltke entered the Military Academy, and became a Danish officer in 1819. In 1822 he quitted the Danish army, and began the whole military course once more in the Army School at Berlin. Ten years later he was appointed a member of the general staff, and engaged on a military survey in Silesia and Posen. Having reached the rank of captain in 1835, he visited Constantinople on furlough, and remained there as chief military adviser to the Turkish Pashas. Moltke was present at the defeat of the Turkish troops at Nisib by Mehemet Ali in 1839 [EGYPT]—a disaster entirely due to neglect of his repeated warnings. In the same year he returned to Berlin, rejoined the general staff, and became major in 1842. He married his niece, Mary von Burt (d. 1868), daughter of his sister and Mr. Burt, an Englishman. In 1848 he became Chief of the Staff in Magdeburg. Colonel in 1851, he became Equerry to the Crown Prince in 1855, and in his company visited all the leading courts of Europe, attending the coronation of Czar Alexander in 1856. On the appointment of the present Emperor to the Regency of the kingdom in 1858, Moltke's sphere of action and influence rapidly increased. As Provisional Director of the General Staff of the Army, acting in unison with Bismarck and General von Roon, he became one of the chief authorities for the vast plans of military reorganisation that were carried out in the few following years. The plan of operations for the Danish campaign of 1864, and for the capture of Alsen, was also due to his strategy, but it was not till the Austro-Prussian War of June to

August, 1866, that his genius was fully displayed. Dividing his invading force in accordance with his well-known maxim of "marching separately and striking together," he entered Saxony with three great columns. With the victory of Sadowa or Königgratz (July 3rd), and the successes of General von Falkenstein, who had been deputed to hold Hanover and the district south of the Main in check, the war was practically over. The peace that was concluded in August, partly owing to the intervention of Napoleon III., put an end to the ascendancy of Austria in Germany. But it soon became evident that a greater struggle was at hand. The cry of "Vengeance for Sadowa" was echoed in France by Bonapartists and Ultramontanes alike. Moltke at once began his preparations for the inevitable campaign. By 1867 his plans were ready. By the spring of 1869, the arrangements for mobilisation were so complete that in three weeks 484,000 men could be on the frontier. On July 16th, 1870, mobilisation began. On the 19th France declared war. On the 26th the three divisions of the German army were ready on the frontier. The first army under General Steinmetz formed the right wing; the second army, under Prince Frederick Charles, the centre; the third army, under the Crown Prince, the left wing. On Aug. 2nd, the day of the unimportant engagement at Saarbrücken, Moltke arrived at Mainz. On the 4th and 5th the third army won the victories of Weissenburg and Wörth. On the 6th the second army was engaged at Spiceren, and on the 18th, all three armies having advanced steadily in line, the second and first armies co-operated in the victory of Gravelotte, and succeeded in shutting up Bazaine's entire army in Metz. General Steinmetz was now withdrawn from command, and the Crown Prince and Prince Albert of Saxony received orders to annihilate Macmahon's army, which was concentrating at Rheims with a view to relieving Bazaine by a movement to the north-east. On Sept. 1 Macmahon and Napoleon were enclosed without possibility of escape in the fortress of Sedan, and surrendered on the 2nd. The road to Paris was now open. On the 4th the Crown Prince's army and the Army of the Meuse began the march. On the 19th Paris was blockaded. On the 28th Strasburg fell. On Oct. 5th Moltke arrived at the head-quarters in Versailles, and it was now that the difficulties of the campaign became fully apparent. New armies seemed to be springing up in every quarter of France. On Oct. 27th, however, Prince Frederick Charles's army was set at liberty by the capitulation of Metz, and he was thus able to act from Orleans against the army of the Loire, under Aurelle and Chanzy, Manteuffel (q.v.), after holding Normandy and the North, being despatched with a new army of the South to support General Werder against Bourbaki in the neighbourhood of Dijon and Besançon.

On Jan. 29th, 1871, Paris was granted an armistice. On Feb. 16th, Belfort capitulated, and on March 1st the German troops entered Paris. The war was over, and a fortnight later Moltke returned to Berlin. At the triumphal entry in June he was created General Field-marshal, and in 1872 was made a life member of the Upper House. As a representative in the Reichstag the "great silent one" has made several brief but important speeches on military affairs, and in favour of the laws for security against the social democrats. He is the author of an admirable little historical treatise on *Poland* (Eng. trans., 1885).

The following published works of Moltke are largely autobiographical—*Briefe über Zustände und Begebenheiten in der Türkei aus den Jahren 1835 bis 1839*; *Briefe aus Russland* (written 1856, translated 1879); *Reden des Abgeordneten Grafen von Moltke* (1879); *Der Russisch-Türkische Feldzug 1828 und 1829* (translated 1854); *Darstellung der inneren Verhältnisse, &c., in Polen* (1832, translated 1885); *Wanderbuch* (1879, translated 1880). See also *General-Feldmarschall Graf Moltke*, by Professor Wilhelm Müller (1878, translated 1879).

* **Mommsen, THEODOR** (b. 1817), a distinguished German epigraphist and historian, the son of a Schleswig clergyman, was born at Garding in that duchy. He studied at the Holstein University of Kiel, and between 1844 and 1847 travelled through France and Italy collecting and investigating Roman inscriptions. In 1848 he obtained a professorship at Leipzig, but his interference with politics resulted in his removal. After holding Chairs at Zürich and Breslau, he was, in 1858, appointed to a professorship in Berlin. He was offered a post at Leipzig in 1874, but he immediately returned to Berlin as secretary of the Academy of Sciences in that town. He has since continued to reside in Berlin. In 1880 his library was consumed by fire, and most of his notes and manuscripts destroyed. He has been for some years a member of the Prussian Landtag. The great work of Mommsen's life has been the supervision of the whole, and the actual collection of a considerable part, of the great *Corpus Inscriptionum Latinarum*, which, for more than the last twenty years has been gradually issued by the Berlin Academy of Sciences, and which is still incomplete. This great task involved a laboriousness, minuteness, and precision which no German scholar has ever surpassed; and has resulted in additions to our knowledge of Roman history, especially of the imperial periods, of a most important description. Besides this stupendous labour, Mommsen has contributed very largely to various periodicals and transactions of learned societies on subjects mainly suggested by his epigraphical researches. He has also written much on philological questions, as for example, his *Ocean Studies* (1845), his *Dialects of Lower Italy* (1850). In conjunction with J. Marquardt, he has edited

a great *Handbuch der Römischen Alterthümer*, of which he has himself written the volume on *Römisches Staatsrecht*, containing important additions to our knowledge of Roman constitutional law. Among his more definitely historical works may be included treatises *De Collegiis et Sodalitibus Romanorum* (1843); *Die Römische Tribus* (1844); *Das Römische Münzwesen* (1850); *Römische Forschungen*, in two volumes (1864–79); and his edition of the *Monumentum Ancyranum* (1865). He has also written and edited several treatises on subjects connected with Roman law, and issued an edition of the *Digest* and the *Corpus Juris Civilis*. The work of Mommsen which most appeals to other than professed scholars and specialists, is his *History of Rome*, of which the first volume was issued in 1853, and the fifth, leaving the fourth still unpublished, in 1885. The English translation of the earlier three volumes, by Professor Dickson, appeared between 1862 and 1875. The only other of Mommsen's works done into English is his *Early Inhabitants of Italy* (1858). Mommsen has also written pamphlets on subjects which, like the Schleswig-Holstein question and the Franco-German war of 1870, specially excited his interest. It is unnecessary to speak at more length of Mommsen's labours as an epigraphist, but as an historian he must be more particularly characterised. He unites to a research and laboriousness, which are sufficiently evidenced by the great works of his life, real historical power of a kind not always found in the learned specialist. Despite his strength and incisiveness he is, perhaps, too careless of his vocabulary, and of some of the graces of style, to write what can be called literature of the highest class. The main results of his learned investigations that have almost remodelled our views of Roman constitutional law, the extraordinary knowledge of the details of Roman life which his work on the inscriptions has given him, are in his Roman history popularised in a short and singularly attractive form. That his power of conjecture and hypothesis approaches the paradoxical; that his sense of the material benefits which the empire won for the Roman provinces leads him into almost a deification of Caesar and his system of government; that, as an English critic has complained, he is careless of moral distinctions, and worships mere strength and ability—are the defects of a most remarkable and suggestive work.

[T. F. T.]

* **Monk-Bretton, THE RIGHT HON. JOHN GEORGE DODSON, BARON** (b. 1825), was educated at Eton and at Christ Church, Oxford (first class classics, 1847). Called to the bar in 1853, he unsuccessfully contested West Sussex in the Liberal interest in 1852 and March, 1857, but was returned in April,

1857. In 1874 he was elected for Chester, but lost his seat on petition in April, 1880, and was returned for Scarborough in the following July. He was Chairman of Committees from February, 1865, to April, 1872; Financial Secretary to the Treasury from August, 1873, to February, 1874; President of the Local Government Board April, 1880, to December, 1882; and Chancellor of the Duchy of Lancaster from 1882 to 1884, when he was raised to the peerage as Lord Monk-Bretton. As Mr. Dodson Lord Monk-Bretton was the introducer of the Agricultural Holdings Act of 1883.

Monkswell, THE RIGHT HON. ROBERT PORRETT COLLIER, BARON (b. 1817, d. 1886), was educated at Plymouth Grammar School, and at Trinity College, Cambridge (B.A., 1841). Called to the bar in 1841, he became a Q.C. in 1854. Returned to Parliament for Plymouth in the Liberal interest in 1852 he became Solicitor-General (1863-6), and Attorney-General (1868-71). In 1870 he accepted the recordership of Bristol, but resigned it at the wish of his constituents, and in November, 1871, was appointed a judge of Common Pleas in order to qualify him for a judgeship of the judicial committee of Privy Council, which he received a few days later. The method of this appointment caused some outcry, and the Government escaped censure by a somewhat narrow majority. In 1885 Sir Robert Collier was raised to the peerage as Baron Monkswell. He was the author of legal works on *The Law of Railways* and *The Law of Mines*, as well as a landscape painter of recognised ability, and the father of the well-known artist, John Collier.

Monroe, JAMES (b. 1758, d. 1831), fifth President of the United States, was descended from a cavalier who settled in Virginia in 1652. He studied at William and Mary College, but left it to enter the army under Washington in 1776, and for the capture of a Hessian battery at Trenton was made captain. He served on the staff of General Lord Stirling at the battles of Brandywine, Germantown, and Monmouth. He subsequently studied law with Thomas Jefferson, and in 1782 was elected to the Assembly of Virginia, and appointed a member of the executive council. In 1783 he was elected a member of Congress. He early comprehended the inadequacy of the articles of confederation by which the colonies had formed the compact of union, and was one of those who inspired the movement which resulted in the formation of the present constitution of the United States, though he opposed it when complete, holding that the powers granted to the general government were excessive. He was a resolute opponent of the Spanish policy in regard to the Mississippi river, in virtue of which Spain denied the right of the colonists on the upper waters to navigate the lower portion, which she claimed and held as her own possession. In

1790 he was elected to the United States Senate, and in 1794 went to France as minister plenipotentiary. His reception there as the representative of the growing Republic was enthusiastic; and Mr. Jay, negotiating a treaty with England, thought that Monroe's relations with the French republicans were damaging to his efforts. In 1796 Monroe was recalled. He was elected governor of Virginia, and held that post until 1802. France having acquired from Spain the dominion of all that country, in virtue of which Spain had raised the question of the navigation of the Mississippi, the opportunity to prevent future trouble presented itself in the projected purchase of all the territory then called Louisiana, and Mr. Monroe was sent to Paris as envoy extraordinary, and assisted Mr. Livingstone, the resident minister, in the completion of that important negotiation. In an effort to conclude with the English government a convention against the impressment of sailors from American ships, and for protection of the rights of neutrals, he was at first unsuccessful; but in 1806, in a second endeavour, he completed a treaty, which was rejected by President Jefferson as insufficient. This difference led to the second war with England. In 1811 Mr. Monroe was again elected governor of Virginia, and in the same year accepted, in the Cabinet of Mr. Madison, the position of Secretary of State. In 1817 he was elected President of the United States, and in 1820 was re-elected. He received every electoral vote but one, which was cast against him by a delegate, who held that the honour of a unanimous vote should be enjoyed by Washington alone. In 1822, as President, he recognised the independence of the Spanish colonies in South America and Mexico, and in so doing made a declaration, which has received the name of "the Monroe doctrine." This doctrine holds that the period of European colonisation in the western hemisphere is closed, and that the endeavour of European states to form new establishments in North or South America is in the nature of invasion.

J. Q. Adams, *Lives of J. Madison and James Monroe*. [G. W. H.]

Montagu, BASIL (b. 1770, d. 1851), jurist and man of letters, was the natural son of the Earl of Sandwich, the friend of Wilkes. Called to the bar in 1798 he obtained considerable reputation as a legal authority, notably by his digest of the *Bankrupt Laws* (1805), and was associated with Romilly and Wilberforce in their efforts to confine the penalty of death to murder and treason. He is now chiefly remembered for his edition of Bacon's works (1825), and his laboriously uncritical *Life of Bacon*, which gave occasion for an unjust and ignorant attack from Macaulay. He also published a volume of essays (1824) and selections from Bacon, Taylor, Hooker, and Hall (1805).

Montalembert, CHARLES FORBES RENÉ, COMTE DE (b. 1810, d. 1870), was the son of a noble French *émigré*, and spent his early years in England. After a visit to Sweden and Ireland in 1830, he settled in Paris, and threw himself with the energy of youth and earnest conviction into the crusade that Lamennais and Lacordaire (q.v.) were waging in defence of the liberty of the Church and the freedom of education, accompanying them to Rome to plead the cause of their paper, *L'Avenir*. His eloquent *Life of St. Elizabeth of Hungary* was published in 1836. From 1835, when he was able by French law to take his seat in the Chamber of Peers, until its abolition in 1848, he devoted himself to the defence of the Catholic religion, and freedom of education. The greatest mistake of his public life was the support which he gave to Louis Napoleon, but his eyes were opened by the confiscation of the Orleans property, Jan. 22nd, 1852, and he withdrew from the government. His public career was virtually over, though he continued to sit in the National Assembly until 1857, when he failed to be re-elected. The remaining years of his life were spent in literary activity and journeys. Those to England, a country to which he was much attached, produced *L'Avenir Politique de l'Angleterre* (1856), and *Un Débat sur l'Inde au Parlement Anglais* (1858), which exposed him to a public prosecution and sentence, remitted, however, by the Emperor. His large work, *Les Moines de l'Occident* appeared in 5 vols., 1861-7, and was intended as a vindication of the monastic orders. Its erudition is enhanced by its charm of style, and its teaching bore fruit when his eldest daughter withdrew into a nunnery. In 1852 Montalembert was elected a member of the Royal Academy. The decree of papal infallibility published shortly before his death, met with his strong opposition, but, true to the principles of a lifetime, he bowed obediently to it when once announced. Among his other writings were *Pie IX. et Lord Palmerston* (1856), *Une Nation en Deuil* (Poland), 1861, and *La Victoire du Nord dans les États Unis*.
Mrs. Oliphant, *Memoir of Count de Montalembert*.

Monteagle, THOMAS SPRING-RICE, BARON (b. 1790, d. 1866), statesman, was a native of Limerick, educated at Trinity College, Cambridge, and entered Parliament in 1820, as member for his native city in the Whig interest. In 1832 he was elected for the Borough of Cambridge, and represented it until 1839, when he was raised to the peerage. As Mr. Spring-Rice he was a prominent member of the Whig party in debate, and had considerable official experience, being Under-Secretary for Home Affairs (1827-30), Secretary for the Treasury (1830-34), in which year he was for a few months Secretary to the Colonies. From 1835 to 1839 he was Lord Melbourne's Chancellor of the Exche-

quer, and after his elevation to the peerage was looked upon as a great authority on financial and Irish questions. In 1861 he unsuccessfully opposed the abolition of the paper duty.

Montefiore, SIR MOSES, BART. (b. 1784, d. 1855), the centenarian philanthropist, was born in London, and belonged to an old Jewish family that had settled in England in the beginning of the eighteenth century. He was early articled to a firm of wholesale tea-merchants in the City, but subsequently left that trade for the Stock Exchange, having received a licence, at that time an essential for a Jewish broker. He succeeded in business so well that in 1824 he retired with a colossal fortune, and devoted the remainder of his life to municipal and philanthropic work. In 1837 he was nominated sheriff of London, when he was knighted. He subsequently became high sheriff of Kent, and was created a baronet in 1846. He undertook several missions to various countries to alleviate the Jewish persecution. In 1867 he founded a Jewish college at Ramsgate, in memory of his wife, and in October and November, 1883, great rejoicings took place at Ramsgate on his entering his hundredth year.

Lucien Wolf's *Centennial Biography*.

Montenegro, THE PRINCES OF, belong to the family of Petrovitch Nyegush, who founded the dynasty in 1697. The history of the nation has been one of almost incessant struggle against the Turk, during which it maintained its independence under its hereditary prince-bishops. The ruler at the beginning of the century was the Vladika PETER I. (1782-1830), who in 1791 had overthrown the Turks in a battle of three days and three nights, and again defeated them in 1796. In 1805 he led his mountaineers against the French, who had occupied Dalmatia, and defeated Marmont. In 1813 a strip of coast was seized from the French, but was handed over to Austria at the peace. During the period of comparative tranquillity which ensued, the Vladika Peter applied himself with considerable success to the civilisation of his subjects, and on his death, in 1830, was canonised as a saint. PETER II. (1830-51), his nephew and nominated successor, succeeded him, and in 1832, the year of his consecration at St. Petersburg, defeated the Turks who had invaded the country when he refused to acknowledge the authority of the Sultan. He proved a beneficent ruler, abolishing the vendetta, and putting a check on cattle lifting. He was a talented man, a good soldier, eloquent preacher, accomplished linguist, and inherited the family talent for poetry. On his death, his successor and nephew, DANIEL II. (1851-60), declined to assume the ecclesiastical functions, proclaimed himself a purely temporal prince, and obtained the consent of the Czar Nicholas. In 1852 the Turks, under Omar Pasha, invaded Montenegro, but were

repulsed with loss. Prince Daniel's neutrality during the Crimean war, his repression of forays into the Turkish dominions, and his willingness to become a vassal of the Porte, in return for substantial concessions of territory, caused him to become unpopular in spite of the brilliant victory gained over the Turks at Grahovo by his elder brother, the renowned warrior Prince Mirko. On Aug. 13th, 1860, he was assassinated by an exiled Montenegrin.

* NICHOLAS I., or NIKITA (b. 1840), the son of Prince Mirko, who loyally served the son in whose favour he had been passed over, married, shortly after his accession, Milena, daughter of Peter Vonkotic, by whom he had a son Daniel Alexander. He inherited the gifts of warrior and poet. Promptly involved in war with the Porte, he resisted bravely against overwhelming numbers, but was forced, in September, 1862, to recognise the Turkish supremacy. Again, in 1875, reprisals between Christians and Mahometans at Podgoritzia nearly caused a war between Montenegro and Turkey, which was averted by the intervention of the powers. In 1876 Prince Nikita had great difficulty in restraining his subjects from going to the aid of their fellow-religionists in the Herzegovina, and on July 2nd he imitated Serbia in declaring war against the Porte. His gallant troops gained repeated successes, and by the Treaty of Berlin (July, 1878) Montenegro was declared independent of Turkey, and given a slice of territory and the seaport Antivari, a long-coveted possession. The Porte, however, neglected to carry out its promises, alleging the formidable attitude of its Albanian subjects, and the Powers in 1880 proposed the cession to Montenegro of the district of Dulcigno instead of those named in the treaty. This was accomplished in November, but not before a naval demonstration had been resorted to by the Powers.

Sir J. G. Wilkinson, *Dalmatia and Montenegro*; Lady Strangford, *The Eastern Shores of the Adriatic*; W. Denton, *Montenegro*; Professor Freeman, in *Macmillan's Magazine*, vol. 33.

* **Montgomery, FLORENCE** (b. 1847), authoress, the daughter of Sir Alexander Montgomery, Bart., acquired the habit of narration from telling stories to her younger sisters. At the instance of Mr. Whyte-Melville, she resolved to publish, and the successes of *A Very Simple Story* (1867), and still more of the charming *Misunderstood* (1869), were immediate and complete. They were followed by *Thrown Together* (1872), *Thwarted, or Duck's Eggs in a Hen's Nest* (1874), *Wild Mike and His Victim* (1875), *Seaforth* (1878), *Peggy and Other Tales* (1880), *The Blue Veil* (1883), and *Transformed* (1886).

Montgomery, JAMES (b. 1771, d. 1854), journalist and poet, a native of Irving Ayr, was the son of a Moravian missionary, and was at first employed in various book shops. In 1792 he was employed as a writer on the

Sheffield Register, afterwards called the *Iris*, of which he became editor, and was imprisoned in 1795 for republishing a song called the *Fall of the Bastille*, and again in 1796 for an account of a riot. Meanwhile, his desire to obtain fame as a poet had not grown less, and *The Wanderer in Switzerland* appeared in 1806. Despite the merciless onslaughts of the *Edinburgh Review*, it was followed by *The West Indies* (1810), *The World before the Flood* (1812), *Greenland* (1819), *Songs of Zion* (1822), and *The Pelican Island* (1828). The most complete edition of his poems was published in 1850. Though now almost unread, Montgomery, if destitute of the highest inspiration, had at any rate a certain distinction of style, and was full of enthusiasm for the common brotherhood of man. His *Lectures on Poetry and General Literature* (1833) are the work of a man of refinement.

Montgomery, ROBERT (b. 1807, d. 1855), poet, a native of Bath, was ordained in 1833, and became minister of Percy Street Chapel, London, in 1843. His *Omnipresence of the Deity* was published in 1828, and indifferent though it was, it was infinitely superior to *Satan* (1830), *The Messiah* (1832), *The Sanctuary* (1851), and his other numerous poems whose unutterable badness was duly castigated by the critics, notably by Macaulay, in 1830, in his famous article in the *Edinburgh Review*. Despite their marvellous nonsense, and the offensive way in which they were puffed, Montgomery's poems were eagerly read by the non-critical portion of the religious world.

* **Montpensier, ANTOINE MARIE PHILIPPE LOUIS D'ORLÉANS, DUC DE** (b. 1824), the fifth son of Louis Philippe, entered the French army, and gained some distinction in the African campaign of 1844-5. In October, 1846, he married Maria Louisa, the sister of Isabella II., of Spain, the object of the arrangement being to secure his eventual succession to the throne of Madrid. [ISABELLA.] After the revolution of 1848 he took up his residence in Spain, and intrigued vigorously against his sister-in-law, who banished him in 1868. His candidature, however, was unsuccessful in more than one provincial parliament, and in March, 1870, he further damaged his cause by killing his cousin and political opponent, Don Henri de Bourbon, in a duel. During the troubles of the following years, Montpensier remained in the background, but he supported the cause of his nephew Alfonso, to whom, in 1878, he gave his daughter, the Princess Mercedes, a union cut short by her early death. On the death of Alfonso, in 1885, he was again informally mentioned as a candidate for the throne.

* **Moody, DWIGHT LYMAN** (b. 1837), the American preacher, was born in Massachusetts, U.S., and, having early lost his father, was left to struggle in the world. For

a time he worked on a farm, but at the age of eighteen he removed to Boston, where he acted for some time as a clerk. Brought up a Unitarian, he renounced that faith in 1856, became a Congregationalist, and a zealous Sunday-school teacher. Shortly afterwards he removed to Chicago to accept a clerkship in a boot and shoe store. Here he became a successful lay missionary, and during the Civil War was in the service of the Christian Commission. At length, in 1865, he entirely disconnected himself from business, and resolved to devote all his services henceforth to spiritual work. He lost his church and school-house by the great Chicago fire in 1871, when he paid his second visit (first visit 1861) to this country to raise funds to rebuild them. The visit was a success, and a church at a cost of £25,000 was erected. Invited a third time to this country to undertake evangelistic work, he came accompanied by Mr. Sankey, an effective singer, and was instrumental in causing a large wave of religious revival to pass over the country in 1873-5. They made another visit in 1883-4. Mr. Moody has written numerous little works of a religious nature, among which may be mentioned *Sovereign Grace* (1884), *The Old Gospel* (1885), and *Bible Characters* (1885).

The Lives and Labours of Moody and Sankey, (London, 1875).

* **Moore, ALBERT** (b. 1837), artist, descended from a family of artists, and brother to Henry Moore the academician, was born at York. Known first of all, and indeed almost exclusively for many years, as a painter in oil, he eventually distinguished himself as an artist in water colour, and in 1881 was elected to the Royal Society of Painters in Water Colours. He had long contributed to the Royal Academy single figure pieces, in which regard was had especially to perfection of line, and delicate harmony of hue, and in which the incident counted for little. Since his election he has contributed, pretty regularly, his single figures in water colour, generally draped, but in the exhibition of 1886 almost nude, and as memorable in modelling as in colour. Mr. Moore has not for a long time repeated that deserved success in the grouping of several figures which, in the *Quartet*—"a painter's tribute to the art of Music"—made the Academy of 1869 distinguished. He has contented himself of late with the single figure, but, it may be, with a closeness of realisation, in fabrics and in flesh, which formerly he was not accustomed to seek. His work could never, it must be confessed, impress itself strongly upon the popular mind, but the more serious and delicate students of Art recognise in it an originality not really to be gainsaid, and a completeness and sureness of taste, which make his place almost a solitary one in our school. [F. W.]

Moore, SIR JOHN (b. 1761, d. 1809), soldier, was the son of a Glasgow physician. In

1777 he received an ensigncy in the 51st regiment, then quartered at Minorca. He served in the American War, and was on half-pay from the peace (1783) until 1787. In 1790 he attained a colonelcy, and 1794 served with distinction in Corsica; was appointed brigadier-general in the West Indies, where he took part in the attack on St. Lucia, and was afterwards governor of that island. Returning to Europe, he assisted in the suppression of the Irish rebellion in 1797, was severely wounded in the unfortunate expedition to Holland in 1799, and served under Abercrombie in Egypt in 1800. He proceeded to Sicily in 1806 as second in command to General Fox. In 1808 he commanded the expedition in aid of Sweden, rendered abortive by the obstinacy of the Swedish king, and on his return proceeded at once to Portugal, where at first he had only a subordinate position, but in October, 1808, was nominated to the command of an army to co-operate with the Spanish troops in the north of Spain. He advanced as far as Salamanca, but found that the accounts of its forces given by the junta were wholly unreliable, and receiving news of the fall of Madrid (Dec. 4th) and the advance of Napoleon to cut off his communications with Portugal, he determined to retreat, although he had already gained a success over Soult at Saldanha. The retreat was carried out in the depth of winter under great difficulties, with Soult's army hanging on the rear, and Napoleon threatening him for a while on the south. Corunna was reached Jan. 13th, 1809, but the non-arrival of the transports rendered an engagement necessary after all. The battle of Corunna took place Jan. 16th, the cavalry and cannon having been already embarked. It resulted in a victory for the English, dearly purchased, however, by the death of the general, who by his personal heroism and lofty character had won the love and esteem of his men and officers alike.

F. C. James Carrick Moore, *Life of General Sir John Moore; Napier's Peninsular War*.

Moore, THOMAS (b. May 28th, 1779, d. Feb. 25th, 1852), poet and prose writer, was born in Dublin, where his father carried on business as a grocer and spirit retailer. He was educated under Mr. Samuel Whyte, a man of literary tastes, and the earliest tutor of Sheridan. Moore's first poetic composition was written at the juvenile age of eleven. In common with many other Irishmen, the poet's father hailed the outbreak of the French Revolution as a happy augury for Ireland, and young Moore imbibed the current ideas and aspirations. In 1794 he entered Trinity College, Dublin, where his political views led to his being reprimanded by the university authorities, and where he became a friend of Robert Emmet. Moore graduated at Trinity College in 1799; and the same year, having chosen the law as a

profession, he proceeded to London to enter at the Middle Temple. The poet's translation of *Anacreon* was published by subscription in 1800, and dedicated to the Prince Regent. He was soon received into fashionable society, and found warm friends in Lord Moira and Lady Donegal. Holland House was speedily opened to him, and he was much sought after for his double gift of wit and song; though there were not wanting those who upbraided the poet for his alleged servility to the aristocracy. In 1801, Moore's first volume of original verse was published, under the title of the *Poetical Works of the Late Thomas Little*, a name referring to the writer's diminutive stature. Lord Moira having obtained for Moore the post of Registrar to the Admiralty Court of Bermuda, the poet left England and arrived at Bermuda in January, 1804. The appointment soon became irksome to Moore, who appointed a deputy, and went on a tour through the United States and Canada. He had little sympathy with the American people and Republic, and returned to England in 1806. The same year he published his *Odes and Epistles*; two years later appeared his poems of *Intolerance and Corruption*, and in 1809 *The Sceptic*. In the course of an article in the *Edinburgh Review*, some trenchant criticisms were made upon Moore's early writings. This led to a challenge from the poet to Jeffrey, and the combatants met at Chalk Farm. The constabulary stopped the proceedings, and on examination it was found that one, if not both, of the pistols was innocent of ball. This fact gave rise to many pleasantries on the part of Byron and other critics at the expense of Moore, who denied that his own pistol was unloaded. Ultimately Moore established a cordial understanding with Jeffrey, and a still closer friendship with Byron. In 1811, Moore's comic opera, *M.P., or the Bluestocking*, was produced at the Lyceum Theatre, but it met with a chilling reception. It was followed by the publication of the *Intercepted Letters, or the Twopenny Post Bag*, "by Thomas Brown the Younger." These satirical epistles enjoyed an enormous success, fourteen editions of the work being disposed of in one year. About this time Moore married Miss Beesy Dyke, a lady who proved an excellent helpmeet, and in the course of a few years the poet removed with his wife and young family to Mayfield Cottage, near Ashbourne, Derbyshire. *National Airs* appeared in 1815; *Sacred Songs, Duets, and Trios*, with music composed and selected by Sir J. Stevenson and Moore in 1816; and *The World at Westminster* in the same year. While residing at Mayfield Cottage, Moore conceived the idea of an Oriental poem, a class of composition then much in vogue. The projected work was completed, and entitled *Lalla Rookh*, and Mr. Longman agreed to pay in advance for this poem the large sum of £3,160. It was

issued in 1817, and consisted of four tales in verse, entitled *The Veiled Prophet of Khorassan, Paradise and the Peri, The Fire Worshipers*, and *The Light of the Harem*. These poetic tales were connected by a short explanatory prose narrative. In 1818 Moore published *The Fudge Family in Paris*, a series of poems, partly of a humorous and partly of a satirical character; the following year was issued *Tom Crib: his Memorial to Congress*; and in 1820, *Rhymes for the Road, and Fables for the Holy Alliance*. At or near this time an incident of a very unpleasant nature occurred. Moore's deputy in Bermuda was guilty of defalcations to the extent of £6,000, and the nominal holder of the office was held liable. Friends made tenders of assistance to the poet, but these he declined, and went on the Continent pending a legal decision on the matter. In the company of Lord John Russell he travelled through France and Switzerland, the friends separating at Milan. Moore went on to Venice, where he spent some time with Byron, and received on parting the gift of Byron's autobiographical memoirs in manuscript. Murray purchased the manuscript in 1821, for £2,100, and the work was delivered to him in 1824, just before Byron's death. On looking through the memoirs, Murray came to the conclusion that they ought to be suppressed, and he held a consultation with various friends of Moore, Byron, and Lady Byron. Murray destroyed the manuscripts, though some portions of them are still extant in various forms, and Moore returned the purchase-money. It is understood, however, that he was afterwards recouped by the parties concerned. The government claim of £6,000 against Moore was eventually reduced to £750, and this sum was paid, an advance being made to the poet by his friends, which was quickly repaid from the profits of the *Loves of the Angels*, published in 1823. Works now followed each other in rapid succession, the *Memoirs of Captain Rock* appearing in 1824; the *Life of Sheridan* in 1825; a *History of Ireland, Travels of an Irish Gentleman in Search of a Religion*, and *The Epicurean* in 1827; and *Odes upon Cash, Corn, and Catholics* in 1828. The best and most valuable of Moore's prose works, *The Life of Byron*, was published in 1830. It was succeeded in 1831 by a *Life of Lord Edward Fitzgerald*. Some years later was issued his last work *Alciphron*, a poem founded on the Egyptian mythology. The poet enjoyed a literary pension of £300 per annum, conferred upon him by Lord Melbourne in 1835. Moore's last years were spent at Sloperston Cottage, near Devizes. The poet's intellect failed him some time before his death, and after three or four years of mental gloom, he expired in his seventy-third year. It is as a song-writer that Moore will survive in literature, and he has been styled the

legitimate successor of Carew, Herrick, Lovelace, Suckling, and Waller. "To me," Byron remarked, "some of Moore's last Erin sparks—*As a Beam o'er the face of the Waters, When he who adores thee, Oh, blame not the bard, Oh, breathe not his name*, are worth all the epics that were ever composed." Such lyrics as *The Harp that once through Tara's halls, The Last Rose of Summer*, and *The Minstrel Boy*, have attained a world-wide fame. Lord Jeffrey happily described the poetry of Moore as "a thornless rose," whose form was "cast in beauty's mould;" while Hazlitt describes his muse as "another Ariel, as light, as tricky, as indefatigable, and as humane a spirit." Moore had wit, fancy, sensibility in abundance; but he lacked depth and passion. He was the poet of the boudoir and the drawing-room; his pathos was sometimes artificial, and never deep; and he captivates not by any serious qualities, but by sentiment and romance, embodied in light and many-coloured verse.

Right Hon. Lord John Russell, *Memoirs*, Journal, and Correspondence of Thomas Moore (1853, 8 vols); H. E. Montgomery, *Thomas Moore, his Life, Writings, and Contemporaries* (1860); *The Hitherto Uncollected Writings of Thomas Moore, Prose and Verse*, edited by E. H. Shepherd (1877); Hazlitt's *English Poets and Spirit of the Age*; *The Poetical Works of Thomas Moore*, edited by W. M. Rossetti. [G. B. S.]

* **Moorhouse**, THE RIGHT REV. JAMES, D.D. (b. 1826), Bishop of Manchester, a native of Sheffield, was educated at St. John's College, Cambridge (B.A. 1853, D.D. 1876). He became vicar of St. John's, Fitzroy Square, in 1862, vicar of Paddington and rural dean in 1868, and prebendary of St. Paul's in 1875. He was appointed Hulsean lecturer on divinity at Cambridge in 1865, and Warburton lecturer in 1875. In May, 1876, Dr. Moorhouse was appointed Bishop of Melbourne, and in 1886 Bishop of Manchester, in succession to the late Bishop Fraser (q.v.). He is generally reckoned as a member of the moderate Church party, and has published several sermons.

More, HANNAH (b. 1745, d. 1833), dramatic writer, novelist, and philanthropist, was born in the neighbourhood of Bristol, and was for some time a teacher in her sisters' boarding school in that town. Her first publication, written at the age of eighteen, although it did not appear till 1773, was *The Search after Happiness*, a pastoral drama, which was followed in 1774 by a tragedy, *The Inflexible Captive*, founded on the story of Regulus. An annuity from a wealthy admirer freed her from her work at the boarding-school, and enabled her to gratify her literary tastes. In 1776 she was introduced to David Garrick, the actor, and the intimacy is marked by her *Ode to Dragon*, Garrick's house-dog. Her tragedy of *Percy*, her best approved dramatic work, was brought forward at Covent Garden

by Garrick in 1777. About the year 1780 her opinions on public theatres underwent a change, and she "renounced her dramatic productions in any other light than as mere poems." Her wishes in this respect were more fulfilled, for few dramatic writers were more successful in obtaining readers. Her *Sacred Dramas* (1782) were very popular. Her prose works, fresh, vivacious and original in their style, depicted in strong character the minor immoralities and infirmities of her age, and in these we find the best exposition of her ethical conceptions; *Strictures on Female Education* (1799), *Catechism in Search of a Wife* (1809), *Practical Piety* (1811), *Christian Morals* (1813), and *Moral Sketches* (1818). But the best testimony to Hannah More's noble character was her long-continued philanthropic work among the poor at a time when such work was not so popular as it is nowadays. A good churchwoman and anti-Revolutionist, she aimed at imparting simple truths. She realised over £30,000 by her writings, £10,000 of which she bequeathed charitably.

William Roberts, *Memoirs of the Life of Hannah More*; also Mrs. H. C. Knight's *New Memoir*, and H. Thompson's *Life*.

Moreau, JEAN VICTOR (b. 1763, d. 1813), French general, and the most formidable of Napoleon's rivals, fought in the campaigns of the war of the French revolution under Pichegru, and as general of division greatly distinguished himself in Flanders during 1794, and as commander-in-chief of the army of the Rhine in 1796 displayed strategy which placed him among the first generals of his time. Sent into retirement for a while for his silence concerning his friend Pichegru's royalist intrigues, he was reappointed in 1798 to serve under Scherer, and rescued the army of Italy from the clutches of Suvaroff by a brilliant retreat. On his return from Egypt, Bonaparte won over Moreau by his flatteries, inducing him to connive at the overthrow of the Directory, and giving him as a reward the command of the united armies of the Rhine and Helvetia. The campaign terminated with Moreau's great victory over the Austrians at Hohenlinden (Dec. 2nd, 1800). The antagonism between Bonaparte and himself now became acute, and Moreau unwisely lent himself to plans for the overthrow of the first Consul. He was accused of participating in the Georges conspiracy of 1804, and was condemned on very slight evidence to death. Bonaparte, however, allowed him to go into exile, and he lived in the United States until 1813, when he joined the Allies, and was mortally wounded by a French cannon-ball as he stood with the Czar Alexander before Dresden.

Morgan, SYDNEY OWENSON, LADY (b. circa 1777, d. 1859), was the daughter of an

Irish actor, and never could be induced to disclose the exact year of her birth, baffling even the researches of Mr. Croker. She took early to literature, and, launching herself in London, after several fairly successful attempts at fiction published a really remarkable novel in *The Wild Irish Girl* (1806). She thereafter became a social celebrity; and fortunately for herself married, in 1812, Sir Charles Morgan, a doctor of position, who kept her exuberant spirits fairly under control. In 1814 came *O'Donnel*, a brilliantly patriotic Irish romance; and in 1817 her lively study of France after the Restoration, which profoundly irritated the French Court and the Tory press in England. Upon the *Quarterly Review* she retaliated in *Florence Macarthy* (1818). Her *Italy* (1821) was as outspoken and shrewd as her *France*, and another clever Irish novel was *The O'Briens and the O'Flahertys* (1827). Lady Morgan received a Civil List pension of £300 from Earl Grey, and continued to write until within a short time of her death, producing nothing, however, of much note after 1830.

Lady Morgan, *Passages from an Autobiography*, and W. Hepworth Dixon's edition of her *Memoirs*.

Morland, GEORGE (b. 1763, d. 1804), an English painter, was the son of Henry Morland, a portrait painter and painter of domestic subjects, himself the son of an artist. Born in the Haymarket in 1763, he is said, at ten years of age, to have been an exhibitor at the Academy—an "honorary exhibitor," figuring as "Master George Morland"—and not long afterwards he was at the Academy Schools. Rebelling against the restraints of home, he betook himself first to Margate and afterwards to France—more it would seem for dissipation than for purposes of study. He came back from the Continent and established himself at Kensal Green, where certain of his pictures were promptly popularised by the art of the engraver. In 1786 he married, the young lady being a sister of William Ward, whose name was to be associated with the mezzotint engravings after Morland as distinctly as that of Raphael Smith is associated with the prints after Sir Joshua. But diligently as William Ward was engaged, for a term of years, in working after Morland, he was only one of many engravers so occupied, for Morland's facile inventions became popular with the classes that loved Art; and in his lifetime there was the steady demand which is yet noticeable to-day for his picturesque record of the life of the parlour, of the inn kitchen, of the stable, of the pig-sty, of the country road. He was marvellously productive, but it is to be feared that soon after he was thirty years old he ceased to observe nature—at all events inanimate nature—and relied upon his memory. Horses he studied, sometimes at the stables in Paddington, and the sweet-tempered woman

of his pictures was, it is reputed, always his wife. He worked hard, but he spent himself likewise in late hours and among the most debauched of companions. As a consequence, in 1799 he was arrested for debt. Soon afterwards, however, he "obtained the rules" and took a house at Lambeth, and in 1802 he was finally released. But by that time his health was absolutely broken. Yet, by the extraordinary buoyancy of his temperament, he managed for a while longer both to work and to take his pleasure. He died after all somewhat suddenly. His wife was not with him at the moment, and when she heard of it the shock killed her, and the two were buried in the same grave. Among the four or five hundred works which Morland undoubtedly executed—and it is possible that he may have exceeded even the latter number—many were of course painted carelessly and with failing skill. Again, one has doubtless to reckon with a certain number of forgeries. But there remain—and generally they are in good condition—a sufficient number of really excellent pictures to justify and perpetuate his fame; and then, as has been said already, the mezzotints after his compositions will continue to widen his popularity. Of late years a noble Morland—the bequest of Sir Bate Dudley—has been placed in the National Gallery. This is the *Farmer's Stable*. Its scene was at Paddington, from which all vestige of rusticity has by this time departed. Morland in his landscape and rural figures carried on, though with a full measure of individuality, that tradition of naturalism which was perhaps begun by Gainsborough. But the naturalism of Morland and of Gainsborough—unlike that of certain of our English and French contemporaries—was a naturalism tempered by grace: if beauty did not exist in the rusticity they beheld, the charm that was lacking must be supplied. In the art of Morland the landscape is but a background, carefully studied, perhaps, when he was industrious; happily conceived when he was idle. His main theme is the figure and the story it may be made to convey, and the story is often one of ordinary life with its habitual and homely occupations, and sometimes one of sentimental adventure, and sometimes the tale of a severe moralist.

Lives by Hassell (1806); and Dawe (1807).

[F. W.]

* **Morley, PROFESSOR HENRY** (b. 1822), was educated at King's College, London, and at first practised medicine in Shropshire, but in 1851 came to London as a journalist. From 1857 to 1865 he was English lecturer at King's College, and in the last year became professor of the English language and literature at University College, London. Among Professor Morley's more important literary works may be mentioned his biographies of *Palissy* (1852), *Jerome Cardan* (1854), *Cornelius*

Agrippa (1856), and *Clement Marot, and Other Studies* (1870); his *Journal of a London Play-goer* (1866); some admirable works on English literature, *English Writers* (1864-67), *Tables of English Literature* (1870), a *First Sketch of English Literature* (1st ed. 1873), and *English Literature in the Reign of Victoria* in the Tauchnitz edition of British authors (1881); and numerous editions of standard authors, *The Spectator* (1868), *Cassell's Library of English Literature* (1875-81), *The Library of English Literature* (1883, etc.), *The Universal Library* (1883, etc.), *The National Library*. He is also the author of fairy tales, *Fables and Fairy Tales* (1860), *Oberon's Horn* (1861), and *The Chicken Market* (1877).

* **Morley**, THE RIGHT HON. JOHN, M.P. (b. 1838), the son of the late Mr. Jonathan Morley, of Blackburn, was educated at Cheltenham College and Lincoln College, Oxford (B.A. 1859, M.A. 1873, LL.D., Glasgow, 1879). Called to the bar in 1873, he devoted himself to a literary career, and became one of the most distinguished men of letters of the day. His works comprise admirable biographical studies of *Burke* (1867), *Voltaire* (1872), *Rousseau* (1876), *Diderot and the Encyclopedists* (1878), and *Cobbett* (1881), an earnest essay on *Compromise* (1874), and two series of *Miscellanies* (1871 and 1877). A new collected edition of his works began to appear in 1886. Mr. Morley was equally conspicuous as an editor, and after conducting the *Literary Gazette* for several years, in succession to Shirley Brooks, was editor of the *Fortnightly Review* (1867 to 1882), of the *Pall Mall Gazette* from 1880 to Aug., 1883, and of *Macmillan's Magazine* until 1885. He is still editor of *English Men of Letters Series*, to which he has contributed a volume on *Burke*. In politics he is a pronounced Radical, and consistently in favour of Home Rule for Ireland, and of non-intervention in European affairs. He unsuccessfully contested Blackburn in 1869, and Westminster in 1880; but in 1883 was first elected for Newcastle-on-Tyne, the vacancy having been caused by the death of Mr. Ashton Dilke. He soon became a power in the House, and in Oct., 1883, presided over the Leeds Conference, at which it was decided to urge the Government to introduce a Franchise Bill in the following session. On the return of the Liberals to power in 1886 he became Chief Secretary to the Lord Lieutenant of Ireland and a member of the Cabinet; at the general election of the same year he was again returned to the House by Newcastle.

Morley, SAMUEL (b. 1809, d. 1886), the son of the late John Morley, of Hackney, was educated at a private school, and entered the firm of J. and R. Morley, hosiers, of Wood Street, City, of which he was for many years the head. A representative Nonconformist, he always took a prominent part in educational and

religious enterprise, notably in the erection of the Memorial Hall, Farringdon Street (1875). Elected M.P. for Nottingham in the Liberal interest in 1865, he was unseated on petition, but represented Bristol from 1868 to 1885, when he retired from parliamentary life, and was offered, but declined, a peerage. He died, universally lamented, in 1886.

Morny, CHARLES AUGUSTE, DUC DE (b. 1811, d. 1865), French statesman, the half-brother of Napoleon III., being the son of Queen Hortense and the Comte de Flahault, or more probably of the Dutch Admiral Verhuell, was adopted by the Comte de Morny, and served in the French army until 1837, when he retired and devoted himself to speculation, with the result that he acquired a considerable fortune, which he speedily lost again in fashionable dissipation. One of the principal authors of the *coup d'état* of Dec. 2nd, 1851, he became Minister of the Interior, and secured his brother's advent to the throne by a series of judicious arrests and imprisonments. The most creditable act of his life was his resignation of office because of the decree confiscating the property of the Orleans family. In 1854 he became president of the Corps Législatif, and filled that post until his death. By a consummate combination of hauteur and tact he succeeded in reducing that body to a condition of complete subservience. In 1856-7 he was sent to St. Petersburg to represent France at the coronation of Alexander III., and after dazzling the court with the magnificence of his equipage, returned with a young Russian wife, the Princess Trobetskoi. The duke was undoubtedly one of the most influential and characteristic of the personages of the Second Empire; and a powerful picture of this sensual, witty, unscrupulous, and brave man is to be found in the pages of the *Nabab* of Alphonse Daudet. Victor Hugo's *Histoire d'un Crime* contains a still more pitilessly severe sketch of the duke.

* **Morocco**, MULEY EL HASSAN, SULTAN OF (b. circa 1839), is descended from Muley Ali, who came from Mecca, and was installed as King of Taflet in the early part of the seventeenth century, and who subsequently united the various monarchies of Al Maghrib al Aska into the present empire of Morocco, with its three capitals—Fez, Mekines, and Marakesh, or the City of Morocco. The reigning sultan claims to be the thirty-fourth in descent from Ali, uncle and son-in-law of Mohammed, and is known, among other titles, as "Emir-al-Mumenin," Prince of the True Believers. His immediate predecessors were (1) Muley Suliman (b. circa 1760, d. 1822); (2) Muley Abdurrahman (b. 1779, d. 1859); (3) Sidi-Muley Mohammed (b. 1803, d. 1873). The succession of Muley el Hassan was contested by Othman, his elder brother; and at various periods pretenders and rebels have required his active attention. Indeed

there has been scarcely a year during which His Shereefian Majesty—for in all his letters he signs himself “a Shereef, and the son of a Shereef,” that is, a descendant of the Prophet—has not been engaged in hostilities against some of his rebellious subjects. One of these expeditions was to the province of Sus, during the summer of 1886, when, in addition to more warlike work, he began the building of the new town of Assaka. His reign has, however, been distinguished by cordial relations between the Moors and the Christian powers, and by various more or less successful attempts to open up the country to commerce and civilisation. As a descendant of Mohammed, the Sultan's turban is covered with a green silk cloth, and his saddle is spread with a similar sheet. He is rarely seen except on horseback. Ambassadors are received in this fashion in a courtyard of the palace, and though he always addresses a few courteous words to them, through the official interpreter, or if the envoy understands Arabic (the sultan's only language), through the spokesman set aside for such duty, he never deigns to shake hands with them, and on no occasion do they penetrate beyond the threshold of the palace. If he wishes to show them respect, he orders one of his great officers, such as the Bashaw of the City, to entertain them, and presents of horses or swords are made to the envoy and his suite on leaving. Any visitor of position is, when duly accredited, supplied during his stay in the capital wholly, or in part, with provisions from the imperial stores; a house is provided for his accommodation, and from the time he leaves the Court to the time when he returns he is supposed to be the guest of “Seedna”—our Lord—as his subjects style him. “Al Sooltan” is another term for their ruler. Personally, His Majesty is of a generous disposition, but firm, and even ruthless, when his prerogatives are infringed, and so far as his purely Arabic education admits, is rather more intelligent than any of his predecessors. In Arabic literature he is well versed, is fond of scientific toys, and though he has never been out of Morocco, likes to hear of “Christian countries.” With the other Moelem princes he holds no relations, and as the foreign representatives all reside at Tangier it is rarely that he sees them more than twice during their stay in the country. Reforms have, therefore, almost stood still; commerce is hampered with all manner of restrictions, and the country (in the interior roadless, and rarely visited) is in much the same condition as it was five or six centuries ago.

Morpeth, LORD. [CARLISLE.]

* **Morris, Lewis** (b. 1834), poet, was born near Caermarthen, and educated at Sherborne School and Jesus College, Oxford, where he obtained a Chancellor's prize in 1855 and the English essay prize in 1858. He has since been elected honorary fellow of the foundation (1877). Having been called to the bar in 1861, Mr. Morris practised for many years. He stood in the Liberal interest for the Caermarthen Boroughs in 1881, but retired before the election, and in 1886 was defeated for Pembroke Boroughs. The three volumes of his poems that were first published, *Songs of Two Worlds*, by a New Writer (1872, 1874, and 1875), attracted immediate attention, and his subsequent poems have all attained a wide popularity. The *Epic of Hades* (1877) has enjoyed an unusually wide circulation for a modern serious poem. It was succeeded in 1879 by *Gwen: A Drama in Monologue*, and in 1880 by *The Ode of Life*. In 1883 Mr. Morris published another volume, entitled *Songs Unsung*, containing the powerful monologue of *Clytemnestra in Paris*, and in 1886 a tragedy called *Gycia*.

* **Morris, William** (b. 1834), best known as a poet, but notable on several grounds, was born at Walthamstow, and was educated at Marlborough and at Exeter College, Oxford. In 1856 he was articled to the late Mr. Street, the architect, and took his degree; and in the same year he had made a noteworthy *début* in literature in founding *The Oxford and Cambridge Magazine*. Although he did not edit this remarkable periodical, he supported the cost of it through the twelve months of its existence, and contributed very largely to its pages, which contain some of his early poems, a number of highly curious romantic prose stories, and some critical papers. In 1858 Mr. Morris, who did not stay with Mr. Street the full time of his articles, marked a great progress in literature by the publication of *The Defence of Guenevere, and Other Poems*, a volume in which the poetical and dramatic aspects of the middle ages are embodied in a series of truly original poems and songs. In 1867 he issued *The Life and Death of Jason*, a poem in seventeen books of heroic couplets, in which his hand had clearly arrived at the strength of maturity; and in 1868 came out the first instalment of *The Earthly Paradise*, which, though called “a poem,” is, in fact, a series of poems of classical and romantic legend and myth, artificially connected, as *The Canterbury Tales* are. In the meantime he had taken the leading part in establishing the fine-art decoration undertaking, which is now carried on under his name alone, but which originally bore the style of Morris, Marshall, Faulkner and Co. This undertaking has certainly been the

most important agent in the reform which has taken place during the last twenty years in English decoration and English taste in colour and design. It was not till 1870 that the publication of *The Earthly Paradise* was completed; but meanwhile Mr. Morris had associated himself with Mr. Magnússon in producing some masterly prose translations from the Icelandic Sagas. Of these, *The Story of Grettir the Strong* appeared in 1869, and *The Story of the Volungs and Niblungs* in 1870. In 1873 came out a "morality" entitled *Love is Enough; or, the Freeing of Pharamond*, in which the influence of Mr. Morris's Icelandic studies was shown in the metre as well as the subject of his poem, as it had already been shown in the subject of some of the poems of *The Earthly Paradise*, notably *The Lovers of Gudrum*. In 1875, under the title of *Three Northern Love Stories, and Other Tales*, Mr. Morris, again associated with Mr. Magnússon, gave his readers a further instalment of his translations from the Icelandic, of which some still remain in manuscript; and in the following year he issued, single-handed, *The Æneid of Virgil done into English Verse*, a book in the metre of Chapman's *Homer's Iliad*. The author of *The Earthly Paradise* had called himself "the idle singer of an empty day," and had disclaimed, in terms which have been much misunderstood, the task of dealing with contemporary concerns. Even the less profound spiritual subjects from which tales of love and adventure cannot be wholly dissociated, had been touched with a light, though with an unerringly steady, hand; but in the year 1878, which gave us Mr. Morris's masterpiece, *The Story of Sigurd the Volsung and the Fall of the Niblungs*, it became abundantly evident that the author was fully qualified to deal with profound spiritual matters, and to deal with them in that region where they are primeval, the region of national mythos. The basis of *Sigurd* is to be found in the Icelandic *Völsunga Saga*; but the treatment is distinctively modern in reach and grasp, while the delineation is in perfect sympathy with the minds which originally caught and embodied the floating mythos. In and since 1878 he lectured much on art; and his lectures were published in pamphlets and volumes. The profound concern in psychical study displayed in *Sigurd*, a poem of great ideal action, manifests itself at length in the concrete form of concern for the welfare of man's body and mind now; and, from looking at art questions from a social and political point of view, Mr. Morris's action widened into that of a prime mover in an important phase of English social life. He became a leading spirit of the Socialist League, in whose organ, *The Commonweal*, a great part of what he produced now appeared. His notes, lectures, chants, and addresses connected with this movement, may not become classical, as

his best poems and translations have already become and must remain; but he embodied, in a poem of modern life called *The Pilgrims of Hope*, his political convictions and social teachings. Over and above superlative metrical, rhythmical, and other technical excellences, and a gift of language unsurpassed in modern literature for native vigour and purity, Mr. Morris shows in all his works a rare apprehension of the outward shows of things, and a power of placing what he sees clearly before the minds of others. In the great bulk of his work, his vision was cast longingly and somewhat sadly back upon the larger life of ancient days. Perhaps he has not changed his point of view so much as superficial observers might think; ripened experience and mature thought, increasing his perception of the deadly dangers with which our modern civilisation is fraught, have taught him an optimist's yearning for a state of society in which all men might be happy.

[H. B. F.]

Morse, SAMUEL FINLEY BREEZE (b. 1791, d. 1872), electrician, was the son of a Congregationalist clergyman of Charlestown, Massachusetts, graduated at Yale College in 1810, and coming to England became a pupil of West, and exhibited a picture of the *Dying Hercules* at the Academy in 1813. Returning to America he obtained reputation as a painter and as a lecturer on art, but it was in 1832, on his return from a visit to Europe, that he hit upon the invention with which his name is permanently associated, the recording electric telegraph, which had been already more than partially conceived, but never put to practical use. In 1835 he put up an experimental line in a room, took out a patent in 1837, and by the aid of Mr. Cornell, after vainly trying a system of underground pipes, sent an overhead telegraphic message from Washington to Baltimore in 1844. His system rapidly spread through America, was adopted in Germany in 1851, and in 1858 a united testimonial was presented to him by representatives of the European nations at the instance of Napoleon III. He also made some successful experiments in submarine telegraphy as early as 1842, but his attempt to lay a cable in 1857 failed. He was involved during many years in lawsuits with infringers of his patent; and was engaged in a violent dispute with Professor Henry (q.v.) as to priority of their conception of the electric telegraph, from which it appeared that Henry had demonstrated the possibility of the telegraph: while to Morse is due the credit of inventing the instrument which intelligently registered the electric effects; while Wheatstone in England, and Steinheil in Bavaria, patented instruments in the same year as Professor Morse, and quite independently of him.

J. D. Reid, *The Telegraph in America; Memorial of S. F. B. Morse* (Wash.); *Nature*, vol. v.

Motley, JOHN LOTHROP (b. 1814, d. 1877), an American author, was educated at a school kept by George Bancroft, the historian, and at Harvard College, whence he graduated in 1831, and continued his studies at the universities of Göttingen, 1832, and Berlin, 1833. He was a comrade of Prince Bismarck at Göttingen, and his fellow-lodger in Berlin. "There we lived," writes the Prince, "in the closest intimacy, sharing meals and out-door exercise." Upon his return to America he studied law, and was admitted to practice in 1836. In 1839 he published a novel entitled *Morton's Hope*. It was not successful, and was without literary value. He went to St. Petersburg in 1840 as Secretary of Legation, but resigned in a few months. He contributed to the *North American Review* in 1845; in 1849 was a member of the Massachusetts House of Representatives, and in the same year published a second novel *Merrymount, a Romance of the Massachusetts Colony*. He had already made extensive researches for a history of the Dutch Republic, but hesitated to venture upon ground that was included in the plan of Mr. Prescott's history of Philip II. He yielded, however, to the judgment of Mr. Prescott. He went to Europe in 1851 and laboured assiduously upon his great subject, and in 1856 published the *Rise of the Dutch Republic*. It was the fruit of ten years' labour, and was published at his own expense, as no bookseller would undertake it. It was very successful, and was soon translated into Dutch, German, French, and Russian. His plan included an account of what he designated "the eighty years' war for liberty," and of this history first published covered but one epoch. *The History of the United Netherlands* was to deal with the second epoch, and two volumes of this were published in 1860. In 1861 he was appointed minister of the United States at Vienna, and held that position for six years. He resigned in 1867 rather than undergo the indignity of combating anonymous vilifications. In 1868 he published the third and fourth volumes of *The History of the United Netherlands*. In 1869 he was appointed United States minister at St. James's, and was recalled in Nov., 1870, apparently on account of President Grant's animosity against Mr. Sumner, at whose request Motley had been appointed. His removal was the source of a profound chagrin to him. Upon his departure from London he went to Holland and continued his history. His position was very agreeable there, for scholars and the court equally respected and honoured him, but he did not cease to work industriously. Towards the end of 1872 he moved to England, and there felt the first effects of the rupture of a minute artery in the brain. He never worked, in any serious sense of the word, after this event. His third book of the historical series, *The Life and Death of John of Barneveld, Advocate*

of Holland, with a View of the Primary Causes of the Thirty Years' War, was published in 1874. It did not complete the plan, for a history of the Thirty Years' War was part of the scheme. In 1874 he was greatly afflicted by the loss of his wife. He visited America in the summer of 1875, but returned to England and died there. Mr. Motley was well equipped for the labour of writing history. He pursued his inquiries to the original source of information with untiring endeavour. His judgment, matured and disciplined by ample study, was trained to the understanding of the problems involved in the histories he wrote by his personal observation of the progress of a great revolution. He wrote vigorously, clearly, and picturesquely. Nevertheless, recent investigations have upset not a few of his conclusions, notably his estimate of the characters of Counts Egmont and Horn.

John Lothrop Motley, *A Memoir*, by Oliver Wendell Holmes, Boston. [G. W. H.]

* **Moukhtar, AHMED, PASHA** (b. 1837), Turkish soldier, entered the Turkish army in 1860, served under Omar Pasha in Montenegro, and in 1863 was sent to Alexandretta as chief of the staff to Dervish Pasha. In 1864 he was tutor to the Sultan's son, Prince Ysuf, during the grand tour; was second in command to Redif Pasha in the Yemen campaign of 1869, and became full general in 1871. After holding, in rapid succession, the governorships of Crete, Erzeroum, and Candia, and being engaged in the suppression of the Bosnian and Herzegovinese rebellion of 1875, he was appointed in March, 1877, on the outbreak of the Russo-Turkish War, commander-in-chief in Armenia. Despite his military ability, Moukhtar Pasha was so hampered by a miserable commissariat and want of money, that after a brilliant relief of Kars, which he had previously been compelled to evacuate, on the 9th of July, he was forced to retreat upon Erzeroum in October, where he was promptly invested. After the bestowal upon him of the title of Ghazi (Defender of the Faith, or Conqueror) by the Sultan, he had to retire from the place, and in December he was recalled to Constantinople. In September, 1878, he was sent to Crete as special commissioner, and made concessions of self-government to the islanders, and in November he became Governor of Janina. In 1885 he was despatched to Egypt with Sir H. D. Wolff, as Joint-Commissioner under the recent Anglo-Turkish convention. His scheme for the military organisation of the country, presented in 1886, was considered by the English government to be too ambitious.

Moultrie, JOHN (b. 1799, d. 1874), poet, was born in London, but spent most of his boyhood in Shropshire till he went to Eton in 1813. In the *Etonian* he wrote several of his earliest and best known poems, such as *My*

Brother's Grave and *Godiva*. In 1819 he entered Trinity College, Cambridge, and after a pretence at legal studies he returned to Eton as tutor to Lord Craven's sons. Having been ordained in 1825, he was, three years later, presented with the living of Rugby, and became an intimate friend of Dr. Arnold, who was appointed to the head-mastership at the same time. Moultrie's poems were published at long intervals, generally far removed from the date of composition. They show the influence of Byron in the satirical and sentimental productions of his youth, but most of the later works are distinctly Wordsworthian in tone, though also thoroughly religious and even theological. The long autobiographical poem of the *Dream of Life* (pub. 1843), is obviously an imitation of the *Prelude*. As a parish priest Moultrie is still remembered with gratitude; as a poet his productions were little more than the leisurely amusements of a "scholar and a gentleman," and as such they will retain no permanent interest.

Memoir by Derwent Coleridge, prefixed to edition of Poems of 1876.

Mouravieff, NICHOLAS (b. 1793, d. 1866), Russian general, entered the Russian army at an early age, and served as general in the suppression of the Polish rebellion of 1830. On the outbreak of the Crimean War he was placed in command of the army of Asia, and, after a protracted siege, succeeded in reducing Kars, through hunger, after repeated attempts to take it by storm (July 16th to Nov. 26th, 1855). He was then sent to suppress the Circassian chief, Schamyl (q.v.), who, since 1854, had been in arms against Russia, and after a tedious war of surprises, succeeded in doing so in 1859.

Mozley, JAMES BOWLING, D.D. (b. 1813, d. 1878), was a native of Lincolnshire, educated at Oriel College, Oxford (B.A. 1834), and was elected fellow of Magdalen in 1837. Ordained in the following year, he became vicar of Old Shoreham in 1856, canon of Worcester in 1869, and Regius Professor of Divinity at Oxford in 1871. Canon Mozley was an emphatic high churchman, and all his writings are marked by great learning, considerable originality, and perfection of style. The chief of them are, a treatise on *The Augustinian Doctrine of Predestination* (1855), *The Primitive Doctrine of Augustinian Regeneration* (1856), *A Review of the Baptismal Controversy* (1863), *Subscription to the Articles* (1863), his *Bampton Lectures on Miracles* (1865), *University Sermons* (1876), *Ruling Ideas in Early Ages* (1877). His brother ***THE REV. THOMAS MOZLEY** (b. 1806), was elected a fellow of Oriel 1829; became rector of Cholderton, Wilts, in 1836; and of Plymtree, Devon, in 1868. He was for many years on the staff of the *Times*, and in 1882 published *Reminiscences, chiefly of Oriel College*

and the Oxford Movement. Further Reminiscences appeared in 1885.

Muir, JOHN (b. 1810, d. 1882), Sanskrit scholar, took his degree at the University of Glasgow, his native town, whence he proceeded to qualify for an Indian appointment. In 1829 he went out to join the East India Company's Bengal Civil Service, in which he held various posts till 1853. As early as 1839 he had displayed his familiarity with Sanskrit in a work entitled *A Sketch of the Argument for Christianity against Hinduism in Sanskrit Verse*, and he published several other learned, if propagandist, volumes in Sanskrit; but his great work is the *Original Sanskrit Texts, on the Origin and History of the People of India, their Religion and Institutions* (5 vols., 1858-70; 2nd ed., 1868-73). He also contributed to Trübner's oriental series a volume of *Metrical Translations from Sanskrit Writers* (1878). His wide linguistic attainments were illustrated by his translation of Kuenen's *Five Books of Moses* and other works from the Dutch, and by some free renderings from the Greek. A record of some Indian experiences is contained in his *Notes of a Trip to Kedar-nath, &c.* (1855).

* **Muir, SIR WILLIAM, K.C.S.I., D.C.L.** (b. 1819), Arabic scholar, brother of John Muir (q.v.), the Sanskrit scholar, joined the Bengal Civil Service in 1837, and rose in thirty years to the eminence of Governor of the N. W. Provinces (1868). Returning to England in 1875, he took his seat on the Indian Council, whence he retired in 1885 on being appointed Vice-Chancellor and Principal of Edinburgh University. He is well known as a writer on Mohammedanism, and his works fully deserve their high repute. His *Life of Mahomet* (4 vols., 1858-61; abridged ed., 1 vol., 1877) is a solid and trustworthy biography, based upon original sources. It is unquestionably the most exhaustive and authoritative work on the subject in the English language, and compares favourably with the rival German biographies of Sprenger and Weil. The *Annals of the Early Caliphate* (1883) carry the history of Mohammedanism from the death of the prophet to the murder of his grandson Huseyn at Kербela, sixty-one years later: they are drawn from native writers, and are characterised by no less learning than the earlier work. These two books hold a permanent and authoritative position in the library of the student of Eastern history. Sir William has also written several small essays on the Koran and kindred subjects, chiefly with a view to missionary efforts. Such are his *The Coran* (1877), *Mahomet and Islam* (1884), *The Apology of Al-Kindy* (1882), and *Extracts from the Coran* (1880). He delivered in 1881 the Rede lecture to the University of Cambridge on the *Early Caliphate*.

* **Müller, FRIEDRICH MAX, LL.D.** (b. 1823), philologist, a son of the celebrated

German poet, Wilhelm Müller [q.v.] and a native of Dessau, was educated at the Nikolaischule and the University of Leipzig. Here Brockhaus taught him Sanskrit, and Max Müller's first book was a translation of the *Hitopadesa* (1844). He worked at comparative philology under Bopp at Berlin, and at Sanskrit under Burnouf at Paris; and in 1846 he came to England, where he was to edit for the East India Company the *Rig-Veda with Sāyana's Commentary* (6 vols., 1849-74). His home was henceforth to be Oxford, where his *Rig-Veda* was published, and where he was admitted to the University through Christ Church (1851), and became a professor of modern languages (1854), assistant (1856), and eventually sub-librarian (1866), at the Bodleian Library; and Fellow of All Souls (1866). In 1868 a new Professorship of Comparative Philology was specially created for him. Max Müller's *Lectures on the Science of Language* (two series, 1861 and 1864), originally delivered at the Royal Institution, enjoy a wide popularity, and his *Chips from a German Workshop* and *Selected Essays* are reprinted articles, written with a similar view—of making the principles of comparative philology and the growth of language familiar to the uninitiated. In 1875 Max Müller practically resigned his chair (Mr. Sayce being appointed deputy-professor), and devoted himself to editing the first series of *Sacred Books of the East* (1875-85, 25 vols.), a priceless collection of new translations, by the best scholars, of the Bibles of all faiths, to which he is now adding a second series, besides contributing valuable texts to the *Anecdota Oxoniensia*. Among his other works may be noted the *History of Sanskrit Literature* (1869, 2nd ed., 1860); the *Sacred Hymns of the Brahmins*; the essay *On the Comparative Philology of the Indo-European Languages in its Bearing on the Early Civilisation of Mankind* (1849), which gained the Volney prize of the French Institute; *Languages of the Seat of War in the East* (1864), enlarged as a *Survey of Languages* (1865); on the methods of recording and transcribing spoken dialects, and *Missionary Alphabet* (1854) to the same effect; *On the Classification of the Turanian Languages* (1854, in Bunsen's *Christianity and Mankind*); and *Essay on Comparative Mythology* (1858). In 1873, at the request of Dean Stanley, Professor Max Müller preached a sermon *On Missions*, from the lectern of Westminster Abbey. In 1878 he inaugurated the lectures founded by the Hibbert Trustees, with a course on *The Origin and Growth of Religions as Illustrated by the Religions of India*. *Biographical Essays* (1883) consist of reprinted articles on prominent Indian reformers, such as Chunder Sen, and oriental scholars like Mohl and Colebrooke. They are written with the same marvellous charm of style and lucidity of presentment which are characteristic of all Max Müller's works, and render his English the

envy of Englishmen. His influence, not only at Oxford and throughout England, but abroad and in India (where many of his writings have been translated into the chief dialects), has powerfully furthered the study of comparative philology and oriental languages, and though his method of elucidating mythological beliefs by means of comparative philology has many opponents, it has drawn general attention to a neglected subject, and thrown many fresh lights upon the beginnings of the religions and superstitions of mankind, especially in the Aryan family. As the founder and editor of the great series of translations of the *Sacred Books of the East*, he is entitled to the profound gratitude of all students of comparative religion. Professor Max Müller is a Foreign Member of the French Institute, an LL.D. of Cambridge and Edinburgh, and Knight of the Ordre pour le Mérite. [S. L.-P.]

Müller, JOHANNES (b. 1801, d. 1858), a distinguished German physiologist, was educated in his native town of Coblenz. He graduated M.D., and became a private teacher of physiology in the university of Bonn, advancing by the stepping-stone of an extraordinary professorship to the ordinary Chair of the same science in 1830. Three years later he was called to Berlin, and there for the next twenty-five years he carried on his researches, and taught the elements of biology to large bodies of students, some of whom became even more distinguished than their master. Müller was, indeed, greater as a teacher and a writer of text-books for self-instruction than as an original investigator, eminent though he was unquestionably as the discoverer of numerous facts in the mechanism of hearing and voice, and in the accurate composition of the lymph, blood, and chyle. But what he did most thoroughly was to bring all the facts which had accumulated up to his day into clear, consecutive order, focusing them in certain salient principles which he enunciated, and by showing physiologists where lacunæ existed, to stimulate them to fresh exertions. His *Elements of Physiology* (Engl. Trans., 1842), though now superseded by more recent books, may be regarded as a landmark in the history of the science from which modern physiologists date. It has become antiquated mainly by the impetus which it gave to the then languid army of workers. It comprised every fact worthy of preservation, and brought into clear relief, not only data, but acute criticism tending to their elucidation. The *Archiv für Anatomie, Physiologie und wissenschaftliche Medicin*, a periodical which he edited for many years, contains most of his own papers, and the writings of the best workers of his period, many of them his pupils, or collaborateurs, who, without his stimulating influence, might have remained idle. Compared, however, with some of his rivals, Müller was not a

voluminous author. He was no relation of the contemporary chemist of the same name, who, also busying himself with the chemical aspects of physiology, is sometimes confounded with him.

Voggenreiff's *Biog. Litterar. Handwörterbuch*, vol. ii. [R. B.]

Müller, KARL OTTFRIED (b. 1797, d. 1840), the Niebuhr of Greek history, was born at Brieg in Silesia, where his father was a Lutheran pastor. The name of Ottfried, by which he is generally known, was adopted in 1819 to distinguish him from the numerous other Karl Müllers. After attending the gymnasium at Brieg, Müller entered the university of Breslau, where he studied Greek literature, and in 1816 he proceeded to Berlin, where he gained the degree of Dr. Phil. for his admirable treatise on *Egina* in 1817. After a year's residence as a schoolmaster in Breslau, he was invited as extraordinary professor to Göttingen in 1819. In the following year the first volume of his monumental work on the *History of the Hellenic Races and Cities* (*Geschichte Hellenischer Stämme und Städte*) was published separately, and after a visit to Holland, England, and France (1822) he continued the work in 1824 by the two volumes on *The Dorians* (*Die Dorier*). It was this portion of the history that gave Müller his European fame, and it is by this that his name is still best remembered. His fresh and original treatment of this portion of the Hellenic race according to the critical method of modern history, supported as it was by the inexhaustible wealth and unflinching accuracy of Müller's Greek researches, made a new era in the reconstruction of history. The work was separately translated, and admirably edited in 1830 by Henry Tufnell and Sir George Cornewall Lewis. It was succeeded in 1825 by the treatise on the Macedonians (*Ueber die Makedonier*), and also by the very valuable *Prolegomena to a Scientific Mythology*. His account of the *Life and Works of Pheidias* (*De Phidias Vita et Operibus*) was published in 1827, and his *History of the Etruscans* (*Die Etrusker*) in the following year. In 1833 he issued a complete translation and annotated edition of the *Eumenides* that led to an embittered professional engagement with Hermann. In 1835, at the suggestion of the "Society for the Diffusion of Useful Knowledge," he began his great *History of Greek Literature*, the English translation of which came out in parts under the superintendence of Sir G. C. Lewis, and afterwards of Professor Donaldson, who completed the work after the author's death. In 1839 Müller visited Italy and Greece, and next year died at Athens from a fever caught whilst deciphering the inscriptions of Delphi.

Erinnerungen an K. O. Müller, von Dr. Friedrich Lücke (1841); *Biographische Erinnerungen an K. O. Müller, von Eduard Müller*; Preface by

Dr. Donaldson to his edition of the *History of Greek Literature* (1858).

Müller, WILHELM (b. 1794, d. 1827), one of the best and most characteristic lyrical poets of Germany, was born at Dessau, of a well-to-do artisan family. Having written verses at fourteen, and showing a tendency to literature, he was sent to the university of Berlin, and studied philology under Wolf and Buttmann. He served in the Liberation War of 1813. *Bundesblüthen*, his first collection of lyrics appeared in 1815, and his translation of Marlowe's *Faust* three years later. In 1817 he visited Italy, and published an account of his travels in *The Men and Women of Rome* (1820). On his return to Germany he became a schoolmaster, and afterwards the Ducal librarian at Dessau. In 1821 he married a granddaughter of the great educationist Basedow, and in the same year he published *Poems from the Papers of a Strolling Minstrel* (*Gedichte aus den hinterlassenen Papieren eines reisenden Waldhornisten*), and a few years later his patriotic *Songs from Greece* (*Griechenlieder*), that, owing to the general excitement over the revival of Hellenic nationality, gained a rapid and extraordinary popularity. Two novels, *The Thirteenth Man* and *Deborah*, were published in 1826 and 1827. But it is not through novels nor patriotic songs that Müller's name lives. He was essentially the poet of idyllic country life, of the mill stream, the inn, the post waggon, the church-yard, the snow-filled valleys, and all the other sights and sounds of German village life. Two series of lyrical scenes, the *Müller's Daughter* (*Die schöne Müllerin*), and the *Winter's Journey* (*Winterreise*) have been set by Schubert to music from which they are now inseparable. A statue to Wilhelm Müller was unveiled at Dessau in 1884 by his son, Professor Max Müller, the well-known scholar.

There is a short biography of Müller in the edition of his *Gedichte* (Leipzig, 1837). Numerous notices also appeared of him in the German papers during August, 1884.

Müller, WILLIAM JAMES (b. 1812, d. 1845), the landscape painter, was born at Bristol, and was the son of the curator of the British Museum, a scientific man of some eminence, who had quitted his home in Dantzic during the French occupation. William Müller early displayed a high talent for art, and after serving an apprenticeship to J. B. Pyne, regarded himself as a finished landscape painter at nineteen. He devoted himself at first chiefly to the representation of English landscape, varied with the remains of picturesque street architecture and humble interiors. In 1834-5 he travelled through Germany and over the Alps into Italy. The result was numerous pictures of foreign scenes, such as *Peasants on the Banks of the Rhine*, exhibited at the Royal Academy in 1836. The year 1838 may be regarded as the turning point of his life, for

he then visited Greece, and after a prolonged stay in Athens proceeded to Egypt, a country in which his genius first found full expression. Returning to England, he quitted Bristol and settled in London, where he executed the twenty-six folio designs illustrating the *Age of Francis I. of France*. In 1841, living in a thatched boat on the Thames, he returned to his former methods of immediate study of nature. In the following year he was in North Wales, and the year 1843 again marks a distinct advance in his art. With one young companion he visited Asia Minor, and making Xanthus their head-quarters, they wandered over Lycia with their tent through that and the following years. The great series of Lycian sketches exhibited in London in 1844 are undoubtedly Müller's masterpieces. He was perhaps the best sketcher that has ever lived, and his rich and full but subdued colouring, and strange melancholy of tone, were well suited to the wild scenery and unknown ruins of the Lycian hills. At the very time of his highest promise, the young artist was suddenly cut off at his old home in Bristol. It may be mentioned that he always painted with his left hand, and with extreme rapidity for so careful a draughtsman.

N. Neal Solly, *Life of Müller* (1875).

Mulock, Dinah. [CRAIK.]

Mulready, WILLIAM, R.A. (b. 1786, d. 1863), painter, was the son of a leather breeches maker, and was born at Ennis, County Clare. The family removed to Dublin in 1788, and to London in 1792. Mulready's introduction to an artist's life was as a model to John Graham, but in 1800 he was entrusted to the care of Banks, through whose training he was admitted a student of the Royal Academy. A year or two later he also became a pupil of John Varley, whose sister he married in 1804. The marriage was unhappy and short-lived. In the early years of his artistic career Mulready supported himself chiefly by illustrating books, such as *The Butterfly's Ball and the Grasshopper's Feast* (1807), and by scene painting for theatres and the military panoramas then much in vogue. He also devoted much attention to landscape, but his earlier important pictures were on such subjects as *The Judgment of Solomon*. Turning from this whilst still young, he discovered that his real talent was for depicting everyday scenes of the city, village, or country-side. Composed tolerably closely on the old artistic rules, aiming at no exactness of realism, and generally pervaded by a certain sweetness of sentiment that is almost sentimental, these pictures have long been popular favourites in England for simplicity of motive and familiarity of theme. The following may be mentioned as most representative: *The Carpenter's Shop* (1808), *The Barber's Shop* (1810), *The Fight Interrupted* (1815), *The Wolf and the*

Lamb (1820), *The Travelling Druggist* (1825), *Giving a Bite* (1834), *The Last In* (1835), *The Sonnet* (1839), *Train up a Child, &c.* (1841), *Choosing the Wedding Gown* (1845), and *Blackheath Park* (1851). Mulready also designed the well-known "Mulready envelope" for the Post Office. He lived for the greater part of his working life in London or one of the suburbs, especially in Bayswater. In the history of art he is one of the most prominent figures in the school of Wilkie.

F. G. Stephens, *Memorials of Mulready* (1867).

* **Mundella, THE RIGHT HON. ANTHONY JOHN, M.P.** (b. 1825), is of Italian extraction, and having received a liberal education, became engaged in manufacturing industries at Nottingham. In 1852 he was sheriff of Nottingham, and in 1859 organised the first courts of arbitration for the settlement of disputes between masters and men. He entered Parliamentary life as an advanced Liberal, and member for Sheffield, in November, 1868, and represented that constituency until November 1885, when he was returned by the Brightside Division of Sheffield. He was Vice-President of the Council on Education, and a Charity Commissioner from 1880-5, and in February, 1886, became President of the Board of Trade, and resigned with his party in 1886.

* **Munkacsy, MICHAEL** (b. 1846), Hungarian painter, was born near Munkacs, and experienced great privations during his boyhood. While apprenticed to a carpenter, he began to paint by stealth; and having acquired a local reputation, set up his easel in rapid succession in Pesth, Vienna, Munich, Düsseldorf, and Paris. His reputation was made by the picture *The Last Day of a Condemned Prisoner*, painted at Düsseldorf, and exhibited at Paris in 1870. Equally gloomy in conception and daring in execution were *The Night Prowlers* (1874), and *The Old Butcherman* (1875). After 1876, however, he adopted a less blunt manner, as in *The Studio and The Two Families*. A yet greater departure in his art was made by *Milton Dictating Paradise Lost to his Daughters* (1878), followed by *Christ before Pilate*, exhibited in London in 1882, *Christ on Calvary* in 1884, and *The Last Moments of Mozart* in 1886.

Magazine of Art, vol. iv.

Munro, HUGH ANDREW JOHNSTONE (b. 1819, d. 1885), scholar, a native of Elgin, was educated at Shrewsbury School and at Trinity College, Cambridge, where he became a fellow in 1843. He was for many years tutor of his college, and in 1869 was elected to the newly established professorship of Latin at Cambridge, a post which he resigned in 1872, finding it incompatible with his work. His famous edition of *Lucretius*, one of the ripest productions of English scholarship, first appeared in 1864, and the latest edition in 1885. His annotated edition of the poem *Etna* was

published in 1867, and the text of Horace in 1869. His last important work was *Criticisms and Elucidations of Catullus* (1878). Many of his admirable verse translations are to be found in the Shrewsbury *Sabrinæ Corolla*, and, in conjunction with Professor Palmer, he wrote a *Syllabus of Latin Pronunciation* (1872).

* **Murad V.** (Amurath V.) (b. 1840), thirty-third Sultan of Turkey, a son of 'Abd-el-Mejid, succeeded his uncle 'Abd-el-'Aziz on his forcible deposition, May 30th, 1876. Murad, however, proved to be imbecile, and was in turn deposed on Aug. 31st following, and succeeded by the present Sultan, 'Abd-el-Hamid II. He was of a gentle and kindly disposition, and his insanity was attributable in a large degree to the shock he experienced on learning his predecessor's terrible fate.

Murat, JOACHIM (b. 1768, d. 1815), sometime King of Naples, was the son of an inn-keeper at Bastide Fortunière, in the department of Lot, France, and spent a short time at the university of Toulouse, with a view to entering the priesthood. His life at college was rather reckless, he got into debt and disgrace, and in a fit of remorse enlisted in a cavalry regiment. A warm partisan of the popular cause in the French Revolution and a brave soldier, he was rapidly promoted, and in the campaign of 1796 was a favourite aide-de-camp of Bonaparte, whose fortunes he thenceforth followed and shared. The intimacy with Bonaparte was strengthened in 1800 by his marrying Bonaparte's youngest sister, Marie-Annonciade Caroline Bonaparte. Murat commanded the cavalry at Marengo in 1800, was appointed Governor of Paris in 1804, became marshal of France in 1805, and was created Grand-Duke of Berg and Cleves in 1806, for his bravery at Austerlitz. In 1808 he invaded Spain, and with little bloodshed entered Madrid. He hoped for the Spanish throne as his reward; but it was given to Joseph Bonaparte, and Murat received Joseph's former kingdom of Naples. In Naples he was received with joy, and reigned liberally and peacefully for four years. He underwent the sufferings of the Russian campaign of 1812, and in 1813 again fought for Napoleon, but being offended by the Emperor he suddenly threw up his command, and began an intrigue with Austria. He agreed to support the allies, but having failed to aid them efficiently, he was accused of duplicity. The Austrians moved a force against him, and May 2nd, 1815, he suffered a disastrous defeat at the battle of Tolentino. He fled to France, but being repudiated by Napoleon, he was forced to live in seclusion. In October, with a chosen band, he made a desperate effort to recover his former kingdom of Naples from the Bourbons. He was defeated, captured, tried by court-martial, under a law of his own making, for

disturbing the public peace, and was sentenced to be shot. Murat was a mild and humane ruler, a dashing cavalry officer, and a rash, hot-tempered man.

C. Miramont, *Vie de J. Murat, Roi de Naples* (1836); Jean de la Rooca, *Le Roi Murat et ses Derniers Jours* (1868), from the papers of Muletto, who accompanied Murat.

Murchison, SIR RODERICK IMPRY, BART., F.R.S., F.G.S., F.R.G.S. (b. 1792, d. 1871), geologist, was born in Ross-shire, educated at Durham Grammar School and the Military College at Great Marlow, and at the age of fifteen was gazetted an ensign in the 36th regiment. He fought under Welleseley in Galicia (1808), and took part under Sir John Moore in the retreat to Corunna. He resigned his commission after Waterloo, married, and travelled extensively on the Continent. It was on this tour that his attention was first directed to the science in which he was afterwards to achieve a permanent fame. He explored with Lyell the volcanic region of Auvergne, and afterwards with Sedgwick studied the geological structure of the Alps. In 1831 he proceeded to investigate the structure of the greywacke rocks underlying the old red sandstone on the Welsh borders, and succeeded in establishing the Silurian system of formations. His researches, now neglected, are embodied in *The Silurian System* (1839), in which he brought into notice for the first time a remarkable series of rock formations, each replete with distinctive organic remains, different from any other in England. He next repaired to Russia, accompanied by De Verneuil and Keyserling, to make investigations similar to those he had made on the Welsh borders, the result of which is to be found in the great work *Russia and the Ural Mountains* (1845). In 1855 he was appointed Director-General of the Geological Survey, and Director of the Royal School of Mines, London. Simultaneously with his work for those appointments, he carried on a geological investigation of the Scottish Highlands, and succeeded in showing a gigantic example of regional metamorphism, inasmuch as the masses of crystalline schists, previously supposed to be part of the "primitive formations," were really proved to be not older than the Silurian period. Knighted in 1846, Sir Roderick was created a baronet in 1866. In the latter years of his life he brought out successive editions of his work *Siluria*, which was meant to present the main features of the original *Silurian System*, together with a digest of subsequent discoveries. In 1870 he established the Chair of geology and mineralogy in the University of Edinburgh. Sir Roderick Murchison will always be remembered for his having added a new chapter to geological history, a chapter which contains the story of almost the earliest appearance of living things upon the earth.

Professor Archibald Geikie, *Life of Sir E. I. Murchison* (1875).

Mure, WILLIAM, D.C.L. (b. 1799, d. 1860), man of letters, was a native of Ayrshire, was educated at Westminster School, and at Edinburgh and Bonn Universities, and from 1845 to 1855 was member for Renfrew in the Conservative interest, and Lord Rector of Glasgow in 1847. He is best known for his *Critical History of the Language and Literature of Ancient Greece* (1850-57), a work of genuine research and knowledge, in which he urges with vigour the unity of the Homeric poems. His minor works include *A Journal of a Tour in Greece* (1842), and two learned monographs on *Egyptian Chronology* (1829), and the *Egyptian Calendar* (1832).

Murray, JOHN (b. 1778, d. 1843), publisher, was educated at the Edinburgh High School, at Kensington, at Dr. Burney's in Gosport, and finally at Loughborough House, Kennington. His father, formerly a marine officer, had in 1768 bought the business of Paul Sandby, 32, Fleet Street, and on his death, his son John succeeded to the management, which he carried on in partnership with Mr. Samuel Highly. This connection broken, he began business on his own account in 1803, retaining the old premises. In helping Mr. Stratford Canning, afterwards Lord Stratford de Redcliffe, and some other young Etonians out of the confusion into which they had fallen with their periodical, the *Miniature*, Mr. Murray came into communications with Mr. Canning. With his co-operation, assisted by Scott, Heber, George Ellis, Barrow, and Gifford, the Tory *Quarterly Review*, was started in 1809, avowedly to counteract the influence of the *Edinburgh Review*, and soon attained a circulation of 12,000 copies. In 1810 Murray gave £600 for the two first cantos of *Childe Harold*, and remained acquainted with Lord Byron for ten years, during which time he repeatedly acted towards him with great generosity. In 1815, hearing of the poet's difficulties, he sent him a cheque for £1,500, and offered to sell the copyright of his works if necessary, and refused after his death to publish Lord Byron's autobiography for fear of hurting the feelings of people then living. At Albemarle Street, whither he removed in 1812, he soon found himself the centre of a group of famous men of letters. *The Representative*, a daily paper, started 1826, was almost the only failure he ever experienced. He continued to take an active part in the business until his death.

Musset, LOUIS CHARLES ALFRED DE (b. Nov. 11th, 1810, d. May 1st, 1857), the typical poet of modern France, was a native of Paris, and was educated at the Collège Henri IV., where he obtained the prize in philosophy. His father was an official, and his brother Paul was of some celebrity in the world of letters. Thrown into contact with Victor Hugo, he imbibed the romantic spirit, and was soon recognised as a poet inferior

only to Hugo himself. His first published volumes of poetry, *Contes d'Espagne et d'Italie* (1830) and *Un Spectacle dans un Fauteuil* (1832), caught the public ear at once, and deservedly, for, although full of harshness of rhythm, they contained a genuine strength of passion mingled with polished cynicism quite equal to that of Byron at his best. *Les Nuits* (1835-7), a series of nocturnal dialogues between the poet and his muse, marked the high water-mark of De Musset's genius. He was, however, unable to concentrate his energies upon any given employment, and becoming intimate with George Sand went with her to Italy during 1833-4 on the famous expedition described by her in *Elle et Lui*, and by Paul de Musset in *Lui et Elle*. He returned broken-hearted, and began to have recourse to stimulants. By Louis Philippe he was appointed librarian to the Minister of the Interior, and although for a time deprived of that post at the Revolution of 1848, he received it again under the Empire. He had refused, however, an appointment in the French Embassy, and after his election to the French Academy in 1852 became hopelessly desultory and dissolute. Among his other poems may be mentioned *Nous l'avons eu votre Rhin Allemand* (1840), a spirited retort to Becker's *Rheinlied*. His prose stories have much positive merit, and include *Emmeline*, *Frederic et Bernerette*, and *Namouna*. The *Confession d'un Enfant du Siècle* is, however, the most important of his prose writings, if we except his plays. Many of these appeared, in the first instance, in the *Revue des Deux Mondes*; two, *La Nuit Vénitienne* (1830) and *Le Chandelier* (1847), were put on the stage, but speedily suppressed. They are chiefly comedies full of wit and pathos, morality and cynicism; but some are *proverbes*, i.e. plays founded on an apothegm. *Lorenzaccio* is an historical play, and contains fine dramatic feeling. De Musset's *Œuvres Complètes* first appeared in 1865.

Paul de Musset, *Biographie de A. de Musset* (1877); Paul Lindau, *A. de Musset*; G. Saintsbury, *Short History of French Literature*.

N

Nachtigal, GUSTAV (b. 1834, d. 1885), the explorer, was born at Eichstädt, and studied medicine at the universities of Halle, Würzburg, and Greifswald. Having emigrated to Algiers in 1862, and to Tunis in 1863, he became private physician to the Bey of Tunis, and in 1868 was appointed by the King of Prussia as his agent to carry presents to the Sultan of Bornu. Starting from Tripoli he made his way through Tibesti, and in 1870 reached Baka, the capital of Bornu. After spending some time in exploration of the neighbourhood, he reached Baghirmi in

1872, and turning north made his way to Wadai and Darfour, whence he was obliged to follow the shortest route through Kordofan to Khartoum. He at length reached Cairo in 1874. The two volumes of his great work on this journey, *Saharâ und Sûdân*, were published in 1879-81. After the French occupation of Tunisia, Dr. Nachtigal was appointed German Consul-General, and in 1883 was chosen special commissioner on board the gunboat *Möwe*, to conduct the so-called general inquiry into the state of German commerce on the west coast of Africa. The expedition resulted in the annexation of Angra Pequena, and the more valuable settlement of the Cameroons, thus laying the foundations of Germany's colonial empire. Dr. Nachtigal died suddenly of malaria when a few days' sail from the Cameroons.

Times, May, 1885; *Berlin Official Gazette*, May 8th, 1885.

Nairne, CAROLINE OLIPHANT, BARONESS (b. 1766, d. 1845), Scottish song-writer, was the daughter of a staunch Jacobite, and was inspired by the example of Burns to write some ballads to the old Scotch airs. In 1800 the "Flower of Strathearn," as she was called, married Lord Nairne, his title being in abeyance through attainder, and from 1822 to 1824 published a collection of her songs under the title of *The Scottish Minstrel*. Numerous subsequent collections have appeared, the best being that edited by Dr. Charles Rogers in 1869. Without doubt she is one of the greatest of Scotland's poetesses, and has, perhaps, more than any of them, retained a hold on the national heart. In proof of this it is sufficient to mention the titles of some of her songs:—*The Land o' the Leal*, *The Laird of Cockpen*, *Wha'll be King but Charlie*, *Charlie is My Darling*, and *Call'er Herrin*.

C. Rogers, *Life and Songs of the Baroness Nairne* (1869).

Nana Sahib (b. 1821, d. circa 1859), was originally known as Seereek Dhondo Punt, and was the adopted son of Bajee Rao ex-Poishwah of Poonah. On the death of Bajee Rao in 1851 the Nana claimed all his possessions, but Lord Dalhousie refused to continue the Government pension. In 1854 he sent Azimmollah Khan on an unsuccessful mission to England, and from that time resolved upon revenge, ostensibly cultivating the while the society of Europeans. On the outbreak of the mutiny he came from his residence at Bithoor in answer to Sir Hugh Wheeler's request for help, and summoned the garrison to surrender (June, 1857). Failing to take the place by assault, he promised the English garrison safe conduct to Allalabad, and then massacred the greater part of them in the Ganges (June 29th). He was proclaimed Peishwah, but on hearing of the approach of the avenging army massacred

the remainder of his prisoners, chiefly women and children, and was then utterly defeated by Havelock outside the gates of Cawnpore (July 16th). After another attempt upon Havelock's rear, he fled into Nepaul, and disappeared, probably dying of hunger or jungle-fever. In 1874 the Maharajah Sindhia delivered up to the English government a prisoner who represented that he was the Nana. He proved, however, to be an impostor, although the reason for his deception was never discovered.

Sir J. W. Kaye, *History of the Sepoy War*; T. E. Holmes, *Indian Mutiny*.

Napier, SIR CHARLES JAMES, G.C.B. (b. 1782, d. 1853), British soldier, the eldest brother of Sir William Napier (q.v.), was the son of Colonel the Hon. George Napier, and the grandson of the fifth Lord Napier. Born at Whitehall, he received a commission in the 22nd foot at the age of twelve, and saw service in the Irish rebellion of 1798. In 1806, having attained his majority, he commanded the 50th foot in the Spanish Peninsula during the retreat to Corunna, and in the battle of Corunna was wounded in five places and made prisoner. Released on parole by Marshal Ney, he went to England, but returned to the Peninsula in 1811, and performed deeds worthy of a Paladin of romance. At Busaco he had his jaw broken and eye injured, but rode off to Lisbon to have the bullet extracted, and put in an appearance at Fuentes d'Onoro. Ordered to Bermuda in 1812, he took part in the American War, commanding the military in several descents upon the coast. He missed the battle of Waterloo, but accompanied the allies to Paris. In 1819 he was sent to the Ionian Islands, and two years later was appointed Governor of Cephalonia, where he endeared himself to the inhabitants but embroiled himself with the authorities at home, notably with the Duke of York. In 1830 he was recalled by the Colonial Secretary, Lord Goderich, and remained in England, commanding the northern district in 1839, until 1841, when he was appointed to command the Bombay army. He was speedily compelled to take the offensive against the Ameers of Scinde, who, taking advantage of the disasters in Afghanistan, were assuming a bellicose attitude. After placing the alternatives of peace or war before them, Napier took the field, in 1843, with an army of 2,800 men, and after blowing up the fortresses of Emaun Ghur with a handful of men, confronted the enemy, some 30,000 strong, at Meeanee (Feb. 17th), with a force reduced to about 1,800. After a terrible battle he won the day, and following up Shir Mohammed, the "Lion," the only Ameer who continued to resist, defeated him with 5,000 men at Hyderabad, the enemy being about 30,000 strong (March 24th). Scinde having been annexed by Lord Ellenborough,

Napier became its Governor, and displayed once more his remarkable ability in gaining the affections of the inhabitants and his propensity to quarrel with the authorities. Sir Charles's work in 1843 is estimated by his brother as follows: "He won two great battles against sixty thousand enemies . . . took four great fortresses . . . received the submission of, and conciliated, four hundred chiefs, some of whom could bring twenty thousand men into the field; arranged the military occupation of the country, and established a civil government in all its branches." In 1847 he returned home, on account of the health of Lady Napier, was received with a series of ovations, and remained out of employment until 1849, when the crisis of the second Sikh war caused him to be despatched to India as commander-in-chief. On his arrival, however, he found that the danger was passed, but spent two years in reorganising the army and quarrelling with Lord Dalhousie. In vain he warned the authorities against the insufficient strength of the British forces in India, and upon the folly of depending so much upon the Sepoys. After his return to England he was engaged almost to the last in controversial disputes and in bringing actions against hostile reviewers. From a cold caught at the Duke of Wellington's funeral he never rallied, and died at Oaklands, near Portsmouth. To say that Sir Charles Napier was absolutely *sui generis* is, after all, little better than a platitude. No commander was ever more popular with his soldiers, and few Anglo-Indians have been more beloved by the natives. Some of his military exploits would appear incredible were they not nineteenth century facts. The great fault in his character was his propensity to quarrel with his superiors; but, though a decisive judgment upon the rights and wrongs of his various disputes would be a weighty task indeed, it may safely be said that in most cases he fought for justice against red-tape and indolence.

Sir W. Napier, *Life and Opinions of General Sir Charles Napier*. [L. C. S.]

Napier, SIR CHARLES JOHN, K.C.B. (b. 1786, d. 1860), British sailor, cousin of Sir Charles James and Sir William Napier, was the son of captain the Hon. C. Napier, and entered the navy in 1800. Becoming commander in 1807, he fought an action in that year against three French men-of-war, which is justly celebrated in the annals of the navy. In 1810 he served ashore in the Peninsula with his cousins, in 1811 in the Mediterranean, and in 1813 against the United States. Nearly ruined by premature speculation in steamboats, he entered the Portuguese service in 1833, and fought with success against the Miguelists, whose fleet he destroyed off Cape St. Vincent. In 1840 he was second in command on the coast of Syria, in the expedition against Mehemet Ali, and

conducted the attack upon Acre. Despatched to blockade Alexandria, he was blamed for making a convention on his own account with Mehemet Ali. From 1840 to 1846 he was Liberal member for Marylebone. Commander of the Channel fleet from 1846 to 1848, he was appointed commander of the Baltic fleet in 1854. He accomplished little except the capture of Bomarsund (Aug. 16th), refusing to obey the orders of the Admiralty and attack Cronstadt, which he maintained to be impregnable. Much undeserved abuse was heaped upon him for this act of moral courage, but on being elected for Southwark, in 1855, he succeeded in justifying his conduct. His works include *An Account of the War in Portugal* (1836), *The War in Syria* (1842), and *The Navy* (1851).

The History of the Baltic Campaign (1857); Major-General E. Napier, Life and Correspondence of Admiral Sir C. Napier.

Napier, MACVEY (b. 1776, d. 1847), lawyer and editor, was the son of John Macvey, of Kirkintilloch, N.B., his mother being a natural daughter of Napier of Craigarmat. Although admitted as a lawyer, with the qualification of Writer to the Signet in 1779, he only practised for a short time. In 1805 he was appointed Librarian to the Signet, a post he held till 1837; and in 1826 professor of conveyancing in Edinburgh University. In 1829 he succeeded Jeffrey as editor of the *Edinburgh Review*, to which magazine he had been a regular contributor since 1805. His management of this organ extended over a period of eighteen years, during which time he gathered round him a brilliant band. He next undertook the editorship of the *Encyclopædia Britannica* (7th edition), which eventually assumed the first place among the class of publications to which it belongs. He was also for some time a clerk of session. His *Selected Correspondence* (1879) contains matter of interest, for he was the intimate friend of Macaulay, Brougham, Jeffrey, and Lytton.

Selected Correspondence, edited by his son (1879).

* **Napier of Magdala**, THE RIGHT HON. ROBERT CORNELIS, BARON, G.C.B., G.C.S.I. (b. 1810), the son of Major C. F. Napier, R.E., was born in Ceylon, and having been educated at the military college, Addiscombe, received his commission in the Bengal engineers in 1826. Becoming captain in 1841, he was largely instrumental in starting the Lawrence asylums for soldiers' orphans in 1845, and fought in the same year in the Sutlej campaign, whence he issued a major. In the second Sikh war (1848) he was chief engineer at the siege of Mooltan and at the battle of Goojerat, and in 1852 was engaged on the frontier against the Hussunzye and Afreedee tribes, having been promoted to the rank of colonel. In the Mutiny he acted as chief of the staff to Sir James Outram during the

first relief of Lucknow, and constructed the elaborate engineering works which enabled the place to hold out until the second relief by Sir Colin Campbell, and aided the latter in the capture and clearing of the city. He commanded a brigade under Sir Hugh Rose at the capture of Gwalior from the rebels, and was engaged with a flying column in hunting down the rebel Tantia Topee, whom he defeated at the battle of Jourah Alipore. In 1860 he commanded a division under Sir Hope Grant in the Chinese War, and was present at the surrender of Peking, and received the thanks of Parliament for his valour. From 1861 to 1865 he was military member of the Indian Council, when he was appointed commander-in-chief of the Bombay Army. In October, 1867, he was appointed to command the expeditionary force for the relief of the captives in Abyssinia [ABYSSINIA], and succeeded, in spite of the mountainous nature of the country, in taking the fortress of Magdala by storm on April 10th, 1868, King Theodore having committed suicide in despair. A peerage and a pension were his rewards. In 1870 he was appointed commander-in-chief in India, and on the expiration of his term of office in 1876 was made Governor of Gibraltar. This post he resigned in 1882, and was created field-marshal. He was selected in 1878, when war appeared imminent between England and Russia, for the command of the expeditionary army. He was created K.C.B. in 1868, G.C.B. in 1868, and G.C.S.I. in 1867.

Napier, Sir William Francis Patrick, K.C.B. (b. 1785, d. 1860), historian and soldier, the brother of Sir Charles James Napier (q.v.), entered the army in 1800, and served in the field from 1807 to 1814. His first experience of war was in Denmark, where he was present at the siege of Copenhagen and the battle of Kioge; and he fought through the Peninsular campaigns down to the battle of Toulouse, having been connected with the 43rd Regiment, a part of the Light Brigade. From 1815 to 1819 Napier, now a lieutenant-colonel, was in command of his regiment in the army of occupation in France, and then retired on half-pay. He had been four times wounded, and had on all occasions been without fear or reproach. He now began to study art, but about 1824 conceived the idea of writing the *History of the Peninsular War*, partly to do justice to the memory of his beloved commander, Sir John Moore, partly to tell a great tale worthily. It appeared between 1828 and 1840, and involved its author in the most bitter controversies, which he was by no means eager to assuage. The fearlessness with which he attacked the shortcomings of the Tory administrations, his generous estimate of the great French generals, especially of Soult, his vigorous comment upon individuals, all contributed to bring a hornet's nest about him.

Nevertheless, the history was soon recognised as one of the finest military narratives of any time; so accurate and sympathetic is it, so dignified in style, and so full of sagacious reflection. He was much assisted in its preparation by Lady Napier, a niece of Charles James Fox, who discovered the key to many of the French ciphers found at Madrid. Sir William was promoted major-general in 1841, and was governor of Guernsey from 1841 to 1847. A third period of his life was devoted to a more than partially successful defence of his brother Charles. His *Conquest of Seinde* was published in 1845, his *History of the Administration of Seinde* in 1851, his *Life and Opinions of General Sir Charles James Napier*, in 1857, and once more he plunged into untiring controversy with those bold wights who dared to dispute one jot of his conclusions. Despite the Napier failing, a strong tendency to indulge in polemics, Sir William was a spotless gentleman, and a heroic member of a family of heroes.

H. A. Bruce (Lord Aberdare) *Life and Letters of Sir W. Napier* (1862). [L. C. S.]

Naples, or The Two Sicilies, THE KINGS OF, were members of the family of the Spanish Bourbons, the line having been founded by Don Carlos, son of Philip V., in 1735.

FERDINAND IV. of Naples, and I. of the Two Sicilies (b. 1751, d. 1825), was his second son, and succeeded him in 1759, when Charles from the throne of Naples passed to that of Spain. As Ferdinand was then only eight years of age, a council of regency was appointed, at the head of which was placed the celebrated Marquis Tanucci. The education of the king was, however, much neglected. When, in 1768, he married Maria Carolina of Austria, daughter of the Empress Maria Theresa, a princess both clever and ambitious, she took in her hands the administration of the kingdom, and, in fact, till her death she ruled under her husband's name. Tanucci was dismissed in 1777, and under the premiership of John Acton (q.v.), an Englishman by origin, a system was instituted, which alienated from the throne many loyal subjects, and brought on revolution and the French invasion. In the meanwhile Ferdinand was devoted to hunting, horse-training, and fishing. He often spent his days in gambling with the lowest of the rabble, the manners and customs of whom he was fond of assuming. Maria Carolina, to revenge the death of her sister, Marie Antoinette, Queen of France, sent 60,000 men to fight the French, who had occupied Rome, but they were defeated, and Ferdinand, who was at the head of the expedition, was the first to fly. The French General, Championnet, easily conquered the kingdom, and in 1799 the Parthenopean Republic was proclaimed at Naples, but it fell in the same year, and Ferdinand was

restored. A reign of reactionary terror then began, and many noble lives, like those of Admiral Caracciolo, fell victims to the royal vengeance. Napoleon, after his victory at Austerlitz, declared that the dynasty of the Bourbons had ceased to reign at Naples, and sent thither an army of occupation under Masséna. Joseph Bonaparte, eldest brother of Napoleon, and Murat, his brother-in-law, were successively named Kings of Naples. Ferdinand and his family fled to Sicily, and there they remained under British protection until the fall of Napoleon. The queen retired to Vienna, and there she ended her life in 1814. Ferdinand was restored by the Congress of Vienna, in 1815, to his throne as King of the Two Sicilies. Returning to Naples, he ruled by the scourge and the scaffold. When, in 1820, a dreadful revolution broke out at Naples and Palermo, Ferdinand promised a Liberal Constitution, but directly afterwards he went to the Congress of Laybach, and returned to his kingdom with seventy thousand Austrian soldiers, who assisted him in abolishing the Constitution and ruling the kingdom in the most oppressive way. He died suddenly, and was succeeded by his eldest son.

FRANCIS I. (b. 1777, d. 1830) in early life sympathised with Liberal ideas, but later on he became an Absolutist. Under the title of Vicar he was twice regent of the kingdom during his father's lifetime, and sided with the reactionary party. In 1825 he succeeded his father, and during his short reign every branch of the public administration was characterised by the utmost confusion and disorder. The king himself by his immoderate expenditure increased the financial difficulties of the State. He was succeeded by his eldest son.

Ferdinand II. (b. 1810, d. 1859) began his reign with the best expectations. The introduction of a few liberal measures and a political amnesty endeared him to his subjects. After the death, however, of his first wife, Maria Christina of Savoy, in 1836, and his second marriage with the Archduchess Maria Theresa, niece of the Austrian emperor, he placed himself under the influence of Austria. His rule was very tyrannical, and a continual series of conspiracies and risings followed, which were only suppressed with great bloodshed. In 1848 the island of Sicily rebelled against him, and the popular manifestations at Naples compelled him to grant a Constitution, and to send 15,000 of his soldiers to join the national forces in Lombardy. But in the month of May, 1848, an outburst of revolt was caused in Naples by the police, and thus Ferdinand II. re-established his absolute government, and recalled his troops from the north. After having twice dissolved the Parliament, he abolished the Constitution, imprisoning and torturing all those who had believed in his honesty. He then turned his

attention to Sicily, which was soon conquered by General Filangieri. The tyranny of Ferdinand II. in his last years knew no bounds, and continued till his death. He was nicknamed *Bomba* for having ordered the bombardment of Palermo and Messina.

*FRANCIS II. (b. 1836) succeeded his father, but the despotic rule of Ferdinand II. having alienated his subjects from the Bourbons, led to the easy overthrow of the throne of his son in 1860. The advance of General Garibaldi towards Naples compelled Francis II. to proclaim a general amnesty, grant a Constitution, and summon a Liberal Ministry. But it was too late. When Garibaldi arrived at the gates of the capital the king fled to Gaeta, and afterwards retired to Rome. After the fall of the Neapolitan monarchy he travelled in England, France, and Austria.

Di Sivo, *Storia della due Sicilie dal 1846 al 1861* (1863); Bencklin, *Geschichte Neapels während der letzten 70 Jahre* (1862). [A. O.]

Napoleon I., BONAPARTE, EMPEROR OF THE FRENCH (b. 1769, d. 1821), is generally said to have been born at Ajaccio, in Corsica, on Aug. 15th, 1769, though it is possible that the real date of his birth is Jan. 7th, 1768. His birth just succeeded the French conquest of the island. His father, Carlo Bonaparte, was of a noble, though poor, Corsican family; his mother, Letitia Ramolino, was beautiful, but of no wealth or family. In 1779, after a few months at school at Autun to learn French, Napoleon was sent to the military academy of Brienne, where he remained until 1784, studious, proud, solitary, feeling keenly the isolation which his poverty and foreign birth involved, but even then consumed by wild schemes of ambition. In 1784 he was transferred to the military school of Paris, and in 1785 obtained a commission in the artillery regiment La Fère. For the next few years he sought fame mainly in authorship; but in 1789 he began his active career by placing himself at the head of the revolutionary party at Ajaccio, and was hailed by Paoli as "one of Plutarch's men." But in 1792 he got into difficulties by a wild attempt to seize Ajaccio, fled to France and deserted his regiment, and was only saved by the revolutionary troubles of that year and the need of the Jacobin government for capable officers. But he still thought mainly of Corsica. Hurrying back to the island he became, with Salicetti, the leading champion of the French connection, now imperilled by the opposition of Paoli and the patriots to Jacobinism. Their revolt drove him and his family finally to France. The Corsican period of his life was now ended. His career as a Frenchman had begun. His pronounced Jacobinism now ensured his rise in the army. He commanded the artillery at the siege of the royalists in Toulon (1793), was made a general for his services, and in 1794 the

favour of the younger Robespierre gave him an important command in the army of Italy. He narrowly escaped proscription after Thermidor, but was saved by Salicetti, though in 1795 he was, much to his disgust, transferred to the Army of the West. But Pontécoulant got him a place at Paris in the topographical section of the War Office, where he won the favour of Barras, and was appointed second to Menou in repressing the revolt of the sections on 13th Vendémiaire against the new Constitution. His marriage with Josephine de Beauharnais, a beautiful West Indian widow, and a leader in Parisian society, still further improved his prospects. He first succeeded Barras in the command of the army of the Interior, and was then appointed the general of the army of Italy. The campaign of 1796 made him the most famous general in Europe. He separated Sardinia and Austria, forced the former to conclude the peace of Cherasco, conquered Lombardy by a rapid succession of brilliant victories, created in Italy a series of vassal republics, and finally invaded the Austrian territories, and compelled that power to accept the preliminaries of Leoben (April 18th, 1797) and the Treaty of Campo Formio, which gave France practical possession of Italy, and arranged for a congress to settle the affairs of Germany. He now returned to Paris, where the revolution of the 18th Fructidor had just transferred power from the Directory to the army. But in 1798 he went on an expedition to Egypt, his head filled with wild schemes of Oriental conquest and of more practical designs against the Eastern Empire of England. His conquest of Egypt and Syria was quickly followed by the destruction of his fleet by Nelson, his abandonment of his army and retreat to France (Oct. 9th, 1799). In his absence the war had been renewed with disastrous results, and the Directory had sunk into extreme discredit. On the 18th Brumaire he completed the military revolution, and by a judicious manipulation of Siéyès' Constitution of the Year Eight, became, with the title of First Consul, exchanged in 1804 for that of Emperor, the dictator of France. His tyranny was accepted by a nation wearied of perpetual revolution, fearful for the foundations of society and anxious for military glory. In 1800 he crossed the Alps, won the battle of Marengo, reconquered Italy, acquired the substantial fruits of Moreau's victory at Hohenlinden, and compelled Austria to accept the Treaty of Lunéville (1801), which gave France the left bank of the Rhine, with the command over Italy, and involved a reconstruction of the Germanic Empire. In 1802 the Treaty of Amiens with England, and the Concordat which reconciled revolutionary France to Catholicism, made the peace universal. The short period of rest that now followed was occupied in the reorganisation of France on the principles of centralised

Cæsarism, in the issue of the Code Napoléon, the creation of the University, the Bank of France, and the Legion of Honour; the stamping-out of the last traces of parliamentary opposition in the sham assemblies of the New Constitution, and in the proscription of Moreau, the murder of Pichegru, and the seizure and execution of D'Enghien. But in 1803 war had again broken out between England and Napoleon, who availed himself of the commanding position which the reconstruction of Germany gave him, to turn all his forces to our destruction. But the navy effectually warded off invasion, and in 1805 a Third Coalition, in which Austria and Russia were the leading powers, again diverted his attention. The "army of England" at once marched into Germany. Mack capitulated at Ulm, and the humiliation of Austria was completed at Austerlitz. Prussia entered the field after Austria's withdrawal, but her power fell in one day at Jena, and after the sanguinary campaign of Eylau and Friedland, the Treaty of Tilsit (1807) united Napoleon and Russia in a colossal alliance that was fatal to the independence of the other states of Europe. The Confederation of the Rhine was formed of the minor German states under Napoleon's protection. A row of vassal kingdoms gradually grew up round enlarged France; the Continental System was devised to destroy the power and commerce of England, whose final destruction of the French navy at Trafalgar stood in brilliant contrast to the failures of her allies. But the very power and success of Napoleon tempted him to schemes which became the causes of his ruin, while the overweening tyranny which had replaced the vindication of the rights of man by the revolutionary armies, alienated not only States and Governments, but the people as well, from the new Cæsar. In 1808, Napoleon's seizure of the throne of Spain for his brother not only threw a power hitherto faithful to France on to the side of her enemies, but led to the first great national rising against him, and the first effective intervention of England in the Continental war. Next year Germany followed the example of Spain, but the collapse of Austria after Wagram, and the failure of England at Walcheren, left Schill and Hofer unsupported in their heroic struggle. Austria was compelled to accept the humiliating treaty of Schönbrunn (1809), and the divorce of the Empress Josephine was followed by Napoleon's marriage to the Archduchess Maria Louisa. On March 20th, 1811, the hereditary empire was completed by the birth of a son, whose designation as King of Rome recalled the old glories of the Holy Empire, to which Napoleon deemed himself the successor. But the limit of Napoleon's career was attained. The friendship with Russia, on which the later developments of his power were based, now came to an end. The colossal army sent

to conquer his eastern rival, penetrated indeed to Moscow, but was destroyed by the severity of a Russian winter and the pertinacious hostility of an outraged nation. In 1813 Germany rose in revolt. Prussia, so long Napoleon's vassal, put herself at the head of the national rising. Austria, after some hesitation, renewed the war with her oppressor, and, after the crushing defeat of Leipzig, Napoleon was driven over the Rhine. In 1814 the allies advanced to Paris, despite Napoleon's brilliant and desperate efforts to defeat them. Meanwhile, Wellington, who for years had contended in the Peninsula against overwhelming odds and terrible difficulties, had availed himself of Napoleon's embarrassments to clear Spain of the French, to cross the Pyrenees, and to advance into the heart of southern France. On April 11th, Napoleon abdicated at Fontainebleau, and retired to his mock sovereignty in Elba, but next year he landed again in France (March 1st) on his last desperate attempt at empire. Within twenty days he entered Paris in triumph; but vast armies gathered round France on every side, and he failed in his attempt to anticipate attack on the north. His crushing defeat at Waterloo (June 18th) put an end to the Hundred Days' revival of his power, and was quickly followed by the second restoration of the Bourbons, his second abdication, his surrender to the English, and his imprisonment on the island rock of St. Helena. There he spent the remainder of his life, in ignoble quarrels with his gaoler, and in an elaborate attempt to falsify history. He died on May 5th, 1821, of an ulcer in his stomach. His remains were subsequently transferred by Louis Philippe to their present resting-place under the dome of the Invalides at Paris. The colossal scale of Napoleon's exploits has invested his career with a fascination such as no other character in history inspires. It is easy to show how the circumstances of revolutionary France made such a career possible even for one without extraordinary abilities, but it is useless to deny the possession of matchless audacity, extraordinary fertility of resources, and unique powers of generalship and statecraft to the man who knew so well how to use his chances. That his motives were purely personal, that his influence was almost wholly for evil, that in the pursuit of ends unworthy of attainment he was capable of the meanest frauds, as well as the most colossal crimes, are equally evident from his career.

Lanfrey's *History of Napoleon I.*, which has been translated into English, is the best general account of his career, though it is unfortunately incomplete. It should be compared with the Napoleon worship of Thiers' *History of the Consulate and Empire*, a work of very inferior authority. A study of his *Correspondence* is essential to a complete understanding of his character and career. The *Mémoires pour servir à l'Histoire de France, écrits à Sainte-Hélène sous la dictée de Napoléon*, and edited by Montholon

and Gourgand, are characteristic, but are to be received with the utmost caution. Professor Seeley published in 1886 an excellent *Short History of Napoleon the First*, to which he added a very suggestive essay on Napoleon's place in history. [T. F. T.]

Napoleon III. (CHARLES LOUIS NAPOLEON BONAPARTE), Emperor of the French (*b.* April 20th, 1808; *d.* Jan. 9th, 1873), was the third son of Louis Napoleon, King of Holland, and of Hortense de Beauharnais, daughter of the Empress Joséphine by her first marriage. His eldest brother died when a mere child, and Louis Napoleon lived with Queen Hortense, who was on the worst possible terms with her husband, at Paris, where he was occasionally taken to see the emperor. After the second restoration of the Bourbons, the Bonapartes were banished from France, and Hortense lived with her son partly at Augsburg and partly at Arenenberg near Lake Constance. He studied voraciously, particularly military matters, as appeared afterwards in the *Manuel d'Artillerie and Considérations Politiques et Militaires sur la Suisse* (1836). After the July revolution of 1830 he and his brother, Napoleon Louis, joined the Italian insurgents in the Pontifical States, but the latter fell mortally ill at Forlì, and he himself nearly died at Ancona. The death of his brother, however, followed by that of the great Napoleon's son, the Duc de Reichstadt, in 1832, made Louis Napoleon the heir to the family pretensions, and in his *Réveries Politiques* he promulgated in inflated rhetoric the gospel of *l'idée Napoléonienne*. Nevertheless, his two attempts upon the throne of France were the most egregious failures—that at Strasburg in 1836, for which he was exiled to the United States, being followed by the Boulogne masquerade with the tame eagle and other accessories, which resulted in Louis Napoleon's imprisonment for life in the castle of Ham (1840). During his six years' imprisonment he wrote various historical fragments, a treatise on the possibility of extinguishing pauperism by the colonisation of waste lands, and studied how to realise that brilliant future for which he still confidently hoped. After his escape from prison, in the guise of a workman with a plank on his shoulder, on May 26th, 1846, he fled to England, where also he had spent the greater part of the years from 1836 to 1840, and lived a not particularly reputable life as a man about town. So far he seemed to have utterly missed his mark. His impassive countenance caused him to be accounted slow of intelligence, and his two attempts on the throne had covered him with ridicule; nevertheless there were those, particularly the students of his brilliant, if shallow, defence of Napoleon, *Des Idées Napoléoniennes* (1839), who felt sure that his sun had not yet set. The revolution of 1848 gave him his opportunity; he was first returned to the Assembly by five departments,

and then, Cavaignac having in the meantime crushed the workmen's insurrection, he was chosen President of the Republic by five and a half million votes, Cavaignac receiving about one and a half million. He swore to observe the Constitution, and it was thought that this dullard would give the country repose. A struggle for power, however, ensued between the Assembly and the President, by which the country was prepared for further changes, and at the same time impressed with the idea that republicanism was synonymous with turbulence. The chief event of his presidency was the French expedition to restore Pius IX. to his sovereignty, undertaken partly to anticipate Austria, and partly to secure the influence of the Church when the long-meditated stroke was to be made. For Louis Napoleon, impelled by men of greater nerve than himself, was about to spring; and on Dec. 2nd, 1851, came the *coup d'état*, which established him in power by arrests, banishments, and massacres of unoffending citizens. The presidency for ten years, with a sham Constitution formed on the model of the first empire, was only the prelude to higher efforts of ambition. The *plébiscite*, taken under circumstances of terrorism which made it perfectly absurd to accept it as a record of the real opinion of France, resulted in his favour, and on Nov. 4th, 1852, Louis Napoleon became Emperor of the French. *L'Empire c'est la paix*, he declared, but it was obvious that if his dynasty was to stand, it must achieve a position in Europe, and divert attention from home affairs. Accordingly, having failed to strengthen himself by a marriage alliance with one of the northern powers, but having, nevertheless, secured a popular bride in the beautiful Spianard, the Countess *EUGENIE DE MONTENO (*b.* 1826), he succeeded in bringing about the Crimean War, whereby he attached England closely to his plans. The war, however, before it was over had well-nigh exhausted his resources, and engendered suspicion between the two nations. The war of Italian liberation followed, nevertheless, the attempt of Orsini (*q.v.*) upon his life hastening him to avert further attempts of the sort by earning the gratitude of the Italians. Having used the fact that the plot had been hatched in London as an opportunity of a display of menace against this country, he held conference with Cavour, and promulgated his intention of "freeing Italy from the Alps to the Adriatic." His intention was to establish a confederation there under the headship of the Pope, but Italian patriotism was too strong for him: and having, as commander-in-chief, won the battles of Magenta (June 4th) and Solferino (June 24th, 1859), despite blundering strategy and an excessive regard for his personal safety, the emperor was forced to look on while the treaty of Zurich, by which the war was concluded, was undone by Garibaldi in Sicily

and Naples. Yet Italy was not free; a French legion upheld the Pope, Venice still belonged to Austria, Nice and Savoy had been annexed to France. Further expeditions tended to increase the fictitious importance of the emperor in the eyes of Europe, that to China in concert with England (1858-60), to Syria with the other Powers (1860-61), to Cochinchina in concert with Spain (1861-62). Nevertheless, at home all was not well; the gentry stood aloof from the court of profligates and adventurers, the opposition increased rapidly in the towns, as the elections of 1863 showed plainly; rascality and mismanagement reigned in all the departments, and Baron Haussmann's spendthrift transformation of Paris into a stucco Athens, which was consummated in the Universal Exhibition of 1867, now only drove the empire faster down the hill. In this country his enlightened commercial policy, which found expression in the Cobden treaty of 1860, had won for him admiration, and it was not suspected that the showy edifice was built on such rotten foundations. Viewed by the light of subsequent events, the moment of the publication of Napoleon's *History of Julius Caesar* (1866), with its thoroughly nineteenth century conception of "Caesarism" falsely so called, was significant, for already the system had been doomed. Of the shadows at which the dreamy idealist had been grasping, two, the creation of a Mahometan kingdom in Algeria, and the erection of Maximilian as Emperor of Mexico, a project passionately espoused by the empress, who, at first devoted to gaiety, had by this time acquired considerable influence over her husband, which she employed chiefly in the interests of clericalism—had vanished into thin air. It was impossible to disguise the loss of prestige involved in the withdrawal of the French troops from Mexico at the bidding of the United States, or the disgrace incurred in the abandonment and consequent death of Maximilian. Further, his pretentious offer of mediation between the warring parties in the United States had been rejected, and looming in the immediate future was the possibility of a united Germany. The Danish war, the crushing defeat of Austria at Sadowa, and the formation, in 1866, of the North German Bund, at length taught Napoleon that he had made a profound mistake, and that Prussia, not Austria, was his most formidable rival. From that time he eagerly sought a quarrel against her, first on the Luxemburg question, and then about the St. Gothard Railway. At home concessions were made to the growing spirit of republicanism. The decree of 1867, relaxing the restrictions on the press, and allowing interpellation in the Chambers, was followed in 1870 by the desperate recourse to constitutional government, and the formation of the Liberal Ollivier Cabinet. It

was too late, however; the Opposition, headed by Jules Favre and Gambetta, could not be silenced, and the *plébiscite* of May 8th, although the peasant vote was given in favour of *l'honnête homme* through the judicious employment of official persuasion, and in the belief that the empire still meant peace (see Erckmann-Chatrian's *l'Histoire du Plébiscite* in illustration of this), disclosed the alarming fact that there was a formidable minority vote of over a million against the empire, a considerable fraction of which came from the army, while in Paris there was actually a hostile majority. Broken down in health, and weary of uncertainty, Napoleon resolved to hazard his fate upon war, and forced a quarrel with Prince Bismarck upon the Berlin Succession question [BISMARCK]. *A Berlin!* shouted the Parisian populace on that fateful July 15th, but its joy was short-lived; much of the French army existed only on paper; the presence of the emperor as commander-in-chief made strategy out of the question, and though the small success of Saarbrück raised false hopes, the battle of Wörth on Aug. 7th resulted in MacMahon's complete defeat. *Tout peut se rétablir*, Napoleon telegraphed to the Empress; but he retired to Châlons, not daring to return to Paris; and went like a man in a dream with the relieving force which the impetuosity of his wife sent under MacMahon to the aid of Bazaine. At Sedan (Sept. 1st) he gave the order to surrender, probably in the hope that Prussian bayonets would place him once more on the French throne. In the spirit of unconscious prophecy he had quoted in his *Julius Caesar*, a saying of Montesquieu's that "if the fortune of a battle has ruined a State, there is a general cause why the State should perish through a single battle." That general cause was the corruption, falsehood, and latterly the fatuity of Napoleonism; and there was nothing left for the broken adventurer but to retire as an exile to England, where some two years afterwards, at Camden House, Chislehurst, he died of the maladies which had been wearing down his strength. It is due to him to say that he faced ruin with dignity; though the motives that inspired him were probably those of the fatalist, not of the man who is conscious of having failed in a worthy cause.

The authorities on Napoleon III. are unsatisfactory. Blanchard Jerrold's apologetic *Life of Napoleon III.* is inadequate and misleading. Fine indictments of the coup d'état, and the empire generally, are to be found in Victor Hugo's *l'Histoire d'un Crime* and *Napoléon le Petit*, and in vol. I. of Mr. Kinglake's *Invasion of the Crimea*. Von Busch's works on Prince Bismarck throw valuable sidelights on Napoleon's foreign policy. The social life of the second empire has been dissected brutally, but faithfully, by the French novelists of the "naturalist" school.

[L. C. S.]

Napoleon, PRINCE LOUIS (EUGÈNE LOUIS JEAN JOSEPH), usually styled in England the

Prince Imperial (*b.* 1856, *d.* 1879), the only child of Napoleon III. and the Empress Eugénie, accompanied his father to the seat of war in 1870, and on Aug. 2nd received his "baptism of fire" at Saarbrück. After Sedan he went into Belgium and crossed over to Dover on Sept. 6th. In 1872 he entered the Woolwich Academy, where he was deservedly popular, and on the death of his father was recognised as the heir to the House of Napoleon. In 1879 he joined the British forces in Zululand in an unofficial capacity. On June 1st he and a body of soldiers under Lieut. Carey were surprised by a band of Zulus. The Prince was unable to mount his horse, and, abandoned by his companions, fell beneath the spears of the enemy.

* **Napoleon, PRINCE NAPOLEON JOSEPH BONAPARTE** (*b.* 1822), commonly known as Prince Napoleon, the son of Jérôme Bonaparte by his second marriage with Princess Frederick of Württemberg, was born at Trieste. His youth was passed in a desultory fashion, much to the detriment of his morals. He was elected to the Assembly as representative of Corsica in 1848, and in 1849 was appointed minister at Madrid, but was dismissed for absenting himself without leave. In 1854 he had a command in the Crimean War, but suddenly resigned, receiving in consequence the nickname of "Plon-Plon," and a reputation for cowardice, from which Mr. Kinglake absolves him. In 1858 he was made President of the Ministry for Algiers and the Colonies, but soon threw up the appointment. He commanded the reserve in the Italian campaign of 1859, and in the same year married Princess Clotilde, the daughter of Victor Emmanuel, to the indignation of Europe. A new view of his character was taken when in 1861 he delivered a magnificent speech in the Senate in defence of Democratic ideas, which was incidentally the cause of a challenge from the Duc d'Aumale, which the Prince declined. He now posed as the champion of democracy, and favoured the Polish revolution. In 1865 he was appointed President of the Commissioners for the Universal Exhibition, but was requested by the emperor to resign in consequence of a vigorously anti-Austrian speech delivered at Ajaccio at the inauguration of a statue of Napoleon I. He was soon, however, again restored to favour, and in 1870 he was sent to Italy to try to induce his father-in-law to come to the aid of France. After the fall of the empire he pushed his own claims to the throne against those of his cousin, Prince Louis Napoleon (the ex-Prince Imperial), whose senatorial candidate, M. Rouher, he opposed at Ajaccio in 1876, and was returned through the invalidation of his rival's election. His speeches were chiefly of an anti-clerical nature, and in October, 1877, he was defeated by Baron

Haussmann. On the death of Prince Louis Napoleon, he was recognised by the Imperialists as the head of the family, though M. Paul de Cassagnac urged the cause of Prince Napoleon's son, Prince Victor (born in 1862). In 1883 he startled Paris by a proclamation in the *Figaro*, in which he appealed to the *plébiscite*. The result was his brief imprisonment, and in 1886 he was compelled under the new law for the expulsion of the Princes to retire from France. Prince Napoleon is perhaps the most brilliant failure of our time.

Justia McCarthy, *Modern Leaders*.

* **Nares, Sir George Strong, K.C.B., F.R.S.** (b. 1831), Arctic explorer, was born in Monmouthshire, and educated at the Royal Naval School, New Cross. He was one of the crew of the Arctic expedition fitted out in 1852, and distinguished himself greatly in the sledging expeditions. After his return in 1854 he served in the Crimean War, made many valuable surveys in the southern hemisphere in command of the *Salamander*, and commanded the *Challenger* in the scientific enterprise set on foot to extend the certainties of oceanic laws and meteorology (1872-5), contributing to the published results of the voyage *Reports on Ocean Soundings and Temperature* (1874-5). In 1875 he left England in an endeavour to reach the North Pole in the *Alert*, the companion ship, the *Discovery*, being commanded by Captain Stephenson. The ship wintered in lat. 82° 27', and a sledging party reached lat. 83° 10 degrees, which was far in advance of any previous record; the explorers defined the character of the great polar ocean, and supplied most important observations relating to the science of hydrography. Coal extends "as far as 81 degrees; coral farther north;" and there was also made "a most complete series of meteorological, tidal, magnetic and electric observations." (See Captain Nares's *Official Report of the Arctic Expedition* (1876), and his *Narrative of a Voyage to the Polar Sea during 1875-6*.) On his return, in 1876, he was knighted. From 1878-9 he commanded the *Alert* in a survey of the Pacific Ocean, and was then appointed a professional member of the harbour department of the Board of Trade.

Narvaez, Ramon Maria (b. 1800, d. 1868), Spanish statesman, entered the army, fought in Catalonia in 1822, and having obtained the rank of colonel, achieved renown in 1836 by a victory over the Carlists near Arcos, and in 1838 became Captain-General of Old Castile. In 1840 he directed an unsuccessful insurrection against Espartero's government on behalf of the Queen-Regent Christina, but was compelled to fly to France, only to return, however, in 1843, and drive his opponent from Madrid. From 1844 to 1846, in 1847, and again in 1856, 1864, and from

1868 until his death, he was Prime Minister, but his violently clerical and reactionary government, as a rule, speedily brought about its own overthrow, and rendered inevitable the downfall of the Bourbon monarchy.

Nasmyth, Major Charles (b. 1825, d. 1861), British soldier, was the eldest son of a Scottish man of science, and obtained a cadetship in the East India Company's service in 1843. In 1853, owing to ill-health, he made a voyage to the Mediterranean, and was at Silistria on the outbreak of the Crimean War. Together with Captain Butler he assumed command of the Turkish garrison, and defended the place against the Russians, until on June 23rd they raised the siege. The garrison had lost some 12,000 men. Nasmyth served with distinction through the campaign, and died two years after he had been invalided home from Australia.

Nasmyth's Diary, published in the *Times*, 1854.

* **Nasmyth, James** (b. 1808), engineer, the son of **Alexander Nasmyth** (b. 1758, d. 1840), who has been called the Father of the Scottish school of landscape painting, was educated at Knight's School, George Street, Edinburgh, and at Edinburgh University. He early acquired a taste for mechanics, and in 1829 came to London, and was engaged by Henry Maudslay, the well-known engineer, whose private assistant he became. Maudslay died in 1831, and Nasmyth, after taking a temporary workshop at Edinburgh, where he constructed a rotatory steam-engine, set up business at Manchester (1834). His premises soon became too small; and he established the Bridgewater Foundry at Patricroft, near Manchester. Here, in 1839, he matured his great invention, the steam hammer, and the implement was introduced into all the principal foundries in England, and even sent to Russia. In 1843 it was adopted by the Government in the Devonport Dockyard, where it was used as a pile-driver in 1845. Mr. Nasmyth's name was now of European fame; he visited all parts of the Continent, and was employed by all the foreign governments. A chronological account of his inventions is to be found in his autobiography; among them may be mentioned a mode of transmitting motion by means of a flexible shaft (1829), the torpedo ram (1839), and the hydraulic mattress press (1839). In 1857 he retired from business, and devoted himself to astronomy, being in active communication with Sir John Herschel. Mr. Nasmyth is the author of some remarks on tools and machinery in Baker's *Elements of Mechanism*, and *The Moon considered as a Planet, a World, and a Satellite* (1874), written in conjunction with J. Carpenter; and has developed a curious theory of the sun-ray origin of the pyramids and of cuneiform characters.

J. Nasmyth: an Autobiography, edited by S. Smiles (1863, 2nd ed. 1885).

Nassr-ed-Deen. [PERSIA.]

Neander, JOHANN WILHELM AUGUSTUS (b. 1789, d. 1850), divine and ecclesiastical historian, was born at Göttingen of a Jewish family named Mendel, and spent most of his boyhood at Hamburg. Diligent study of Plato and Schleiermacher caused him to abandon Judaism, and in 1806 he was baptised with the name by which he is now known. After a short course of Schleiermacher's lectures at Halle he was driven back to Göttingen by the war, and was ordained in 1809, establishing himself as *privat-docent* in theology at Heidelberg in 1810. Next year he produced his first important work, *On the Emperor Julian and his Times*, for which he was invited to a professorship at Berlin, where he spent the remainder of his life in uninterrupted study. In theology he inclined to the tenets of the Evangelical school. His principal polemics were directed against the Hegelian philosophy and its later developments. His most important works were: *Memorials of the History of Christianity and the Christian Life* (1822-3); *General History of the Christian Religion and Church* (1825-45); *The Life of Jesus in its Historical Connection* (1837), and the *Lectures* that were collected by D. J. Müller in 1857.

Erinnerungen an Dr. August Neander, von Dr. J. L. Jacobi (1883).

Neilson, LILIAN ADELAIDE (b. 1850, d. 1880), actress, was a native of Saragosea, her father being a Spaniard, and her mother English. She was seized with a desire to go on the stage, and at the age of fifteen appeared as Julia in the *Hunchback* at Margate, and in the same year came forward as Juliet at the Royalty Theatre with success. During the next few years she appeared at the Princess's in *A Huguenot Captain* and *Lost in London*, at the Gaiety in *Uncle Dick's Darling*, at Drury Lane in *Amy Robsart*. In 1872 she reappeared as Juliet in the maturity of her powers, and was recognised as one of the finest exponents of Shakespearian female character that the modern English stage had produced. In the same year, while on tour in America, she added Beatrice, Rosalind, and Isabella to her *répertoire*. She was next the heroine in Tom Taylor's *Anne Boleyn*, revisited America in 1875, and again in 1879, and in 1877-8 was engaged at the Haymarket in a series of Shakespearian representations. She died suddenly at Paris.

Nelson, HORATIO, VISCOUNT (b. 1758, d. 1805), British sailor, was the son of the Rev. Edmund Nelson, and was born at Barnham in Norfolk. As his career lies to some extent outside the century it will be treated here with brevity. He entered the navy in 1770, became lieutenant in 1777, and post-captain in 1779. After fighting in the War of American Independence he obtained command of the *Agamemnon*, on the outbreak of the war of

the French Revolution, under Lord Hood, and greatly distinguished himself in the following years for his seamanship and daring. In 1796 he became a commodore, and on Feb. 13th, 1797, won the grade of admiral for his matchless valour under Admiral Jervis at the battle off Cape St. Vincent. On Aug. 12th, 1798, he won the battle of the Nile, his greatest achievement, and was raised to the peerage as Baron Nelson of the Nile (1800). Meanwhile, however, his connection with Lady Hamilton had begun. Although, contrary to what has been frequently asserted, it is improbable that to her influence was due his non-intervention while the restored King and Queen of Naples wreaked their vengeance upon their rebellious subjects, the relationship entailed Nelson's divorce from his wife. In 1801 he was sent, under Sir Hyde Parker, into northern waters to put an end to the armed neutrality of the north, and on May 2nd led the attack upon Copenhagen, which by bold disobedience of his superior officer's order of retreat he brought to a brilliant conclusion. Created a viscount, he was occupied in watching the French coast until the conclusion of the Peace of Amiens. In 1803, on the renewal of the war, he was reappointed to the Mediterranean command, and hovered off Toulon, thereby preventing a combination of the French fleets. In March, 1805, however Villeneuve, the French admiral, escaped from Toulon, was joined by a Spanish squadron, and having lured Nelson on a futile pursuit across the Atlantic, appeared on the Spanish coasts with the view of setting free in succession the squadrons shut up in Ferrol, Rochefort, and Brest for the invasion of England. Nelson, however, had warned the Admiralty by means of a fast-sailing vessel of his opponent's designs, and Villeneuve was forced by Sir Robert Calder to take refuge in Ferrol, whence, his plans having failed, he made for Cadiz. Napoleon, in high dudgeon, ordered him to fight, and so the battle of Trafalgar took place on Oct. 21st, 1805. The combined fleets of France and Spain considerably outnumbered the English; but Collingwood at the head of one column, and Nelson at the head of the other, broke the enemy's line, and the victory was won which made England for a generation undisputed mistress of the sea, and rendered her invasion by Napoleon an impossibility. It was dearly bought, however, by the death of Nelson, who, wounded in the first hour of the battle, died in the moment of victory.

Nelson's Despatches and Letters (1844-6); Prof. J. K. Laughton, *Selections from Nelson's Despatches*; Clark and McArthur, *Life of Nelson* (1806), Southey, *Life of Nelson* (1828).

* **Nemours, LOUIS CHARLES PHILIPPE D'ORLÉANS, DUC DE** (b. 1814), the second son of Louis Philippe, was educated at the Collège Henri IV., and entered the French army. He was twice elected to monarchies—

in 1831 to that of Belgium, and in 1832 to that of Greece, but the French Court induced him to decline both of those honours. He served in the army in Algeria, and in 1837 became lieutenant-colonel. On the death of the Duc d'Orléans he was declared regent by a Bill which passed the Chambers, and in 1848, after the abdication of Louis Philippe, was left in charge of the interests of his nephew, the Comte de Paris, but took no decisive action. He returned to France in 1870, but played little part in the subsequent attempts to effect a fusion of Orleanist and Legitimist pretensions, although in 1873 he took part in the Frohsdorf interview with the Comte de Chambord (q.v.).

Nerval, GÉRARD DE (b. 1805, d. 1857), French man of letters, was rightly called Gérard Labrunie. He was educated at the Lycée Charlemagne, and took to journalism, but in a desultory manner, so that despite his ability he was frequently in want, and died by his own hand. His translation of *Faust* (1828) was admired by Goethe, and his *Sémes de la Vie Orientale* (1848-50) were widely popular. But he will be chiefly remembered for his exquisite tales—*Contes et Facéties* (1852), *La Bohème Galante* (1856), etc.—and his genuinely rhythmic poems, which include sonnets, national songs, satires, and so forth. His *Œuvres Complètes* were published in 1868.

Nesselrode, CARL ROBERT, COUNT (b. 1780, d. 1862), a Russian diplomatist and statesman, of Saxon origin, for many years Minister of Foreign Affairs, and ultimately Chancellor of the Empire, began life as an officer in the Imperial Guard. But the Emperor Paul, who prided himself on his knowledge of physiognomy, saw him one day on parade, and after informing him he had a face not for war but for diplomacy, appointed him to a clerkship in the Foreign Office, whence he was transferred to the diplomatic service. In 1807 he was first secretary to the Russian Embassy at Paris; and he now distinguished himself, and rendered important services to his government, by gaining information respecting Napoleon's designs against Russia. After the retreat of Napoleon from Moscow, Nesselrode went to Paris in the suite of the Emperor Alexander I., and he took part in the Congress at Vienna, both in 1814 and 1815, opposing strongly the propositions of Prussia for the partition of France. He served under four successive sovereigns, and acted as Minister of Foreign Affairs under three—Alexander I., Nicholas, and Alexander II. Soon after the signing of the Treaty of Paris, in 1856, on the conclusion of the Crimean War, a catastrophe which, as far as in him lay, he had endeavoured to prevent, Count Nesselrode, now in his 77th year, was replaced at the Foreign Office by Prince Gortschakoff. The veteran statesman did not, however, retire

from public affairs. Not, at least, ostensibly; though the functions of Chancellor of the Empire—the exalted office now conferred upon him—would be difficult to define. He died at a critical time for Russia, when Nihilism had just shown its head, and when the Polish insurrection, which was to burst out in 1863, was already in active preparation.

Count Nesselrode's *Autobiography* (in French). [H. S. E.]

Newcastle, HENRY PELHAM FIENNES PELHAM CLINTON, 5TH DUKE OF, K.G. (b. 1811, d. 1864), statesman, was educated at Eton and Christ Church, Oxford (B.A. 1832), and while known as Lord Lincoln entered Parliament as member for South Nottinghamshire and a Conservative (1832). In 1834 he was a Lord of the Treasury, and in 1841 he became First Commissioner of Woods and Forests, and in 1846 Chief Secretary for Ireland. His loyalty to Sir Robert Peel during the corn-law crisis cost Lord Lincoln his seat, but he was speedily returned for Falkirk Burghs; and introduced the Irish Coercion Bill, which was the cause of the downfall of the Peel Ministry. He succeeded his father as Duke of Newcastle in 1851, and in 1853 became Colonial Secretary in the Aberdeen Cabinet, a post which he exchanged for that of Secretary for War on the outbreak of the Crimean War. Hampered by a rusty system which had not been tried for more than thirty years, he was not a success, as he frankly owned when he resigned at the opening of the session of 1855. From 1859 to 1864 he was Secretary to the Colonies, and visited Canada with the Prince of Wales in 1860.

Newman, EDWARD (b. 1801, d. 1876), naturalist, was a native of Hampstead, and embraced a commercial life. As a relaxation he took up the study of natural history, devoting particular attention to ferns, butterflies, and moths. Of his numerous works the *Grammar of Entomology* appeared in 1835, and his *History of British Ferns* (1840), and *History of British Moths* (1869), still keep their place. He was editor of the *Zoologist and Entomologist*.

* **Newman, FRANCIS WILLIAM** (b. 1805), theologian and essayist, the brother of Cardinal Newman, was born in London, and was educated at Worcester College, Oxford. After passing in the Schools with a double first class he was elected to a fellowship at Balliol College, but resigned in 1830, being unable conscientiously to comply with the regulations of the Test Act then in force. After prolonged travels in the East, where he laid the foundation of his wide knowledge of Oriental philology, he returned to England, and became classical lecturer at Bristol and other colleges, till in 1846 he was appointed Professor of Latin in the University of London, a position which

he occupied for seventeen years. His very numerous works may be classified as religious, philological, political, and social. The following are some of the more important, with the dates of their publication: *The Soul: its Sorrows and Aspirations* (1849), a work that will, perhaps, remain his most abiding contribution to modern thought; *Phases of Faith* (1850), in which he issued an explanation of his own position that may be contrasted with his brother's *Apologia*; *A History of the Hebrew Monarchy* (1847); a literal translation of *Horace's Odes* (1853); a translation of the *Iliad* (1856); *Theism, Doctrinal and Practical* (1858); *A Handbook of Arabic* (1866); *Miscellanies* (1869); *A Dictionary of Modern Arabic* (1871); *Hebrew Theism* (1874); *A Libyan Vocabulary* (1882); *A Christian Commonwealth and Essays on Diet* (1883); *Christianity in its Cradle, and Rebilius, or Robinson Crusoe in Latin* (1884), also *Hia-watha* in Latin, each with a special purpose. Professor Newman has taken an active interest in all the social movements of recent years, and has also written and lectured extensively on the subordinate questions of vivisection, temperance, and vegetarianism.

* **Newman, His Eminence JOHN HENRY** (b. 1801), cardinal deacon of the Holy Roman Church, the son of the late Mr. John Newman, banker, of London, and a brother of Prof. Francis William Newman (q.v.), was born in London. His boyhood was passed in Bloomsbury Square, and at an early age he developed a strong passion for theology. After going to a private school at Ealing, he became a member of Trinity College, Oxford, graduated in classical honours in 1820, and afterwards a fellow of Oriel College, where he came under the influence of Whately and of Hawkins, afterwards Provost of Oriel. In 1824 he took orders, and in the following years became vice-principal of St. Alban's Hall under Whately. He now drifted from the Calvinism of his boyhood in the direction of intellectual liberalism, but was "rudely awakened," he says in his *Apologia*, "by two great blows—illness and bereavement," and broke with Whately in 1829. From 1826 to 1831 Mr. Newman was a tutor at Oriel, and in 1827 examined for the B.A. degree. In 1828 he became incumbent of St. Mary's, Oxford, an appointment which he held until 1843, together with the chaplaincy of Littlemore. In 1830 he began to write a *History of the Arians of the Fourth Century* for the theological library, edited by Mr. Hugh Rose and Mr. Lyall, afterwards Dean of Canterbury. Meanwhile Mr. Newman had become the intimate associate of Pusey, Keble, Hurrell Froude, and other future leaders of the Tractarian movement. His wonderful preaching had already made him a power in the land, when in 1833 Newman's friends took counsel how to "keep the Church from

being 'liberalised.'" He was on the Continent at the time, but returned to England in July, after being prostrated by a fever in Sicily, composing by the way the beautiful hymn, *Lead, kindly Light*. He at once threw himself into the movement, and, with Pusey and Keble as lieutenants, became its guiding spirit. "The whole movement," said Bishop Blomfield, "is nothing but Newmania." So the *Tracts for the Times* were started, and in the first Newman emphasised the apostolic descent of the English Church. Newman's *Elucidations of the Bampton Lectures* of Dr. Hampden brought the conflict between the Tractarians and the Broad Church party to a crisis (1836), but after gaining a temporary victory, the former gradually lost ground in popular estimation, fear being entertained lest they should Romanise the Church. In February, 1841, *Tract XC.*, written by Newman, appeared, in which it was argued that subscription to the articles was not incompatible with holding many of the doctrines of the Church of Rome. The storm burst upon him; the tract was severely condemned by the University authorities, and still clinging to his idea of a *via media* between Rome and the Establishment, he resigned the living of St. Mary's, and took up his abode, in 1842, in what became known as Littlemore monastery. He ceased to preach in Littlemore church in 1843, but his definite secession was not accomplished until October, 1845. It was especially due, he says, to Dr. Russell, afterwards President of Maynooth. Received into the Church of Rome by Dr. Wiseman, he was ordained priest, and in 1848 was appointed head of the oratory then established in honour of St. Philip Neri at Birmingham. In 1850 he founded the Brompton Oratory, but in 1852 repaired to the new Oratory erected at Edgbaston, near Birmingham, where he remained with the exception of the years 1854-8, when he was rector of the Roman Catholic University at Dublin. After his return to England a school for the education of Catholic gentry grew up in connection with the Oratory. In 1864 a very intemperate attack upon him by Charles Kingsley in *Macmillan's Magazine*, and a subsequent pamphlet, drew from Newman his noble *Apologia pro vita sua*, the dignified beauty of which is manifest upon every page. His well-known poem, *The Dream of Gerontius*, appeared in the following year, which, with his contributions to the *Lyra Apostolica*, is among his most imaginative works. It describes the vision of a dying Christian. In 1866 Newman answered Dr. Pusey's *Eirenicon*, a proposal for re-uniting Christendom, in a *Letter to Dr. Pusey*, showing such a scheme to be impossible. At this time he was subjected to attacks on doctrinal points from a section of his co-religionists. On the promulgation of the dogma of the infallibility of the Pope's

decisions *ex cathedra*, Dr. Newman accepted it with limitations, but censured it as ill-timed in a letter to Bishop Ullathorne of Birmingham, which found its way into the papers. In 1874 Mr. Gladstone's pamphlet on *The Vatican Decrees* drew from Dr. Newman a powerful rejoinder in the form of *A Letter to the Duke of Norfolk*. In December, 1877, Dr. Newman was elected an honorary fellow of Trinity College, Oxford; revisited Oxford in the following year, and saw Dr. Pusey once more. In 1879 he was created a cardinal deacon by Pope Leo XIII., but of late years has lived a somewhat secluded life. A collected edition of his numerous works was published in 1877, and beside those mentioned above may be noted *Parochial Sermons* (1842-4); the remarkable *Loss and Gain, or the Story of a Convert* (1848); *The Scope and Nature of University Education* (1852); *An Essay in Aid of the Grammar of Assent* (1870); *Callista, a Sketch of the Third Century* (1858); and *Essays Critical and Historical* (1872). He was co-editor with Dr. Pusey and others of the *Library of the Fathers*, and contributed to it a translation of the treatises of St. Athanasius against the Arians (1838), and edited the *Remains of R. H. Froude*.

J. H. Newman, *Apologia pro vita sua*; T. Mozley, *Reminiscences*; Oakeley, *Notes on the Tractarian Movement*; Sir J. T. Coleridge, *Life of Keble*; Mr. J. A. Froude, *Reminiscences of the High Church Revival in Good Words for 1881*.

* **Newton, CHARLES THOMAS, C.B., D.C.L., LL.D.** (b. 1816), classical archaeologist, was born at Bredwardine, Herefordshire, was educated at Shrewsbury school, and afterwards at Christ Church, Oxford, where he was elected a faculty student, and took his B.A. degree in 1837. From 1840 to 1852 he held the post of assistant in the then undivided Department of Antiquities in the British Museum, which he then exchanged for the office of Vice-Consul at Mitylene, whither the possibilities of exploration attracted him. For seven years he diligently prosecuted his researches on the coast of Asia Minor and in the islands, and the results were the famous discoveries of the Mausoleum and the unearthing of numerous and important sculptures at Halicarnassus, Cnidus, and Branchidæ, which were acquired by the British Museum through the influence of Lord Stratford de Redcliffe, then H.M.'s Ambassador at the Porte. The nature and progress of these excavations have been related in detail by Mr. Newton in two works, the *History of Discoveries at Halicarnassus, etc.* (2 vols., 1862), and the more popular *Travels and Discoveries in the Levant* (2 vols., 1865). He was then appointed Consul at Rome, in 1860, but in the following year he accepted the post of Keeper of Greek and Roman Antiquities in the British Museum. He presided over this department for a quarter of a century, resigning at the close of 1885, and during this

period the collections of Greek antiquities were brought up to the highest point of order and usefulness, various admirable *Guides* to the several sections of the collection were prepared, and many important additions have been made by purchase to the Museum treasures. Mr. Newton edited several laborious volumes of the corpus of Ancient Greek Inscriptions in the British Museum (1874, etc.). In 1880 he reprinted a collection of *Archæological Essays*, among which a remarkable lecture *On the Study of Archæology*, delivered at Oxford so long ago as 1850, and a series of articles on *Greek Inscriptions*, so valuable that they were separately translated into German, are the most permanent. He is a correspondent of the Institute of France, an honorary doctor of Oxford and Cambridge, hon. fellow of Worcester College, Oxford, and a member of numerous societies. He married the daughter of Joseph Severn, Keats's friend, but this accomplished artist died in 1866.

Ney, MICHAEL (b. 1769, d. 1815), Prince of the Moskowa, Duke of Elchingen, and Marshal of France, was born at Saar-Louis, in Lorraine, and at the age of thirteen was articulated to a notary of that town, but enlisted in 1787 in a regiment of hussars. He became captain in 1794, and in 1799 served as a general of division with the army of the Rhine under Moreau. He contributed much to the victory at Hohenlinden in 1800, and his marriage shortly afterwards with Made-moiselle Augnié, a friend of Hortense Beauharnais, secured him the friendship of Napoleon. In 1803 he was appointed minister plenipotentiary of the French Republic in Switzerland, where his government was very popular, and on his return to Paris, in 1804, he was raised to the dignity of marshal. On the renewal of hostilities with Germany in 1805, the direction of the eighth corps was confided to him. His chief achievement in this campaign was his capture by storm of the village of Elchingen, which was commemorated by Napoleon creating him Duke of Elchingen. It was, however, during the Prussian campaign of 1806, that Ney's military reputation rose to its greatest height. He effected the capitulations of Erfurt and of Magdeburg, the passage of the Vistula, the taking of Thorn, and the total destruction of the Prussian corps at Deppen; cut off the retreat of the Russians on Königsberg by the combat of Schmoditten; and finally gained the victory at Friedland. He next saw service in Spain and Portugal, where he quarrelled with Masséna, and was recalled; and in 1812 joined the disastrous expedition to Russia, commanding the rear-guard during the retreat from Moscow. In the campaign of 1813 Ney displayed his usual courage and ability, and was chiefly instrumental in obtaining the victories of Bautzen, Lützen, and Dresden. He was, however, defeated in the

disastrous engagement at Dannewitz (Sept. 6th, 1813), by the Prussians and Swedes under Bernadotte, and after the abdication of Napoleon, in 1814, retired with his family to his country seat. It was there in March, 1815, that, ignorant of Napoleon's return from Elba, he received instructions from the Minister of War to join the eighth military division, of which he was still commander. He at once set out, determined to support the power of Louis, but in that part of France the popular feeling was entirely for Napoleon, and a touching appeal to the early and glorious reminiscences of the prosperous days of the Empire coming from his old chief, completely overcame his pledged loyalty. He threw in his lot with Napoleon, commanded the French at Quatre Bras, where his generalship was altogether unexceptionable, and directed the last charge of the Old Guard at Waterloo, was subsequently arrested, and was tried, condemned, and shot as a traitor. He was a simple soldier, intensely brave and modest, and seen at his best only in the hour of danger.

Mémoires du Maréchal Ney, publiés par sa famille (Paris, 1833); *Vie du Maréchal Ney* (1816); *Military Studies by Marshal Ney, written for the use of his Officers*, translated by C. H. Caunter (1833).

Nicholas, PAULOVITCH (*b.* July 7th, 1796; *d.* Feb. 18th, 1855), Czar of Russia, was the third son of the Emperor Paul; his elder brothers being Alexander I., who preceded him on the throne, and Constantine, from 1815 until 1830 governor of Poland, who renounced his dynastic rights in favour of his younger brother. Constantine's renunciation had not been made known up to the time of Alexander's death (December, 1825); and Nicholas, before assuming power, wished his elder brother to refuse the imperial crown explicitly. Meanwhile a military insurrection broke out, headed by a number of officers who, during the campaign of France and the occupation of Paris, had acquired Liberal and constitutional ideas. They preferred Constantine with a Constitution, which they proposed to make him accept, to Nicholas without one. When, however, Nicholas appeared personally on the scene, the greater number of the regiments composing the St Petersburg garrison declared in his favour; and a conflict took place in which General Miloradovitch, Governor of St. Petersburg, was killed. The insurrection having been suppressed, five of the ringleaders—Pestel, Rytleiff, Mouravieff, Bestoryeff, and Kachovski—were sentenced to death and executed. A great number of the "Dekabrista," as the insurgents of December were now called, were exiled to Siberia, and the severity of the repression threw a gloom over the whole country. The circumstances attending his accession had the natural effect of rendering Nicholas even more mistrustful and more

despotic than he was by nature; and the Polish insurrection of 1830 contributed to the hardening of his character the final touch. Everything had now to bend to his will; and Russia, which had advanced under the comparatively mild rule of Alexander I., seemed now to have gone back to the days of the tyrannical Paul. Soon after his accession, in 1827, Nicholas declared war against Persia in consequence of a boundary dispute, and the year following, in continuation of the action of the allied powers at Navarino, he invaded Turkey. The Turkish campaign occupied him two years; and scarcely was it at an end, when, in 1850, it was necessary to march against the Poles. The Polish insurrection was suppressed in the sternest manner; and in the meantime, in 1849, a Russian corps was sent into Hungary to restore the power of the Austrian crown. In 1853 Russia's pretensions to exercise a protectorate over all the Christian subjects of the Porte led to the war known as that of the Crimean, which lasted from 1854 until after the death of the Emperor Nicholas in 1855. He had married in 1817, Frederica, daughter of Frederick William III. of Prussia, who on entering the Russian Church took the name of Alexandra; and he was succeeded by his eldest son, Alexander, proclaimed as Alexander II.

A. W. Kinglake, *Invasion of the Crimea*.
[H. S. E.]

Nicholson, JOHN (*b.* 1822, *d.* 1857), British soldier, was the son of an Irish doctor, and entered the East India Company's service in 1838. He served in the first Afghan campaign; at Ghuznee thrice refused to surrender to the enemy in obedience to Colonel Palmer's order, and was then shut up in Cabul. He won great distinction in the Sutlej campaign (1845-6), but more as assistant to Sir H. Lawrence, the resident at Lahore, whom he aided in the reduction of that turbulent district. In the second Sikh war his name was constantly mentioned in despatches, and he was promoted major by special brevet. In January, 1852, he was placed in charge of the Dera Ismail Khan district of the Punjab, and won golden opinions from the chief commissioner, Sir John Lawrence. On the outbreak of the Mutiny he displayed supreme resource and boldness in the disarmament of the Sepoys at Peshawur, and in the punishment of the Sealkote mutineers. Promoted, at Lawrence's request, to the rank of brigadier-general, he was despatched to the siege of Delhi with the column sent from the Punjab. There he saved the siege train from the enemy at Nuzguffur, a most critical affair, and was fatally wounded before the Cashmere gate in the final assault on the city. Nicholson's character was full of faults, arbitrariness and faction being the chief; but he was a born king of men; and of all the Mutiny

heroes the one most qualified to succeed in a desperate enterprise.

R. Bosworth Smith, *Life of Lord Lawrence*; Edwardes and Merivale, *Life of Sir J. Lawrence*, and the histories of the Mutiny.

* **Nicol**, ERSKINE, A.R.A. (b. 1825), painter, was born at Leith, and received his education as an artist at Edinburgh. In 1845 he visited Ireland and remained there some years, and to this sojourn is due the frequency with which Irish life and character are depicted in his works. Since 1863 he has generally been represented in the exhibition of the Royal Academy, of which body he was elected an associate in 1866. Among his most popular works are *Among the Old Masters*, *Both Puzzled*, *Paying the Rent*, *The Trio*, *Interviewing the Member*, etc, several of which have been engraved.

Nicolas, SIR HARRIES NICHOLAS (b. 1799, d. 1848), antiquarian, was a native of Cornwall. In 1815 he became lieutenant in the navy, but quitted the service at the peace, and in 1825 was called to the bar. Nicolas was knighted in 1831, and devoted himself to research during the later years of his life. Among his works are *Notitia Historica* (1824), *Chronology of History* (1835), *History of the Orders of Knighthood* (1841-2), *Despatches of Lord Nelson* (1844), and an incomplete *History of the British Navy* (1847). His exposure of the inaccuracies of Lord Campbell's *Lives of the Chancellors* was particularly acute.

Niebuhr, BARTHOLOMEW GEORG (b. Aug. 27th, 1776, d. Jan. 2nd, 1831), historian, scholar, and politician, was the son of Carsten Niebuhr (b. 1733, d. 1815), the famous Arabian traveller, and was born at Copenhagen. His father, a Hanoverian by birth, had settled in Copenhagen on marrying a Danish lady. In 1778 he went to reside at Meldorf as Land-schreiber of South Ditmarsch, so that Barthold grew up a Holsteiner. He soon proved a boy of extraordinary precocity and knowledge, of weak health, and of melancholy and irritable, but sympathetic and affectionate disposition. Taught by his father to be a sound German patriot, he was, at the age of thirteen, thrown into a frenzy of horror by the outbreak of the French Revolution. Though brought up very quietly in the country, he found, whether at home at Meldorf, at school at Hamburg, or at Kiel University—where he went in 1794—a stimulating literary society in Voss, Boie, the Stollbergs, and other members of the Göttingen Hainbund whom chance had collected together in Holstein. In 1796 he broke off his studies at Kiel to become private secretary to Count Schimmelmann, the Danish Minister of Finance; but soon exchanged this office for a post in the royal library at Copenhagen. In 1798 he visited England, and remained about a year at Edinburgh, attending lectures at

the university. Returning to Denmark he obtained a post at the Colonial Office, and in 1800 married Amelia Behrens, whose "Roman character" would, he thought, strengthen his own impressionable and weak temperament, and whose elder sister, Frau Hemslér, a woman of remarkable strength of character, had long been his most intimate friend, and ultimately became his biographer. In 1804 he rose to be Director of the Copenhagen Bank, and discharged the duties of that office with such success that Stein invited him to assume a similar post at Berlin. Thus Niebuhr abandoned the Danish for the Prussian service, an act sometimes ignorantly described as springing from want of patriotism, for Niebuhr's country was Germany. He arrived, however, at an unfortunate time, reaching Berlin in October, 1805, a few days before the catastrophe of the Prussian monarchy at Jena. Ardently attached to Stein, he accepted unwillingly a place on the Immediate Commission formed in 1807, during the short ministry of Hardenberg; but on Hardenberg's retirement he threw up his position, the more willingly as he saw no hope of Stein resuming office. From the end of 1807 to the spring of 1809 he was in Holland, engaged on an unsuccessful attempt to raise a loan for the Prussian government, and on his return held a post in the Department of Finance, which made him specially responsible for the management of the State debt. In May, 1810, he threw up public life, partly because of his personal dislike for Hardenberg, and partly because he was very anxious to devote his energies to study and research. He actually declined the offer of the Ministry of Finance made to him by Hardenberg, and gladly accepted a professorship in the newly-opened University of Berlin. He at once established his academic reputation by his course of lectures on Roman history, which became the basis of the first two volumes of the great work which revolutionised the current conceptions of early Roman history. He remained at Berlin until 1815, though taking some part in the campaign and negotiations of 1813. In 1815 he lost his father and his wife. In 1816 he became Prussian ambassador at Rome, with the special object of concluding a Concordat with the Pope as to the condition of the Catholic church in Prussia. Before his departure he married a niece of his first wife, who, however, but imperfectly supplied her place as an intellectual companion to him. On his way to Italy he accidentally discovered the *Institutes of Gains* in the cathedral library of Verona. He remained in Italy until 1823, though his position was difficult and disagreeable. Afraid of the Liberals, and cordially disliking the reactionaries, he could find nothing to excite his sympathy in Italian politics, and nothing attractive in Italian men. His health was bad; he failed to continue his history; he

was not very successful in his social relations as ambassador. He became extraordinarily gloomy and desponding, and ultimately resigned his appointment. Returning to Germany in 1823, Niebuhr took up his residence at Bonn, where he lectured in the University, and busied himself with the continuation of his *Roman History*. He issued in 1827-8 a revised edition of the first two volumes, and at his death had practically completed a third volume, published posthumously by Classen. He gave several courses of lectures, which were also published after his death, and assisted Bekker in his edition of the Byzantine historians. The Revolution of 1830 excited in him the gloomiest forebodings, and actually, it is thought, hastened his death. Niebuhr's personal character was, with all its defects, singularly attractive. His simplicity and honesty, the loftiness of his motives, and his warm and affectionate disposition more than atone for his peevish irritability, frequent despondency, and womanish dependence. His excessive sensitiveness was a sort of morbid development of his marvellous acuteness. His judgment was often limited by his imagination. These qualities, with marvellous memory and insight and complete scholarship, he brought to bear on the literary problems to which he owes his enduring fame. As the historian of early Rome he completely demonstrated the untrustworthiness of the early sources of its history. He was among the first to take a really historical view of its development, to direct attention to the true character and unique importance of its constitutional history, and to turn men's attention from mere narrative, and the picturesque, to the critical investigation of causes, tendencies, and results. His attempts at reconstruction have been less fortunate. No one now believes that the original source of Roman history was old ballads; and no one accepts his arbitrary attempts to discriminate between the true and false parts of the traditional accounts. His ingenuity, his love of paradox, his critical imaginativeness, his confident sense of the importance of his discoveries, are qualities which, despite some want of the charm of style, make his work well deserve to be called brilliant. Its first appearance made an epoch in our conceptions of ancient history; it turned the attention of scholars to the right methods, and even now its main lines of argument and general theory of the subject have retained general acceptance. Niebuhr's minor works are very numerous, but are not of very great importance as compared with the *Roman History*. His academic lectures are hardly original though always most suggestive. The best of his other writings are included in his *Kleine Schriften*. His *Roman History* has been translated by Julius Hare and Bishop Thirlwall, and his *Lectures on Ancient History and Roman History* by Dr. Schmitz. A well-known criticism of it is in

Sir G. C. Lewis's *Essay on the Credibility of Early Roman History*.

The chief authority for Niebuhr's biography is Frau Hensler's *Lebensnachrichten über B. G. Niebuhr*, with large selections from his very interesting correspondence. This is the basis of Miss Winkworth's *Life and Letters of Niebuhr*, to which is added estimates of his character by Bunsen, Brandis, and other friends, and translations from some of the *Kleine Schriften*. Pertz, in his *Leben des Ministers Freiherrn von Stein*, gives a large quantity of his political correspondence. Professor Seeley has taken pains to make his *Life of Stein* serve as a political supplement to the *Lebensnachrichten*, which are confessedly weak on that side. [T. F. T.]

* **Nightingale**, FLORENCE (b. 1820), the younger daughter of Mr. William E. Nightingale, a Hampshire landowner, was born at Florence. Her energies were early devoted to philanthropic effort. Having inquired into the working of English schools, hospitals, and reformatories, Miss Nightingale went to Germany in 1851, and entered an institution of Protestant sisters of mercy at Kaiserswerth, on the Rhine; and on her return to England devoted herself to the re-organisation and reformation of the Governesses' Sanatorium, Harley Street. After the outbreak of the Crimean War, when news reached home of the awful sufferings of our soldiers, owing to the defective management of the military hospitals, the "lady-in-chief," invited by Mr. Sidney Herbert, then Secretary for War, arrived with her force of ninety-two women workers, and took up her quarters in the Barrack Hospital, Soutari (Nov. 4th, 1854). By unwearying self-devotion, a fearlessness in attacking abuses, and by the immense moral enthusiasm she inspired, Miss Nightingale brought order out of chaos; and eventually, with the aid of the sanitary commissioners, the death-rate was reduced to a par with that in our military hospitals at home. She refused to accept for herself a testimonial collected by her admirers, but suggested the application of the £50,000 subscribed to an institution for training nurses. Her health unfortunately suffered from her severe exertions, but Miss Nightingale continued to aid the good cause by her writings. At the request of the Government, she drew up a valuable volume of *Notes on Matters affecting the Health, Efficiency, and Hospital Administration of the British Army*, founded on her own late experience; and her *Notes on Hospitals* (1859), and *Notes on Nursing* (1860), have had a very large circulation. In 1863 she published *Observations on the Sanitary State of the Army*; in 1871, *Notes on Lying-in Institutions, together with a Proposal for Organising an Institution for Training Midwives and Midwifery Nurses*; and in 1873, *Life or Death in India*, a paper read before the National Association for the Promotion of Social Science, at Norwich, followed by an appendix in 1874, *Life or Death by Irrigation*.

Kinglake, *Invasion of the Crimea*.

Nikita, PRINCE OF MONTENEGRO. [MONTENEGRO.]

* **Nilsson**, CHRISTINE (b. 1843), singer, the daughter of a small Swedish farmer, was born at Hassaby, near Wexiö. In company with her brother, the youthful singer performed at village fêtes and fairs, accompanying herself on the violin, and it was while thus engaged that, in 1857, her wonderful voice and talent attracted attention. She was given a regular musical education at Halmstad and Stockholm, and in 1860 went to Paris, where she studied under Wartel and Masset. Here, on Oct. 27, 1864, she made her *début* at the Théâtre Lyrique as Violetta in *La Traviata* with such success that she was engaged for three years, during which period she appeared in *Il Flauto Magico*, *Don Juan*, and *Mariha*. Her first appearance in England was in 1867 at Her Majesty's, London; and after having closed her engagement at the Lyrique with her creation of the rôles of Myrrha in Joncières' *Sardanapale*, and Estelle in Cohen's *Les Bluets*, she returned to England in 1868. Until 1877, with the exception of the year 1871, she was a constant visitor to England. Her first tour in the United States (1870-72) was a great pecuniary and artistic success. On her return she married, in 1872, at Westminster Abbey, M. Auguste Rouzaud, whose death took place in 1882. She paid a second visit to America in 1873-4, and a third in 1882-3. Mme. Nilsson's voice, though of moderate power, possesses great sweetness, and is seconded by a noble and attractive presence. Among her most famous impersonations are Ophélie, created at Paris in 1868, and Edith in Balfe's *Talismano*.

"**Nimrod**" (CHARLES JAMES APPERLEY) (b. 1778, d. 1843), the well-known sporting writer, was accustomed to field sports from childhood, and received a classical education at Rugby. On leaving school he accepted a commission in Sir Watkin Wynn's Fencible Cavalry Regiment, in which he served during the Irish rebellion of 1798. He rose rapidly in the regiment, and remained with it till it was disbanded. He then married, and settled in Leicestershire, where he found the Quorn hunt in the height of its glory. His next home was Bittern Hall, in Warwickshire, where Addison had lived. After one or two changes of residence, Apperley went to London, where he first began to write. His first articles appeared in the *Sporting Magazine*, in 1822, on *Fox Hunting in Leicestershire*. The name of Nimrod soon became famous, and his *Letters on Hunting*, and kindred articles, followed in quick succession. At fifty years of age he rode for and won the gold cup at Dobberan. In 1830 he went to Calais, whence he contributed to the *Sporting Review* and the *Sportsman*, also to *Fraser's*, the *Encyclopædia Britannica*, and the *Morning Herald*. In

1843 he returned to England, where he died soon after. His best known works are his *Hunting Tours* (1835) (especially the Yorkshire one), *The Turf, the Chase, and the Road* (1837), and *Life of a Sportsman*.

H. C., *Memoir of Nimrod*.

Nodier, CHARLES (b. 1780, d. 1844), French man of letters, was a native of Beaunçon, and lived a migratory life until, in 1823, he became librarian to the Bibliothèque de l'Arsenal. He wrote abundantly and well, on a number of widely different subjects, but produced nothing of permanent value, if we except some of his tales, such as *Le Roi de Bohême* (1830) and *Inès de las Sierras* (1837). A collection of his works was published in 1832. Nodier is chiefly of importance through his influence on the Romanticists, to whom he acted as guide, philosopher, and friend.

Noel, THE HON. AND REV. BAPTIST WRIGHTERLEY (b. 1798, d. 1873), brother of the first Earl of Gainsborough, was educated at Trinity College, Cambridge, where he graduated B.A. and M.A., and then entered the Church. After his ordination he received a royal chaplaincy, and was appointed minister at St. John's Chapel, Bedford Row, where his preaching soon attracted a large and cultivated congregation. His separation from the Church took place after the celebrated Gorham Case (1848), which, while it was the cause of several secessions to the Church of Rome, led Baptist Noel, on the other hand, to the conviction that the sacramental teaching of the English Church approached too nearly to that of Rome. His grounds for this step were explained in the *Essay on the Union of Church and State* (1848), and from this date he was connected with the Baptists, although he still continued a warm supporter of the leading evangelical societies, and took an active part in the labours of the City Mission. Besides his numerous sermons, he published an *Essay on the Duty of Englishmen towards Hindoos*, an *Essay on the External Act of Baptism*, *American Freedom and Slavery*, a *Comparison between Christianity and Unitarianism*, *Notes of a Tour through Switzerland*, and *Notes of a Tour through Ireland*.

Nollekens, JOSEPH (b. 1737, d. 1823), sculptor, was the son of a Dutch landscape painter of some repute, and was born in London. He studied sculpture in London, under Schneemakers, and in Rome (1760), where he obtained prizes for design and modelling. Having returned to London, he greatly distinguished himself for his skill in the execution of busts, and was patronised by the leading celebrities and people of fashion at the time. He thus acquired a large fortune, which he retained with the sordid frugality of a miser. His bluntness and eccentricity gained him the reputation of insanity, but he was intimate with Blake,

Fuseli, Flaxman, and other artists, and his criticisms often displayed unusual shrewdness and discernment. He became an R.A. in 1772. Of his works, we may mention a bust of George III., the bust of Goldsmith in Westminster Abbey, and the busts of Pitt and Fox in the National Portrait Gallery. He was also renowned for his skill in the restoration of antique statues.

J. T. Smith, *Nollekens and His Times* (1838), a diffuse, but interesting and important record.

* **Nordenskiöld, NILS ADOLF ERIC, BARON** (b. 1832), Arctic explorer, was born at Helsingfors, in Finland, where his father was a director of mines. Having studied mathematics and physics at the University of Helsingfors and in Berlin (1849-56), he published a treatise on the *Molluscs of Finland* (1856), and in 1858 accompanied Torell on a short polar voyage. Excluded from Finland for political reasons soon after his return, Nordenskiöld was appointed one of the geologists to the Royal Museum in Stockholm; and in 1861, 1864, and 1866 made three separate voyages for the exploration of Spitzbergen, the last of the three being the important expedition in the *Sofia*, which attained the northernmost point then reached. In 1870 Nordenskiöld visited Greenland, and in 1872 continued his exploration of Spitzbergen, where on this occasion he spent the winter. In 1875 on board the *Prøven* he achieved the important discovery that during three months of the year the sea was open from the North Cape to the mouth of the Yenisei, thus opening a new commercial route for the traffic of Central Asia and Siberia. He repeated this voyage in 1876, but both expeditions were only intended to prepare the way for the discovery of a North-East passage to Behring Straits along the coast of Siberia. Supported by the King of Sweden, Nordenskiöld started in 1878 with the *Vega*, the *Lena*, and three tenders that were left behind at the Yenisei. The *Lena* was also deputed some weeks later to explore the entrance of the river of that name, and the *Vega*, having been forced to winter near the Bear Island, where important observations were made on the native Chukchi tribes, completed the voyage alone, arriving at Yokohama in the summer of 1879. Nordenskiöld has published several scientific treatises on the Arctic regions, and has gathered up the results of his numerous voyages in *The Voyage of the Vega round Asia and Europe* (translated, 1883).

Svenskt Biografiskt Lexikon (Stockholm, 1877), Nordenskiöld, *sa vis et ses Voyages*, by Ch. Flahault (1830).

* **Normanby, CONSTANTINE HENRY PHIPPS, 1ST MARQUIS OF, G.C.B., G.C.M.G., F.S.A.** (b. 1797, d. 1863), statesman and diplomatist, was the son of the 1st Earl of Mulgrave, and entered the House of Commons in 1819 as a determined advocate of Catholic Emancipation and Whig tenets

generally. In 1826 he brought out a series of political pamphlets supporting the policy of Canning, which soon gave him a reputation; and succeeding his father as Earl Mulgrave in 1831, was sent out as captain-general and governor of Jamaica, where he gained much credit as an administrator for successfully effecting the distribution of the compensation to owners upon the abolition of slavery. In 1835 he was appointed Lord-Lieutenant of Ireland, an appointment that was received with enthusiasm; and he was a most popular Viceroy. Created Marquis of Normanby in 1838, he held under Lord Melbourne the offices of Secretary for the Colonies (1839) and for Home Affairs (1839-40), and was nominated in 1846 Ambassador at Paris, and in 1854 at Florence. His journal of the stormy time of 1848, *A Year of Revolutions* (1857), brought him into violent controversy with Louis Blanc on questions both of fact and policy; and his subsequent controversies with Lord Palmerston and Mr. Gladstone on French and Italian questions showed that he had fallen away from the Liberalism of his earlier years. In early manhood he was the author of the novels *Matilda* (1825), *Yes and No* (1828), and *Clarinda* (1830).

* **Normanby, THE MOST NOBLE GEORGE AUGUSTUS CONSTANTINE PHIPPS, SECOND MARQUIS OF, G.C.B., G.C.M.G.** (b. 1819), colonial administrator, the only son of the first Marquis of Normanby, joined the Scots Fusilier Guards in 1838. In 1847 he entered the House of Commons as Liberal member for Scarborough, and in 1858 was nominated governor of Nova Scotia, where he remained eight years. He succeeded to the marquise in 1863. He was governor of Queensland from 1871 to 1874, of New Zealand from 1874 to 1878, and of Victoria from 1878 to 1884.

* **Norman-Neruda, WILHELMINE** (b. 1840), violinist, was born of an artist family at Brünn, in Moravia, and became a pupil of the virtuoso Jansa. She made her first appearance in 1846, and in 1849 performed before a London audience at the Philharmonic. In 1864 Mlle. Neruda married Ludwig Norman, a Swedish musician, and in 1869 again played at the Philharmonic and at the Monday Popular Concerts, and subsequently paid a visit to England every winter. Her execution is a theme of universal praise.

* **Norris, EDWIN** (b. 1795, d. 1872), philologist, after holding a clerkship in the India House, became interpreter to the Foreign Office. He early began to study obscure languages, giving the results of his labours to learned societies in the form of memoirs. He wrote *A Grammar of the Fulah Language*; *Grammar of the Bornu, or Kanuri Language*; *Sketch of Cornish Grammar*; and the first Assyrian dictionary attempted. He also assisted Sir H. C. Rawlinson in some of his

works in connection with the cuneiform inscriptions of Western Asia.

North, CHRISTOPHER. [WILSON.]

* **Northbrook, THE RIGHT HON. THOMAS GEORGE BARING, EARL OF, K.G., K.C.S.I.** (b. 1826), the eldest son of the second Baron, was educated at Christ Church, Oxford (2nd class classics, 1846), and was private secretary to Mr. Labouchere, Sir George Grey, and Sir Charles Wood. From 1857 to 1866 he was member for Penryn and Falmouth in the Liberal interest, and during that period was a Lord of the Admiralty 1857-8, Under-Secretary for War 1861, for India 1861-4, and for the Home Department 1864-6, and Secretary to the Admiralty 1866. Raised to the Upper House, he was again Under-Secretary for War 1868-72, and on the death of Lord Mayo, succeeded him as Governor-General of India 1872-6. The chief events of his administration were the Bengal Famine of 1874, and the visit of the Prince of Wales in 1875. Lord Northbrook resigned on account of a disagreement with Mr. Disraeli's government concerning the policy to be pursued in Afghanistan. From 1880 to 1885 he was First Lord of the Admiralty, and the appearance of a series of papers entitled *The Truth about the Navy*, in the *Pall Mall Gazette*, caused his administration to be somewhat impugned. In 1884 he was sent to Egypt as Lord High Commissioner to inquire into its finances and condition, the result being a loan of nine millions. Lord Northbrook stood aloof from Mr. Gladstone's ministry of 1886.

Northcote, JAMES (b. 1746, d. 1831), painter, was the son of a watchmaker at Plymouth. He was a pupil of Sir Joshua Reynolds from 1771-5, and after a visit to Italy in 1777 obtained a good practice as a fashionable portrait painter. Among his pictures may be mentioned *The Young Princess Murdered in the Tower*, *The Death of Wat Tyler*, and several animal subjects. Northcote's art seldom rose superior to a certain rough vigour, and his importance lies chiefly in the fact that he was the biographer of Sir Joshua Reynolds (*Memoirs of Sir Joshua Reynolds*, 1813-15). His conversations, which were instinct with wit, were published by Hazlitt in the *New Monthly Magazine*. His *Life of Titian* was published in 1830.

Northcote, SIR S. [IDDESLEIGH.]

Norton, HON. MRS. CAROLINE ELIZABETH (b. 1808, d. 1877), woman of letters, was one of the three beautiful granddaughters of Sheridan, and made her first publication at the age of seventeen with a merry satire, *The Dandies' Rout*. In 1827 she made an unfortunate marriage with the Hon. George Norton, brother of Lord Grantley, and after three years' cohabitation a judicial separation was effected. In 1836 the husband instituted an

action for divorce from his wife, with Lord Melbourne as co-respondent, which, however, turned out to be a base and unfounded charge. In 1829 she made her first essay in serious verse with *The Sorrows of Rosalie*, and her next in 1831 with *The Undying One*, a version of the legend of the *Wandering Jew*. In 1836 she attacked child labour in factories in her rousing *Voice from the Factories*, and subsequently promoted social reform both by her pen and her personal exertions. She also wrote three novels of some merit, *Stuart of Dunleath* (1851); *Lost and Saved* (1863); and *Old Sir Douglas* (1868); and in 1861 brought out her last poem, *The Lady of La Grange*, followed by the charming story of *The Rose of Jericho* in 1870. In her poetry, Mrs. Norton is too much confined within the narrow circle of personal and domestic feelings, and indulges in a morbid and egotistical tone, especially in treating of her own sufferings. In her novels, this tendency, although it is perceptible, is more veiled and lightened by the animation of the incidents and characters. Moreover, she writes a good prose style. In 1875 Mr. Norton died, and in 1877, the year of her death, Mrs. Norton married Sir William Stirling-Maxwell (q.v.)

Temple Bar, February, 1878; *Quarterly Review*.

Nott, GENERAL SIR WILLIAM (b. 1782, d. 1846), British soldier, was a native of Caermarthen, and joined the Bengal Infantry in 1800. After twenty-six years' service he attained his majority, and was then invalided home. Pecuniary losses compelled him to return to India, and in the first Afghan war he distinguished himself by holding Candahar during the critical winter of 1841. In the following spring he started for Cabul, and on his march utterly crushed the Afghans at Ghuznee, destroyed the citadel, and carried off the gates of Somnauth. [ELLENBOROUGH.] He received a pension of £1,000, was appointed Resident at Lucknow, but was compelled by ill-health to return to England, where he rapidly succumbed.

* **Nubar Pasha** (b. 1825), Egyptian statesman, by birth an Armenian of Smyrna, was educated in Switzerland, and near Toulouse. He served Mehemet Ali, Ibrahim and Abbas Pashas [EGYPT] as secretary and interpreter, and in 1850 was sent on a mission to London to obtain the recognition of the rights of the Viceroy. Under Said Pasha he organised the intermarine railway. Under Ismail he became Minister of Public Works in 1864, and of Foreign Affairs in 1867. He managed the negotiations with regard to the Suez Canal at Constantinople and Paris, was created Pasha by the Sultan despite his Christianity, and obtained from the Porte the firman by which the title of Khedive was sanctioned (1867). He was thus identified with Ismail's undertakings, extravagance, and loans, and was the author of the enlightened

institution of courts of justice composed partly of Europeans, partly of Egyptians. After enjoying the frowns and smiles of Ismail in very rapid transition, Nubar Pasha in 1878 formed a Council of Ministers, with Mr. Rivers-Wilson as Minister of Finance; but quarrelling with the Khedive and each other, the duumvirate collapsed in February, 1879, without having done anything to remedy Egyptian finance. During the following years, which witnessed the deposition of Ismail, the Dual Control, the revolt of Araby Pasha, and the appearance of the Mahdi, Nubar Pasha remained in opposition, but in January, 1884, when Sherif Pasha resigned because the English Government advised the withdrawal of the Egyptian forces from the Soudan to the line of the Wady Halfa, Nubar Pasha formed a ministry which proved amenable to English advice, and was still in power in September, 1886.

O

O'Brien, WILLIAM SMITH (b. 1803, d. 1864), was of an ancient and illustrious Irish family descended from King Brian I. He was educated at Harrow and at Trinity College, Cambridge, as was his brother Lucius, afterwards Lord Inchiquin, and took his B.A. degree in 1826. The home of his family was in Clare, and in 1826 he was elected M.P. for Ennis. From 1826 to 1843 he represented county Limerick. The O'Briens of Clare were Tories and Protestants, but intensely Irish and very popular, and during these years Smith O'Brien voted as a "country gentleman," that is, Conservative with Liberal and practical leanings on Irish questions. He supported Catholic Emancipation, and opposed the Irish Arms Act of 1843. Hitherto he had not been a follower of O'Connell, but in 1843, at the cost of much family estrangement, he publicly, as the result of seventeen years' experience of the English Parliament, gave in his adhesion to the Repeal movement. Although not cordially welcomed by O'Connell's more immediate following, he soon became the head of the educated and literary "Repealers," with whom he began a forward movement which alarmed O'Connell. In July, 1846, this party, calling itself Young Ireland, formally quitted the old Repeal Association, and in 1847 the "Confederation" was founded. This, however, was soon split by the action of the physical force party, whom O'Brien, intensely opposed to revolutionary doctrines, resisted to the utmost. He declared that he or Mitchel must quit the organisation, and on Feb. 6th, 1848, the extremists were out-voted and retired. At the same time the O'Connellite Repealers were strongly opposed to the whole Young Ireland party. Lord Clarendon drew no distinctions, but on March 21st, 1848,

arrested O'Brien, Mitchel, and Meagher for seditious writing and speaking; but as to O'Brien and Meagher the juries disagreed. O'Brien's party were now anxious to delay the resort to arms until the autumn, but Mitchel's transportation expedited matters. O'Brien was then preparing for the rising at Ballinkale, county Wexford. He moved into Tipperary, and endeavoured to effect a rising at Ballingarry, but, being surrounded, his forces melted away. He was arrested and was tried by a special commission at Thurles, convicted, and sentenced to death, but the sentence was commuted to one of transportation. He was set at liberty in 1854 on condition of not returning to Ireland, and was fully pardoned in May, 1856. His remaining years were spent in private life, and he wrote in 1856 a work on *The Principles of Government*. He died at Bangor, North Wales.

A. M. Sullivan, *New Ireland*; Sir C. G. Duffy, *Young Ireland*.
[J. A. H.]

O'Connell, DANIEL (b. Aug. 6th, 1775; d. May 15th, 1847), was of an old Irish Catholic family, impoverished by the wars of the seventeenth century. He was born near Cahirciveen, in Kerry, where his father and relatives were occupied in farming and smuggling. He was educated first at a Catholic school in Cork, and then at the Colleges of St. Omer and Douai. Here he became strongly tinctured with the habits of thought and speech of the Roman priesthood, and during the French Revolution contracted a firm hatred of anarchy and a strong attachment to his Church. He was called to the Irish bar in 1798, and soon attained the foremost position there, although the higher ranks of his profession were closed to him as a Catholic. He was a fine advocate, an eloquent orator, a learned lawyer, and as an examiner of Irish witnesses without a rival. But politics soon claimed his attention. To fight the battle of the Catholic Church, to promote Catholic Emancipation, to take the leadership of the Irish out of the hands of the more exclusively Protestant leaders, were his great objects. He conceived the idea of forming an extensive league among the Irish Catholics, supported and officered by the priesthood, depending on popular subscriptions, and carrying on an active political agitation without breaking the letter of the law. Slowly, and after many attempts of the Government to suppress them, he formed an immense network of local associations leagued together under his absolute direction, and determined to secure Catholic Emancipation. The contest culminated in 1828, when the famous Clare election, which returned him to Parliament, convinced the Duke of Wellington that resistance to the desires of the Irish people was no longer possible, and in the following year the Catholic Emancipation Act was passed. O'Connell now allied himself

with the Whigs in the reform movement. In Ireland the resentment of the Irish against Protestant ascendancy led to the outrages of the Tithe War; and O'Connell opposed with all his efforts the measures of Lord Grey for vindicating the law. It was only when the Whigs practically abolished tithes, and proposed to deal with the Irish Church surplus for secular purposes, that O'Connell became again reconciled to them. He was, however, a warm supporter of Lord Melbourne's Government; so warm, that their supposed subserviency to him estranged many, and he received from them, but refused, the offer of a judgeship. His ambition had been to become Irish Attorney-General, but this was refused him. All extreme democratic measures, and the Chartist movement, he vigorously opposed, and declared a strike against rent to be a crime. In 1841, however, on the accession of Peel to power, he pressed his agitation for Repeal of the Union, which in his earlier years he had desired during the contest on the Catholic question, and had not afterwards advocated. He believed that under a Tory government the union would be worked unfairly to Ireland. In 1842 and 1843 he reorganised the old Emancipation machinery, and addressed enormous meetings in what he called Conciliation Hall in Dublin and elsewhere in favour of repeal. Peel determined to suppress the agitation, proclaimed a meeting announced to be held at Clontarf on Oct. 8th, 1843, and put O'Connell on his trial. A conviction was obtained, but from an exclusively Protestant jury, and he was sentenced to twelve months' imprisonment, and a fine of £2,000, on May 24th, 1844. In September, however, the House of Lords reversed the sentence. But O'Connell's health was failing. His last speech in Parliament was on April 3rd, 1846, and he was visibly broken. The growth of the Liberal and Democratic movement within the ranks of the Repeal Association in Ireland also alarmed him. In 1846 those who sympathised with that movement seceded from him and formed the Young Ireland party. Then followed the horrors of the famine, and the disastrous outbreak of 1848. But this O'Connell did not live to see. He died at Genoa on a journey to Rome. His oratory, though often coarse and extravagant, was of a very high order, and established his influence, not only over his own countrymen, but even in the House of Commons over an audience often hostile, and always by race and religion out of sympathy with him. He was one of the greatest orators and the most popular leader that Ireland has ever known.

W. E. H. Lecky, *Leaders of Public Opinion in Ireland; The Life and Times of Daniel O'Connell*, by his son, J. O'Connell (1846). [J. A. H.]

O'Connor, FEARGUS EDWARD (b. 1796, d. 1855), Chartist leader, was the fourth son of Roger O'Connor, editor of the original

Northern Star, and was educated at the Grammar School at Portarlington, and afterwards at Trinity College, Dublin. He became a member of the Irish bar, and entered public life in 1832 as member for Cork and a supporter of O'Connell. Having quarrelled with the great agitator, he was estranged from Irish politics, and although he succeeded in gaining re-election in 1835, he was unseated on petition. Henceforth he identified himself with the movement of the working classes in England. Endowed with enormous physical strength, eloquent and enthusiastic, he acquired great popularity among the people, and in his paper, the *Northern Star*, advocated the views which were embodied in the People's Charter. Elected member for Nottingham in 1847, he presented the monster petition in April, 1848, with which the whole movement collapsed. Feargus O'Connor continued to sit in Parliament until 1852, when it was discovered that he was utterly insane. He was committed to the care of Dr. Tuke, of the Manor House, Chiswick, with whom he remained until a few days before his death. A large body of his admirers assembled to do him honour at the funeral in Kensal Green, where an oration was pronounced over the tomb by William Jones, a working man of Liverpool.

O'Curry, EUGENE (b. 1796, d. 1862), Irish antiquarian, was a native of county Clare, and the son of a peasant. Having learnt to read Celtic manuscripts, he became employed in 1834 in the historical department of the Ordnance Survey, and was employed to make researches in public libraries. He was elected to the Council of the Celtic Society in 1852, and to the Royal Irish Academy in 1853. In 1856 he was appointed by Dr. Newman to the Chair of Irish history and archaeology at the Catholic University of Ireland. Professor O'Curry was without a rival in Celtic scholarship, and entirely reconstructed the data of early Irish history. In conjunction with Dr. O'Donovan, he edited the *Brehon Laws*, and was the author of the valuable works, *Lectures on the Manuscript Materials of Ancient Irish History* (1861) and *Lectures on the Manners and Customs of the Ancient Irish*, edited after his death by Principal W. K. Sullivan.

Irish Monthly Magazine, vol. ii.

O'Donnell, LEOPOLD, Duke of Tetuan (b. 1808, d. 1867), Spanish soldier and politician, was of Irish extraction, and served the regent Christina in the first Carlist War, becoming general of division, and accompanied her into exile in 1840. Permitted to return, he raised an unsuccessful revolution against Espartero, but after the latter's first fall O'Donnell was governor of Cuba (1844-8). On his return he attached himself for a while to Narvaez; but in 1854 began to intrigue against him, joined the Isabellists, and in

July became Marshal and Minister of War under Espartero. In 1856 he overthrew Espartero, and became Prime Minister, but his rule only lasted a few months. In 1857, however, O'Donnell again came to the top, and in 1859 and 1860 commanded a highly successful expedition against the Moors in Africa. His last tenure of office was in 1865 and 1866, when, having quelled a military revolt in favour of Prim at Madrid, he was supplanted by Narvaez.

O'Donovan, EDMOND (b. 1838, d. 1883), war correspondent and traveller, was the son of Dr. Donovan, professor of Celtic philology in the Queen's University of Ireland. Having embraced journalism as a profession—he was the representative of a London paper in Spain during the Carlist War—he became attached to the *Daily News* in 1876, and was one of its representatives during the Russo-Turkish War of 1877–8, accompanying the army of Moukhtar Pasha in Armenia throughout the campaign. In 1879 he succeeded in penetrating from the Caspian to the land of the Tekke Turkomans, and reached the *terra incognita* of Merv, where he obtained an ascendancy over the people which may be compared not unjustly to that of Lady Hester Stanhope over the Arabs. His interesting work on the *Merv Oasis* was published in 1882, and a condensed edition in 1883. In the latter year he went with the army of Hicks Pasha (q.v.) against the Mahdi of the Soudan, and perished in the general massacre of the expedition.

O'Donovan, JOHN, LL.D. (b. 1809, d. 1861), Celtic scholar, was, like his fellow-student O'Curry, the son of an Irish peasant. In 1830 he was appointed to an office in the historical department of the Irish Ordnance Survey, and in 1849 became professor of the Irish language in Queen's College, Belfast. His translation of the *Brehon Laws*, in which he was aided by O'Curry, is of great value, and of still more importance is his fine edition of *The Annals of the Four Masters* (1856). He also wrote a *Grammar of the Irish Language* (1845).

Oehlenschläger, ADAM GOTTLÖB (b. 1779, d. 1850), the Danish poet and dramatist, was born near Copenhagen, and after serving an apprenticeship on the stage, devoted himself entirely to a literary career. With this object he travelled through Germany and Italy, and became acquainted with the greatest writers of the times through his earliest and perhaps greatest dramatic poems of *Aladdin* and *Hakon Jarl*, which were favourably received by Goethe when the author visited Weimar (October, 1806). Soon after this he also published the tragedies of *Correggio*, *Axel* og *Valdborg*, and *Palnatoke*, and was appointed professor of aesthetics in the University of Copenhagen. Of his other works we may mention *Nordens Guder* (*The Gods of the North*;

1819), *Erik og Abel*, a tragedy (1820), and *Frejas Alter*, a comedy (1828). He also wrote several lyrics and ballads that are valued as national works in Denmark. Most of his poems were translated into German by himself.

His very valuable *Lebens Erinnerungen* (1850) and *Adam Oehlenschlägers, et Mindeskrift* (1879).

Oersted, HANS CHRISTIAN (b. 1777, d. 1851), Danish man of science, was born at Rudkjøbing, in the Island of Langeland, entered Copenhagen University in 1800, and became assistant professor of chemistry there in 1800, and professor of physics in 1806. In 1819 he became director of the Polytechnic Institute and Magnetic Observatory at Copenhagen. Oersted was honoured by election to most of the learned societies of Europe, and received the Copley medal of the Royal Society of England. His great discovery was the power of an electric current upon a magnet, from which the science of electro-magnetism has been developed. It was announced in his essay, *Experimenta circa Efficaciam Conflictus Electrici in Acum Magneticam* (1820). Oersted was also the author of numerous scientific works intended to popularise knowledge, most of which have been translated into German, and one, *The Soul of Nature*, into English (1847).

Möller, Oersted, *Charakter und Leben*.

Offenbach, JACQUES (b. June 21st, 1819; d. Feb. 10th, 1881), chief of operabouffe composers, was born of Jewish parents at Cologne. In 1835 he entered as a student at the Paris Conservatoire. There composition and the violoncello engaged him, but it was to the instrument rather than to the pen that he directed his attention. Young Offenbach entered Professor Vaslin's class, and in course of time became a proficient 'celloist. Eminent in this direction he never was, as was found to be the case when, in 1844, he made a public appearance in this capacity in London. His first essays at composition—the line in which he was to make a name—consisted of pieces for the violoncello and some clever settings of many of La Fontaine's fables. This stray work, and his regular duties as 'celloist in the orchestra of the Opéra Comique, led up to the conductorship in 1847 of the Théâtre Français, and subsequently he took a theatre, and called it the "Bouffes Parisiens." This was in 1855, from which time dates a highly successful career and a reign of popularity which more sober composers before and since have envied. Offenbach had already written one of his finest pieces, *Le Chant de Fortunio* (1848); he had produced his first opera, *Pepito*, in one act (1853); trifles like *Les Deux Aveugles*, and *Le Violoncelle* had been given at minor Paris theatres; but the vein in which he was to succeed was not struck until the production of his *bouffonneries musicales* at his

own theatre and under his own direction. Work after work then followed with surprising luck and rapidity of composition, until in the space of twenty-five years he had written no less than seventy works. The best known among his pieces are *Orphée aux Enfers* (1858), *La Grande Duchesse* (1867), *La Belle Hélène* (1865), *Madame Favart* (1878), *Geneviève de Brabant* (1860); *La Barbe Bleue* (1866), *La Périchole* (1868), *Un Voyage dans la Lune* (1875), *Le Roi Carotte* (1872), and *La Princesse de Trebizonde* (1870). Offenbach was essentially a music-maker, and the composer who descends to manufacturing music by the yard can scarcely hope for much in the way of an enduring fame. It is unlikely that much of his music will live, and it is earnestly to be hoped that what survives will be the genuine muse of the man—seen at its best in *Orphée aux Enfers*. Nothing could more impede the fame of most of Offenbach's music than the vulgar, and oftentimes positively indecent, nature of his *libretti*; and as the composer frequently descends to the level of his words, the world of art of a century hence will be none the poorer if it be without about two-thirds of the opera-bouffes by Offenbach. It is true these so far "un-rejected addresses" have pleased a section of London audiences, but they have not gone deeply into the hearts of the English people. With all this, it would be useless to deny to Offenbach great talent. Though a Teuton, he stormed the stronghold of French music, and became more French than any native composer before or since. He pleased the Parisians as no other composer did, and went on writing ear-catching melodies which, while they brought him considerable wealth and the red riband of the Legion of Honour, also won him fame as the most prolific contributor to the street-organ music of his time. His great fluency and power of writing six and even seven operas in a year was fatal to the quality of his work, but no one denies his peculiar gift of turning to comical account whatever came in his way. Then there was a melodic power which, if only spasmodic, was genuine as far as it went, and equal at all times to the demands which were made upon it. A certain piquancy of rhythm and flavour frequently presents itself in his music, and imparts to it a fresh and sparkling character which it is to be regretted is not more sustained and regular. He possessed, too, a great knowledge of stage resource and effect, and to this, not less than to his music, many of his artistic successes were due. He is not likely to be awarded a much higher place in the history of art than that of being the great musical caricaturist of the nineteenth century. His posthumous opera, *Les Contes d'Hoffmann*, produced at the Opéra Comique, Paris, on Feb. 10th, 1881—was enthusiastically received, and declared to be without doubt one of the best of its composer's operas. [F. J. C.]

Ohm, GEORG SIMON (b. 1787, d. 1853), German man of science, became a teacher of mathematics, and in that capacity was employed successively at Bamberg (1815), at Cologne (1817), and at the Berlin Military Academy. In 1833 he became director of the Nürnberg Polytechnic, and from 1849 until his death was professor of physics in the University of Munich. He is chiefly remembered for having discovered "Ohm's Law" of electricity, by which the intensity of a current is stated in terms of the electromotive force and the resistance of the circuit ($I = E \div R$). Among his works were *Die Galvanische Kette* (1827), *Beiträge zur Molecular Physik* (1849), and *Grundzüge der Physik* (1853).

Oken, LORENZ (b. 1779, d. 1851), philosopher and morphologist, was born at Bohlsbach, near Offenbach, in Suabia, of an old local family named Okenfuss. He studied at Freiburg University, and there published his *Sketch of the System of Natural Philosophy* (1802), and his treatise on *Generation*, containing the germ of his important theory of growth by a process of subdivision and repetition of cells, which he called *infusoria*. Having settled in Göttingen as a *privat-docent* in 1805, he continued his embryological investigations, especially with a view to tracing the development of the intestinal canal in the embryo. In 1807 he was appointed professor of medicine and physiophilosophy at Jena, and in his opening address expounded his theory of the homology of the cranium with the vertebral column, an important discovery in the history of morphological science, the honour of which he shares with Goethe, if, indeed, with anyone. Oken's *Text-book of Natural Philosophy* appeared in 1809-11, and his *Manual of Natural History* in 1813-15. But meantime the agitation of Germany had drawn the philosopher into politics, and early in 1814 he published his protest for a renewed and united Fatherland in his remarkable pamphlet, *New Armament, New France, New Germany*. In 1817 he began the scientific and literary journal *Isis*, that continued with hardly any interruption till 1848. Occasionally, however, the periodical trenchoned upon politics, and the author's enthusiastic participation in the Liberal demonstration known as the Wartburg Fest of 1817, led to his dismissal from Jena in 1819. After wandering about in Paris, Basle, and Jena again, he was appointed to a professorship at Munich in 1827, but was again dismissed in 1832. In the following year he was invited to Zurich, and there remained till his death, continuing to edit the *Isis*, and bringing out his largest, though no longer his most important work, the *General Natural History*, in 13 vols. (1833-41).

A. Ecker, *Lorenz Oken* (translated by A. Tulk, 1883); Dr. C. Güttler, *Lorenz Oken und sein Verhältnis zur modernen Entwicklungslehre* (1884).

* **Oliphant, LAWRENCE** (b. 1829), man of letters, the son of the late Sir Anthony Oliphant, was called to the bar, but devoted his energies to travel, the results appearing in *A Journey to Katmandhu* (the capital of Nepal) (1852), *The Russian Shores of the Black Sea* (1853), *Minnesota and the Far West* (1855), *The Transcaucasian Campaign of the Turkish Army* (1856). He served on Lord Elgin's mission to China in 1857-9, and wrote a *Narrative* of it, and was then *chargé d'affaires* at Pekin, a post he resigned in 1862, in consequence of wounds received in an encounter with assassins. For a short period he was Paris correspondent of the *Times*, and from 1865-8 sat in Parliament for Stirling Burghs. An attempt was then made by him to found a socialist and religious community at Portland, United States, but it was not an unqualified success, and since then Mr. Oliphant has resided chiefly in the East. *The Land of Gilead* appeared in 1881, and *Sympneumata, or Evolutionary Forces now active in Man*, in 1885. Mr. Oliphant's religious views are also to be found mingled with the delicate irony of his novels *Piccadilly* (1870) and *Alliotta Peto* (1883). Among his minor works may be mentioned *Patriots and Filibusters* (1860) and *Traits and Travesties* (1882).

* **Oliphant, MRS. MARGARET, née WILSON** (b. 1818), novelist, published her first work of fiction, *Passages in the Life of Mrs. Margaret Maitland*, in 1849, and was at once recognised as a writer of genuine ability. Her minute and graphic representations of individuals and scenes, skilful though somewhat cynical delineation of character, graceful narrative, and high literary ability, place her among the most excellent of living novelists. She is especially happy when treating of Scottish life and character, and her clerical portraits are exceedingly well done. Of her numerous novels we may mention:—*Merkland* (1851), *Adam Graeme* (1852), *Harry Muir* (1853), *Magdalen Hepburn* (1854), *Lillie's Leaf*, the sequel to her first novel (1855), *Zaidée* (1856), the well-known series of studies of country-town life, entitled *Chronicles of Carlingford* (1863), *Salem Chapel* (1863), *Agnes* (1866), *The Minister's Wife* (1869), *John a Love Story*, and *The Three Brothers* (1870), *Squire Arden* and *Ombra* (1871), *At His Gates* (1872), *Innocent* (1873), *A Rose in June* (1874), *For Love and Life*, *Mrs. Arthur*, and *Young Musgrave* (1877), *The Primrose Path* and *Within the Precincts* (1878), *He that will not when he may* (1880), *In Trust* (1882), *The Ladies Lindores* and *It was a Lover and his Lass* (1883), *Hester*, *The Wizard's Son*, and *Sir Tom* (1884), *Madam* and *Two Stories of the Seen and the Unseen* (1886), and *A Country Gentleman and his Farm* (1886). Many of these appeared in the first instance in the pages of *Blackwood*, the *Cornhill*, and other periodicals. Mrs.

Oliphant has also done excellent work as a biographer. Her *Life of Edward Irving* (1862) is a valuable and deeply interesting study, and so is her *Memoir of Count Montalembert* (1872). She has also written a life of *Francis of Assisi*, and contributed *Molière* and *Cervantes* to Blackwood's series of *Foreign Classics for English Readers*, edited by herself, and *Sheridan* to the *English Men of Letters Series*. *The Makers of Florence—Dante, Giotto, Savonarola*—was published in 1876, and in 1882 *The Literary History of England in the end of the Eighteenth and beginning of the Nineteenth Century*.

* **Ollivier, OLIVIER ÉMILE** (b. 1825), French politician, was called to the Paris bar in 1847, and for a few months after the revolution of 1848 was prefect of the Bouches du Rhône, but returned to the law in 1849. In 1857 he was elected to the Corps Législatif by the third circumscription of the Seine, and was a prominent member of the small Opposition. But he gradually separated from it; and, while accepting from the Emperor a commission to draw up a report on the Suez Canal disputes, attempted to occupy a position independent of parties. When in 1869 Napoleon III. resolved to govern through parliamentary forms, rumours were rife of an understanding between the Court and M. Émile Ollivier, and in December they were confirmed by his undertaking to form a Cabinet, in which he was Minister of Justice. A few months of reform were cut short by the declaration of war with Prussia, the consequences of which the Premier accepted "with a light heart." The ministry fell ignominiously in August, and M. Ollivier retired to Italy, but returned to Paris in 1872. In 1874, when he ventured to take the seat in the Academy to which he had been elected in 1870, in succession to Lamartine, there was a violent scene between Guizot and himself. Subsequently he supported the pretensions of Prince Napoleon, and in consequence waged in 1880 a violent paper warfare with M. Paul de Cassagnac. M. Ollivier's works are chiefly legal; he published an edition of his speeches in 1875, *M. Thiers à l'Académie et dans l'Histoire* (1880), and *Le Concordat, est-il respecté?* (1883).

Omar Pasha (b. 1806, d. 1871), Turkish soldier, was by birth an Austrian, and his real name was Mikail Lattas. He entered the Austrian army, but fled into Turkish territory to escape punishment for breach of discipline, and embraced Mahomedanism. His fine handwriting gained him the post of writing-master to Abd-el-Medjid, the heir to the throne, and when the latter became Sultan (1839), Omar, as he was called, was made a colonel in the army, and in 1842 was appointed military governor of the Lebanon. From 1842 to 1853 he was employed in quelling revolts in Albania, Bosnia, and other

provinces, and had a fair measure of success, except against the Montenegrins. On the occupation of the Danubian Principalities by the Russians, Omar Pasha, now Turkish commander-in-chief, boldly crossed the Danube and entrenched himself at Kalafat, whence the Russians failed to dislodge him, and ultimately withdrew, leaving him to enter Bucharest in triumph (August, 1854). In February, 1855, he arrived in the Crimea, and defeated the Russians at Eupatoria on Feb. 17th. His attempt to relieve Kara, however, in October, was made too late, and shortly afterwards the war came to an end. Omar Pasha was engaged once more against the Montenegrins in 1862, and compelled them to recognise Turkish supremacy. In 1867 he was employed against the Cretan insurgents, but resigned his command without having effected anything of consequence. In 1869 he retired from public life.

Opie, JOHN, R.A. (b. 1761, d. 1807), the painter, was the son of a carpenter at Truro, and having early attracted the notice of Dr. Wolcott (Peter Pindar) by his skill in portraiture, was taken by him in 1781 to London, where, under the patronage of Sir Joshua Reynolds, he soon became one of the fashionable portrait painters of the day. In 1782 he painted the portrait, now at Hampton Court, of Mrs. Delany, by special commission from George III., and in the same year he exhibited five pictures at the Royal Academy. He became A.R.A. in 1786, and R.A. in the following year, and in those two years completed two of the more celebrated of his historical pictures, the *Assassination of James I. of Scotland*, and the *Death of Rizzio*, both now to be seen in the Guildhall. In 1789 he contributed several imaginative subjects, such as scenes from *King John* and *Romeo and Juliet*, to the Shakespeare Gallery. After his second marriage, in 1798, he devoted himself more entirely to portraiture, and of his most celebrated portraits the following may be mentioned:—Samuel Johnson (1782), now at Exeter; Hannah More (1786), now in the possession of the Duke of Manchester; Lady Hamilton (painted apparently about 1793), in the possession of Captain Hamilton, R.N.; Priestley (engraved 1801), now in Manchester New College, London; and Charles James Fox (1804), now in the galleries at Holkham. Very numerous portraits of Peter Pindar, of Amelia Opie, and of Opie by himself, for the most part in early youth, are scattered throughout the country. In 1805 Opie became professor of painting at the Royal Academy, but was only able to deliver one course of lectures. He is buried in St. Paul's. His second wife, **AMELIA OPIE** (b. 1769, d. 1853), daughter of Dr. Alderson of Norwich, was well known as a writer of tales and novels, and as a leader in the literary and artistic society of the first half of this century. Her first story was *Father*

and Daughter (1801), and it was followed by *Adeline Mowbray* (1804). Both enjoyed high reputation and wide popularity. She also published a collection of *Poems* (1802), *Simple Tales* (1806), and *Tales of Real Life* (1813). Her *Memorials*, containing passages from her diaries and letters, edited by Cecilia Brightwell (1854), have considerable historic interest.

J. J. Rogers, *Opie and his Works*, containing a catalogue of 760 of his pictures (1878); Amelia Opie, *Memoir of John Opie*, prefixed to her edition of his *Lectures on Painting* (1809).

*** Orchardson, WILLIAM QUILLER, R.A.** (b. 1835), a painter of high distinction, was born at Edinburgh. At the age of fifteen he entered the Trustees' Academy of his native city, and to the exhibition of the Royal Scottish Academy he sent the first pictures which he intended to expose to public view. As precocity had never been associated with his genius, as he had shown no extraordinary gifts at a very early age, so, even after practice had permitted him to acquire the materials for his art, it was not by any means in the first years of his manhood that he used them with complete effect. He came to London in 1863 (at twenty-eight years old), not at all a celebrated man, and after working in London for five years, he was (in 1868) elected an Associate of the Academy. He exhibited something that was meritorious (nothing, perhaps, that was visibly a work of genius) year after year at the Royal Academy, and his *Christopher Sly*, painted in 1866, was very cordially noticed at the Paris Exhibition of 1867. It was, however, hardly till *Queen of the Swords* was painted, and that was only in 1877, that Mr. Orchardson can be said to have been in any way popular. The prettiness of the incident depicted in that canvas, and its French grace of conception, made a mark with all who were in the slightest degree discerning. Here was a painter who could be quietly and skilfully dramatic; a painter sensible of the presence of harmonious line; a painter whose true material was indeed paint, because he was a most subtle colourist. Next year came *A Social Eddy*, a drawing-room episode of that period of the First Empire which, in English art, seems the especial property of Orchardson and Charles Green. In 1880 the Academy contained the impressive instance of historical genre which, under the title *Napoleon on board the Bellerophon*, now figures at South Kensington, for it was a purchase out of the funds of the Chantrey Bequest. *Voltaire at the Duc de Sully's* was the more radiant canvas of 1883. Orchardson has concentrated himself generally on one important work. *Voltaire* was such a work; so was the *Salon de Madame Recamier* (1885); so too was the modern English subject, the *Marriage de Convenience*, in which, in 1884, he disproved the childish and academic theory that a man of genius cannot happily grapple with the costume he habitually beholds. A

companion picture to this last work, entitled *Mariage de Conscience—After*, was exhibited in 1886. As Orchardson is really alive to all the picturesqueness of the past, so is he among the first to be sensible of the boundless occasions offered by the life of the present. Having already been for nearly ten years an Associate, it was in December, 1877, that Orchardson was elected a full Academician. [F. W.]

Orrelli, JOHANN KASPAR (b. 1787, d. 1849), scholar, was a native of Zurich, and was educated at the Carolinum of his native town, where in 1819 he became professor of eloquence and hermeneutics, and stimulated the cause of education by founding the Zurich High School. He is now remembered as an editor of the Latin classics, and the bulk of his acute emendations is even yet accepted. His chief works are:—An edition of *Horace* (1837–8), of *Tacitus* (1846–7), and of *Cicero* (1826–31). He was the collaborator with Baiter in the *Onomasticon Tullianum* (1836–8), and published an *Inscriptionum Latinarum Selectarum Collectio* (1828).

Orléans, F. L. P. DUC D'. [D'ORLÉANS.]

Orsay, COUNT D'. [D'ORSAY.]

Orsini, FELICI (b. 1819, d. 1858), Italian conspirator, the scion of that ancient Italian family, was born at Meldola, in the province of Forlì. While yet a youth, he joined the patriotic party, and having become a member of a secret revolutionary society, was arrested, and in 1844 condemned to the galleys for life. The amnesty under Pius IX., however, restored him to liberty in 1846. In the subsequent affairs in Italy he took a prominent part, but on the downfall of the Roman Republic in 1849, he fled to England, where he carried on his connection with the Revolutionary party. Returning to Italy as Mazzini's agent, he was captured and imprisoned in Mantua, whence he contrived to make his escape, and again arrived in London. Believing that the influence of the Emperor Napoleon III. was a serious obstacle to the success of the Italian refugees, he devised a plot for removing him from the scene. On Jan. 14th, 1858, while the Emperor and Empress were passing through the Rue Lepelletier, three bombs, thrown under his carriage by Orsini and his confederates, exploded, resulting in the death and injury of several of the suite, although the intended victims escaped. Orsini was captured and executed.

Osborn, SHERARD (b. 1822, d. 1875), British admiral, entered the navy at the age of fifteen, and was present at the capture of Canton in 1841. He joined the Franklin search expedition of 1850, and in 1851 made a famous sledge expedition to the farthest western point of Prince of Wales's Land. In 1854 he commanded the *Vesuvius* in the Black Sea operations, and during 1856 he

commanded the entire squadron there. As commander of the *Furious* he fought through the Chinese War of 1857–8. He was an advocate of the system of turret-ships, and was in 1864 commissioned to test the *Royal Sovereign*, which had been adapted to it by the Admiralty. He retired from the service in 1872, and shortly afterwards was promoted rear-admiral. At the time of his death he was a member of the committee appointed to get ready Sir G. Nares's Arctic expedition. He was the author of several books of travel, the editor of McClure's *Discovery of the North-West Passage*, and wrote *The Career, Last Voyage, and Fate of Sir J. Franklin* (1860).

* **Osborne, THE REV. LORD SYDNEY GODOLPHIN** (b. 1808), philanthropist, third son of the 1st Lord Godolphin, was educated at Brasenose College, Oxford (B.A. 1830), and in 1833 became rector of Stoke Pogis, near Eton. From 1841 to 1875, when he resigned, he was rector of Durweston, Dorset. On his brother's accession to the Dukedom of Leeds in 1859 he was raised to the rank of a duke's son. Lord Sydney Osborne was conspicuous in every kind of philanthropic effort, especially in the endeavour to improve the condition of the agricultural poor, and his letters to the *Times* under the signature "S. G. O." did much to enlighten the public mind on the subject. *Gleanings in the West of Ireland* (1850) was the result of his experiences of the Irish famine, and *Scutari and its Hospitals* (1855) of a visit to the Crimea. Lord Sydney Osborne published *Hints to the Charitable* (1838), *Hints for the Amelioration of the Moral Condition of a Village Population* (1839), *A View of the Low Moral and Physical Condition of the Agricultural Labourer* (1844), and *Letters to Young Children* by "S. G. O." (1865).

Oscar I. and II., OF SWEDEN. [SWEDEN.]

* **Osman Ali or Abubekr**, called **Digna** (Dakana or "Black Beard"), (b. circa 1836), the lieutenant or emir of the Mahdi in the eastern Soudan, was the grandson of a Turkish slave-dealer, who married a woman of the Hadendowa tribe. He was regarded as a Hadendowa pure and simple, and succeeded his father as owner of a thriving slave-trading business, the head-quarters of which were at Souakim. As early as 1869 he became affected by the anti-Egyptian movement, which was spreading among the Soudanese Arabs, and when, about 1870, his business began rapidly to fall off, partly through the capture of cargoes of slaves by British cruisers, but chiefly through the Anglo-Egyptian slave convention, he was ready for revolt. The Hadendowas, however, treated him as a *magnoo* ("ape" or "fool"), and it was not till the spring of 1883, when the Mahdi (q.v.) had placed himself at the head of an anti-Egyptian crusade, that Osman's time had come. He then visited the Mahdi

at El Obeid, and departed with the title of Emir of the Dervish of God. The powerful Sheikh Tahir of Damer, near Berber, placed his resources at his disposal, and in November he began the revolt by the slaughter of a body of Egyptian troops near Tamai. The expedition of Egyptian gendarmerie under Baker Pasha, despatched to the relief of Tokar, was next utterly defeated (Feb. 11th), and neither of General Graham's expeditions, in spite of brilliant victories gained over the Arabs, could do much more than keep them off Souakim; attempts to relieve the isolated Egyptian garrisons failing completely. [BAKER; GRAHAM.] In September, 1885, however, an Abyssinian expedition sent to the relief of Kassala by King Johannes, under Ras Alula, encountered Osman Digna at Kafeil, and utterly defeated him. He was reported to be slain, but the rumour was baseless, and in the summer of 1886 he was still threatening Souakim.

The Daily News, Feb., 1885.

***Osman Pasha** (b. 1832), Turkish soldier, a native of Tokat, entered the Turkish army in 1853. After the Crimean War he was appointed a captain in the Imperial Guard, and aided in the suppression of the Cretan insurrection (1866-9). On the declaration of war by Serbia in 1876, he commanded a division against them, and for his victories was created mushir (marshal). The Russian invasion being followed by a series of Turkish defeats, Osman Pasha threw himself into Plevna, and for a while stayed their advance. The 9th Russian Army Corps was defeated by him in July, and on Sept. 14th he gained a victory for which the Sultan gave him the title of Ghazi ("the Victorious," or "the Defender of the Faith"). The place was, however, closely invested, and on Dec. 10th, Osman Pasha, after a gallant attempt to cut his way out, was compelled to capitulate. After the peace he was appointed commander-in-chief of the Imperial Guard, and Marshal of the Palace, and in December, 1878, Minister of War. This post he held until July, 1880, when he was removed, chiefly because his plan of army reorganisation had broken down. He retained, however, his influence over the Sultan, and was soon re-appointed (January, 1881), and held office, with a slight break, until 1885.

Ossington, JOHN EVELYN DENISON, VISCOUNT (b. 1800, d. 1873), eldest son of Mr. John Denison, of Ossington in Nottinghamshire, was educated at Eton and Christ Church, Oxford. From 1823 to 1826 he sat in the House of Commons for Newcastle-under-Lyne, in the Tory interest; then he represented Hastings until 1831, Nottinghamshire until 1837, the borough of Malton until 1841, and Nottinghamshire again until 1872. In 1857 he succeeded Mr. Shaw Lefevre to the Speaker's chair, which, as Mr. Evelyn Denison, he continued to occupy till 1872,

when he was relieved of his official duties, and summoned to the Upper House as Viscount Ossington, refusing the usual retiring pension. He left no issue, and his title consequently became extinct.

Ossoli, SARAH MARGARET FULLER, MARCHIONESS (b. 1810, d. 1850), one of the brightest lights of the brilliant literary circle that centred in Boston during the second quarter of this century, was the eldest child of Timothy Fuller, of Cambridge, Massachusetts. In the story of Mariana, in *Summer on the Lakes*, she recounts her own girlhood. Unfortunately her father over-stimulated her already too active powers, and though we read of her early acquaintance with Latin, Shakespeare, Molière, and Cervantes, we also read of troubled nights, horrible dreams and fancies, and other signs of a morbidly developed intelligence. The death of her father in 1835 caused Margaret Fuller to relinquish the cherished plan of a European visit, and to devote herself to assisting her mother to provide for the younger members of the family. In 1837 she accepted a remunerative post in the Green Street School, Providence, Rhode Island. From 1839 until 1844 Boston was her social centre. The Transcendental movement was then at its height, and Margaret Fuller, aided by Emerson and George Ripley, started *The Dial*, to which Emerson, Theodore Parker, and Alcott were among the leading contributors. She also was a visitor to the community at Brook Farm, although not altogether in sympathy with the ideas in vogue there. During this period she held conversation classes for ladies. In 1844 she was invited by Horace Greeley to contribute to the *New York Tribune*, and resided in his family until her departure for Europe in 1846. Having visited England and France, she passed, in 1847, into Italy. There she saw and sympathised with the heroic struggle for independence. She was in Rome during the siege. In 1848 she contracted a private marriage with the Marquis Ossoli, a sympathiser with Mazzini. On the fall of the republic they set out to return to America (1850); the barque *Elizabeth* foundered off Fire Island Beech, and the Ossolis were among those who perished. Of Margaret Fuller's writings the most important are:—*Women in the Nineteenth Century*; *Art, Literature, and the Drama*, essays collected from the *New York Tribune*; and *Abroad and at Home*.

Channing, Emerson, and James Freeman Clarke, *Memoirs of Margaret Fuller*; Julia Howe, *Margaret Fuller (Eminent Women Series)*.

Otho I. of Greece. [GREECE.]

Otranto, Duc D'. [FOUCHÉ.]

Oudinot, CHARLES NICOLAS, Duke of Reggio and Marshal of France (b. 1767, d. 1847), entered the French army at the age of seventeen, and serving in the war of the

French Revolution became general of division in 1799, and fought with great courage at Possola. "Oudinot's Brigade" fought with distinction in the Austrian campaign. He gained the battle of Ostrolenka (Feb. 16th, 1807), and the battle of Friedland (June, 1807) was a French victory chiefly through Oudinot's brilliant resistance to a vastly superior Russian force. For his services in the war of 1809 he was created Marshal of France and Duke of Reggio. In 1810 he was sent to occupy Holland, where he was personally popular, and stood by Napoleon through the disastrous Russian campaign, and that of 1813, when he was defeated by Bernadotte at Gross-Beeren, being one of the last to abandon the Emperor. He took no part, however, in the Hundred Days, but acquiesced in the Restoration, and in 1823 commanded a corps in the force that invaded Spain to restore Ferdinand VII. to the throne. His son, CHARLES NICOLAS OUDINOT, Duke of Reggio (b. 1791, d. 1863), commanded the French army sent in 1849 to Rome to restore Pius IX., but retired from public life after the *coup d'état* of 1851.

J. N. Fabert, *Histoire de C. N. Oudinot*.

* **Ouida**, is the pseudonym of LOUISE DE LA RAMÉE (b. 1840), an English novelist of French extraction, who was born at Bury St. Edmunds. Ouida, who is so called from her little sister's childish mispronunciation of her Christian name, published her first novel, *Granville de Vigne*, in Colburn's *New Monthly*, and it was republished in 1863 under the title of *Held in Bondage*. Then followed in rapid succession *Strathmore* (1865), *Chandos* (1866), *Idalia* and *Under Two Flags* (1867), *Tricotrin* (1868), *Puck* (1870), *Folle-Farine* (1871), *A Dog of Flanders* and *A Leaf in a Storm* (1872), *Pascarel* (1873), *Two little Wooden Shoes* (1874), *Signa* (1875), *In a Winter City* (1876), *Ariadne* (1877), *Friendship* (1878), *Moths* and *Pipistrello* and other Stories (1880), *A Village Commune* (1881), *In Maremma* and *Bimbi* (1882), *Wanda* and *Frescoes* (1883), and *Princess Naprazne* (1884). *A House Party* appeared in 1886. Of late years she has spent much time in Italy, where the scenes of several novels are placed.

* **Oules**, WALTER WILLIAM, R.A. (b. 1848), painter, was born and educated in Jersey. He was a student at the Royal Academy, and has for many years exhibited at Burlington House. He began his career as a painter of *genre* and historical pictures, but it is as a portrait painter that he has chiefly distinguished himself. He was elected an Associate of the Academy in 1877, and a full Academician four years later. He has painted portraits of Charles Darwin, Lord Selborne, Cardinal Newman, and other celebrated persons.

Outram, LIEUT.-GENERAL SIR JAMES, G.C.B. (b. Jan. 29th, 1803; d. Mar. 11th, 1863), was born at Butterley Hall, Derbyshire, and

lived with his mother at Aberdeen till 1819, when he obtained an Indian cadetship, and joined a native regiment of the Bombay army. From 1826 to 1835 he was political agent in East Khandesh. There he first won the confidence of the savage Bhils by hunting with them in the jungle unprotected, "sleeping under their swords"; then formed them into a military police corps; finally established schools for their children. As a hunter he once fought a tiger alone in a dark cave. From 1835 to 1838 he was political agent in the Mâhikânta, a rebellious province of the Gaekwar of Baroda. In the Afghan War he was aide-de-camp to Sir J. Keane, pursued Dost Mohammed from Haidar Khel to the Bamian Pass, and stormed Khelat under General Willshire, who then sent him, disguised as an Afghan merchant, by an unknown route to Somniâni with despatches. In December, 1839, Major Outram was made political agent in Lower Scinde; in August, 1841, the agency in Upper Scinde and Beloochistan was added. In 1842 he took a chief part in urging Lord Ellenborough to allow General Nott's relief expedition to Cabul, and in assisting it by forwarding supplies, and by keeping Khelat quiet. To effect the last-named object he restored Quetta to Khelat without authority. In October Sir Charles Napier arrived in Scinde with full military and political authority, and on the 20th Outram was remanded to his regiment. He returned, however, on Dec. 21st, and worked under Napier to keep peace, but refused pay. On Feb. 14th, 1843, he defended the Residency at Hyderabad from an attack by the Beloochees, retired to the Indus, and his efforts after peace having failed, returned home. He condemned Sir C. Napier's policy towards the Ameers of Scinde as peremptory, indiscriminating, and based on mistaken facts, and refused his share of the Scinde prize-money, £3,000. He served next in a subordinate political capacity at Nimar in Indore (1844), then on "special" duty in the Southern Mahratta country, where a rebellion had broken out. After being Resident at Satara (1845-7), where he wrote his *Commentary upon the Conquest of Scinde*, he was appointed Political Commissioner at Baroda. From November, 1848, to February, 1850, he was absent on sick-leave in Egypt, and drew an elaborate report upon Egyptian affairs. His efforts to suppress bribery at Baroda brought him into conflict with the Bombay Government, and led to his resignation (December, 1851). He returned home, memorialised the directors, was re-appointed Commissioner of Baroda by Lord Dalhousie (1854), and became Resident at Lucknow (December, 1854). In 1855 he advised the taking over of Oudh by the British Government; a policy which Lord Dalhousie instructed him to accomplish in January, 1856. In December, 1856, he handed over the Residency at Lucknow to Sir H. Lawrence,

and assumed the command of the Persian expedition. General Stalker had already taken Bushahr before Outram's arrival, otherwise Outram had resolved not to rob him of his laurels by assuming military command. A march of forty-six miles in forty-one hours resulting in the victory of Khush-ab, the capture of Muhamra, and the pursuit by 300 men, in three river-boats, of the Persian army to Ahwaz, 100 miles up the Karun, were the main incidents of the campaign. Peace was restored in April; and in July, 1857, Outram was back in Calcutta in the thick of the Mutiny. Lord Canning gave him the command of two divisions of the Bengal army, and the commissionership of Oudh (Sir H. Lawrence having died). Then came the relief of Lucknow. Sir H. Havelock (who served under him in Persia) was already at Cawnpore, where Outram joined him on Sept. 15th with 1,448 men, resigned his military command in order that Havelock might have the glory of ending what he had begun, and joined the cavalry as a volunteer, charging at their head *stick* in hand, and succeeded, after a loss of 500 men, in reinforcing the Lucknow garrison on Sept. 25th. Then he resumed military command, and was in turn besieged. From Nov. 27th till March, 1858, he held some 100,000 of the hostile forces in check at 'Alum-Bagh, where he was posted with 4,442 men. At the recapture of Lucknow (Mar. 6th to 19th) he, acting in conjunction with Lord Clyde, commanded the northern division of the army. His last act as Commissioner at Lucknow was to suspend Lord Canning's confiscatory proclamation until he could accompany it by a pardon to repentant Talúkdars. As military member of council (April, 1858, to July, 1860) he urged greater "individualism," and more "scrupulous regard for the feelings of those under you" in officers and men. Like Sir H. Lawrence, he took the deepest interest in the native aristocracy of Oudh. In July, 1860, he returned home a lieutenant-general, a baronet, and with a pension. He died at Paris, and was buried in Westminster Abbey, where his tomb bears the inscription, "The Bayard of India"—a name given him by Sir C. Napier (Nov. 6th, 1842). Besides a monument in Westminster Abbey, two statues have been erected in his memory—one on the Esplanade in Calcutta, one on the Thames Embankment at Charing Cross.

Sir F. Goldsmid, *Life of Outram.*

[J. D. R.]

Overbeck, JOHANN FRIEDRICH (b. 1789, d. 1869), the religious artist, was born at Lübeck, and in 1806 entered as an art student in the Academy at Vienna, under Füger. The strongly religious tendency of his art was, however, at variance with the tone of the Academy, and in 1810 he went to Rome with a few kindred spirits, who established

the Pre-Raphaelite, or more strictly speaking the Raphaelite, Brotherhood in the monastery of Sant' Isidoro. Here Overbeck fell under the influence of Niebuhr, Bünsen, Cornelius, and especially Friedrich Schlegel, through whose persuasion he joined the Roman Catholic Church in 1813. In 1818 he completed two series of frescoes, one on the *History of Joseph*, for the Casa Bartholdi, and one on *Tasso's Jerusalem Delivered*, for the Villa Massimi. Commissions now came in rapidly, both from Italy and the leading art centres of Germany, and the most important of the artist's works may be classified as follows: *The Vision of St. Francis* (1830), now in the church of Santa Maria, near Assisi; a *Holy Family*, and an allegory of *Italy and Germany*, taken to Munich at the time of the painter's visit in 1831, and still in the New Pinakothek; *Christ's Agony in the Garden*, painted for a wall in the hospital at Hamburg (1835); *The Triumph of Religion in the Arts* (finished 1840), now in the gallery at Frankfurt; a *Pietà* (1846), now in the Marien Kirche at Lübeck; *The Incredulity of St. Thomas* (1851), painted for a church in Leeds, but bought by Mr. Beresford Hope, and exhibited in the Royal Academy (1853); *Forty Cartoons of the Gospels* (1852), at Weihern, near Munich; *The Assumption of the Madonna* (1855), in the Marien Chapel of Cologne Cathedral; fourteen cartoons of the *Stations of the Cross* (1857), and seven cartoons of the *Sacraments* (1861). In drapery and arrangement of figures, Overbeck was as conventional and traditional as in the choice of subject. His saintliness often degenerates into sentimentality. Nevertheless, he holds an important place in the history of art for his steady opposition to crude realism, and his reaction against the later Italian and Flemish schools.

J. Bevington Atkinson, *Overbeck* (1882).

Overstone, SAMUEL JONES LOYD, BARON (b. 1796, d. 1883), economist and financier, was educated at Eton, and Trinity College, Cambridge, and entered the banking house of Jones, Loyd and Co., of London and Manchester, in which his father was partner. This establishment was afterwards merged in the London and Westminster Bank. From 1819 to 1826 Mr. Loyd represented Hythe in Parliament in the Whig interest, and made some important speeches on financial topics. In 1850, on his withdrawal from business, he was raised to the peerage, with the title of Baron Overstone of Fotheringhay. As a financial authority he had few rivals, and was more than once invited to take office, but contented himself with giving advice to successive Chancellors of the Exchequer. His *Tracts and other Publications on Metallic and Paper Currency* were published between 1837 and 1857, and then appeared in volume form. The Bank Act of 1844, by which the banking and issue departments of the Bank of England

were separated, was based upon his proposals. He also succeeded in defeating the introduction of the decimal system of arithmetic.

* **Owen, Sir Francis Philip Cunliffe**, K.C.M.G., C.B., C.I.E. (b. 1828), son of Captain C. C. Owen, R.N., was bred for the navy, but after five years' service was compelled by ill-health to retire, and entered the Science and Art Department in its original quarters at Marlborough House. His remarkable powers of organisation soon procured him promotion. He was one of the directors of the Paris Exhibition in 1855, and his able management marked him out as the right man to organise such enterprises. He has since spent his life in organising exhibitions and other movements for the diffusion of technical knowledge throughout all classes and countries. He was Director of the foreign sections at the 1862 exhibition at South Kensington, Assistant Executive Commissioner at the Paris Exhibition of 1867, Secretary of the British Commission at the Vienna Exhibition of 1873, under the Prince of Wales, Commissioner at the Philadelphia Exhibition of 1876, representative of England at the Paris Exhibition of 1878, and inventor and organiser of a series of English exhibitions, including the Fisheries (1883), Health (1884), Inventions and Musical Instruments (1885), and Colonial and Indian (1886). He succeeded Sir Henry Cole as Director of the South Kensington Museum in 1873, and never lost an opportunity of increasing the popular usefulness and attractions of that institution. He was made a K.C.M.G. in 1878.

* **Owen, Sir Richard**, K.C.B., M.D., D.C.L., LL.D., F.R.S. (b. 1804), a celebrated English comparative anatomist and palæontologist, after receiving his preliminary education in his native town of Lancaster, was articled to a surgeon, and in 1823 entered the University of Edinburgh. During his residence in Edinburgh he assisted in founding the Hunterian Medical Society, of which he was president in 1825, and for more than forty years, until it ceased to be a students' debating club, took an active interest in its welfare. He did not, however, graduate, for in 1826 he removed to London, and joined the Medical School of St. Bartholomew's Hospital, taking the diploma of the College of Surgeons in the same year. His first scientific paper was written during his stay here, having been read to the Medical Society of the Hospital School, and in 1830 was published in the *Medico-Chirurgical Transactions* under the title of *An Account of the Dissection of the Parts concerned in the Aneurism for the Cure of which Dr. Stevens tied the internal Iliac Artery*. From that date paper after paper, work after work poured from his pen, each containing some remarkable discovery, or unfolding some new view in comparative anatomy. However, up to the period of his qualifying as a surgeon,

he seems to have had no intention of devoting himself to science. He had, indeed, proposed to enter the navy. But while waiting for an opening he accepted the office of assistant to Mr. Clift, Curator of the Museum of the Royal College of Surgeons, the most noticeable portion of which were the collections of John Hunter, whose articled apprentice Mr. Clift had been. Henceforward Mr. Owen's life was to be mainly devoted to the museum. His fame is chiefly associated with it, and as the successor of Clift, whose daughter he married, he remained until, in 1856, he was transferred to an appointment—really made for him—as Superintendent of the Natural History Department of the British Museum. The various volumes of the printed catalogue, which constitute pathological and anatomical works of the most elaborate character, were for the most part by him, though it was not until his *Memoir on the Pearly Nautilus* appeared that his merits attracted general attention. In this work he demonstrated for the first time the structure of the extinct group of cuttle-fishes to which the Ammonites belonged, and to this day his description forms one of the classics of palæontology. Still continuing to enlarge and describe Hunter's Museum, he not only issued several other volumes descriptive of its riches, but in 1837 edited Hunter's *Animal Economy* and other papers; twenty-four years later publishing two other volumes of Hunter's unpublished writings on anatomy and natural history, and prefacing both issues with elaborate dissertations on the contributions which their author made to the sum of knowledge. As early as 1834 he had begun to lecture on comparative anatomy at St. Bartholomew's, treating almost for the first time in England—unless, indeed, Robert Grant (q.v.) had anticipated him—the noble discoveries which Cuvier and the French zoologists had been making on the Continent. In 1836 he became professor of anatomy and physiology to the Royal College of Surgeons, and in the same year Hunterian professor. In these capacities, as well as during his different tenures of the Fullerian Chair of physiology in the Royal Institution, he delivered annual courses of lectures which for many years were "institutions" in London, attracting not only ordinary students, but distinguished members of the medical profession and laymen of high rank. In the rapidly advancing science of palæontology, Owen saw opportunities which, in England at least, had been scarcely dreamt of. He taught geologists that in "the correlation of structure" lay the secret of building up from a mere fragment of a skeleton the entire animal to which it belonged. That this was no guess-work was proved by the fact that drawings made by Owen from a few bones were found, when at a later date the entire skeleton was discovered, to be remarkably accurate. In

this way he studied the extinct birds of New Zealand, the British fossil mammals, birds, and reptiles; the remarkable remains of great sloths and armadillos which Darwin brought home from the Pampas, and the extinct feathered reptile-bird of Solenhofen. In addition, numerous memoirs on the duckbill, the kangaroo, the structure of the monkey order, the brain as a guide to classification, etc., were communicated by him to the Royal, Zoological, Linnean, and other societies. These researches were condensed in his *Lectures on Comparative Anatomy* (2 vols.), *Paleontology*, *Odontography*, *The Archetype Skeleton*, and in his works on *British Fossil Mammalia and Birds*, and afterwards in his great work in 4 vols. on *Fossil Reptiles* (1884). Altogether between 300 and 400 papers and books bear his name on the title-page. Nearly every one of these scientific contributions represents a large amount of laborious research, and in the aggregate they bear ample testimony to the soundness of that consensus of opinion which stamps Owen as the greatest palæontologist since Cuvier, and a comparative anatomist only second in the immensity and importance of his labours to Hunter himself. In 1883 he retired from the superintendence of the Natural History Department of the British Museum, and was nominated a K.C.B., the minor distinction of C.B. having been bestowed some years previously. Sir Richard Owen has in addition received almost every honour which comes within the grasp of men of science. He has been Rede Lecturer in Cambridge, and is an honorary fellow of nearly every learned society in Europe and America. He is a Knight of the Legion of Honour, of the Prussian order *pour le mérite*, etc.; in 1858 he was elected one of the eight foreign associates of the Institute of France in room of Robert Brown (q.v.); Oxford, Cambridge, Edinburgh, and other universities have bestowed on him their honorary doctorates. In 1858 he presided over the Leeds meeting of the British Association; and for many years he has enjoyed, by favour of her Majesty, the use of Sheen Lodge in Richmond Park as his residence. Though for many years *en retraite*, his intellectual activity was still so keen that in the session of 1855-6 several important papers were communicated by him to the Royal Society.

Owen, ROBERT (b. 1771, d. 1858), the founder of socialism in England, was the son of poor parents living at Newtown, Montgomeryshire. He was a precocious child, and read omnivorously. In 1780 he left school, and from the position of shopboy rose to be manager in Mr. Drinkwater's factory when only twenty years old, and afterwards became a partner in the Chorlton Twist Company. In 1800, having bought the New Lanark Cotton Factory from his father-in-law, Mr. Dale, he set to work to put into practice among a low and

degraded populace of 4,000 "hands" the theories of a new system of society which he had conceived. He believed human character to be the result of antecedents and surroundings, and therefore argued that, given fair conditions and means of education, men would naturally become moral and useful citizens. Having in 1812 published his essays, *A New View of Society*, which contained his theories of character and education, he was by the support of Jeremy Bentham and others enabled to buy out his earlier partners, who were unable to countenance a business carried on for any other aim but profit. The model community at New Lanark now attracted wide attention. The Dukes of Kent and Sussex were deeply interested in the work, and for some years Owen was one of the most popular men in the kingdom. But his antagonism to religious forms was a valuable weapon for his opponents, and ultimately produced a split between himself and his partners, who were mainly Quakers. He finally withdrew from business in 1829, having already, in 1825, attempted the formation of a society founded on Communistic principles at New Harmony, in America. It was a complete failure; nor were the settlements at Ralahine, in Ireland (1831), and Harmony Hall, in Hampshire (1844), less disastrous. He devoted the later part of his life to educating the people for a reception of ideas which he believed would bring about the regeneration of the human race. Oddly enough, in his old age he became a believer in Spiritualism. Just before his death he attended and spoke at the Liverpool Social Science Congress, October, 1858. His agitation was instrumental in procuring the first factory legislation, and infant schools owe their origin to his experiments at New Lanark, and he was a pioneer of co-operation.

William Sargent, *Robert Owen and his Social Philosophy*; Booth, *Life of Robert Owen*.

Oxenford, JOHN (b. 1812, d. 1877), dramatist and translator, was born in Camberwell, and was educated for the law, but soon turned to a literary life. He first became known for his translations from the German, especially of Goethe's *Dichtung und Wahrheit*, and the *Conversations with Eckermann*. It is also noticeable that by a magazine article he was the first to introduce Schopenhauer to the notice of English readers, before he was recognised even in Germany. He edited Flügel's dictionary, and published a translation of *French Songs*. For the drama, besides very numerous farces, he wrote some important plays, such as the *Dice of Death*, the *Reigning Favourite*, the *Two Orphans*, and the libretto of the opera *The Lily of Killarney*, the two last of which still hold the stage. His most popular piece, however, was the farce *Twice Killed*, which enjoyed the rare honour of translation for the French and German stage. For thirty years, from 1847 till his death, he acted as dramatic critic for the *Times*.

P

* **Pachmann, Vladimir de** (b. 1848), the well-known Russian pianist, was born at Odessa, and at the age of eighteen was sent to the Imperial Conservatoire at Vienna, where he studied for two years under Professor Dachs, and obtained the gold medal. In 1869 he returned to Russia, where he gave a series of concerts, but, dissatisfied with his own achievements, refused to appear in public for two years. On his return to public performances he was warmly received at Leipzig, Berlin, and other Continental cities. He still resolved, however, to seclude himself for another two years, until he had reached the standard of excellence which he had set before himself. Three concerts which he gave in Vienna at the expiration of this time were so satisfactory as to induce him to give a like number in Paris. He appeared for the first time in London in 1882, at one of Mr. Ganz's orchestral concerts, where he was received with every mark of approval. Since then he has been a constant visitor to our capital, and his recitals are one of the chief features of the musical season.

Paganini, Nicolo (b. 1784, d. 1840), the greatest of violinists, was born of humble origin in Genoa. He received the first lessons in his art from his father, and afterwards studied under Servetto, Giacomo Costa, and perhaps Rolla. He first performed in public at the age of nine, and after receiving further instruction from Ghiretti, in Parma, he began his first series of tours through the Italian towns in 1797. In 1799 he was presented with his famous Guarnerius violin, now preserved in Genoa. In spite of the dissoluteness of his early life, and his mania for gambling, he studied with the utmost diligence. From 1801 to 1804 he lived in retirement with a lady of rank, and devoted himself to the guitar. Returning to Genoa he composed four quartets for violin, viol, guitar, and violoncello. He was next appointed conductor of the opera at Lucca, under Princess Eliza, Napoleon's sister, and here he composed his *Napoleon* sonata on the c string. Leaving Lucca in 1808, he continued his professional tours in Italy, and at Milan, in 1813, first produced his famous variations on *Le Streghe* (*The Witches*). In 1828 he visited Vienna, Berlin, and other German cities. His greatest triumph, however, was in Paris, where he arrived in 1831. In the same year, and in 1832, he also visited London, and made a tour through the English provinces. He then retired to the neighbourhood of Parma, on the large fortune he had amassed during the few preceding years. Having been enticed into an unfortunate speculation in Paris in 1836, he was forced to

visit that city in 1839, in hopes of liquidating the debt by his concerts. But he was already too unwell to appear in public, and on his way homewards he died at Nice of consumption of the throat. For execution, inventiveness, and resource, Paganini was undoubtedly the greatest virtuoso on the violin that has ever lived. No one before him had divined the full capabilities of the instrument, and no one seems likely to rival him in his unerring command over it. His introduction of intermediate and double harmonics, and his innumerable new effects in bowing, would alone have made an era in the history of the violin. At the same time there was in the character and expression of the performance, especially in his own composition, a demonic force that seems to have acted irresistibly on every audience. Added to the mystery of his life, and the eccentricity of his appearance, his extraordinary power fully accounted for the generally circulated tales of his satanic origin and subsequent contracts with the powers of darkness. Of his numerous compositions few have been published entire. Besides those mentioned above, the following are still occasionally performed:—*Concerto in D* (Op. 6); *Concerto in B minor* (Op. 7); and the *Moto Perpetuo* (from Op. 11). Imitations of his variations on the *Carnival of Venice*, etc., are also familiar.

F. J. Fétis, *Nicolo Paganini* (with an analysis of his compositions). For the effect of his playing on the audience, see Heine's account in his musical reviews included in the *Letters from Paris*.

* **Paget, Sir James, Bart., F.R.S., D.C.L.** (b. 1814), was born at Great Yarmouth, and received his medical education at St. Bartholomew's Hospital, where he became surgeon and lecturer on physiology. He became a member of the Royal College of Surgeons in 1836, and a fellow in 1843, and was from 1847 to 1852 professor of surgery and anatomy at the college. He became a member of the Council in 1866, was president of the College in 1875, and Bradshawe Lecturer in 1882. Sir James Paget is serjeant-surgeon to the Queen, surgeon to the Prince of Wales, and consulting surgeon to St. Bartholomew's Hospital. He was for many years a member of the Senate of the University of London, and vice-chancellor from 1884-6. He was created a baronet in 1871, and has been granted honorary degrees by Oxford, Cambridge, and Edinburgh. Sir James Paget, as may be gathered from the list of his appointments, is one of the leading members of the medical profession in England; he has served on several royal commissions, and has a very large consultative practice. He is known to the medical world generally as the author of *Lectures on Surgical Pathology* (1853, 4th ed. 1876), and *Clinical Lectures and Essays* (1875), both of which are regarded as standard works. The results of his more purely scientific investigations are to be

found in the *Transactions* of the learned societies, and among his minor works may be mentioned *A Report on the Chief Results obtained by the Use of the Microscope* (1842), *Lectures on the Processes of Repair and Reproduction after Injuries* (1849), *Theology and Science, An Address* (1881), and *On Some Rare and New Diseases, The Bradshaw Lecture* (1883).

Pakington, Sir J. [HAMPTON.]

Palafox, José (b. 1780, d. 1847), Spanish general, became a member of the royal household, and accompanied Ferdinand to the meeting with Napoleon at Bayonne. In 1808, when the attack of the French upon Saragossa was expected, he was nominated captain-general of the town, and defended the city with great courage for sixty days, after which the French retired (August). A second siege was begun in November by Marshal Laannes, and Palafox, after an heroic defence, in which the streets were contested inch by inch, while an epidemic decimated the garrison, was forced to capitulate (February, 1809). In 1820, and again in 1823, he proclaimed himself an opponent of the absolutism of Ferdinand VII.

* **Paley, Frederick** APTHORP, LL.D. (b. 1816), scholar, a grandson of the author of the *Evidences*, was born near York, and educated at Shrewsbury School, and St. John's College, Cambridge, where, after a distinguished university career, he continued to reside till his conversion to Roman Catholicism in 1846. Meantime he had become conspicuous, as a member of the Cambridge Camden Society, for his zeal for the revival of Gothic architecture, and had written some important architectural works, such as *The Church Restorers* (1844), *Gothic Mouldings* (1845), and *Gothic Architecture* (1846). During his absence of fourteen years from Cambridge, he was tutor to several noted Catholic families, and in 1860 published *Notes on Twenty Churches round Peterborough*, and *The Flora of Peterborough*. He also published an account of his conversion, entitled, *A Review of the Arguments in Defence of the Protestant Position* (1848). Having resided again in Cambridge from 1860 to 1874, he was appointed professor of classical languages in the Roman Catholic college in London, and afterwards classical examiner to London University, an appointment which he held again five years later. His great services to literature have been in the emendation and exposition of the Greek and in some cases the Latin classical texts. His editions of *Æschylus*, *Sophocles*, *Euripides*, and certain plays of *Aristophanes*, are now almost universally employed in schools and colleges throughout England. Several are embodied in the *Bibliotheca Classica*, several also in the *Cambridge Text Series*. He has further edited the *Iliad*, *Theocritus*, *Propertius* (1853); *Ovid's Fasti* (1854); *Martial* (1868); *The Select Private Orations of Demosthenes*

(1874); and *Hesiod*; has published a treatise on *Greek Particles*, and on *Greek Wit* (both in 1881); and has translated the *Philebus* and *Theætetus* of Plato, the *Odes of Pindar* (1868), and the tragedies of *Æschylus* in English prose (1871). He advocated, in a series of pamphlets, the now accomplished recession and compilation of the existing Homeric texts. Professor Paley became LL.D., Aberdeen, in 1883.

Palgrave, Sir Francis (b. 1788, d. 1861), historian, was the son of a Jewish stockbroker named Cohen, and changed his name in 1823 on embracing the Christian faith. The failure, and consequent poverty, of his father compelled him to become a solicitor's clerk in 1803, but in 1821 he was employed under the Record Commission in the publication of original documents. He was called to the bar in 1827, and practised his profession for some years, obtaining distinction in pedigree cases before the House of Lords. In 1832 knighthood was the reward bestowed for important contributions to historical and antiquarian literature. From 1833-5 he served on the Municipal Corporation Commission; and in 1838 was appointed deputy-keeper of her Majesty's Records, a post he held until his death. Of his voluminous writings and editions, the most important are his *Parliamentary Writs* (1827-34); *History of England* (1831); *Rise and Progress of the English Commonwealth* (1832); *Rotuli Curie Regis* (1835); *Calendars and Inventories of the Exchequer* (1836); *The Merchant and the Friar* [Marco Polo and Friar Bacon] (1837); *History of Normandy and of England* (1851-64).

* **Palgrave, Francis Turner** (b. 1824), poet, the son of the above, was educated at the Charterhouse and at Balliol College, Oxford, where he was a scholar. He took his degree with a first in classics in 1847, and was elected to a fellowship at Exeter College. From 1850 to 1855 he was vice-principal of the training college at Kneller Hall, and, after being secretary to Earl Granville, became assistant secretary to the Committee of the Privy Council on Education. In 1855 he was appointed professor of poetry at Oxford, in succession to Professor Shairp (q.v.). Professor Palgrave is the author of *Essays on Art* (1866) and two admirable stories, *Precious* (1862) and *Five Days' Entertainment at Wentworth Grange* (1868). He is, however, better known as the writer of some exceedingly melodious verse, characterised by refinement and symmetry, and including *Idylls and Songs* (1854), *Hymns* (1867), *Lyrical Dreams* (1871), *A Lyric Garland* (1874), and *The Vision of England* (1881). His collections of poetry are among the best in our language, and include *The Golden Treasury* (1864) and *The Children's Treasury of Lyrical Poetry* (1876). Mr. Palgrave has also published editions of *Clough's Poems*, with a *Memoir* (1862), *Shakespeare's Songs and*

Sonnets (1865), *Scott's Poems*, "Globe" edition (1866), *Chrysonela, a Selection from the Poems of Herrick* (1877), *Keats* (1884), and *Wordsworth* (1885).

* **Palgrave, WILLIAM GIFFORD** (b. 1826), traveller and man of letters, son of Sir Francis Palgrave, and brother of Mr. Francis Turner Palgrave, was educated at Charterhouse School, and Trinity College, Oxford, where, in 1846, he took first-class honours. In the following year he entered the military service as a second lieutenant in the 8th Bombay Native Infantry; but in 1853 he quitted India, and for the next ten years devoted himself to travelling. His wanderings in Syria, Central Arabia, and various parts of the Ottoman Empire, bore much solid fruit. He rapidly became one of the best Arabic scholars living, acquired an extraordinary familiarity with the habits and ways of thought of the numerous peoples among whom he passed, and published one of the most remarkable modern books of travels, the *Personal Narrative of a Year's Journey through Central and Eastern Arabia* (1862-3). Returning to Europe in 1863, he received the gold medal of the French Geographical Society. In 1865 he was sent on special service for the release of the Abyssinian prisoners, and remained in Egypt till June, 1866. In that year he entered the consular service, in which he has held posts at Soukhaum-Kali, Trebizond, St. Thomas, Manilla, Bulgaria, and Bangkok; but he then passed into the diplomatic service, being (1886) her Majesty's minister in the Republic of Uruguay. He published in 1872 an Eastern narrative, entitled *Hermann Agha*, which weaves into a web of romantic fiction many of his own experiences and startling adventures. It is a work of a very high literary quality. Another publication of that year, *Essays on Eastern Questions*, displays profound knowledge and erudition, and remarkable sagacity. He has also published (1876) *Dutch Guiana*, and a number of magazine and review articles of a topographical or ethnographical character. Mr. Palgrave is now said to be writing a poem of considerable magnitude, in *terza rima*. Judging from the lyrics scattered through *Hermann Agha*, and the vigour and originality of mind shown throughout his writings, the completion of this poem should be an event to look to with keen interest.

Palikao, GENERAL CHARLES COUSIN MONTAUBAN, COMTE DE (b. 1796, d. 1878), served as a soldier for upwards of twenty years in Africa. He had command of the French troops in the Anglo-French expedition to China in 1860, where he distinguished himself by his bravery. For this he received the Grand Cross of the Legion of Honour, and was raised to the rank of a senator, receiving the title of Comte de Palikao after one of his victories. In 1865 he received the command

of the 4th Army Corps in Lyons; in 1870, after the fall of the Ollivier ministry (Aug. 9th), he was Minister of War and President of the Cabinet until the proclamation of the Republic (Sept. 4th); and in 1871 he published *Un Ministère de Guerre de Vingt-quatre Jours, etc.*—a book that roused a great amount of attention. His last appearance in public was at Versailles, where he gave evidence in the trial of Marshal Bazaine.

Palmer, EDWARD HENRY (b. 1840, d. 1882), was a native of Cambridge, where he was educated at the Perse Grammar School, and whither, after three years of clerkship in the city, he returned in ill health in 1859, and making the acquaintance of Seyyid Abdallah, a teacher of Indian languages, began to turn his thoughts to Oriental study, and having attracted the notice of the governing body of St. John's College, was admitted there as a sizar in 1863, and shortly afterwards elected a scholar. Whilst pursuing the ordinary reading for a degree, he continued his Eastern work, arranged and catalogued the Oriental MSS. of King's and Trinity College, and afterwards of the University Library, and corresponded in Urdu with an Indian paper. He took his B.A. degree in 1867, and in spite of his third class, was elected to a fellowship at St. John's on the ground of his Oriental scholarship. Palmer joined the party of explorers who conducted the survey of Sinai in 1868-9. His contributions to the work consisted chiefly in the important and difficult task of establishing the exact nomenclature of the peninsula in all parts. In 1870, accompanied by C. Tyrwhitt Drake, he again visited the East, and began his celebrated exploration of the "great and terrible" Desert of the Wanderings for the Palestine Exploration Fund. After safely reaching Jerusalem, they went on to the Lebanon and Damascus. The results of the expedition were published in *The Desert of the Exodus* (1871), in a report to the Palestine Exploration Fund, in the "Special Papers" of the *Survey of Western Palestine*, and in an article on the *Secret Sects of Syria*, contributed to the *British Quarterly Review*. Later on, he edited for the Fund the name-lists of their great survey. In 1871 he wrote, in conjunction with Mr. Walter Besant, a *History of Jerusalem*, and the same year was appointed Lord Almoner's reader and professor of Arabic at Cambridge. Palmer undertook at this time various literary works. His excellent *Arabic Grammar* appeared in 1874; *Arabic Manual* in 1881, and *Simplified Grammar of Arabic, Persian, and Hindustani* in 1882; *Persian-English Dictionary* in 1876; *Poems of Beha-ed-din Zohair, Arab and English Verse*, in 1876-7; *Haroun Alraschid (New Plutarch Series)* in 1880; *History of the Jewish Nation* in 1874; *Koran (Sacred Books of the East)*, 2 vols., in 1880; and he also revised, with Dr. Bruce, Martyn's *Persian New*

Testament for the Bible Society. He also published some volumes of original verse and translations. His *Koran* and *Zohair* are both works of remarkable power and originality. In 1881 he gave up Cambridge work, came to London, and began regular daily writing for the *Standard*, and more occasionally for the *Times*, *Saturday Review*, and other papers. On the breaking out of disturbances in Egypt, he was sent out by the Admiralty in June, 1882, with the object of securing the support, or at least the neutrality, of the sheiks of the tribes bordering the canal, and proceeded to Jaffa, and thence alone crossed the desert to Suez. On his way he visited the chief sheiks, and succeeded in persuading them, by means of argument and promises of money, to agree to defend the canal and restrain their followers from abetting Araby. Having completely succeeded in his important mission, Palmer was appointed chief interpreter to the forces, and was instructed to arrange for the purchase of camels, and to organise a patrol of Arabs for the protection of the canal. It was while proceeding to Nakhil to meet an assembly of the Arab sheiks with the object of accomplishing these purposes and fulfilling his promises of money, that Palmer, in company with Captain Gill, R.E., and Lieutenant Charrington, R.N., was set upon by a party of hostile Bedouins, acting, it is believed, under orders from Araby, and the three were murdered in the Wady Sudr on August 11th, 1882. Their remains were afterwards discovered by Major (now Sir Charles) Warren, and now lie in St. Paul's Cathedral.

W. Besant, *Life and Achievements of E. H. Palmer*. [S. L.-P.]

Palmer, SAMUEL (b. 1805, d. 1881), one of the most poetical of English painters, was born at Newington (Jan. 27th, 1805). His first picture, an oil-painting, was exhibited and sold upon his fourteenth birthday. He became acquainted with Blake and Linnell, by the former of whom he was profoundly influenced, while the latter became his father-in-law. Settling at Shoreham, he produced a number of beautiful landscapes, chiefly in oils, but his style was not fully formed until two years' residence in Italy (1837-9) penetrated his naturally romantic imagination with classical sentiment. Devoting himself chiefly to water-colour upon his return to England, he soon obtained recognition as the most poetical of all living masters of this branch of art. Shortly afterwards he took up etching, and in this pursuit also he attained the highest rank of excellence. In his latter years he undertook two extensive sets of drawings, illustrating respectively Milton's *Allegro and Penseroso*, and Virgil's *Eclogues*. The former, a noble series of imaginative compositions, was completed; the latter, left imperfect at his death, was retouched and published by his son in the form of

autotypes, accompanying a metrical translation by Palmer himself, more faithful to the spirit than to the letter of the original. He died on May 24th, 1881. Palmer was a most attractive character, an unworldly idealist, living solely for art and literature, the characteristics of whose mind were reflected in the classic grace and romantic conception of his works. He excels in solemn and pathetic landscape, especially the twilight of early morning or late evening, enlivened by the twinkling star, the folded flock, the gleam of silvery light on winding waters. His works are invariably ideal inspirations; he does not profess to transcribe nature, and may be taxed with mannerism; his range of subject also is not very wide; but within these limits the sentiment of a spiritual beauty immanent in landscape has never been conveyed more impressively. He was laborious and fastidious as a painter, and, considering his length of days, and his industry, his works are not numerous. An enthusiast in literature as well as art, he was deeply versed in his favourite authors—Shakespeare, Milton, and Virgil.

A. H. Palmer, *Life of Samuel Palmer*. [R. G.]

Palmerston, HENRY JOHN TEMPLE, K.G., G.C.B., 3RD VISCOUNT (b. Oct. 20th, 1784; d. Oct. 18th, 1865), Prime Minister of England, was descended from Sir William Temple, the celebrated diplomatist. The grandfather of Henry Temple was created a viscount in the peerage of Ireland. His father, the second viscount, married a Miss Mee, a lady celebrated for her beauty, and the daughter of a Dublin tradesman. Henry Temple was their eldest son. He was born at the family seat, Broadlands, in Hampshire. After spending some years at Harrow, he went, in 1800, according to the fashion of the day among young noblemen of political connections, to Edinburgh, living with, and studying under, Professor Dugald Stewart. His father died, and he succeeded to the title on April 17th, 1802, and in 1803 he went to St. John's College, Cambridge, where he took his M.A. degree on June 27th, 1806. Earlier in the year, in January, he contested one of the seats for the University, but was at the bottom of the poll. In November he made another attempt at Shoreham, but a double return left the result doubtful. In 1807, when the administration of the Duke of Portland was formed, the influence of Lord Malmesbury secured for him a Junior Lordship in the Admiralty. Again he contested the University of Cambridge without success, and eventually a seat was found for him in the Isle of Wight. He made his maiden speech in 1808—a more critical event then than now—in defence of the expedition to Copenhagen, and having carefully prepared himself, was favourably received. In October, 1809, when Mr. Perceval was forming his ministry, he made

young Palmerston the brilliant offer of the Chancellorship of the Exchequer. With great judgment and self-restraint Palmerston declined this post, but accepted that of Secretary at War on Oct. 28th, and was sworn of the Privy Council on Nov. 1st. This post he retained in many administrations for nearly twenty years, until 1828. He had not a seat in Mr. Perceval's Cabinet, and for many years he confined himself to the duties of his office, without professing to have any influence over the policy of the Government to which he belonged. His combativeness soon displayed itself in an attempt to assert his independence of the Commander-in-Chief, Sir David Dunbar, who regarded the Secretary of War as a subordinate official. He also took an occasional part in debate, acquiring confidence as a speaker, and even at times displaying his characteristic flippancy. His public position was at this time an isolated one. He attached himself to no individual and scarcely to any section. A Whig he was not, perhaps never was; he was a Tory, without being a Canningite or an Eldonite. Throughout life he remained anti-democratic; but although strongly attached to aristocracy, he was in favour of just and liberal administration. In the main, he adhered to the principles of Mr. Pitt. Thus he gave no support to the Six Acts, or the measures for diminishing the liberty of the press, or for rendering the law against seditious libel more severe. He did not defend the Peterloo massacre, and although he was not at this time a supporter of Parliamentary Reform, he was in favour of Catholic Emancipation, and on these principles was elected and re-elected for Cambridge University in 1812, 1818, 1820, and 1825. The chief event of his private life was an attempt to assassinate him, made on April 8th, 1818, at the War Office, by a madman, Lieutenant Davis. He received a wound in the hip, but it proved not to be serious. While winning credit by his able administration during the later years of the Napoleonic War, he posed at this time chiefly as a country gentleman and a man of fashion, taking an interest, as his letters show, in horse-racing and in improving his estates. He had a turn for writing verses, and along with Sir Robert Peel and Croker wrote the *New Whig Guide*. Lord Liverpool at different times offered him the post of Governor-General of India and of Postmaster-General, with an English peerage, but both offers were declined. In April, 1827, when Lord Liverpool died, and Mr. Canning formed his short-lived administration, he at first offered Palmerston the Chancellorship of the Exchequer, which was accepted; but George IV., who hated Palmerston, and, besides, wanted some pliable man to be Chancellor, forced Canning to withdraw the offer. Palmerston, with perfect good temper, declined the Governor-Generalship of India, which was

again offered him, and remained at the War Office, but now entered the Cabinet. After Canning's death he continued a member of the Duke of Wellington's administration, along with the Canningites, but when Mr. Huskisson quarrelled with the Premier and resigned, Palmerston resigned also, May 26th, 1828. From this time he devoted especial attention to foreign affairs. He spent some time during 1829 in Paris, and satisfied himself that a revolution was imminent, and on June 1st, 1829, delivered, on the subject of foreign policy, one of his finest speeches. After Huskisson's death in September, 1830, Wellington invited Palmerston to join his Cabinet again. Palmerston replied that he could only do so with Melbourne and Grant. To this the Duke agreed, but it appearing that Palmerston had now become convinced of the need for Parliamentary Reform, the negotiations were broken off. On the formation of Lord Grey's government, Palmerston was at once appointed to the Foreign Office, Nov. 22nd, 1830. The revolution of 1830 had disturbed the whole system of western Europe, and his task was no easy one. The kingdom of the Netherlands had been broken up by the revolution in Belgium; there was civil war in Portugal, arising out of the conduct of Don Miguel, and the question of the Spanish succession was drawing to a head. Under Palmerston's auspices the Conference of London was summoned. His policy was to support France against the Northern Powers, and by imposing upon her the condition that no attempt should be made to annex Belgium, he succeeded in averting war, and in seating Leopold of Saxe-Coburg on the throne of Belgium. Although he did not actively interfere as yet in the affairs of the East, he entered an unavailing protest with France against the treaty of July 8th, 1832, by which Turkey virtually placed herself under the protection of Russia, by closing the Dardanelles against all but Russian ships of war. This was a sign that his views were veering round to the maintenance of Turkey, though he had earnestly supported the cause of Greece in the War of Independence. The next problem that presented itself was that of the Spanish Succession, and he took up the Constitutional cause in Spain, united as that was, by the skilful policy of Queen Christina, with the cause of the Princess Isabella. With great tact Palmerston formed, in spite of the Northern Powers, his Quadruple Alliance, and on April 22nd, 1834, entered into the treaty by which England and France combined to secure the peace of the Peninsula, and support constitutional government both in Spain and in Portugal. Still it was during these negotiations that he contracted that suspicion and dislike of Louis Philippe which guided his policy twelve years later. The condition of Egypt now attracted his attention. He considered the revolt of Mehemet Ali in

Egypt a grave danger to the integrity of the Turkish Empire. In 1833, 1835, and 1839 he was anxious to have interfered with arms in defence of the Porte, but his colleagues overruled him. On July 27th, 1839, he succeeded in inducing the Powers to present a collective note on the subject, and at length, on July 15th, 1840, when Mehemet Ali invaded Syria, Palmerston, finding that France held back, signed a treaty with the Northern Powers, and confident that France, however incensed, would not take up arms, began, and with great good-fortune carried through, the Syrian War, and suppressed Mehemet Ali. He was at the same time active in Asia; intriguing in Afghanistan against Russia, and carrying on the operations against China which ultimately terminated in the acquisition of Hong-Kong. France was so incensed at his conduct that he expected a declaration of war. Indeed, his management of foreign affairs had been so self-willed, meddlesome, and overbearing, that he was in danger of embroiling England with foreign Powers. Abroad, however, his reputation stood high; but he had taken little share in domestic affairs since 1830, and under any minister less indolent than Lord Melbourne, who had replaced Lord Grey in July, 1834, his wilfulness must have been checked. Palmerston had resumed office, April 18th, 1835, with Lord Melbourne, after Sir Robert Peel's short administration in 1835, and sat for Tiverton. The *Greville Memoirs* show in a very striking manner how opposed his colleagues were to his daring conduct of foreign affairs; but his threats of resignation overcame them, and his skill, courage, and good-fortune carried him triumphantly through. However, on the fall of the Whig ministry in 1841, Palmerston went out with Lord Melbourne, and lived for some years in comparative retirement. He returned to the Foreign Office on July 3rd, 1846, when Lord John Russell formed his administration, and France at once assumed an attitude of antagonism. Then followed the complex intrigue as to the Spanish Marriages. [ISABELLA.] In this, by dint of duplicity, Louis Philippe out-manœuvred Palmerston, who took his revenge by making the embassy at Paris a centre of intrigue, even in domestic concerns, against the French king. This distinctly accelerated the revolution of 1848. During the whole period of this revolutionary movement Palmerston's sympathy was everywhere in Europe actively with the insurgents. He entertained a strong dislike for Austria and Metternich, and was a warm friend of the Italian nationalists, and he even went so far as to assist the Sicilian insurgents against the King of Naples with a consignment of arms from Woolwich. This conduct, when the party of order had at last re-established itself in nearly every European State, rendered him an object of suspicion to every foreign govern-

ment, and even to his own colleagues. In 1850 his arbitrary and high-handed treatment of Greece in connection with the claims of Don Pacifico, a Maltese Jew, and a British subject, brought on him a vote of censure from the House of Lords. Mr. Roebuck, the member for Sheffield, however, moved a counter-vote of confidence in the House of Commons, and after Palmerston had defended himself with marvellous fire and spirit in a speech of five hours' duration, carried it by forty-six votes. It was on this occasion that Palmerston enunciated his famous doctrine that the Briton abroad was everywhere entitled to England's protection, pointing it with the phrase, *Civis Romanus sum*. But he was carrying his independence too far. He assumed to manage foreign affairs entirely at his own discretion. Her Majesty complained to Lord John Russell that Lord Palmerston had sent off important despatches, which she ought to have seen, without her knowledge. Strange to say, on this reprimand Palmerston did not resign; but when, two days after the *coup d'état* of Dec. 2nd, 1851, he assured the French ambassador that Napoleon should have the support of the British Government, without previously consulting that Government; its head, Lord John Russell, found him intractable, and summarily dismissed him on Dec. 22nd. Palmerston waited a while, and took his revenge. He opposed the Government, and turned them out on their Militia Bill. After Lord Derby's administration fell he joined that of Lord Aberdeen on Dec. 28th, 1852, but did not return to the Foreign Office. He became Home Secretary, and supported the Premier very loyally. When his mismanagement of the Crimean War caused Lord Aberdeen to retire, Palmerston succeeded him as Prime Minister on Feb. 5th, 1855. From this time his biography is the general history of the Liberal Government. He brought the Russian War to a fortunate conclusion, and having been defeated in 1857 by a combination of Tories, Peelites, and Radicals on his Chinese policy, appealed to the country, and returned with a stronger party. He was, however, defeated, and resigned on Feb. 20th, 1858, but after Lord Derby's second administration he returned to power on June 30th, 1859. He supported Napoleon III. generally, and especially in his invasion of Italy, but at the same time he expended nine millions sterling on the fortifications of the southern coast against the contingency of a war with France. Although his sympathies were with the Confederate States during the American War, he preserved a position of neutrality, and when the United States steamer *San Jacinto* violated it by arresting the Confederate envoys, Mason and Slidell, on board the British mail-packet *Trent*, he was instant and prompt to demand reparation. When Austria and Prussia, the leaders of the North German Confederation, invaded

Schleswig-Holstein in 1864, Lord Palmerston endeavoured to induce France and Russia to join him in enforcing the Treaty of London, which guaranteed the integrity of Denmark, but without success. He was not, however, hostile to the growth and consolidation of Germany. He died on Oct. 18th, 1865, at Brockett, and was buried in Westminster Abbey. He was a Knight of the Garter, and a Knight Grand Cross of the Bath. He married, in 1839, the widow of Earl Cowper. He had little sympathy with, or desire for, domestic reform, and yet his pluck, self-reliance, and assertion of British rights abroad, rendered him very popular with the people of England. Though his conduct as Foreign Secretary was intolerably masterful and overbearing, his ambition to see England a leading State in Continental affairs was prompted by a genuine patriotism, and beyond doubt his policy, in succession to that of Mr. Canning, did much to advance the cause of Constitutional liberty in Europe. Few English statesmen have held so many offices of State, or for so long a period, as Lord Palmerston; and during his long career it fell to his lot to make more ecclesiastical appointments than any other minister has ever done. He entered a Ministry when he was twenty-three: when he died, at the age of eighty-one, he was Prime Minister.

Lord Dalling, *Life of Palmerston*; and the *Granville Memoirs*. [J. A. H.]

Panizzi, SIR ANTHONY (b. 1797, d. 1879), principal librarian of the British Museum, was born at Brescello, in the duchy of Modena, Sept. 16th, 1797. He was educated at the University of Padua, and became an advocate. Having participated in movements having for their object the liberation of Italy, he was, in 1822, compelled to fly from his native State, and was condemned to death in his absence. He made his way to England, and settled at Liverpool, where the patronage of the historian Roscoe obtained him employment as a teacher of Italian. Roscoe also introduced him to Brougham, by whose recommendation he was made professor of Italian in University College in 1828, and in 1831 he became by the same influence an assistant librarian of the British Museum. In this year he published his standard edition of the *Orlando Innamorato* and *Orlando Furioso*. His attention was then given to the library of the Museum, at that time in a very defective condition; and on being promoted to the keepership of printed books, in 1837, he undertook the new catalogue, which, having swollen to gigantic dimensions in manuscript, is now in course of being printed. By his energy and social influence, he obtained an ample grant towards remedying the deficiencies of the library, which was more than quadrupled under his direction. In 1852 he designed the magnificent reading-room and

adjacent libraries, capable of containing a million volumes, which were completed in 1857. He became principal librarian in 1856, and retired in 1866. During the whole of this time he had exercised a great influence in the affairs of his native country, using the consideration in which he was held by English Liberal statesmen to promote the cause of Italian freedom, and maintaining a constant communication with the leading patriots. He died April 8th, 1879. Panizzi was a truly great man, of immense force of character, daring and magnificent conceptions, southern passions tempered by northern acuteness, and enough administrative talent to have governed a kingdom. He was imperious and despotic, but large-hearted and magnanimous. The Museum owes much, its library most, of its present efficiency to him: the great reading-room is a durable monument to his genius, and his services to his native country, though less conspicuous, were hardly less considerable.

His *Life* has been written by Mr. Louis Fagan, who has also edited the letters addressed to him by his friend Prosper Mérimée, and by the Italian patriots. [R. G.]

Pannure, FOX MAULE RAMSAY, BARON, afterwards EARL OF DALHOUSIE, K. T., G. C. B., P. C. (b. 1801, d. 1874), statesman, was educated for the army, and in 1791 entered the 79th Highlanders, retiring with the rank of captain in 1831. In 1835 he was returned to Parliament for Perthshire in the Whig interest, and subsequently sat for the Elgin Burghs (1830-41) and for the city of Perth (1841-52). From 1835 to 1841 he was Under-Secretary of State for Home Affairs, was Vice-President of the Board of Trade in 1841, Secretary of War in 1846-52, and President of the Board of Control in the same year. In 1852, also, he succeeded his father as second Baron Pannure. Lord Pannure was again Secretary at War from 1855 to 1858, and was not altogether a successful administrator. He then retired from public life, and in 1860 succeeded his cousin, the Marquis of Dalhousie, in the earldom, assuming shortly afterwards the name of Ramsay.

* **Paris**, LOUIS PHILIPPE ALBERT D'ORLÉANS, COMTE DE (b. Aug. 24th, 1838), the head of the Bourbon family, was the son of the Duc d'Orléans, the eldest son of King Louis Philippe. After the revolution of 1848, he lived at Eisenach, and Claremont in Surrey, where his education was conducted by his mother, the Duchess of Orleans, who died in 1858, and by Adolphe Regnier. In 1861 he went with his brother, the Duc de Chartres, and his uncle, the Prince de Joinville, to the United States, and was attached to McClellan's staff during the campaign on the Potomac. Returning to Europe in 1862, he married his cousin, the Princess Marie Isabelle, the daughter of the Duc de Montpensier,

in 1864, and his son and heir, Prince Louis Philippe, was born at York House, Twickenham, in 1869. After the fall of the Second Empire, the Comte de Paris returned to France, but abstained from putting himself forward, living quietly on his estates, which had been restored to him by a vote of the Assembly. In August, 1873, occurred the celebrated interview at Frohsdorf; when the fusion was effected by which the Comte de Paris agreed to waive his claims to the throne in favour of those of the Comte de Chambord (q.v.). By the death of the latter in August, 1883, he became the undisputed head of the House of Bourbon; but it cannot be said that the old Legitimists hailed him with much enthusiasm, or that the Comte de Paris showed any disposition to bring his cause before the world. Nevertheless, the popularity of the Orleanist family, as shown on the occasion of the marriage of the Comte de Paris's eldest daughter with the son of the King of Portugal in the summer of 1886, so alarmed the French Government that it was the cause of a law of expulsion by which direct claimants to the French throne and their heirs were banished from France. The Comte de Paris retired to England. Of his writings, a thoughtful work, *Les Associations Ouvrières en Angleterre* (1869), has been translated into English; and his *Histoire de la Guerre Civile en Amérique*, to be completed in 8 vols., began to appear in 1874.

Parish, SIR WOODBINE, F.R.S. (b. 1796, d. 1882), diplomatist and man of science, was educated at Harrow, and entered the diplomatic service. After being employed on various missions of importance, he was *chargé d'affaires* at Buenos Ayres from 1825 to 1832, and was sent to Italy to negotiate a commercial treaty in 1839. He is, however, chiefly remembered for his valuable account of *Buenos Ayres and the Provinces of the Rio de la Plata* (1838), and for the remains of the Megatherium, Glypodon, and other fossil monsters, which he brought from South America to this country. He became F.R.S. in 1824.

Park, MUNGO (b. 1771, d. 1806), African traveller, was the son of a farmer of Selkirkshire, was educated at Edinburgh University, and became assistant-surgeon on board an East Indiaman. His first voyage of exploration was made in Sumatra, and in 1795 he was sent out by the African Association to explore the course of the Niger, which he reached through Senegal. His charming *Travels in the Interior of Africa* appeared in 1799. For a while he practised as a doctor at Peebles, but in 1805 he started with a second expedition to complete his exploration of the Niger, and when man after man had died through malaria, he was slain by natives. An account of his second journey appeared in 1815.

Parker, JOHN HENRY, C.B. (b. 1806, d. 1884), archaeologist, began life as a bookseller,

succeeding his uncle in the well-known firm of Parker and Sons, at Oxford, in 1832. He was one of the leading spirits of the Gothic revival, and published several valuable works on architecture. His *Glossary of Architecture* was published in 1836, an *Introduction to the Study of Gothic Architecture* in 1849, and a more elaborate work, *The Domestic Architecture of the Middle Ages*, in 1859. In his later years he was occupied chiefly in excavations at Rome, and published in 1874 his notable *Archæology of Rome*. In 1870 he was made keeper of the Ashmolean Museum.

• **Parker**, THE REV. JOSEPH, D.D. (b. 1830), Nonconformist divine, was born at Hexham, Northumberland, and studied theology under Dr. Cameron, of the Moorfields Tabernacle. He then became a student at University College, and preached at the same time as a "supply" at the Old Barbican Chapel. In 1853 he was ordained as pastor of the Congregational Church at Banbury. His *Helps to Truthseekers* (1857) contains the pith of his controversial discourses with Secularists, held at open-air meetings during this period. In 1858 Mr. Parker became minister of the Cavendish Street Church, Manchester, where he founded mission stations and night-schools, and did much admirable work. When Professor Seeley's *Ecce Homo* came out, Mr. Parker replied with *Ecce Deus*. After declining several valuable posts out of consideration for his congregation, Mr. Parker accepted the ministry of Poultry Chapel in 1869. In 1874 the City Temple, which had been built by subscription, was opened, and has since been the centre of Dr. Parker's labours. A great feature of his ministry is the Thursday service at noon, after which a conference is frequently held, which on one occasion was addressed by Mr. Gladstone. Among Dr. Parker's other works may be mentioned:—*The Paraclete*, *Ad Clerum*, *The City Temple Pulpit*, and *The Apostolic Life*. His works are as popular in America, which he visited in the capacity of Congregational Delegate, as in this country, and his degree was conferred upon him by Chicago University.

The Christian Age, May 2nd, 1883.

Parker, THEODORE (b. 1810, d. 1860), preacher and Abolitionist, was born at Lexington, Massachusetts, where his father was a small farmer. He entered for the examinations at Harvard University in 1830, though he continued his usual work on the farm till the following year. He then became an assistant-master in a private school in Boston, and in 1832 opened a small school on his own account at Watertown, so that two years later he was able to go into residence at Cambridge Divinity Hall. Having spent some time as a candidate at Barnstable and other places, he was ordained to the Unitarian Church and appointed to West Roxbury, near Boston, in 1837. Parker was soon regarded as one of

the most daring, learned, and eloquent of the "Transcendentalists." He contributed to the *Dial*: he supported the "Come-outers." In 1841 he preached a notable sermon on *The Transient and Permanent in Christianity*, which alarmed the Unitarian Association, and caused his temporary retirement to Europe in 1843. On his return the conflict was renewed, and Parker was practically excluded from Boston pulpits, till early in 1846 he was invited to the Twenty-eighth Congregational Society in Boston, and finally abandoned the Unitarian body altogether. In this new position he remained quietly till his death, uninterrupted by controversy except for the attacks of the "revivalists" in 1858, and thus enabled to devote himself entirely to the positive labours of his life, attention to his parish, preaching, and the cause of the Abolitionists. The main principles of his teaching closely resembled Emerson's, but he had little of Emerson's conservative tenderness for things outworn, and little of his inventiveness and intellectual imagination. He was a scholar of wide and too miscellaneous reading, possessed of extraordinary tenacity of mind and memory. He was no poet, even in thought. His historic importance is as a high-principled leader in the great practical movements of the time. From 1849 to 1851 he was the most conspicuous member of the Vigilance Committee that organised resistance in Boston to the Fugitive Slave Bill. From 1856 to 1859, as an intimate friend of Garrison and John Brown, he did all that was possible by preaching and the supply of arms to assist the Abolitionist cause during the Kansas War and the raid on Harper's Ferry. From the first he had foretold that only a righteous war would settle the question, but he himself did not live to see it. He died in Florence of consumption. His works in the complete edition of 1863 are divided, according to their subject, into *Discourses of Theology, of Social Science, of Politics, of Slavery; Historic Americans; and Miscellaneous and Critical Essays*.

John Weiss, *Life of Theodore Parker* (1863); O. B. Frothingham, *Life of Theodore Parker* (1874); P. Dean, *Life of Theodore Parker* (1877).

* **Parnell**, CHARLES STEWART, M.P. (b. 1846), Irish statesman, is of Anglo-Irish extraction on his father's side, Parnell the poet, and Sir H. Parnell (CONGLETON) having been members of the family, and his mother is the daughter of Admiral Stewart, of the U.S. Navy. Educated at Magdalen College, Cambridge, he became High Sheriff for county Wicklow in 1874, and in the same year unsuccessfully contested Dublin county. In April, 1875, however, he was returned for county Meath in the Home Rule interest on the death of Mr. John Martin. It was not long before he began to win the leadership of the Home Rule party from Mr. Butt, whose somewhat passive policy was supplanted

by one of obstruction to Parliamentary business inaugurated by a small band of seven in the session of 1877. The dissensions in the Home Rule party became accentuated in 1878, when Mr. Parnell was elected president of the English Home Rule Association instead of Mr. Butt; and his projected National Convention of 1879 fell through owing to the opposition of Mr. Butt's successor, Mr. Shaw. The agrarian agitation of that year, however, gave him his opportunity. He placed himself at the head of the movement, and in October he was chosen President of the Irish National Land League. [DAVITT.] In December he sailed for the United States to collect subscriptions, and was allowed to speak in the House of Representatives at Washington. At the General Election of 1880 he was returned by Meath, Mayo, and Cork City, took his seat for the last, and on May 17th was chosen president of the Home Rule party in place of Mr. Shaw. Meanwhile, the agrarian agitation continued; the Government Compensation for Disturbance Bill was thrown out by the Lords, and in a speech at Ennis on Sept. 19th, 1880, Mr. Parnell formulated the instrument of social ostracism which, from the name of one of its most prominent victims, became known as Boycotting. Arrested in December in company with other leaders of the Land League, he was acquitted in January, 1881, owing to the non-agreement of the jury. The following session witnessed the stubborn resistance of Mr. Parnell and his followers to the Arms and Coercion Bills, their consequent suspension from debate on more than one occasion, and the passing of the Irish Land Act. Mr. Parnell, however, declined to accept it as a final settlement of the question, and proposed that test cases should go before the Land Court, the result being that on Oct. 13th, after Mr. Gladstone had denounced him in a powerful speech at Leeds, he was arrested, in company with Messrs. Dillon, Sexton, and O'Kelly, and lodged in Kilmainham Gaol. A "No rent" manifesto issued in their names was followed by the suppression of the Land League. He remained in prison until May 2nd, 1882, when the Government, finding that the state of affairs was not more hopeful, released him after a correspondence that was much discussed in the House of Commons. The assassination of Lord F. Cavendish and Mr. Burke having necessitated the passing of the Crimes Act, Mr. Parnell's attitude did not long remain conciliatory; the National League arose in October, 1883, phoenix-like, from the ashes of the Land League, after a scene which seemed to portend a revolt headed by Mr. Michael Davitt. Mr. Parnell's personal popularity was testified by his receiving the freedom of most of the chief cities of Ireland, and in December, 1883, he was presented with a national testimonial of £38,000, which had been collected in spite of the opposition of

the Roman Catholic hierarchy. During later sessions the Parnellites had relaxed the policy of parliamentary obstruction, but their action was simply *reculer pour mieux sauter*. In a speech at Cork in January, 1885, Mr. Parnell announced that the restoration of Grattan's Parliament was imperative; and at Arklow, in August, having apparently brought away false impressions of the pliability of the Government from an interview with Lord Carnarvon, he announced that the Irish must protect their industries. One result of the general election of 1885 was the increase of the Parnellite party to some eighty-five members, and they held the balance in the House of Commons. Signs of rupture in the party had been evident more than once, and when Mr. Parnell insisted on Captain O'Shea coming forward as a candidate for Galway, a dangerous revolt arose, led by Messrs. Healy and Biggar, but it was crushed at once by Mr. Parnell's presence. During the earlier session of 1886, Mr. Parnell supported Mr. Gladstone's measures for the settlement of Irish difficulties, and during the general election which followed the rejection of the measure for the better government of Ireland, he supported the candidature of several Gladstonians, notably of Sir C. Russell at Hackney. The Parnellite party suffered severe losses in the defeats of Messrs. W. O'Brien and T. M. Healy, but Mr. Sexton gained for them an important victory at West Belfast.

Parnell, Sir Henry. [CONGLETON.]

Parr, Samuel, LL.D. (b. 1747, d. 1825), was born at Harrow-on-the-Hill, and spent two years at Emmanuel College, Cambridge, but his father's death compelled him to accept an assistant-mastership at Harrow, 1767. After applying unsuccessfully for the vacant headmastership in 1771, he started a rival establishment at Stanmore. In 1777 he became headmaster of Colchester School, of Norwich School in 1778, and in 1780 accepted the living of Hatton, in Warwickshire, where he spent the remainder of his life. Dr. Parr had in his day an enormous reputation, based chiefly on his conversational powers; for his learning was more showy than real. His emphatic Whiggism is amusingly displayed in his Latin preface to his edition of the works of Bellenden. Dr. Parr's collected works, critical, metaphysical, and so forth, were published in 8 vols. by Dr. J. Johnstone, but they have not kept their place in literature.

W. Field, *Life of Parr*; Dr. Johnstone's biographical preface to his collected works; De Quincey's Essay on Dr. Samuel Parr on *Whiggism in its Relations to Literature*.

* **Parry, Charles Hubert Hastings** (b. 1848), musical composer, was born in Gloucestershire, and early displayed his genius for music, having composed two services and several songs and minor pieces whilst still at Eton. He graduated as Mus. Bac. at

Oxford whilst still only nineteen, and afterwards entered at Christ Church. After leaving Oxford, he studied music at Stuttgart, and also in London under Prof. Macfarren. The following are some of his more important compositions:—Overture *Guillem de Cabestanh* (1879); trio for piano, violin, and cello in \sharp minor (1880); string quartet in \flat ; cello sonata in \sharp ; piano concerto in \sharp sharp (1880); the great "cantata," a setting of Shelley's *Prometheus Unbound*, performed at the Gloucester Festival in 1880; and the incidental music to the *Birds* of Aristophanes, performed at Cambridge in 1883. Mr. Parry is strongly imbued with Wagner's influence, and in 1880 Dr. Richter declared that in him England had at last produced a great musician.

Parry, John Orlando (b. 1810, d. 1879), the popular comic singer and pianist, and originator of the "musical sketch," was the son of a Welsh musician, and made his first public appearance as a harpist in 1825. He afterwards became an excellent pianist, and in 1831 made his *début* as a baritone. It was not until 1836 that he revealed his special talent as a buffo singer. The success of his entertainment, *Wanted a Governess*, induced him to relinquish serious singing entirely in 1840, and from this date his songs were one of the most popular features in all the principal concert programmes. *Wanted a Wife*, *Blue Beard*, *Country Commissions*, *Matrimony*, *Fair Rosamond*, and *The London Season*, were among the best of these productions, the words of which were generally penned by Albert Smith, the music by himself. In 1849 an entertainment, written by Albert Smith, was a great success, and from that date he no longer appeared at concerts. In 1853 ill health obliged him to retire from public life for a season; he became organist at St. Jude's, Southsea. In 1860 he reappeared before the public in Mr. and Mrs. German Reed's entertainment, and continued to do so until his health forced him to retire in 1869. At a benefit performance at the Gaiety given in 1877, he took his final farewell of the public.

Parry, Sir William Edward, F.R.S. (b. 1790, d. 1855), British navigator, was the son of a well-known doctor at Bath, and in 1803 joined the Channel Fleet as a first-class volunteer. He received his commission in 1810, and was then sent north in the *Alexander* to protect the Spitzbergen whale fisheries. From 1813 to 1817 he served on the North American station, and circulated among the crews manuscript copies of a little work on *Nautical Astronomy by Night*. After his return to England he was appointed to command the *Alexander* under the orders of Captain John Ross in the expedition which was to discover the North-West passage. The explorers returned, having accomplished little; but Parry made known his belief in the

possibility of success, and was accordingly sent out with a new expedition in 1819. On this occasion he reached long. 110° W. in Melville Sound, having advanced 30° farther west than any previous explorer. His *Narrative* appeared in 1821, and he was appointed commander and made an F.R.S. Two other attempts were made, in 1821-3, of which he published a *Journal*, and in 1824-5, of which also he published an account, but the passage was discovered on neither occasion. He was next occupied as hydrographer to the navy, but finding the employment tedious, he obtained leave from the Admiralty to attempt to reach the North Pole in sledges, starting from Spitzbergen. He started in March, 1827, and reached lat. 82° 40'; but it was then discovered that the ice on which the expedition was travelling was rapidly moving southward, and he was obliged to abandon the scheme in despair. A *Journal* of this voyage was published, and a complete edition of his voyages appeared in 1833. Sir Edward Parry's subsequent career may be briefly summarised; he was Commissioner to the Agricultural Company of Australia, 1829-34, and held various Government appointments until 1846. In 1852 he was made a Rear-Admiral, and in 1853 he became Governor of Greenwich Hospital, an appointment he held until his death.

The Rev. E. Parry, *Memoirs of Rear-Admiral Sir W. E. Parry*.

* **Pasteur, Louis** (b. 1822), a celebrated French chemist and physiologist, was born at Dôle, where his father, an old soldier of the First Empire, followed the business of a tanner. He was, however, a man of some intelligence, and made strenuous efforts to give his son the best education in his power, in order that he might become a master in the Arbois College. Accordingly, in 1842, after passing through the elementary schools of his native town, Louis Pasteur was entered as a candidate for the École Normale of Paris. But passing only fourteenth on the list, young Pasteur voluntarily devoted another year to study, entering in 1843 as fourth among the aspirants. Already he had begun to devote himself to chemistry, and now, under Dumas at the Sorbonne, and Balard at the École, this study absorbed a large portion of his time. Under Delafosse he became a proficient in molecular physics also, and while listening to his lecturer struck upon the ideas regarding dissymmetry, which at a later period of his life he developed at greater length. After graduating, he was appointed assistant professor of physics at Strasbourg. In 1854 he removed to Lille, as dean of the faculty of sciences, and though still an enthusiast in molecular physics, he regarded it politic, considering that the staple industry of the town was distilling, to devote some of his lectures to the subject of

fermentation. In the course of the next few years, spontaneous generation, wine, vinegar, the silkworm disease, splenic fever, chicken cholera, and hydrophobia received his attention, and were wonderfully elucidated by his researches. By his discovery (suggested no doubt by Jenner's on the prophylactic influence of variola against small-pox) that an attenuated virus of the splenic fever (the "charbon," or woolsorters' disease), if used as inoculating matter, could produce so mild a form of this plague that it protected the animals from any more severe attack, he succeeded in saving millions to the graziers. In like manner his discovery that inoculating a person bitten by a mad dog with an attenuated virus of the poison producing rabies, acts in such a manner that the original poison seems neutralised, and the patient recovers, has almost revolutionised one section of medicine. These conclusions have, of course, been stoutly contested. But as they rest upon the basis of nearly two thousand cases, in which only a very few proved fatal, it is impossible—always allowing that the dogs which bit the people were actually mad, that the poison entered their systems, or that the days of incubation were completed—to reasonably deny the claims made on M. Pasteur's behalf. After his removal to the École Normale a large pension, voted by the Legislature, enabled the savant to devote the greater portion of his time to the researches indicated, and now that his admirers, aided by the Paris municipality, are erecting a large hospital and laboratory for the treatment of hydrophobia under his system, the results are likely to prove even more valuable in the future than in the past. M. Pasteur has received all honour, both from his own and from foreign countries. He is not only a member of the Academy of Sciences, but was elected as the successor of Littré to a seat in the Academy, an honour rarely bestowed on a man of science without special literary claims; while orders, doctorates, and other honorary diplomas, have been showered on him by almost every civilised country in the world.

M. Pasteur: *Histoire d'un Savant, par un Ignorant* (his son-in-law), which was published in 1883, and has been translated into English by Lady Claud Hamilton, with an introduction by Professor Tyndall, gives the fullest particulars of his career.

* **Patey, JANET MONACH, née WHYTOCK** (b. 1842), the first among English contralto concert singers, was born in London. Her first appearance was at the Birmingham Town Hall. She subsequently became a member of Henry Leslie's choir. In 1865 she was engaged by Mr. Lemmens for a provincial tour, and in the following year married JOHN GEORGE PATEY, a baritone who had gained a considerable reputation in opera and oratorio. Mme. Patey's name is associated with all the principal musical works produced during her

public career, her fine declamatory style especially suiting her for those parts requiring dramatic power. In 1871 she made a very successful tour in America, and in 1875 received from the Conservatoire de Paris a medal in acknowledgment of her magnificent rendering of "O rest in the Lord," at two of its concerts.

Grove's Dictionary of Music.

***Patmore**, COVENTRY KEARSEY DEIGHTON (b. 1823), poet, the son of Peter George Patmore, author and editor, in the early days of his authorship contributed largely to the *Edinburgh Review*, *North British Review*, *National Review*, *Saturday Review*, and other journals; and in 1844 he published his first volume of *Poems*. In 1847 he was appointed an assistant librarian at the British Museum. In 1850 he was so far involved in the Pre-Raphaelite movement as to be a contributor, though not on a large scale, to *The Germ*, the recognised organ of the movement. In 1853 appeared his *Tumerton Church-Tower, and other Poems*, a volume sufficiently remarkable in poetic quality; but it was not till the next year that Mr. Patmore's distinct place as a poet was assured by the issue of the first instalment of *The Angel in the House* (*The Betrothal*). *The Espousals* came out in 1856; a revised edition of the two parts was issued in 1858; and a further revision followed in 1860. In the latter year appeared also *Faithful for Ever*; and in 1863 *The Angel in the House* was completed by the publication of *The Victories of Love*. These two volumes did not purport to form parts of *The Angel in the House*; but the theme is continuous; and in the fourth edition (1866) all four volumes are included under the general title. This important recast of Mr. Patmore's work was issued at about the time when the author retired from his post in the British Museum, after which event he bought and occupied an estate of some 400 acres in Sussex, which he farmed and improved. In 1868 he printed privately a small collection of *Odes*; and shortly afterwards he settled at Hastings, where he still lives, and where he has built a large Catholic Church. *The Angel in the House* was withdrawn from circulation in or about 1871; but in 1878 it made a fresh appearance, once more fastidiously revised, in a collected edition of the author's poems, preceded by a valuable essay on *English Metrical Law*. In the meantime had appeared (1877) *The Unknown Eros, and other Odes*, which, also, was absorbed into the 1878 collection. In 1884 appeared a remarkable volume of posthumous poems (privately printed) by Henry Patmore, to which his father, the subject of this notice, wrote a few pathetic prefatory words. The list of Mr. Patmore's works is not complete without mention of *The Children's Garland*, a poetical anthology which he edited for the "Golden Treasury

Series," and the Autobiography etc. of Bryan Waller Procter (Barry Cornwall), published under his editorship in 1877. In 1886 Mr. Patmore issued what is designated as a final edition of his poems, which he has over and over again subjected to scrupulous revision, and has thus brought to a high degree of technical excellence. The lasting merit of his work is that it deals with love from the modern and domestic point of view in a manner that is at once manly, exquisitely refined, and wholly sincere and impassioned. The topic absorbs utterly a fine and cultivated poetic nature; and *The Angel in the House* has a place of its own among the achievements of the nineteenth century.

[H. B. F.]

***Paton**, SIR JOSEPH NOEL, R.S.A., LL.D. (b. 1821), artist, was born at Dunfermline, where his father, a Quaker, and afterwards a Swedenborgian, was a manufacturer. Having shown some capacity for art, Noel Paton was sent to study at the Royal Academy in London under George Jones, R.A., for a time in 1843, but he never received any systematic training. Some of his earliest works were outline illustrations to the *Tempest* and *Prometheus Unbound*, published 1844-5, and his first exhibited picture, *Ruth Gleaning*, was at the Scottish Academy in 1844. In 1845 he won a prize at the cartoon exhibition in Westminster Hall for his *Spirit of Religion*, and again in 1847 for his *Christ Bearing the Cross*, and the *Reconciliation of Oberon and Titania*, now in the National Gallery at Edinburgh, with *The Quarrel* from the same play (1850). His reputation was now established, and the following important works mark the succeeding years:—*The Eve of St. Agnes* (1852); *The Dead Lady* (1854); *The Pursuit of Pleasure*, one of his best known works, and *Christian at Vanity Fair* (1855); *Home*, a Crimean soldier, exhibited at the Royal Academy in 1856; *In Memoriam*, a scene in the Indian mutiny, exhibited 1858; *Dawn—Luther at Erfurt* (1861); six illustrations to the *Dowie Dens of Yarrow* (1862); a series of designs for the *Ancient Mariner* (1863); *Mors Janua Vitæ* (1866); the illustrations to the *Water Babies* (1869); *Faith and Reason* (1871); *Satan Watching the Sleep of Christ* (1874); *The Man of Sorrows* (1875); *The Spirit of Twilight* (1875); illustrations to *Rab and his Friends* (1878); *Lux in Tenebris* (1879); and *Puck*, a fairy scene, exhibited at the Grosvenor Gallery, 1883. The titles of his pictures alone would be enough to show that the artist generally turns for his subjects to religious or mystical themes and allegories, or else to realms of fairyland and ancient legend; his most important works are, however, too familiar through engravings to need further description. He became a member of the Scottish Academy in 1860, was appointed Her Majesty's Limner for Scotland in 1866,

knighted in 1867, and made LL.D. of Edinburgh in 1876.

Art Journal, 1869, p. 1; and 1881, p. 78 (by J. M. Gray).

Patteson, JOHN COLERIDGE (b. 1827, d. 1871), Bishop of Melanesia, the son of Justice Patteson, and cousin of Samuel Taylor Coleridge, was educated at Ottery St. Mary, Eton, and Balliol College, Oxford. In 1852 he became a fellow of Merton College, and curate of Alington, and in 1854 went to the Melanesian Islands as bishop. His eminent success as a proselytiser was deservedly rewarded by the bishopric of Melanesia in 1861, but in 1871 he was murdered by a native.

Charlotte M. Yonge, *Life of J. C. Patteson*.

* **Patti, ADELINA MARIA CLORINDA** (b. 1843), a singer of Italian and Spanish extraction, was born at Madrid, and received her musical education from her brother-in-law, Maurice Strakosch. Her parents removed to America, where the young artiste appeared at a very early age, but wisely retired to re-appear in November, 1859, at New York, where she created a most favourable impression as Lucia. In May, 1861, she made her *début* as Amina at Covent Garden, and her brilliant success in this and the later rôles—Lucia, Violetta, Zerlina, Martha, and Rosina—essayied in the same year, established her reputation among English opera-goers. The charm of her person and manner have considerably helped to enhance the effect of her brilliant and finished execution and great artistic power. In Italian opera she has shown great versatility, having succeeded equally well as the exponent of passionate tenderness and of the lighter moods of comedy. In the autumn of 1861 she sang at the Birmingham festival, and afterwards at Berlin, Brussels, and Paris. In 1862 she made an operatic tour in the English provinces, and in 1863 revived the parts of Ninetta in *La Gazza Ladra*, Norina in *Don Pasquale*, and Adina in *L'Elisir d'Amore*. In 1864 her Margherita was an acknowledged triumph, and at the Birmingham festival of that year she sang the music of Adah in *Naaman*. In 1867 her Juliet in Gounod's opera was one of the chief features of the operatic season. She sang at the Handel festivals of 1865, 1877, and 1880, at the Liverpool festival of 1874, and fulfilled with the same success engagements at Paris, Vienna, St. Petersburg, Moscow, and other European cities. In 1868 she was married to the Marquis de Caux, from whom she was afterwards divorced, and in 1886 she married Signor Nicolini.

Grove's Dictionary of Music.

Pattison, MARK (b. 1813, d. 1884), was born at Hornby, in the North-Riding, but spent his boyhood at Hauxwell, near Richmond, where his father was the vicar. He represents himself in his *Memoirs* as an

instance of unusually late development, caring in his youth mainly for outdoor pursuits. Nevertheless, when he went to Oriel College, Oxford, in 1832, he already set the scholar's life before him as his ideal. In Oxford he became self-conscious, solitary, and so dilatory in his work that in 1836 he only obtained a second class, and his hopes seemed to be ruined. He remained in Oxford, however, throughout the heat of the Hampden controversy, working in close intimacy with Newman and other Oriel leaders of the "Oxford Movement," and in 1839 he was at last elected to a fellowship at Lincoln College. About this time he was largely employed by Pusey and Newman in their translation and edition of the Fathers, thus laying the foundation of his vast ecclesiastical knowledge. In 1841 he was ordained, and in the same year and the next he gained the Denyer theological prize. During these years, as he tells us, he was an "ultra-Puseyite." When Newman left St. Mary's in 1843, Pattison resided for some time with him at Littlemore, but, owing, as he afterwards thought, to his wide and persevering studies, he "did not share in the crash of 1845." After this the change in his mind towards advanced "Liberalism" became more perceptible every year. He devoted himself to the reform of university education, and the superintendence of his own college, till in 1851 he was disappointed of election to the rectorship. In 1853 he was appointed one of the first examiners in the reformed Final Schools, and two years later he published some papers on education in the *Oxford Essays*, but for ten years he took little other part in university affairs. He wandered throughout Germany, visiting most of the universities, and in 1858 he acted as *Times* correspondent in Berlin. In 1860 he became one of the contributors to the *Essays and Reviews*, sending his account of the *Tendencies of Religious Thought in England (1688-1750)*. In 1861 he was elected rector of Lincoln College. Of his remaining works, omitting numerous articles in the *Quarterly* and *Nineteenth Century*, the following may be mentioned:—Editions, with elaborate notes, of Pope's *Epistles and Satires* and the *Essay on Man* (1869); the great work on *Isaac Casaubon* (1875); *Milton in the Men of Letters Series* (1879); and the *Sonnets of Milton* (1883). In 1883 he was making preparation for a life of Scaliger. All these works, even the smallest, are monuments of profound learning and unexhausted research; but his great service to learning was that he made the scholar's life an end in itself, not a means for the production of books. His interest in education and university reform is proved by his other writings, namely:—*Suggestions on Academical Organisation* (1868), and *Review of the Situation for the University Reform Bill of 1876* (published in *The Endowment of Research*).

He also acted as assistant-commissioner on the Duke of Newcastle's commission of Enquiry into Elementary Education in Germany. A volume of his sermons was published in 1885. In 1862 he married Emilia Frances Strong, afterwards Lady Dilke, and the authoress of the *Renaissance of Art in France* (1879) and *Claude Lorraine* (in French, 1884). His sister, DOROTHY WYNDLOW PATTISON (b. 1832, d. 1878), the heroine of what Pattison himself called "Miss Lonsdale's romance," *Sister Dora*, was born at Hauxwell, began to teach in a school at Bletchley (1861), joined the Sisterhood of Good Samaritans (1864), and in the next year went as nurse to the accident hospital at Walsall, where, with one short interval of nursing at an epidemic hospital in 1875, she remained till the year of her death.

Memoirs by Mark Pattison (1884); *Times* of July 31st, 1884; T. F. Althaus, *Recollections* (1884).

Pauli, REINHOLD (b. 1823, d. 1882), the German historian of England, studied at Berlin, where he attended the lectures of Ranke, and afterwards at Bonn. He came in 1847 to England, and was for several years private secretary to the Chevalier Bunsen, then the Prussian Minister in London. In 1855 he returned to Germany, was elected a fellow at Bonn, and appointed two years later to a professorship at Rostock, whence in 1859 he accepted a similar office at Tübingen. During the war of 1866 an article of his in the *Prussian Annals*, sharply criticising the position of Württemberg, necessitated his withdrawal from that kingdom; cordially received in Prussia, he became in 1867 professor at Marburg, and in 1870 at Göttingen, where he remained until his death. Professor Pauli represented the University of Marburg in the German Upper House, and in 1874 received the honorary degree of D.C.L. from Oxford and of LL.D. from Edinburgh. He published at Berlin, in 1851, his *Life of King Alfred*, of which two translations have appeared in England; at Gotha, from 1853-8, a continuation of Lappenberg's *History of England* (covering the period from Henry II. to Henry III.); from 1864-75, *A History of England since the Treaties of 1814 and 1815*; *Pictures of Old England*, the most popular of his works in this country, was translated in 1861; and in 1867 appeared a monograph on *Simon de Montfort, Creator of the House of Commons*, also translated, and in 1869 *Essays on English History*.

Paxton, SIR JOSEPH (b. 1803, d. 1865), architect and horticulturist, was a native of Milton Bryant, Beds, and entered the service of the Duke of Devonshire at Chiswick as a gardener. Transferred to Chatsworth, his abilities soon found expression in designs for the fine gardens and conservatory. He was also editor of the *Horticultural Register*,

started in 1831; the *Magazine of Botany* (1833, etc.); and the extremely popular *Collage Calendar*; and the author of an excellent *Pocket Botanical Dictionary* (first ed. 1840). He was led by his knowledge of the architectural uses of glass and iron to propose a building of those materials for the Great Exhibition of 1851, and his plans were accepted by the committee. It proved an immense attraction, and Paxton was knighted. He also superintended the construction of the Crystal Palace on its new site at Sydenham, and laid out the grounds. In 1854 he was elected member for Coventry in the Liberal interest, and sat until his death.

* **Payn, JAMES** (b. 1830), novelist, was educated at Eton, Woolwich Academy, and, having abandoned his original design of entering the army, at Trinity College, Cambridge (B.A. 1854). He first courted publicity as a poet with *Stories from Boccaccio* (1854), and *Poems* (1855), but fiction became his sheet-anchor, and in 1858 he was made editor of *Chambers's Journal*. In 1882 Mr. Payn became editor of the *Cornhill Magazine*, in succession to Mr. Leslie Stephen. Mr. Payn is one of the most prolific novelists of the day, and three or four works of fiction per annum are usually turned out by his busy pen. At the same time he is one of the most popular; his works never fall below a high standard, and possess the varied attractions of lively dialogue, a keen sense of the ludicrous, and a clever manipulation of incident. Among his most happily conceived works may be mentioned:—*The Lost Sir Massingberd* (1864), *Like Father Like Son* (1871), *At Her Mercy* (1874), *By Proxy* (1878), *What He Cost Her* (1879), *Two Hundred Pounds Reward* (1880), and *For Cash Only* (1882). Mr. Payn has also published collections of essays, such as *Some Private Views*, several handbooks to the Lake District, and some capital *Literary Recollections* (1884).

Peabody, GEORGE (b. 1795, d. 1879), the well-known philanthropist of the Old and the New World, was the son of poor but respectable New England parents. After receiving a scanty education, he was apprenticed to a grocer, and afterwards joined his brother in a "dry-goods" store at Newburyport. This business was destroyed by fire, and young Peabody went to manage his uncle's business at Georgetown, and in 1812 served as a volunteer during the war with Great Britain. But it was as working partner in the firm of Riggs and Peabody that he began to realise a fortune. In 1815 the business was removed to Baltimore, and branches were established at Philadelphia and New York; Peabody becoming head of the firm in 1830. In 1838 he settled in London, and on his withdrawal from the American firm established a large banking business in England (1843). In 1851 his generosity supplied the sum needed for

the arrangement of American exhibits at the Great Exhibition in Hyde Park; in 1852 he aided Henry Grinnell to fit out the expedition in search of Franklin; and in the same year gave £25,000 to found a free library and educational institute at Danvers, his native place. For a similar purpose at Baltimore he gave in all four times this sum, and in 1862 gave the first donation of £150,000 into the hands of trustees to be used to better the condition of the London poor, known as the Peabody Fund; this was subsequently increased by gifts and bequests to £500,000, and employed to erect model artisans' dwellings. In acknowledgment of his munificence, he was offered a baronetcy, but refused it. In 1866 Peabody returned to America for a three years' visit, during which time he founded numerous Chairs and institutes. He also endowed a school of art at Rome. On his death in England his body received funeral honours at Westminster, and was afterwards conveyed to America and buried in his native city, now called after him Peabody.

Peacock, THOMAS LOVE (b. 1785, d. 1866), novelist and poet, was born at Weymouth, Oct. 18th, 1785. He was the son of a London merchant, who early left him an orphan; he quitted school before he was thirteen, and completed his education himself, "reading the best books, illustrated by the best critics." Thus self-educated, he became one of the best classical scholars of his time. As a young man he published several volumes of poetry, one of which introduced him to the acquaintance of Shelley, whose intimate friend he became, and who left him his executor. His first considerable work was *Headlong Hall*, published in 1815, the type of all his subsequent novels; *Melincourt* followed in 1817; *Rhododaphne*, a beautiful but too artificial poem, appeared in 1818; *Nightmare Abbey* in the same year; *Maid Marian* in 1822. In 1819 he had become an assistant examiner at the India House, and in 1836 he succeeded James Mill as chief examiner. The responsibilities of these important appointments greatly restricted his literary activity. *The Misfortunes of Elphin*, however, appeared in 1829, *Crotchet Castle* in 1831, and *Gryll Grange* in 1860, after his retirement from the East India Company's service. Peacock's novels are unique in their way. They possess few of the ordinary attributes of works of fiction, having hardly any plot, and making no pretence to the accurate delineation of character. They may be described as imaginary conversations strung upon the slenderest thread of narrative, sparkling with wit and satire, solid with ripe learning, instructive from the writer's robust good sense, and amusing from his obstinate prejudices, interspersed with delightful lyrics, and treating of all things under the sun. Their nearest literary analogue is, perhaps, the comedy of

Aristophanes. Peacock's official services were highly valued by the East India Company; he was an amateur in ship-building, and designed the first iron steamers that doubled the Cape. He died Jan. 23rd, 1866, at Lower Halliford, where, so far as his London engagements would allow, he had lived for more than forty years. [R. G.]

Pedro I. and II., of BRAZIL. [BRAZIL.]

Pedro V. and VI., of PORTUGAL. [PORTUGAL.]

Peel, SIR ROBERT, 2nd baronet (b. 1788, d. 1850), born on Feb. 5th, 1788, near Bury in Lancashire, was the son of Sir Robert Peel, a wealthy manufacturer, who was created a baronet in 1800, and died in 1831. He was anxious from the first that his heir should make a figure in politics, and used to say to him in jest, "Bob, you dog, if you're not Prime Minister, I'll disinherit you." The son, however, had no intention of disappointing the father, and after a successful career at Harrow and Oxford, where in the year 1808 he obtained a double first-class, he entered the House of Commons as member for Cashel in 1811, and was at once, at the age of twenty-three, made Under-Secretary for the Colonies. In 1812 he was appointed to the much more responsible post of Chief Secretary for Ireland, in which his anti-Catholic disposition was so strongly manifested that he acquired the nickname of Orange Peel. O'Connell sent him a challenge, but the authorities prevented a duel. In 1816 he succeeded Mr. Abbot in the representation of the University of Oxford, and in the following year made a speech against the Roman Catholic claims, which Charles Buller declared to be the ablest defence of the Protestant position with which he was acquainted. In 1818 Mr. Peel's strong religious views had made him so unpopular in Ireland that it was judged better for him to retire from the Secretaryship, and he then remained out of office for four years. It was about this time that his talents for business and natural genius for finance began to show themselves through the scholarship and literary culture by which he had hitherto been distinguished, and in 1819 he was appointed chairman of the Bank Committee, and soon became known as the leader of the party who advocated a return to cash payments. The soundness of his views on political economy, and his great parliamentary ability, which now became conspicuous, did much to restore the waning popularity of Lord Liverpool's Cabinet. The interval which elapsed between his retirement from office in 1818, and his return to it in 1822, does not seem to have made any change in his opinions. He had enjoyed a long period of leisure, during which he had abundant opportunity of reflecting on the state of the country and the spirit of the age, and of examining his own mind with regard

to the great public questions which then agitated society. But he returned to office the same man that he had left it: the uncompromising champion of the old Constitution both in Church and State, and the faithful representative of the views of his university constituents. At this time, then, he represented the Addingtonian section of the Tories in the House of Commons, as Canning, who rejoined the government at the same time (1822), represented the Pittite section. On his reunion with the government in that year he was appointed to the Home Office, vacated by Lord Sidmouth, and in this position was the author of useful reforms in several departments of administration. He reformed the criminal code, introduced the Weights and Measures Act of 1824, and was extremely useful to the Government in the financial debates of 1825-6. But a period was now approaching when questions of a different calibre were to try the mettle of statesmen, and Mr. Peel found himself plunged into all the difficulties of a transition epoch. On Feb. 17th, 1827, Lord Liverpool was seized with apoplexy, and though he lingered on till December of the following year, he never recovered, and it became necessary very shortly to appoint a new Prime Minister. The choice apparently lay between three men—Mr. Canning, the Duke of Wellington, and Mr. Peel—and the long and tangled thread of negotiations and intrigues which preceded the formation of the new government cannot be fully unravelled in so brief a notice as the present. All three were agreed in this, that they would serve together in any new ministry formed on the basis of Lord Liverpool's; that is to say, one in which the Roman Catholic question was left open, the Prime Minister being neutral. Unfortunately no such Prime Minister could be found; and finally, driven into a corner, and determined to show his independence, the king sent for Mr. Canning. Mr. Peel's conduct throughout these intricate transactions has been considered ambiguous, and on the assumption that he had communicated to Lord Liverpool as early as 1825 his doubts whether the Roman Catholic disabilities could any longer be maintained, it wears a suspicious aspect, which, if nothing more can be added to his own version of the story, published shortly after his death, is, we fear, destined to be permanent. Lord George Bentinck once told Sir Robert Peel that he had worried Mr. Canning to death. Be this as it may, Mr. Canning died four months after his accession to office, and, after the feeble interlude of Lord Goderich, left the way open to Peel and Wellington to form a Cabinet of their own. Peel again became Home Secretary, and now also leader of the House of Commons, in which capacity he had to propose to the House the Bill for Roman Catholic Emancipation, his antipathy to which

had, he said, been his sole reason for refusing to act with Mr. Canning. The Bill, which cost Mr. Peel his seat for Oxford, was carried through both Houses of Parliament in 1829, with the result, as might be expected, of breaking up the Tory party, though vengeance did not overtake its author till November, 1830. In the meantime Mr. Peel introduced and carried his new Police Bill, which has transmitted his name to posterity in as durable a form, perhaps, as anything else that he has done. In November, 1830, the Government were defeated on the Civil List, and at once resigned. The Whigs succeeded to office, and Mr. Peel found himself, for the first time in his life, the leader of the Opposition. How admirably he discharged his functions during the next ten years is matter of history: and he did within this brief period what no other living man could have done—that is, completely re-established the ascendancy of the Tory party in spite of the great popular services which the Whigs had rendered to the country, and the utter prostration of Conservatism, which was the immediate effect of the Reform Bill. Of this measure Sir Robert, who in 1831 succeeded to the baronetcy, was a strenuous opponent, and though his tactics may in one or two respects have been erroneous, he greatly distinguished himself in debate, and even in the first Reformed Parliament was the foremost man in the House of Commons. The Liberal majority, however, was too large, and composed of too discordant elements, to be long held together; and the internal dissensions which agitated the ministerial party in 1833-4 alone made it possible for William the Fourth to dismiss the Whigs from office, and to call on Sir Robert and the Duke of Wellington to form a Conservative administration. Sir Robert was at Rome when the summons reached him, and he hurried home as fast as post-horses could carry him, arriving in London on the 9th of December. Having formed his Cabinet, he came to the resolution that it would be wiser to dissolve Parliament at once, and his address to his own constituents, which he published on this occasion, has ever been regarded as a State Paper. The Tamworth manifesto, though it has been censured as “an attempt to construct a party without principles,” hardly deserves the satire. It was an attempt to persuade the country that there was a middle course between the stationary creed of men like Eldon and Wetherall, and the revolutionary creed, as it was thought, of men like Hume, Cobbett, Roebuck, Leader, and O'Connell, which the Whigs seemed unable to withstand. No other kind of appeal, at all events, had any chance of giving him the Parliamentary majority which he wanted; and even this was unsuccessful. Sir Robert gained a hundred seats, but these were not enough to defeat the forces of the Opposition, who in

the following May returned to office, to retain it for six years longer. It was during this period that Sir Robert Peel's parliamentary talents shone with peculiar lustre. In all the great contests of the day—the Appropriation Clause, a clause in the Irish Church Bill for appropriating ecclesiastical revenues to secular purposes; the Municipal Corporation Bill, the Irish Municipal Corporation Bill, the Poor Law Bill, the Tithes Bill, and the University Tests Bill—the part which he played was invariably marked by common sense, moderation, and a happy combination of dignified eloquence with practical ability, which gradually gained him the entire confidence of the country, and made the result of the general election of 1841 a foregone conclusion. At this period of his career his party worshipped him. He had raised them from the dust, and restored all their ancient reputation: and he himself used to say that he would not exchange his position as “the leader of the country gentlemen of England for the confidence of princes.” The idol, however, was soon to be shattered in the dust. It was unfortunate for Sir Robert Peel that the circumstances of the country between 1835 and 1840 forced him into closer relationship with the system of protective duties than he could probably have desired himself. As it was, he was almost obliged to build up “the great Conservative party,” which he brought back to power in 1841, on the basis of Protection, and thus placed himself in a false position which ultimately proved his ruin. The general election of the last-mentioned year yielded a Conservative majority of ninety-one, and Sir Robert, on the meeting of Parliament, immediately moved a vote of want of confidence, which finished Lord Melbourne's administration. He then acceded to office, apparently under the happiest auspices, and M. Guizot predicted that Peel would be another Walpole, and enjoy as long a term of power. But, as in Wellington's case, office was taken by the Prime Minister with a suppressed question in the closet which was sure sooner or later to be a source of trouble to him. His followers did not know this, and the large majority of Sir Robert Peel's supporters accepted all his earlier reforms of the tariff without any reluctance or misgiving. A few were alarmed, but they were very few; and more, perhaps, were offended by the Maynooth Grant, and the establishment of the Queen's colleges (the “Godless colleges”) in Ireland, than by the Budgets of 1843-4. But as early as 1844 the Protectionists had taken the alarm, and a debate on the sugar duties of that year revealed the existence of a rift in the Conservative party, which continued to grow wider and wider till the whole edifice collapsed. It is enough to say here that Sir Robert Peel, who had for some time been a secret convert to the principles of Free Trade,

was led by the Irish famine of 1845 to make open profession of them, and resigned office to give Lord John Russell an opportunity of repealing the Corn Laws. Lord John Russell, however, was unable to form a government, and Sir Robert returned to power to destroy the system which he had been placed in power to maintain. His own party, stung rather by what they conceived to be his treachery than by any inconceivable hatred of Free Trade, had not the magnanimity to resist the temptation of overthrowing him, and in July, 1846, combined with the Whigs to defeat an Irish Coercion Bill, which was thrown out by a majority of 73. Sir Robert Peel resigned, and declared that henceforth he had done with parties. He probably meant it when he said it; but had his life been spared, it is probable that we should have seen him once more at the head of a new Conservative party: his desertion of Protection being condoned after a short interval, as his desertion of Protestantism had been before. But this was not to be. After giving an efficient support to the Whig Government on the whole of their Free Trade legislation from 1847 to 1849, it might be thought that Sir Robert Peel's mission was fulfilled. In the following year, on June 29th, he was thrown from his horse on Constitution Hill, fracturing one of his ribs, the point of which penetrated his lung. After lingering in great agony for a few days, he died at his house in Whitehall Gardens on July 4th, in the sixty-third year of his age. His last appearance in the House of Commons was on June 27th, in the great Pacifico debate [PALMERSTON], when he spoke with great effect against the system of foreign policy with which the name of that statesman was at that period of his life associated, though it was then that he generously said of a political opponent that we “were all proud of him.” Two elaborate portraits of Sir Robert Peel as a statesman and a politician have been drawn by two competent hands—Lord Beaconsfield, namely, in his *Life of Lord George Bentinck*, and Mr. Charles Greville in the last volume of his *Memoirs*. They do not materially differ. Sir Robert Peel married in 1820 the daughter of General Sir John Lloyd, and his eldest son, the present baronet, was born in 1822. The Minister was a man of domestic habits, who mingled but little in general society, and, according to Greville, had no confidant but his wife. He loved the House of Commons, he loved his books and his pictures, and he loved the covers and turnip fields of Drayton Manor. He was not a sociable or genial man, and many odd stories are told of his inability to adapt himself to his company or catch the humour of the moment. But he was a liberal patron and a kind friend to all artists and men of letters whom he believed to be deserving, and his munificence to Haydon the painter is well known. After his death his

executors, Mr. Cardwell and Lord Stanhope, were authorised to publish selections from his papers bearing on the events of 1829, 1835, and 1846; and it is from these alone that we are able to judge of his motives or his difficulties in the trying situations in which he found himself.

Remains, edited by Lord Stanhope and Mr. Cardwell; *Lines*, by Mr. Laurence Peel and Lord Dalling; *Greville Memoirs*, *Croker Papers*, *Diary of Lord Colchester*. [T. E. K.]

* **Peel**, THE RIGHT HON. ARTHUR WELLESLEY, M.P. (b. 1829), youngest son of the Prime Minister, was educated at Eton, and at Balliol College, Oxford. After unsuccessfully contesting Coventry in 1863, he sat for Warwick in the Liberal interest from 1865 to November, 1885, when he was returned for Warwick and Leamington. His official career began in 1868 with the Parliamentary Secretaryship to the Poor Law Board, and he became Secretary to the Board of Trade in 1871 and Patronage Secretary to the Treasury (1873-4). On the return of the Liberals to office in 1880, Mr. Peel was Under-Secretary for the Home Department until 1884, when, on the elevation of Mr. Brand to the peerage, he succeeded him as Speaker of the House of Commons. Mr. Peel's speech on accepting the office was one of great dignity. He was re-elected in January; and again in Aug., 1886.

Pelissier, JEAN JACQUES AMABLE (b. 1794, d. 1864), Duc de Malakoff and Marshal of France, a native of Maromme, entered the French army in 1815, and after serving in Spain, the Morea, and Algeria, was sent to Algeria a second time as chief of the staff in 1839. He remained there until 1855, becoming general of division in spite of his atrocious conduct in suffocating a band of Arabs in a cave in 1846. In May, 1855, Marshal Canrobert proving unequal to his position, Marshal Pelissier succeeded him as commander-in-chief of the French forces in the Crimea, and on the fall of Sebastopol was created Duc de Malakoff. In 1860 he was appointed Governor-General of Algeria.

Marbaud, *Le Maréchal Pelissier*.

Pellico, SILVIO (b. 1788, d. 1854), Italian man of letters, was a native of Salazzo, had obtained some celebrity as a writer of tragedies, when in 1820 he was arrested by the Austrian Government and condemned to fifteen years' imprisonment. He was released in 1830, and gave to the world more tragedies, which are now forgotten. His account of his imprisonment, *Le mie Prigioni* (1832), has, however, deservedly retained the popularity which it won on its first appearance by its transparent simplicity and pleasant narrative style.

Pennethorne, SIR JAMES (b. 1801, d. 1871), architect, a native of Worcester, studied art under the elder Pugin, and

afterwards under Nash, whose assistant he was in carrying out Carlton House Terrace and the alterations in St. James's Park. In 1838 he was appointed to carry out the extension of Oxford Street eastwards to Holborn, and other government improvements; and in 1843 he became Surveyor to the Board of Works. Among his more important undertakings were the laying out of Victoria, Battersea, and Kennington Parks, of Kensington Palace Gardens, and the Chelsea Embankment. He also removed the colonnade of the Quadrant, Regent Street. In 1851 he began his five designs for the General Record Office in Fetter Lane, which were completed after his death; and in 1854 he finished the new south wing of Buckingham Palace. Two years later he finished the new west wing of Somerset House. His last work was the University of London, Burlington Gardens, opened by the Queen in 1870. In 1865 he was presented with the royal gold medal for architecture, and was knighted on his retirement from office in 1870. Although not conspicuous for any striking originality, Sir James Pennethorne's work is remarkable for the skill with which he made the most out of materials, even when they were of an unpromising character.

The Builder, Sept. 16th, 1871.

* **Penzance**, THE RIGHT HON. JAMES PLAISTED WILDE, BARON (b. 1816), the nephew of the 1st Lord Truro, was educated at Winchester College and at Trinity College, Cambridge (B.A. 1838). Called to the Bar in 1839, he became a Q.C. in 1855, Baron of the Exchequer in 1860, and Judge of the Court of Probate and Divorce in 1863, an appointment which he resigned in 1871. He was raised to the peerage in 1869, and in 1875 his knowledge of ecclesiastical law gained him the post of Dean of Arches (Judge of the Public Worship Regulation Court), and Judge of the Provincial Courts of Canterbury and York. He gave proofs of great legal acumen in his judgments on the knotty points of ritual which came before him.

Pepe, GUGLIELMO (b. 1782, d. 1855), Italian patriot, a Neapolitan by birth, served in the French army during the Peninsular War, and afterwards took part in Murat's attempt on Naples (1815). In 1820 he led the revolutionary party which extorted a Constitution from Ferdinand of Naples, but was defeated by the Austrians at Rieti in 1821, and fled to Spain, afterwards living for many years in England. He returned to Italy in 1848, and Ferdinand was compelled by the popular voice to appoint him commander-in-chief of the contingent sent to aid Venice against the Austrians. On the march he received orders to return, but promptly went over to the Venetian service; and as commander-in-chief, aided by Daniele Manin

(q.v.), conducted the heroic defence of the city against the Austrians. In August, 1849, he was compelled to capitulate, and escaped to Paris, living there until the establishment of the Second Empire, when he retired to Turin. He wrote in French an account of the Italian wars of 1847-9.

Pepys, Sir W. [COTTENHAM.]

Perceval, THE RIGHT HON. SPENCER (*b.* 1762, *d.* 1812), was the second son of the 2nd Earl of Egmont by a daughter of the Earl of Northampton. He was sent to Harrow, and in due course to Trinity College, Cambridge, where in 1781 he gained the English declamation prize. On leaving Cambridge he adopted the bar as his profession, and joined the midland circuit. In 1790 he married Jane, daughter of Sir Thomas Wilson, of Charlton, and in the same year was made Deputy Recorder of Northampton. Soon afterwards, having attracted the notice of Mr. Pitt by a pamphlet on the Warren Hastings case, he was retained for several Government prosecutions. His rise was now rapid. In January, 1796, he was made King's Counsel. In April he was returned to the House of Commons for the borough of Northampton; and four years afterwards, on the formation of Mr. Addington's government, he was made Solicitor-General. In 1802 he was advanced to the Attorney-Generalship, and henceforth remained among the firm friends of Mr. Addington, and a leading member of that section of the Tory party. On Pitt's return to power, however, in 1804, Perceval did not refuse to continue in his office, and held it till 1806, when the death of Mr. Pitt made way for a coalition ministry (All the Talents), of which Lord Grenville was the head. Perceval now became the rival of Mr. Canning for the leadership of the Tory party in the House of Commons; and it is difficult to say who at the moment actually was regarded as the leader. But Perceval soon showed himself to be the favourite of the Addingtonians, who greatly outnumbered the Pittites, and the part which he took in the Roman Catholic question at once made him a favourite with the king. On the Roman Catholic question Mr. Perceval distinguished himself by a speech which he delivered on March 6th, 1807, when Lord Grenville's Government proposed to bring in a Bill to enable Roman Catholics to hold commissions in the army in England as well as in Ireland. It was introduced in the House of Commons by Lord Howick, and when he sat down Perceval rose to answer him. His speech was considered so good that, on the downfall of the Grenville administration immediately afterwards, nobody was surprised that he was selected for the post of Chancellor of the Exchequer and leader of the House of Commons under the Duke of Portland, though both Castlereagh and Canning were members

of it. He seems at this time to have been in favour of a vigorous prosecution of the war. He approved of the seizure of the Danish Fleet by Lord Cathcart in 1807. He drew up the Order in Council of November, 1807, issued about the same time, and he approved Sir A. Wellesley's return to Portugal in the summer of 1809. The Copenhagen expedition and the Order in Council were vehemently assailed on the meeting of Parliament in January, 1808. But Perceval, whose speaking in the previous session had rather fallen off, regained his former level. At the expiration of a most laborious session, Perceval bought for himself a house and small property near Ealing, called Elm Grove, which cost him £7,500; and here he remained till the end of his career, which had but a few more years to run. With the session of 1809 came the famous scandal case of the Duke of York and Mrs. Clarke, in which the Duke was defended by Perceval in a speech which elicited the admiration of both friends and enemies. It is when the question of finding a successor to the Duke of Portland comes on the *tapis* that he becomes one of the leading actors in the drama. Canning felt from the first that he could not serve under Perceval; and Perceval, after some hesitation, made up his mind that he could not act under Canning. For his own decision Perceval seems to have been indebted to some of those well-meaning friends who had formed an exaggerated notion of his talents, and egged him on to pit himself against the ablest statesman of the day. But his behaviour was perfectly honourable and straightforward, and his friendship with Mr. Canning does not seem to have been impaired for a moment. After an ineffectual attempt by Mr. Perceval and Lord Liverpool to secure the services of Lords Grey and Grenville, Perceval himself, on Oct. 4th, 1809, became Prime Minister, and in 1810 had to bear the full brunt of the Opposition inquiry into the Walcheren Expedition, and Lord Chatham's communications with the king, which were pronounced highly unconstitutional. Perceval's personal character had risen deservedly high by his refusal of a rich sinecure which fell vacant at the beginning of the year, and, as in Pitt's case, the moral influence which he acquired by this proof of disinterestedness helped him through many difficulties which might otherwise have proved fatal to him. During the recess the Government occupied themselves with an attempt to re-enrol in their ranks some of the former members of Mr. Pitt's government—Canning, Castlereagh, or Sidmouth. But it was all in vain; and when the king's illness revived the battle over the regency question, they had to fight it as they were. It was in the autumn of 1810 that the final attack from which George the Third was destined never to recover made it necessary for Parliament to provide for the exercise of his authority. Perceval introduced

the resolutions which had been passed in 1788, according to which the House was to proceed by Bill, and to limit the powers of the regent by numerous restrictions; whereas the Whigs were for proceeding by Address and inviting the Prince of Wales to assume the regency as a thing of right. A desperate parliamentary struggle was the consequence; and here again the high personal character of Mr. Perceval, and the respect entertained for his courage, integrity, and consistency, kept many by his side who would otherwise have voted with the Whigs. After a series of very narrow divisions, the minister triumphed all along the line, and on Feb. 4th, 1811, the Bill received the royal assent. This was Perceval's last parliamentary triumph—and his greatest. But the accession of the Prince of Wales to power did not remove him from office. The regent quarrelled with the Whigs and kept the Tories where they were; and the combined result was to strengthen Mr. Perceval very materially. In the session of 1811 the restrictions on the regency expired, and then, for some reason which has never been very clearly explained, Lord Wellesley, who had succeeded Canning as Foreign Secretary, resigned his office. Then followed more negotiations, applications to Canning and Castlereagh, and Lord Grenville and Lord Grey; and ultimately Lord Castlereagh became Foreign Secretary. But the crisis only affects Mr. Perceval so far as it includes the charge brought against him by Lord Wellesley, who said that the feeble prosecution of the war was his chief reason for resignation. As this is the heaviest charge which rests on the memory of Perceval, his family have been at great pains to disprove it, and on its being repeated very pointedly by Sir W. Napier in his *History of the Peninsular War*, Mr. Dudley Perceval wrote at once to the Duke of Wellington to ask if there was any foundation for it. The Duke replied that there was none; but it is not very easy to reconcile this statement with passages in the Duke's own despatches; the question must always remain in some obscurity. Another vexed question in Perceval's career is that of the "Orders in Council," a series of decrees intended to cripple French commerce, begun by Mr. Fox in 1806, and continued with great energy by Perceval. It was said that they injured our own trade as much as that of our enemies, but Perceval's biographer shows that this was not the case. However, in May, 1812, the question was referred to a committee of the whole House; and it was while Mr. Brougham was examining a witness at the bar on Monday, the 11th, that Mr. Perceval was shot in the lobby as he was hurrying to take part in the proceedings. The shot at once proved fatal, and Bellingham, the murderer, was immediately tried at the assizes, and hanged within seven days. A liberal provision was made for

Mr. Perceval's family by Parliament, and a monument erected to his memory in Westminster Abbey. That he was a vigorous and able minister, a powerful debater, and a good man, will be readily admitted. But history will hardly pronounce that he was a great statesman.

Life of Mr. Perceval, by his grandson, Mr. Spencer Walpole. [T. E. K.]

PERCY, THOMAS (b. 1729, d. 1811), Bishop of Dromore, the editor of the *Reliques*, was born at Bridgenorth, in Shropshire, was educated at Christ Church, Oxford, and was for many years vicar of Easton Maudit, near Wellingborough, becoming afterwards successively Dean of Carlisle (1778), and Bishop of Dromore, in Ireland (1782). He published a *Dissertation on the Chinese* (1762), a translation of the *Song of Solomon* (1764), and wrote a *Life of Goldsmith*, some treatises on *Icelandic Mythology*, and a poem, entitled *The Hermit of Warkworth*, that enjoyed considerable popularity. But his reputation entirely rests on the discovery at Shiffnal of the seventeenth century manuscript of Old English ballads and romances, which, in 1765, he published, with various alterations and additions by himself and other contemporary poets, as *Reliques of Ancient Poetry*, thereby causing a revolution in the literature of Europe.

Life prefixed to Hales and Fumivall's reprint of Bishop Percy's Folio Manuscript (1868).

PÉRIER, CASIMIR (b. 1777, d. 1832), French statesman, was a native of Grenoble, and served in the Italian campaign, but in 1800 founded, with his brother Scipion, a bank at Paris, which became highly prosperous. In 1817 he was returned by one of the divisions of Paris to the National Assembly, and immediately became one of the most prominent of the Opposition band who urged the Government to be faithful to the charter. He was one of the moving spirits of the July revolution of 1830, and became a member of the ministry of the 11th of August, but refused to join the Lasfite ministry of November, and took instead the position of President of the Chamber. In March, 1831, he was compelled to accept the responsibility of premiership, and directed affairs with considerable resolution until he fell a victim to the cholera epidemic.

PERSIA, THE SHAHS OF, include, in the present century, Fattah-Ali-Shah, Muhammad Shah, and Naas-ed-Deen.

FATTEH-ALI-SHAH (1798-1834) was the son of Agha Muhammad, the founder of the Kajar dynasty. Born about 1766, he was fond of sport and literature, nor was his reign disgraced by one-tenth of the cruelties of that of his predecessor. In the beginning of the reign, Nadir Mirza, the representative of the dynasty expelled by Agha Muhammad, rebelled, but was reduced, and afterwards put

to death. A war with Russia lasted from 1801 to 1813, when peace was concluded through British intervention, the object of Persia being to recover the territory of Georgia, on her north-west frontier. It recommenced in 1825, but peace was again concluded in 1827, Persia being deprived of large slices of territory. Meanwhile, in 1806, a number of French officers had been sent by Napoleon to drill the Persian troops; the peace of Tilsit, however, necessitated their recall, and both the English Government and the Government of India took care to send missions to counteract French influence. The other important events of the reign were a war, in 1821, with Turkey, chiefly concerning frontier questions, which, after the Persians, under the Crown Prince, Abbas Mirza, had gained a great victory near Erzeroum, terminated in 1823, and the subjugation of Khorasan, which was followed by several ineffectual attempts to take Herat. In 1814 a treaty was concluded between England and Persia, by which the former undertook to aid the latter with men or money in the event of an unprovoked attack, while Persia was to attack the Afghans if they invaded India.

MUHAMMAD SHAH [1834-1848], the son and successor of Fattah-Ali-Shah, was born in 1806. The great event in the reign was the attempt to take Herat, begun by the king in person, on Nov. 23rd, and abandoned after a siege of ten months, partly from the vigour of the defence under ELDRED POTTINGER (q.v.), and partly from fear of the intervention of England. The refusal of the Shah to surrender several places taken during the campaign from the Afghans nearly produced war with England. The occupation of the island of Karak, however, by British troops, and an interchange of explanations, induced the Shah to give way. The relations with Russia and Turkey during this reign were, on the whole, pacific.

* NASR-ED-DEEN succeeded his father in 1848. Born in 1829, he had been proclaimed heir to the throne some years previously, but as he was unfortunately absent at Tabriz when his father died, he did not gain the throne without bloodshed. The Shah speedily developed the character of a humane and intelligent ruler, and showed a considerable knowledge of European politics. A formidable rebellion in Khorasan, and the suppression of the sect of the Babis by fire and sword, were the most important events of the earlier part of the reign. A strongly-marked sympathy with Russia during the Crimean war, and the capture of Herat in 1856, compelled the English Government to declare war against Persia in November, 1856. After a short campaign, during which the British, under Sir James Outram, were completely victorious, peace was concluded and Herat evacuated. From that time forward the Shah's disposition towards England was of

a most friendly character. In 1872 the Indo-European telegraph line, from London to India, through Teheran, was put into working order; the Seistan mission, under Sir F. Goldsmid, succeeded in effecting, between 1870 and 1872, a more or less satisfactory settlement of frontier difficulties between Persia and Khelat. In 1873, and again in 1878, Nasr-ed-Deen made prolonged tours in Europe, and on the first occasion visited England. His diaries have been translated; that of the first visit by J. W. Redhouse, that of the second by A. Schindler and Baron L. de Norman, and prove that his Majesty is most able and observant. He has adopted a prudent attitude of non-interference in external affairs, notably with regard to the threatening advance of Russia in Central Asia.

C. R. Markham, *A General Sketch of the History of Persia*; R. G. Watson, *A History of Persia, 1800-58*; Sir F. J. Goldsmid, *Telegraph and Travel, Eastern Persia, and Life of Sir James Outram*.

Pestalozzi, JOHANN HEINRICH (b. 1746, d. 1827), the educationalist, was born at Zurich, and, having studied theology and law in turn, finally devoted himself to farming, beginning his experiments in education in 1775, by receiving a few destitute children into his house. *Lienhardt and Gertrude: A Book for the People*, was written between 1781 and 1787, and was an attempt to trace the causes of the wretchedness of the poor. Leaving his small estate at Neuhof, near Lenzburg, in 1798, he established an institution for deserted children, under the protection of the new Swiss Directory at Stanz, and when that was ruined by war within the year, he removed to Burgdorf as a schoolmaster. His school flourished in spite of the opposition of conservatives and aristocrats, and in 1804 he removed it to a chateau near Yverdon (canton Vaud), lent him by the government. The basis of Pestalozzi's method was "intuition," that is, education through the senses immediately from the object. In encouragement of self-development and avoidance of all arbitrary and unreasoning instruction or acquisition, he may be regarded as the forerunner of Froebel. He owed much to Rousseau, and something, perhaps, to Basedow. His educational works that have exercised the widest influence are probably *How Gertrude instructs her Children* (1801), and his *Mother's Book* (1803). His *Complete Works* were republished in 18 volumes by Seyffarth (1869-73).

Besides Pestalozzi's *Autobiography* (1826), there are numerous *Lives*, by Proeger, Kruesi, Luger, Mayo, Noack, etc. Some idea of his system may be gathered from Mr. Herbert Spencer's *Education*.

Pétion, ALEXANDRE (b. 1770, d. 1818), a mulatto, born at Port-au-Prince, received his education in the military school of Paris, and then returned to Hayti. Being a skilful

engineer, he there rendered great assistance to Toussaint and Dessalines. He was elected president of the south-western part of the island in 1807, which position he held until his death. His opponent for the presidency was Christophe, and his successor General Boyer.

***Pettie, JOHN, R.A.** (b. 1839), a native of Edinburgh, received his early training in the Trustees' Academy and in the Scottish Academy. His first picture, *The Prison Pet*, was exhibited at the Gallery of the last-named institution in 1859, and in 1860 he sent the *Armourers* to the Royal Academy, London. A marked advance in his art was made by the *Drum-head Court Martial* (1864); and Mr. Pettie's most striking characteristics—intensity of conception, conveyed by vigorous brushwork and effective grouping—now became manifest. Among the remarkable pictures of the following years were *An Arrest for Witchcraft* (1866), *The Rehearsal*, seen at the Winter Exhibition of 1867, *Persuading Papa* (1868), and *Scene in the Temple Gardens* (1871). His subsequent pictures include *Juliet and Friar Lawrence* (1874), *A Sword and Dagger Fight* (1877), *The Death Warrant* (1879), *His Grace* (1880), *Her Grace* (1881), *The Palmer* (1882), *Do not know this Waterfly?* (1883), *The Vigil* (1884), purchased by the Academy from the Chantrey Bequest Fund, *Challenged* (1885), and *The Chieftain's Candlesticks* (1886). He was elected an A.R.A. in 1866, and an R.A. in 1873.

The Art Journal, 1899.

Phelps, SAMUEL (b. 1806, d. 1878), actor, was a native of Devonport, and was apprenticed to a printer. He took to the stage, however, and in 1827 made his first appearance at Wakefield, and soon afterwards was made happy by Edmund Kean's prophecy that he would make a name. In 1837 he appeared in leading characters at the Haymarket, and was then associated with Macready at Covent Garden. He gradually became recognised as the destined successor of Macready, and was designated by the latter, on his retirement in 1857, as the best Shakespearian actor and scholar then alive. Mr. Phelps was at this time manager of Sadler's Wells, a position he held from 1844 to 1862. Under his direction that theatre was the home of the standard drama, mounted with much archaeological accuracy, and admirably acted. Phelps himself was a player of much distinction, full of intelligence, knowledge, and resource, but lacking something in fire. He was distinctly of the school of Macready. In Shakespearian tragedy he is considered by some critics to have missed his mark; but his Sir Peter Teazle, Bottom the Weaver, and Justice Shallow will long be remembered. His edition of Shakespeare, published in 1853, is the work of a scholar. After relinquishing the management of Sadler's Wells, he appeared from time to time at Drury Lane, the

Lyceum, and the Gaiety, and, though broken in health, was contemplating shortly before his death a reappearance in *Hamlet*.

Phillimore, SIR ROBERT JOSEPH, BART. D.C.L. (b. 1810, d. 1885), the ecclesiastical lawyer, was the third son of Dr. Joseph Phillimore, Regius professor of civil law and Chancellor of the diocese of Oxford. He was educated at Westminster School, and, entering at Christ Church, Oxford, took the Bachelor's degree in 1831, and obtained the degree of D.C.L. in 1838. For a few years he was employed as a clerk in the office of the Board of Control; but in 1839 he was admitted an advocate at Doctor's Commons, and his rise in his profession was very rapid. He was called to the bar at the Middle Temple in 1841, and for some years was engaged as counsel in almost all the important cases that came before the Admiralty, Probate, or Divorce Courts. He was successively Master of the Faculties, Commissary of the Dean and Chapter of St. Paul's and of Westminster, official to the Archdeacons of Middlesex and London, and Chancellor of the Dioceses of Chichester and Salisbury. In 1853 he entered Parliament as member for Tavistock in the Liberal interest, and in the following year he brought into the House a Bill for the introduction of *vide voce* evidence into the Ecclesiastical Court, and with the aid of Lord Brougham succeeded in carrying the measure through Parliament. In 1855 Dr. Phillimore was appointed Judge of the Cinque Ports, and in 1862 advocate-general in Admiralty, with knighthood. He was judge of the Court of Arches from 1867 to 1875, judge of the High Court of Admiralty from 1867 to 1883, and Judge-Advocate-General in 1871-2. Sir Robert was created a baronet in 1881. While judge of the Court of Arches, it fell to his lot to hear a considerable number of ecclesiastical cases of the first importance, among them being the well-known suits of *Sheppard v. Bennett*, *Martin v. Mackonochie*, and *Boyd v. Philpotts*. His judgments are marked by great erudition. As an author, Sir Robert Phillimore found time to distinguish himself. His *Commentaries on International Law* and *Ecclesiastical Law of the Church of England* are well-known works.

The Law Times, lxxviii. 290; *The Solicitor's Journal*, xxix. 235. [W. M.]

Phillip, JOHN, R.A. (b. 1817, d. 1867), a native of Aberdeen, was encouraged by Lord Panmure to enter the Academy schools, London, in 1836. At first he directed his efforts to historical and Scottish subjects, such as *Tasso relating his Persecution to his Sister* (1840), and the *Presbyterian Catechising* (1847). A visit to Spain in 1852, however, revolutionised his art, and he began to exhibit those powerful and unconventional pictures of Spanish life by which he is remembered. They gained for him the honours of A.R.A.

in 1857, and of R.A. in 1859. Among his pictures in his later manner may be mentioned *La Gloria* (1864), and *A Chat round the Brasero* (1866). He was also the painter of court festivities, such as the marriages of the Princess Royal and of the Prince of Wales, and in 1863 executed a large picture of the *House of Commons*.

Phillips, JOHN (b. 1800, d. 1874), geologist, the nephew of the geologist William Smith, was instructed by him in the knowledge of rocks and fossils. For many years he lived in Yorkshire, arranging museums and organising scientific institutions, and in 1832 was appointed assistant-secretary to the British Association. In 1834 he became F.R.S., professor of geology at Dublin University in 1844, and at Oxford in 1856, having three years previously been made deputy-professor. In 1859-60 he was president of the Geological Society. His chief works are *Palaeozoic Fossils of Cornwall, Devon, and West Somerset* (1841), and *Geology of Oxford and the Thames Valley* (1855).

Phillips, WENDELL (b. 1811, d. 1884), American Abolitionist, was the descendant of a Boston family of aristocratic leanings. Educated at Harvard University, he was called to the bar in 1834; but in 1837 joined the movement for the abolition of slavery, and two years later retired from his profession because he could no longer abide by the oath of fidelity to the United States Constitution. His speeches on behalf of the movement were full of inspiration and mastery of the resources of oratory, notably that uttered over the grave of Brown, the Harper's Ferry insurrectionist, in 1859. He spoke with equal eloquence on temperance and the emancipation of women. When, after the Civil War, Garrison (q.v.) ceased to be President of the Anti-Slavery Society, on the ground that the cause was won, Phillips took his place, and succeeded in winning for the negro full citizenship. In 1870 he resigned his office, and his organ, *The Anti-Slavery Standard*, was converted into a monthly magazine. Wendell Phillips continued until a few years before his death to advocate social and moral reforms upon the platform.

Speeches, Letters, and Lectures (1863); *A Memorial of W. Phillips from the City of Boston* (1884).

Philpotts, HENRY (b. 1777, d. 1869), Bishop of Exeter, was a native of Gloucester, entered Corpus Christi College, Oxford, in 1791, and was elected fellow of Magdalene in 1795. He was ordained priest in 1804, became prebendary of Durham in 1809, and Dean of Chester in 1828. Two years later he was appointed Bishop of Exeter. Shortly before he had written a vigorous letter to Mr. Canning against the Roman Catholic claims; and, though he changed his opinion on the subject, he was a vigorous opponent of

most measures of ecclesiastical reform. He rapidly won for himself the position of leader of the Tory High-Church party, and was conspicuous for the orthodoxy of his opinions. In 1849 he refused to institute Mr. Gorham to a living on account of his views on baptism, and when thwarted by a decision of the Privy Council announced his intention of "renouncing communion" with the Archbishop of Canterbury as being a supporter of Mr. Gorham's heresies. Though he made many enemies, he was, on the whole, deservedly beloved in his diocese, and his advocacy of the most advanced claims of the Establishment was both able and sincere.

Phiz was the signature assumed by HARLOT KNIGHT BROWNE (b. 1815, d. 1882), the humorist and caricaturist, who was sprung of an old French family, but was born in Lambeth. His father, a merchant, apprenticed him to a mechanical engraver, who gave him what little education in art he ever received. His success began with the illustrations to *Pickwick*, the first complete edition of which, with illustrations by "Phiz" and Seymour, was published in 1837. After this the history of his life becomes merely a catalogue of the extraordinary number of humorous works to which he supplied illustrations. Amongst these were several by Dickens, *Nicholas Nickleby* (1839), *Martin Chuzzlewit* (1849), *David Copperfield*, etc.; Fielding's *Joseph Andrews* and *Amelia* (1857); Smollett's *Humphrey Clinker* and *Peregrina Pickle* (1857); *A Legend of Cloth Fair* (1840); *The Commissioners (of Lunacy)* (1843); and nearly all of Lever's novels. Some of these designs, especially the illustrations to Dickens, place "Phiz" in the very first rank of this century's caricaturists, by the side of Cruikshank and Leech. In 1867 he was unfortunately visited by a serious illness that deprived him of his former powers of hand and brain, and reduced him to extreme destitution. He attempted such works as the *Derby Carnival* (1869), *Remarkable Trials* (1871), and the *Cambridge Freshman* (1871), but they are all comparatively failures. Unable to obtain a pension from Government, he was only saved from starvation by an annuity from the Royal Academy.

* **Piatti, ALFREDO** (b. 1822), probably the finest violoncellist the world has ever seen, was born at Bergamo, and studied at the Milan Conservatoire. He made his first appearance in England before the Philharmonic Society in 1844; in 1859 performed at the first Monday Popular Concert; and has subsequently missed very few of these entertainments. A consummate artist, Signor Piatti is also a composer of much refinement. Perhaps his most popular works are his setting of several songs, to which he has written a violoncello obbligato. He has also written a concertino and two concertos.

Picton, SIR THOMAS (b. 1758, d. 1815), soldier, was a native of Poyston, Pembrokeshire, and entered the army in 1773. He was stationed at Gibraltar until 1778, and was out of an appointment until 1794, when he went to the West Indies, and became aide-de-camp to Sir John Vaughan. After the capture of Trinidad in 1797 he became its governor, and in 1803 was transferred to Tobago, but was forced to resign in 1807 in consequence of the clamour against him for having ordered, while governor of Trinidad, the torture of a female slave to procure evidence. Nevertheless he took part in the capture of Flushing, and became its governor in 1809; and in the following year, proceeding to the Peninsula as general of division, won high renown for daring and ability. The capture of Badajoz in 1811 was the result of his brilliant conversion of a feigned attack into the chief effort upon the fortress. He was badly wounded at Quatre Bras, but, nevertheless, fought at Waterloo, where he fell while repulsing the enemy.

H. B. Robinson, *Life of Sir T. Picton*.

Pierce, FRANKLIN (b. 1804, d. 1869), fourteenth President of the United States, was the son of General Benjamin Pierce, a soldier of the War of Independence, who from 1827 to 1829 was Governor of New Hampshire. Franklin Pierce was educated at Bowdoin College, where he made the friendship of Nathaniel Hawthorne, and graduated with honour in 1824. He was admitted to the bar in 1827, practised at Hillsborough, in 1833 was elected to Congress, where he remained for four years, and in 1837 took his seat in the Senate. About the year 1840 he became recognised as one of the leaders of the Democrats, but his want of means compelled him to betake himself exclusively to his profession in 1842, and he remained absorbed in it until 1847, declining the office of Attorney-General of the United States, offered him by President Polk. The Mexican War called him from his retirement, and he served in it with the rank of brigadier-general (1846-7). At the National Democratic Convention of 1842 his name was put forward on the spur of the moment by the Virginia delegates after thirty-five futile ballotings had been held, and he was nominated. In the following November he was elected by 271 votes over his opponent, General Scott. His presidency, owing to his strong pro-slavery opinions, was not a universally popular one; nevertheless Pierce undoubtedly acted according to what he really believed to be best for the States. The repeal of the Missouri compromise, and the passage of the Nebraska-Kansas Bill, which he approved in 1854, created great indignation among the Free State party, to whom he was firmly opposed. It was at his instigation that three of the American

ambassadors met in 1854, and issued the "Ostend Manifesto," by which Spain was informed that if she would not sell Cuba it would be taken from her by force. In the National Democratic Convention of 1856 Pierce sought nomination once more, but the claims of Buchanan were thought superior by the party. He thereupon retired into private life. Personally President Pierce was one of the most amiable of men.

N. Hawthorne, *Life of Franklin Pierce*.

* **Pinero, ARTHUR WING** (b. May 24th, 1855), actor and dramatist, was born in London. His first appearance on the stage was at the Theatre Royal, Edinburgh, in June, 1874, and he acted in provincial and London theatres, being chiefly associated with the Lyceum until July, 1882. After an interval he re-appeared as Sir Anthony Absolute in the revival of *The Rivals* under the Bancroft management (1884). His last appearance was on the occasion of Mr. and Mrs. Bancroft's farewell of management at the Lyceum. Mr. Pinero is the author of several admirable plays, written subsequently to 1880, which are chiefly remarkable for their crisp dialogue and happy fertility of characterisation. Among them are *The Money-Spinner* and *The Squire*, in which Mrs. Kendal had the principal part; *Imprudence*; *The Rocket* and *In Chancery*, written for Mr. Edward Terry; *Lords and Commons*, produced at the Haymarket; and the *Magistrate* and the *School-mistress*, produced at the Court Theatre, and *The Hobby Horse* at the St. James's.

Pitt, WILLIAM (b. May 28th, 1759; d. Jan. 23rd, 1806), was the second son of the great Lord Chatham and Lady Hester Grenville, sister of George Grenville, First Lord of the Treasury from 1763 to 1765. He went into residence at Pembroke College, Cambridge, in 1773. He was called to the bar in 1780, and at the general election of that year was returned to Parliament for the borough of Appleby. He attached himself to the party of Lord Shelburne, who had been the great friend of his father, and when, in 1782, on the death of Lord Rockingham, the king chose Lord Shelburne for Prime Minister, Pitt became Chancellor of the Exchequer and leader of the House of Commons. The Shelburne Government being defeated on the Peace of Versailles in the following February, Pitt retired with his leader, and in the ensuing summer he paid his first and last visit to the Continent, of which an amusing account has been left us by William Wilberforce. The Coalition Ministry, formed by the junction of Lord North and Mr. Fox, which succeeded Shelburne, only lasted till the following December, when the king dismissed Lord North and Fox from his service, and made Pitt Prime Minister when he was only in his twenty-fifth year. The great Whig lady, Mrs. Crewe, said that it

would be only a mince-pie administration : but it lasted seventeen years, and made Mr. Pitt one of the greatest men in history. Of the first ten years of Mr. Pitt's government, that is, from 1783 to 1793, there are, at this distance of time, hardly two opinions. It is admitted, even by the opponents of the Tory party, to have been eminently wise, enlightened, and statesmanlike. Lord John Russell and Lord Macaulay both allow this, and it is not till the outbreak of the French Revolution and the commencement of the war with France, that he is supposed to have made any mistakes. As, however, the termination of his first administration is exactly coincident with the beginning of the nineteenth century, we shall not discuss his conduct of the war down to the year 1800. We may go on at once to the union of Ireland and Great Britain, and the causes of Mr. Pitt's resignation, fraught, as they were, with such momentous consequence to the country. The experience of Grattan's Parliament convinced Mr. Pitt that Ireland could not remain as she was. It may be presumed that he thought it impossible to go back to the old system, and renew the restrictions which the Constitution of 1782 had repealed. There appeared, therefore, to be no choice between a legislative union with Great Britain and the suspension of representative government in Ireland altogether. Pitt, as a matter of course, chose the former; and though the means by which the union was carried are at variance with all modern notions of political honesty, they were not worse than the means by which the Hanover dynasty was kept upon the throne of England during the administration of Walpole, and they were, perhaps, justified by the end which, had his genius been allowed full play, Pitt would certainly have accomplished. But a backstairs intrigue came between him and the object which he had in view. The repeal of the Romish disabilities, and the endowment of the Irish Roman Catholic clergy were, as is well known, parts of Mr. Pitt's great scheme, and it is generally believed that had he been allowed to unfold it to the king in his own way, and at the proper time, George the Third would, however reluctantly, have assented; but Pitt was anticipated by the treachery of Lord Loughborough at Weymouth. The result was certain. The king, who might have given way had he been properly approached, was all the more determined to resist when the idea had once been suggested to him that Pitt was working under ground, and that a mine was suddenly to be sprung upon him. The Archbishop of Canterbury came in at Loughborough's instigation to add the weight of his opinion to the one already given by the Lord Chancellor; and, as might have been expected, henceforth the king remained immovable. Pitt resigned, Mr. Addington became Prime Minister, and

Roman Catholic emancipation was deferred for thirty years. Observing the distress of mind into which the agitation of this question had plunged his majesty Pitt gave him a promise never to renew the subject during his lifetime. "Now," said the king, "my mind is at ease again." But, as far as Pitt was concerned, the mischief was already done. Addington was in, and could not decently be turned out even had that been possible. But he was popular in Parliament; the opposition affected to support him, if only to spite Pitt; he was a great favourite with the king; and in all probability his government might have lasted many years had it not been for the renewal of the war with France in May, 1803. Then Addington's incompetency seems to have been recognised on both sides of the House. And he himself, as soon as he saw that the Peace of Amiens was not likely to last much longer, made overtures to Mr. Pitt, who was living in retirement at Walmer. But Pitt very naturally declined to come back to office except as Prime Minister. The negotiations fell through; war broke out; Pitt reappeared in Parliament, and felt himself compelled to censure Addington's war measures as inadequate. The minister's majorities fell as low as twenty and thirty, and the unanimous voice of the nation recalled Mr. Pitt to power. On April 30th, 1804, he received the king's commission to form a new administration. But it was not till the middle of May that the Cabinet was completed. Pitt wished, as far as possible, to reconstitute the Cabinet as it stood when he left office, including Windham, Spencer, and Grenville, and he was also anxious to present a united front to the common enemy by bringing in Mr. Fox as well. The king resolutely excluded Fox. Grenville and his friends, however, unmindful of Mr. Pitt's loyalty to themselves in the previous year, refused to come in without Fox, and Pitt was obliged to make up his Ministry out of such materials as were afforded him by the narrower section of the Tory party. He, however, was able to secure Mr. Canning, and in process of time no doubt others would have joined him. Pitt has been blamed both for proposing Fox to the king, and for not insisting on his admission when he had proposed him. But Lord Stanhope's answer to both charges is complete. The co-operation of Fox and Pitt would not have been a coalition like the junction between Fox and North, but only a temporary alliance in face of a great national emergency, and not entailing any further obligations. In the second place, it was perfectly impossible for Pitt to force any minister on the king. He had entered his service as the representative of the contrary principle, and could not now turn round and follow the example of those his opposition to whom had been his chief title to the king's confidence. Besides, the king had

still Addington to fall back upon if Pitt was obstinate. The new Foreign Secretary was Lord Harrowby, who being compelled to retire in consequence of an accident early in the following December, left an opening for Mr. Addington to come in, and secure the support of his own particular following. Before the end of the year the latter became Lord Sidmouth, and President of the Council. But the two men could not get on together, and in the following July Lord Sidmouth was once more out of office. Pitt had enough to harass him without these internal troubles. The impeachment of Lord Melville, carried in the House of Commons by the casting vote of the Speaker, is said to have affected him more deeply than any incident of his whole career. [MELVILLE.] Clouds were now gathering over Europe, soon to burst in a storm, which fell too heavily on Pitt for his already enfeebled constitution to bear up against it. On April 11th a treaty had been signed between England and Russia to serve as the basis of another European confederation against the French emperor. The Emperor of Austria signified his accession to the treaty on Aug. 9th. Sweden followed suit, and the warmest hopes were entertained by Mr. Pitt of a triumphant issue to the struggle. The first disappointment was the capitulation of General Mack with thirty thousand men at Ulm. But this was more than counterbalanced by the great naval victory which followed only two days afterwards. On his interview with Pitt before taking command of the fleet Nelson had said that his object was not to conquer but to annihilate. Pitt assured him he should have whatever force was necessary; and when the interview was ended Pitt paid Nelson the rare compliment of leaving the room with him, and attending him to his carriage. At the Lord Mayor's dinner the Lord Mayor proposed his health as "the Saviour of Europe." Pitt replied very briefly, "I return you many thanks for the honour you have done for me; but Europe is not to be saved by any single man. England has saved herself by her exertions, and will, as I trust, save Europe by her example." The Duke of Wellington, who was present, said, "nothing could have been more perfect." Within less than a month after those words were spoken Pitt's hopes were destroyed by the Battle of Austerlitz, fought on Dec. 2nd, and it is the common opinion that he never recovered from the blow. When he received the news he was at Bath, and recovering from an attack of gout. But the effect upon him was such as to throw the gout back into his system. On Jan. 9th he returned from Bath to his house at Putney. A fortnight afterwards he died. The death of Mr. Pitt following so soon on the death of Lord Nelson, shed a gloom over England which those only can appreciate who have conversed

with men living at the time. But their work was done. Nelson had destroyed the naval power of our great enemy, and made the invasion of England impossible. Pitt had upheld the spirit of the nation during the earlier and darker hours of the French war, and had inspired the English people with that confidence in its great men which alone enabled the Duke of Wellington to achieve his crowning triumphs. Pitt has sometimes been compared with his father, if anything to his disadvantage. But he was in reality the greater of the two. The height of moral grandeur attained by him has been attained by no other English subject. Chatham never carried on his shoulders one tithe of the responsibility which for twenty years was borne by his majestic son. Pitt was never married, though at one time of his life he had been seriously attached to Miss Eden, the eldest daughter of Lord Auckland, who subsequently married the Earl of Buckinghamshire. His debts, and the uncertainty of his fortunes in a pecuniary sense, prevented him from making her an offer. He was a virtuous man, if not a religious one. On his death-bed he told the Bishop of Lincoln that he had neglected prayer so long he feared it would be useless now, but that he found consolation in looking back on the "innocency of his life."

Bishop Tomlin, *Life of Pitt*; Lord Stanhope, *Life of Pitt*; Lord Macaulay, *Biography of William Pitt*; Sir G. C. Lewis, *Administration of Great Britain (1783-1830)*. [T. E. K.]

Pius VII., POPE (*b.* 1742, *d.* 1823), whose original name was Barnaba Chiaramonti, was a native of Cesena. In 1758 he entered the Benedictine order, and in 1785 was created by Pius VI. Cardinal and Bishop of Imola. In March, 1800, he was elected Pope by the conclave at Venice, and soon afterwards appointed Cardinal Consalvi his Secretary of State. His first difficulties with Napoleon arose over the Concordat for the re-establishment of Catholicism in France, which, however, was signed and ratified in 1801. In 1804 he was requested by Napoleon to consecrate him as Emperor of the French at Paris; and, sorely against his will, performed the ceremony in December. Pius returned to Rome, but in 1805 was compelled to submit to the occupation of Ancona by French troops; and in 1806, on refusing to expel the citizens of belligerent nations from the Papal States, was deprived of Benevento. The occupation of Rome followed in 1808, and in 1809 he was deprived of his States by a decree of the Emperor issued from Vienna. He retaliated by a bull of excommunication against his enemies, and was then arrested by General Miollis and conveyed to Grenoble, afterwards to Savona and to Fontainebleau (June 20th, 1812). Pope Pius behaved with great dignity under his afflictions, but at Fontainebleau Napoleon succeeded in extorting from him a

new Concordat, which, however, he immediately retracted, and finally declined to negotiate until restored to Rome. Early in 1814 he was reconducted to Rome, and, with the exception of a brief flight to Genoa during the Hundred Days, remained there until his death. His administration was uneventful, but by no means illiberal, timid though his innovations appear to the modern reformer. His magnanimity was admirably displayed in his allowing several members of the Bonaparte family to find asylum at Rome.

Artande de Montor, *Histoire de Pie VII.* His correspondence with Napoleon was published in 1814.

Pius VIII., POPE (b. 1761, d. 1830), was originally called Francesco Xaviero Castiglioni, and was a native of Ancona. He was consecrated Cardinal and Bishop of Cesena by Pius VII. in 1816, and in 1821 became Bishop of Frascati. In March, 1829, he was chosen as successor to Leo XII., but died in November, 1830, having during his brief pontificate given but little indication of originality or liberality of opinion.

Pius IX., GIOVANNI MARIA MASTAI FERRETTI (b. 1792, d. 1878), the most important Pope of this century, was the fourth son of Count Gerolamo Mastai Ferretti, of Sinigaglia, near Ancona, where the future Pope was born. He received his first education at Volterra, in Tuscany, and when eighteen he went to Rome to be admitted to the bodyguard of the Pope. An attack of epilepsy, however, prevented him from attaining this wish; he entered an ecclesiastical seminary, and in due course was ordained deacon in December, 1818. In 1823 he was sent as *Uditore* to Monsignor Muzzi, Apostolic Delegate in Chili. He remained in St. Iago till 1825, and on returning to Rome he was made Canon of Santa Maria in Via Lata. In 1827 he was created Archbishop of Spoleto, where he became very popular, and in 1832 he was transferred to the diocese of Imola, and on Dec. 14th, 1840, he was proclaimed a Cardinal. He acquired the reputation of a patriotic and charitable Prince of the Church, and of a true Italian of enlightened views. His election to succeed Gregory XVI. in the pontificate on June 16th, 1846, was hailed with the highest demonstration of joy. The political amnesty which he soon after granted, and which restored to their families more than six thousand prisoners and exiles, endeared him to the Italians to a high degree. His name was looked upon as synonymous with Italy and Freedom. He tried to comply, as far as his position and conscience allowed him to do, with the wishes of the Liberals, and even a Constitution (*Statuto Fondamentale*) was granted. The Pope was, however, to remain supreme in everything. The freedom of the Press was conceded, but with a censorship to restrict its abuses. A school board was created, and

something also done for the instruction of the people. A ministry was formed, consisting almost entirely of laymen. The people, however, insisted that the Pope should declare war against Austria, and unite with Piedmont and Lombardy. It was then that Pius IX. began to hesitate and draw back. He could not fight against the Austrians who were Catholics, and therefore his own children. He disavowed any complicity with the idea of an Italian Confederation with himself at its head. His troops against his orders had passed the Po and joined the national forces; Pius recalled them and disowned their general. This placed a barrier between the Pope and the Italian Liberals, and the people lost all reverence and affection for Pius IX. Count Rossi, his minister, was assassinated in the streets in broad daylight on Nov. 15th, 1848. Two days later the mob presented itself at the Quirinal asking for new reforms, and threatening massacre. Pius IX. then fled in disguise to Gaeta, near Naples, on Nov. 24th. A provisional government was formed in Rome, and on the arrival of Mazzini the Roman Republic was proclaimed, with Mazzini, Armellini and Saffi at the head of the executive power. The Pope from Gaeta excommunicated the rebels, and declared all the measures decreed in Rome during his absence null and void. In the following month of February he called upon the principal Catholic Powers to re-establish his authority. A French army of 10,000 men, commanded by General Oudinot, landed at Civitavecchia in April, 1849, and advanced to Rome, and after a siege, which lasted from June 3rd to July 3rd, the town surrendered unconditionally to the French, and it was at once garrisoned by them. Pius IX. returned to his See in April, 1850. The Pope threw from this moment the temporal administration of the Pontifical States into the hands of Cardinal Antonelli, his Secretary of State, and devoted himself entirely to spiritual affairs. He restored the Roman Catholic Hierarchy in England. On Dec. 8th, 1854, he defined the doctrine of the Immaculate Conception of the Mother of Our Redeemer, in the presence and with the concurrence of the Catholic bishops of every part of the world. The events of 1859-60 deprived him of the greatest part of the estates of the Church. Antonelli raised a legion, composed chiefly of Belgians, French, and Irish, under General La Moricière, to oppose to the advancing Italian army; but it was defeated; Ancona, the principal Papal fortress, was taken, and the Legation, Marches, and Umbria were incorporated with the kingdom of Victor Emmanuel. The Pope was maintained in Rome and its district only by a French garrison. In 1864 the Pope published the *Syllabus*, or list of prevalent errors and their reprobation. A General (Ecumenical) Council assembled in Rome on Dec. 8th, 1869, and promulgated on July 18th,

1870, the supremacy of the Pope over the authority even of an Ecumenical Council. This is what is generally called the dogma of the infallibility of the Pope. The truth is, however, that the Council declared only that when the Pope speaks *ex cathedra* (viz. as Doctor and Pastor of all Christians), and defines a doctrine of faith or morals, such definitions are of themselves irrevocable. When in 1870 the Franco-German War was declared, the French troops left the Papal States, and soon afterwards Victor Emmanuel notified to the Pope that his army would enter Rome to protect his Holiness, and maintain order. Pius IX. expressed his opposition, and protested in very strong terms against the intended occupation of Rome. General Cadorna, however, with a few Italian regiments, arrived at the gates of the Eternal City on Sept. 20th, 1870. The Pontifical Zouaves opposed him, but after a short bombardment they were compelled to surrender, and Rome was declared capital of the Italian kingdom. For the rest of his life Pius IX. remained unmolested in the Vatican, where he died on Feb. 8th, 1878. The chief event of his last years was his vigorous condemnation of the Falck laws in Germany. His pontificate was the longest which history records.

Leopold Wappmansperger, *Leben und Wirken des Papstes Pius des Neunten* (Ratisbon, 1878); *Banke, Die Römischen Päpste*, 7th ed.; *Hassard, Life of Pope Pius IX.* [A. O.]

Planché, JAMES ROBINSON (b. 1796, d. 1880), dramatist and antiquarian, was the descendant of French Huguenots, and a native of London. A schoolboy effort at burlesque was fortunately seen by Hayley, the actor, and in 1818 was successfully produced under the title of *Amoroso, King of Little Britain*. Planché thereupon became a dramatist by profession, adapting old plays to modern exigencies; composing the books of operas, for instance of Bishop's *Maid Marian* and Weber's *Oberon*; and writing a number of extravaganzas for Madame Vestris, which were full of genuine humour. In all, his plays amounted to about two hundred, but most of them are forgotten. His most ambitious effort was the historical drama *Charles XII.*, produced with success in 1828. Planché's antiquarian tastes were employed by Charles Kemble in "dressing" his Shakesperian revivals; he became Rouge Croix Pursuivant at Arms in 1854, and Somerset Herald in 1866. His *History of British Costumes* (1834), and *The Pursuivant-at-Arms* are works of genuine research, and his contributions to the publications of Charles Knight are also of value. Planché was also the author of *Lays of the Rhine* (1826), and *Descent of the Danube*.

The Recollections and Reflections of J. R. Planché, a professional autobiography.

Platen, KARL AUGUST GUSTAVUS, COUNT VON HALLERMÜNDE (b. 1796, d. 1873), German

poet, was born at Ansbach, and having served through the campaign of 1814, retired to Italy, where he resided at Venice, Rome and Naples, and finally died at Syracuse. He wrote *The Abbassidae*, a kind of Oriental epic (1829), and several plays, for the most part comedies, as *The Glass Slipper* (1823), *Berengar* (1824), *The Treasure of Rhampsinitus* (1824), and some satirical farces directed against the romantic school, as the *The Fateful Fork* (*Die Verhängnisvolle Gabel*, 1826). But his real strength certainly lay in lyrical poetry, and as a lyric poet the lucidity of his thought and purity of his style give him a high place in German literature. His influence in the reaction against romanticism was, however, of even greater importance than his actual production. It was of him, not, as is generally supposed, of Heine, that Goethe said he had everything a poet should have, but wanted love.

Platen's biography was written by Prittwitz and Gaffron. He is also well known through Heine's witty but scurrilous attack in the *Reisebilder* and the *Bäder von Lucca*.

* **Playfair, THE RIGHT HON. SIR LYON, K.C.B., LL.D., F.R.S.** (b. 1819), the son of the late Dr. George Playfair, Inspector-General of Hospitals in Bengal, was educated at the Universities of St. Andrew's and Giessen, and at University College, London, and was a pupil of the celebrated chemists, Graham and Liebig (q.v.). After managing for some years some calico-print works at Clitheroe, he became in 1843 Professor of Chemistry in the Royal Institution, Manchester; Chemist to the Museum of Practical Geology in 1846, and Professor of Chemistry in Edinburgh University (1856-69). Dr. Playfair served on numerous royal commissions, for instance that of 1844, which inquired into the sanitary condition of towns, and the Civil Service Commission of 1874, of which he was president, and which produced the "Playfair scheme." He was a special commissioner at the great exhibition of 1851 and 1862, became joint secretary to the Science and Art Department in 1853, and Inspector-General of Government Museums and Science in 1856. His political career began in 1868, when he was first returned in the Liberal interest by the Universities of Edinburgh and St. Andrew's. In 1885 he was first elected by the South Division of Leeds. He distinguished himself by speeches on university education, and sanitary questions, and became Postmaster-General (1873-74), and Chairman of Ways and Means and Deputy Speaker from 1880 to 1883, when he was knighted. It was Dr. Playfair's misfortune to have to deal with Irish obstruction in its most determined form, and his suspension of the Irish members *en bloc* during the session of 1882 was a remarkable parliamentary incident. In February, 1886, he became Vice-President of the Committee of the Council on Education. He was president of the British Association in 1885. Sir Lyon Playfair has published numerous

addresses on education and scientific subjects, and edited Liebig's *Chemistry in its Application to Agriculture and Physiology*.

* **Plumptre**, THE VERY REV. EDWARD HAYES, D.D. (b. 1821), was educated at University College, Oxford, graduated B.A. in 1844, was elected fellow of Brasenose College in the same year. In 1847 he received his M.A. and the chaplaincy of King's College, London. Among other appointments that he afterwards received was that of Boyle lecturer (1866-67), professor of pastoral theology (1853), and professor of New Testament exegesis in 1864. Dr. Plumptre became Prebendary of St. Paul's in 1863, and in 1869 the Archbishop of Canterbury presented him to the rectory of Pluckley, Kent, which he exchanged with the Rev. E. J. Selwyn, for the vicarage of Bickley. During the four years, 1869-74, he was one of the committee appointed by Convocation to revise the Bible, and in 1872-4 Grinfield lecturer on the Septuagint at Oxford. In 1875 he received the degree of D.D. from the University of Glasgow, and in 1881 became Dean of Wells. He has written, among other works, chiefly theological: — *Sermons at King's College* (1859); *Lazarus and other poems* (1864); *Master and Scholar* (1866); *Christ and Christendom* (the Boyle Lectures, 1867); translations of *Sophocles* (1866), and *Æschylus* (1870); *Things New and Old* (poems, 1844); *The Spirits in Prison* (1884). He was also editor of the *Bible Educator* (1877-9), contributed several sections to Bishop Elliott's *New Testament Commentary*, and published *The Commedia and Canzoniere of Dante* (1886).

Plunket, WILLIAM CONYNHAM, 1ST BARON (b. 1765, d. 1854), Irish orator, was born in Fermanagh County in July, 1765, and having received his early education at home, entered at Trinity College, Dublin, in 1779. There he was distinguished as a scholar, but still more so as the first among the many brilliant speakers who were then members of the Historical Society. Eloquence was then the readiest road to success at the Irish bar and in Irish politics. Plunket entered at Lincoln's Inn in 1784, and three years afterwards was called to the Irish bar. He was made a King's Counsel in 1798, practising chiefly in equity, and in the same year entered Parliament as member for Charlemont. His political opinions were those of Burke. He was a bitter opponent of the principles of the French Revolution and a warm supporter of those of 1838. Still he was a strong opponent of the Union, and was in favour of toleration for Roman Catholics and Dissenters. In 1803 he was employed for the Crown to prosecute Emmett, and in 1804 became Irish Solicitor-General, and subsequently Attorney-General in Pitt's second administration. He continued in office under Lord Grenville, warmly supporting the French War and Catholic Emancipation, and resigned with him, and returned

to lead the Equity Bar in Dublin, where he amassed a considerable fortune. He returned to Parliament in 1812 as member for Dublin University, and obtained the reputation of being, for logic and nobility and beauty of language, the first orator of the House of Commons. In 1822 he again became Irish Attorney-General, and although a supporter of Emancipation, strongly opposed the Catholic Association and O'Connell's machinery of agitation, which he endeavoured to suppress. After for a short time holding the office of English Master of the Rolls, he became, in 1827, Chief Justice of the Irish Common Pleas, and a peer of the United Kingdom. He became Lord Chancellor of Ireland in 1830, and held that post while his party was in office, until 1841, when he retired from public life. He had the qualities of a great jurist, industry, memory, and learning, a capacious understanding, a strong grasp of general principles, and a clear power of analysing facts; but he was less eminent as a judge than as an advocate. Until the sixth decade of this century the greatest compliment that the House of Commons could pay to an oration was "that there had been nothing like it since Plunket." [J. A. H.]

Poe, EDGAR ALLAN (b. 1809, d. 1849), an American poet, was the son of General Poe, a scapegrace, who was distinguished for his services in the War of Independence; his mother was an actress who had figured in the playbills as "the beautiful Miss Arnold." He inherited his grandfather's pride and his father's tendency to vagaries in conduct. Both his parents died in his infancy, and he was adopted by a Mrs. Allan, the wife of a Scotchman resident in Richmond, who had enriched himself in the tobacco trade. Mrs. Allan had no children of her own, and grew passionately fond of the precocious and beautiful boy; but her husband seems to have regarded her inclination as a caprice. He was put to school in England at the age of seven years, and ten years later entered the University of Virginia, where he remained but one year, when he retired on account of gambling debts, which Mr. Allan refused to pay. The latter would not even continue the support of Poe at the University, but proposed a desk in the counting-house instead. Poe regarding himself as wronged and oppressed, left Mr. Allan's home, and went to Boston. His first enterprise there was to publish a little volume (1827) entitled *Tamerlane, and other Poems*. Tamerlane was not a success, and Poe enlisted in the United States army. Mrs. Allan died while he was a soldier, and Mr. Allan, moved by consideration of his wife's fondness for the lad, aided in the effort to procure his discharge from the service and his appointment as a military cadet. He entered West Point July 1st, 1830, but was dismissed in his first year

for deliberate neglect of duty, and naturally received no more support from Mr. Allan. In 1831 he published *Al Aaraaf, and other Poems*. In this collection were the lines to Helen—verses since noted as the best early evidence of the author's genius. *Al Aaraaf* is the name of the limbo or purgatory of the Mahometans, but the poem had no relation to any suggestion involved in the name. It is a mere rhapsody of feeble lines without any perceptible coherence of its parts. Poe was now dependent absolutely upon his own efforts. Penniless, solitary, proud, sensitive, without knowledge or capacity for any money-making occupation, he could only turn with very little hope to literature. In 1833 a publisher offered two prizes—one of one hundred dollars for a tale, and one of fifty dollars for a poem. Poe competed with a whole collection of tales, and the prize was awarded to his *Manuscript Found in a Bottle*. He would have gained the prize for the poem also, but the terms were against the capture of both prizes by one author. With one hundred dollars in ready money he was rich. But this success had an even more substantial value. It procured him the friendship of "his first true friend," Mr. Kennedy, the author of *Swallow Barn*. Through this gentleman he obtained a regularly remunerative occupation as editor of the *Southern Literary Messenger*. In 1835 Poe married his cousin, Virginia Clemm. His relations with the owners of the *Literary Messenger* were closed in consequence of his incapacity to restrain himself from drink. He removed to New York in the hope to find there some adequate occupation. He published at this time the narrative of *Arthur Gordon Pym*, a tale of adventure and mischance, written with a minute accuracy of detail in the expectation that it would pass as a recital of actual experiences. In 1839 he was employed by Mr. Burton, the comedian, as editor of the *Gentleman's Magazine*, a Philadelphia periodical, but the employment ended abruptly in a quarrel. Poe's next employment was upon *Graham's Magazine*, another Philadelphia periodical. Nearly all the Philadelphia periodicals of that time were of the same quality—they were magazines for young ladies filled with love stories of the *Rosa Matilda* order, occasional poems, and a little light criticism, and illustrated with an engraving on steel and a French fashion plate. But the public had taste to appreciate much better material than the periodicals supplied, and *Graham's Magazine* attained great vogue through Poe's contributions. He subsequently contributed to Godley's *Lady's Book*—a magazine of the same class—a series of articles on the literary merits of his cotemporaries, entitled *The Literati*. These were criticisms mainly in the slashing style, and naturally made Poe very unpopular among literary men. His tales of the *Grotesque and Arabesque* were published in 1840,

and his beautiful little poem, *The Raven*, in the *American Review* in 1845. Poe entered in New York upon various enterprises in periodical literature, but could barely live by his labour. His wife died in 1847, the victim of misery and chagrin. He published *Eureka: A Prose Poem*, a speculative rhapsody on the universe, in 1848, and was in want at the time. In 1849 he seemed upon the threshold of a happier future. He was about to marry again, and this time a lady of fortune. On a journey he stopped at Baltimore, and meeting some former comrades they celebrated his prospects with such success that Poe was taken to the hospital, where he died the next day. His stories, collected under the title of *Tales of Mystery, Imagination, and Humour*, are noted for their constructive ingenuity. They begin generally at the limit of possibility and move the other way. The most popular of them are the *Gold Bug* and the *Murders in the Rue Morgue*. His poetry has been regarded by some enthusiastic admirers as without equal in the literature of his own country, but others decry it. The difference of opinion is easily intelligible. Few writers have so little thought in their verses. There is not a passage that is quotable for its intellectual quality or for any effect but its music. With this poverty of thought he combines a music and a rhythmical dexterity hardly to be found in any other writer of the English language.

George E. Woodberry, Edgar Allan Poe, in the *American Men of Letters*; J. H. Ingram, E. A. Poe; W. F. Gill, E. A. Poe. [G. W. H.]

Poggendorff, JOHANN CHRISTIAN (b. 1796, d. 1877), German chemist, was a native of Hamburg, and after some years of apprenticeship to an apothecary became a student at Berlin. In 1824 he was appointed by Barth the editor of the *Annalen der Physik und Chemie*, and continued its editor until close upon his death, the jubilee of his editorship being celebrated in 1874. In 1830 he became professor of chemistry at Leipzig. Poggendorff wrote numerous treatises on his favourite science, but he is remembered almost entirely as the editor of *Poggendorff's Annalen*, as it was generally called, the record of all the important chemical discoveries of half a century.

Polignac, JULES, PRINCE DE (b. 1780, d. 1847), French politician, a descendant of the old noblesse, was created a peer of France after the Restoration of 1815, and in 1823 was nominated ambassador to London. In 1829, Charles X. having determined to oppose all concessions to the popular demands, made him Minister of Foreign Affairs, and in November president of the council. Polignac's fighting policy, notably the promulgation of the *Ordonnances* [CHARLES X.], produced the Revolution of July 1830, and he fled for his life. He was arrested at Granville, tried

before the Chamber of Peers, and in spite of the brilliant defence of de Martignac (q.v.), condemned to perpetual imprisonment. In 1836, however, his sentence was remitted, and he retired to England, but returned to France a few years before his death.

Polk, JAMES KNOX (b. 1795, d. 1849), the eleventh President of the United States, was a native of Mecklenburg county, North Carolina, and graduated at the North Carolina University in 1816. He then studied law. Polk entered Congress as a representative of Tennessee, whither his family had migrated, in 1825; and was chosen Speaker of the House of Representatives by a Democratic majority in 1835, a post which he held until 1838. In 1839 he was elected Governor of Tennessee, but in 1841 was defeated by a Whig opponent. The question of the annexation of Texas now became prominent; and it was chiefly through his advocacy of that step that Polk obtained the nomination of the Democratic National Confederation to the Presidency, and was elected in 1844. After the annexation of Texas in 1845, war promptly began between the United States and Mexico, and in 1847 the Mexicans were compelled to purchase peace by the cession of Upper California and New Mexico. Another important event was the settlement of the boundary of Oregon with the British government, which was fixed at the parallel of 49°. Polk retired from office in March, 1849, and died a few months afterwards.

L. Chase, *History of the Administration of James K. Polk*.

* **Pollock, FREDERICK** (b. 1845), jurist, the eldest son of Sir William Frederick Pollock, Bart. (b. 1815), Queen's remembrancer, was educated at Trinity College, Cambridge, where he was first chancellor's medalist in 1867, and took his M.A. degree in 1870. He joined Lincoln's Inn at the age of twenty-two, and was called to the Bar in 1871. He was examiner in law tripos, Cambridge, 1879-81; public examiner at Oxford, 1881-4; and professor of jurisprudence, University College, London, 1882-3. In 1883 he became professor of jurisprudence at Oxford, and in 1884 professor of common law to the Inns of Court. Professor Pollock has written largely on law and philosophy. Some of his works may be mentioned:—*Principles of the Law of Contract*, *Digest of the Law of Partnership*, *Essays in Jurisprudence and Ethics*, and *Spinoza, his Life and Philosophy*. He is editor of the *Law Quarterly Review*. Professor Pollock practises as a conveyancer and an equity draftsman in Old Square, Lincoln's Inn.

Pollock, SIR FREDERICK, BART. (b. 1783, d. 1870), an English judge, was born in London of Scottish extraction, and was the elder brother of Field-Marshal Sir George Pollock noticed below. Educated at St. Paul's School, and at Trinity College, Cambridge, where he came out as senior wrangler,

he was called to the Bar at the Middle Temple in 1807 and joined the Northern Circuit. In the northern counties he soon achieved an almost unprecedented success, and at Westminster he was retained in almost every cause of importance. King's Counsel in 1827, he was returned in the Tory interest as member for Huntingdon in 1831, and became Sir Robert Peel's Attorney-General in 1834 and again in 1841. On the death of Lord Abinger in 1844 he was nominated to the post of Chief Baron of the Exchequer, where he presided for twenty-two years with the highest ability and credit. He was created a baronet in 1866 on his retiring from the bench.

Times, Aug. 23rd, 1870; *Solicitor's Journal*, xiv., 370.

Pollock, SIR GEORGE, BART. (b. 1786, d. 1872), soldier, brother of the above, entered the service of the East India Company in 1803, and as an ensign in the Bengal Artillery served under General Lake in the war against Holkar [INDORE]. In 1814, having become captain ten years previously, he volunteered for Nepal, and served in the Goorka campaign. In 1819 he was appointed major and adjutant-general of artillery, and in 1824 lieutenant-colonel. He served in the Burmese campaign of that year, and was gazetted C.B. In 1829 Pollock became full colonel, but saw no active service until 1841, when the Afghan War having resulted in utter disaster [AUCKLAND] Pollock was appointed to command the expedition which was to relieve Sir Robert Sale at Jellalabad and avenge the massacre of the British garrison at Cabul. The Khyber Pass was forced by a series of dashing engagements (April 5th to 6th), and Jellalabad was relieved on the 15th. After an enforced delay until Aug. 20th, due to the hesitation of the Governor-General, Lord Ellenborough, Pollock advanced upon Cabul. Having defeated the Afghans in the three battles of Mamoo Khail, Jugdulluck, and Tezeen, he occupied Cabul on Sept. 15th, and released the prisoners. The return march began on Oct. 12th, and was accomplished without a hitch. A G.C.B. and the thanks of Parliament were Pollock's rewards. In 1843 he was appointed British Envoy at Oude and military member of the Supreme Council of India in 1844. His health compelled him to return to England in 1846, and in the following year he was voted a pension of £1,000 per annum by the Company, and from 1858-60 was one of its directors. He became Field-Marshal in 1870, succeeded Sir J. Burgoyne as Constable of the Tower in 1871, and in 1872 received the somewhat tardy honour of a baronetcy. He was buried in Westminster Abbey. Pollock was not a soldier of genius, but he brought all his enterprises to a successful termination, and restored British prestige at a highly critical moment.

C. B. Low, *Life and Correspondence of Field-Marshal Sir G. Pollock*.

Pollok, ROBERT (b. 1798, d. 1827), the son of a farmer, of Eaglesham, Renfrewshire, was self-educated, and having taken a degree at Glasgow University, studied for the United Secession Church. Overwork, however, brought him to the grave, but not before he had published the *Course of Time* (1827). This is a long composition in blank verse describing the spiritual future of mankind; and though its qualities are more those of good rhetoric than of good poetry, it is by no means unworthy of the enthusiasm with which it was received by the religious world.

Ponsard, FRANÇOIS (b. 1814, d. 1867), French dramatist, was a native of Vienne, in Dauphiné, and adopted the legal profession, making at the same time various adventures in literature. In 1843 he produced his play *Lucrèce* at the Odéon, with Rachel in the title-rôle; and it was immediately hailed with enthusiasm as a revolt against the romantic school and a return to classicism. *Agnès de Méranie* (1846) and *Charlotte Corday* (1850) were, however, indifferently received, and it was not until 1853 that Ponsard again achieved an undoubted triumph with his clever comedy *L'Honneur et l'Argent*. *La Bourse* (1856) and *Le Lion Amoureux* (1867) followed. Ponsard was elected to the Academy in 1855. He was undoubtedly a dramatist of ability, but his range was limited, and his plays were extremely fortunate in the moment of their appearance.

Poole, JOHN (b. 1787, d. 1872), dramatist, began at an early age to write for the stage. It was not until 1815, however, that he scored a distinct success when the farce *Who's Who?* was produced at Drury Lane. *Paul Pry*, the play with which his name is chiefly associated, was first played at the Haymarket in 1825, with Liston, Mme. Vestris, and Farren in the cast; *Married and Single* having been produced in 1824 by Elliston. Among Poole's other pieces are *Turning the Tables*, *Simpson and Co.*, *A Nabob for an Hour*, and *'Twould Puzzle a Conjurer*. Their humour is chiefly that of situation. Poole's real masterpiece was his skit *Little Pedlington* (2 vols., 1839), an admirable satire on country-town life.

Percy Fitzgerald in the *Gentleman's Magazine*, 1874.

Poole, PAUL FALCONER, R.A. (b. 1806, d. 1879), was born at Bristol. With little or no instruction he made himself a painter, and exhibited at the Academy in 1830, but soon left London and took up his residence at Southampton. This was a time of great hardship and adversity. In 1837 he again exhibited at the Academy, and gradually worked his way up until, in 1843, his great picture of *Solomon Eagle denouncing the Sins of the People during the Plague* startled the town. The same year he obtained a premium at the Westminster competition, and in 1846 his *Visitation of Sion*

Monastery gained him the associateship. He was elected R.A. in 1861, having in the interval produced, with other fine works, *Job and his Friends* (1850), *The Goths in Italy* (1851), *The Song of the Troubadour* (1853), and *Glaucus, Ione, and Nydia* (1860). He continued to paint in the same poetical spirit for the rest of his life, and died in September, 1879. A selection of his finest works, in most beautiful preservation, was exhibited along with the Old Masters in 1884. Poole was a great colourist and one of the most imaginative of English painters. His defects are imperfect draughtsmanship and ineffective composition, due partly to the preponderance of the sentiment of colour, partly to want of technical training. His works fall into two classes—charming idyllic groups or single figures taken from country life, and large ideal compositions full of poetical invention, and dominated by intense sentiment—ghastly terror as in *Solomon Eagle*, dreamy absorption as in *The Song of the Troubadour*, pathos as when the banished Custance floats out to the moonlit sea with her little one, savage wildness as when the naked wayfarer confronts the lion in *The Lion in the Path*. Poole's character was quaint and original; shy and reclusive towards the world, he was genial to his friends, and possessed stores of reading and conversation. [R. G.]

* **Poole, REGINALD STUART, LL.D.** (b. 1832), Numismatist and Egyptologist, was brought up in Cairo under the care of his uncle E. W. Lane (q.v.). At the age of 17 he published an ingenious work on Egyptian chronology, based upon a study of the hieroglyphic monuments, the conclusions of which, however, he has since abandoned. In 1852 he was appointed an Assistant in the Coin Department of the British Museum, of which he became Assistant-Keeper in 1866, and in 1870 Keeper, in succession to W. S. W. Vaux. During the last sixteen years he has brought his department to a high degree of efficiency, and has personally superintended the publication of more than twenty volumes of official *Catalogues*, Greek, Roman, Oriental, and Indian, besides *Guides*. His own contributions to the series consist of the catalogue of the *Coins of the Ptolemies*, and a volume on the coins of the *Shahs of Persia*. *Cities of Egypt* (1882) is a republication of contributions to periodical literature. He was one of the chief founders of the Egypt Exploration Fund. In 1869-70 he was sent on an official mission to report on the discoveries in Cyprus, and after visiting that island proceeded to Ephesus and Alexandria, where he reported on the Harris collection. He is a correspondent of the Institute of France, an hon. LL.D. of Cambridge, and of Dartmouth, U.S.A.

Poonah, THE PEISHWAH OF, BAJEE RAO (b. 1775; d. 1834), the nominal chief of the Mahratta confederacy in India at the

beginning of the century, was invested as Peishwah of Poonah in 1796. In 1802, however, he was driven from his dominions by Holkar [Indore], and to secure British assistance he signed the treaty of Bassein, by which he pledged himself to hold communications with no other Power, and to grant us districts for the maintenance of a subsidiary force. From this arrangement came the Second Mahratta War, during which the Peishwah was restored to his capital by British arms. He, however, felt the treaty to be a degradation, and when further restrictions were placed upon him by the treaty of Poonah, he flew to arms and was joined by Holkar. After a crushing defeat, Bajee Rao surrendered his dominions to the East India Company, and retired to Bithur, near Cawnpore, on a pension of £80,000 a year (1818). His adopted son was the infamous Nana Sahib.

J. Grant Duff, *History of the Mahrattas*.

Forson, RICHARD (b. 1759, d. 1808), one of the greatest of English Greek scholars, was born at East Ruston, in Norfolk, where his father was parish clerk. He was sent to Eton, and in 1777 to Trinity College, Cambridge, where he was elected to a fellowship; and though he refused to sign the Articles, saying it would take him fifty years' study to understand them, he became professor of Greek in 1793. He issued a complete text of *Æschylus* with several hundred emendations in 1795, and two years later his celebrated edition of *Hecuba* appeared, and at once placed him in the first rank of European scholars. Other plays of Euripides followed, the *Medea* being published in 1801. It is on his emendations to Euripides and his laws of metre or "metrical canons" that his fame chiefly rests. His success in the collation of manuscripts was chiefly due to unflinching diligence and a portentous memory. In 1800 he was appointed Librarian to the London Institution. One of his last services was the restoration of the last twenty-six lines of the Rosetta stone. The stories of his extreme intemperance are too familiar for repetition.

Biography, by J. S. Watson and by H. J. Nicoll.

Porter, JANE (b. 1776, d. 1850), novelist, was the daughter of a surgeon in the 6th Dragoon Guards. After his death, when she was a child, Jane Porter settled in London, and in 1803 published her well-known novel, *Thaddeus of Warsaw*, the romantic style of which gained for it a most successful reception. *The Scottish Chiefs* appeared in 1809, and was an equal favourite; but her best piece of fiction was *Sir Edward Seaward's Narrative* (1831). Among her other works are *The Pastor's Friends*, *Duke Christian of Luneburg*, *The Fields of Forty Footsteps*, and *Tales Round a Winter's Hearth*, written in conjunction with her sister ANNA MARIA PORTER (b. 1780, d. 1832), also a novelist of some

repute in her day. Their brother, SIR ROBERT KER PORTER (b. 1780, d. 1852), was a diplomatist of some importance, the author of several interesting books of travel, and a painter of panoramas and religious subjects.

Portland, WILLIAM HENRY CAVENDISH BENTINCK, 3RD DUKE OF, K.G. (b. 1738, d. 1809), was one of those great Whig noblemen who, during the latter half of the eighteenth century, were enabled, by virtue of their wealth, political influence, and knowledge of statecraft, to hold a position in the country entirely out of proportion to their abilities or their accomplishments. As with many other men, however, a great historical interest attaches to him from the ever memorable scenes in which he played a prominent, if not an influential, part. After more than a hundred years have passed away, the Coalition of which he was the head, is still the Coalition; while his connection at a subsequent period with the Peninsular War, and with the quarrels of Castlereagh and Canning, unite him to a later generation with which even our own has not yet "lost touch." He is the connecting link between the two centuries, and a fitting representative of that transition period which broke up the old Whig system as it had lasted from 1688 to 1788, and substituted for it the one with which we of the present day are most familiar. The Duke of Portland succeeded his father in the dukedom in May, 1762. In the first administration of Lord Rockingham he was Lord Chamberlain from July, 1758, to December, 1766, and when Lord Rockingham returned to power in 1782 the duke was made Lord Lieutenant of Ireland. He had, therefore, the unenviable distinction of being at the head of the Irish government when Grattan's Parliament was established. On Lord Rockingham's death in the summer of that year, and the king's appointment of Lord Shelburne to the Treasury, the Duke of Portland retired with the rest of his colleagues. But in the following year he was selected by the Whig Party, who coalesced with Lord North and a section of the Tories to turn out Lord Shelburne, as the fittest chief to preside over the new alliance; and on April 5th, 1783, he kissed hands as Prime Minister. The king had strained every nerve to avoid yielding to the Coalition, and no doubt began to work for their downfall as soon as they were installed in office. Fox's India Bill gave him the opportunity which he wanted. It made the Ministry thoroughly unpopular, and enabled the King to execute the *coup d'état*, which got rid of the Duke of Portland with perfect safety to himself and the general satisfaction of the country. The Duke of Portland was dismissed on Dec. 17th, 1783, and we hear little more of him again for twenty years. He was one of the Whigs who went over to Mr. Pitt in 1794, and he held the office of Home

Secretary from that year till 1801, when Mr. Pitt resigned. Previous to the year 1798 the duties which are now discharged by the Lord Lieutenant of Ireland were included in the Home Secretary's department, so that a second time the Duke of Portland became largely responsible for the state of Ireland at a very critical period of her history. His correspondence with Lord Northampton, the Lord Lieutenant, and Lord Cornwallis, the commander of the forces, is full of interest. From July, 1801, to January, 1805, he was President of the Council. But he was nearly forgotten by the public when in 1807 he was suddenly dragged from his obscurity to become the head of the Tory administration which succeeded the government of Lord Grenville. The Government was composed of elements which required a firmer hand than that of the Duke of Portland to hold together. He was a man of great integrity and amiability, but totally deficient in moral courage, and disabled by ill-health from exerting what authority he possessed. That he was ever placed in the position which he occupied for two years and a half is the more to be regretted, as it is undoubtedly owing to his weakness and vacillation that a stain has been left on the character of one of England's greatest statesmen which many believe to be totally undeserved. [CANNING and CASTLEREAGH.] Canning told the Duke of Portland that he could not continue in the Ministry if Lord Castlereagh continued to hold the War Department. The Duke of Portland agreed with Canning in his estimate of Castlereagh's qualifications, and promised that a Cabinet communication should be made to him in conformity with Canning's representations. It was never made: for the Duke of Portland could not muster up the resolution which was required for so delicate an undertaking. He was too old, too ill, and too amiable for any one to take him to task; and when he died in the following October, the share which he really had in this unfortunate complication seems to have been forgotten. His second, and Tory, Ministry will always be remembered for many remarkable events:—the seizure of the Danish fleet by Lord Cathcart, the Orders in Council, the commencement of the Peninsular War, the campaign of Sir John Moore, and the expedition to Walcheren.

Sir G. C. Lewis, *Administrations of Great Britain*; J. A. Froude, *The English in Ireland*.
[T. E. K.]

Portugal, THE SOVEREIGNS OF, belong to the House of Braganza, and in 1800 were represented by Queen MARIA I. who had ascended the throne in 1777. She, however, became hopelessly insane, and in 1792 her son, Dom John, was declared regent. He entered with zeal into the war against the French Republic, and formed a close alliance

with England. For this alliance the Portuguese were chastised by the Spaniards, at Napoleon's instigation, in 1801; and, as soon as the emperor's plans permitted, he drew up the treaty of Fontainebleau (October, 1807) for the partition of Portugal, and sent Junot to march upon Lisbon. The regent, who was a man of little strength of character, saw nothing for it but flight; and taking with him Queen Maria sailed off to Brazil, leaving a Council of Regency to act as best they could. The court did not return until 1822, although the French had been driven from the Peninsula in 1814. The regent, who had become king (JOHN VI.) on the death of his mother in 1816, tarried in Brazil, while Portugal, under the military rule of the Council of Regency, in which the English representatives, Sir C. Stewart and Marshal Beresford, were supreme, was seething with discontent. At last a revolution broke out at Oporto, the Council of Regency was expelled from Lisbon, and John yielded to the pressure of the English ministry and returned to his European dominions. At first he swore to obey a Liberal constitution (1822), but in 1823 took advantage of popular disturbances to proclaim himself an absolutist. He in turn was the victim of a plot hatched by his queen and second son, Dom Miguel, and became a prisoner in his own palace. Thence he was delivered through the remonstrances of the Powers, but in 1826 quitted Lisbon once more, and died shortly after his arrival in Brazil.

PEDRO IV., his father's heir, succeeded, and proclaimed a Liberal charter; but being more attached to Brazil (of which he had been proclaimed emperor in 1822) than to Portugal, speedily resigned in favour of his daughter, MARIA DA GLORIA (b. 1819, d. 1853), on condition that she should marry her uncle, Dom Miguel. In 1827 Miguel was established as regent, but in the following year proclaimed himself king, and obtained the consent of the Cortes. Maria took refuge in England, and thither her father came to her assistance. In spite of the sympathy of the Wellington Ministry for Dom Miguel, the English people were full of enthusiasm for the young queen's cause; and by means of an English loan and English officers, of whom the most famous was Sir C. Napier (q.v.), Dom Pedro was enabled to ensure the triumphant return of his daughter to Lisbon in 1833. In the following year, however, he died; after that Miguel had, by the Convention of Evora, agreed to quit Spain for ever. The queen was now declared of age by the Cortes, but she was unfortunate in her friendships, and soon became unpopular. In 1835 she married Augustus, Duke of Leuchtenburg, and on his death, a few months afterwards, Ferdinand of Saxe-Coburg. The remainder of the reign was one of incessant strife between the Semptembrists, or Ultra-Democrats, and the Chartists, or Liberals; the

Mignelites, whose creed was one of clericalism and reaction, rendering confusion worse founded. The armed intervention of the Powers of England, France, and Spain in 1847 for awhile restored tranquillity, but the duplicity of the queen, who intrigued with every party, and trusted none, rendered a stable government impossible. Her sudden death was a great benefit to the nation (Nov. 15th, 1853).

PEDRO V. (b. 1837, d. 1861) succeeded, under the regency of his father, the King Consort, until he came of age, in 1855. His reign was rather uneventful, except for the collision with the French government over the seizure of the French ship *Charles et Georges*, on the very justifiable suspicion of its being a slaver. Napoleon III. seized the opportunity to send a French fleet up the Tagus, and the Portuguese Government gave way (1858).

* LUIS I. (b. 1838), succeeded on the death of his brother (1861), and in the following year married the Princess Maria Pia of Savoy. He has proved a sagacious ruler, and though at first he was unable to form a stable government, of late years peace and prosperity have been uninterrupted, the last insurrection having been that headed by a veteran conspirator, the Duke of Saldanha, in 1870. In no respect did King Luis display his prudence more than by the deaf ear he turned to the schemes of General Prim (q.v.) for the union of Spain and Portugal under the House of Braganza. The marriage of his son and heir, Don Carlos (b. 1863), to the daughter of the Comte de Paris in 1886 was probably devoid of political significance, although the conduct of the French government raised it to an event of some importance. In the same year His Majesty visited England. King Luis is a friend of reform, as witness his conversion of the Portuguese Upper House from an hereditary assembly to one of life-members; he also has strong literary tastes, and has translated several plays of Shakespeare into Portuguese.

Potter, PHILIP CIPRIANI HAMBLEY (b. 1792, d. 1871), musician, was born in London, where his father was a professor of music. Under him he studied the piano, and afterwards passed into the hands of Calcott, Crotch, and Woelfl. Encouraged by the success of his early compositions, he visited the Continent in 1807, and studied music for many years in Germany, making the acquaintance of Beethoven in Vienna. After his return he became professor of the pianoforte in the new Royal Academy of Music, and in 1832 was appointed principal in succession to Dr. Crotch. He occupied this position for seventeen years. Amongst his pupils he counted Sterndale Bennett and Professor Macfarren. His own compositions, which included many overtures and symphonies, possess great merit, but unfortunately are for the most part unpublished.

Pottinger, ELDRED (b. 1811, d. 1843), British soldier, was the son of an Irish gentleman, and, having been educated at the East India Company's Academy at Addiscombe, entered the Bombay Artillery in 1827. In 1838 he was sent on a mission of inquiry into Afghanistan, and after many adventures succeeded in reaching Herat in the guise of a Cutch horse-dealer (Aug. 18th). Soon after his arrival news came of an impending attack by the Persians. Pottinger made himself known to the Vizier, Yar Mohammed, and was the guiding spirit in the heroic defence maintained against the Persian army and its Russian officers for nine months. The siege was raised in consequence of demonstrations made by the British in the Persian Gulf. After the British invasion of Afghanistan, Pottinger, now a major, was appointed political agent in Kohistan to the north of Cabul (1841), and when the general insurrection took place in favour of Akbar Khan (q.v.), succeeded in cutting his way to that city with a handful of Ghoorkhas. On the murder of Macnaughten (q.v.) he took command of the mission, and negotiated with the Afghan chiefs the safe conduct of the garrison. When that treaty was broken by the Afghans, and the miserable remnant of the fugitives had to surrender to Akbar Khan, Pottinger surrendered himself as hostage, and remained prisoner (January to September, 1842) until rescued by Pollock. A military inquiry only covered him with fresh renown; but while on a visit to his uncle, Sir H. Pottinger, in China, he died of fever.

Sir J. W. Kaye in *Good Words*, 1865.

Pottinger, SIR HENRY (b. 1789, d. 1856), soldier and diplomatist, uncle of the above, was educated at Belfast Academy, and in 1803 entered the East India Company's naval service, but in 1805 received a cadetship. In 1810 he and Captain Christie undertook a most dangerous mission of exploration into the countries between the Indus and Persia to examine the resources of the countries through which a French army might march upon India, and returned safely in 1811 (*Travels in Beloochistan and Scinde*, 1811). In the same year he became assistant to Mr. Elphinstone, the Resident at Poonah; was collector at Ahmednuggur (1816-25); and Resident at Cutch (1825-39), where he practically ruled for the infant prince. During this period Colonel Pottinger was sent on a mission into Scinde in 1831, and again in 1838, when he negotiated a passage for Lord Keane's army to Cabul. Created a baronet, he returned to England, but was despatched in 1841 as our envoy to China, where the war with England was in its third year. His firmness had much to do with bringing the war to a close by the treaty signed at Nankin on Aug. 26th, 1842. In 1844 he returned to England, received a

pension of £1,500, and was made a member of the Privy Council. He was Governor of the Cape of Good Hope (1846-7), and Governor and Commander-in-Chief of the Presidency of Madras from 1850-4.

Dublin University Magazine, 1856.

Powell, BADEN, F.R.S. (b. 1796, d. 1860), man of science, was educated at Oriel College, Oxford (B.A. 1817), and became Vicar of Plumstead, Kent, in 1821. In 1827 he was appointed and held that office until 1854. He had been Savilian professor of geometry at Oxford, made an F.R.S. in 1824. Professor Powell was an energetic promoter of the study of natural science, and published some thorough treatises on *Differential and Integral Calculus* (1829-30), *Elementary Optics* (1833), and *The Undulating Theory of Light* (1841). He contributed to the famous *Essays and Reviews*, and wrote several works from a Broad-Church standpoint, such as *Religion and Science* (1833).

Powers, HIRAM (b. 1807, d. 1873), American sculptor, was the son of a farmer of Vermont; and, after a meagre education, became librarian in a Cincinnati hotel, clerk in a store, and apprentice to a clock-maker. Having become acquainted with the Prussian sculptor, Eckstein, he acquired a knowledge of modelling in clay, and became superintendent of the wax-work department of the Western Museum at Cincinnati. In 1835 he appeared in Washington, and modelled busts of some of the leading statesmen with great success. In 1837 he went to Florence, and remained there until his death. Fortunately he did not restrict himself to portraiture, but encouraged by Thorwaldsen's warm commendation of his *Eve*, executed, in 1839, his celebrated *Greek Slave*, which at once attained popularity, and that deservedly. *The Fisher Boy*, *Il Penseroso*, *Proserpine*, and the *Indian Girl* were among the productions of his original and fearless genius.

T. A. Trollope in *Lippincott's Magazine*, Feb., 1875; *American Annual Cyclopædia* (1875).

* **Poynter**, EDWARD JOHN, R.A. (b. 1836), the son of an architect, was educated at Westminster School and at Ipswich Grammar School, and studied art at the Royal Academy schools, and under Gleyre in Paris. He settled in London in 1860, and in 1862 first exhibited in the Royal Academy. It was in 1867 that he made his reputation by the picture *Israel in Egypt*, a remarkable instance of the artist rising superior to the mere archæologist; and it was followed by the *Catapult* (1868). Mr. Poynter became A.R.A. in 1869, and R.A. in 1876. From 1871 to 1876 he was Slade Professor of Art at University College, London; and from 1875 to 1881 was Director for Art at South Kensington, combining with it the office of Principal of the Training School, which he continued to hold after 1881. His fields of activity are various;

in 1869 he exhibited landscape studies in water colours at the Dudley Gallery; in 1869, having studied mosaics in Italy, he designed a mosaic of St. George for the central hall of the Houses of Parliament, and in 1872 made cartoons for two frescoes for St. Stephen's Church, Dulwich, and decorated the grill-room at South Kensington (1868-70). Among the pictures more recently exhibited by him at the Academy were the *Ibis Girl* and *Milanon in the Temple of Venus* (1871); *Perseus and Andromeda* (1872); *The Golden Age* and *The Festival* (1875); the fine picture *Atalanta's Race* (1876); *The Fortune Teller* (1877); *A Visit to Æsculapius* (1880); *Helen* (1881); *Diadumene* (1885). *A Visit to Æsculapius*, which was purchased out of the Chantrey fund, is perhaps one of the most successful pictures of any in which artists of the present age have received inspiration from classic themes. Venus's ills were of no serious nature when they brought her, slender and noble, to the groves and gardens in which Æsculapius exercised his art, and she and her handmaidens, the attendant Graces, and the temple, woods, and fountain, inspire us with the pleasure of a concentrated and complete beauty. The theme so strongly and exquisitely treated by Mr. Poynter in oils was repeated by him in water-colour with hardly less success. Mr. Poynter is also the author of *Ten Lectures on Art* (1879).

Mr. P. G. Hamerton in the *Portfolio*, vol. 2.

Praed, WINTHROP MACKWORTH (b. 1802, d. 1839), the poet, was born in London, where his father was serjeant-at-law. In 1814 he was sent to Eton, where he published first the *Apis Matina* and then the *Etonian* (1820-1), by which his reputation for facile, and sometimes witty verse, was immediately established. He entered at Trinity College, Cambridge, in 1821, and after a very distinguished university career, in which he took two Chancellor's medals for English verse (1823-4), he graduated as third classic, and in 1827 was elected fellow of his college. Having been called to the bar in 1829, he was returned for St. Germans in 1830 in the Tory interest, and afterwards sat for Yarmouth (1834) and Aylesbury (1837). In 1834-5 he was Secretary to the Board of Control in Sir Robert Peel's government. But he had only time to show the highest promise of a parliamentary career when signs of rapid consumption appeared, and he died at his house in Chester Square when only thirty-seven. As a poet he accomplished little that will last, for he was deficient both in true humour and seriousness. He must be classed among the imitators of Byron. His rhymes are fairly lively, and were evidently written with consummate and self-satisfied ease. Subjects and sentiments are alike commonplace and the wit seldom advances far beyond the schoolboy stage; at the same time

it is always in admirable taste. *Lilian, The Troubadour*, and the *Bridal of Belmont*, are among his longer poems. *The Vicar* and the *Red Fisherman* are as good as any others.

Præd's Poems, with a *Memoir* by the Rev. Derwent Coleridge (1864).

Preller, ERNST CHRISTIAN JOHANN FRIEDRICH (b. 1804, d. 1878), artist, was born at Eisenach, but during his first year the family removed to Weimar. Here, under the direct encouragement of Goethe, Preller devoted himself to art, especially landscape. After studying in Dresden, he visited the Netherlands with Karl August of Saxe-Weimar, and remained two years in Antwerp (1823-5). He subsequently spent three years in Italy (1827-30), and stood by the death-bed of Goethe's son. After his return to Weimar Preller was entrusted with the duty of drawing the portrait of Goethe himself as he lay in death. The result was the well-known outline of the head crowned with the laurel wreath. From 1835 to 1837 he was engaged on the series of designs for Wieland's *Oberon*, now on the walls of the Residenz in Weimar. In 1840 he visited Norway, and soon after this began to work upon the great designs in illustration of the *Odyssey*, by which his name will be remembered. The cartoons were exhibited at Munich in 1858, and Preller was commissioned by the Grand Duke of Weimar to execute them in fresco on the walls of the new museum at Weimar. A second series of cartoons was completed in 1863, and is now to be seen at Leipzig. The frescoes, or rather "spirit-frescoes," themselves were finished in 1868, and attracted much attention in all art circles throughout Germany. They consist of sixteen scenes from the life of Ulysses, and are perhaps rather to be called historical landscapes than historical paintings in the ordinary acceptance. In 1875-6 Preller again visited Rome with the intention of studying for a series of illustrations for the *Iliad*, but strength failed him.

Friedrich Preller's *Odyssee-Landschaften*, mit einer Biographie des Künstlers (Leipzig, 1881).

Prescott, WILLIAM HICKLING (b. 1796, d. 1859), American historian, was born at Salem, Massachusetts. He came of old Puritan stock, his father being a lawyer of high standing. In 1808 the family removed to Boston, which continued to be Prescott's home for the rest of his life. In 1811 he was admitted to Harvard University, from which he graduated with honours in 1814. While at college, a crust of bread, flung in jest by a fellow-student, struck the pupil of Prescott's left eye with such force as permanently to blind it. The sight of his other eye, however, remained for a time unimpaired, and after graduation he commenced the study of law in his father's office. But in Jan., 1816, his right eye was attacked by acute rheumatism, and at first it was feared that he would

become completely blind. After a European tour, however, an improvement was manifest, but to the end of his life the condition of his eyesight was such as to preclude all thought of active employment, and painful inflammatory attacks were of frequent occurrence. His cheerful temperament, however, would not let him succumb to his misfortunes, and he was resolved to be a worker in some capacity. After his marriage, in 1820, he studied successively the English, French, and Italian literatures, and contributed a review of Byron's *Letters to Pope* to the *North American Review* in 1821. Many of his articles on European literature were republished in 1 vol. in 1845. In 1824 he began the study of Spanish, under the influence of his friend Ticknor, the future historian of Spanish literature. Preparations for his *History of Ferdinand and Isabella* were commenced in 1826, and for the next ten years he was engaged almost continuously upon the work, under enormous difficulties caused by his weakness of sight. He was naturally indolent; this, however, he attempted to overcome by bets with his friends upon the accomplishment of given tasks within given times. He wrote with a noctograph, and the light was carefully regulated by a contrivance of his own. His method of composition was to make a mental digest of his materials, and then to shape his thoughts in literary form. On one occasion he is said to have re-written a chapter of his *History of Philip II.* no less than sixteen times. The *History of Ferdinand and Isabella* was completed in June, 1836, and published in London and Boston in Dec., 1837. The romantic nature of its subject, and the rich colouring of the author's style, contributed greatly to the popularity of the work—a popularity which has continued to the present day. After an interval of rest he resumed his historical studies, choosing the conquest of Mexico as his next subject. Irving had selected the same theme for historical treatment, but relinquished the field to Prescott upon learning the latter's intentions. The *Conquest of Mexico* was written under more favourable conditions than its predecessor, Prescott's eyesight having considerably improved, and the work was completed and published in 1843. Among the many compliments he received, an appreciative letter from Humboldt gave more gratification to the author than anything else. During 1844-5-6 he was engaged on his *Conquest of Peru*, which was published in March, 1847. In the spring of 1850 he revisited England and the Continent, and while in England he received the degree of D.C.L. from the University of Oxford. In 1855 appeared the first two volumes of his unfinished *History of Philip II.*, upon which he had been at work since 1849, and in 1856 he published a continuation of Robertson's *Charles V.* A stroke of apoplexy in Feb., 1858, did not

permanently interfere with his labours, but he finally succumbed to a second attack of the same disease. As an historian he is deemed to excel in vigorous and picturesque narration, in the arrangement of his materials, and the vivid presentation of events—qualities which have procured him a wide popularity. Of history in its profounder aspects, of the philosophy which deals with causes rather than consequences, with tendencies rather than individuals, there is little to be found in his writings; but all voices agree that he has adorned the literature of his country and his age.

George Ticknor, *Life of William Hickling Prescott*. [E. J. H.]

Pretorius, ANDRIES (*b. circa 1795, d. 1853*), the real founder of the Orange Free State and of the Transvaal Republic, began life as a farmer at Graaf Reinet in Cape Colony. In 1834 he led the Dutch exodus from British territory, which resulted in the foundation of the Orange Free State. After the massacre of the Dutch by the Zulus in 1838 he defeated the Zulu king Dingaan, and won the interior of Natal for European colonisation. Outlawed by the British government as a rebel in 1848, he "trekked" into the Transvaal, and there founded the Transvaal Republic. A free pardon was given him in 1851, and in 1852 he negotiated the Sand River Convention for the independence of the Transvaal. The town of Pretoria is named after him. His son, MARTINUS WESSEL PRETORIUS (*b. circa 1830*), also a farmer, was elected in 1859 second President of the Orange Free State, and made an ineffectual attempt to effect a union of the Republics. From 1869–72 he was President of the South African (Transvaal) Republic, when he was forced to resign on the ground that he had exceeded his constitutional authority in agreeing to the "Keate" award concerning the West Griqualand frontier. He took a prominent part in the agitation which preceded the Boer War of Independence, and in December, 1880, was elected, with Messrs. Krüger and Joubert, a member of the provisional government, which carried on the successful struggle against the British.

Prichard, JAMES COWLES, M.D. (*b. 1786, d. 1848*), anthropologist, a native of Ross, was educated at Bristol and at Edinburgh University, where he took his degree, and was afterwards attached to Trinity College, Cambridge, and to more than one college at Oxford. In 1810 he established himself at Bristol as a doctor, and remained there until 1845, when he was appointed a Commissioner of Lunacy, and came up to London. Dr. Prichard's great work was his *Researches into the Physical History of Man* (1st ed. 1813), in which he contended for the origin of the whole human race from a common source, and especially established the connection between the Celts and the other European nations. A

supplementary treatise was published in 1831, *The Eastern Origin of the Celtic Nations*, and a summary entitled *The Natural History of Man* in 1843. Among Dr. Prichard's works of minor importance may be mentioned *Analysis of Eastern Mythology*, and some medical treatises which have been rendered obsolete by subsequent discovery, such as one on the *Nervous System* (1822) and on the *Different Forms of Insanity* (1842).

Prim, JUAN (*b. 1814, d. 1870*), marshal, Marquis de los Castillejos and Count de Reuss, was a native of Catalonia, and on the outbreak of the first Carlist War (1834) supported the cause of the regent Christina with such ability that he became colonel in 1837. After the peace of 1839 he constantly opposed Espartero in the Progressist interest, and in 1843 succeeded in driving him from Madrid. For a brief period Prim was governor of Madrid, but he soon fell out with the reactionary Prime Minister, Narvaez, and being accused of attempting his assassination, was sentenced to six years' imprisonment. He was speedily released, but lived in retirement until the Crimean War, when he was sent to the East as military representative of Spain. Prim greatly distinguished himself in the Morocco campaign of 1859, was created marquis, and in 1862 commanded the Spanish contingent in the expedition of the English, French, and Spanish Powers to Mexico. As soon, however, as he discovered Napoleon's design of establishing an empire in Mexico he withdrew his troops to Cuba and thence to Spain. He again engaged in revolutionary attempts, and after having to fly the kingdom in 1866, succeeded, in 1868, with the aid of Serrano and Admiral Topete, in overthrowing Isabella. He became Minister of War in Serrano's provisional government, and took in charge both the suppression of the revolt in Cuba and the selection of a Sovereign. Prim was, in fact, virtually Dictator, and acted with great energy, though with but little success. After his encouragement of the candidature of Prince Leopold of Hohenzollern had precipitated the Franco-German War, Prim succeeded in obtaining the consent of Amadeus, Duke of Aosta, and he was elected King of Spain by the Cortes (Nov. 16th, 1870). On leaving the Chamber Prim was mortally wounded by Carlist assassins, and died three days afterwards.

Procter, B. W. and A. [CORNWALL.]

Proudhon, PIERRE JOSEPH (*b. 1809, d. 1865*), was the son of a poor cooper living at Besançon. Having become a working printer, he lived in that capacity until 1837, and acquired a knowledge of Hebrew. His earliest work, an *Essay on Grammar* (1837), and its immediate successors were devoted to philology, but were valueless. In 1838 he gained a pension of 1,500 fr. from the Besançon Academy, tenable for three years, and going

to Paris published his famous *Qu'est-ce que la Propriété? (What is Property?)* The answer, *Property is Theft*, was found in the first page, and the work contained the further development of Proudhon's speculations that government of men by men is oppression, that anarchy is the only true order. In this and his subsequent writings, which were collected after his death in 26 vols., Proudhon denounced equally the orthodox and socialistic economists. For his *Avertissement aux Propriétaires* in the following year Proudhon was prosecuted, but acquitted. For five years subsequently he worked at Lyons as general man of business to the brothers Gautier, who had established a water-transport system between the Rhone and Rhine, and published among other works his *Creation of Order in Humanity* (1843) and *Economic Contradictions; or, the Philosophy of Poverty* (1846), containing his analysis of value and a history of economic evolution. During the revolution of 1848 he returned to Paris and edited the *Représentant du Peuple*, and was returned a deputy to the Constituent Assembly at the July elections. But his paper was prosecuted, and thrice suppressed, and Proudhon, flying to escape a sentence of three years' imprisonment and a fine of 10,000 fr., was compelled to relinquish the project of a People's Bank, to be carried on without interest. Returning to France in 1850, he was arrested, and married while in prison at St. Pelagie, where also he wrote his *Confessions of a Revolutionist*, and continued to edit his paper. His *Justice in the Revolution and the Church* (1858) resulted in a similar term of punishment, to escape which he fled to Belgium, whence he returned in 1863, continuing his restless activity until his death.

Sainte-Beuve, Proudhon: *sa Vie et sa Correspondance*.

Prout, SAMUEL (b. 1783, d. 1852), the artist, was born in Plymouth, and received little education in art till he came to London in 1802, at the invitation of Britton, who asked for his assistance in the *Beauties of England*. In 1804 he exhibited a picture of St. Keyne's Well, Cornwall, at the Academy, and he soon became so well known for the picturesque effects of his country and village scenes, that in 1815 he was elected to the Water-Colour Society. In 1818 he made his tour in Normandy, so important for the subsequent development of his art. Next year he exhibited his great picture of the *Indianman Ashore*, and in 1824 he made a prolonged journey through Italy, Germany, and Bohemia, fondly recording the memorials of a past that even then was beginning to disappear. Prout had the true romantic feeling for lands of history and antique beauty. Few have done higher service for the cause of antiquarian art. In such works as his *Views of Northern England* (1821), and *Sketches in France, Italy, and*

Switzerland (1839), he has handed down to us the true portraits of the old English and Continental towns as they were before the railways came. He was above all things an artist of the pencil, and was one of the first to make large use of lithography in his publications. An exhibition of his works was held in 1880 at the Fine Art Society's Rooms.

John Ruskin, *Notes on Samuel Prout and William Hunt* (1890). See also *Modern Painters* (passim).

Pugin, AUGUSTUS WELBY NORTHMORE (b. 1811, d. 1852), architect, was born in London, and was the son of a French emigrant, Augustus Pugin, himself a writer of high reputation on architectural subjects, and the author of the *Microcosm of London* (1808), *Picturesque Tour of the Seine* (1821), and *Gothic Ornaments* (1831). The younger Pugin early displayed his extraordinary capacity for architectural detail and ornamentation by his Gothic boyish designs for silver plate and furniture. Having also tried his hand at scene-painting, he amused himself by cruising about the German Ocean in fishing boats, adopting the sailor's dress which he never abandoned. Returning to the diligent study of architecture in 1830, he devoted himself with wild enthusiasm to the revival of Gothic architecture in England that always remained the chief object of his life. He entered the Church of Rome in 1834, and two years later published his first great onslaught upon Protestantism, *Contrasts*, a series of comparisons between such churches as St. Mary Redcliffe and All Souls', Langham Place. Partly owing to the "Oxford Movement," and the general Gothic and Romantic tendency of the time, the book had an extraordinary effect, and Pugin's reputation as an art-critic was subsequently maintained by his more valuable works, *The True Principles of Pointed or Christian Architecture* (1841), *Glossary of Ecclesiastical Ornament and Costume* (1844), and *Floriated Ornament* (1849). Numerous important structures were also entrusted to him by the Roman Catholic Church, such as St. George's Cathedral, Southwark; St. Bernard's Monastery, in Leicestershire; and the cathedrals of Kilmarnock and Ennischorthy. He also designed and built at his own expense the church and conventual buildings of St. Augustine, near Ramsgate, in which he himself for the most part resided during his closing years. It is now generally admitted that nearly all of the designs for the new Houses of Parliament, except the outside skeleton, were due to Pugin rather than to Barry. He was himself ceaselessly engaged upon the masses of detail for the interior when in 1851 he was suddenly overtaken by insanity and confined in Bedlam, whence he was removed to his home near Ramsgate, only a short time before his death. His strength undoubtedly lay rather in ornamentation and elaborate detail than in

grandeur of conception or creation of a whole, but no one can claim a larger share in the overthrow both of pseudo-classic and of sham Gothic.

Benjamin Ferrey, *Recollections of A. N. Welby Pugin and of his father, Augustus Pugin* (1861).

Punjaub, THE MAHARAJAHS OF THE, consist of Runjeet Singh and his sons Khuruk Singh and Dhuleep Singh. Their capital was at Lahore, and they ruled over the Sikhs, who, at first a religious sect founded by Nanak (d. 1539), established themselves as a nationality independent of the Mogul Empire in 1764. They formed a confederacy of twelve military organisations, chief of which was that of Puttiala. RUNJEET SINGH (b. 1780, d. 1839) was the son of Maha-Singh, the sirdar or chief of the Sukur-Chukeah organisation (misul). His father died in 1792, and Runjeet Singh, who had been attacked at an early age by small-pox, and had recovered at the cost of an eye, was left to the care of his mother, who allowed him to indulge in every kind of debauchery. He grew up absolutely ignorant; but ignorance was no check to his ambition. Arrived at the age of seventeen, he seized the government, and relieved himself by poison of the inconvenient presence of his mother. He next set himself to overcome the rival sirdars, and embracing the alliance of Shah Zeman, the Ameer of Afghanistan, when he invaded the Punjaub, obtained from him the grant of Lahore. Thence he gradually spread his power over the Punjaub, exterminating the more able of his opponents and rendering the weaker sirdars tributary. By 1809 he had rendered himself supreme of the district west of the Sutlej, and now began to attack the sirdars on the east of that river. They invoked the aid of the British, and Runjeet Singh, prudently avoiding a struggle with a superior power, came to an arrangement by which he was to be excluded from the territory east of the Sutlej. Beyond that river, however, he was supreme, and in 1812 proclaimed himself Rajah of the Punjaub. His army, which was officered by Europeans, was everywhere successful. The disorder in Afghanistan relieved him of anxiety from that quarter; indeed, when Shah Shujah came to his court as a fugitive, Runjeet Singh became the possessor of the Koh-i-noor under false promises of assistance, and increased his dominions at the expense of that power by the conquest of Attock (1813), Multan (1818), and Cashmere (1819). Having further reorganised his army by the aid of some French officers, he crossed the Indus, and in 1829 annexed the province of Peshawur. Runjeet Singh, who had assumed the title of Maharajah in 1819, was now at the height of his power. He maintained peaceful relations with the British, confirmed by a meeting held with Lord W. Bentinck on the Sutlej in 1831; order and tranquillity reigned within his boundaries,

and even a considerable defeat inflicted on his forces by the Afghans in 1836 did not disturb the loyalty of the annexed districts. He belonged, in fact, to the highest type of Oriental despot. The death of Runjeet Singh, however, was a signal for general anarchy. His imbecile son, KHURUK SINGH (b. 1812, d. 1840), succeeded him, but he died in the following year, and his successor, NAO NIBAL SINGH, only reigned a day. Two more phantom rajahs came and went, and then * DHULEEP SINGH (b. 1838), a son of one of Runjeet Singh's favourite wives, was placed on the throne (September, 1843). The first Sikh War soon followed (1845-6), caused chiefly by the Sikh generals being desirous to find a field for their turbulent soldiery, and after the British had won the great battles of Moodkee, Ferozeshah, Aliwal, and Sohraon, a council of regency was appointed during the minority of the Maharajah, and a British resident sent to Lahore. [LAWRENCE, SIR H.] A general rebellion, however, necessitated the second Sikh War, and after the victory of Guzerat it was resolved to annex the Punjaub. The Maharajah on March 29th, 1849, agreed to a treaty by which he transferred his dominions to the East India Company, and received an annuity of £50,000. He took up his abode in England, embraced Christianity, and married a Christian wife. His chief residence was at Thetford. In 1886 he was allowed to revisit India; but having incautiously promulgated a manifesto, in which he renounced Christianity and claimed the possessions of his father, he was arrested at Aden and brought back to London.

Punshon, THE REV. WILLIAM MORLEY LL.D. (b. 1824, d. 1880), Wesleyan minister, was born at Doncaster, and in 1838 entered the office of his grandfather, a timber merchant at Hull. He conceived, however, a strong desire to enter the Wesleyan ministry, and in 1844 went to the Wesleyan College at Richmond. In the following year he took charge of a congregation at Marden in Kent, but was shortly afterwards transferred to Whitehaven in Cumberland, where his fame as a preacher spread far and wide. In 1849 he was ordained to the ministry at Oldham Street Chapel, Manchester, and then went the circuit for three years. In 1868 Mr. Punshon went to Canada, and became known as the most eloquent preacher in the Dominion. In 1871 he represented the Canadian churches at the Annual Wesleyan Conference of July. In 1873 he returned to England, and was appointed to the chapel at Warwick Gardens, Kensington. In 1875 he was president of the Wesleyan Conference. Dr. Morley Punshon was undoubtedly one of the most eloquent pulpit orators of his time; he was hardly less

celebrated as a lecturer, and his lectures on *John Bunyan* and *The Huguenots* have gone through many editions. Selections of his *Sermons* and *Lectures* have been published by the Rev. W. Arthur (1882).

T. MacCullagh, *The Rev. W. Morley Punahon*.

PURCHAS, THE REV. JOHN (b. 1823, d. 1872), divine, a native of Cambridge, was educated at Rugby and at Christ's College, Cambridge. After holding various curacies, he was, in 1866, appointed perpetual curate and incumbent of St. James's Chapel, Brighton. Mr. Purchas was by this time well known as an advanced Ritualist, having already published a remarkable book of ceremonial, the *Directorium Anglicanum* (1852). He was speedily arraigned before the court of Arches, and the well-known case *Hebbert v. Purchas* terminated in Mr. Purchas being admonished to discontinue certain illegal practices. As he did not do so, he was suspended *ab officio* in 1872, and shortly afterwards died.

PUSEY, EDWARD BOUVERIE, D.D. (b. 1800, d. 1882), theologian, was the son of the Hon. Philip Bouverie, half-brother of the Earl of Radnor, and was descended from a Flemish family that settled in England in the sixteenth century. He was born at Pusey House, in Berkshire. Having been educated at Eton and at Christ Church, Oxford, he obtained a first class in classics in 1822, the Latin essay prize in 1824, and a fellowship at Oriel in the same year. In 1826 he went to Germany to study the condition of German theology, and in 1828 published the results of his visit in the impartial *Historical Enquiry into the Probable Causes of the Rationalistic Character lately predominant in the Theology of Germany*. In the same year he was appointed Regius professor of Hebrew, with a canonry and residence in Christ Church. He also married the widow of J. R. Barker, by whom he had one son, Philip Edward Pusey, who wrote some treatises on Cyril, but died two or three years before his father. Having long protested against "dead orthodoxy," Pusey in 1833 contributed a short treatise on the *Benefits of Fasting to the Tracts for the Times*, but he did not appear as a leader in the Tractarian cause till the publication of his great pamphlet on *Scriptural Views of Holy Baptism* (1835-6). Under his influence the Oxford Movement changed its character. Newman says, "He gave us a position and a name." "He introduced sobriety and gravity." He further supported his position in the celebrated sermon in which he maintained that wilful sin after baptism is irreparable (1837). Meantime he was taking a prominent part in the Hampden controversy, and was beginning the publication of his great series of the *Library of the Fathers*, the *English Translation of the Fathers*, and the *Anglo-Catholic Library*. He also endeavoured, with Newman, to establish a hall for reading graduates

in the house opposite Christ Church. After 1838 he and the movement were continually attacked in various pulpits, especially in the university sermons. He further increased the indignation by preaching in the university church, in 1843, a sermon on the *Holy Eucharist a Comfort to the Penitent*, containing high sacramental theories. Pusey was suspended from preaching in St. Mary's for two years. Again in 1850 he was inhibited from preaching by Bishop Wilberforce. Meantime, by the secession of Newman in 1846, he had been left almost alone as the leader of the movement that became naturally known as "Puseyite." It was through his unwavering persistence and belief in the cause, illustrated especially in his *Letter to Keble* (1846), that the Anglican party regained confidence and extended its dominion. He maintained the continuity of the Greek, Roman, and English Churches, but was himself not a Ritualist, being comparatively indifferent to outward ceremonies. In 1866 he published the *Eirenicon*, a proposal for the reuniting of Christendom, which was adversely commented upon by Dr. Newman. As a scholar he was eminent for linguistic powers and profound knowledge of theology. He was thoroughly acquainted with Arabic, having studied it under Freytag. He learnt Ethiopic when he was over sixty. Latterly, he seldom left his rooms in Christ Church, except for an occasional visit to the convalescent home founded by him and Miss Sellon, at Ascot, where he died. As a memorial, the Pusey House, containing his library, and endowed for three priests, to form a centre of theology in Oxford, was opened in 1884. Besides numerous letters to the *Times* on Church and State, Royal Supremacy, Marriage with a Deceased Wife's Sister, etc., the following are perhaps Pusey's most important remaining publications:—*The Real Presence* (1857), *Sermon on Everlasting Punishment* (1864), *Nine Lectures on Daniel the Prophet* (1864), *The Church of England, Letters to Keble, Newman, etc.* (1865), *Historical Preface to Tract 90* (1865), *Blessed are the Meek* (sermon at the opening of Keble Chapel, 1876), *What is of Faith as to Everlasting Punishment?* in reply to Canon Farrar's *Eternal Hope* (1880), *Sermons for the Church's Seasons* (edited by R. F. Wilson, 1883), and *Private Prayers* (edited by Canon Liddon, 1883).

Times, July 17th, 1882; *Memorial Sermons* by Canon Liddon (1884) and Canon H. S. Holland (1882). [H. W. N.]

PUSHKINE, ALEXANDER SERGEEVITCH (b. 1799, d. 1837), the greatest Russian poet of the century, was born at Moscow, educated at the lyceum of Tsarskoe-Selo, and in 1817 became a clerk in the Russian Foreign Office. In 1820 appeared his romantic poem *Ruslan and Luniela* in the Byronic style, and the author was hailed as a genius by his contemporaries. It deals with the legendary

period of Vladimir. His next compositions of importance were *The Pioneer of the Caucasus* (1822) and *The Fountain of Bakhkhiseraï* (1824). These were followed by the deeply interesting study *The Gipsies* (1824), the scene of which is pitched in Bessarabia, where the poet had been living in exile on account of his revolutionary opinions. He was now suffered to return to his estates, but was soon placed under police supervision. There he wrote his fine tragedy *Boris Godunoff*, an imitation of Shakespeare (1825), and the narrative poem *Poltava*, of which Mazeppa is the hero (1828), and *Eugene Onyegin*, a satire on Russian society (1832). His best prose story, *The Captain's Daughter*, appeared in the same year. By this time Pushkine had married, and was leading a life of great happiness. His wife, however, began to suffer from anonymous lampoons, and the poet fell mortally wounded in a duel with D'Anthès, their supposed author. Pushkine's fame is European, yet he was confessedly indebted to foreign models. Of these the most influential was Byron, and *Eugene Onyegin* is a distinct imitation of Don Juan. Pushkine, however, had a genuine passion which Byron too frequently lacked; and in him the poet was never replaced by the rhetorician.

Annenkoff, *Materials for the Biography of Pushkine, and Pushkine in the reign of Alexander.*

Pye, JOHN (b. 1782, d. 1874), engraver, was self-taught, and coming to London at the age of eighteen was apprenticed to the engraver Heath. In 1811 his engraving after Turner of *Pope's Villa* delighted the painter, and Pye was engaged to engrave his *Temple of Jupiter in Ægina*. He also engraved Turner's *Junction of the Tees and Greta*, *The Rialto*, and *Redcliffe Church, Bristol*. His exquisite line was displayed no less happily in Claude's *Annunciation* and *Classical Landscape* and Poussin's *Abraham Preparing for the Sacrifice*. Pye was not amicably disposed towards the Royal Academy, and published a trenchant attack upon it in 1845, entitled *The Patronage of British Art*.

Q

Quain, JONES (b. 1796, d. 1865), the most distinguished of a distinguished family of doctors, was a native of Mallow, Ireland, and studied at Paris. After being lecturer on anatomy at the Aldersgate School of Medicine, he was Professor of Anatomy and Physiology at London University, now called University College, from 1831 to 1836. Dr. Quain was a most successful lecturer, and his *Elements of Anatomy* (1st ed. 1828, 9th ed. 1882), did much to popularise the science, and to teach it in a rational manner. In

conjunction with Dr. Erasmus Wilson, he published some valuable anatomical plates of *The Muscles of the Human Body*.

* **Quain, RICHARD, M.D., F.R.S.** (b. 1816), an eminent physician, studied for his profession at the medical school of the University of London. He was made Bachelor of Medicine, gaining the university scholarship, in 1840, and Doctor of Medicine in 1842. He subsequently became a member of the Senate, and chairman of the Brown Institution. He was a member of the Royal Commission on the Cattle Plague. Dr. Quain has been the Queen's representative on the Medical Council, and treasurer for many years, and also chairman, of the Pharmacopœic committee of the Council. In 1851 Dr. Quain became a fellow of the Royal College of Physicians, and was member of the Council and censor in 1867, 1868, and 1882, and senior censor in 1877. In 1872 he delivered the Lumleian lectures, the subject being *The Diseases of the Muscular Walls of the Heart*, and was Harveian orator in 1885. Dr. Quain is consulting physician to the Brompton Consumption Hospital, to the Seamen's and other hospitals. He has been vice-president of the Royal Medical and Chirurgical Society, president of the Pathological Society and of the Harveian Society. He is a well-known practitioner, and he attended Lord Beaconsfield in his last illness. His most valuable contribution to medical literature is *The Dictionary of Medicine* (1882), which he edited, and for which he wrote some valuable articles. Among his other contributions to science, may be mentioned one on *The Fatty Diseases of the Heart* in the *Medical and Chirurgical Transactions* of 1852.

Quinet, EDGAR (b. 1803, d. 1875), French man of letters, was a native of Bourg, and embarking on a literary career, attracted the notice of Cousin by his translation of Herder's *Philosophie der Geschichte*. He was sent by the Government on a mission to Greece in 1829, became professor of foreign literature at Lyons in 1839, and at Paris in 1841, where he and his friend Michelet made themselves notorious by violent attacks upon Ultramontanism. He fought in the revolution of 1848, and opposed the Second Empire in the spirit of a true republican, refusing to accept the amnesties of Napoleon III. His works, which fill some 30 vols., are on miscellaneous subjects:—*Ahasuerus* (1833) and *Merlin l'Enchanteur* are wildly imaginative allegories; *Préméthée* (1833), and *Les Esclaves* (1853) are dramas: *Les Révolutions d'Italie* (1852), and *La Révolution* (1865), are historical; and *Le Génie des Religions* (1842) is perhaps the most remarkable specimen of the works produced under the influence of the religious mysticism which influenced so many of the great Frenchmen of Quinet's time.

E. Quinet, *Histoire des idées* (1858); Chassin, E. Quinet, *sa Vie et son Œuvre* (1858).

R

Rachel, ELISA (b. 1820, d. 1858), French actress, properly called Elisa Rachel Felix, was born at Mumf, in Switzerland, and was of Jewish origin. In her childhood she attracted notice while singing for bread in the streets of Lyons, and in 1833 appeared on the stage as an actress. It was not until 1838 that she really took hold of the public in Corneille's *Les Horaces*. From that time forward she was without a rival as the exponent of the dramas of the classical school of Racine and Corneille, and her *Phèdre*, first given in 1843, has probably never been equalled as a representation of supreme human woe. In 1848 her recitations of the *Marseillaise* were not the least among the precipitant causes of the revolution. In London (1846), and in America (1855), she was received with great enthusiasm, but during the latter tour her health broke down and she died of decline near Toulon. Her private life was abandoned, and she had inordinate love of wealth.

E. de Mirecourt, *Mme. Rachel*.

Radetsky, JOHANN JOSEPH WENZEL (b. 1766, d. 1858), Count of Radetz, and an Austrian field-marshal, was a Bohemian by birth, entered the Austrian service in 1784, and fought through the wars against Napoleon. It was not until 1848, however, that he particularly distinguished himself, when, while commander of the troops in Lombardy, he was confronted by an insurrection in the Quadrilateral. Having effected a masterly retreat to Verona, he turned upon the Italians, and after some partial reverses succeeded in driving Charles Albert of Sardinia into Milan, and in March, 1849, utterly defeated him at Novara. Radetsky then laid siege to Venice, and took it after an obstinate defence. From 1850 to 1856 he ruled Lombardy and Venice with a rod of iron.

Radowitz, JOSEPH VON (b. 1797, d. 1853), Prussian statesman, was of Hungarian origin, and in 1812 entered the army of Westphalia. He subsequently exchanged into the Hessian service, and in 1823 entered that of Prussia. He married a Prussian countess, and gradually worked his way to the leadership of the Conservative party, and in 1836 was sent as military plenipotentiary of Prussia to the Diet of Frankfurt. In 1847 he was commissioned by Frederick William IV. to draw up a memorandum on the reconstitution of the German Confederation; but the revolution of 1848 cut short his projects. In the National Assembly at Frankfurt he proposed the union of Germany under Prussia, and in 1850 entered the Prussian Cabinet to carry out his schemes. At the eleventh hour, however, the king yielded to the armed opposition of Austria, and dismissed his minister.

Fernsdorff, *Joseph von Radowitz*.

Raeburn, SIR HENRY (b. 1756, d. 1823), Scottish portrait painter, was the son of an Edinburgh manufacturer, was educated at Heriot's Hospital, and, influenced probably by the career of its founder, was apprenticed to a goldsmith. In the workshop he insensibly took to sketching, and soon attracted the interest of his fellow-townsmen. He was at length absolved from his articles, when he devoted himself assiduously to the study of the principles of his art. A happy marriage enabled him to travel in other countries. In London he was received by Sir Joshua Reynolds, who sent him to Italy with letters of introduction. After a stay of two years on the Continent, Raeburn returned to Edinburgh in 1787, and set up his easel in George Street. He now began a career of portrait-painting unsurpassed in Scotland, his success being chiefly due to the highly gifted manner in which he represented the intelligence as well as the mere flesh of the human countenance. His best portraits were those of Sir Walter Scott, Lord Eldon, Professor Playfair and Francis Jeffrey. In 1815 he became a Royal Academician, and in 1822 he was knighted by George IV. An exhibition of Raeburn's works was opened at Edinburgh in October, 1876.

Tait's *Edinburgh Magazine*, 1843 and 1844.

Raffles, SIR THOMAS STAMFORD (b. 1781, d. 1826, naturalist and administrator, entered the East India House as an extra clerk in 1795, and on the establishment of the new settlement at Penang, since called Prince of Wales' Island, on the coast of Malacca, in 1805, he was appointed assistant secretary, becoming shortly afterwards chief secretary, with the responsibility of arranging the forms of the new government. When on furlough, in 1808, he made the acquaintance of the two Orientalists, Marsden and Leyden, in whose company he began his elaborate researches into the history, the laws, and the literature of the Hindu and Malay races. At his instigation Java was wrested from the French in 1811, and annexed to the dominion of the East India Company. Raffles was nominated governor of the new territory. He at once introduced a system of upright administration, but he found a stubborn antagonist to all reforms in the vested interests, for Java had long been misgoverned; so much so that he was recalled in 1816 by the directors. They found on inquiry, however, that his reforms were based on "motives perfectly correct and laudable;" and to meet the growing demand for information about Java, he published a *History of Java* (2 vols.) in 1817. As a recompense for his recall, Raffles was knighted and sent out to govern Bencoolen in Sumatra in 1817. He forthwith set to work to abolish slavery, and subsequently established Singapore as a station for the protection of British shipping. In 1820 he sent home a large

collection of preserved animals, now in the museum of the London Zoological Society; and in 1824 returned home with his collections in botany and zoology, and his papers and manuscripts, of which there were many volumes. The ship suddenly took fire, and every scrap was lost. Sir Stamford Raffles died two years afterwards, but not before he had aided to found, and been first president of, the Royal Zoological Society. In company with Dr. Arnold he found in the interior of Sumatra the *Rafflesia-Arnoldi*, said to be the largest and most magnificent flower in the world.

Memoir of the Life and Public Services of Sir Stamford Raffles (1830), by his widow.

Raglan, FITZROY JAMES HENRY SOMERSET, BARON (*b.* Sept. 30th, 1788; *d.* June 25th, 1855), field-marshal, was the eighth son of the fifth Duke of Beaufort. He entered the army at the age of sixteen, and served as aide-de-camp to Wellington at Copenhagen, in the Peninsular War (1809-14), and at Waterloo, where he lost his right arm. Lord Fitzroy Somerset was Minister Plenipotentiary at Paris in 1815, and Secretary to the French Embassy from 1816 to 1819, when he became secretary to the Duke of Wellington, whom he succeeded as Master-General of the Ordnance (1852). He had previously sat in the House of Commons for Truro from 1818-26. He was then raised to the Upper House as Baron Raglan. On the outbreak of the Crimean War he was appointed commander of the English forces, despite the fact that it was years since he had seen active service. In September, 1854, the victory of the Alma was won; Balaklava followed with its immortal cavalry charge, concerning which it may safely be said that whoever the "someone" who blundered was, he was not Lord Raglan; and then came the terrible carnage of Inkermann. Raglan was now created a field-marshal; but it gradually began to dawn upon the public that all was not well in the Crimea, and the terrible sufferings endured by the troops before Sebastopol during the winter of 1854-5, owing to the hopeless confusion in the commissariat, confirmed that impression. Lord Raglan felt bitterly the charges brought against him, and when the general attack, ordered on June 18th, failed utterly, he sank under the blow. He was said to have died of dysentery; it would be truer to say that he died of a broken heart. Lord Raglan was a knight without fear and without reproach, and his knowledge of the technique of war was thoroughly sound, but he lacked initiative, and inspired affection rather than enthusiasm. At the same time it should be mentioned that he objected from the first to the plan of the campaign.

Mr. Kinglake's brilliant defence of Lord Raglan in the *Invasion of the Crimea*.

* **Ramsay**, SIR ANDREW CROMBIE, LL.D., F.R.S. (*b.* 1814), geologist, a native of Glas-

gow, was educated at the university of that city. He was given an appointment on the Geological Survey of the United Kingdom, and was its director from 1872 to 1881, holding at the same time the post of director of the Museum of Practical Geology, London. Previously to this he had held the offices of professor of geology at University College, to which he was appointed in 1848, and at the Royal School of Mines (1851). In 1862 and 1863 he was President of the Geological Society. He holds numerous foreign knight-hoods and associateships, and has been President of the Royal Geographical Society. Sir Andrew Ramsay's works on geology are widely read, especially his *Physical Geology and Geography of Great Britain* (1st ed. 1853, 5th ed. 1878). Of more local interest are his fine monographs written for the Geological Survey. He is also the author of *The Geology of the Island of Arran* (1841), *The Old Glaciers of Switzerland and Wales* (1859), and has published many of his lectures.

Ramsay, THE VERY REV. EDWARD BANNERMAN BURNETT (*b.* 1793, *d.* 1876), the well-known Dean of Edinburgh, was the fourth son of Alexander Burnett, an Edinburgh advocate, and was born at Aberdeen. At an early age he was taken in charge by his grand-uncle, Sir Alexander Ramsay, whose surname he subsequently adopted, and by whom he was educated in Yorkshire. Graduating at St. John's College, Cambridge, the future dean was in due course received into holy orders, and afterwards spent some time in the curacy of Rodden, Somersetshire, where he laboured with zeal and discretion among the Methodists of the district. In 1823 he removed to Edinburgh, where, after occupying several subordinate posts in the Scottish Episcopal Church, he became dean of the diocese of Edinburgh in 1846. He declined the bishopric of New Brunswick in 1835, that of Glasgow in 1847, and that of Edinburgh in 1862. Dean Ramsay was the author of *Advent Sermons* (1850), *Canon Law* (1861), *Life of Dr. Thomas Chalmers* (1850), *Manual of Catechising*, and *Genius and Works of Handel* (1862); but by far his most popular work was *Reminiscences of Scottish Life and Character* (1857, 22nd ed. 1874). Dean Ramsay held a unique position in Scotland, justly due to his catholic spirit, to his zeal as a minister, and to his shrewd appreciation of Scottish humour.

Professor Cosmo Innes, *Biography*, prefixed to the *Reminiscences* (1874); Dr. Rogers, *Memoirs*; *Sunday Magazine*, January, 1885.

Randolph, JOHN, of Roanoke (*b.* 1773, *d.* 1833), American orator, a native of Carsons, Virginia, claimed to be a descendant of the Indian Princess Pocahontas. He entered the law, and in 1799 he was elected to Congress as a Democrat and follower of Jefferson. He soon distinguished himself as a political Ishmaelite with powers of biting sarcasm;

and some of his witticisms, notably his designation of the Northern members who voted for the Missouri compromise of 1820 as "dough-faces," have been perpetuated. In 1826 he fought a harmless duel with Mr. Clay, whom he had styled a "combination of the Puritan with the black-leg." In 1822 and 1824 he visited England, was elected a Senator of the United States in the last year, and was appointed Minister to Russia in 1832. By his will he manumitted over three hundred slaves, and provided for their maintenance.

H. A. Garland, *Life of John Randolph*.

Ranke, LEOPOLD VON (b. 1795, d. 1886), historian, was born at Wiehe, in Thuringia, and was educated at Schulpforta and the University of Leipzig. In 1817 he became professor of history at the Gymnasium of Frankfurt-on-the-Oder. He utilised the leisure of a country schoolmaster so well as to publish in 1824 a *History of the Romance and Teutonic Nations between 1494 and 1535*, to which he added in an independent work a series of criticisms of some of the chief contemporary sources employed by him. This won for him an extraordinary professorship at the University of Berlin. Here he found in the manuscript collections of the Royal Library a large number of Relations and Reports of Venetian ambassadors, from which he drew the materials for his first really important work, his *History of the Princes and Peoples of Southern Europe in the Sixteenth and Seventeenth Centuries*. Of this, the first volume, *The Ottomans and the Spanish Monarchy*, appeared in 1827, and at once established its author's reputation as an investigator of inedited documents, who possessed profound historic insight and great literary power. He obtained a long leave of absence from Berlin to prosecute further the researches thus auspiciously begun. For four years he laboured at the public and private archives of Vienna, Venice, Rome, and Florence. On these was based what has always remained his most generally-known work, the *History of the Popes*, of which the first volume appeared in 1834, the last in 1837. The same years also witnessed the publication of the *History of the Serbian Revolution*, the foundation with Savigny of an historical and political review, as well as the establishment of Ranke's reputation as a professor. Ranke's next great work was his *History of Germany during the Reformation*, published in six volumes between 1839 and 1847. Written in more detail and with less coldness than the *History of the Popes*, this work is generally regarded as his masterpiece. In 1841 he became royal historiographer, and published in his *Nine Books of Prussian History*, which subsequently became twelve, an excellent account of the first century of Prussian greatness. Between 1852 and 1861 appeared his

History of France, principally in the Sixteenth and Seventeenth Centuries, in five volumes. Between 1859 and 1874 appeared the nine volumes of his *History of England, chiefly in the Seventeenth Century*. Though already advancing in years, he now plunged with undiminished ardour and ability into the composition of a long series of works on German history, which in a sense supplement his great work on the sixteenth century. These include a *History of Germany between the Religious Peace and the Thirty Years' War* (1868), a *History of Wallenstein* (1869), *Contributions to the History of Austria and Prussia between the Treaties of Aachen and Hubertsburg* (1875), *The German Powers and the League of Princes* (1872), *The Origin and Beginning of the Revolutionary War* (1875), the *Memoirs of Hardenberg* (1877), and the *Correspondence of Frederick William IV. with Bunsen* (1873). While issuing this vast series of works, Ranke also found time for composing a good many smaller essays and monographs, as well as for his professor's work at Berlin, though for the last twenty years he ceased to lecture. When more than eighty years of age he undertook the stupendous new task of writing a *Universal History*, or rather a series of reflections on the greater turning-points of the world's history. A volume of this work appeared regularly every year until the author's death, when he had brought it down to the middle ages. For considerably more than a generation Ranke has occupied a unique position among German historians, as the founder and most conspicuous exponent of modern historical research. Besides the great fame won by his works, he was the teacher and master of nearly every German historian of note. Though never a very popular or brilliant lecturer, he exercised a profound influence over the narrower circles of his pupils, who formed his *Seminar*. About 1830 this class undertook under his direction the *Jahrbücher des Deutschen Reichs* under the Saxon Emperors. Though his own work lay mostly in recent periods, he inspired pupils like Waitz or Giesebrecht to do as much for mediæval history as he himself accomplished for the last three centuries. The universal homage and distinguished honours he received in his later years were but inadequate expressions of his great position in his country. It is difficult to express clearly and concisely the great debt which historical literature owes to Ranke. The long series of independent works already enumerated nearly all formed parts of a great whole whose subject was nothing less than the diplomatic history of nearly three centuries. Though in his histories of France, or England, or Germany, he often threw a new and brilliant light on internal history, it is his regard to the mutual relations of the members of the European State system that constitutes the unity and harmony of his works.

Another main object of his studies was to trace the development of the systems of administration which culminated in the governments of Louis XIV. and Frederick William I. But whatever his immediate subject, a severe impartiality of tone and scientific objectivity of treatment characterise all that came from his pen. A comparison of Ranke and Macaulay in their treatment of the Revolution of 1688 will sufficiently illustrate the difference between the scientific student whose great object was to explain how events had happened and what men had thought, and the political partisan who saw in the controversies of two hundred years back the counterpart of the party struggles in which he was himself engaged. Similarly, all religious or philosophical bias, all prejudices which stood in the way of the clear investigation of events, were equally alien to Ranke's mind. Ranke's researches cover a very wide field. He combined a great capacity for brilliant generalisation with that of minute investigation of particular points, though he seldom wrote mere monographs, and it is for general outlines more than for detailed researches that the student most frequently consults his works. Yet no one has done more than he in the way of discovering new matter and basing his work upon inedited documents. It was one of his greatest glories that he revealed to historical students the enormous importance of the *Relazioni*, or Reports of Venetian Ambassadors to the Senate, as materials for political history. Though never aiming at merely literary effects, he wrote strongly and vigorously, and with considerable capacity for artistic grouping and arrangement. It must, however, be remembered that none of Ranke's books present a complete picture of the age they delineate. They are almost entirely confined to political and diplomatic history: the relations of States and the acts of statesmen. Thus his account of the Puritan movement is less complete than his exposition of English foreign policy in the seventeenth century; and his numerous writings on the history of the French Revolutionary period tend to ignore the great movements of ideas and concentrate attention on the diplomatic intrigues. And a certain impatience of repeating what is already known when he has so much new to say gives an incompleteness even to that side of his history on which he desired to say most. He wrote, moreover, so much that he did little towards correcting or expanding his earlier works, so that, though he gave the impulse, it was for his disciples to say the last word on almost every point treated of by him. But with all his defects, Ranke remains one of the greatest historians of the century.

Many of Ranke's works have been translated into English; the *History of the Popes* three times by independent translators, of which the best is that by Mrs. Austin, who also did into English the early part of the *Reformation in Germany*. The *English History* has been trans-

lated by a body of Oxford tutors for the Clarendon Press. The *Prussian History*, the earlier part of the *French History*, treating of the Civil and Religious Wars of the sixteenth century, the *Ottomans and Spanish Monarchy*, the *History of Serbia*, and several of the minor works are also to be found in English versions. Part of the *Universal History* has been translated by Mr. G. Prothero. An article on German historians by Lord Acton in the first number of the *English Historical Review* shows clearly Ranke's place among historical writers; and an excellent summary of his life and labours by M. R. Keuss is to be found in vol. 31, No. II., of the *Revue Historique*. [T. F. T.]

Raspail, FRANÇOIS VINCENT (b. 1794, d. 1878), French chemist and revolutionist, was the son of poor parents in the department of Vaucluse. After indulging in a little hero-worship of Napoleon, he became a free-thinker, Socialist, and scientific lecturer. In the last capacity he was successful, and published besides some remarkable works, among which were *Système de Chimie Organique* (1833), *Histoire Naturelle de la Santé et de la Maladie chez les Végétaux et chez les Animaux* (1843), and *Manuel Annuaire de la Santé* (1846). He took part in all the revolutionary outbreaks, and was frequently imprisoned, the last occasion being in 1875 for a violent preface to a new edition of his *Manuel*.

* **Rassam**, HORMUZD (b. 1826), Assyriologist and traveller, a native of Mossul in Mesopotamia, was employed by Mr. Layard (q.v.) from 1845 to 1847 as his assistant in his Assyrian explorations and excavations, and again from 1849 to 1851. He was then appointed by our Government to be Mr. Layard's successor, and returned to England in 1854, having discovered the palace of Assur-Banipal, the Sardanapalus of Herodotus. Mr. Rassam was next employed as judge and British agent at Aden, and in 1861 was sent by the Bombay Government to mediate between the Imâm of Muscat and his brother, the Seyyid of Zanzibar. In 1864 he was despatched to the court of Abyssinia to demand the release of Consul Cameron and the other European captives, but the tyrant Theodore threw him and his comrades into prison. The expedition of Sir Robert Napier was sent to relieve them (1868), and on his return to England Mr. Rassam published an interesting account of *The British Mission to Theodore, the King of Abyssinia* (1869). From 1876 to 1882 he was employed by the authorities of the British Museum in making explorations at Nineveh and throughout Mesopotamia, and contributed numerous additions to the Assyrian gallery of that institution, besides discovering the site of numerous cities, of which the most important is Sepharvaim. His interesting little monograph on *Babylonian Cities* was published in 1813.

Rattazzi, URBANO (b. 1810, d. 1873), Italian statesman, was a native of Piedmont, and became an advocate at Casale. In 1848

he was returned to the Chamber of Deputies at Turin, and became the leader of the democratic party. In 1848 he became a member of Gioberti's ministry, which was dissolved after the defeat of Novara. He became Minister of Justice under Cavour in 1854, but excited opposition by his bill for the abolition of convents, and retired in 1857, owing to his supposed sympathy with Mazzini's insurrection; but was again a member of the ministry in 1859. In 1862 he formed a cabinet, and incurred undeserved unpopularity from his opposition to Garibaldi's rash expedition against Rome, resigning in December. He was again Prime Minister for a brief period in 1866.

Rauch, CHRISTIAN (b. 1777, d. 1857), sculptor, was born at Arolsen, in Waldeck, his father being in the Prince of Waldeck's service. After being apprenticed for a time to a stonemason in Cassel, he became one of the lacqueys of Frederick William II. in Berlin (1797), and afterwards of the Queen Louise. Partly through her influence he was sent to study at Dresden in 1802, and in 1804 quitted the royal service and settled in Rome, where he gained the patronage of William von Humboldt, and became the pupil of Canova and Thorwaldsen. After the death of Queen Louise he won the competition for a design for her statue, returned to Berlin in 1811, and finally completed the work in marble at Rome (1814). It is now in her chapel at Charlottenburg. Rauch had become suddenly famous, and the memorials of nearly all the great Prussian heroes of the War of Independence, such as Blücher, Scharnhorst, Gneisenau, Yorck, von Wartenburg, were entrusted to his care. Of Blücher he made two statues, the one in Berlin, designed in 1815 and unveiled in 1826, and the other later in Breslau. He also modelled a bust of the Czar Alexander II. (1815), and designed the memorial to Max Joseph, King of Bavaria, in Munich (1825-35). But his masterpiece beyond question was the celebrated equestrian statue of Frederick the Great that stands at the end of the Linden in Berlin. It was begun in 1830, and unveiled by Frederick William IV. in 1851. It represents the old King in his favourite uniform with the well-known cocked hat, as he rode at the head of his troops.

W. Heinrich, *Christian Rauch und seine Schüler* (1894).

* **Rawlinson**, THE REV. GEORGE (b. 1815), the brother of Sir H. Rawlinson (q.v.), historian and Orientalist, was born in Oxfordshire, and educated at Trinity College, Oxford, where he obtained a first-class in the Final Schools in 1838, and was elected fellow of Exeter in 1840. In 1859 he preached the Bampton lectures, his subject being the *Historical Evidence of the Truth of the Scripture Records*, and in 1861

he was appointed Camden professor of ancient history. In 1872 he was made a Canon of Canterbury. In the same year he contributed a paper on the *Genuineness and Authenticity of the Pentateuch* to Dr. Thomson's *Aids to Faith*, and preached nine sermons on the *Contrasts of Christianity with the Heathen and Jewish Systems*. For the series known as *Present Day Tracts*, he has written essays on the *Antiquity of Man*, the *Early Prevalence of Monotheistic Belief*, and the *Religious Teachings of the Sublime and Beautiful in Nature*; and to the *Pulpit Commentary* (1880, etc.) he has contributed expositions on the books of Esther, Ezra, and Nehemiah. His great work on the book of Exodus appeared separately in 1882-5. The results of his more directly historical investigations into the records of ancient Europe form an almost complete history of the ancient world. The series began with the *New Version of Herodotus, with copious notes and appendices* (1858-62), still universally recognised as the standard authority on the early historian. In its preparation Professor Rawlinson was largely assisted by Sir Gardner Wilkinson and, especially in the appendices on oriental antiquities, by Sir Henry Rawlinson. This translation was followed by the vast undertaking of the history of the *Five Great Monarchies of the Ancient Eastern World*, began in 1862. The *Sixth Great Oriental Monarchy* followed in 1873, and the *Seventh Great Oriental Monarchy* in 1876. The *History of Ancient Egypt*, in two volumes, was published in 1881, and *Egypt and Babylon* in 1886. Professor Rawlinson has also written two smaller text-books on more general subjects, namely, a *Manual of Ancient History from the Earliest Times to the Fall of the Western Empire* (1869), and *The Religions of the Ancient World* (1882).

* **Rawlinson**, MAJOR-GENERAL SIR HENRY CRESWICKE, K.C.B., F.R.S., D.C.L., L.L.D. (b. 1810), soldier and diplomatist, the brother of the above, was educated at Ealing School, and entered the Bombay army in 1837. From 1833-9 he served in the army of the ruler of Persia, Muhammad Shah, who relied upon British assistance against the competitors for the throne, and aided him to reorganise his forces. In 1839 the relations between Persia and England became strained, Mr. Rawlinson was recalled, and sent to Candahar as political agent (1840-42), where he maintained British influence intact during the troubled period of the massacre of Cabul and Pollock's expedition of vengeance. From 1843-55 he was political agent in Turkish Arabia, becoming in addition Consul at Bagdad in 1844, and Consul-General in 1851. His next appointment was a Crown Directorship of the East India Company, when he retired from the army with the rank of lieutenant-colonel, and

became a K.C.B. (1856), and during part of 1858 he was a member of the Council of India. He was, however, despatched as envoy to the Court of Teheran in September, as successor to Mr. Murray, but remained there barely a year, being recalled at his own request. Before being sent to Persia he was for a few months Liberal member for Reigate, and from 1865 to 1868 was member for Frome. Re-appointed a member of the Council of India in 1868, he was its vice-president in 1876, and afterwards continued a member of the Council (1886). Sir Henry Rawlinson's honours are numerous; he was president of the Royal Geographical Society from 1871 to 1876, became a trustee of the British Museum in 1879, and is a director of the Royal Asiatic Society and corresponding member of the French Institute. It was during his first visit to Persia, when stationed at Kermanshah, that Sir Henry began to study cuneiform inscriptions, and he announced the result of his discoveries in the journals of the Royal Asiatic Society from 1837 to 1838, publishing at the same time the records of his travels in Susiana in the Geographical Society's journal. In 1836 he made a most important addition to our knowledge by deciphering the great inscription at Behistun, which contains more than a thousand lines, and gives an account of the genealogy of Darius Hystaspes, the chief events of his reign, and the extent of his power, besides recording the building of palaces, and prayers to Ormuzd (Sir H. Rawlinson, *The Persian Cuneiform Inscription at Behistun Deciphered and Translated*, in the journal of the Asiatic Society, 1846). His other works are *A Commentary on the Cuneiform Inscriptions of Babylon and Assyria* (1850), *Outline of the History of Assyria* (1852), *Notes on the Early History of Babylonia* (1854), a translation of *The Inscription of Tiglath Pileser* (1857), and the five folio volumes of *The Cuneiform Inscriptions of Western Asia*, edited in conjunction with E. Norris and George Smith between 1861-70. He also wrote in 1874 a work on *England and Russia in the East*, in which the occupation of Herat by the British was advocated; and aided his brother in his edition of *Herodotus*.

Reade, CHARLES (b. 1814, d. 1884), was the son of John Reade, an Oxfordshire squire, and was born at Ipsden in 1814. Educated at Magdalen College, Oxford, of which he was demy and afterwards fellow, he took his degree in 1835, with a third class in classics, was elected Vinerian Reader in Law in 1842, and a year later was called to the bar at Lincoln's Inn. In 1850 he made his first appearance as a dramatist, *Gold* being the title of the piece produced. It secured only a moderate success. Not until 1862, when he was bordering upon forty years of age, did he begin to write novels. He used to say that he had studied

the great art of fiction closely for fifteen years before he had presumed to write a line. His first book, *Peg Woffington* (1852), at once established his position. *Christie Johnstone* followed in 1853, and then came his best known work, *It's Never too Late to Mend* (1856), a novel which exposed the abuses of prison discipline. Some years later, when the story had become highly popular, the author dramatised it, and his own version has since held the stage against several rival versions. In rapid succession there appeared *The Course of True Love Never Did Run Smooth* (1857), *Jack of All Trades* (1858), *The Autobiography of a Thief* (1858), *Love Me Little, Love Me Long* (1859), *The Double Marriage, or White Lies* (1860), and the *The Cloister and the Hearth* (1861). The last, perhaps the finest of his productions, is an exception to Reade's works in being full of learning and shrewd reflections on the past. It has been generally regarded as Reade's masterpiece. Two years previously he had dealt with the subject in *Once a Week*, but seeing its capabilities he expanded his periodical contributions into their present bulk and form. In 1860 he published *The Eighth Commandment*, a vigorous protest against the class of thief who steals the product of the brain. In 1863 *Hard Cash* appeared. In that book Reade drew attention to the abuses of private lunatic asylums. *Griffith Gaunt*, which was published in England and America in 1866, was looked upon by the author as his best novel. *Foul Play*, which appeared in 1869, aroused public interest in the iniquities of ship-knackers, and in *Put Yourself in His Place*, which followed in 1870, Reade represented the tyranny practised by trades unions. *A Terrible Temptation* appeared in 1871. *A Simpleton* appeared in 1873, and *A Woman Hater* in 1877. In the latter book Reade advocated women's rights. All this time he was pursuing a dramatic career. He wrote, in conjunction with Tom Taylor, *Masks and Faces*, founded on the novel *Peg Woffington* (1854), which retains its popularity, *The King's Rival*, and *Two Loves and a Life*. He dramatised Lord Tennyson's *Dora* in 1867. In 1869 he wrote *Foul Play*, in combination with Mr. Dion Boucicault. The collaboration failed, and alone he produced another version in 1877, under the title of *A Scuttled Ship*, but with no better result. *The Lyons Mail*, however, first produced in 1854, still holds the stage. His greatest dramatic success was *Drink*, founded on Zola's *L'Assommoir*. This play is said to have yielded him more than £5,000. *Love and Money* was produced in 1883, and on the lines of this play he afterwards wrote a story, which was published under the title of *A Perilous Secret*. It is curious that Reade should have regarded himself as a dramatist first and a novelist afterwards, for his greatest successes were certainly not secured on the stage. Throughout the thirty odd years of his literary life he was

perpetually at war, either with the critics, his publishers, or some theatrical manager who had used his work without permission. Now and again he stormed the judicial bench on account of some judgment which he considered illegal and unjust. Warfare was, if not his pleasure, his element; perhaps the only element in which he could breathe freely and enjoy life. Within a narrow circle he was sincerely beloved. Reade's great merit as a novelist is his extraordinary narrative power. No man could tell a story more swiftly, directly, and effectively. Reade's method was the reverse of that of George Eliot. Never for an instant does he clog the wheels of his narrative with essays on the character of the characters. His characters evolve themselves. Reade's faults are, no less than his merits, on the surface of his work. He is often theatrical and not always dramatic. There is too much of the pasteboard art in his writing. You sometimes see the skeletons of his schemes, and perceive that they have their origin in the theatre. There are the leading young man, the leading young woman, the heavy villain, the light comedian, the low comedian, the chambermaid, and so forth. His best books, *Griffith Gaunt* and *The Cloister and the Hearth* are the freest from this theatrical defect. Certainly Reade carries the art of the stage as far into the art of the novel as is desirable, or perhaps possible. But in spite of his manifest faults, his occasional vulgarity, his tawdry effects, he was unquestionably a great novelist. The author of *Griffith Gaunt* cannot fail of a high place in the literary history of the century.

[R. H. C.]

Récamier, JEANNE FRANÇOISE BERNARD (b. 1777, d. 1849), a native of Lyons, married M. Récamier, a banker, in 1793, and arriving in Paris, became an intimate friend of Mme. de Stael, whom, in consequence of her husband's bankruptcy, she joined at Coppet in 1806. Here she enthralled Prince August of Prussia, but gave way to the mild remonstrances of M. Récamier, and refrained from so compromising herself as to make a divorce possible. She was banished from Paris in 1811, but returned in 1815, and until her death was the acknowledged queen of Parisian society. Her salon at Abbaye-aux-Bois was frequented by the rank and genius of the time, notably by Chateaubriand, who asked for her hand, but in vain. If incapable of love, Mme. Récamier was a sincere friend, and her despotism was one tempered, not by epigrams, but by amiability.

Souvenirs et Correspondance tirés des Papiers de Mme. Récamier (1859).

Redesdale, JOHN FREEMAN MITFORD, BARON (b. 1748, d. 1830), an English lawyer, was descended from the ancient family of Mitford, of Mitford Castle, in Northumberland, and was educated at Oxford. Having joined the

English bar, he soon became a distinguished Chancery pleader, and published in 1787 a valuable work *On the Pleadings in Suits in the Court of Chancery by English Bill*, which ran through several editions. In 1788 he was returned to Parliament for Beeralston, through the interest of his cousin, the Duke of Northumberland, and in 1793 succeeded Sir John Scott (afterwards Lord Eldon), in the solicitor-generalship, when he was knighted. In 1799 Sir John Mitford became Attorney-General, and in 1801 Speaker of the House of Commons, and in 1802 Lord Chancellor of Ireland, and was in consequence raised to the dignity of a peer. The unsettled state of Ireland made him very unpopular with the Catholic party, and he was removed from the Chancery bench by the short-lived administration of 1806, of which he loudly complained. Lord Redesdale subsequently heard appeals in the House of Lords, and was considered a very high legal authority. He took a prominent part in removing the hardships of the old bankruptcy laws, and was the author of several political pamphlets.

Gentleman's Magazine, March, 1830.

Redesdale, THE RIGHT. HON. JOHN THOMAS FREEMAN MITFORD, EARL OF, D.C.L., F.S.A. (b. 1805, d. 1886), Chairman of Committees in the House of Lords, was the eldest son of the preceding, and was educated at Oxford. Soon after his accession to the peerage in 1830 he began to manifest an interest in practical measures of legislation, and it was not long before his clearness of judgment began to make itself felt in the House. He acquired considerable authority for his general acumen and his capacity for grasping the details of a measure, so much so that on the retirement of Lord Shaftesbury in 1851 he was unanimously chosen Chairman of Committees. Henceforth his lordship exercised enormous influence over the private bill legislation of the Upper House; he kept agents and attorneys rigidly in order, and invariably resisted all attempts to bias his judgment. Lord Redesdale was likewise an able controversialist. In 1849 he published his *Reflections on the Doctrine of Regeneration*, and in the following year he mingled in the fray in connection with the famous Gorham case. He strongly opposed the introduction into our law of the dissolution of the marriage tie by the Civil Court, and vindicated his views on the subject in a pamphlet entitled *The Law of Scripture against Divorce*, published in 1856. In 1874 he brought out *Reasonings on Some Disputed points of Doctrine*, and in 1875 he entered into a controversy with Cardinal Manning on the subject of Communion in both kinds. The correspondence was afterwards published under the title of *The Infallible Church and the Holy Communion*. Lord Redesdale took much delight in literary recreations, and in 1859 published *Thoughts on English Prosody and Translations from Horace*, which

was followed by *Further Thoughts on English Prosody*. He was created an earl in 1877. He never married, and the peerage became extinct with his death.

Times, May 3rd, 1898.

* **Redgrave**, RICHARD, R.A. (b. 1804), a native of London, became a student of the Royal Academy in 1826, and first exhibited at the Royal Academy in 1838, when his picture was *Ellen Orford*. He was elected an A.R.A. in 1840, and an R.A. in 1851. Mr. Redgrave's services to English art are very considerable. After being head-master of the Government School of Design, he drew up the system and course of instruction for the Department of Practical Art, now the Science and Art Department, and became Inspector-General of Art Schools, an appointment which he resigned in 1880. He aided Sir Henry Cole in founding the museum of ornamental art at Marlborough House, which they afterwards developed into the museum of art at South Kensington. Further, Mr. Redgrave played a prominent part in the various international exhibitions, especially at that of 1862, in which he arranged the specimens of British painting. He was surveyor of the Crown pictures from 1872 to 1880. Mr. Redgrave, in conjunction with his brother, Mr. S. Redgrave, the writer of the valuable *Dictionary of Artists of the English School*, is the author of the well-known work, *A Century of Painters* (1866), and edited many valuable catalogues, including that of the *National Gallery* (1874). Among his principal paintings may be mentioned *The Reduced Gentleman's Daughter* (1841); *The Attiring of Gressolda* (1850); *The Flight into Egypt* (1851); *Sermons in Stones* (1871); *Calling the Sheep to Fold*, and *The Oak of the Mill Head* (1876); *A Well-Spring in the Forest* (1877); *Friday Street, Wotton* (1878); and *Hidden among the Hills* (1881).

The Art Journal, vol. ii.

* **Reed**, SIR EDWARD JAMES, K.C.B. (b. 1830), was educated at Portsmouth for the navy, and after occupying several appointments, among which was the editorship of the *Mechanics' Magazine*, he became Chief Constructor of the Navy in 1863. In 1870, however, he resigned, and for some time devoted himself to privately inspecting the foreign dockyards of Europe. At the general election of 1874 he contested the Pembroke boroughs in the Liberal interest, and was returned, continuing to sit for that constituency until 1880, when he was returned for Cardiff. He has written several works on shipbuilding, and after a visit to Japan he published, in 1880, *Japan: its History, Traditions, and Religions*. He has also contributed to the Press articles relating to the state of the Navy which have awakened considerable attention. In 1886 he was a Junior Lord of the Treasury. He has received several foreign decorations.

* **Reeves**, JOHN SIMS (b. 1822), the celebrated English tenor singer, born at Shooters' Hill, Kent, was the son of a musician, and as a child was gifted with a beautiful treble voice and great musical talent. In his eighteenth year he appeared on the stage at Newcastle-on-Tyne, in the character of Rudolpho in *La Sonnambula*, this being the one of the few instances of a tenor beginning his career as a baritone. After studying under Mr. Hobbs and Mr. T. Cooke, he joined Macready's company at Drury Lane as second tenor (1841), and first attracted the attention of the public by his singing of the celebrated war song in Purcell's *King Arthur*. In 1843 he went to the Continent, studying in Paris under Bordogni, and at Milan under Mazzucato; at the latter place he appeared with great success as Edgardo in Donizetti's *Lucia di Lammermoor*. After singing at several other Italian theatres, he returned to England, and was engaged by Jullien for the new English opera at Drury Lane, and his success was instantaneous (1847). At the Norwich festival of 1848 he showed his ability in oratorio singing, delighting his audience in *Israel in Egypt*. After 1860 he appeared but seldom in operatic parts, but was frequently heard in the concert hall, and at the musical festivals, until in 1882 he virtually retired from public life. Among his most remarkable performances were undoubtedly his appearances in oratorio, notably in *Judas Maccabeus*, *Elijah*, *Eli*, and *Messiah*. As a ballad singer he excelled all his predecessors. His wife, formerly known on the concert stage as Miss Emma Lucombe, had great reputation as a soprano singer, and his son, Mr. Herbert Reeves, is a tenor of much refinement.

H. Sutherland Edwards, *Life of Sims Reeves*.

Regnault, HENRI VICTOR, French chemist, and one of the greatest experimentalists of his time, was educated at the École Polytechnique, and after being professor of chemistry at Lyons, was appointed professor at the École Polytechnique in 1840, and at the Collège de France in 1841, becoming director of the porcelain manufacture at Sèvres in 1854. His experiments on the specific heat of gases were particularly acute, but unfortunately the results of many of them were destroyed during the siege of Paris in 1871. Among his pupils was Sir William Thomson. Regnault was the author of an admirable *Cours Élémentaire de Chimie* (1847-49).

Reichstadt, NAPOLÉON FRANÇOIS CHARLES JOSEPH, DUKE OF (b. 1811, d. 1832), known as Napoleon II., was the only son of Napoleon I. and Marie Louise of Austria, and received at his birth the title of King of Rome. In 1814 Napoleon I. abdicated in favour of his son; Louis XVIII. being, however, elected by the Senate, Marie Louise returned with the young Napoleon to Austria, and took up her residence at Schönbrunn, near Vienna.

In 1817 his mother retired to the duchy of Parma, assigned to her by the treaty of Vienna, the young prince remaining with his grandfather, Francis I. at Vienna, where he entered the Austrian army, and was created Duke of Reichstadt. At the time of the Revolution of 1830, Talleyrand is said to have come to Vienna, in order to propose the Duke of Reichstadt as a candidate for the French throne, but his proposals were very coldly received at the Austrian Court, and the claims of Napoleon's son were not pressed further. He had some intellectual ability, but his bodily health was very feeble.

J. de Saint Félix, *Histoire de Napoleon II*:

Reid, CAPTAIN MAYNE (b. 1819, d. 1883), novelist, was a native of the north of Ireland, and was intended for holy orders, but fired with a love of adventure, started for America in 1838, and roamed about Missouri as a trapper. He accepted a commission in the United States Army in 1845, fought with distinction in the Mexican War, and attracted the favourable notice of General Winfield Scott. He then came to Europe, hoping to lead a volunteer band in Hungary against the Austrians, but finding that the insurrection had collapsed, settled down to a literary life, first in London, then in Buckinghamshire. He made a considerable income until about 1866, when he began to lose his hold upon public favour, and suffered in addition pecuniary losses. During his last years the quality of his work fell off considerably, but taken at his best Captain Mayne Reid fully deserved the adoration with which he has been regarded by generations of school boys. His style, although not polished, was full of vigour, and his fund of perilous situations and hair-breadth escapes was simply inexhaustible. His Red Indians and trappers may have been more fruitful in deeds of prowess than the ordinary Red Indian and trapper; none the less are their individualities thrown into impressive relief and they are consistent works of art. Captain Mayne Reid's strongest point was perhaps his vigorous and accurate description of natural scenery. Among his very numerous works it is sufficient to mention here—of those for juveniles, the *Boy Hunter* (1853), the *Bush Boys* (1856), and the *Boy Tar* (1860); and of the novels, which practically appealed to the same audience, though supplied with a larger allowance of slaughter, the *Scalp Hunters* (1847), the *Rifle Rangers* (1860), the *War Trail* (1857), and the *Headless Horseman* (1865). The best of his later novels was *Afloat in the Forest* (1868).

Rémusat, CLAIRE ELIZABETH DE VERGENNES, Comtesse de (b. 1780, d. 1824), married the Comte de Rémusat when quite a girl, and entered the service of the Empress Joséphine. She was much appreciated as a woman of intellect, and the favourable judgment of her contemporaries is confirmed by her clever

essay on *Female Education* (1824), and still more by her remarkable *Mémoires* (1879), which give a wonderfully complete picture of the court of the First Empire, and of the strength and weakness of Napoleon's character. Her son CHARLES, COMTE DE RÉMUSAT (b. 1797, d. 1875), man of letters and politician, played in his time a rather important second-rate part. At first a journalist, lawyer, and disciple of Cousin, he entered public life after the July Revolution, and acted with M. Thiers, becoming in 1840 Minister of the Interior for a few months. After a long interval of literary retirement he became Minister of Foreign Affairs in M. Thiers' cabinet (1871-3). His works include several on English subjects, such as *L'Angleterre au XVIII. Siècle* (1856), *lives of Bacon, Wesley, Channing, St. Anselm*, and *Histoire de la Philosophie en Angleterre depuis Bacon jusqu'à Locke* (1875). He also published *Philosophie Religieuse* in 1864.

Rémusat, JEAN PIERRE ABEL (b. 1788, d. 1832), French orientalist, studied medicine and took a doctor's degree, but came under the influence of De Sacy, who induced him to take up the study of Chinese. His *Essai sur la Langue et la Littérature Chinoise* appeared in 1811, and in 1814 he was elected to the Chair of the newly created professorship of Chinese at the Collège de France. He became editor of the *Journal des Savants* in 1818, Keeper of the oriental MSS. in the Bibliothèque Royale in 1824, and in 1829 President of the Société Asiatique. His too early death was caused by cholera, but not before he had made known to Europe the life and opinions of the philosopher Laou-tsze, the founder of Taoism. Among his more important works are, *Recherches sur les Langues Tartares* (1820), *Éléments de la Grammaire Chinoise* (1822), *Observations sur l'Histoire des Mongols Orientaux* (1832), and *l'Histoire du Bouddhisme* (1836).

* **Renan, JOSEPH ERNEST** (b. 1823), orientalist, historian, and essayist, was born at Tréguier, in Brittany, and is fond of tracing the characteristics of his genius to his Breton origin, modified as it was by his mother's Gascon temperament. His father was a master-mariner, and was drowned at sea. Having been trained in Latin and the strictest Catholicism by the priests who controlled the school of Tréguier, Renan was in 1836 selected for his talents to be sent to the Collège of St. Nicholas du Chardonnet, in Paris, at that time presided over by M. Dupanloup (q.v.). Here he was taught the significance of literature and the power of style; but in 1839 he returned to theological studies at Issy, the suburban adjunct of the seminary of St. Sulpice. In 1842 he was admitted to St. Sulpice itself, and began the study of Hebrew and Syriac under the distinguished orientalist M. le Hir. These pursuits, however, gradually undermined his belief in the Roman Catholic dogma. "My faith," he insists again and

again, "was destroyed, not by metaphysics nor philosophy, but by historical criticism." In 1845 he gave up all intention of becoming a priest, left the seminary, and for three and a half years served as an assistant master in a Parisian school. But he continued his historical and linguistic studies. He had already conceived the idea of the *Vie de Jésus*. In 1848 he obtained the Volney prize for an essay on the Semitic languages, afterwards amplified into the *Histoire Générale et Système Comparé des Langues Sémitiques* (1855). In 1849 he published *L'État des Esprits*, and was sent on a mission to Italy by the Academy of Inscriptions and Belles Lettres. On his return he obtained an appointment in the manuscripts department of the Imperial Library (1851), and in 1852 published his first really important work, *Averroës et l'Averroïsme*. In 1856 he was elected a member of the Academy of Inscriptions and Belles Lettres, and having published some *Études d'Histoire Religieuse* in 1858, was again sent on a mission to Syria in 1860. His elder sister Henriette, who was intimately versed in German speculation, accompanied him, but died at Byblos in 1861. To her he dedicated the *Vie de Jésus*; it was almost entirely written in Palestine, though not published till 1863. Meantime, in 1861, Renan had been appointed Professor of Hebrew in the Institute of France, but his first lecture, in 1862, caused such disturbance that the course was suspended, and the lecturer, in spite of protestations, was transferred to a high position in the Imperial Library. He was, however, restored to his Chair in 1870. The *Vie de Jésus* was the first part of a comprehensive work on the *Histoire des Origines du Christianisme*, which now includes *Les Apôtres* (1866), *St. Paul* (1867), *L'Antechrist* (1873), *L'Eglise Chrétienne* (1879), and *Marc Aurèle* (1880). The publication of the *Vie* created intense excitement throughout Europe. It was condemned alike by the Catholic Church and by the German Protestants of the Tübingen school. It gave rise to an interesting correspondence between the author and Dr. Strauss, and its ingenuity and admirable style have secured it a high place in modern literature. Of M. Renan's remaining writings we may mention:—*Mission de Phénicie* (1865-74), *La Réforme Intellectuelle et Morale* (1871), *Dialogues et Fragments Philosophiques* (1876), *Spinoza* (1877), *Caliban, suite de la Tempête*, a satirical drama (1878), *L'Eau de Jouvence, suite de Caliban* (1880), *Qu'est ce qu'une Nation ?* (1882), *L'Islamisme et la Science*, and *Le Judaïsme comme Race et comme Religion* (1883), and *Nouvelles Études d'Histoire Religieuse* (1884). In 1878 M. Renan was elected to the French Academy, and in his address on Claude Bernard in 1879 he introduced the celebrated onslaught on German manners, literature, and politics. He explained his meaning in a *Lettre à un Ami*

en Allemagne in the *Journal des Débats*. In 1880 M. Renan delivered the Hibbert lectures in London on *The Influence of the Institutions, Thought, and Culture of Rome on Christianity, and the Development of the Catholic Church*, and also gave a lecture on *Marcus Aurelius* at the Royal Institution. His *L'Abbesse de Jouarre*, published in 1886, created an immense sensation in Paris. He has twice unsuccessfully attempted to enter political life (1869 and 1876).

Ernest Renan, *Souvenirs d'Enfance et de Jeunesse* (1883), translated by C. B. Fittman; *Fortnightly Review*, May, 1880; *Appleton's Journal*, 1870; *Harper's Magazine*, Feb., 1864.

Rennie, JOHN (b. 1761, d. 1821), engineer, the intimate friend and companion of James Watt, was born in East Lothian, N.B., and settled in London in 1783, where he soon won a name for himself by the ability he displayed in the construction of the Albion Mills. In 1800 he erected the fine bridge at Kelso. Mr. Rennie afterwards developed extraordinary qualities as a civil engineer, and some of his works still speak volumes for his boldness of design. Among his public works may be mentioned Waterloo bridge, begun in 1811 and finished in six years, Southwark bridge, and new London bridge, the last, however, begun after his death; the Crinan, the Lancaster, and the Avon canals; the docks at London and Hull; and the extensive drainage schemes for the Lincolnshire fens. He also commenced three other great works—the Sheerness dockyard, the Ramsgate harbour, and the Plymouth breakwater, but death having intervened, the completion was effected by his sons John and George, noticed below.

Gentleman's Magazine, Oct., 1821; *Smiles, Lives of the Engineers*, vol. iii.

Rennie, SIR JOHN (b. 1794, d. 1874), a distinguished civil engineer, was a son of the preceding, and was trained to his father's profession. On the death of his father in 1821, he succeeded him as engineer to the Admiralty, and on the completion in 1831 of London Bridge, one of the great works planned by his father, was knighted. Among the more important engineering works designed and executed by Sir John Rennie himself were the docks constructed at Whitehaven for Lord Lonsdale, and a portion of the Cardiff docks. In conjunction with his brother GEORGE RENNIE (b. 1791, d. 1866) he attained eminence as a mechanical engineer, having greatly contributed to the introduction of Sir F. P. Smith's invention, the screw-propeller, into the royal navy. With him also he designed and erected the machinery for the mints of Bombay, Calcutta, and Mexico; while the brothers likewise erected the Royal Clarence Victualling Yard at Plymouth. Sir John Rennie was admitted to be the highest authority on all subjects connected with hydraulic engineering, harbours, canals, drainage, irrigation, the storage of water, and the management of rivers. He was the first

to recognise the value of the diving-bell in engineering works, and to adopt it in that connection. His pamphlet on the *Drainage of Lombardy* attracted the practical attention of the Italian Premier, Signor Sella. Amongst other works executed by him for foreign governments may be mentioned the harbour of Ponte Delgada, in the Azores. Among the papers contributed by him to the Institute of Civil Engineers is one upon the *Harbour of Ostia*, which is full of instructive practical facts relating to the effect of the action of tides and of rivers in the formation of deltas, shoals, and bars at the entrances of harbours. (See *Transactions* for 1844). His presidential address in 1846 is worthy of notice as being a condensed history of the rise and progress of engineering science in modern times. Sir John Rennie also contributed in an eminent degree to professional literature by his great work on *The Theory, Formation, and Construction of British and Foreign Harbours* (2 vols., 1851-4).

Sir John Rennie's *Autobiography* (1875); Engineering, xviii., 206.

Reschid Pasha (b. 1802, d. 1858), Turkish statesman, was born of a wealthy family at Constantinople, and embracing a political life, took part in the negotiations with Russia at Adrianople in 1829, and is supposed generally to have been the author of the Treaty of Kutahia, 1833, by which the aid of Russia was secured against Mehemet Ali. In 1839, on the accession of Abd-el-Medjid, Reschid Pasha became his chief adviser. He immediately helped to conclude the Quadruple Alliance, by which Turkey was saved from the victorious advance of Mehemet Ali [Egypt], and proclaimed the Hatti-Sherif of Gulhané, a charter of constitutional reform. Overthrown by the forces of reaction, he was recalled to power on the eve of the Crimean War, 1853, but succumbed to a palace intrigue. After the Peace of Paris he once more became Grand Vizier, and took part in the reorganisation of the principalities, but exercised little real power, owing to the hostility of the French ambassador, M. Thouvenel.

* **Reuter, Baron Paul Julius** (b. 1818), was born at Cassel. He is chiefly known in connection with the development of the system of telegraphic communication. In 1849 he established an office at Aix-la-Chapelle, from which he supplied newspapers with the latest intelligence collected from all sources, and by this means revolutionised the press of Europe. In 1851 he became a naturalised Englishman, and opened an office in London. In 1865 he converted his business into a limited liability company, of which he was for some years managing director, and in 1871 received the title of baron from the Duke of Cobourg-Gotha. He has laid down several important telegraphic cables, and in 1872 was granted the privilege by the Shah of developing the

resources of Persia in several important directions.

Reuter, Heinrich Ludwig Christian Friedrich, always known as Fritz (b. 1810, d. 1874), the humorist, was born at Stavenhagen, or Stemmhagen, in Mecklenburg-Schwerin, where his father was bürgermeister during the French occupation. After attending the school in Parchim, he went to Rostock University in 1831, and to Jena in 1832. There he became an enthusiastic member of the Germania, the most advanced of the Burschenschaften, and the next year, owing to Metternich's proclamations against these societies, he was summoned home, but during a visit to Berlin he was arrested (October, 1833), and imprisoned at Silberberg. The capital sentence was commuted to imprisonment for thirty years, but after seven years' confinement in Magdeburg, Berlin, and Dömitz, he was released on the accession of Frederick William IV. (1840). Returning home, he supported himself by farming, and afterwards by teaching gymnastics for some years, till in 1850 he removed to Treptow, and there published his first volume of humorous poems in low German (*Laüschchen un Rimels*, 1853). In 1856 he removed to New Brandenburg, and published some comedies, and a second volume of poems. The success of his Platt-Deutsch rhymes was extraordinary. In 1859 he published the first part of the *Olle Kamellen (Old Camomile)*, a series of prose tales that includes his greatest works, namely: *Wo ans ik tan ne Fru kamm (How I got a Wife)*; *Ut de Franzosentid* (1859; translated with the title *The Year '13*); *Ut mine Festungstid (My Prison Life)*, 1862, *Ut mine Stromtid* (1862-4); translated with the title *An Old Story of my Farming Days* (1878); and *Dörchlaüchtung (His Highness)*, 1865. Of his other works we may mention *Hanne Nüts*, a poem (1860), and *Schurr Murr* (1861). In 1863 Fritz Reuter settled at Eisenach, where he remained till his death. He was undoubtedly one of the greatest humorists of the century.

H. Ebert, *Fritz Reuter, sein Leben und seine Werke* (1874); K. T. Gaedertz, *Fritz Reuter—Reliquien* (1885). [H. W. N.]

* **Réville, Albert** (b. 1826), French divine, was born at Dieppe, his father being a pastor of the French Protestant Church. He followed in the steps of his parent; became in rapid succession vicar at Nîmes, pastor at Luneray, and in 1851 pastor of the Walloon (Belgian) Church at Rotterdam. In 1862 he received the degree of doctor from the University of Leyden. M. Réville acquired a high reputation as a lecturer both in France and in England, where he delivered the Hibbert lectures in 1884, on *The Origin and Growth of Religion, as illustrated by the Native Religions of China and Peru*. In 1880 he was appointed titular professor of the history of religions at the Collège de France, a Chair which was then created. M. Réville has

translated into French several of the works of Archbishop Whately, Olshausen, and Scholten. His works comprise *Essais de Critique Religieuse* (1860); *Études Critiques de l'Évangile Selon Saint-Mathieu* (1862); *La Vie de Jésus de M. Renan*, a reply (1863); *Théodore Parker sa Vie et ses Œuvres* (1865); *Histoire du Dogme de la Divinité de Jésus Christ* (1869); *L'Enseignement de Jésus Christ* (1870); *Prolégomènes de l'Histoire des Religions* (1881).

Reynolds, JOHN HAMILTON (b. 1796, d. 1852), poet and man of letters, was the author of *Safie*, an Eastern tale in verse (1814), which was much admired by Byron, Leigh Hunt, and other well-qualified judges. His other works are, *The Eden of Imagination* (1814), and *Odes and Addresses to Great People*, written in conjunction with his brother-in-law Thomas Hood, in 1825. He was for many years a constant contributor to the principal London reviews, and was on terms of intimacy with Charles Lamb, Allan Cunningham, Carey, and other leading literary men. It was he who defended Keats from the bitter attacks of the reviewers, remaining to the last the poet's faithful friend. At the time of his death he was clerk of the county court of the Isle of Wight.

* **Rhys, JOHN** (b. 1840), a native of Cardiganshire, after receiving an elementary education in the neighbourhood of the place of his birth, proceeded, in 1865, to Jesus College, Oxford, and in 1869 was elected a fellow of Merton College, Oxford. He afterwards prosecuted his studies abroad at the Sorbonne, the Collège de France, the universities of Heidelberg, Leipzig, and Göttingen. In 1871 he was appointed Her Majesty's Inspector of Schools for Flintshire and Denbighshire; and in 1877 Celtic Professor at Oxford. In the same year, 1877, he published *Lectures on Welsh Philology*; and in 1882 *Celtic Britain*.

Ricardo, DAVID (b. 1772, d. 1823), political economist, the son of a Jewish broker, was born in London, and became a member of the Stock Exchange in partnership with his father. In consequence of his marriage with a Christian in 1793, this partnership was dissolved. Ricardo subsequently amassed a large fortune, and retired from business soon after the peace of 1815. From 1819 he was member of the House of Commons for Portarlington, but seldom spoke on subjects other than those dealing with finance and commerce. In 1810 he published his lucid tract on *The High Price of Bullion a Proof of the Depreciation of Bank Notes*, and in 1817 his *Principles of Political Economy and Taxation*, in which he briefly expounds the doctrine of production, and chiefly occupies himself with the theories of distribution and circulation. In these subjects he shows originality, although he is wanting in clearness, and reasons too much from the abstract. He, however, made im-

portant investigations on the laws of profits and of value, on banking, on money, on private and public credit, and on the elasticity of taxation. But Ricardo's fame rests on the theory of rent, which had already been expounded by Dr. James Anderson in 1777; by Sir Edward West, afterwards a judge of the supreme court of Bombay, in 1815; and by Malthus, but with less profundity and fulness. This doctrine, long misunderstood by economists, has become an important acquisition to the science; indeed, according to Mill, it is the *pons asinorum* of political economy. Ricardo's works were collected and published by J. R. McCulloch in 1846.

J. R. McCulloch, *Life of Ricardo*, prefixed to Ricardo's works (1846); *Edinburgh Review*, June, 1818.

Ricasoli, BETTINO, COUNT (b. 1809, d. 1880), Italian statesman, was a Florentine by birth, and lived quietly on his estates until 1847, when he appeared in public life as a supporter of the Grand Duke Leopold of Tuscany. The flight of the latter, and his return with Austrian military support, disgusted Ricasoli, and he again devoted himself to agriculture. In 1859, however, on the final flight of the Grand Duke, Ricasoli was appointed Dictator of Tuscany, co-operated with Victor Emanuel in the war of Italian liberation, and steadily refused to consent to the recall of Leopold. In 1861 he succeeded Cavour as Prime Minister of Italy, but had only time to proclaim administrative unity when he was overthrown by Rattazzi (1862). He was again Prime Minister in 1866-7.

Rich, CLAUDIUS JAMES (b. 1786, d. 1821), orientalist, was born near Dijon, but was brought to England, and educated at Bristol. He became a remarkable linguist, and in 1804 entered the service of the East India Company. He was so complete an orientalist that he was able to travel in disguise from Alexandria to the Persian Gulf without discovery. In 1808 he was appointed Resident at Bagdad. There he explored in all directions, and in particular the ruins of Babylon. His *Memoirs of Ancient Babylon* appeared in 1815, and his *Narrative of a Residence in Koordistan* was published in 1836 by his widow, the daughter of Sir J. Mackintosh. His collection of oriental MSS. and coins is in the British Museum.

Richards, HENRY BRINLEY (b. 1819, d. 1885), pianist and composer, was born at Carmarthen, and educated for the medical profession, which he abandoned, however, for the more congenial study of music. He became a pupil at the Royal College of Music, gaining the king's scholarship in 1835 and 1837, and subsequently attained a high rank as a pianist. He devoted much time to the study of Welsh national music. His musical compositions are very popular, and consist of orchestral works, pianoforte pieces, and songs, both sacred and

secular. His name will be best remembered in connection with the well-known national hymn *God Bless the Prince of Wales* (the welsh poetry beginning "Ar Dwysog gwlad," published in 1862), which has attained a popularity well nigh as great as that of the National Anthem.

* **Richardson, BENJAMIN WARD, M.D.**, F.R.S. (b. 1828), man of science, was educated at Burrow-on-the-Hill, and at Anderson's University, Glasgow. He became M.B. (St. Andrews) in 1854, gaining in the same year the Fothergill Gold Medal, and the Astley-Cooper prize in 1856. Dr. Richardson became M.R.C.P. in 1856, F.R.C.P. in 1861, F.R.S. in 1867, and Croomian lecturer to the Royal Society in 1873. He has been president of the Medical Society of London. Dr. Richardson is well known to the general public for his papers and treatises on the evils of alcohol-drinking and smoking, the cruelties of slaughter-houses, the use of anæsthetics, the spread of contagious diseases, and the necessity of sanitary precautions. They gained him in 1868 the honour of a public testimonial from the medical profession. Many of his investigations appeared in the first instance in papers edited by him, such as *The Journal of Medical Health, The Social Science Review*, and the *Asclepiad*. He is the author of *Alcohol, its Action and its Use* (1869); *Diseases of Modern Life* (1876); *Hygeia, a City of Health*, a lecture delivered before the Social Science Congress (1876); *The Action of Alcohol on the Mind* (1877); *Dialogues on Drink* (1878); *Moderate Drinking, For and Against* (1879); *Health in the Home* (1882); *Twenty-one Years of Scientific Progress in Temperance Reformation* (1882); *The Field of Disease* (1883).

The Family Doctor, vol. I.

Richardson, SIR JOHN (b. 1787, d. 1866), Arctic explorer, was born at Dumfries, entered Edinburgh University in 1801, and entered the navy as assistant-surgeon in 1807. In 1816 he took his M.D. Dr. Richardson first visited the Arctic regions in 1819, when he was appointed surgeon and naturalist to the expedition of that year, commanded by Sir John Franklin. In 1825 he again sailed northwards under Franklin, and, in company with Kendal, surveyed the coast between the Mackenzie and Coppermine rivers. (See Franklin's *Narrative*.) On his return to England Richardson resumed his duties of surgeon to the Royal Marines at Chatham. In 1829 appeared the first part of his *Fauna Boreali-Americana*, which was completed in 1837, in four parts, in the second of which, that on birds, Dr. Richardson was assisted by Swainson. In 1838 Dr. Richardson became physician of Haslar Hospital and inspector of naval hospitals and fleets, and in 1846 he received the honour of knighthood. In 1848 he commanded the Franklin Search expedition of that year, returning from his fruitless

labours in November, 1849. In 1852 he published his journal, under the title of *The Arctic Searching Expedition: A Journal of a Boat Voyage through Rupert's Land and the Arctic Sea* (1851). Sir John Richardson retired from his post at the Haslar Hospital in 1855. His zoological appendices to the voyages of Parry and the other Arctic heroes are of great value; and as late as 1861 he published a volume on *The Polar Regions*.

J. Mellraith, *Life of Sir J. Richardson*.

* **Richmond and Gordon, CHARLES HENRY GORDON-LENNOX, 6TH DUKE OF, K.G.** (b. 1818), was educated at Westminster School and Christ Church, Oxford (B.A. 1839). He entered the army, became captain in 1844, and served as aide-de-camp to the Duke of Wellington and Lord Hardinge. He entered the House of Commons as Conservative member for West Sussex in 1841, and in 1859 became President of the Poor Law Board and member of the Privy Council. In 1860 he was raised to the Upper House on the death of his father. The Duke of Richmond was President of the Board of Trade under Lord Derby in 1867-8, and in 1870 became leader of the Opposition in the Upper House. In the Disraeli Ministry of 1874 he became Lord President of the Council, and led the Government in the House of Lords until the elevation of the Prime Minister to the peerage (1876). During that period he introduced the Scottish Church Patronage Bill of 1874, and the Agricultural Holdings Bill of 1875. In 1876 he assumed the additional dukedom of Gordon, and became Lord-Lieutenant of Banff in 1879. The duke waived his claims to the leadership of the Conservative party in the House of Lords on the death of Lord Beaconsfield (1881) in favour of Lord Salisbury, and served under that statesman as President of the Board of Trade until August, when he became Secretary for Scotland in the Conservative government of 1885-6, but held no office in Lord Salisbury's second Ministry.

* **Richmond, GEORGE, R.A.** (b. 1809), one of the leading English portrait painters, became a student at the Royal Academy in 1824, and, like John Linnell, formed one of the small group of admirers that gathered round William Blake in his old age. In 1837 he went to Italy, and resided for some years in Rome, as is described by Mr. Ruskin in *Præterita* (vol. ii., *Rome*). After his return he soon established a reputation as a distinguished portrait-painter in oil colour, and during a long and laborious career he has perhaps executed more portraits than any other living painter. Merely as examples of his work, the following portraits may be mentioned:—*Lord Elgin, The Duke of Buccleuch, Sir Robert Inglis, Bishop Selwyn* (now at St. John's College, Cambridge), *Sir Moses Montefiore, The Bishop of Carlisle, Earl*

Granville, and *The Marchioness of Salisbury*, the last three of which were exhibited at the Academy in 1877. He also designed the monument to Bishop Blomfield in St. Paul's. He was elected R.A. in 1867.

Müller, *Künstler-Lexicon der Gegenwart* (1882).

* **Richmond, WILLIAM BLAKE** (b. 1842), the artist, the son of Mr. George Richmond, R.A., was born in London, where he was educated by private tutors. He afterwards studied art for some years on the Continent. Following in his father's footsteps, he early became distinguished as a portrait-painter, and the numerous examples of ideal art which he has exhibited during the last ten years have always attracted much attention. In 1876 he contributed a portrait of *Miss C. H. Richmond* to the Royal Academy, but since the opening of the Grosvenor Gallery he has been represented almost entirely there. The following is a list of his principal works, with the dates of their exhibition:—Portraits of *Miss E. A. Cambell, W. Stewart, Esq.*, and two others (1878); *Sarpedon, The End of the Story*, a few portraits, and a statue of an athlete in bronze (1879); *The Song of Miriam*, and portraits of *Charles Darwin* and *Mr. Holman Hunt* (1880); *Behold the Bridegroom Cometh*, and portraits of *H.R.H. Princess Louise* and the *Bishop of Salisbury* (1881); *Release of Prometheus by Hercules*, and portraits of *Gladstone, Browning, William Morris*, and several others (1882); *the Lady Mary Glyn, Mrs. Frederic Harrison*, etc. (1883); *Viscount Cranborne, Miss Dora Mirless*, and *May* (1884); *An Audience in Athens during the Representation of the Agamemnon*, *Athena in a Mist from the Road to Eleusis*, and portraits of the *Lady Loyd Lindsay, Miss Mary Burne-Jones*, and *Mr. Andrew Lang* (1885); and *Hermes*, portraits of *Miss Burne-Jones, Mrs. Blanche Cumberlege*, and several other portraits (1886). Mr. Richmond was in 1880 elected Slade Professor of Fine Art at Oxford, in succession to Mr. Ruskin, but resigned the professorship in 1883.

Richter, ADRIAN LUDWIG (b. 1803, d. 1884), artist and engraver, was born at Dresden, and learnt the elements of his art from his father, till in 1820 he went to study in France, and three years later in Italy. At first he was especially devoted to landscape, and after serving as instructor of landscape-painting in the china-works at Meissen, he was appointed Professor of Landscape in Dresden (1836). From landscape he turned to the illustration of poems and fairy tales. It was not till comparatively late in life that he discovered his true function in his own original designs of German village life and the ways of children, as in the collections, *Edification and Contemplation* (*Erbauliches und Beschauliches*), *House and Home* (*Fürs Haus*), *Our Father* (*Das Vaterunser*), etc., that are almost as familiar in England as in Germany. Per-

haps the best general idea of his art, its tenderness, simplicity, and understanding of the old national life, may be gained from the well-known *Familienschats* (Leipzig, 1878), or the *Richter-Album* (Leipzig, 1876).

For the life of Richter see his *Selbstbiographie* (1885), and the minute classification of his works by J. F. Hoff (1877).

* **Richter, GUSTAV KARL LUDWIG** (b. 1823), artist, was born at Berlin, and having studied at the Academy there, visited Paris in 1844, and became a pupil of Cogniet. After studying in Rome (1847-9) he was commissioned to execute some of the frescoes in the New Museum at Berlin, and in 1856 attracted general attention by his *Raising of Jairus' Daughter*, now in the Berlin National Gallery. He was next commissioned to represent the *Building of the Pyramids* in the Maximilianeum at Munich, and having studied the subject in Egypt he completed the work in 1873. It is, however, as a portrait-painter that Professor Richter gained most renown in Germany. Of his most celebrated portraits we may mention: the *Duchess of Edinburgh*, the *Emperor William*, two portraits, one at Berlin, and one at Breslau (1877); the *Empress Augusta* (1878); the *Countess Karyoli*; and, above all, the well-known ideal portrait of *Queen Louise of Prussia* (1879), now in the Cologne museum. The national heroine is represented coming down the palace steps; thunder-clouds gather behind her, but over her head a star is shining through.

Müller, *Künstler-Lexicon der Gegenwart* (1882.)

Richter, JEAN PAUL FRIEDRICH (b. 1763, d. 1825), "the Unique," was born at the little village of Wonsiedel in the Fichtelgebirge, not far from Bayreuth. Two years later his father, who was a poverty-stricken pastor and schoolmaster, was appointed to Joditz, a neighbouring village, and in 1775 the family again removed to Schwarzenbach-am-Saale. After attending the school at Hof for two years Jean Paul was sent as a penniless theological student to Leipzig University in 1781. From theology he turned naturally to literature, and in 1783 gained a few pounds by the publication of the *Greenland Lawsuits* (*Grönländische Prozesse*), satirical essays of little value, the satire being inevitably second-hand. For his *Selections from the Devil's Papers* (*Auswahl aus des Teufels Papieren*), written in 1784, he found no publisher till 1787, and in the meantime he had returned to live with his widowed mother in penury at Hof, though he occasionally varied the starvation of literature with the painful ease of residential tutorships in the neighbourhood. *The Invisible Lodge* (*Die unsichtbare Loge*) his first original work, written with the same serious purport as may be traced in the greatest productions of the following years, was published in 1792, and was at least noticed as extraordinary. *Hesperus* (1792-4), still con-

sidered Richter's masterpiece by some, was read with enthusiasm, and after the appearance of *Quintus Fizelein und Siebenkäs* (*Blumen-Frucht-und-Dornenstücke, oder Ehestand, Tod und Hochzeit des Armenadvocaten F. S. Siebenkäs*) in 1796, Jean Paul was, for a time, the most universally popular author in Germany. In 1796 the *Biographical Recreations under the Cranium of a Giantess* (*Biographische Belustigungen*, etc.) were written, and in the same year Jean Paul made his first visit to Weimar, where he settled for a time two years later, attracted by the influence of Herder. His minor writings at this time, such as the treatise on immortality, *Das Kampaner Thal* (1797), *Palingenesien* (1798), and his attack on Fichte's system, *Clavis Fichtiana* (1798), were of no great importance, but the appearance of the four volumes of *Titan* (1799-1802) revived the popular interest in the author, though opinions were much divided as to the merits of the book. Meantime Jean Paul had married Caroline Meyer in Berlin, and was living at Meiningen, and then at Coburg, till in 1804 he finally established his home in Bayreuth. The *Fliegjahre* (*Wild Oats, or Youth's Young Dream*), the last and greatest of his peculiarly characteristic works, appeared in 1803. This was the year of Herder's death, and to this event some critics have traced the subsequent change. The next two publications, *Introduction to Aesthetics* (*Vorschule der Ästhetik*, 1804-13), and *Levana* (1806), a thoughtful treatise on education, are almost scientific in tone; and *Army-chaplain Schmelzle's Journey to Flätz* (*Des Feldpredigers Schmelzle Reise nach Flätz*, 1807) and *Dr. Katzenberger's Trip to the Watering-place* (*Dr. Katzenbergers Badereise*, 1808), though more distinctly amusing, have lost something of the old enthusiasm and earnestness of purpose. The *Life of Fidel* (1811) and *The Comet, or Nicholas Margraf*, were neither of them successful, and the latter was, indeed, never properly finished, though begun in 1813 and published in 1820-2. In 1818 Richter began his *Autobiography*, but unfortunately threw it up in impatience after completing a few chapters. His old age was saved from poverty by the grant of a small pension from Prince Carl von Dalberg. His *Twilight for Germany* (1809) and his *Words of Peace for Germany* (1818), prove his patriotic interest in the great drama of German independence. Otherwise he lived out his days quietly amidst a small circle of friends at Bayreuth, till grief at the death of his eldest son reduced him to total blindness during the last year of his life. A complete edition of his works in sixty-five volumes was published after his death. Posterity has seldom reversed the verdict of its grandfathers so completely for the worse as in the case of Jean Paul. In England he is now almost unknown at first hand. In Germany his name is only mentioned with a scornful

smile and the final criticism of "antiquated stuff" (*nicht mehr Modern*). The temper of the times has indeed changed. Even Germans now demand the concise and concrete. Sentimentality and diffuseness are the two undeniable sins that condemn Jean Paul almost hopelessly before the modern judge. As stories his romances are forced, unreal, confused, and inevitably disappointing. Hardly any of his characters are human. It is noticeable that Jean Paul seems never to have written a single line of verse. And yet, unread and despised, for many reasons justly, as he is, Jean Paul remains the most profound German humourist, and there are passages in *Siebenkäs* and the *Fliegjahre* that must ultimately take a high place in the literature of the world. He must be read by passages as an essayist; the interest of his work is mainly personal, and the humour does not lie in situation, but in thought. For an English student of Jean Paul the first necessity is to forget the time-honoured comparison between him and Carlyle; but for the deep human sympathy of both, few men of genius have been more unlike.

Jean Paul's *Briefwechsel mit seinem Freunde Otto* (1829); Ernst Förster, *Denkwürdigkeiten von Jean Paul* (1863); Paul Nerlich, *Jean Paul und seine Zeitgenossen* (1876); Carlyle's *Miscellaneous Essays*, vol. i.; C. Lee, *Richter's Levana and Autobiography* (translated, with a short memoir, 1876) and *Life of Jean Paul* (*Catholic Series*, 1849).

[H. W. N.]

Rickman, THOMAS (b. 1776, d. 1841), architect, born at Maidenhead, was of Quaker family. His father was a surgeon, and the son started life as a chemist's assistant. He went next to a grocery establishment at Saffron Walden, thence to Lewes to assist his father, then he entered the service of a corn-factor in London, and at last, in 1808, settled down in Liverpool as a clerk in an insurance office. He now began to study architecture. Obtaining the first prize for a design for one of the Government churches, he adopted architecture as a profession, and removed to Birmingham. He received a great many commissions, and among his works are to be mentioned the New Buildings of St. John's College, Cambridge, Oulton Church, near Leeds, and the church of Hampton Lucy, near Stratford-on-Avon. At his death it is surmised that he had designed more churches than any other architect. He wrote a treatise, *An Attempt to discriminate the Different Styles of Architecture in England from the Conquest to the Reformation*, which was the first satisfactory attempt to classify the different periods of Gothic.

* **Riddell, CHARLOTTE ELIZA LAWSON**, née COWAN (b. circa 1837), novelist, born in Carrickfergus, Co. Antrim, married Mr. J. H. Riddell, of Winsor Green House, Staffordshire, in 1857. Her first novel, published under the name of "F. G. Trafford," was *The Moor and The Fens* (1858). *Too Much Alone* followed in

1860, and *George Geith of Fen Court* in 1864. Mrs. Riddell now wrote under her husband's name, and produced a succession of novels, dealing chiefly with city and commercial subjects, which have commanded great popularity. They include *City and Suburb* (1861); *The World and The Church* (1862); *Maxwell Drewett* (1865); *The Race for Wealth* (1866); *The Rich Husband and Far Above Rubies* (1867); *Austin Friars* (1870); *A Life's Assize* (1871); *Home Sweet Home and The Earl's Promise* (1873); *Montmorley's Estate* (1874); *The Ruling Passion and Above Suspicion* (1876); *Fair Water* (1878); *The Mystery in Palace Gardens* (1880); *The Senior Partner and Alaric Spencer* (1881); *Daisies and Buttercups and The Prince of Wales's Garden Party* (1882); *A Struggle for Fame, The Uninhabited House and the Haunted River* (1883); *Berna Boyle* (1884); and *Mitre Court* (1885).

Ripley, GEORGE, LL.D. (b. 1802, d. 1880), American man of letters, was born at Greenfield, Mass., graduated at Harvard in 1823, and in 1826 at the Cambridge Divinity School. From 1828-31 he was a Unitarian minister at Boston, but then resigned his pastorate and went to Europe to study philosophy. On his return he edited, with Dr. Hedge, *Specimens of Foreign Standard Literature* (1838-42), and published *Discourses on the Philosophy of Religion* (1839), which produced an animated controversy with Professor Andrews Norton. Dr. Ripley was one of the initiators of transcendentalism, wrote for the *Dial*, and in 1844 lost his fortune in the socialistic experiment of Brook Farm. In 1849 he became literary editor of the *Tribune*, and later "reader" for Harpers. In 1852 he edited a *Handbook of Literature and the Fine Arts* with Mr. Bayard Taylor, and in 1858 *Appleton's New American Cyclopædia* with Mr. C. A. Dana.

Ripon, THE RIGHT HON. FREDERICK JOHN ROBINSON, 1ST EARL OF (b. 1782, d. 1859), Prime Minister of England, was the second son of the 2nd Earl Grantham. After taking his degree at Cambridge in 1802, he entered public life as a moderate Tory and member for Carlisle in 1806, a seat which he exchanged for Ripon in 1807. Under-Secretary for the Colonies in 1809, he became a member of the Admiralty Board in 1810, and Vice-President of the Board of Trade in 1812. In 1823 Mr. Robinson became Chancellor of the Exchequer, in succession to Mr. Vansittart, but inaugurated no new era in finance. When his friend Canning became Prime Minister in 1827 Robinson was created Lord Goderich, and led the Tory party in the Upper House as Secretary for the Colonies. The "Prosperity Robinson" of Cobbett became the "Goody Goderich" of Sir C. Napier. In August, 1827, on the death of Canning, Goderich was chosen by the King

to form a Cabinet and carry on Canning's system. It lasted seven months and then collapsed from internal dissension, the Premier wavering feebly between his Canningite and Tory supporters (Jan. 8th, 1828), after it had signally failed to make use of the battle of Navarino in order to secure independence for Greece. This government had never encountered Parliament. In Grey's Ministry of 1830 Lord Goderich became Secretary for the Colonies, a post which he exchanged in 1833 for the office of Lord Privy Seal, when he was created Earl of Ripon. In 1834 he resigned, in consequence of the consent of Lord Grey to a commission of inquiry into the Irish Church after the success of Mr. Ward's motion. In 1841 he accepted the presidency of the Board of Trade from Sir Robert Peel, moved to the Indian Board in 1843, and retired with his chief in 1846, after which he took no active part in politics. His last effort was to introduce the Bill for the Repeal of the Corn Laws in 1846, having been the author of the Corn Law Bill of 1815. Lord Ripon was a hum-drum, plodding man, and a useful subordinate, but it would be difficult to conceive anyone more unsuited for the position of Prime Minister.

* **Ripon, THE RIGHT HON. GEORGE FREDERICK SAMUEL ROBINSON, MARQUIS OF, K.G., G.C.S.I., C.I.E.** (b. 1827), accompanied a special mission to Brussels in 1849, and entered the House of Commons as member for Hull, in the Liberal interest, in 1852, succeeding his father as Earl of Ripon in 1859. He was Under-Secretary of State for War 1859-61, for India 1863, Secretary of State for War 1863-6, Secretary of State for India 1866, and Lord President of the Council 1866-73, resigning a few months before the fall of the Government. In 1871 he had been raised to a marquessate. In 1874 he became a convert to Roman Catholicism. Lord Ripon was appointed Viceroy of India on the return of the Liberals to office in 1880. His policy included the withdrawal from Afghanistan and the admission of the natives to a share in the government of the Empire; and several of his measures, notably the Ilbert Bill of 1883, the object of which was to place native civil servants on an equality with English as far as criminal procedure was concerned, irritated the Anglo-Indian population not a little. He resigned in 1884, and on his return to England delivered a number of speeches in defence of his administration. In 1886 he became First Lord of the Admiralty in Mr. Gladstone's third administration.

* **Ristic, JOHANNES** (b. 1831), Servian statesman, was educated at Berlin, Heidelberg, and Paris. In 1860 he entered the diplomatic service of Servia, and in 1861, while acting as *chargé d'affaires* at Constantinople, succeeded in preventing a rupture between Servia and Turkey, in consequence

of the bombardment of Belgrade by the Turkish garrison, and subsequently arranged the evacuation of the country by the troops of the Porte. He now became a popular hero, and in 1867 was nominated President of the Council. During the minority of Prince Milan, M. Ristic was a member of the Council of Regency, until 1872, when the prince assumed the government. M. Ristic, although filling for some time the position of Foreign Secretary, remained in the background until 1876, when he assumed the entire direction of Foreign Affairs, and urged on the declaration of war against Turkey. Despite the reverses sustained by the Servian troops, the policy was entirely successful, and M. Ristic, at the Congress of Berlin, triumphantly pleaded the cause of Servian independence. He was now virtually dictator, but in 1880 the "Servian Cavour," as he has been rather absurdly called, was forced to resign, on account of his attempt to tax Austrian imports. He became the leader of a Radical opposition.

* **Ristori**, ADELAIDE (b. 1821), the celebrated Italian actress, a native of Friuli, and the child of strolling actors, appeared on the stage when but two months old. Her first instructress was her grandmother, Teresa Ristori; but having made her *début* as Francesca da Rimini, 1835, she joined a year later the Royal Sardinian Company, where Carlotta Marchioni, perceiving the genius of the young actress, trained her as her own successor in the leading parts. A romantic love affair, followed by her marriage in 1847 with the young Marquis Capranica del Grillo, caused Ristori to relinquish her profession for a short period, but fortunately the objections of her husband's family were overcome by an exhibition of her genius at a charitable performance, and she returned to the stage. Caroline Internari gave her lessons in tragedy, and having established her reputation in Italy as Myrrha, Rosamunde, Ottavia, Antigone, Mary Stuart, and other characters, she went in 1855 to Paris, where she made her *début* as Francesca, while Rachel was at the zenith of her fame. In spite of the severe nature of the test, Ristori's genius triumphed, and her acting was praised by Lamartine, Dumas, and other celebrated critics, nor was she less successful in England (1858). Fresh laurels were gained in every European capital, from Moscow to Dublin, and her travels were extended to Egypt and Constantinople. Nor was she less successful in the New World, where she visited not only the United States, but also the principal countries of South America. In 1873 Ristori revisited England, and gave her farewell performance at the Queen's Theatre, Manchester. Her grand impersonation of Lady Macbeth, despite the inadequate support accorded to it, was received with enthusiasm by London audiences during a short season in 1884. Twice (in Spain, 1857, and in Chili,

1874) the enthusiasm aroused by her acting enabled her to plead successfully for the remission of a sentence of death.

Ritter, CARL (b. 1779, d. 1859), geographer, was born at Quenlenburg, in Prussia, and educated at Halle, and after travelling about Europe in the capacity of private tutor became professor of geography at Berlin University in 1820, and at the same time was appointed director of studies at the Military Academy, and member of the Supreme Council of Public Instruction. These appointments he filled until his death. Ritter was the first man to place the science of comparative geography upon a sound basis, and to show how intimate is the connection between the formation of the surface of the globe and the historic development of humanity. His great work, *Die Erdkunde im Verhältnisse zur Natur und Geschichte des Menschen* (Geography in its Relation to Nature and the History of Man), appeared in seventeen volumes between 1822 and 1854. It deals with Asia alone, the geographer's design of following up the achievement by a geographical description of Europe having been cut short by death. The accompanying *Atlas* is a work of great value. Among Ritter's other works are:—*Europe: a Geographical, Historical, and Statistical Picture* (1807); *The Colonising of New Zealand* (1842); and *The Jordan and the Navigation of the Dead Sea* (1850). His academic writings were collected under the title, *An Introduction to Universal Comparative Geography* (1852).

* **Rivière**, BARRON, R.A. (b. 1840), the well-known artist, was born in London of French descent, his ancestors having come over to England on the revocation of the Edict of Nantes. Of artistic antecedents, he had the advantage of studying under his father, William Rivière, successively principal of the Drawing School at Cheltenham College, and art teacher at Oxford. The son also studied at this university, and graduated B.A. in 1867; but his earliest exhibitions at the Royal Academy, *Rest from Labour* and *Sheep on the Cotswolds* (1858), and *On the Road to Gloucester Fair* (1859) show that the young artist was seeking inspiration from his own observation rather than from his classical studies. It was not until 1864 that he again exhibited at the Academy, when he sent *Iron Bars* and *Romeo and Juliet*, and in 1866 he had the good fortune to get *The Poacher's Nurse* tolerably well hung. Since then his pictures, distinguished for the most part by dramatic and impressive treatment, now humorous, now pathetic, and especially strong in the representation of wild animals, have always been conspicuous objects of attention to visitors at this exhibition. Among his works we may mention *The Long Sleep* (1866), *The Prisoners* (1869), *Charity* (1870), *Come Back* and *Circe transforming the Friends of Ulysses to Swine*

(1871), *Daniel in the Lion's Den* (1872), *Argus* (1873), *Apollo and The Genius Loci* (1874), *War Time and The Last of the Garrison* (1875), *A Stern Chase is always a Long Chase*, *Pallas Athene and the Swineherd's Dogs* (1876), *A Legend of St. Patrick and Lazarus* (1877), *Sympathy and Persepolis* (1878), *The Poacher's Widow*, and *In Manus Tuas, Domine* (1879), *The Last Spoonful*, *The Night Watch* (1880), *Let Sleeping Dogs Lie*, *A Roman Holiday*, and *Envy, Hatred, and Malice* (1881), *The Magician's Doorway* (1882), *Giants at Play*, *The Last of the Crew*, *Old Playfellows* (1883), *The King and his Satellites and Acteon* (1884), *Vae Victis*, and *After Naseby* (1885), *Union is Strength and Ruzpah* (1886). Mr. Rivière was elected A.R.A. in 1878 and R.A. in 1881.

Roberts, David, R.A. (b. 1796, d. 1864), Scottish painter, was born at Stockbridge, Edinburgh, where his father was a shoemaker, and his mother eked out a scanty livelihood as a laundress. In due course he was apprenticed to a house-painter. The apprenticeship over, Roberts commenced his career as a scene-painter, and to the grief of his parents joined a company of strolling players, on the understanding that he was to make himself generally useful as actor or artist. Afterwards he obtained the situation of scene-painter in Edinburgh and Glasgow, and in 1820 he married. Two years later, like all enterprising Scotsmen, he flitted to London, and with his friend Clarkson Stanfield was engaged by Elliston at Drury Lane Theatre. He employed his leisure hours in painting pictures, and before he was thirty years old gained a name and patrons. His progress was now rapid. In 1824 he exhibited at the British Exhibition in London. In 1825 he sought on the Continent for new and higher subjects for his pencil—the Cathedral of Rouen and Old St. Germain's at Amiens. In 1826 he exhibited at the Royal Academy. In 1827 he threw scene-painting aside, and devoted himself wholly to architectural pictures. In 1832 he produced his fine illustrations of Bulwer's *Pilgrims of the Rhine*—a book, indeed, written to "illustrate" the illustrations. He next travelled in Spain, and then proceeded to Syria and Egypt. He was absent for about eighteen months, and the immediate result on his return was the publication (1842) of the splendid illustrated work in four large folio volumes, *The Holy Land, Syria, Idumea, Arabia, Egypt, and Nubia*. Meantime he had attained the highest formal honours of his profession. In 1830 he was elected president of the Society of British Artists, in 1839 associate of the Royal Academy, in 1841 full academician. He painted no fewer than 300 finished pictures, and 11,000 sketches in oil and water colour.

The Life of David Roberts, R.A., by his old "colour boy," James Ballantine; Macmillan's Magazine, October, 1886; John Dennis, in *Fortnightly Review*, January, 1867.

* **Roberts, Lieut.-General Sir Frederick Sleigh, Bant, G.C.B., C.I.E., V.C.**, etc. (b. Sept. 30th, 1832), the son of the late General Sir A. Roberts, was educated at Eton, Sandhurst, and Woolwich. In 1851 he entered the Bengal Artillery, and served through the Indian Mutiny, taking part in the storm of Delhi, the capture of Cawnpore and the relief of Lucknow, and gaining the V.C. at Khodagunj for rescuing a standard. Created a major in 1860, Roberts served on the north-west frontier in 1863, where the tribes were uneasy. In 1868 he served as assistant-quartermaster-general with the Bengal Brigade in the Abyssinian expedition; and in 1871-2, having attained the grade of colonel, he organised and took part as senior staff officer in the expedition for the punishment of the marauding Loochhai tribes of south-east Bengal. For his services he was created C.B. The declaration of war against Afghanistan (1878) found him a major-general and commandant of the irregular force on the Punjab frontier, and he at once was placed in command of the Kurum Valley column. The attack on the Peiwar Kotai (ridge) was a brilliant success, and after wintering in the Kurum Valley, whence he was compelled to issue in order to chastise the Mangal tribes in the Khost Valley, he advanced upon Cabul in the spring. The arrival of Yakub Khan in his camp (May 8th, 1879), and the conclusion of the treaty of Gundamak, brought the campaign to a close, and he returned to India. When the second campaign (1879-80) was necessitated by the massacre of the British mission at Cabul, General Roberts was placed in command of the army of invasion, and after defeating the Afghans at Charasiah occupied Cabul on Oct. 12th. His position becoming uncomfortable, he retired into cantonments at Sherpur. On Aug. 11th, 1880, he went to the relief of Candahar, which was being besieged by Ayoub Khan (q.v.). In that magnificent march, which received the warm admiration of Moltke, Skobelev, and all the great military authorities of the Continent, over three hundred miles were accomplished in twenty days, and on Sept. 1st the enemy were utterly defeated outside Candahar. General Roberts for these services was created a baronet, G.C.B., and received the thanks of Parliament. In 1881 after the defeat of the British by the Boers at Majuba Hill, Sir Frederick Roberts was appointed commander-in-chief and High Commissioner in South Africa, but peace was concluded before he arrived at Natal. From 1881-5 he was a member of the Council of the Governor of Madras, in 1885 became commander-in-chief in India, and in 1886, on the death of General Sir Herbert Macpherson, assumed the command of the army in Burmah.

C. R. Low, *Life of Sir F. Roberts*.

Robertson, The Rev. Frederick William (b. 1816, d. 1853), the popular preacher

and suggestive thinker, was born in London, and spent a happy boyhood at Leith Fort, Beverley, and Tours. After winning distinctions at the Edinburgh Academy, he attended the Edinburgh University for a session, and at eighteen was articled to a solicitor at Bury St. Edmunds. A year of this work was enough to test its uncongeniality. He was anxious to join the army (his father's profession), but eventually the Church was agreed upon, and with that object in view he entered at Brasenose College, Oxford. His first curacy was at Winchester, in 1840, and in the following year he was forced to travel abroad to recruit his health. At Geneva he married Helen, the third daughter of Sir George Denys, Bart., and on returning to England in 1842 accepted the curacy of Christ Church, Cheltenham, where he remained for five years. Here he laboured hard among all classes, and was an earnest student of every science that had any bearing on his work. But he suffered much agony of doubt (the Tractarian Movement was then at its height), and he had an unfounded notion that he was "doing his work badly," and that his "life was being misspent." His health suffered; and at length he was compelled to try again the healing and rest of foreign travel. In 1847 he was offered the church at St. Ebbes, Oxford, and three months later Trinity Chapel, Brighton. He entered on his work at Brighton sadly, "with small hope," he says, "and much misgiving." But it is by his work at Brighton that Mr. Robertson will be remembered; it was there that his too brief ministry ripened, his powers were developed, his teaching was enunciated in its fullest form. It was a work, however, of little outward interest. Outside the pulpit its chief incidents were a lecture or two at the Athenæum and a lecture or two to working men. Suffering, the torture of a sensitive heart constantly and rudely wrung, intense mental effort quickly consuming the energy of body and brain, brought it to a premature end. A melancholy crept over him that sometimes sunk into gloom; partly the melancholy of profounder thought, of a more intense sympathy with men, partly of the weight of disease. He died at the age of thirty-seven; and was buried in a hollow of the Downs that he loved so well. He was at first little missed; but in a year or two a volume of his sermons was published, with the drawbacks inseparable from all posthumous publications. Other volumes followed, even more imperfect and less authoritative, yet their circulation spread with extraordinary rapidity; their popularity at home and in America has been unprecedented, and they have been translated into several foreign languages. Although Robertson is perhaps inferior to Archer Butler in eloquence, and to Newman in metaphysical and dialectic power, he stands out as a man representative of his

M.W.—28

time and the leader of a great movement in theology.

Rev. Stopford A. Brooke, *Life and Letters of Rev. Frederick W. Robertson.* [W. M.]

* **Robertson, GEORGE CROOM** (b. 1842), a native of Aberdeen, was educated at the grammar school and university of that town, graduating M.A. in 1861. During the years 1861-3 he pursued his studies at University College, London, and at the universities of Berlin and Göttingen. In 1864 he became assistant to the professor of Greek in Aberdeen, and in 1866 professor of philosophy of mind and logic in University College, London. He was examiner in mental and moral science in the University of London during the years 1868-73, which appointment he again received in 1883. In conjunction with Professor Alexander Bain he edited Grote's *Aristotle*, which was published posthumously in 1872. From 1876 he has edited *Mind: a Quarterly Review of Psychology and Philosophy*, to which he is a constant contributor. He is the author of *Hobbes in Blackwood's Philosophical Classics*. In 1872 he married Caroline, second daughter of the late Mr. Justice Crompton.

Robertson, THOMAS WILLIAM (b. 1829, d. 1871), dramatist, was the son of actors, and the elder brother of Miss Madge Robertson (Mrs. Kendal). He went early on the stage in the provinces, but was never a success, and lived for many years a life of privation as "utility" actor, literary hack, and the writer of plays which no one would look at. In 1850 he came to London and earned a precarious living by journalism, contributing especially to *Fun*, under H. J. Byron's editorship. In 1851 he succeeded in persuading the management of the Olympic to accept his play *A Night's Adventure*, but it was not until 1864, when Sothorn produced his adaptation from the French piece *Sullivan*, entitled *David Garrick*, that he gained any considerable triumph. In the following year *Society*, which had been refused at the Haymarket, was brought out at Liverpool, and afterwards at the Prince of Wales Theatre, London, by Mrs. Bancroft. It was a complete success, and was followed by *Ours* (1866), *Caste* (1867), *Play* (1868), *School* (1869), and *M.P.* (1870), all at the same theatre. Robertson during his later years produced many other pieces besides those written for the Prince of Wales's company, of which the most successful were *The Ladies' Battle*, *Dreams*, and *Home*, adaptations from the French. In none of them, however, did he attain the same level of excellence as in the comedies written for the Bancrofts, and when he attempted sensational drama he distinctly failed. In *Caste* and *School* he is seen at his best, and their bright dialogue, promptness, simplicity of story, and

developed contrasts of character have secured them a permanent place among the best works of modern English playwrights.

* **Robinson, AGNES MARY FRANCES** (b. 1867), poetess, the daughter of Mr. G. F. Robinson, F.S.A., a native of Leamington, was educated at Brussels and University College, London. In 1878 her first collection of poems, *A Handful of Honeysuckles*, was published, and was immediately hailed as the effort of a cultured and graceful fancy. In 1880 appeared her translation of *The Crowned Hippolytus* of Euripides, with new poems. Miss Robinson contributed a volume on *Emily Brontë* to the *Eminent Women Series* in 1883, and published a novel, *Arden*. Her *New Arcadia*, and other Poems appeared in 1884.

Robinson, HENRY CRABB (b. 1775, d. 1867), man of letters, was born at Bury St. Edmunds, was sent to school at Devizes, and was articled for a time in a lawyer's office at Colchester (1790-5). In 1796 he went to London, where he spent a few unsettled years, till in 1800 he made his first visit to Germany, and there became acquainted with Goethe, the Brentanos, Schiller, and most of the leading poets and men of letters of the time. On his return in 1805 he entered literary society in London, and for a time acted as foreign correspondent for the *Times* in Germany, Spain (1809), and elsewhere. During these years he was intimately acquainted with Coleridge, Charles Lamb, Flaxman, Hazlitt, Madame de Staël, and Mrs. Barbauld, and subsequently with Wordsworth, Southey, De Quincey, Blake, and nearly every other leading personality in literature and art. He visited Weimar again in 1818 and 1829. In 1813 Crabb Robinson was called to the bar; but he took little interest in the profession, and quitted it in 1828. He was a prominent supporter of the Athenæum Club at its foundation in 1824, and of the London University when it was opened in 1828. But his real function in life was to be a student of character, and an observer of contemporaries. His wide opportunities, and the carefulness with which he recorded his observations, have made his *Diary*, *Reminiscences*, and *Correspondence*, published by Thomas Sadler in 1869, an invaluable authority for the student of the literary and social history of this century.

* **Robinson, THE RIGHT. HON. SIR HERCULES GEORGE ROBERT, G.C.M.G.** (b. 1824), colonial administrator, was educated at Sandhurst, and entered the army, from which he retired in 1846. He held civil appointments in Ireland until 1852, was appointed President of Montserrat in 1854, Lieutenant-Governor of the Leeward Islands in 1855, Governor of Hong-Kong in 1859, and Governor of Ceylon in 1865. In 1872 he became Governor of New South Wales, and two years later, as High Commissioner, effected

the annexation of the Fiji Islands. From 1870 to 1880 Sir Hercules was Governor of New Zealand, and in the last year was appointed Governor of the Cape of Good Hope, and High Commissioner of South Africa, in succession to Sir Bartle Frere. Before many months were out he was confronted by the difficulties attendant upon the Transvaal rebellion, and on May 10th, 1881, took his seat as president of the Royal Commission to settle the question of boundaries and other questions still at issue between England and the Boers. In consequence of the filibustering expeditions of the Boers into Bechuanaland, an English expedition to expel them was despatched under Sir C. Warren in 1884-5. Sir Hercules was accused of holding aloof from the expedition, but the difficulties of his position were not taken into account. As Governor of the Cape he was bound to be guided by the Cape ministry, as High Commissioner he had authority over the whole of South Africa, and yet Sir C. Warren had an independent command. The Cape Government was of double mind concerning Basutoland, the government of which they took over in 1884, but relinquished in 1886. Sir Hercules was sworn of the Privy Council in 1883.

Robson, FREDERICK (b. 1821, d. 1864), comedian, took early to the stage, and performed for many years in provincial companies. In 1845, or thereabouts, he came up to London, and was engaged at the Grecian Theatre, City Road, and in 1848 made a great hit at the Olympic in the burlesques of *Macbeth* and *The Merchant of Venice*. He increased his reputation as Jem Baggs in the farce *The Wandering Minstrel*, the feeble humours of which he eked out by the comic song, *Villikins and his Dinah*. The *Yellow Dwarf*, *Boots at the Swan*, and *Medea* in the burlesque of that name, were among his other successes. Robson was undoubtedly the greatest low comedian of his day, and probably the British stage has not had his equal since.

G. A. Sala in *The Atlantic Monthly*, vol. 13.

* **Roby, HENRY JOHN** (b. 1830), scholar, a native of Tamworth, was educated at Bridge-north Grammar School and St. John's College, Cambridge, of which foundation he became a fellow and lecturer, having graduated in 1853 senior classic. During his subsequent residence at Cambridge, Mr. Roby was examiner in the university in law, classics, and moral science. He was under-master of Dulwich College Upper School from 1861-5, and professor of jurisprudence at University College, London, from 1866-8. In 1864 he was appointed secretary to the Schools Inquiry Commission, and in 1869 to the Endowed Schools Commission, and was one of the Endowed Schools Commissioners from 1872 to 1874. Mr. Roby then established himself

in business at Manchester, where he has played a prominent part in politics. Mr. Roby is widely known as the author of a *Grammar of the Latin Language from Plautus to Suetonius* (1871-4), a work of universally recognised authority. He published in 1884 an *Introduction to Justinian's Digest*, of which an Italian translation appeared in 1886.

* **Rocheport**, VICTOR HENRI DE ROCHEFORT-LUCAY, COMTE (b. 1830), French politician, commonly known as Henri Rochefort, and the son of a Legitimist marquis, spent his youth and early manhood as a medical student, a clerk in the Hôtel de Ville, a successful playwright, and a journalist. He became attached to the *Figaro* about 1863, when his caustic comments upon the Second Empire brought the paper into collision with the authorities, and in 1868 caused the management to dispenise with the services of M. Rochefort. His articles were collected in three volumes, entitled *Les Français de la Décadence*. On June 1st, 1868, he started *La Lanterne* on his own account. It was seized by the police on its eleventh appearance, and Rochefort was condemned to a fine of 10,000 francs and a year's imprisonment, to which four months were added for an assault upon a rival journalist. He fled to Belgium, and after two unsuccessful candidatures was returned to the Chamber of Deputies by the Ultra-Democrats of the first *circonscription* of Paris, and after a few hours' arrest on crossing the frontier took his seat. In the Chamber he attacked the Imperial régime with great bitterness, and started at this time a new paper called the *Marseillaise*, in which was inserted the article which caused Prince Pierre Bonaparte to kill the journalist Victor Noir. In January, 1870, Rochefort was arrested, in consequence of the violence of his attacks upon the Imperial family, and condemned to a fine and six months' imprisonment. Set free by the downfall of the Empire, Rochefort became a member of the Government of the National Defence, but showed distinct sympathy with the first Communitistic outbreaks, and was compelled to resign. Elected by the department of the Seine to the Assembly of Bordeaux, he voted against the preliminaries of peace, but then retired from the Assembly. On the establishment of the Commune on March 19th he at first supported its excesses in the *Mot d'Ordre*, but finding its tyranny insupportable, fled in disguise from Paris on May 11th. Arrested by the Versailles Government, he was condemned by martial law to perpetual imprisonment in September, and despite Victor Hugo's efforts to obtain his release, was deported to New Caledonia. Thence in 1874 he escaped in an open boat, went *vid San Francisco* to London, and thence to Geneva, whence he contributed freely to the Parisian press. In 1880, after being severely

wounded in one of his numerous duels, he took advantage of the general amnesty of July to return to Paris, and started a new paper called *l'Intransigeant*. In 1881 he commented with his usual incisiveness upon the Tunis expedition, which he declared to be a mere stock-jobbing affair, and gained a triumphant acquittal in December in an action for libel brought against him by M. Rouston, the Resident at Tunis, who had been the motive power in the annexation. In 1886 he proposed to take part in the workmen's riots in Belgium, but the authorities would not allow him to cross the frontier.

Rodbertus, CARL JOHANN (b. 1805, d. 1875), the founder of scientific Socialism, a native of Greifswald, was the son of a professor. After studying law at Göttingen and Berlin, and travelling about for some time, he in 1836 settled at Jagetzow, an estate that he had purchased, and entered upon the study of political economy. In 1848 he was elected to the Prussian National Assembly, sat among the members of the Left Centre, and for fourteen days was Minister of Public Worship and Education. In 1849 he represented Berlin in the Chamber; and after a contest for a seat in the first North German Diet, in which he was unsuccessful, he withdrew from public life. Rodbertus's chief contribution to economic science is his development of the Ricardian theory of value. That theory, coupled with the wage-system, explains how over-production arises; as labour becomes more and more productive, the consuming power of the labourers becomes less and less; and as the labourers are the majority of consumers in every country, there is no consequence more natural in our present economic system than glutted markets and trade depression.

Roebuck, THE RIGHT HON. JOHN ARTHUR (b. 1801, d. 1879), was the son of an Indian civil servant, and was related on his mother's side to Tickell the poet, the intimate friend of Addison. His boyhood was spent in Canada, but on his choosing the legal profession he came to this country in 1824, and was called to the bar of the Inner Temple in 1832. For some time he went the Northern Circuit, taking silk in 1843. It soon became apparent, however, that he was more fitted for political life than for the law. He first came before the public as a prominent Radical reformer. In 1832 he was returned for Bath in the first Reformed Parliament, and became the exponent of the principles of the new Radical party in the House. He sided with O'Connell in his opposition to renewed coercion in Ireland; indeed, it was a marked feature in Roebuck's character that he was ever ready to take up the cause of those to whom injustice, in his opinion, had been done. He advocated the adoption of the ballot and the abolition of sinecures. He defended the Crimean

War on the ground that it was necessary "to stop the Emperor of Russia in his career of spoliation;" and in the discussions connected with that war Mr. Roebuck secured his greatest party triumph, for he caused the overthrow of the Aberdeen Ministry by his motion for the formation of the "Sebastopol Committee" (of which he became chairman) to inquire into the condition of the army in the Crimea. About 1862 Mr. Roebuck began to show a growing divergence from his chief Liberal supporters, and gave offence to the working classes, who had hitherto idolised him, by his attack on the morality of the working men of our northern towns. He embarked with impetuosity in the cause of the Southern States of America, then at war with the North, and subsequently lost the confidence of many of his friends by his action in connection with the Trades Unions Commission of 1866-7 and the Irish Church question. He lost his seat at Sheffield in consequence in 1868, but was again returned at the general election of 1874, when he supported the policy of Lord Beaconsfield on the Eastern Question, with something of that old vigour of attack which had formerly gained him the title of "Tear'em." The Queen admitted him a Privy Councillor in 1879. Mr. Roebuck was the author of a *History of the Whig Ministry of 1830 to the passing of the Reform Bill* (1852).

Rogers, SAMUEL (b. 1763, d. 1855), poet, was the son of a London banker, and after a sound education entered his father's business. Though his courage was not sufficient to enable him to call upon Dr. Johnson, he ventured to publish numerous poetical effusions, such as *An Ode to Superstition* (1786), *Pleasures of Memory* (1792), by which he is now chiefly remembered, *Columbus* (1812), *Jacqueline*, published in company with Byron's *Lara*, (1814), *Human Life* (1819), and *Italy* in 1822. Though an indifferent poet, Rogers was an enormous success in society. He retired early from business, and devoted himself to poetry, good living, and the serious amusements of the virtuoso. Latterly he ceased from authorship, but to the end of his long life was held in deserved esteem as a genial host and witty companion. His *Table Talk* was published in 1859.

Rolfe, R. M. [CRANWORTH.]

Rolleston, GEORGE, M.D. (b. 1829, d. 1881), man of science, was a native of Maltby, Yorkshire, and was educated at Gainsborough Grammar School, Sheffield Collegiate School, and Pembroke College, Oxford, where he became a fellow in 1851, having obtained a first class in classics in the previous year. Having studied at St. Bartholomew's Hospital, he was appointed in 1855 one of the physicians to the British Civil Hospital at Smyrna, and worked vigorously until the end of the campaign. On his return to England in 1857 he was appointed physician to the Radcliffe

Infirmary at Oxford, and in the same year Lee's reader in anatomy. In 1860 he was appointed to the recently created Linacre professorship of anatomy and physiology, a post which he held until his death. He became an F.R.S. in 1862, and a fellow of Merton College in 1872. Rolleston's energies were chiefly taken up by lecturing, and for clearness and thoroughness it was not easy to find his equal. A collection of his *Scientific Papers and Addresses* was edited after his death by Professor Tylor, and among his more important publications in volume form may be mentioned *Forms of Animal Life* (1870), and a remarkable treatise on craniology in Greenwell's *British Barrows* (1877).

Biographical sketch by Dr. Tylor prefixed to the *Scientific Papers and Addresses*.

* **Romanes, GEORGE JOHN**, F.R.S. (b. May 20th, 1848), man of science, was born at Kingston, Canada, and was educated at Caius College, Cambridge, taking his degree in natural science honours in 1870. He obtained the Burney essay prize in 1873, and in 1879 was elected a fellow of the Royal Society. Mr. Romanes was Rede lecturer before the University of Cambridge in 1885, and was lecturer on the philosophy of natural history at Edinburgh University in 1886; he has also lectured extensively in London and the provinces on scientific subjects. He is a contributor to periodical literature on topics of philosophical interest, and has published various works, chiefly connected with evolution, among which may be mentioned, in the series of *Science Lectures for the People*, *Mental Evolution* (1878); *Animal Intelligence* (1882); and *The Starfish, Jelly-fish, and Sea-Urchins* (1885), in the *International Scientific Series*; *Charles Darwin, his Character and Life* (1882); and *The Scientific Evidence of Organic Evolution* (1882), in the *Nature* series. His *Mental Evolution in Animals*, containing a posthumous essay by Darwin on *Instinct*, appeared in 1883.

Romilly, THE RIGHT HON. JOHN, BARON (b. 1802, d. 1874), was the son of Sir Samuel Romilly, noticed below, and was educated at Westminster and Cambridge. In 1827 he was called to the bar at Gray's Inn, and selected the same department of practice as his father—viz., Chancery. On the passing of the Reform Bill he was elected M.P. for Bridport in the Liberal interest, but at the next general election, in 1835, was defeated by Horace Twiss (q.v.). For the next eleven years he was out of the House. During this interval he rose very quickly in his profession, and obtained a silk gown. In 1848 he became Solicitor-General, and in 1850 succeeded Sir John Jervis in the office of Attorney-General. In 1851, on the death of Lord Langdale, he was appointed Master of the Rolls. After his appointment to this post he continued to sit for some time in the House of Commons, and in 1866 he was raised

to the peerage. In 1873 he retired on a pension. As a legislator Lord Romilly's name is associated with the Leases under Powers Relief Acts of 1849 and 1850, and the Irish Encumbered Estates Act. It was, however, as a judge that Lord Romilly made his name. Many of his decisions are admirable instances of case law, such as the leading case of *Edwards v. Edwards*, in which he laid down rules that have ever since governed the Rolls court; and cases such as *Hoghton v. Hoghton*, in which he clearly defined the limits of equitable doctrines and principles. Lord Romilly also did good service in the discharge of his non-judicial duties as Keeper of the Public Records. His appointments of editors were judicious, and the service he rendered in this department in the way of calendaring the State papers will not soon be forgotten by the historical world.

Poss, Judges of England, vol. ix.; *Solicitor's Journal*, vol. xix., 153.

Romilly, SIR SAMUEL (b. 1757, d. 1818), a celebrated English lawyer, was born in London, the grandson of a French Huguenot who had settled in England on the revocation of the Edict of Nantes. His father, in whose shop he spent some years, was a jeweller, but disliking that work he entered a lower grade of the legal profession, and eventually became a barrister of Gray's Inn in 1783. He immediately set up as equity draftsman, and joined the Midland Circuit, of which in due time he became leader. In 1784 he became acquainted with Mirabeau, who was then in London, having previously made the acquaintance of Dumont at Geneva. Mirabeau introduced him to Lord Lansdowne, in whom he found a patron and friend. A Whig in politics, he was regarded with hope by the Opposition of that day, and his *Fragment on the Constitutional Power and Duties of Juries* justified that hope. Lord Lansdowne directing Romilly's attention to a recent sanguinary tract on criminal punishments, by Madan, induced him to study the question, and the result was the production of an anonymous pamphlet, *Observations on "Thoughts on Executive Justice."* This led him into a thorough investigation of the criminal law, in which his name is honourably associated with that of Bentham. In 1806 he was elected to Parliament, appointed Solicitor-General (1806-7), and was obliged, much against his will, to accept the honour of knighthood. He acquired a reputation by his speeches against the slave trade, and his investigations into the state of the criminal law were already bearing fruit. Nearly three hundred crimes of various grades were punishable by death. In 1809 he procured the repeal of a statute which made stealing from the person punishable by death. In 1810 he published his *Observations on the Criminal Law of England*, and he agitated in vain for the repeal of the statute which

punished with death the crime of stealing from a shop goods valued at five shillings, but he succeeded in introducing ameliorative punishments in minor offences. In his profession he is said to have been more successful and distinguished than any other lawyer of his day. In 1818 he was returned to Parliament for Westminster; a few months later his wife, to whom he was dearly attached, died; and in the following week, in a fit of delirium, he committed suicide at his house in Russell Square.

The Life of Sir Samuel Romilly, written by himself, and edited by his sons (1840); *Edinburgh Review*, February, 1812; J. H. Croker in *Quarterly Review*, September, 1840.

Roon, ALBRECHT THEODOR EMIL, GENERAL FIELD MARSHAL COUNT VON (b. 1833, d. 1879), the reorganiser of the Prussian army, was born at Pleushagen, near Colberg, in Pomerania. His father was an officer in the Prussian army during the French occupation, and died in poverty in 1811. Von Roon was brought up by his maternal grandmother, till in 1816 he entered a corps of cadets at Kulm, and after attending the military school in Berlin, obtained a commission in a Pomeranian regiment in 1821. In 1826 he became one of the instructors in the cadet school in Berlin, devoting himself especially to the study of military geography. The result was that in 1832 he published his celebrated *Principles of Physical, National, and Political Geography* (*Grundzüge der Erd-, Völker- und Staatenkunde*), which may be said to have laid the foundations of a new science. Pursuing the same object, he afterwards wrote his popular *Elements of Geography* (*Anfangsgründe der Erdkunde*, 1834), his *Military Geography of Europe* (*Militärische Länderbeschreibung von Europa*, 1837), and the beginning of a minute account of Spain and Portugal (*Die Iberische Halbinsel*, 1839). Meantime, in 1832, he had been stationed at Crefeld, had witnessed the siege of Antwerp, and had found sufficient opportunities to estimate the disgraceful disorganisation of the Prussian army. In the following year he was appointed to the Topographical Bureau, and became a member of the General Staff in 1835, captain in 1836, and major in 1842. In that year he was present at the manoeuvres on the Rhine, when the inefficiency of the Prussian troops became the laughing-stock of Europe. In 1844 he was appointed tutor to Prince Frederick Charles, and in 1848 became chief of the staff of the 8th Army Corps. During the disturbances of that year he served under Prince William, now Emperor, in suppressing the rising in Baden, and on that occasion laid before him some of his schemes for reform. It was not, however, till 1859 that the new plans of reorganisation could be seriously discussed. The prince was then regent, and Roon was supported by Moltke and Manteuffel. In December Roon succeeded Bonin as Minister

of War. He became lieutenant-general, and two years later the Ministry of Marine was also entrusted to him. The aim and object of his policy was to make the army identical with the people in arms. To attain this end he proposed a universal three years' service, and a reserve (*Landwehr*) for the defence of the country when the line was actively engaged. Though supported by Bismarck's authority, these proposals were met with the bitterest opposition. Even the Danish campaign of 1864 did not wholly convince the majority of the nation, and it was not till the "Six Weeks' War" of 1866 that obstinate hostility was changed to enthusiastic admiration. The system was adopted by the North German Confederation, and produced its natural and inevitable results in the series of triumphs of 1870-71. During the campaign, General von Roon attended the Emperor, but took no part in the direction of the armies. After the triumphal entry into Berlin, he was created count, and soon afterwards resigned the Ministry of Marine. In the same year (1871) he succeeded Bismarck for a few months as President of the Prussian Ministry, but towards the end of the year retired altogether from public life, content with the glory of the great national instrument which he had created.

Times, Feb. 24th, 1879.

* **Roscher**, **WILHELM** (b. 1817), German economist, was born in Hanover, and graduated at Göttingen and at Berlin. In 1844 he became professor of political economy at Göttingen, and in 1848 passed to the University of Leipzig. He, along with Hildebrand (*d.* 1878) and Knies, is the originator of the historical school in political economy. Its fundamental principle is stated, though with some hesitation, in his *Grundriss zu Vorlesungen über die Staatswirthschaft nach geschichtlicher Methode* (1843). His greatest work is a course of political economy, which is one of the most remarkable economic treatises of our time. His *System der Volkswirthschaft* (vol. i., *Grundlagen der National-ökonomie*, 1854, 15th ed. 1880; vol. ii., *N. O. des Ackerbaues*, 1860, 10th ed. 1882; vol. iii., *N. O. des Handels und Gewerbfleisses*, 3rd ed. 1882) is devoted to the exposition of general theories, and their application to territorial industries. Fundamentally a follower of the doctrines of Adam Smith, Hermann, and Mill, he has gathered together valuable materials from classical literature, from books of travel, and from historical, geographical, and statistical works, to illustrate the various phases of economic civilisation in nations, and to show that legislation ought to take these varieties of culture into account. His *Geschichte der National-ökonomik in Deutschland* (1874), to which he is said to have devoted fifteen years of study, is among the most valuable works of its kind.

* **Roscoe**, **PROFESSOR SIR HENRY ENFIELD**, M.P., F.R.S., LL.D. (b. 1833), man of science, is a grandson of the historian, and a son of his biographer **HENRY ROSCOE** (b. 1799, *d.* 1836). He was educated at University College, London (B.A. London, 1852), at Heidelberg, and when quite a young man was appointed professor of chemistry at Owens College, Manchester (Victoria University), which has since been the centre of his activity. He was examiner in chemistry at London University from 1874 to 1878, and has been a member of several royal commissions. He has also been president of the Chemical Society (1880) and of the Society of Chemical Industry (1881). Sir Henry Roscoe became an F.R.S. in 1863, and in 1873 received the Society's gold medal for his researches, chiefly connected with the chemical action of light. He was knighted in 1884, and in 1885 was first returned in the Liberal interest for the south division of Manchester. Many of Sir H. Roscoe's discoveries are to be found in the *Transactions* of the Royal Society, but to the wider scientific world he is known as the joint-author with Professor Bunsen of Heidelberg of *Gasometry*, comprising the leading and physical properties of gases (1857), and as editor of Kirchhoff's *Researches on the Solar Spectrum* (1862). Many of his lectures have been republished; those on *Spectrum Analysis* (1869) have been through three editions, and he has contributed to the series of *Half-hour Recreations in Popular Science: Spectrum Analyses Explained* (1874) and *What the Earth is Composed of* (1879). His *Lessons in Elementary Chemistry* (1st ed. 1866) is a textbook of almost universal acceptance, and in conjunction with Professor W. J. Russell he has published an admirable *Outline of Experiments Suitable for Illustrating Elementary Instruction in Chemistry* (1882). He has also, in conjunction with Prof. Schorlemmer, published an elaborate *Treatise on Chemistry* (1879-82).

Roscoe, **WILLIAM** (b. 1753, *d.* 1831), historical biographer, was the son of a Liverpool market gardener, was articled to an attorney at the age of fifteen, and in 1774 was admitted an attorney of the Court of King's Bench. Meanwhile he had educated himself, and in 1777 published a collection of poems. He was also an opponent of the war against the French Republic, and published some *Strictures* upon Burke's manifestoes. In 1799 appeared the *Life of Lorenzo de Medici, called the Magnificent*, and it was immediately received with great favour. Its literary merits are indeed very considerable; but it is, as Sismondi did not fail to point out, an ingenious apology for despotism rather than a trustworthy account of Lorenzo's career. The same fault, in a no less marked degree, occurs in Roscoe's *History of the Life and Pontificate of Leo X.*, in which the utter deadness of religion at Rome under that great pope is hardly touched upon at all. In

1806 he was returned for Liverpool in the Whig interest, but did not offer himself for re-election in 1807. His later years were clouded by pecuniary losses, but he retained his keen interest in things around him, and aided in founding the Royal Institution at Liverpool.

H. Roscoe, *Life of W. Roscoe* (1836).

Rose, GEORGE (b. 1817, d. 1882), humorist, who generally wrote under the assumed name of "Arthur Sketchley," was a nephew of Sir John Rose, formerly Master in Chancery. He began life as a clerk in the Custom House, but subsequently took his B.A. degree from Magdalen Hall, Oxford, and was ordained. He was successively curate at Camberwell and Hoxton, and assistant reader at the Temple Church. About 1845, however, he seceded from the English Church, and became tutor to the Duke of Norfolk. Arthur Sketchley is widely familiar as the author of numerous skits on the topics of the day collectively known as the *Brown Papers*, most of which originally appeared in *Fun*. Among them were *Mrs. Brown at the Sea-side* (1868), *Mrs. Brown on the Tichborne Defence* (1873), *Mrs. Brown at Margate* (1874), *Mrs. Brown on Spelling Bees* (1876). Among his other works are *The Great Country*; or, *Impressions of America* (1868), and some novels and plays.

Rose, SIR H. [STRATHNAIRN.]

* **Rosebery, THE RIGHT HON. ARCHIBALD PHILIP PRIMROSE**, 5th Earl (b. 1847), was educated at Eton, and Christ Church, Oxford. At first he devoted himself chiefly to the turf, but about the year 1876 made his mark in the House of Lords by some clever speeches on foreign affairs, and gave some admirable literary addresses. In 1878 he married Hannah, the daughter and heiress of the late Baron Meyer de Rothschild. Lord Rosebery supported Mr. Gladstone with zeal in the Midlothian campaigns of 1879 and 1880, and held the office of Under-Secretary for Home Affairs from 1881 to 1883, and from February to June, 1885, was a member of the Cabinet as Lord Privy Seal and First Commissioner of Works. In the session of 1884 he moved a resolution in favour of the reform of the House of Lords in a clever speech. On the return of the Liberals to office in 1886 Lord Rosebery became Secretary for Foreign Affairs, and to his clever statesmanship is due much of the credit of the successful coercion of Greece by the Powers which averted a Græco-Turkish war; and the establishment of amicable relations between the Porte and Prince Alexander of Bulgaria. He has been Lord Rector of Aberdeen University (1878-81), and of Edinburgh University (1881-83).

* **Rosecrans, WILLIAM STARK** (b. 1819), American general, was born at Kingston, Ohio, and educated at West Point, where he graduated in 1842. He was employed as an

engineer until 1854, when he resigned his commission. On the outbreak of the Civil War, however, he was appointed Brigadier-General, and commanded the Union forces in West Virginia. In June, 1862, he commanded the army of the Mississippi, and gained an important victory at Corinth (Oct. 4th). In Jan., 1863, he defeated Bragg at Stone River; and going in pursuit of him into Georgia on Sept. 9th, occupied Chattanooga, but on the 19th and 20th was defeated by Bragg at Chickamauga, and compelled to retire. He was then relieved from his command. General Rosecrans subsequently held some military and diplomatic appointments, and was American minister at Mexico in 1868.

Ross, SIR JAMES CLARK (b. 1800, d. 1862), admiral and Arctic voyager, was the nephew of Sir John Ross noticed below, and was born in the county of Wigtown, N.B. In 1812 he entered the navy, and in 1858 became Rear-Admiral of the White. He served in all the naval expeditions for the discovery of the North-West Passage from 1818 to 1833, and in 1831, during his uncle's second expedition, discovered, and planted the British flag on, the North Magnetic Pole. During the years 1835-8 he was chiefly employed on the magnetic survey of Great Britain, but in 1836 he crossed the Atlantic to relieve the frozen whalers in Baffin's Bay. He commanded the expedition of the *Erebus* and *Terror* to the Antarctic regions from 1839 to 1843, when he attained the latitude of 78 deg. 10 sec., and approached within 160 miles of the South Magnetic Pole. His *Narrative of a Voyage in the Antarctic Regions* appeared in 1847, and in 1848 he made a voyage in the *Enterprise* in search of Franklin.

Ross, SIR JOHN (b. 1777, d. 1856), Arctic voyager, entered the Royal Navy in 1786, and served with distinction in the war with France. His most important services were rendered in the Arctic regions, whither in 1818 he proceeded, attended by Lieutenant Parry (q.v.), for the purpose of exploring Baffin's Bay, and inquiring into the probability of a north-west passage. Unfortunately he mistook some clouds for mountains, and returned home. The result of his investigations were detailed by Captain Ross in his *Voyage of Discovery* published in 1819. He was afterwards, from 1829 till 1833, employed in the *Victory* steamer, on a fresh expedition to the Arctic regions, equipped at the expense of Sir Felix Booth, which attempted, but in vain, to penetrate through Prince Regent's Inlet to Barrow's Straits. In 1834 he was knighted, and in 1850 made, at his own expense, a futile effort to find Sir J. Franklin. Sir John Ross was the author of *Life of Admiral Lord de Saumarez*, a treatise on *Navigation by Steam*, and other works of naval interest. He was for many years consul at Stockholm.

Rosse, WILLIAM PARSONS, 3RD EARL OF. K.P., F.R.S. (b. 1800, d. 1867), a distinguished practical astronomer, and constructor of reflecting telescopes, was born at York, and educated first at Trinity College, Dublin, and subsequently at Magdalen College, Oxford, where he graduated first class in mathematics. From 1821-34 he sat as M.P. for King's County under the title of Lord Oxmanstown, and in 1845, four years after his accession to the title of Earl of Rosse, he was elected an Irish representative peer. As far back as 1826 he had begun those experiments in the construction of fluid lenses which are described in the *Philosophical Transactions* for 1840; but relinquished them in order to investigate the problem of how best to construct the speculum of the reflecting telescope, in order to correct spherical aberration, and the absorption of light by specula. For long he was baffled by the apparent impossibility of preventing those of large size from cracking and warping on the surface during cooling. In the end, however, he succeeded in obviating the latter defect and in greatly diminishing the two former. The result was the commencement of his great reflecting telescope in 1845; though its predecessor, one of three feet aperture, which was mounted in 1839 at Birr Castle, Parsonstown, may be regarded as the "first draft" of this celebrated instrument. The Irish famine, which demanded the attention of Lord Rosse as the largest landowner and the Lord Lieutenant of King's County, supervening almost immediately after this telescope was finished, compelled the owner to leave it unutilised for nearly three years. But in 1848, more leisurely times having dawned, he instituted a comprehensive system of observation with an instrument the powers of which had until then been never approached, and the mere cost of which—£30,000—few amateurs could compass. Three tons of metal were used in its construction, and the entire weight of the telescope was four times that amount. The study of nebulae was what it was principally employed for. By means of its fine powers of definition these flocculent bodies were resolved into endless groups of stars, while the discovery of many binary and ternary stars, and a clearer description of the moon's surface, may be ranked among the other contributions which Lord Rosse, and his assistants, were able to make by means of this great reflector. These researches are described in the *Philosophical Transactions* for 1840, 1844, 1850, 1861 and 1868, and in vol. ii. of the *Scientific Transactions of the Royal Dublin Society*. From 1848 to 1854 Lord Rosse presided over the Royal Society of London, and from 1862 to the period of his death, in 1867, he acted as Chancellor of the University of Dublin. Telescopes of greater magnitude have been built since that date, but in many respects the Rosse telescope has never been surpassed;

nor has the world been presented with a nobler array of discoveries by any of its rivals and successors. [R. B.]

* **Rossetti**, CHRISTINA GEORGINA (b. 1830), poetess, the youngest member of a family of rare distinction, first saw the light Dec. 6th, 1830. Her father was Gabriele Rossetti, an Italian patriotic poet of repute, who was born in Vasto, in the Abruzzi (then kingdom of Naples), in 1783, and died in London in 1854. After the constitutional struggle with King Ferdinand in 1821, Rossetti escaped and settled in London as a refugee, publishing occasionally, and occupying a chair of Italian literature. He married Frances Mary Lavinia Polidori (d. 1886), sister of Byron's travelling physician, and had four children, the subjects of the present and three following articles. Christina Rossetti gave very early proof of inherited talent intensified to genius. While still quite a child she wrote verses, remarkable not only for sweetness and purity of feeling, but also for genuine singing impulse and a keen sense of fitness in the means of expression. Many of these are preserved in a small volume (*Verses by Christina G. Rossetti, dedicated to her Mother*) printed privately by her grandfather, G. Polidori, in 1847, when the authoress was still but sixteen years old. In 1850, when her brothers were identifying themselves with the Pre-Raphaelite movement, she contributed, under the pseudonym of Ellen Alleyn, to *The Germ*, the short-lived organ of that movement, and many of her compositions have made their first appearance in other magazines; but it was not till 1862 that Miss Rossetti came before the public with a book. In that year appeared her *Goblin Market, and other Poems*, by which she at once established a reputation as a poetess of the first rank in our literature. In 1866 followed *The Prince's Progress, and other Poems*; and in 1870 appeared a prose volume entitled *Commonplace, and other Short Stories*, which, if relatively less remarkable than the volumes of verse, was still worthy of its author for dignity and purity of thought and style. Two books for children, illustrated by Mr. Arthur Hughes, were the next appeals to the public, *Sing-Song, a Nursery Rhyme Book* (1872) and *Speaking Likenesses (quasi-allegorical prose, 1874)*. The volumes of 1862 and 1866 had contained important groups of strictly devotional poetry of the highest class; and in 1874 Miss Rossetti issued a book of devotion pure and simple, *Annus Domini: a Prayer for each Day of the Year, founded on a Text of Holy Scripture*. In 1875 came out a collected edition of the poems, embodying a considerable number of new compositions, and in 1881 appeared *A Pageant, and other Poems*. Three religious works in prose belong to this later period, *Seek and Find*, a double series of *Short Studies of the Benedicite* (1879), *Called to*

the Saints: the Minor Festivals Devotionally Studied (1881), and *Letter and Spirit: Notes on the Commandments* (1883); and in 1885 Miss Rossetti published a book similar in kind, but of alternate verse and prose, called *Time Flies: a Reading Diary*. In each and all of these works a critic must perforce recognise the hand of a finished artist, and one desirous and competent to teach, suggest, and stimulate; but it is not rash to say that Miss Rossetti's permanent reputation must rest on her poems, which take high rank in the literature of the day, many of them being unsurpassed as lyrics representing a certain definite sphere of emotion. [H. B. F.]

Rossetti, GABRIEL CHARLES DANTE (b. 1828, d. 1882), poet and painter, brother of the foregoing, and usually known as Dante Gabriel Rossetti, was the second child of Gabriele and Frances Rossetti, and was born in London on the 12th of May, 1828. When only five years old he distinguished himself from the childish crowd by actually writing down an attempt at dramatic composition. This was entitled *The Slave*, and of course the fact that it was produced at so early an age was the one thing memorable about it. He cannot have been more than seven years of age when he was sent to the private school of the Rev. Mr. Paul, in Foley Street, London, for already in 1835 his education appears to have been transferred to King's College School. Here he remained until 1843, having in the meantime written some verse, and shown a strong bent towards painting. A literary composition of his thirteenth or fourteenth year owes its preservation to the same cause as that which gave us his sister's early poems; *Sir Hugh the Heron: a Legendary Tale, in Four Parts*, was privately printed by his grandfather in 1843. From the time of attaining his fourteenth year he was instructed in art at Cary's Art Academy (Bloomsbury) until 1846, when he entered the Antique School of the Royal Academy. The notable poems *My Sister's Sleep* and *The Blessed Damsel* were composed before he was nineteen years old, though not published till 1850. After quitting the schools of the Royal Academy he became the pupil of Mr. Ford Madox Brown; but it was not till he left that artist's studio and took one jointly with Mr. Holman Hunt that he commenced his early picture, *The Girlhood of the Virgin*, exhibited in 1849 at the Portland Gallery. He visited Antwerp, Bruges, and Ghent in this early period of his career, and was greatly influenced by what he then saw of the work of Memling and Van Eyck; and about the same time he wrote *Hand and Soul*, the most considerable piece in prose which he has left us. Shortly afterwards, the celebrated Pre-Raphaelite Brotherhood, of which he was the leading spirit, was founded; and in 1850 Rossetti co-operated with his

brother and sister and a small band of earnest young men in the issue of that extraordinary publication *The Germ*, the first organ of Pre-Raphaelitism. From that time until 1870 he worked on, practically unknown to the public either as artist or as poet, though familiar to a few as a genius in the foremost rank among contemporaries. The work of his pencil, eagerly acquired by private clients, came but rarely where the general public could see it, and while deeply influencing the tone and tendency of English art, he seems to have been content to remain, so to speak, a living tradition, except to his clients and intimates. In 1856 he contributed a few poems to *The Germ's* successor, the more lasting but yet short-lived *Oxford and Cambridge Magazine*; and in 1861 he published one of the most remarkable collections of poetic translations ever given to the world, *The Early Italian Poets, from Giulio d'Alcamo to Dante Alighieri*, a volume which includes a version of the *Vita Nuova*. At that time he had by him a considerable collection of original poetry, on which he had bestowed that earnest thought and ceaseless revision characteristic of all his work; and of this poetry he now designed to offer the reading public a selection. In 1860 he had married Elizabeth Eleanor Siddall, who died in February, 1862, suddenly, and in somewhat tragic circumstances. The greater part of the poems intended for the public, but then still in manuscript, he impulsively brought together and laid as a last offering in his wife's coffin, in which they were accordingly buried. In time, however, he let himself be persuaded to recall this seemingly irrevocable sacrifice; and eventually the precious manuscripts were exhumed and revised for publication. In 1870 appeared the volume entitled *Poems*, which contains *Dante at Verona*, *Sister Helen*, *The Burdens of Nineveh*, *Jenny*, *A Last Confession*, and many of the wonderful sonnets of *The House of Life*, a volume which at once met with an acceptance as wide and warm as it was unprecedented in its suddenness. Of this volume he made more than one revision; in 1874 he republished his translations, "revised and re-arranged" under the new title of *Dante and his Circle*; and in 1881 he issued a second collection of original poetry, entitled *Ballads and Sonnets*, at the same time re-editing the *Poems*, and redistributing the contents of the two volumes. The second volume contained *The King's Tragedy*, perhaps the finest ballad of modern times, *The White Ship* and *Rose Mary*, besides the completed *House of Life* and other minor works. Shortly after the issue of this definitive edition of his poems, Rossetti's health, which had once before completely broken down, gave way; and after a few months all hope of its restoration was at an end. He died on Easter Sunday, 1882, at Westgate-on-Sea, and was buried in the neighbouring churchyard at Birchington. Had he lived longer the

might have elected to appeal to the public judgment as the poet had tardily done. As it was, the second appeal came only after his death, and it was made in London, where two exhibitions of his works were organised, one by the Royal Academy and one by the Burlington Fine Arts Club: a third opportunity to judge his artistic work in the mass occurred when the drawings, studies, etc., remaining in his studio at his death, were sold at Christie's. The verdict of his contemporaries was sufficiently generous and appreciative to confirm the almost superstitious regard in which his name had been held while his works remained practically unknown. It was generally admitted that in earnestness and intensity of feeling, depth of thought, originality of design, and splendour of colour, his paintings stood in the first rank, and opened, equally with his poetry, a new order of ideas. The National Gallery acquired (1886) his oil painting of 1850, *Ecce Ancilla Domini*; and the remains of a work in fresco of six years later, *Lancelot at the Shrine of the Sancte Graal*, may be seen at the Oxford Union Reading Room. At the Taylorian Museum, Oxford, is a water-colour drawing, *The Passover* (1858), and at Llandaff Cathedral may be seen the important triptych in oil (1861). Of the same date are the two glass-paintings of *Adam and Eve before the Fall*, and the altar panels of the *Annunciation* at St. Martin's, Scarborough. A memorial window (1866) may be seen at Christ Church, Albany Street; and his largest picture, *Dante's Dream*, is at the Walker Art Gallery in Liverpool. A few book illustrations and book covers, and a few photographic reproductions, are also before the public, but by far the greater number of his works, of which nearly 400 (including drawings and sketches) have been catalogued, remain in private hands. Whether as a poet or as a painter, Rossetti was thoroughly in earnest about the employment of his gifts—gifts of a magnitude not to be found more than two or three times in a century. He dealt only with subjects of a high interest, and he brought to their treatment, whether with pen or pencil, an insight, an intensity of conviction and imagination, such as one associates with his paternal stock, while the thoroughness of the English race is everywhere visible. An entire absence of intellectual commonplace, and a pervading sense of the beautiful and the essentially true, characterise his mature work, although it must be admitted that his technical limitations as a draughtsman, and his persistent disregard of the value of out-of-door life, have left on much of his work a certain superficial deficiency in naturalness.

William Sharp, *Dante Gabriel Rossetti: a Record and a Study* (1882). [H. B. F.]

Rossetti, MARIA FRANCESCA (b. 1827, d. 1876), sister of the above, was the eldest child of Gabriele and Frances Rossetti, and

while sharing in the literary endowments of her family, she showed a stronger bent for education, for which, in its highest sense, she had a remarkable gift, and with which a great part of her life was occupied. Her earliest contributions to literature were a translation of an Italian ode on the death of Lady Gwendalina Talbot, *A Dream not all a Dream*, and a book called the *Rivulets*. Later she published two small Italian manuals (*Exercises in Idiomatic Italian* and *Aneddoti Italiani*), and a book entitled *Letters to my Bible Class on Thirty-nine Sundays* (1872). The one work by which she is generally known is critical, *A Shadow of Dante: being an Essay towards Studying Himself, his World, and his Pilgrimage* (1871). In 1873 she entered the Anglican Sisterhood of All Saints; and it was at the home of the order that her last hours were passed. [H. B. F.]

* **Rossetti, WILLIAM MICHAEL** (b. 1829), critic and man of letters, brother of the above, was educated at Mr. Paul's private school and King's College School, London, and in 1845 entered the Excise Office (now Inland Revenue). Three years later the young civil servant began to take an important part in the Pre-Raphaelite movement at its inception; and in 1850 he contributed largely to *The Germ* (see above), of which he was editor during the four months of its existence. From that time forward his leisure has been largely occupied with literature. He has acted as a critic, chiefly of fine art, for the *Critic*, *Spectator*, *Reader*, *Saturday Review*, *London Review*, *Chronicle* (weekly), *Academy*, *Fraser's Magazine*, *Fine Arts Quarterly Review*, and *Weldon's Register*, and has edited works for the Early English Text and Chaucer Societies. His substantive publications are: a literal blank-verse translation of Dante's *Hell* (1865); *Swinnburne's Poems and Ballads, a Criticism* (1866); *Fine Art, chiefly Contemporary* (1867); *Notes on the Royal Academy Exhibition* (1868), in conjunction with Mr. Swinnburne; a selection from the Poems of Walt Whitman (1868), an edition of Shelley's Poetical Works (1870), with an important memoir and extensive notes; the series of volumes known as *Moxon's Popular Poets* (1870-5); the Aldine edition of Blake's Poems, with memoir (1874); a further edition of Shelley, very much altered and revised (1878); *Lives of Famous Poets* (1878). In 1869 Mr. Rossetti became assistant-secretary in the Inland Revenue Office; and in 1874 he married Lucy Madox Brown, daughter of the renowned painter, and herself an artist who has exhibited at the Royal Academy. Beside poems and sonnets in *The Germ*, Mr. Rossetti has published a blank-verse poem of modern life, which appeared in *The Broadway Magazine* under the title of *Mrs. Holmes Grey*; and he is said to have written sonnets on political subjects, entitled *Democratic Sonnets*. His

special bent is criticism, to which he brings an unusual combination of gifts—enthusiasm, an eminently judicial tone of mind, absolute frankness, and imperturbable good-temper.

[H. B. F.]

Rossi, PELLEGRINO (b. 1787, d. 1848), Italian statesman, was a native of Carrara, and in 1812 became professor of law at Bologna University, but was exiled for espousing the cause of Murat. He became professor of law at Geneva, and published his learned *Droit Pénal*. In 1832 he was appointed professor of political economy at the Collège de France, Paris, and became a French subject. He was sent to Rome as French ambassador in 1845, but after the fall of Louis Philippe became an Italian once more. He was called to the first ministry of Pius IX., and schemed for an Italian confederacy under the presidency of the Pope. His hostility to the House of Savoy was the cause of his assassination by an unknown hand in the streets of Rome on Nov. 15th, 1848.

Rossini, GIOACHINO ANTONIO (b. 1792, d. 1868), was the son of Giuseppe Rossini, town trumpeter and horn-player, who had married a singer of some pretensions. Gioachino, at ten years, made his *début* as the child in Paer's *Camilla*. He subsequently became a pupil of Tesei for pianoforte and singing, while Padre Mattei taught him the theory of music (1807–8), the young student supporting himself this while and subsequently by singing in the churches and in composing or conducting for theatrical companies (1810–14). At sixteen he had been chosen to compose the cantata annually expected of the best pupil at the Bologna Lyceum, a work followed by many others, *La Cimbale di Matrimonio* being his first opera (1810), until (1813) he made his name famous by the production of *Tancredi*. Operas now followed with amazing rapidity, *L'Italiana in Algeri* (1813), a first essay in the style which reached perfection in *Cenerentola* (1817) and *Il Barbiere di Siviglia* (1816); *Aureliano* (1813), in which Velluti so embroidered the music that Rossini declared he would in future write his own ornaments; *Elisabetta, Regina d'Inghilterra* (1815); *Otello* (1816), full of Rossini's orchestral reforms in *opera seria*; *La Gazza Ladra* (1817), which was written for La Scala theatre; *Armida*, and the oratorio, afterwards converted into an opera, *Mosè in Egitto* (1818), best known to English people by its excerpt *Dal tuo Stellato Soglio* (To Thee, Great Lord); *La Donna del Lago* (1819), *Zelmira* (1821), *Semiramide* (1823), and *Guglielmo Tell* (1829), the last of Rossini's great operas. Besides his operatic works he wrote a little Church music, chief among which stands the *Stabat Mater* (1842) and the *Messe Solennelle* (1864). Numerous instrumental pieces also came from his prolific pen. In Rossini the

great school of Italian opera composers reaches its culminating point. He stands the most successful, the most popular (because the most melodious) composer Italy has produced, and though there have been others (Verdi to wit) whose melodies have gone the rounds of musical Europe, it has fallen to none other to influence the country's music as did Rossini. Two conditions favoured this; his extraordinary success, and the fact that Italian opera as he found it offered ample scope for the exuberant richness of a melodic and orchestral genius. What he knew of the lyric works of Gluck, Mozart, Spontini, and others, is uncertain, but it is clear that more surface charm and less of the under-depth or learning were the lines which Rossini struck out. He worked in every known orchestral instrument, and reduplicated and intensified the power of many of them, until composers, critics—all burst into indignation and rage at his "crimes." Besides other operatic reforms, such as the bringing of the bass voice to the front, the banishing of the pianoforte from the orchestra, the attempt to make the dreary recitative which made up so much of opera interesting, the importance given to the chorus, Rossini's instrumentation almost revolutionised his art. His weakest point was, perhaps, his love of quick times and over-ornamentation. Socially he was a great favourite, and his home in Paris, where he lived almost continuously from 1824, was the centre of all that was distinguished in art or literature.

H. Sutherland Edwards, *The Life of Rossini*.
[F. J. C.]

Rothschild, MEYER ANSELM (b. 1743, d. 1812), a native of Frankfurt, was brought up to be a priest of the Hebrew faith. Being a man of steady character, he was able to raise a loan for the defence of Frankfurt. After the battle of Jena, the Elector of Hesse-Cassel sent for Rothschild and offered him the free use of his treasure, which, amounting to about a million sterling, was then in danger at the hands of Napoleon; the use of so much money for nothing was a considerable gift, and may be looked upon as the foundation-stone of the great financial enterprise that has made the name of Rothschild world-renowned. Meyer Anselm Rothschild had five sons, of whom NATHAN (b. 1777, d. 1836) came to England in 1800, and acted as agent for his father. He was the agent appointed to pay the £12,000,000 due under the Treaty of Töplitz by Great Britain to her German allies. Meanwhile his brothers had been growing strong in finance as well, and all united in the wealthiest co-partnership that had yet been seen. Nathan by knowing the result of the battle of Waterloo before the English Government, is said to have made £200,000. He was made Baron of the Empire by the Emperor of Austria in 1822. His eldest son, LIONEL DE ROTHSCHILD (b. 1808, d. 1879), was educated

at Göttingen, and at an early age entered the business of his father. In 1847 he was returned to the House of Commons by the City of London in the Whig interest, but being of the Hebrew persuasion was unable to take the oath on account of the words in it, "On the true faith of a Christian;" and it was not until 1858 that he was able to take the oath and his seat through the passing of the Jewish Disabilities Bill. In 1876 he advanced to the English Government four millions sterling for the purchase of the Suez Canal shares from the Khedive, and a few years later he bought the whole of the quick-silver mines in South America.

Tresekow, *Biographische Notizen über Nathan Meyer Rothschild*; *Notice sur la Maison de Rothschild* (Paris, 1881).

Rouher, Eugène (b. 1814, d. 1884), French politician, was a native of Auvergne, and after taking his law degree at Paris in 1835, began to practise his profession at Riom. In 1848 he was returned to the Constituent Assembly in the Conservative interest by Le Puy-de-Dôme, and to everyone's astonishment, became President Louis Napoleon's Prime Minister in October, 1849. On October 26th, 1851, however, in view of the contemplated *coup d'état*, the Cabinet was reconstructed under Marshal St. Arnaud, Rouher remaining out of office, though probably cognisant of the conspiracy. In 1852, after the proclamation of the Second Empire, he became Vice-President of the Council of State, and having been appointed Minister of Agriculture, Commerce, and Public Works in 1856, negotiated the Cobden Treaty of 1860. By this time he had become an indispensable tool to Napoleon III., and in 1863 he was appointed Minister of State, i.e., spokesman of the Government in the Corps Législatif, and doggedly defended the Imperial interests against the growing forces of the Opposition. The return to constitutionalism in 1870 received his entire sanction, and, though he was ostensibly President of the Senate, he was the real director of the Ollivier Cabinet, and much of the responsibility of the Franco-German War must be laid to his door. On the fall of the Empire he fled to England, but in 1871 found a seat in the General Assembly for a Corsican constituency, and defended the lost cause with a sturdy fidelity that extorts admiration, until the death of the ex-Prince Imperial in 1879. That event utterly disheartened him; and though he made some slight attempt to champion the candidature of Prince Napoleon, whom he had defeated at the polls in 1876, he ceased to struggle with his former tenacity against the current of events.

Roumania, THE PRINCES AND KING OF, have ruled over what were originally known as the Danubian Principalities of Wallachia and Moldavia. Subject to Turkey until 1861,

with the exception of a period of Russian occupation from 1806 to 1812, the principalities were administered through Greek phanariates, or governors, until after the Greek rising of 1821, when, in consequence of the Greek governors making common cause with their insurgent fellow-countrymen, they were removed, and the native hospodars restored—the Ghikas to Wallachia, the Stoudzas to Moldavia. Continued efforts were made at independence, of which that of 1848 was very determined, and in 1853 the Czar Nicholas, having picked a quarrel with the Porte concerning the "holy places," occupied the principalities. The Crimean War was the result of this forward movement, and at its close the principalities were reorganised on a basis of autonomy under the suzerainty of the Porte. But the principalities, seeing that unity was strength, cleverly chose the same ruler, JOHN COUZA (b. 1820, d. 1873), who ascended the united throne under the title of PRINCE ALEXANDER JOHN I. OF ROUMANIA. He belonged to an old family of boyards, or territorial nobles, and was at first extremely popular, chiefly on account of the virtues of his wife, the Princess Helena, but he soon endeavoured to become absolute, and in 1864 effected a *coup d'état*, relying on the support of the peasantry against the aristocrats. In order to secure their fidelity a sweeping agrarian law was passed by which the peasants were enabled to hold land. His success, however, was extremely brief; for the statesmen of the country, disgusted by his rapacity and immorality, rose in 1866, and forced him, after a very feeble resistance, to abdicate. He was allowed to withdraw from Roumania with a considerable quantity of wealth, and died at Heidelberg.

The Provisional Government chose as the second Prince of Roumania the Count of Flanders, a younger brother of the King of the Belgians, but he declined the honour. They then offered the crown to Prince Charles of Hohenzollern, who accepted the precarious position.

* CHARLES I. (KARL EITEL FRIEDRICH, etc.), the second son of Prince Charles Anton of Hohenzollern-Sigmaringen, was born in 1839. He entered the 2nd Regiment of Prussian dragoons as a sub-lieutenant, and had not attained promotion when he received the offer of the Roumanian Chambers. His entry into Bucharest was made on May 22nd, 1866; he was at first careful to protest his respect for the treaties between the Porte and the Principalities, and was personally invested by the Sultan Abd-el-Aziz at Constantinople. In November, 1869, he married the Princess Elizabeth of Wied, the only daughter of Prince Wilhelm of Wied, a lady of distinguished talents, who has written some admirable poetry under the *nom de plume* of Carmen Sylva (*Homerstein*, 1880; *Sappho*, 1880; *Rumänischer Dichtungen*, 1881; *Jehovah*, 1882;

Die Here, 1882; *Handzeichnungen*, 1884; *Meine Ruh'*, 1884, etc.), but there is no living issue by the marriage. At first the task of Prince Charles was by no means easy; it was impossible to form a stable government; the somewhat wrathful intervention of the Powers was necessitated by the persecution of the Jews. But despite the suspicion with which Prince Charles was regarded by the leading politicians, he contrived to win the affections of the people, to introduce throughout the country a system of primary education, and to thoroughly reorganise the Roumanian army. The Russo-Turkish War of 1877 afforded an opportunity for testing the new military arrangements. Prince Charles having to choose between the Russians and the Turks, advisedly sided with the stronger. A convention was signed in April by which the troops of the Tsar were granted a free passage through Roumania; the army was mobilised, the reserves called out, and the summons of the Porte for military assistance was rejected. In May the Senate voted a declaration of independence, and Prince Charles, placing himself at the head of his army, went to the assistance of the Russians, when Osman Pasha had inflicted a reverse upon them from Plevna. The troops greatly distinguished themselves during the siege, but the good understanding between Russia and Roumania was seriously impaired through the evident intention of Russia to appropriate Bessarabia. By the Treaty of San Stefano (March, 1878), and at the Congress of Berlin, where the cause of Roumania was ably pleaded by M. Bratiano (b. 1822), President of the Roumanian Council, the principality was declared independent; the people were, however, bitterly aggrieved at having to exchange with Russia the fertile district of Bessarabia for the Dobrudscha, which, however, proved more valuable than was anticipated. In May, 1881, a further step in advance was made, when the Roumanians, with the concurrence of the Powers, invested their prince and princess with the dignity of royalty. The question of the navigation of the Danube proved a point of contention in the following years between Austria and Roumania; and considerable diplomatic tension ensued, which was obviated by the visit of King Charles to Vienna 1883. King Charles adopted an attitude of strict neutrality during the movement of 1885, which resulted in the unity of the Bulgarians under Prince Alexander. [BULGARIA.]

E. Regnault, *Histoire Politique et Sociale des Principautés Danubiennes* (1857); E. Braun, *Rumänien* (1877); J. Samuelson, *Roumania, Past and Present*; *Quarterly Review*, 1878, vol. 148.

ROUSSEAU, THÉODORE (b. 1810, d. 1869), French landscape painter, was born at Barbizon, and was instructed in art by the ultra-classical Guillon Lethière, but cannot be said

to have followed him in any way. He first exhibited at the Salon of 1823, and was at once hailed as the leader of the new movement, that of painting landscape after nature. He increased his reputation by his pictures exhibited between 1832 and 1835, but his originality offended the jury, and his *Allée des Châtaigniers* of 1837 was rejected. It was not until 1847 that he reappeared at the Salon with two sunsets, one of which, *Sortie de la Forêt de Fontainebleau*, is at present at the Louvre. In 1849, and again in 1855, he gained the first medal, and the medal of honour at the Universal Exhibition of 1867. Théodore Rousseau had long outlived artistic persecution, and was reaping the rewards of his fine defiance of tradition. Among his later pictures may be mentioned the *Bornage de Barbizon*, *Bords de la Sèvre*, *Ferme de Landes*, *Métairie des Bords de l'Oise*, and especially the *Chaumières sous les Arbres* of 1864, and the *Bords de la Douzanne* of 1867. No man tried more earnestly to improve, and his place among the French painters of the nineteenth century is a high one.

Rowlandson, THOMAS (b. 1756, d. 1827), the caricaturist, was a native of London, and studied at the Royal Academy schools, and at Paris. His first contributions to art were of a serious character, and in 1777 he settled in Wardour Street as a portrait painter. He began to occupy himself with caricature about 1782, and soon attained an excellence second only to that of his contemporary, Gillray. He was of a desultory disposition, and had it not been for the constant commissions from the publisher, Ackermann, would frequently have been in indigence. He is chiefly remembered for his admirable illustrations to Combe's *Doctor Syntax's Three Tours* (1813). Hardly less admirable are his plates in Sterne's *Sentimental Journey* (edition of 1809), and Goldsmith's *Vicar of Wakefield* (edition of 1823). His political caricatures hardly compare advantageously with those of Gillray.

J. Grego, *Rowlandson the Caricaturist; a Selection from his Works*.

* **Rubinstein, ANTON GREGOR** (b. 1829), the greatest pianist in the world, and one of the most eminent composers, was born near Jassy, of Russo-Jewish parents. His mother entrusted him to the care of Villoing at Moscow. In 1839 master and pupil visited Paris, where Rubinstein studied under Liszt. The return journey was extended through England (1842), Holland, Scandinavia, and Germany, and in 1845 Rubinstein settled in Berlin to study composition under Dehm. On his father's death he taught from 1846-8 at Pressburg and Vienna, returned in the latter year to Russia, where the Grand Duchess Helen nominated him her *kammer-virtuoso*. For the next eight years he occupied himself with composition, then undertook a new tour

through Germany, England, and France, winning fame both as virtuoso and composer. Returning to St. Petersburg he became Imperial concert-director with a life pension, and worked with his friend Carl Schuberth for the advancement of Russian music. His efforts resulted in the foundation of the Russian Musical Society in 1861, and of the St. Petersburg Conservatoire in 1862, of which he remained principal until 1867. A third tour, more successful even than the preceding, lasted until 1870, when he spoke of finally retiring; but he assumed for some time the direction of the Philharmonic concerts and Choral Society at Vienna, and in 1872-3 made a tour in America. In 1886 Rubinstein paid his eighth visit to England, when he gave at St. James's Hall his series of historical recitals, including works by all the important composers from the earliest to the present time. Rubinstein's pianoforte music and songs are universally admired; he has composed a great quantity of chamber-music and symphonies, of which perhaps the *Ocean and Dramatic Symphonies* are the most widely known and appreciated. His operas and oratorios have only received qualified praise. The principal are *Dimitri Donskoi*, *The Siberian Hunters*, *The Vengeances*, *Tom the Idiot*, *Feramos*, *The Demon*, *Nero*, *The Maccabees*, *The Tower of Babel*. In 1869 he was decorated by the Czar with the Vladimir Order, and in 1877 received from Marshal MacMahon the Legion of Honour.

Grove's Dictionary of Music; Mendel und Reissmann, *Musikalisches Conversations-Lexikon*.

Rückert, FRIEDRICH (b. 1788, d. 1866), the poet and Orientalist, was born at Schweinfurt-on-Main, where his father was an advocate. After studying law at the Universities of Würzburg and Jena, he turned to philology and literature, and was in turn *privat-docent* in Jena and schoolmaster at Hanau, till he settled for a time at Nuremberg, and there published his first collection of poems (*Deutsche Gedichte*, 1814), which includes the *Sonnets in Armour* (*Geharnischte Sonnetten*), patriotic lines on the War of Independence. In 1816 he removed to Stuttgart as a journalist, and there produced his *Time's Garland* (*Kranz der Zeit*, 1817) and the epic *Childe Horn* (*Kind Horn*, 1817) in the Nibelungenlied measure. After a tour in Italy, he visited Vienna in 1818, and was there introduced to the study of Oriental languages by Hammer Purgstall. He devoted himself especially to Persian and Sanscrit, but there is no trace of these studies in the next two collections of lyrics, *Amaryllis* (1820) and *Love's Springtide* (*Liebesfrühling*, 1821), both composed during his residence near Coburg. In these, especially in the latter, many of the songs from which have been set to music by the greatest composers, his power as an original lyric poet reached its height. The inspiration for

his remaining works was for the most part drawn from the ancient poets of the East. Thus in 1822 he published the *Eastern Roses* (*Oestliche Rosen*) in confessed imitation of Goethe's *Divan*. In 1826 he was appointed professor of Oriental languages at Erlangen, and began the production of the *Hariri's Makamas* (*Die Makames des Hariri*, 1826-37). In 1828 he published his rhymed version of the Indian myth of *Nal and Damajanti*, and in 1833 the version of *Sehi-King*, the Chinese song-book of Confucius. His collection and imitations of Brahmin proverbs and didactic rhymes (*Die Weisheit der Brahmanen*), considered his masterpiece by many critics, appeared in 1836, and his longest epic, *Rostem and Suhrab*, derived from the well-known Persian tradition, in 1838. In the following year he wrote a poetic version of the *Life of Christ* (*Leben Jesu*), and in 1841 was appointed to the professorship of Oriental languages in Berlin. Here, however, he was not altogether successful, though he counted Max Müller among his pupils. His summers were spent at Neuses, near Coburg; by degrees he withdrew from Berlin society altogether, and in 1848 gave up his position at the university, and spent the rest of his life in deep retirement at Neuses, where he died. Rückert's few dramas, *Saul and David* (1843), *Christoforo Colombo* (1844), *Herod the Great* (1844), etc., were inevitably failures on the stage. His versions of Oriental poems do not rise much above the average level of such undertakings, and it is only by his German lyrics that he will be remembered. Even as a lyric poet Goethe called him a "poetic dilettante"; and yet his songs represent a distinct period in German history, and many of them have passed securely into the national storehouse.

Dr. C. Beyer, *Rückert's Leben und Dichtungen* (1866). [H. W. N.]

Rüdiger, FREDOR VASILIEVITCH, COUNT (b. 1790, d. 1856), Russian general, rose by the year 1828 to the rank of general of division, and gained several victories over the Turks. He also took part in suppressing the Polish insurrection of 1831. In 1849 he was sent by the Russian Government to assist the Austrians against the revolted Hungarians, and it was to him that Görgey surrendered at Villagos in August, whereby the war was practically brought to a conclusion.

Ruhmkorff, HEINRICH DANIEL (b. 1803, d. 1877), electrician, was a native of Hanover, and, after a boyhood of which little is known, went to Paris in 1819, and became a porter in the laboratory of the physicist, Professor Charles Chevalier. He rapidly acquired proficiency in electrical experiments, and set up a small manufactory of physical apparatus. In 1844 Ruhmkorff brought out his first invention, a convenient thermo-electric battery. He then turned his attention to magneto-

electricity, especially to the production of the induced currents; and in 1851 produced the "Ruhmkorff coil," a most powerful apparatus, by which sparks eighteen inches in length can be produced and thick plates of glass pierced. Despite the honours that came to him, a medal at the Exhibition of 1855, and a prize of 50,000 francs in 1858, Ruhmkorff continued to occupy his dingy little bureau in the Rue Champollion, and died comparatively poor, having spent his money in the causes of science and charity.

Nature, vol. xvii.

Rumford, BENJAMIN THOMPSON, COUNT (b. 1753, d. 1814), man of science, was a native of Woburn, Massachusetts, and began life as a clerk. He married a rich widow, however, and on the outbreak of the American revolution embraced the royalist cause, and was sent to England with despatches. There in 1780 he became Under-Secretary of State for the Colonies, but shortly afterwards returned to America as commander of the King's American Dragoons. In 1784 he entered the Bavarian service, and by his powers as an organiser and disciplinarian, rose to be Minister of War and Count of the Holy Roman Empire. In 1805, on the death of Karl Theodor, Rumford retired to Paris, and in 1806 married the widow of Lavoisier. During the whole of his life he had been a devotee of science, and had proved by experiment that the then current theories of the caloric origin of heat were wrong. Count Rumford also invented some practical improvements by which chimneys were prevented from smoking, and fuel was economised in cooking-stoves. He was one of the benefactors of the Royal Society of London, where his name is perpetuated by the Rumford medal.

G. E. Ellis, memoir prefixed to the *Collected Works of Count Rumford* (1876).

Runeberg, JOHAN LUDWIG (b. 1804, d. 1877), Swedish poet, was a native of Finland, but wrote exclusively in Swedish. He graduated at the University of Åbo, and in 1830, when he published his first volume of *Poems*, was appointed tutor in Roman literature at the University of Helsingfors. In 1837 he became Professor of Greek and Latin at the Borga Gymnasium, and was its rector from 1847-50. In 1851 he paid a visit to Sweden, and was received with great enthusiasm. After 1863 his health began to decline, and he wrote very little. Runeberg's reputation in Sweden is equal to the highest; and the classic refinement of his style, especially in his lyrics, is of almost unique beauty. Among the most remarkable of his works are *The Elk-hunters* (1832), the idyll *Hanna* (1836), the Russian romance *Nadeschda* (1841), the epic *King Ejalor*, the two series of *Ensign Sids's Tales* (1848 and 1860), with their fine lyrics, and a tragedy in imitation of Sophocles. His *Lyrical Songs, Idylls, and Epigrams* were

translated into English by Magnússon and E. H. Palmer.

Gosse, *Studies of Northern Literature*.

Bunjeet Singh. [PUNJAB.]

* **Ruskin, JOHN** (b. 1819), the only son of a wine-merchant in Billiter Street, City, was born in Hunter Street, Brunswick Square, but in his infancy (1821) the family removed to Herne Hill, where he was brought up, chiefly under his mother's care, through a solitary childhood. In his autobiographical papers, called *Præterita*, he has given us an account of these times; of his early attraction to the natural sciences, and to the poetry of Scott and, later, of Byron; of his passion for nature, and of the annual drives through various districts of England or the Lowlands; of his first acquaintance with Turner's work in Rogers's *Italy* (1832), and with Prout's in the *Sketches in Flanders and Germany* (1833); of the first travels abroad in the same year; of the introduction to Pringle, Rogers, and Hogg, and the occasional contribution of verses to *Friendship's Offering*. In 1836 he matriculated at Christ Church, and went into residence next year as a gentleman commoner. At this time he took lessons in drawing and painting from Copley Fielding and Harding. In 1837, also, his first really significant piece of prose criticism, *An Introduction to the Poetry of Architecture*, appeared in the *Architectural Magazine* for November. In 1839 he gained the Newdigate prize for a poem on the theme, *Salsette and Elephanta*, but next year his preparation for his degree was interrupted by ill-health, and he was forced to pass the winter in Italy, where he became acquainted with Mr. Severn and Mr. George Richmond, the artists. After his return he took a pass degree at Oxford, and in 1842 the family removed from Herne Hill to Denmark Hill, where the first volume of *Modern Painters, by a Graduate of Oxford*, was written. It was published in 1843, and inevitably attracted serious, though often hostile, attention; for it created nothing less than a complete revolution in modern art and the estimation of artistic qualities. The work was primarily undertaken as a defence, or rather an explanation, of Turner; but it developed into an acute analysis of truth in painting, and a rigorous comparison between the old masters of the late sixteenth and the seventeenth centuries with the modern English landscape painters, very much in favour of the latter. The remaining four volumes were written, for the most part, in development and further analysis of the main principles laid down in the first. In 1844 Mr. Ruskin was in Switzerland, continuing his examination of the geology of the Alps, and the second volume, treating of the *Theoretic and Imaginative Faculties*, was not published till 1846. The third, *Of Many Things*, including the celebrated chapters on the *True*

and *False Ideal*, the *Pathetic Fallacy*, and *Classical, Mediæval, and Modern Landscape*, appeared, together with the fourth or geological volume, *Of Mountain Beauty*, in 1856; and the fifth, *Of Leaf Beauty*, *Of Cloud Beauty*, and *Of Ideas of Relation*, in 1860. The whole five volumes display throughout the vast powers and unerring insight of the brain that Mazzini called "the most analytic in Europe," and the work, taken as one whole, is undoubtedly the greatest critical treatise ever written on art, and one might almost say on literature and nature as well. To comment on the beauty and purity of Mr. Ruskin's style in this and all his other works is now superfluous. After 1843 the external history of Mr. Ruskin's life becomes a mere chronicle of his writings, lectures, and labours for the cause of the poor and social regeneration. During the interval between the appearance of the second and third volumes of *Modern Painters*, he published *The Seven Lamps of Architecture*, namely, the Spirits of Sacrifice, Truth, Power, Beauty, Life, Memory, and Obedience (1849); *The King of the Golden River*, a fairy tale or allegory, a mixture, as Mr. Ruskin has said, of Grimm and Dickens; *Notes on the Construction of Sheepfolds*, an essay on the Church of England; the treatise in defence of *Præ-Raphaelitism*; and the first volume of the *Stones of Venice* (all in 1851). Then came the second and third volumes of the *Stones of Venice*, with *Examples of the Architecture of Venice* (1853); *Giotto and his Works in Padua*, *Lectures on Architecture and Painting*, and *The Opening of the Crystal Palace considered in some of its Relations to the Prospects of Art* (1854). In 1855 he began a series of *Notes on the Royal Academy* that was continued till 1859, and resumed for the year 1875. In 1856, besides the third and fourth volumes of *Modern Painters*, he published *Notes on the Turner Gallery at Marlborough House*, and notes to Turner's *Harbours of England*; in 1857, the *Political Economy of Art*, and a treatise on *Drawing*; and in 1858-9, the course of lectures known as *The Two Paths*, and a treatise on *Perspective*. At this time Mr. Ruskin was taking an active interest in the erection of the new Museum buildings in the Parks at Oxford. But after about 1860 there is a marked change in the character and immediate aim of his writings. The majority of them deal directly with the great social problems of the present age on the lines laid down in his two text-books, *Unto this Last* (1862), and *Munera Pulveris* (1872), in which he ruthlessly demolishes the dicta of the Manchester school and the orthodox economists. His method of attack and the result of it may be compared with his revolt against the orthodox critics twenty years before. In the same cause he wrote *Time and Tide by Wears and Tyne: Letters to a Cork-cutter of Sunderland* (1867); and the long series of *Fors Clavigera*:

Letters to the Working-men and Labourers of Great Britain (1871-84), so called from "the best part of Force, Fortitude, and Fortune," according as it bears *clava*, "a club, or strength;" *clavis*, "a key, or patience;" or *clavus*, "a nail, or law." On the strength of these letters, and his other economical works, Mr. Ruskin continually asserts that he is a strict follower of his master, Carlyle, or, in his own words, "a violent Tory of the school of Scott and Homer," or, again, "a violent Illiberal," and also that his "*forte* is really not description, but political economy." Of his numerous remaining works, which, for the most part, treat of economy, art, ethics, history, and literature combined, as parts of one-supreme science, we may further mention *Sesame and Lilies* (1865); *The Ethics of the Dust*, and *The Crown of Wild Olive* (1866); *The Queen of the Air* (1869); two series of Oxford Lectures in 1870, when Mr. Ruskin was first elected Slade professor, having been Rede lecturer at Cambridge in 1867; *The Eagle's Nest* (1872); *Ariadne Florentina* and *Love's Meinie*, lectures on Greek and English birds (1873); *Val d'Arno* (1874); *Proserpina*, on wild flowers, and *Deucalion*, on "the lapse of waves and the life of stones" (1875-8); *St. Mark's Rest* and *The Laus of Fecole* (1877-8); *Elements of English Prosody*, and *Arrows of the Chase*, a collection of his miscellaneous letters (1880); *Fiction, Fair and Foul*, in the *Nineteenth Century* (1880-1); *Our Fathers have Told Us* (*The Bible of Amiens*) (1881); *Lectures on the Art of England* (1883); on *The Pleasures of England* (1884); and an account of Sir Herbert Edwards (1885). In 1871 Mr. Ruskin endowed a school of drawing in the Taylorian Museum in Oxford, and in August of the same year founded the Guild of St. George, of which he is the master. The centre of the Guild is now at Sheffield, where it has its museum, but it holds land at Barmouth and other places. The objects of the association are best explained in *Fors Clavigera*, especially the letters for the years 1872-6. Having been re-elected in 1876, Mr. Ruskin retired from his Oxford professorship, owing to his severe illness, in 1878. In the same year Mr. Whistler brought an action against him for an alleged libel contained in the *Fors* of June, 1877, where Mr. Ruskin had expressed surprise that "a coxcomb should ask 200 guineas for flinging a pot of paint in the public's face." Verdict was given for the plaintiff, damages one farthing. Having been again re-elected Slade professor in 1883, Mr. Ruskin resigned in 1885, owing to the introduction of vivisection into the Oxford schools. Of late years he has resided for the most part at Brantwood, on Coniston Lake.

Up to 1879 there is a good *Bibliographical Biography* of Mr. Ruskin, by W. E. A. Axon, and the authority for the earlier part of his life is his own *Præterita* (1885, etc.).

[H. W. N.]

* **Russell, Sir Charles, Q.C., M.P.** (b. 1833), a native of Newry, was educated at Castleknock College, and at Trinity College, Dublin. At first he practised as a solicitor at Belfast, but coming to England was called to the bar at Lincoln's Inn in 1859, and gradually acquired a reputation as one of the most eloquent and ingenious lawyers of his time. In 1872 he became a Q.C., and from that time forward was engaged in nearly every important case, notably *Fitzgerald v. Dr. Northbrook*, *Robertson v. Labouchere*, *Lambri Pasha v. Labouchere*, *Regina v. Yates*, and *Fortescue v. Garmoyle*. Sir Charles Russell did not enter Parliament until 1880, when he was returned for Dundalk, having been defeated there in 1874. He distinguished himself in the debates on the Land Bill of 1882, and in 1886, having been returned for South Hackney, became Attorney-General in Mr. Gladstone's Government. He was again returned for South Hackney at the general election of that year.

Russell, John Russell, Earl, K.G. (b. 1792, d. 1878), statesman and man of letters, was the third and youngest son of the 6th Duke of Bedford. He was educated at Westminster School and Edinburgh University, where he studied under Dugald Stewart, and at the age of twenty-one entered Parliament as member for the borough of Tavistock. The Whig party was at this time in a minority, so that although Lord John Russell had all the prestige of a great name, as well as many influential connections, his prospects were not very brilliant. His maiden speech was delivered in July, 1814, and in the ensuing year he spoke upon Napoleon's return from Elba, vindicating the right of the French people to choose their own form of government. Lord John had acquired some prominence in 1816, and was chosen to second the Whig amendment to the Address on the opening of Parliament. The Whig party now began to advocate the reform of our parliamentary representation. Lord John Russell became so enfeebled in health that in 1817 he contemplated retiring altogether from Parliament. This resolve he announced during a debate on the suspension of the Habeas Corpus Act, adding that his views on this subject were so strong that no weakness of frame, no indisposition of body, should prevent him from protesting against the establishment of the most dangerous precedent the House had ever made. He now remained out of Parliament for a short time in consequence of continued ill-health; but in 1818 he was again returned for Tavistock, and in the ensuing year assumed the lead on the question of Parliamentary Reform. His first speech on this subject was delivered on Dec. 14th, 1819, when he proposed the disfranchisement of certain corrupt boroughs. He did not at this period receive much en-

couragement in his reforming zeal. In 1819 Lord John published his *Life of Lord William Russell*, which, besides doing justice to his illustrious ancestor, was regarded as a manifesto of Liberalism. This was followed in 1820 by a volume entitled *Letters for the Post, not the Press, and Essays and Sketches of Life and Character*, "by a gentleman who has left his lodgings." He succeeded in 1821 in carrying a Bill for the disfranchisement of Grampound, Barnstaple, Penryn, and Camelford. Literature still continued to attract him, and in 1822 he published *The Nun of Arrouca: a Tale*, which was succeeded in the same year by his tragedy of *Don Carlos*. In 1823 appeared his *Essay on the History of the English Government and Constitution*, a work exhibiting breadth of view and considerable historical research. Lord John Russell early supported in Parliament a scheme for the endowment of the Roman Catholic Church in Ireland, and late in life he believed that such a scheme would have permanently settled the Catholic question and saved the Irish Protestant Church. On Feb. 26th, 1828, Lord John brought forward a resolution in the House of Commons to go into committee on the Test and Corporation Acts, and although his motion was opposed by Sir Robert Peel, Mr. Huskisson, and Lord Palmerston, it was carried by 237 to 193 votes. A Repeal Bill was subsequently introduced, which passed into law. Lord John issued in 1828 a work on *The Establishment of the Turks in Europe*; and from 1824 to 1829 he was engaged in the preparation of his *Memoirs on the Affairs of Europe*. Catholic emancipation was secured in 1829, and then the Whigs addressed themselves to the question of reform; Lord Grey came into power in 1830, and Lord John Russell accepted office under him as Paymaster of the Forces. His lordship drew up and introduced the Government Reform Bill, which met with such long-continued opposition, bore the larger share of its defence in the House of Commons, and was gratified by seeing the Bill receive the royal assent on June 7th, 1832. A Boundary Bill and Reform Bills for Scotland and Ireland followed. Lord John published at this juncture *An Essay on the Causes of the French Revolution*. In consequence of ministerial divisions on Irish affairs, Lord Grey resigned office in 1834; and after a temporary reconstruction of the Government under Lord Melbourne, Sir Robert Peel became Prime Minister. The Conservative Government, however, was quickly overthrown on Lord John Russell's motion for reforms in the Irish Church. Lord Melbourne was recalled, and Lord John Russell was appointed Home Secretary, with the leadership of the House of Commons. A vexed question was set at rest in 1836 by the passing of Lord John's Bill for the Commutation of Tithes, and this was followed by the passing of his Act which

provided for the marriage of Protestant Dissenters, Roman Catholics, and Jews according to their own rites, and enacting a civil marriage before a registrar for those who objected to a religious ceremony. In 1838 an Irish Tithe Act was passed. Lord John Russell retired from the Home Department in 1839, and accepted the office of Colonial Secretary. Amongst the important results which followed his tenure of this post was the proclamation of British sovereignty over New Zealand in 1840. After the elections of 1841 a vote was carried against ministers in the House of Commons by a majority of 91. Lord Melbourne resigned, and was succeeded by Sir Robert Peel. Lord John was now in opposition for some years, and his ability as a parliamentary leader during the exclusion of the Whigs was admired even by his opponents. The Anti-Corn Law agitation had acquired resistless force in 1845, and in November of that year Lord John addressed a manifesto (the *Edinburgh Letter*) to his constituents, the electors of the City of London, pronouncing for complete abolition. The Conservative ministry, being disorganised, resigned, but Lord John Russell was unable to form a Government, owing to dissensions in the Whig ranks, and Sir Robert Peel returned to office and abolished the Corn Laws. The Government were defeated, however, on their Irish Coercion Bill, and in July, 1846, Lord John Russell came into office for the first time as Premier. The Navigation Laws were abolished in 1849, and in 1851 the Premier replied to the Pope's Bull for the rearrangement and extension of Roman Catholic bishoprics in England by passing the futile Ecclesiastical Titles Act. The Premier had paved the way for this legislation by his famous "No Popery" letter to the Bishop of Durham. In the session of 1852 a new Reform Bill and a Militia Bill were introduced. The latter measure was very unpopular, and the Government were defeated upon it by eleven votes. Lord John resigned, and was succeeded by the Earl of Derby. The new ministry was defeated on its financial proposals, and in December, 1852, Lord Aberdeen formed a coalition Cabinet, with Lord John Russell as Foreign Secretary. The Crimean War broke out shortly afterwards, and the Government incurred great unpopularity by reason of the mismanagement of the war. Mr. Roebuck gave notice of a motion for an inquiry into the Crimean disasters, and Lord John Russell, who was now Lord President of the Council, resigned, on the ground that the motion could not be honestly met. The ministry was defeated by an overwhelming majority, and a reconstructed government was formed under Lord Palmerston, in which Lord John Russell became Secretary for the Colonies. His lordship went out as British plenipotentiary to the Vienna Conference, but the negotiations failed, and not long

afterwards Lord John withdrew from Lord Palmerston's Cabinet, owing to the unpopularity he had incurred by playing into the hands of Austria and Russia. In the midst of much political turmoil Lord John Russell had been for some years engaged upon his *Memoirs of Thomas Moore*, which were now published in 8 vols. His lordship, who in 1854 had carried a Bill for reforming the University of Oxford, brought forward a series of resolutions on National Education in the session of 1856, but the opinion of the country was not yet ripe on this question, and the resolutions proved abortive. In the session of 1858 he introduced a measure which settled a long-standing controversy on the subject of parliamentary oaths, and provided for the admission of Jews to Parliament. An unsuccessful attempt was made by Mr. Disraeli in the following session to pass a Reform Bill, which Lord John opposed, as being inadequate to satisfy the demands of the country. Ministers were defeated on the second reading, and appealed to the country, but the elections were unfavourable to them, and on the meeting of the new Parliament an amendment to the address was carried by 323 to 310. The Derby Government now resigned, and Lord Palmerston formed an administration, in which Lord John Russell became Foreign Secretary. His lordship published this year a work on the *Life and Times of Fox*. In the session of 1860 he introduced a Government Reform Bill, providing for a £6 franchise in towns, but the measure was ultimately withdrawn, in consequence of the half-hearted support it received in the House. Lord John Russell was elevated to an earldom in 1861. His policy of strict neutrality during the crisis created by the American Civil War was much commended. On the death of Lord Palmerston, in October, 1865, his lordship became Prime Minister. In 1866 he made his last and greatest effort towards the settlement of the Reform question, with which he had been identified during almost the whole of his long career. Mr. Gladstone introduced the Government measure in the House of Commons. It provided for a very liberal extension of the suffrage, but ministers were defeated in committee, on a motion of Lord Dunkellin to substitute rateable value for clear yearly value. As this amendment struck at the root of the measure, the Russell-Gladstone Government resigned office. Lord Derby became Premier, but his administration, being defeated on the Irish Church question, went out of office in December, 1868. Earl Russell's advanced age would alone have prevented him from taking office, and as the country moreover strongly indicated Mr. Gladstone for the premiership, the latter was sent for by the Queen, and succeeded in forming his first administration. Earl Russell supported Mr. Gladstone's Irish Church Disestablishment Bill in the Upper House. His lordship

published in 1868 his *Letters on the State of Ireland*; in 1870 appeared a selection from his speeches and despatches; and in 1871 his essay on *The Foreign Policy of England from 1570 to 1870*. Earl Russell introduced a Bill for the creation of life-peereages in the session of 1869, but it was lost on the third reading by 106 to 77 votes. In 1870 he delivered in the House of Lords a striking and patriotic speech relating to the Franco-Prussian War, demanding that England should be faithful to her obligations and engagements in regard to Belgium. This speech drew from the Government an emphatic declaration that they intended to maintain and enforce the independence and the neutrality of Belgium. Lord Russell was strongly opposed to the ballot, and spoke against the ministerial measure of 1872. His lordship published in 1873 his *Essays on the Rise and Progress of the Christian Religion in the West of Europe from the Reign of Tiberius to the End of the Council of Trent*; and this work was followed in 1875 by his *Recollections and Suggestions, 1813-73*. Earl Russell died May 28th, 1878, having nearly completed his eighty-sixth year. He was an excellent party leader, and a capable statesman. He left an enduring mark upon the legislation of the country, and gave an impetus to many important measures which do not bear his name. His zeal for popular measures, however, sensibly abated as he advanced in life, and during his last premiership he pursued what was known as the "rest and be thankful" policy.

Lord John Russell's *Recollections and Suggestions* (1875); the *Times*, May 29th, 1878.

[G. B. S.]

Russell, LORD ODO. [AMPHILL.]

* **Russell, WILLIAM HOWARD, LL.D.** (b. 1821), the first of "special correspondents," is of Irish parentage, was educated at Trinity College, Dublin, and in 1843 became attached to the *Times* newspaper. His first experience as a war correspondent was in the Danish War of 1848, and in 1854 he went to the Crimea as the representative of the *Times*. His letters during the winter siege of 1854-5, and the terrible mismanagement they disclosed, created great consternation in this country, and were the cause of the fall of the Aberdeen Government, as well as of the despatch of Miss Nightingale to the East, and the charitable efforts which saved the army. His letters were republished in 1855 under the title of *The War*, and *The British Expedition to the Crimea* in 1858. After experiencing the stirring events of the Mutiny, he published his *Diary in India*, and *My Diary North and South* after his return from the United States in 1861, which was occasioned by his too faithful description of the defeat of the Northerners at Bull Run. He has also represented the *Times* in the Austro-Prussian War of 1866, in the Franco-German War of 1870 (*My Diary in*

the Last Great War, 1874), besides accompanying the Prince and Princess of Wales during their tour in the East (*A Diary in the East*, 1869), and the Prince in his tour in India of 1877 (*The Prince of Wales's Tour*, 1877). Mr. Russell was also for many years the chronicler of royal festivities and great public ceremonies. He is proprietor and editor of the *Army and Navy Gazette*, established in 1858, and has written a novel, *The Adventures of Doctor Brady* (1868), and *Hesperothen* (1882), an account of rambles in the United States and Canada.

* **Rydberg, VIKTOR** (b. 1829), Swedish man of letters, was born at Jönköping, and educated at the college of Wexjö and the University of Lund. He began to study the law, but was compelled by the scantiness of his means to betake himself to journalism, and in 1854 became co-editor of the *Gothenburg Shipping and Mercantile Gazette*, an appointment he held as late as 1879. He sat in the Swedish Parliament from 1870 to 1872; in 1876 was appointed lecturer on philosophy and history to the town of Gothenburg, and in 1877 was elected to the Swedish Academy. In the same year he received his Doctor's degree at the jubilee of the University of Upsala. His chief works, which have won him the position of the first of Swedish men of letters, are:—*Singoalla*, a gipsy romance (1857); *The Last Athenian*, a novel (1859), which has been translated into English; *Magic in the Middle Ages* (1864), translated 1879; *What the Bible Teaches concerning Christ* (1862); *The Venus of Milo*, an æsthetic study (1874); and *Roman Days* (1875-7), psychological studies on the busts of the Roman emperors, translated 1879. He has also published an admirable translation of *Faust*. A collected edition of his *Poems* began to appear in 1882.

H. A. W. Lindehn, *Sketch of Rydberg*, prefixed to the translation of *Roman Days*.

* **Ryle, THE RIGHT REV. JOHN CHARLES, D.D.** (b. 1816), Bishop of Liverpool, was educated at Eton, and at Christ Church, Oxford, and graduated B.A. with a first-class in 1836. In 1841 he took holy orders, and became curate at Exbury, Hants; rector of St. Thomas's, Winchester, in 1843; of Helmingham, Suffolk, in 1844; Vicar of Stradbroke, Suffolk, in 1861; and Canon of Norwich in 1871. In 1880 he became successively Dean of Salisbury and Bishop of Liverpool on the nomination of Lord Beaconsfield. Bishop Ryle is a recognised leader of the Evangelical party in the Establishment, is a large contributor to ecclesiastical literature, and a preacher of great power. He has published amongst other works:—*Expository Thoughts on the Gospels* (1856-9); a selection of hymns known as the *Additional Hymn-Book* (1875); *The Bishop, the Pastor, and the Preacher* [Latimer, Baxter and Whitefield] (1854); *Bishops and Clergy of other Days* (1868); *Evangelical*

Religion, What it is (1867); *Home Truths* (eighth series, 1872); *Short Expository Readings on the Gospel of St. John* (1882); and a vast number of addresses and sermons.

S

Sabine, GENERAL SIR EDWARD, K.C.B., F.R.S. (b. 1788, d. 1883), was a native of Dublin, his family having originally come from Italy. Educated for the army, he joined the Artillery in 1803, becoming captain in 1813. The only service he saw was in America during the years 1813-16, and in Ireland during the disturbances of 1830. In 1841 he became lieutenant-colonel, in 1851 colonel, and in 1859 lieutenant-general, retiring in 1874 with the rank of general. It is, however, not as a soldier, but as a scientific investigator that he distinguished himself. He was astronomer of the first expedition under the command of Sir John Ross, sent (1818) in search of the North-West Passage; he also in the same capacity accompanied the second, under the command of Sir Edward Parry. During 1821-3 he conducted, under the English Government, a series of pendulum experiments at several stations on the coasts of Africa and America, also of Greenland, Spitzbergen, and Norway, for the purpose of determining the figure of the earth; and in 1824 he published the results. In 1825 he was placed on the joint commission appointed by the English and French Governments to determine exactly the longitudes of Greenwich and Paris Observatories; and in 1827 he was making observations as to the length of the second pendulum and the magnetic force of the earth at the same places. He next began a systematic survey of the pendulum and magnetic phenomena, covering practically the entire globe from the Equator to the Arctic regions. The results of those observations were made known in a great number of papers read before such learned bodies as the Royal Society and the British Association, and are to be found in those Societies' published *Transactions*. Besides the direct addition to our knowledge resulting from these investigations, such zeal on the part of Sabine gave to physical research an impetus that was of much greater importance. As a consequence, we find that in 1838 Captain James Ross was despatched with the *Erabus* and *Terror* to make a magnetic survey of the Antarctic regions and to found magnetic meteorological observatories at the Cape, St. Helena, and Van Diemen's Land. Under Sabine's direction the facts collected at the colonial observatories, as also those from other sources, were systematised and published; and it is not too much to say that to his exertions is mainly due the rapid

progress made in recent years in terrestrial magnetism, meteorology, and cognate sciences. He was president of the British Association in 1853, and from 1861 to 1879 president of the Royal Society. He was a member of the Royal Commission appointed in 1868 to inquire into the standards of weights and measures.

Sacy, ANTOINE ISAAC SILVESTRE, BARON DE (b. 1758, d. 1838), Orientalist, was a native of Paris, and applied himself during his youth to the study of the languages of the East. In 1785 he was elected to the French Academy, and in 1795 was appointed professor of Arabic at the École des Langues Orientales. The *Journal des Savants* was founded at this time, and gave great impetus to learning. In 1806 he became professor of Persian at the Collège de France; was elected to the Corps Législatif in 1808, and in 1813 was created Baron. In 1822 he became administrator of the Collège de France, and applied himself with the utmost zeal to the creation of fresh chairs—those of Sanscrit, Chinese, and Hindustani. In the same year he founded, with Abel Rémusat, the Société Asiatique, by the aid of which Paris became the home of Orientalists and the centre of Oriental learning. Sacy was, in fact, the father of modern Oriental science, and among his distinguished pupils were Freytag and Kosegarten. He contributed freely to encyclopædic and biographical literature, and his works include *Annales des Sassanides*, translated from the Persian (1793), *Chrestomathie Arabe* (1806-27), *Grammaire Arabe* (1810-31), *Relation d'Égypte*, translated from the Arabic (1810), *Mémoires d'Histoire et de Littérature Orientales* (1818), and *Exposé de la Religion des Druses* (1838).

Reinaud, *Notice Historique et Littéraire sur S. de Sacy*.

Safvet Pasha (b. 1815, d. 1883), Turkish statesman, was born at Constantinople, and entered the public service of the Porte. After being secretary to the Sultan Abd-el-Medjid and ambassador at Paris, he became President of the Council of State (1859), Minister of Commerce (1861), and Minister of Public Instruction (1868). In 1875 he became Minister of Foreign Affairs, and was one of the Turkish representatives at the Conference of Constantinople (1876). In July, 1877, he quarrelled with the Grand Vizier Edhem Pasha, but returned to office in February, 1878, and negotiated with the Russian commander-in-chief, the Grand Duke Nicholas, the disastrous treaty of San Stefano (March 3rd). From June to December, 1878, Safvet Pasha was Grand Vizier, and after being Turkish ambassador at Paris for a few months retired into private life.

* **Sagasta**, PRAXEDES MATEO (b. 1827), Spanish statesman, a native of Torrecilla, was educated for the profession of engineer, and in 1854 was returned to the Constituent

Cortes at Madrid. He was twice forced to take refuge in France on account of his opposition to Queen Isabella, and after her overthrow in 1868 became Minister of the Interior in General Prim's first Cabinet. He favoured the candidature of King Amadeus for the vacant throne, and during his reign was a member of most of the short-lived ministries. He continued in office under Marshal Serrano in 1874, but after the accession of Alfonso XII. retired for a while into private life. In 1875, however, he accepted the Monarchy, and became the leader of the Liberal party on its reorganisation in 1880. In 1881 the Conservative ministry of Canovas del Castillo was overthrown; and a coalition ministry, headed by Sagasta and General Martinez Campos, took its place. Senor Sagasta fell in October, 1883, but in November, 1885, shortly after the death of King Alfonso, he was requested by the Queen Regent to form a ministry which, though decidedly Liberal, was kept in power by a tacit understanding of parties.

Saïd Pasha. [EGYPT.]

Saint-Arnaud, ACHILLE LE ROY DE (b. 1801, d. 1855), Marshal of the second Empire, was originally called Jacques Arnaud le Roy. He entered the army in 1831, but his conduct was the reverse of meritorious, and he was more than once dismissed the service. The African wars, however, gave him opportunity for distinction; in 1844 he became colonel, and by 1851, having led a successful expedition against the Kabyles in Algeria, general of division. When Louis Napoleon was contemplating the overthrow of the Republic, St. Arnaud was summoned to Paris, and became Minister of War (Oct. 27th). It was to a great extent due to his unscrupulous resolution that the *coup d'état* of December 2nd was a success, and he organised the attack of the military upon the barricades. In 1854 he was made commander-in-chief of the French forces in the Crimea, but died nine days after the battle of the Alma (Sept. 20th).

Kinglake, *Invasion of the Crimea*.

Saint-Hilaire. [BARTHÉLEMY SAINT-HILAIRE and GEOFFROY SAINT-HILAIRE.]

Saint Leonards, THE RIGHT HON. EDWARD BURTENSHAW SUGDEN, BARON (b. 1781, d. 1875), the erudite real-property lawyer, was the second son of Richard Sugden, a London hair-dresser. Obtaining facilities for studying for his future profession as clerk in a law office, he was called to the bar at Lincoln's Inn in 1807, and practised for some time as a conveying counsel, in which capacity he soon became a distinguished lawyer. The stories of his powers of work would be barely credible were they not thoroughly authenticated. His early success was promoted by his publication of *The Law of Vendors and Purchasers* (written before he was twenty-one), two editions of

which were exhausted before his call to the bar, and of which Lord Campbell afterwards remarked that it was superior to an Act of Parliament. In 1808 he brought out his great work on *Powers*, which before long ran through a dozen editions. Then came his *Letters to a Man of Property*, of which, fifty years afterwards, he issued a seventh edition, under the title of *A Handy Book on Property Law*. By the excellence of these works he made a name and a practice for himself; indeed, he was soon so overloaded with abstracts to inspect and deeds to settle that he felt it necessary in 1817 to restrict himself solely to Court work. This change, however, did not bring him much relief, for briefs now came in as abstracts had formerly, and it was not until he was sent to preside over Irish equity in 1834, having become Tory member for Weymouth in 1828 and held the Solicitor-Generalship for a few months in 1829, that he obtained the rest he had longed for. He was again Lord Chancellor of Ireland from 1841 to 1846, when he gained a high reputation for his luminous judgments, as, e.g., that in *Westby v. Westby*, elucidating the doctrine relating to family compromises, and in *Ex parte Hennessy*, settling the rule relating to assignments of assurance policies. He was next Lord Chancellor of England for ten months in 1852, when he gave judgment in the famous case of *Lumley v. Wagner*. Lord St. Leonards was an earnest and energetic law reformer within somewhat narrow limits. Some of his amendments have been of great service; an examination of his rejected proposals will well repay the curious. His legal writings occupy a unique place among modern treatises. They are cited not as mere opinions, but as authorities; indeed, they constitute a kind of court of review, to which lawyers frequently look for confirmation or criticism of judgments pronounced.

Solicitor's Journal, Feb. 6th, 1875.

[W. M.]

Saint-Pierre, JACQUES HENRI BERNARDIN DE (b. 1737, d. 1814), French man of letters, belongs, properly speaking, to the eighteenth century. He was an engineer by profession, and a great traveller. Soon after 1771 he met Rousseau, and was impelled by his example to advocate the return to nature and the savage state. His *Studies from Nature* (1774) are full of Rousseau's precepts, and so is his charming romance *Paul and Virginia* (1788), written after three years' residence in the Mauritius. Among his other works are *The Desires of a Solitary* (1789), *The Indian Cottage* (1790), *Harmonies of Nature* (1815). He received under the Empire a pension of 2,000 francs.

L. Aimé-Martin, *Vie de Bernardin de Saint-Pierre*, prefixed to his complete works.

* **Saint-Saens**, CHARLES CAMILLE (b. 1835), musician, was born at Paris, and studied

music under Stamatz and Maleden, and at the Conservatoire under Benoist. In 1851 he composed his first symphony, and from this time has shown great activity as a composer, having written many symphonies, cantatas, and songs. His cantata *Les Noces de Prométhée* (1867), was a great success, but his efforts in opera have failed. Besides being an eminent composer, M. Saint-Saëns is an excellent conductor, and a musical critic of no mean ability. He was elected a member of the institute in 1881.

Saint-Simon, CLAUDE HENRI, COMTE (b. 1760, d. May 19th, 1825), socialist and philosopher, belonged to a noble French family that claimed descent from the Emperor Charlemagne. He was connected with the famous author of the *Memoirs of the Court of France*, the Duc de Saint-Simon, though not his grandson, as is often supposed. After a good education he entered the American service as a French officer, in 1777. Here he remained for about half a dozen years, during which time he fought under Bouillé and Washington, and was taken prisoner in 1782. Of his martial career he says:—"My vocation was not that of a soldier. . . . The life-purpose which I set before me was to study the movements of the human mind, in order that I might then labour for the perfection of civilisation." He returned to Europe by way of Mexico, and there he may be said to have anticipated M. de Lesseps, for he exerted himself, unsuccessfully, to launch a project for the cutting of a canal between the Atlantic and the Pacific. Recalled to France by the Revolution, he sided with the people, and in 1789 was elected president of the commune that his property was in. Although he renounced the title of Count, and refused any position that might be construed as having been conferred on account of his rank, he was nevertheless imprisoned for eleven months. On his release he speculated in the confiscated lands of the nobility, and realised 144,000 francs. Thinking this enough, he retired from business and devoted himself to study, and then to the acquiring of experience. His object was to realise "in his own person the whole range of human situations and emotions," and for this purpose he lived every kind of life. His property was, of course, soon gone, and he became a clerk with a salary of £40 a year. His health began to fail, for he used to work nine hours a day for his £40, and then he would go without sleep in order to give shape to his ideas. The extreme wretchedness of his condition is seen from a letter that he wrote begging assistance to print a couple of his books. "Be my saviour," it begins; "I am dying of starvation. For fifteen days I eat only bread and drink water; I work without a fire, and I have sold everything save my garments to cover the expense of the

copies." His family ultimately allowed him a small pension, but we find him in 1823, when beyond sixty years of age, filled with despair with the reflection that his life had been a failure, and resolving to end it. Comte was among those present at his death-bed. "All my life," he said, "is comprised in this one thought—to guarantee to all men the first development of their faculties." It is not possible for us to give here Saint-Simon's plans whereby all men were to attain to this "first development." These may, perhaps, be gathered from the mottoes adopted by his followers:—"The purpose of all social institutions ought to be the intellectual, moral, and physical amelioration of the poorest and most numerous class." "All privileges of birth, without exception, are to be abolished." "To each one a vocation according to his capacity; to each capacity a reward according to its works." Of Saint-Simon's writings, the one to consult for his system is the *Catéchisme des Industriels*.

R. T. Ely, *French and German Socialism in Modern Times*; J. S. Mill, *Political Sermons*.
[W. B. R.]

Saint Vincent, THE RIGHT HON. JOHN JERVIS, EARL OF (b. 1734, d. 1823), a distinguished naval officer, was the youngest son of Swynfen Jervis, barrister-at-law, and entered the navy under Admiral Hawke, at the age of ten. He worked his way up from post to post until, in 1787, he became a Rear-Admiral, having in the meantime seen service in Jamaica, Canada, and the Mediterranean. In 1794 he was promoted to the command of the squadron equipped for the West Indies, and captured the islands of Guadaloupe, Martinique, and St. Lucia. In 1797 he gained a brilliant victory over a Spanish force greatly superior in numbers, off Cape St. Vincent, for which service he was created a peer, with the titles of Earl of St. Vincent and Baron Jervis, receiving also a pension of £3,000. Admiral in 1799, he was subsequently employed in the blockade of Cadiz; and in 1801 was appointed First Lord of the Admiralty (1801-4). In 1814 he was appointed General of the Royal Marines, and in 1821 Admiral of the Fleet. Lord St. Vincent was one of the greatest of English commanders at sea, of high gallantry and ascendant genius, but as an administrator he was not commendable. He spent seventy-nine years in active service. His statue was placed in St. Paul's Cathedral by a vote of the House of Commons.

Captain E. P. Brenton, *Biography of Lord St. Vincent*.

Sainte-Beuve, CHARLES AUGUSTIN (b. Dec. 23rd, 1804; d. Oct. 13th, 1869), the greatest of French critics, was a native of Boulogne, and was educated for the medical profession at the Collège Charlemagne, Paris.

He became a surgeon at the hospital of St. Louis. In 1826, however, his journalistic efforts obtained for him an engagement on the *Globe* newspaper; and a favourable review of Victor Hugo's *Odes et Ballades* gained for him the intimacy of the Romantic school of poets. Sainte-Beuve essayed both verse and fiction, but neither his poetic effusions in *Vie, Poésies, et Pensées de Joseph Delorme* (1829), *Les Consolations* (1830), *Pensées d'Août* (1837), and *Pensées Complètes* (1840), nor his novel *Volupté* (1834) achieved more than a passing success. As a critic, however, he made his mark as early as 1828, with a *Tableau Historique et Critique de la Poésie Française au Sixième Siècle*. From 1840 to 1860 appeared his elaborate *Histoire du Port-Royal*. In 1845 he was elected to the Academy. He accepted the accession of Napoleon III. with enthusiasm; and was raised from the comparatively obscure position of professor of literature at Liège to that of professor at the Collège de France, and afterwards became senator. His critical articles appeared in the first instance in the newspapers, latterly, for the most part, in the *Constitutionnel* and *Moniteur*, and were subsequently republished in volume form under the title of *Portraits Littéraires* (1832-9), *Portraits Contemporains* (1846), *Causeries de Lundi* (1857-62), and *Nouveaux Lundis* (1863-8). Their charm is easier to be apprehended than described; it consists, perhaps, chiefly in acuteness of analysis, fairness of judgment, and distinction of style. The importance of his method is, as Mr. Saintsbury has pointed out, that he was the first critic to carry out the canon that a critic has only to judge of the intrinsic goodness of a book, and not of its conformity with certain fixed rules.

Correspondance de Sainte-Beuve; G. Saintsbury, *Short History of French Literature*.

Sainton-Dolby, CHARLOTTE HELEN (b. 1821, d. 1885), the celebrated contralto, was born in London; studied at the Royal Academy of Music under Bennett, Elliott, and Crivelli, from 1832-42; and in 1837 was elected a king's scholar. From her first appearance she won the reputation of an unrivalled concert and oratorio singer. Mendelssohn admired her singing in his *St. Paul* so greatly that he procured her an engagement at the Gewandhaus concerts in Leipzig, and wrote the *Elijah* music with a view to her singing it, and dedicated to her his *Six Songs* (op. 57). Her success in Leipzig was followed by several tours in France and Holland, and in 1860 she married M. Prosper Sainton, the eminent violinist. In 1870 she retired from public life as a singer, but two years later she opened a vocal academy, where many of the principal singers now before the public have been trained. Mme. Sainton-Dolby also challenged fame as a composer. Besides many ballads and songs, she wrote the cantatas, *The Legend of St. Dorothea*, produced at St. James's

Hall on June 14th, 1876, and *The Story of the Faithful Soul*, at the Steinway Hall, in 1879.

Grove's Dictionary of Music.

***Sala, GEORGE AUGUSTUS HENRY** (b. 1828), the son of an Italian, his mother being a native of the West Indies, was educated with a view to becoming an artist. This profession, however, he abandoned, becoming in the first instance a contributor to *Household Words*. He then formed a connection with the *Welcome Guest*; the *Illustrated London News*, to which he has contributed *Echoes of the Week* for many years; *Cornhill Magazine*, *All the Year Round*, and founded the *Temple Bar Magazine*, of which he was the first editor. He has been a prominent member of the staff of the *Daily Telegraph*, being in 1863 its special correspondent in the United States, in 1870 war correspondent at Metz, and in 1876 special correspondent in Russia. Among the numerous works that have issued from his pen, it is sufficient to mention several novels, of which *The Baddington Peerage* (1860), *Captain Dangerous* (1863), and *Quite Alone* (1864), are the best known; the burlesque *Wat Tyler, M.P.* (1869), and some books of travel and description which are extremely popular, such as *A Journey Due North* (1859); *Trip to Barbary by a Round-about Route* (1865); *From Waterloo to the Peninsula* (1866); *Under the Sun* (1872); *Paris Herself Again* (1880); *America Revisited* (1882); *A Journey Due South* (1885). He visited Australia in 1885, and sent home some graphic articles to the *Daily Telegraph*, entitled *The Land of the Golden Fleece*, which attracted considerable attention.

Saldanha, JOSÉ CARLOS SALDANHA DE OLIVEIRA, DUKE OF (b. 1791, d. 1876), Portuguese soldier and statesman, after serving in the army under Marshal Beresford, and as Minister of Foreign Affairs under the Count of Palmella, in 1825, became Governor of Oporto. During the war between the Isabellists and Miguelites (PORTUGAL), Saldanha greatly distinguished himself on the side of the former; and his determination led to Dom Miguel's capitulation at Evora (1864). In political affairs, however, he proved factious and incompetent. He placed himself at the head of the reactionary party, and was in consequence in exile from 1836-46. On his return he succeeded in keeping at the head of affairs from 1847-9, and from 1851-6, chiefly through the support of England. But he was not in favour with Pedro II. or his successor, Louis, and was kept abroad as ambassador at Rome. In 1870 he compelled the king to dismiss his minister, the Duke of Loulé, and was Prime Minister for four months, after which he was sent as ambassador to London, where he died.

Count da Carnota, *Memoirs of the Duke of Saldanha*.

Sale, SIR ROBERT HENRY (b. 1782, d. 1865), "Hero of Jellalabad," became an

ensign in the 36th Foot in 1795. After some hard fighting in India, and in the first Burmese War of 1825, he was appointed, in 1838, to the command of the 1st Bengal Brigade of the army of the Indus, which advanced on Afghanistan, and greatly distinguished himself at the battle of Ghuznee. In 1841, after the first outbreak against the British at Cabul, when the whole country was in arms against the invaders, he commanded a small body of men, who stormed the Khoord Cabul Pass, forced the Jugdulluk Pass, and retreated upon Jellalabad, where he was besieged from Nov. 12th, 1841, to April 7th, 1842. On this latter date the beleaguered garrison sallied forth and routed the besieging army, and joined hands with Pollock's relieving force. When left behind in Cabul, his wife, Lady Sale, behaved with great fortitude. Sir Robert Sale was killed while fighting against the Sikhs in the battle of Moodkee.

Grieg, Sale's Brigade in Afghanistan.

* **Salisbury**, THE RIGHT HON. ROBERT ARTHUR TALBOT GASCOYNE CECIL, 3RD MARQUIS OF, K.G., D.C.L. (b. Feb. 3rd, 1830), was born at Hatfield, the second son of J. B. W. Gascoyne Cecil, 2nd marquis. He was educated at Eton, and at Christ Church, Oxford, and in 1853 was elected to a fellowship at All Souls'. He was a frequent speaker at the Union Debating Society. In the same year he was returned to Parliament for the borough of Stamford; and in 1857 he married Miss Alderson, daughter of the well-known judge of that name. It was in this same year that the *Saturday Review* was started, to which Lord Robert Cecil at once became a regular contributor. He also wrote frequently in the *Quarterly Review*. Lord Robert Cecil did not come forward as a debater very prominently till the second administration of Lord Palmerston. He made his maiden speech on April 7th, 1854, on the Oxford University Bill, and he spoke at intervals on all the great questions of the day between that date and the formation of Lord Palmerston's second administration. But it was between 1859 and 1865 that he made his mark in the House of Commons, where ecclesiastical and educational questions came again to the front. By the death of his elder brother in 1865 he became Lord Cranborne, and heir to the marquise, and in the following year, on the formation of Lord Derby's third administration, he was appointed Secretary of State for India. In 1867, on the introduction of the second Derby Reform Bill, Lord Cranborne, Lord Carnarvon, and General Peel, being unable to consent to the reduction of the franchise proposed by Mr. Disraeli, retired from the ministry, but though some memorable passages of arms occurred in the House of Commons between "the noble lord" and "the right honourable gentleman," no serious breach of political friendship was the

consequence. In 1868, by the death of his father, Lord Cranborne was called to the House of Lords, and in 1869, the death of Lord Derby, whom he was chosen to succeed as Chancellor of the University of Oxford, left him without a rival among the peers for eloquence and debating power. In the debates upon the Irish Church Question, the palm was carried by the Bishop of Peterborough, Lord Derby being second, and Lord Cairns third in the oratorical race. But next to them unquestionably came Lord Salisbury, who spoke in favour of the second reading, on the ground that it was impossible to save the Establishment. In the following year, in 1870, he made a capital and very liberal speech on the Government Land Bill. In 1871 he spoke very strongly against Mr. Gladstone's employment of the royal prerogative to overrule the decision of either branch of the legislature on any question which had once been submitted to it. When the general election of 1874 gave a decisive majority to the Conservatives, Lord Salisbury returned to his former post of Secretary of State for India, and while in this position addressed himself to the Afghan Question with a view to re-establishing friendly relations between England and the Ameer. These overtures were not successful; but before they broke down, Lord Salisbury had exchanged the India Office for the still more arduous position of Foreign Secretary, and responsibility for Indian affairs passed into the hands of Lord Cranbrook. Lord Salisbury, however, while still Minister for India, represented this country at the Conference of Constantinople in 1877, where he exerted himself to obtain the consent of the Porte to execute internal reforms in the propriety of which all the great Powers were agreed. Turkey refused, and substituted others which Lord Salisbury would have allowed her time to carry out. But the delay did not suit Russia, who proposed the adoption of a protocol, leaving it to the Powers to watch events and reserve their action in the matter. As this was merely giving to Russia the right to choose her own moment for going to war, England declined to be a party to it unless Russia should disarm. Unfortunately this condition was abandoned, and the conference failed in its object. In the meantime Lord Salisbury had returned home, and the war broke out between Russia and Turkey, which ended in the defeat of the latter, the approach of the Russians to Constantinople, and the imminent danger of the destruction of the Turkish Empire. The result — briefly — was that the British fleet entered the Dardanelles; and England insisted on the treaty of San Stefano, which Russia had forced upon the Porte, being submitted to a congress of the five Powers. Russia refused. The English Government called out the Reserve forces, and brought a detachment of Indian troops to Malta. Russia then gave way. But Lord Derby

resigned, and Lord Salisbury became Foreign Minister. From this date his figure begins to loom larger in our political history, and events seem gradually to be marking him out as Lord Beaconsfield's successor. His first act as Foreign Minister was to write a circular despatch to all the foreign Powers, characterised by remarkable clearness, vigour, and even brilliancy, in which he summed up the objections to the Treaty of San Stefano in so masterly a manner that no further opposition was made to its full reconsideration. In 1878 he accompanied his leader to the Congress of Berlin, an account of which will be found in the article on Lord Beaconsfield. At the same time he arranged the Anglo-Turkish Convention, by which England engaged to defend the Sultan's possessions in Asia Minor against any aggression from Russia, and received in exchange the island of Cyprus as a military and naval station. He returned to England on July 15th, and between that time and the death of Lord Beaconsfield in April, 1881, his career presents no special points of interest. He resigned with the rest of the government after the general election of 1880, and when the question arose twelve months afterwards as to who should be the leader of the Conservative party in future, his claims and those of Sir Stafford Northcote were thought to be so evenly matched against each other, that no decision was arrived at, and the question was left to stand over till the Conservatives should return to office. During the next years Lord Salisbury showed great tactical skill by maintaining a purely critical attitude, and showing no undue hurry to take advantage of the weakness of the ministry even when the opportunity occurred. He saw that it was necessary to abandon the traditional opposition of his party to placing the town and county franchise on the same footing; and the plan which was then for the first time adopted of a conference between the leaders of the two parties for the purpose of settling the main principles of the measure before it was submitted to the House of Commons, enabled this great change to be effected with an ease and celerity in marked contrast to the progress of its predecessors. The Redistribution Bill prepared by Mr. Gladstone and his colleagues, in consultation with Lord Salisbury and Sir Stafford Northcote, passed through Parliament in the spring of 1885. But before the first appeal could be made to the new constituencies, Mr. Gladstone was no longer minister. A resolution carried against the Budget by Sir Michael Hicks-Beach on June 8th, led at once to his resignation; and then arose the difficulty between the claims of the two Conservative leaders which no attempt had yet been made to reconcile. The Queen sent for Lord Salisbury, and returning to the Foreign Office, he was recognised as the real head of the govern-

ment. The new Cabinet at once found itself face to face with the new Afghan difficulty, and with the revolutionary party in Greece. Owing to the indiscretion of some of his colleagues, Lord Salisbury's decision not immediately to renew the Crimes Act in Ireland was construed into an intention to make terms with Mr. Parnell, while some observations on the Viceroyalty of Lord Spencer, which rather unfortunately were uttered from the Treasury Bench in the House of Commons soon after the formation of the new government, gave further currency to the reports here referred to. Of these reports Lord Salisbury felt the effects at the general election in the autumn. He arranged the difficulty with Russia on the Afghan frontier in a manner agreeable to English interests without apparently giving any serious offence at St. Petersburg; and he succeeded in preventing war between Greece and Turkey at a moment when it seemed imminent, by the adoption of that firm and resolute attitude which always commands respect when exhibited by statesmen or governments. In the meantime, however, preparations for the great struggle were in full progress, and the leaders of both parties addressed themselves to the task of explaining their principles to the people. Lord Salisbury's "manifesto" made its appearance in the form of a speech delivered at Newport in Shropshire, in October, 1885. In this, after distinctly repudiating all connection with the Home Rulers, he gave an outline of the several questions which, in his opinion, were awaiting legislation; and after stating his readiness to deal with them in a liberal spirit, added emphatically that there was one question on which the Conservative party would set down its foot, and that was the maintenance of the Established Church. On the election which took place in November, the borough vote went strongly in favour of the Conservatives, but the new rural constituencies took a different view of their interests, and only two hundred and fifty-one supporters of Lord Salisbury were returned to the House of Commons. The Liberal Parliament nominally amounted to three hundred and thirty-three; but this was not a majority of the whole House, which now numbered six hundred and seventy, and the Home Rulers, eighty-six in number, were masters of the situation. Mr. Gladstone, once more Prime Minister, unfolded the Home Rule scheme. This policy broke up the Liberal party, and a considerable section of it joining with the supporters of Lord Salisbury, defeated the second reading of the Home Rule Bill, and caused Mr. Gladstone to dissolve a Parliament which had only existed six months. The result of the following election was favourable to Lord Salisbury, who gained sixty-five seats, and who, though without an absolute majority in the House of Commons, was now at the head of by far the strongest, most compact, and

most unanimous party in the country. But the marquis was in ill-health, and there were several reasons, both party reasons as well as public reasons, which would have made a Whig ministry more welcome to him than a Tory one. But on Mr. Gladstone's resignation he was at once summoned by her Majesty, and with her approval communicated with the Marquis of Hartington, the leader of the Liberal Secessionists. But Lord Hartington declining to take office, the Conservative leader had no choice but to construct one out of his immediate followers. He soon lost two of his colleagues, Lord R. Churchill by resignation, and Lord Iddesleigh by death; and in Jan., 1887, appointed Mr. Goschen Chancellor of the Exchequer, and became himself Foreign Secretary. [T. E. K.]

Salomons, SIR DAVID, BART. (b. 1797, d. 1873), Lord Mayor of London, was the son of Levy Salomons, and followed the commercial pursuits of his father. In 1835 he was elected Sheriff for Middlesex and the City of London, and a special Act of Parliament had to be passed to enable him to qualify for the post. In 1838 he was placed on the Commission of Kent, and so became the first Jewish Justice of the Peace. After two elections had been annulled by his refusal to take the oath "on the true faith of a Christian," he was elected Alderman of the Cordwainers in 1847. After unsuccessfully contesting Shoreham, Maidstone, and Greenwich, in the Liberal interest, he was returned for the last-named borough in 1851. He brought the question of Jewish disabilities to an issue in the House of Commons by thrice voting, whereby he was subjected to long legal proceedings. In 1855 he was elected Lord Mayor of London, and in 1859, having been returned for Greenwich, took his seat under the provisions of the Jewish Disabilities Act. Mr. Salomons, who was a man of great integrity of character, was re-elected for Greenwich in 1859 and 1865. He wrote several pamphlets on religious disabilities and commercial questions.

Salt, HENRY (b. 1785, d. 1827), traveller and Orientalist, a native of Lichfield, was educated at a school in his native town, and subsequently read widely. In 1802 he was selected by Lord Valentia to accompany a scientific expedition to India, Ceylon, and the Red Sea littoral. In 1805 he penetrated alone into Abyssinia, in the character of English ambassador, being the first European who for two centuries and a half had set foot in that country. The publication of Lord Valentia's travels soon attracted public attention to Salt, and in 1809 he returned to Abyssinia with the mission of concluding a treaty of alliance between Abyssinia and England, but was prevented by the turbulence of the country. In 1815 he was appointed Consul-General at Cairo, and was much interested in hieroglyphic inscriptions. His

Essay on Young and Champollion's Phonetic System of Hieroglyphics was a shrewd guess in the right direction. Salt's chief work, however, is his *Account of a Voyage to Abyssinia and Travels in the Interior of that Country* (1809-10).

J. J. Hall, *Life and Correspondence of H. Salt.*

Salt, SIR TITUS, BART. (b. 1803, d. 1876), manufacturer and philanthropist, was a native of Morley, and was educated by his father and at a Wakefield school. He set up business as a wool-spinner at Bradford in 1834, and in 1853 removed to premises on the banks of the Aire above Shipley, constructed on the most elaborate scale and covering twenty acres. By this time the firm of Titus Salt, Sons, and Company were the greatest manufacturers of alpaca fabrics in Europe. Sir Titus gradually built a village round his manufactory, which was called Saltaire. It contained nearly nine hundred model dwellings, and its sanitary arrangements were almost perfect. Sir Titus treated his hands with great liberality, and his gifts to the town of Bradford were princely. They included £5,000 to the Bradford Fever Hospital and £1,000 to Peel Park, Bradford. He served as Mayor of Bradford, represented the constituency as an advanced Radical from 1859-61, and became a baronet in 1869. A statue was erected in his honour in 1874.

Rev. R. Balgarnie, *Life of Sir T. Salt.*

* **Salvini, TOMMASO** (b. 1830), Italian tragedian, a native of Milan, belonged to a family of actors. The inherited genius displayed itself when he was in his teens, and he was accordingly sent to be instructed by the great actor Modena. After playing in children's parts, he obtained an engagement in Madame Ristori's company, and was soon recognised as the coming tragedian. After fighting in the Italian War of Independence, he became a member of Dondini's troupe, and by his impersonation of Edipo (Edipus) in Nicolini's tragedy of that name, and of Saul in Alfieri's play, achieved European renown. Orosmane in Voltaire's *Zaire* was added to his repertoire, and in 1857 he first essayed Othello, with brilliant success. In 1865 Ristori, Rossi, Majeroni, and Salvini formed the famous quartette who acted Silvio Pellico's *Francesca da Rimini* on the occasion of the sixth Dante centenary. Signor Salvini next essayed Romeo, and Conrad in *La Morte Civile*. He visited the United States in 1872 and 1881, and England in 1875, 1876, and 1884. In this country his genius was at once recognised, and he was hailed as "the finest living male exponent of his art." His most important appearances were in *Othello*, *Hamlet*, and Soumet's tragedy *The Gladiator*.

* **Sambourne, EDWARD LINLEY** (b. 1845), artist, was born in London, and was educated at Chester College. Intended for the engineering profession, he entered the factory of

Messrs. John Penn and Son in 1861, and remained there until 1867. In the latter year he began to draw for *Punch*, and his admirable illustrations soon became one of the most prominent features of that periodical. Mr. Sam-bourne also lent additional attractiveness to Mr. J. L. Molloy's *Our Autumn Holiday on French Rivers* (1874); Mr. Arthur A'Beckett's *Our Holiday in the Scottish Highlands* (1876); Mr. Burnand's *New History of Sandford and Merton*, and Kingsley's *Water Babies* (1885). He designed the diploma for the Great International Fisheries Exhibition of 1883.

Samson, JOSEPH ISIDORE (b. 1793, d. 1871), French actor, was a native of Paris, studied at the Conservatoire, and in 1827 made his appearance at the Comédie Française. He retired from the stage in 1863, having made a great reputation in Molière, Beaumarchais, and Marivaux; but his fame is higher still as an instructor. He was appointed a professor at the Conservatoire in 1829, and among his celebrated pupils may be mentioned Mmes. Rachel and Sarah Bernhardt.

Sand, GEORGE (b. 1804, d. 1876), otherwise AMANTINE LUCILE AURORE DUDÉVANT, née DUPIN, by illegitimate affiliation was descended on the paternal side from Marshal Saxe, while her mother was the daughter of a poor bird-seller in Paris. Her father's name was Maurice Dupin de Franqueil, but the suffix was dropped. When but four years of age Aurore lost her father. At the age of thirteen, having previously received some education at home, Aurore entered the Couvent des Dames Anglaises, in Paris, and remained there more than two years. In 1820 her grandmother died, leaving her heir to the little property of Nohant, near La Châtre, in the province of Berry. Shortly after this Aurore conceived the idea of taking the veil, but her mother dissuaded her from following out such an intention. While staying with some friends in the country she met Lieut. Casimir Dudevaut, to whom she was married in 1822. Her husband was not what she had expected, his cold-heartedness being little suited to her warm and ardent nature. In 1831 they separated, the husband engaging to allow his wife about £120 a year. Residing in Paris she found that this sum was inadequate. After trying several occupations she was induced to write, in collaboration with Jules Sandeau, the novel entitled *Rose et Blanche* (1831). Both authors were afraid of the reproaches of their families, and it was decided that Sandeau's name should be curtailed, and that the work should appear under the signature of "Jules Sand." Acting upon the advice of her mother, the young authoress assumed male attire. *Indiana* was the first novel published by her under the name of "George Sand" (1832); *Valentine* (1832), and *Lélia* (1833), succeeded it. She then went

to Italy with Alfred de Musset, and during her stay in Venice wrote *Metella*, *Léon Léoni*, *Mattea*, *Les Maîtres Mosaïstes*, *La Dernière Aldini*, and *L'Uscoque*, besides some novels on subjects not directly connected with Italy, *Jacques*, *Le Secrétaire Intime*, *André*, and *Mauprat*. Her connection with De Musset was afterwards the subject of the fine novel *Elle et Lui* (1858). In 1838 she went to Majorca with Chopin, and treated the visit in *Lucrezia Floriani* (1847). Under the influence of Pierre Leroux, she wrote the philosophical rhapsodies *Spiridion* (1839) and *Les Sept Cordes de la Lyre* (1840). In a similar way the influences of the doctrines of philosophic republicanism are to be seen in *Consuelo* (1844), perhaps the most popular of George Sand's works, and its sequel, *La Comtesse de Rudolstadt*. Another kind of novel in which she was admirably successful was that descriptive of peasant life, such as *François le Champi* and *La Petite Fadette*, both published in 1848. Among her other novels were *Pauline* (1840), *Teverino* (1843), *Horace* (1844), *Le Péché de M. Antoine* (1847), *Les Dames Vertes*, *Laure*, and *L'Homme de Neige* (1859), *La Famille Germandre* (1861), *Mlle. de la Quintinie* (1863), *Laura* (1864), *La Confession d'une Jeune Fille* (1868). Her *Journal d'un Voyageur pendant la Guerre* was published in 1871, her *Impressions et Souvenirs* in 1873. She was also the author of numerous plays, such as *Le Roi Attend* (1848), *Claudie* (1851), *Le Mariage de Victorine* (1851), *Le Démon du Foyer* (1852), *Molière* (1853), *Flaminio* (1854), *Comme-il Vous Plaira* (1856), *Françoise* (1856), and *Les Beaux Messieurs de Bois-Doré* (1865). She died on June 8th, 1876, and was buried in the cemetery at Nohant. Nothing written by George Sand gives a better insight into her character than her own voluminous correspondence, translated into English by Raphaël Lédos de Beaufort. The letters are fine, thoughtful productions, abounding in suggestion, instinct with womanliness, never very sparkling, rarely touched by humour, always interesting. They show that the writer was a student of character. They do not deal to any great extent with literary subjects. Naturally the personal element is that in which the deepest interest centres. George Sand was not thought to be a woman of strict virtue, but her letters convey the strong impression that she never ceased to be a good woman. The influence of George Sand on the French literature of the last half of the century is not great. Individually she is a large figure, but she has no more direct effect on the making of modern French fiction than Victor Hugo has—that is to say, next to none at all. When George Sand arose in France, Balzac was, perhaps, at his highest; Victor Hugo was already a man of some consequence, and the fame of George Sand grew up side by side with that of Hugo. George Sand brought a noble vein of poetry, a strong

love of nature, and some very heterodox opinions to bear on social problems. France was ready for her, for Frenchmen were in the temper of the Athenians—they were waiting for something new. Balzac had gone to astounding lengths to satisfy the craving for novelty. France was ripe in a social as well as in an artistic sense. A strong feeling against the French marriage laws which forbade divorce was growing into rebellion. To rebel against the marriage laws meant to rebel against the canon law, and that in turn meant to rebel against the clerical party. The clergy were becoming less and less popular in France, and it only required that a strong writer should arise to deal the clerical party a great blow, and half France must be at his feet. George Sand arose and dealt that blow, and secured tremendous popularity. As a literary artist George Sand was distinctly an idealist. Nothing in her literary correspondence is more emphatic than the opinion that in all art virtue must triumph; that art itself should be the research for truth, and that truth does not consist merely in representing either evil or good. Writing to Gustave Flaubert on the Zolaistic movement, she pointed out that “the artist who only notices defects is as deficient as the one who only sees good qualities; that society is not composed merely of blackguards and rogues; that honest people are not in the minority; that imbeciles are predominant, it is true, but there is a public conscience which overawes them and counsels them to respect the law.” Thus George Sand stands midway between an idealist like the younger Dumas and a realist of the type of Zola.

Letters of George Sand, translated and edited by Raphaël Ledos de Beaufort, in 3 vols. (1886); Bertha Thomas, George Sand (1883).

[R. H. C.]

Sandean, LÉONARD SYLVAIN JULES (b. 1811, d. 1883), the French novelist and dramatist, came to Paris as a student of law. He began his literary career in 1831 with the novel *Rose et Blanche*, written in collaboration with Mme. Dudevant, who, adopting the first part of his surname for her *nom de plume*, made the fame of George Sand soon eclipse that of Jules Sandeau. After the termination of this collaboration, Sandeau travelled in Italy, and devoted himself henceforth entirely to writing. His first independent work of importance was *Mme. de Sommerville* (1834); from that date until 1855, when his literary activity declined, he produced one or more works a year, distinguished by a purity and healthiness of tone not generally associated with French fiction, many of which appeared in the *Revue des Deux Mondes*. In 1858 he was elected a member of the Academy, having been already decorated with the Légion d'Honneur (1847). He was appointed Keeper of the Mazarin Library in 1853, and six years later received

the sinecure appointment of librarian at St. Cloud, with a salary of 6,000 fr. After the extinction of his office in consequence of the fire at St. Cloud, he was granted a pension of 2,000 fr. Of his novels, among the most remarkable are *Marianne* (1839), *Le Docteur Herbeau* (1841), *Mlle. de Kerouare* (1842), *Catherine* (1845), *Mlle. de la Seiglière* (1848), considered by most his masterpiece, and afterwards dramatised; *Madeleine* (1848), *La Chasse au Roman* (1850), *Sacs et Parchemins* (1851), *La Maison de Penarvan* (1858), *La Roche aux Mouettes* (1871). In collaboration with Émile Augier, Sandeau wrote for the stage *Le Gendre de M. Poirier* (1854), also *Ceinture Dorée* (1855), and *Jean de Thommeray* (1873). Several of his works have been rendered into English.

* **Sanderson, PROFESSOR JOHN SCOTT BURDON, LL.D., F.R.S.** (b. 1828), physiologist, was educated at Edinburgh University, and took a medical degree. Coming to London he became physician to the Middlesex Hospital and the Hospital for Consumption at Brompton. He was superintendent of the Brown Institution from 1871–8, and Jodrell professor of practical physiology and human physiology at University College from 1874 to 1882. In 1882 he was appointed Waynflete professor of physiology at Oxford University. Professor Burdon Sanderson has frequently been employed by Government to report upon epidemics and other medical matters. He is the author of a *Handbook of the Sphygmograph* (1867), edited a *Handbook for the Physiological Laboratory* (1873), and a *University College Course of Practical Lectures in Physiology* (1882). His lecture on *The Study of Physiology* has been republished (1883).

Sandhurst, THE RIGHT HON. WILLIAM ROSE MANSFIELD, BARON, G.C.B., G.C.S.I. (b. 1819, d. 1876), fifth son of John Mansfield, of Diggeswell House, Herts, and grandson of Sir James Mansfield, a Lord Chief Justice of the Court of Common Pleas, passed through the Royal Military Academy, Sandhurst, and entered the 53rd Regiment in 1835. His first services were in the Sutlej campaign of 1846, and then in the Punjaub campaign of 1849; he was afterwards employed chiefly in operations on the Punjaub frontier. In 1855 he was attached to the Embassy at Constantinople, was sent after the Crimea as Consul-General to Warsaw, and then on the outbreak of the Indian Mutiny was chosen by Sir Colin Campbell to be the chief of his staff. He was at the relief of Lucknow, at Cawnpore, and all the other engagements of any importance that occurred during the war. His services were repeatedly acknowledged by his commanding officer, whose report received for him the thanks of both Houses for his signal services. In 1860 he was appointed to the command of the troops in the Bombay Presidency, and in

1865 to the post of commander-in-chief in India. In 1870 he was raised to the peerage as Lord Sandhurst, and by his advice rendered considerable service to the Government in the army reforms then being inaugurated—notably the abolition of purchase. In the House of Lords he confined himself almost entirely to military topics.

Sandon, Viscount. [HARROWBY.]

***Sant, JAMES, R.A.** (b. 1820), was born at Croydon, and received his first lessons in painting from John Varley, the well-known water-colour artist. In 1840 he began to exhibit at the Royal Academy. Among his pictures may be mentioned:—*Gregory passing through the Slave Market at Rome* (1845); “*Speak, Thy Servant Heareth*” (1853); *The Children in the Wood* (1854), this same subject being repeated in 1856; *Infancy* (1857); *Little Red Riding-Hood* (1860); *Turn Again, Whittington* (1864); *The Schoolmaster's Daughter* (1871); *Gleanings* (1877), now generally known as *Prosperity*; *Adversity* (1879); *Maidenhood* (1882); *Love - Birds* (1883). As a portrait-painter, Mr. Sant is especially successful, and has of late years confined himself almost entirely to this branch of his art. A large number of his works are at Strawberry Hill. He was elected A.R.A. in 1861, and R.A. in 1870.

Santa Anna, ANTONIO LOPEZ DE (b. 1798, d. 1876), Mexican statesman, was born at Xalapa, and fought on the Spanish side in the war of Mexican Independence. In 1829, having changed sides, he compelled the surrender of the Spanish expedition against Mexico, and was in consequence elected President in 1833. He relied on the clerical party, and became unpopular through his recognition of the independence of Texas, after suffering a crushing defeat from the Texans at San Jacinto; but in 1839, war having been declared against France, he defended Vera Cruz with great valour. He was Dictator from 1841 to 1844, when he was overthrown, tried for treason, and banished. He returned to Mexico to take command on the outbreak of the war with the United States, but was utterly defeated by General Scott (q.v.). He fled, but in 1853 became Dictator again, until overthrown by Carera in 1855. He offered his services to Maximilian of Mexico (q.v.), who, however, did not make use of them, and intrigued against President Juarez, who banished him for eight years. In 1874 he returned to Mexico.

***Santley, CHARLES** (b. 1834), a public singer of high repute, was born at Liverpool, and studied at Milan under Gaetano Nava, and in London under Manuel Garcia. In 1857 he appeared at St. Martin's Hall as Adam, in Haydn's *Creation*, making his *début* two years later on the stage as Hoel, in *Dinorah*. He sang at the Handel Festival at

the Crystal Palace in 1862, and has since appeared constantly at oratorios and concerts, both in London and the provinces, being acknowledged as the first English baritone singer. He possesses a voice of much power, compass, and sweetness, and sings with great expression and taste. He has gained great distinction as a baritone on the lyric stage. Mr. Santley is the composer of several songs, and has edited Gaetano Nava's *Method of Instruction for a Baritone Voice* (1872). His wife, Gertrude Kemble (a grand-daughter of Charles Kemble), had appeared in public as a soprano singer, but gave up her professional career after her marriage. One of Mr. Santley's daughters has inherited her father's gifts, and has adopted his profession.

***Sarasate, MARTIN MELITON** (b. 1844), an eminent violinist, was born at Pampeluna, and entered the Paris Conservatoire at the age of twelve, where he became a pupil of Alard, and gained the first prizes for solfeggio and violin. After leaving the Conservatoire he entered upon his career as a concert-player, visiting all the countries of Europe and North and South America. He first appeared in London at one of the Philharmonic concerts in 1874; and of late years has come over to England regularly during the season, when he never fails to draw large and enthusiastic audiences. His style of playing is graceful and delicate, his tone is rich and full, and his facility extraordinary. He has composed a number of works for the violin, amongst which we may mention *Prière et Berceuse* (1870), *Caprice Basque* (1881), and his transcriptions of Spanish airs and dances.

***Sarcey, FRANCISQUE** (b. 1828), French critic, was born at Dourdan, and was educated at the École Normale. From 1851 to 1858 he was professor at various lycées and academies, and then gained admission to the columns of the *Figaro* through the influence of Edmond About. His reputation as a dramatic critic was made by his articles contributed to the *Opinion Nationale* in 1859, which he abandoned in 1867 for the *Temps*, and in 1872 became also a member of the staff of the *XIX. Siècle*. M. Sarcey is chiefly known for the caustic common sense of his dramatic articles; but he has also touched on administrative abuses, and has written some novels and studies of life.

Sardinia, THE KINGS OF, comprise in this century Victor Emmanuel I., Charles Felix, and Charles Albert.

VICTOR EMMANUEL I. (b. 1759, d. 1824), was the second son of Victor Amadeus III., and during his father's life bore the title of Duke of Aosta. He resisted the French revolutionary army on the battle-field, and when in 1796 his father concluded a peace with Bonaparte, he refused to accept it, and retired to

the Island of Sardinia. When in 1802 his brother, Charles Emmanuel IV. (who had succeeded Victor Amadeus III. in 1796), abdicated, Victor Emmanuel assumed his titles, but remained in Sardinia under British protection until 1814, when he returned to Turin. By the treaties of Paris (1814) and Vienna (1815) all his Continental States were restored to him, with the addition of the territory of the ancient republic of Genoa. Against the expectations of his subjects, he replaced the laws introduced by the French by the old ones, persecuted the Waldenses and Jews, and persistently refused to grant a Constitution to his people. In consequence a great number of secret societies were formed, and a revolution burst forth in 1821. Victor Emmanuel I. was then compelled to abdicate, and was succeeded by his brother Carlo Felice (Charles Felix), who, until his accession to the throne, was known by the title of Duke of the Genoeese.

CARLO FELICE (CHARLES FELIX) (b. 1765, d. 1831), was the fourth son of Victor Amadeus III. For a long time he resided in Sardinia as viceroy for his brother, Victor Emmanuel I. After the forced abdication of the latter, he became king in 1821. He suppressed the rebellion and punished its leaders. Order and economy were introduced by him into his kingdom. In 1822 he published a new military code, and ordered that the old civil and penal laws should be replaced by new ones more in accordance with the times. The decimal system was adopted in his States, and ruling under difficult circumstances, he did his best to promote the welfare of his subjects. With him the eldest branch of the House of Savoy ended, and, in consequence, he was succeeded by his distant cousin, Charles Albert, Prince of Savoy-Carignano.

CARLO ALBERTO (CHARLES ALBERT) (b. 1798, d. 1849) was the son of Charles Emmanuel, Prince of Savoy-Carignano, of a younger branch of the House of Savoy, which began in 1596. Charles Albert in his youth was filled with Liberal ideas, and became attached to the National Italian party. In 1821 Victor Emmanuel I. appointed Charles Albert regent of the kingdom during his absence. The young prince took this opportunity to give a Liberal Constitution to the States entrusted to him. Victor Emmanuel refused to adhere to these reforms, and abdicated in favour of his brother, Carlo Felice, who disowned the acts of his cousin, who, in consequence, was compelled to flee secretly from Turin. He went to fight in Spain against the French army, which had invaded the Peninsula to overthrow the new Constitution proclaimed there. In 1829 Charles Albert was reconciled to King Charles Felix, and was sent for a short time as Viceroy to the island of Sardinia. In 1831 he succeeded his cousin. Unfortunately in the beginning of his reign he was obliged to

resort to severe measures in order to secure his throne against the secret societies, and above all against Mazzini's *Giovine Italia* (Young Italy). He afterwards devoted himself to administrative reforms in the various departments of law, commerce, and the army, and the encouragement of art, science, and literature. In 1848 he gave to his subjects a Liberal Constitution, and marched with his troops to support the insurgents in Lombardy and Venetia against Austria. He obtained various brilliant successes, having defeated the Austrians at Pastrengo, Goito, Rivoli, and Somma-Campagna. Unfortunately, however, he was beaten at Custoza soon after, and was compelled to retire to Milan and sign an armistice. On the expiration of the truce he recommenced hostilities, and experienced nothing but reverse. In the battle of Novara he fought with the utmost bravery, and risked his life in every possible way, but he was, however, routed by the Austrian Marshal Radetzky. In order that the conditions of peace should be less onerous, he abdicated the crown on March 23rd, 1849, in favour of his eldest son, Victor Emmanuel, and retired to Oporto, in Portugal, where he died four months after. It has been said of him that "He fought like a hero, lived like a monk, and died like a martyr."

VICTOR EMMANUEL II. [See under V.]

[A. O.]

* **Sardou, VICTORIEN** (b. Sept. 7th, 1831), French dramatist, the son of a professor, studied medicine, but abandoned that pursuit for historical research. After living in penury on the proceeds of his pen, he succeeded, in 1854, in obtaining a hearing for a comedy, *La Taverne des Étudiants* at the Odéon; but it failed disastrously. At last, through his wife, whom he married in 1858, he obtained an introduction to Mlle. Déjazet, the celebrated actress, and at her theatre speedily won for himself a great reputation. His successes at the Déjazet theatre were *M. Garat* (1860) and *Les Prés-Saint-Gervais* (1862), the music by Lecoq, which has been successfully adapted into English. Among his most celebrated pieces are:—*Les Pattes de Mouche* (1861), familiar to English audiences as *A Scrap of Paper*; *Nos Intimes*, a satire on provincial busybodies (English versions, *Friends and Foes* and *Peril*); *Les Vieux Garçons* (1865); *La Famille Benoiton* (1865); *Nos bons Villageois* (1866). *La Patrie* (English version, *Fatherland*) was a more serious effort (1869); and then, as if to show his versatility, M. Sardou composed the libretto to Offenbach's *Le Roi Carotte* (1872). In the same year he produced at the Vaudeville *Rabagas*, a scathing satire on Democratic politicians in general, and Gambetta in particular. *Daniel Rochat* (1880) was, in the same way, a discussion of the arguments for and against religious marriage. *Dora* (English

version, *Diplomacy*) was produced in 1877, *Le Bourgeois de Pont d'Arcy* in 1878, *Odette* (English version, *Odette*) in 1881, *Fédora* (English version, *Fedora*) in 1883, *Theodora* in 1884, and *Le Crocodile* (1886). M. Sardou is seen at his best when pointing his bitter wit at social follies, especially those of the hour. He is undoubtedly among the greatest of living dramatists; and is unequalled in the construction of a powerful and enthralling, if occasionally somewhat disagreeable, plot. His later plays are decidedly sombre in colour, and therefore admirably calculated to display at its best the genius of Mme. Bernhardt. The didactic purpose is not so strong in M. Sardou as in M. Dumas fils, but he has perhaps a firmer power of characterisation. He became a member of the French Academy in 1877.

Saumarez, JAMES, BARON DE (b. 1757, d. 1836), British sailor, was a native of Guernsey. He entered the navy as a midshipman at the age of thirteen, and served in the American War. In the action of 1781 off Doggerbank he greatly distinguished himself, and was promoted to the rank of commander, and commanded the *Russell* in the battle between Rodney and De Grasse, being knighted for his gallant capture of the French frigate *La Réunion*. He took part in the battle off Cape St. Vincent, and was second in command at the battle of the Nile, becoming a baronet in 1801. In the same year, on July 12th, he won a splendid victory off Cadiz over a French and Spanish fleet double his own in numbers, and in the Russian War of 1809 he commanded the Baltic fleet, taking two large Russian flotillas. He was created a peer in 1831.

Sir John Ross, *Memoirs of Admiral de Saumarez*.

Savigny, FRIEDRICH KARL VON (b. 1779, d. 1861), the German jurist, was born at Frankfurt-on-the-Maine, of a French Huguenot family that had settled in Germany. Left an orphan at thirteen he was taken in charge by a friend, who sent him, in due course, to the University of Marburg, where he took a degree in law in 1800. In 1801 as *privat-docent* at Marburg he gave a series of lectures on juridical subjects relating chiefly to the *Digest*. In 1803 he published his masterly treatise *Right of Possession* (*Das Recht des Besitzes*), a condensation of his lectures, in which he called attention to the work of the commentators on the *Digest*, and sought to separate the Roman law as propounded originally by the Roman jurists from the emendations and additions made to it by custom, the Germanic law, and the mistakes of commentators. The merit of this work was quickly perceived, and its author received tempting offers from other universities. These, however, Savigny declined, having determined to prosecute his researches in the libraries of Germany, France, and Italy, with

a view to tracing the historical development of the glosses of commentators. In this task he was assisted by his pupil, Jakob Grimm, and his young wife, a daughter of the poet Brentano. After four years' research and travel he became professor of law in the University of Landshut (1808), and two years later (1810) professor at Berlin on the re-organisation of the university there, a post he held for thirty-two years. In 1811 he became a member of the Prussian Academy of Sciences, in 1817 entered the Council of State, and in 1842 was nominated Minister of Justice for the revision of the law, retiring from public life in 1848. His chief works are—*The Vocation of our Age for Legislation and Jurisprudence* (*Vom Berufe unserer Zeit für Gesetzgebung und Rechtswissenschaft*, 1815; Eng. trans. by Hayward, London, 1831), *History of the Roman Law during the Middle Ages* (*Geschichte des Römischen Rechts im Mittelalter*, 6 vols., 1826–31, partly translated into English by Cathcart, Edinburgh, 1829), and *System of Modern Roman Law* (*System des heutigen Römischen Rechts*, 10 vols., 1840–51; English trans. by Holloway, 1867). Savigny continued the work begun by Hugo and Schloesser, and so established the new historical school of jurisprudence. Unlike the analytical jurists, he proclaimed law, or right, simply as one of the forces of society, by which it is influenced, and with which it develops according to fixed laws unaffected by the caprices of the day. This is his fundamental idea, which when worked out historically produces original and very important results, and which may be said to raise law from almost a superstition to a science. Savigny's son, KARL FRIEDRICH (b. 1816, d. 1875), served in the diplomatic service of Prussia from 1836, and was an influential member of the Reichstag from 1868 till 1876.

Stinsing, F. C. von Savigny (1862); Laboulaye, F. C. de Savigny (1842). [W. M.]

***Savory, WILLIAM SCOVELL, F.R.S.** (b. 1826), studied medicine at St. Bartholomew's Hospital, and took his M.B. with the London University medical scholarship in 1848. He became surgeon and lecturer on surgery at the hospital, and he is surgeon of Christ's Hospital, consulting surgeon to the London Fever Hospital, to the Royal and General Dispensary, and to the Charterhouse. Mr. Savory became a member of the Royal College of Surgeons in 1847, a fellow in 1852, a member of the council in 1877, and was president of the college in 1885 and 1886. In the last year the foundation-stone of the new Examination Hall, on the Thames Embankment, was laid by the Queen. He was Bradshaw lecturer in 1884, the subject being *The Pathology of Cancer*. Mr. Savory is the author of *Life and Death* (1863), an introductory chapter to the *Book of Health*, edited

by Malcolm Morris (1883), and various essays in the *Philosophical Transactions* of the Royal Society, and in the *Medico-Chirurgical Transactions*.

Saxe-Coburg-Gotha, ERNST I., DUKE OF (b. 1784, d. 1844), was born at Coburg, and was the son of Francis, Duke of Saxe-Coburg-Saalfeld, whom he succeeded in 1805. Having taken part in the disastrous defeat of Jena-Auerstadt in the following year, he accompanied the King of Prussia in his flight to Königsberg and East Prussia, but returned to his dominions after the Peace of Tilsit, only to find them on the verge of ruin. In the campaign of 1812-13 he was appointed to hold Frankfurt-on-the-Maine for the allies, and at the peace of 1815 his lands were considerably increased. Having married Louisa, heiress of Saxe-Gotha, in 1817, he assumed the title of Duke of Saxe-Coburg-Gotha on his divorce from her in 1826. His eldest son, *ERNST II. (b. 1818), succeeded him. As he has no issue, the title descends to Prince Alfred of England, Duke of Edinburgh, the second son of Prince Albert (q.v.), Ernst I.'s younger brother. The Prince of Wales resigned his rights in Prince Alfred's favour in 1863. Ernst I. was brother to Leopold, who married the Princess Charlotte, and was afterwards King of the Belgians (q.v.), and he was uncle to Ferdinand, who married Maria la Gloria, Queen of Portugal. His sister Victoria was the wife of the Duke of Kent, and mother of the present Queen of England.

Saxe-Weimar, KARL AUGUST, DUKE OF (b. 1757, d. 1828), was the son of the Duke Constantine and of the Duchess Anna Amalie of Brunswick (b. 1737, d. 1807), a woman of high natural genius, who in 1771 invited Wieland to be her son's tutor and companion. In 1774, however, Goethe was introduced to Karl August, in Frankfurt, and next year he came to Weimar, thus beginning the long association that ended only at death. As a man Karl August was simple, straightforward, and rough, with a love of dogs and beer and sport. His character is best known from the description of him in Goethe's *Ilmenau*. Especially after the tour in Switzerland with Goethe in 1779, he devoted himself in the old patriarchal fashion to the good of his people, and succeeded in raising his little State to a very conspicuous position in Germany. He identified himself definitely with the Prussian policy, and in 1783 took a prominent part in the formation of the Princes' Confederation (*Fürstenbund*), in opposition to Austrian ascendancy. Having thoroughly reorganised the military forces of his dukedom, he took service in the Prussian army in 1788, was present in Silesia when danger threatened from Austria and Russia (1790), and took part in the fatal campaign of the Confederates in France (1792), and the prolonged siege of Mainz (1793). During the

disastrous campaign of 1806, Karl August was appointed to hold the Central Thüringen Forest, with an advance guard at Ilmenau. He thus escaped being present at the day of Jena, and the subsequent sack of his city, which was only saved from utter destruction by the heroism of his wife, the Duchess Louise. Napoleon treated him and his people with peculiar indignity, and 1814 found Karl August at the head of 30,000 men in the Netherlands. He was a member of the Congress of Vienna, assumed the title of Grand Duke in 1815, and after the peace devoted himself entirely to home government, though much impeded by protests from the Great Powers against his concession of freedom of the press and the celebrated Festival on the Wartburg (1818). One of his granddaughters is Augusta, the present Empress of Germany.

Briefwechsel mit Goethe (1868); L. von Ranke, *Die Deutsche Mächte und der Fürstenbund* (1872); A. Schöll, *Karl-August-Bachlein* (1857).

Saxony, THE KINGS OF, date from 1806, and the first holder of the title was FREDERICK AUGUSTUS I. (b. 1750, d. 1827), known as the Just. He obtained the electorate in 1763, at the age of thirteen, and during his minority ruled under the guardianship of his uncle Xavier. Saxony was a model kingdom, but did not escape the storm of the French revolution. Frederick Augustus at first joined the allies against France, but after the battle of Jena (1806) made his peace with Napoleon, received the title of king, and was made a member of the Federation of the Rhine. By the Peace of Tilsit he was made ruler over the Grand Duchy of Warsaw. These rewards cost him dear on the downfall of Napoleon: not only had he to surrender the Grand Duchy of Warsaw, but was compelled to hand over to Prussia a large slice of territory as well. In spite of the loss of about half his territory, Frederick Augustus never let go the affection of his subjects.

ANTHONY (b. 1755, d. 1836), succeeded his brother. He, too, was of a liberal disposition, but the people clamoured for rapid reforms, and there were revolutionary outbreaks in many of the large towns during the following year. The result was the promulgation of a new Constitution, and the retirement of the king from public life in 1830, his nephew, Frederick Augustus, acting as regent.

FREDERICK AUGUSTUS II. (b. 1797, d. 1854) succeeded his uncle in 1836. He found himself confronted by an angry opposition, who demanded the freedom of the press. Resistance made the monarchy exceedingly unpopular; the heir-apparent, Prince John, was assaulted at Leipzig, in 1845, and a riot ensued. At last, in 1848, the king dismissed his Conservative Cabinet, and called the Liberals to power. In 1852, however, the reactionaries, under the leadership of Count von Beust, gained the upper hand, and the liberties

granted to the people were abrogated. King Frederick Augustus was killed by an accident while travelling in the Tyrol.

JOHN I. (b. 1801, d. 1873), was an accomplished scholar, and published translations of Dante's *Divina Commedia* and of Shakespeare. He had also served in the Ministry of Finance at Dresden as far back as the years 1821-31, and played a prominent part in his brother's reign as leader of the reactionary party. At first he kept the Conservatives in office; but gradually relaxed the rigour of his régime, and eventually developed into an admirable specimen of a constitutional monarch. Under the guidance of Von Beust, he adopted an Austrian policy, and became the champion of the smaller states in the contentions arising out of the Schleswig-Holstein question, proposing as a solution of the difficulty a Confederation of the Middle States. On the outbreak of the Austrian and Prussian War of 1866 he fought on the side of Austria, but was utterly defeated. King William was disposed to annex Saxony, but by the advice of Prince Bismarck he was content with the fortress of Königstein and a heavy indemnity. King John joined the North-German Confederation, and zealously co-operated with Prussia during the Franco-German War, in which the Saxons greatly distinguished themselves.

* ALBERT I. (b. 1828), the eldest son of King John, succeeded his father in 1873. He had received a thorough military education, had taken part in the Danish War of 1848, and on his father's accession to the throne was made commander of the Saxon infantry, with the title of lieutenant-general. Prince Albert fought in the disastrous battle of Sadowa on the side of Austria (1866), but when Saxony joined the North-German Confederation he was appointed by King William commander-in-chief of the Saxony army, which became the 12th corps of the Federal army. He fought with great distinction in the Franco-Prussian War in the actions before Metz, in the operations which terminated in the surrender of Napoleon at Sedan, and during the siege of Paris, when he held the right bank of the Seine. On the conclusion of the armistice (December 2nd) he returned to Germany, and was made Field-Marshal and Inspector-General of the Army. On Oct. 29th, 1873, he succeeded his father as King of Saxony, and began a prosperous though uneventful reign. He married Caroline, the daughter of Prince Gustavus Vasa of Sweden; and his heir is his brother, Prince George, born in 1832.

Say, JEAN BAPTISTE, political economist (b. 1767, d. Nov. 16th, 1832), was descended from a family of Protestant refugees. He early showed a disposition for letters, and was of a contemplative turn of mind, which unsuited him for business. Consequently we find him assisting Mirabeau and Clavières,

and, during the Reign of Terror, conducting the *Décade Philosophique*. Bonaparte, in 1799, when First Consul, invited him to participate in the tribunate, from which, however, he withdrew in 1804, on the First Consul being raised to the Empire. As an economist his chief merit lay in popularising the doctrines of Adam Smith; among his works are:—*Traité d'Économie Politique* (1802), *Cours Complet d'Économie Politique Pratique* (1829), and *Catechisme d'Économie Politique* (1816).

* **Say**, JEAN BAPTISTE LÉON (b. 1826), the grandson of J. B. Say (q.v.), obtained a good position on the Chemin de Fer du Nord, and his public life may be said to have begun in 1871, when he was returned to the National Assembly by one of the departments of the Seine. Towards the end of the same year he visited London, and was entertained at a public banquet at the Mansion House. An honest Republican, in 1872 he accepted the portfolio of Minister of Finance under M. Thiers, and negotiated a guarantee from the Rothschilds for the payment of the war indemnity. He accepted the same portfolio in 1875 under M. Buffet, though opposed to his monarchical leanings, and retained it in 1876 under Dufaure and under Jules Simon. He held the same position in Dufaure's second ministry, and also in President Grévy's first Cabinet. He was president of the International Monetary Conference held in Paris in 1878, and in 1880 was appointed French ambassador in London during the negotiations for a commercial treaty between France and Britain; his stay in England, however, was cut short in consequence of his being elected president of the Senate, which necessitated his return to Paris. About the same time he was appointed by the Academy of Moral and Political Sciences successor to M. Chevalier as *titulaire* in the department of political economy. Again chosen president of the Senate in 1881, he again became Minister of Finance in M. de Freycinet's Cabinet of 1882. He is an authority on economic and financial questions, to which fact his frequent appointment as Minister of Finance is no doubt due. He has written *Histoire de la Caisse d'Escompte*, *La Ville de Paris et le Crédit Foncier*, and *Les Obligations Populaires*. He translated Mr. Goschen's *Theory of Foreign Exchanges* into French (1866, 2nd ed. 1876).

* **Sayce**, THE REV. ARCHIBALD HENRY, LL.D. (b. 1846), was educated at Grosvenor College, Bath, and Queen's College, Oxford (B.A., with a first-class, 1868), where he became a fellow in 1869, and soon afterwards tutor. In 1876 he was appointed Professor Max Müller's deputy in the Chair of comparative philology at Oxford. Professor Sayce's Hebrew knowledge was called into requisition by the Company for the Revision of the Old Testament, and he has contributed freely to

the journals of learned societies, particularly on the history of the Hittite Empire. His chief works in volume form are:—*An Assyrian Grammar* (1872), *The Principles of Comparative Philology* (1874, 3rd ed. 1885), *The Astronomy and Astrology of the Babylonians* (1874), *Lectures upon the Assyrian Language and Syllabary* (1877), *Introduction to the Science of Language* (1880). In 1882 he contributed a volume on *The Witness of the Ancient Monuments to the Ancient Scriptures to the Present Day Tracts series*, and *Assyria to By-Paths of Bible Knowledge* in 1883. He has also published an annotated edition of *Herodotus I.-III.* (1883) and *The Ancient Empires of the East* in 1884. Professor Sayce has edited several of the works of George Smith, and contributed an excursus on *The Inscriptions Found at Hissarlik to Dr. Schliemann's Ilios.*

Scarlett, Sir J. [ABINGER.]

Schadow, JOHANN GOTTFRIED (b. 1764, d. 1850), sculptor, was the son of a poor tailor in Berlin, but received a training in art from Tassaert, till in 1785 he went to study for three years in Rome. On his return he became secretary to the Berlin Academy, and in 1793 was commissioned to execute the statue of Frederick the Great at Stettin. It was followed by the statues of Ziethen and the Old Dessauer in Berlin, in which the sculptor, against the prevailing fashion, ventured to follow realism in a public monument. In 1795 he executed the well-known Quadriga on the Brandenburg Gate at Berlin, in 1819 the statue of Blücher at Rostock, and in 1821 the monument to Luther at Wittenberg. He was also the sculptor of the statues of Charlemagne, Henry the Fowler, Henry the Lion, Kant, and other great men in the Wall-halla near Ratisbon. In 1816 he became Director of the Berlin Academy, and in 1833 published *Polykletus* (translated 1883), his great work on the proportions of the human figure. He also wrote *Nationalphysiognomien* (1835). Rauch was one of his pupils. His son, **FRIEDRICH WILHELM VON SCHADOW** (b. 1789, d. 1862), was a religious painter of considerable celebrity. As he was a Roman Catholic, several of his works were executed for altarpieces, and are now to be seen in the churches of Berlin, Hanover, and Frankfurt.

F. Friedländer, *Gottfried Schadow; Aufsatze und Briefe, nebst einem Verzeichniss seiner Werke* (1864); Dr. G. Schadow, *Vortrag bei seiner Gedächtnissfeier* (1850).

Schäfer (1), **WILHELM** (b. 1809, d. 1880), a German writer on literature, studied philosophy at Leipzig, and became (1831) a tutor at the principal school in Bremen, where in 1867 he received a professorship. His principal works are:—*Sketch of the History of German Literature* (1836), *Manual of the History of German Literature* (1842), *History of German Literature in the Eighteenth Century* (3 vols., 1855-7), *Goethe's Life* (1850), *Schiller, a Biographical Sketch* (1853), *Literary*

Portraits (1861), and the cycle of songs, *Love and Life*. All of these have gone through several editions. (2) ***ARNOLD SCHÄFER** (b. 1819), brother of the preceding, and historian, studied also from 1838-42 at Leipzig, and was professor successively at the Royal School at Grimma and the University of Greifswald, whence he proceeded (1864) to accept a similar position at Bonn. He has written *Demosthenes and his Time* (3 vols., 1856-8), *Sketch of the Sources of Grecian History to Polybius* (1867), *History of the Seven Years' War* (2 vols., 1867-74), *The Hanse and the North-German Marine* (1869), *Historical Essays and Orations* (1873), *Goethe's Position in the German Nation* (1880).

Schamyl, BEN MOHAMMED SCHAMYL EFFENDI (b. 1797, d. 1871), was known also by the name of "The Warrior-Propheet of the Caucasus." He was born in the village of Himri, north of the Caucasus, and when about thirty years of age headed a religious and political movement against Russia. In 1831 in one of his struggles Schamyl was wounded and many of his followers cut to pieces; he managed to escape, however, and in 1834 we find him chosen to the command of the Caucasian tribes, who kept back for many years the inroads of the combined forces of Russia. By 1859, however, they were considerably weakened, and Schamyl in September was taken prisoner and carried off to Central Russia. Thereafter he spent the remainder of his life chiefly at Moscow. His aim in opposing Russia was to effect a union between the Caucasians of the Black Sea and those of the Caspian.

Scharnhorst, GERHARD JOHANN DAVID VON (b. 1756, d. 1813), one of the greatest of the liberators of Germany, was a native of Hanover. He entered the Hanoverian army in 1776, and served against France in 1793, but exchanged into the Prussian service in 1801, and became director of the military academy at Berlin. In 1804 he became a general and member of the Prussian staff, and in 1806 was present at the battles of Auerstädt and Eylau. In 1807 he was entrusted, as president of the Military Commission, with the task of reorganising the Prussian army. This he succeeded in doing. The stipulations of the Treaty of Paris (1808) that Prussia should only keep an army of 42,000 men in the field were evaded by a short-service system, with an active army of 40,000, a reserve, a *Landwehr* or militia, and if necessary a *Landsturm* or *levée en masse*. In 1813 he accompanied Blücher to the front as chief of the staff, but on June 28th, on the eve of victory, died at Prague while on his way to Vienna to persuade Austria to enter the war. He wrote several military works.

Lives of Scharnhorst, by Kleppel, Schweder, and Boyen; Lehmann, *Stein, Scharnhorst, und Schön*; Seeley, *Life and Times of Stein*.

Scheffel, JOSEPH VICTOR (b. 1826, d. 1886), poet and novelist, was born at Karlsruhe, and studied law at the Universities of Munich, Heidelberg, and Berlin. He was in Italy in 1852, and in the following year published *Gaudeamus*, a collection of student-songs and humorous poems, that at once attained high popularity. It was translated into English in 1872. Devoting himself entirely to literature, Scheffel now produced his rhymed "epic" of the *Trumpeter of Säckingen* in 1854, and next year published the great historical romance of *Ekkehard*, a tale of German life in the tenth century. It has been translated into English by Sofie Delffs, and may, on the whole, be regarded as the author's masterpiece. *Frau Aventiure*, a somewhat similar work, followed in 1863, *Juniperus* in 1867, and the *Mountain Psalms* in 1870 (*Bergpsalmen*, translated 1882). For the Wartburg festival of 1873 he wrote the lyrical drama of the *Bride's Welcome on the Wartburg* (*Der Brautwillkomm*, etc.). His last work was *Hugideo* (1884).

A. Klar, *Scheffel und seine Stellung in der Deutschen Literatur* (1876).

Scheffer, ARY (b. 1795, d. 1858), painter and politician, was the son of a German artist, and was born at Dortrecht, Holland. He exhibited at the Amsterdam annual exhibition when twelve years old, and in 1811 entered Guérin's studio at Paris. At first he confined himself to *genre*, and several of his pictures became exceedingly popular; for instance, *La Veuve du Soldat* and *Le Retour du Conscrit*. He plunged into the Romantic movement in art, and after several failures turned for inspiration to Goethe and Dante. The result was his well-known *Faust* series, in which *Marguerite at the Fountain* is perhaps the best known; his masterpiece, *Francesca da Rimini* (1835), and kindred works. Latterly his art was almost solely religious, and he produced such pictures as *Le Christ Consolateur* (1836), and *Le Christ Enseveli* (1845). Ary Scheffer was an ardent politician of Liberal views; he fought at the barricades during the revolution of 1830, and, with M. Thiers, was deputed to open communications with the family of Louis Philippe.

Mrs. Grote, *Life of Ary Scheffer*; *Etex, Ary Scheffer*.

Schelling, FRIEDRICH WILHELM JOSEPH VON (b. 1775, d. 1854), German philosopher, was the son of a country clergyman in Württemberg, and was educated for the Church at the theological seminary in Tübingen. Here he had for fellow-students the poet Hölderlin, and Hegel, afterwards his philosophical rival. Graduating in 1792, the brilliant and precocious Schelling threw himself ardently into the philosophical movement initiated by Kant and Fichte. By his two first works, *On the Possibility of a Systematic Philosophy* (1794) and *The Ego as Principle of Philosophy* (1796), he at once took rank with

the leaders of the new movement. Fichte declared the latter work to be a commentary on the *Wissenschaftslehre*, which had been unintelligible to many until Schelling's work appeared. In 1796 Schelling went to Leipzig, where for two years he devoted himself chiefly to the natural sciences and medicine, continuing, however, to write articles in exposition and defence of the Fichtian idealism against the orthodox Kantians. The fruit of his scientific studies soon appeared in a series of works in which he sought to apply the principle of Idealism to the interpretation of nature. In 1798 he began to lecture at Jena, and on Fichte's removal from Jena in the following year he took his place as philosophical professor. By this time Schelling had begun to look upon Fichte's position as one-sided and to develop a more comprehensive system of his own. This was expounded in his *Transcendental Idealism* (1800), and more definitely in the *Exposition of My System* (1801). Schelling was joined at Jena by Hegel, and they edited together the *Critical Journal of Philosophy* by way of defending and propagating their joint views. But in 1803 Schelling left Jena for Würzburg, and the two friends began to drift apart. Schelling had previously married the brilliant Caroline Schlegel, who to this end had been separated in a friendly way from her former husband, A. W. Schlegel. Schelling's rapidly succeeding works give evidence of the kaleidoscopic changes of his views. His was a poetic and artistic rather than a scientific nature; hence he was eminently susceptible to new influences. His dialogue, *Bruno, or on the Natural and Divine Principles of Things* (1802), and his *Lectures on the Method of Academic Study* (1803), represent substantially the same view as the *Exposition* which preceded them; but the little tractate on *Philosophy and Religion* (1804) already contains the germs of the mysticism which is further developed in the *Philosophical Investigations concerning the Essence of Human Freedom* (1809), and which constituted henceforth the staple of his philosophy. Other works are devoted to the violent controversy in which he became involved with Fichte and Jacobi successively. In 1807 Schelling left Würzburg for Munich, where he became professor, and in 1812 president of the Munich Academy of Sciences. When the University of Munich was founded in 1827, Schelling was appointed to a philosophical chair. In 1841 he left Munich for Berlin, whither he was summoned by the new king, Frederick William IV., as an ally of orthodoxy against the irreligious tendency which had developed itself within a section of the Hegelian school. Schelling professed to supplement the Hegelian system by a "Positive" philosophy of his own, but his mystical addition found little favour. He died at Ragaz, in Switzerland. For a long time previously he had published

nothing, but his later lectures are included in his collected works as a second division, consisting of 4 vols. The first division, containing his earlier works is in 10 vols. Historically, Schelling occupies a position between Fichte and Hegel in the development of German idealism. He was the main author of the *Philosophy of Nature*, which strove to remedy Fichte's neglect of nature by exhibiting the natural world as itself an ideal or spiritual process, rising in stages towards complete consciousness. It is thus the objective counterpart of the subjective intelligence, and hence Schelling's position is frequently contrasted as Objective Idealism with the Subjective Idealism of Fichte. Worked out with poetic fervour, but with inadequate means, the Nature-Philosophy, it is but right to add, drew upon itself at a later period the ridicule of scientific men. In Schelling's fully developed system both intelligence and nature (subject and object) are regarded as parallel developments of one identical principle called the Absolute. The system is accordingly known as the Philosophy of Identity.

[A. S.]

Schiller, JOHANN CHRISTOPH FRIEDRICH VON (b. 1759, d. 1805), the poet, was the son of Caspar Schiller, a subordinate officer in the Duke of Württemberg's army, and was born at Marbach, but spent most of his childhood at Lorch and Ludwigsberg (1768). He appears to have inherited his genius, and to have received most of his early training from his mother, but unfortunately, at the Duke's request, he was made over to him by his flattered parents in 1773, and set to study law in the Karlschule at Stuttgart. Disgusted with the drudgery, he turned with some relief to medicine in 1775, but the fact was he had already learnt *Werther* and *Götz*, and perhaps a little of Rousseau, and was already aspiring to literature. At nineteen he wrote *The Freebooters* (*Die Räuber*), a most characteristic production of that impassioned time in Germany and in Europe. It was a wild note in the rising storm of revolution and upheaval. The drama teems with high rhetoric, impossible characters of ideal virtue and ideal vices, Rousseau-like denunciations of all that is fashionable, proper, and false. It was first produced at Mannheim in 1782, and the effect was extraordinary. It was *Werther* come again. *Die Räuber* still continues, perhaps deservedly, the most popular play in Germany by either of the two great German poets. For Schiller the immediate result was to bring him into disgrace with the Duke of Württemberg, and soon after the performance of the drama he escaped to Mannheim, taking refuge with the Baron von Dalberg, director of the theatre, who remained his constant friend through life. For the time, however, his next drama, *Fiesco*, was refused, and he retired for some months to Meiningen, where he was entertained by Frau von Wolzogen. Recalled as theatre-

poet to Mannheim in 1783, he produced *Fiesco* and *Intrigue and Love* (*Kabale und Liebe*) there in 1784, but resigning his position in the same year, he visited Leipzig and Dresden with his friend Körner, the father of the poet. Bringing the finished manuscript of *Don Carlos* with him, he reached Weimar in 1787, and for the next two or three years made the neighbouring valley of the Saale, with its learned little towns of Jena, Rudolstadt, and Saalfeld, his headquarters. In Rudolstadt he met Charlotte von Lengefeld, whom he married in 1790, after his appointment to the professorship of history at Jena in succession to Eichhorn. The appointment was probably recommended by Goethe, though the poets were as yet far from intimate, there being at first sight, indeed, a decided antipathy in their natures. Schiller had, in fact, of late years almost forsaken poetry for the study of Kant's philosophy, and the research needed for his *History of the Revolt of the United Netherlands* (*Geschiede des Abfalles der vereinigten Niederlande*), the first volume of which appeared in 1788. It was never finished, though in many ways it might rank above his second great historical work, *The History of the Thirty Years' War* (*Geschiede des dreissigjährigen Kriegs*), part of which was published in 1790. The latter, however, if not the most thorough, is still the most vivid and lifelike account of the period, and is generally estimated amongst the few supreme examples of German prose. In the university Schiller excited more interest as the author of *Die Räuber* than as an historian, so that when the students had satisfied their curiosity by swarming through the windows of his lecture-room, they allowed him afterwards to lecture in profound but impecunious peace. In 1792 he was encouraged by a document declaring him one of the seventeen foreigners on whom the Convention deigned to confer the dignity of French Citizenship. And Schiller was now beginning to gain a surer foothold in his own country also. Admirers were gathering round him in Jena, of whom W. von Humboldt was one. In 1794 he invited Goethe to contribute to the *Hours* magazine (*Die Horen*) and the *Muses' Almanack*, an annual in which most of Schiller's own greatest ballads and lyrics subsequently appeared, though the *Ode to Joy* (*An die Freude*) that forms the text of the last movement in the choral symphony, and *Resignation*, had both been written in 1786, and the *Gods of Greece* in 1788. The two poets were thus brought into closer relation, and the friendship developed fast. To Goethe the result was a new epoch of life; the effect on Schiller was not so marked, for Schiller never wanted driving. Nevertheless his subsequent work gained very noticeably in calmness and beauty of form. Most of his well-known essays on art and poetry, that will, perhaps, after all prove more permanent than many of his more ambitious undertakings, were composed at this time, and were generally

published in the *Horen*. On *Charm and Dignity* (*Ueber Anmuth und Würde*), On *Simple and Sentimental Poetry* (*Ueber naive und sentimentalische Dichtung*), and On *the Sublime* (*Ueber das Erhabene*), may still be read with delight for their power of analysis and definition. The *Xenien*, or the German *Dunciad*, epigrams on the mediocre *littérateurs* of Germany, were published in the *Musenalmanach* for 1796, and were for the most part composed by Schiller. The outcry raised against them only cemented his friendship with Goethe, and in 1799 Schiller agreed to quit Jena, and settled for the rest of his life in Weimar, within three minutes' walk of Goethe's house. In the same year and the next, the trilogy of *Wallenstein*, namely, *Wallenstein's Camp* (*Lager*), *The Piccolomini*, and *Wallenstein's Death* (*Tod*), was represented on the Weimar stage. It is by far the greatest and most complex in character of all Schiller's dramas, and is the most familiar in England, owing to Coleridge's admirable translation. *The Song of the Bell* (*Das Lied von der Glocke*) was written in 1800, and in the same year *Maria Stuart* was produced. The other dramas, *The Maid of Orleans* (*Die Jungfrau von Orléans*), *The Bride of Messina* (*Die Braut von Messina*), and *William Tell*, appeared severally in the years 1801, 1803, and 1804. Schiller was engaged on the drama of *Demetrius* when he died rather suddenly on May 9th, 1805, of a feverish chill acting on a constitution long worn out by overwork, late hours, close rooms, and stimulated excitement. Schiller was a man of singularly high and pure character, and of singularly noble aims; an idealist from his birth up; the German counterpart of the French revolutionary heroes. His error lay in an impatience and restlessness that perhaps arose from too eager ambition, and at all events rendered him partially blind to the truth of things. He seldom saw the world in its reality, as Goethe could see it when he was not led away by artistic theories. This is why there is so little humour in his work, of which, indeed, almost the only instances are to be found in the *Lager*, *The Famous Authoress* (*Die Berühmte Frau*), *Pegasus in Harness* (*Pegasus im Joche*), and perhaps *The Glove* (*Der Handschuh*). Hence, too, his dramas, in spite of their grandeur of thought and style, deal rather with abstractions, first principles, and ideal personalities, than with complex men and women. They are, after all, rather French than Shakespearean in tone, and never rise to the supreme height of tragedy, though in *Wallenstein's Tod* that point is almost reached. And yet Schiller's dramas stand far above any other works ever written for the German stage, and must have exercised incalculable influence on the national character and judgment. The same may be said of his fine and dignified ballads, *The Diver* (*Der Taucher*), *Knight Toggenburg*, *The Fight with the Dragon* (*Der Kampf mit dem Drachen*), *The Cranes of Ibycus* (*Die Kräne*

des Ibycus), *The Count of Habsburg*, and many more. When we consider further the ethereal beauty and ideal aspirations of many of his most familiar lyrics, and remember that, at all events till very lately, Schiller was by far the most popular poet in Germany, so that it has been said that every maidservant knew the *Murderess Mother* (*Die Kindesmörderin*) by heart, it may be said of him, as Professor Seeley has said of Wordsworth, that he has done more than any one else to free his country's literature from vulgarity. Nor is this wonderful when we remember also that, in Goethe's words, Schiller himself was free from the power that holds us all in bonds—the commonplace.

Briefwechsel zwischen Schiller und Goethe, edited by Goethe (1828), translated by L. Dora Schmitz (1879); *Schiller's Leben*, by his sister-in-law, Caroline von Wolzogen (1830); Carlyle, *Life of Schiller* (1825), with supplement of 1872.
[H. W. N.]

Schlegel, AUGUST WILHELM VON (b. 1767, d. 1845), critic and man of letters, was born at Hanover, and was the eldest son of Johann Adolf Schlegel, a pastor of someliterary renown in the last century. August studied at Göttingen under Heyne, and spent three years as a private tutor in Amsterdam, after which he settled at Jena, where he was appointed professor of art and literature in 1798. He at once became the centre of the small group of enthusiasts that afterwards were known as the "Romantic School." They included his brother Friedrich, Tieck, Novalis, and later the Brentanos and Fouqué. Their organ was the *Athenäum* (1798-1800), edited by the Schlegels. Their object was to usher in the new century by rebellion against everything that was tainted by commonplace. The beauty, mystery, and religion of the middle ages were to return in more æsthetic guise; feeling and passion were to reign untrammelled, and cold reason and science to flee away. But clouds overcast the new era's morning. Novalis died; the literary lawgivers of Weimar smiled disdainfully; and in 1802 Schlegel removed to Berlin and completed his tragedy of *Ion*, an imitation of Euripides. In the meantime, however, he had already undertaken the great task that was to be his most abiding service to Germany—the translation of Shakespeare (1799-1810, finished by Tieck in 1825), perhaps the finest work of translation ever executed. In 1804 he published the *Garland of Flowers* (*Blümensträuße*), a collection of his translations from Italian, Spanish, and Portuguese, and in the same year he made the acquaintance of Madame de Staël. As her counsellor and friend, he made with her the circuit of Europe, and for a few years acted as master of the ceremonies in her literary court at Coppel, receiving from her meantime a very sufficient pension for his services. On Madame de Staël's banishment in 1808, Schlegel

accompanied her to Vienna, where he delivered the course of lectures on *Dramatic Literature*, that attained European celebrity, and, apart from his translations, is certainly the most permanently valuable of his works. In 1813 he became secretary to Bernadotte, the Crown Prince of Sweden, but after the war he returned to Madame de Staël, in Paris, and remained there till her death in 1817. Next year he was appointed professor of history and literature at Bonn, and for a time his lectures aroused considerable enthusiasm, and several courses were published. But his insatiable vanity and spleenetic attacks upon equally successful authors exposed him to merciless ridicule, and by degrees he was forgotten. In old age he devoted himself chiefly to Sanskrit and Oriental literature. He was an example of great powers wasted by haste for immediate fame. Of his almost innumerable works we need only further mention the translation of *Calderon* (1803-9); his *Poetic Works* (1811); and *Critical Essays* (*Kritische Schriften*, 1828).

J. Schmidt, *Die Romantik*; Heine, *Romantische Schule*.
[H. W. N.]

Schlegel, KARL WILHELM FRIEDRICH (b. 1772, d. 1829), Orientalist and man of letters, was the younger brother of the above, and after studying at Göttingen and Leipzig, settled in Berlin (1794), and devoted himself to literature. His first publication was *The Greeks and the Romans* (1797), and he assisted Schleiermacher in the beginning of his *Plato* (1798). But it was not till 1799 that he became notorious through his somewhat scandalous novel of *Lucinde*. Owing to this and his unconventional marriage with Moses Mendelssohn's daughter, Dorothea Veit, he left Berlin in 1800, and joined his brother and the rest of the young Romantic School at Jena. In 1801 he published another romance called *Florentin*, and in 1802, *Alarcos*, an impossible drama. In the same year he settled in Paris, and devoted himself almost entirely to the study of Sanskrit, the result being the publication of his highly important and influential work *On the Language and Wisdom of the Indians* (*Ueber die Sprache und Weisheit der Indier*, 1808). Immediately afterwards Friedrich Schlegel and his wife left Paris, were admitted into the Roman Catholic religion at Cologne, and proceeded to Vienna, where he was appointed to a position in the civil service. In 1809 he published a collection of his poems, that are at least of higher order than those of his brothers. In 1812 he delivered his well-known course of lectures on the *History of Ancient and Modern Literature* (published 1815), and in 1815 a course on the *Philosophy of Life*. He died suddenly in Dresden, where he had been lecturing on *Philosophy, especially of Language*. All his later works are imbued with extreme Catholic mysticism. Friedrich Schlegel, though not so famous as his brother, was a greater man and of a truer nature. Romanticism was for him a

vital thing, and he ordered his life accordingly, without shrinking from its ultimate issues. Thus, though far less successful in mere literary effect, he left a nobler record and a few works of lasting interest.

Schleiermacher's *Biography*; Lindemann's *Deutsche Classiker*; Heine's *Romantische Schule*, etc.
[H. W. N.]

Schleiermacher, FRIEDRICH ERNST DANIEL (b. 1768, d. 1834), theologian, was born at Breslau. His father was an army chaplain of strict Evangelical or Moravian views, and in 1785 Schleiermacher was sent to the Hernhut seminary at Barby, but after two years was at his own request transferred to the University of Halle. After acting as a schoolmaster for a year in Berlin, he was ordained curate at Landsberg in 1794, and became a preacher in Berlin in 1796, and at Stolpe in 1802. Meantime he had become prominent in the most advanced intellectual circles of the capital, and was especially intimate with Friedrich Schlegel, at whose suggestion he undertook his justly celebrated translation of *Plato* (*Platon's Werke*, published 1817). In 1804 he was appointed professor of theology in Halle, and in 1810 was invited to the Chair of theology in the newly founded University of Berlin, becoming at the same time preacher in the Church of the Holy Trinity. He retained this position till his death, remaining throughout one of the most conspicuous figures in Germany, owing his influence to his idealism and his extraordinary personal power over the more thoughtful of the university students. He has often been compared to Coleridge in later life, rather perhaps as an inspirer of others and originator of movements that afterwards passed beyond him, than for any close connection in doctrinal position, though even in doctrine some similarity may be found if the more poetic side of Coleridge's speculations be left out of sight. Schleiermacher was admitted to be far more powerful as a speaker than in his books, which, excluding the *Plato*, consist in general of *Sermons* taken down in shorthand during delivery, and other treatises on religion and Christian ethics. His *Sämmtliche Werke* were published in 1834.

His *Life and Letters*, etc., was translated by Frederica Rowan in 1860.

***Schliemann, DR. HEINRICH** (b. 1822), the son of a Lutheran pastor, who early roused his enthusiasm for the heroes of ancient Greece and their exploits, was born at Ankershagen, in Mecklenburg. Misfortunes falling upon his father, young Schliemann at the age of fourteen had to leave school, and became a grocer's assistant, in which capacity he remained for upwards of five years. He then became correspondent and book-keeper in a mercantile house, which in 1846 he went to St. Petersburg to represent, and in 1847 started a business there on his own account.

Being successful in business, he devoted himself to the studies that had awakened his enthusiasm as a boy, and began his excavations in the East—the result of these appearing in 1869 under the title of *Ithaque, Le Péloponnèse, Troie : Recherches Archéologiques*. His discoveries at Hissarlik, the site of ancient Troy, next appeared in *Troy and its Remains* in 1874, the same year in which he obtained leave to excavate Mycenæ. Here he discovered what are supposed to be the royal tombs that Pausanias speaks of as having been pointed out to him as the tombs of the Atridae. He also found gold and silver adornments of considerable artistic merit, and apparently of Phœnician origin. In his work Dr. Schliemann received great aid from his wife, who is a Greek, and an accomplished Greek scholar. In 1877 he visited England, where, at the South Kensington Museum, many of his finds were exhibited. In the same year, too, he published *Mycenæ : a Narrative of Researches and Discoveries at Mycenæ and Tiryns*, to which Mr. Gladstone wrote the preface. His later works include: — *Ilios, the City and Country of the Trojans* (1880); *Orchomenos, and Reise in der Troas im Mai, 1881* (1881); *Catalogue des Trésors de Mycènes au Musée d'Athènes* (1882); *Troja, the Results of the latest Researches upon the Site of Homer's Troy* (1884); and *Tiryns, the Prehistoric Palace of the Kings of Tiryns* (1886). In 1883 he built, at a cost exceeding £20,000, a house in Athens, where with his family he now lives. When he came to England in 1877 he was elected an honorary member of the Grocer's Company, a Fellow of the Society of Antiquaries, a member of the Royal Institute of British Architects, and of the Archaeological Institute.

Autobiographical preface to *Ilios, the City and Country of the Trojans* (1880).

***Schneider, HORTENSE CATHERINE** (b. 1835), French actress, was a native of Bordeaux, and first appeared on the stage at the *Athénée* of her native town, at the age of fifteen. Having received lessons from an old professor, she arrived at Paris and made a successful début at the Théâtre des Variétés, in *Le Chien de Garde*. In 1858 she appeared at the Palais Royal, and speedily became a popular favourite. In *La Belle Héloïse* (1864), and still more in *La Grande Duchesse de Gérolstein*, Mme. Schneider created a perfect furor, and her appearance in London in 1868 was a great success. Indeed, it may fairly be said that Offenbach's most popular operas owed not a little to her singing and dancing. After the fall of the Second Empire her popularity began to decline; and in 1881 she married and retired from the stage.

Schoolcraft, HENRY ROWE (b. 1793, d. 1864), American ethnologist, a native of Albany, New York, was in 1820 appointed geologist to the expedition sent to explore the sources of the Mississippi. In 1822 he became

agent for Indian affairs in the north-west provinces, and gained an intimate acquaintance with the Indians. In 1832 he discovered the Itasca Lake to be the source of the Mississippi (*Narrative of an Expedition to the Itasca Lake*, 1834). Government subsidies enabled him to pursue his researches, and the results were *Notes on the Iroquois* (1846), and *Historical and Statistical Information Respecting the Indian Tribes of the United States* (1851–60). His inquiry into *The Myth of Hiawatha* is full of interest. Schoolcraft's labours were of great value to the study of ethnology.

Schopenhauer, ARTHUR (b. 1788, d. 1860), German philosopher, was born in Dantzig. His father was a banker, and his mother a literary lady of some reputation. Destined by his father for business, his education was somewhat irregular, and when at the age of fifteen he showed a leaning towards a learned career, an attempt was made to divert him from the idea by a prolonged period of travel. He was absent for a year and a half, mainly in England and France, and the effects of the journey are visible in his acquaintance with the literature of the two countries, and in the freshness of his observations on men and manners. "Ce n'est pas un philosophe comme les autres," it has been said of him, "c'est un philosophe qui a vu le monde." In 1805 his father was killed by an accident, and his mother removed to Weimar, where her *salon* was one of the most frequented by the brilliant literary society of the place. Schopenhauer at first made an effort to carry out his father's wish and become a merchant, but finding a business life utterly distasteful he turned to study, and after two years' preparation entered the University of Göttingen in 1809, where in addition to science and history he devoted himself to the study of Plato and Kant. In 1811 he went to Berlin, attracted by Fichte's fame, but found nothing satisfactory in his doctrine. He took his degree in 1813 at Jena, with the essay on the *Fourfold Root of the Principle of Sufficient Reason*. From 1814 to 1818 he lived in Dresden, where his principal work, *The World as Will and Idea*, took shape in his mind, and was gradually written down. It was published in 1819, but was so much at variance with dominant modes of thought that it attracted next to no attention. Schopenhauer qualified himself as lecturer at the University of Berlin in 1820, and essayed the academic career without success. In 1831 the cholera drove him from Berlin, and he settled in Frankfurt, where he continued to live in the enjoyment of his private competence till his death on Sept. 21st, 1860. Schopenhauer's natural disposition was one of ill-tempered discontentment with things in general, joined to an immoderate self-esteem, and an abusive disdain of others; and in spite

of his own ethical precepts his conduct was marked by self-indulgence and ignoble fear. His unfortunate temperament was embittered by the long period of neglect which his doctrine had to encounter, and the predominance of those whom he regarded as sophists and charlatans: his works are full of brilliant abuse of the professional philosophy of the universities. Time, however, brought him his revenge. A second edition of his great work was called for in 1844, and before he died an increasing band of followers was gathering round his name. His works have been collected in 6 vols. by Frauenstädt (2nd ed. 1877), and the chief of them have passed through several editions. Besides his avowed followers, Hartmann represents at the present day the direct influence of his thoughts, while the literary excellence of his style, and the shrewdness of his observations, have caused his works to be read far beyond the schools. Schopenhauer's philosophy attaches itself to the Kantian system, from which it borrows the doctrine of the subjectivity of space, time, and the categories—in fine, of all the forms of our knowledge. All that is presented to us in knowledge, therefore, is phenomenal: in the Will alone do we find nominal or real existence. In the latter respect Schopenhauer follows Kant more in appearance than in reality, for the Will of which he speaks is an unconscious desire or force which, as it were, blindly impels the universe into existence. No sooner does the world come to consciousness of itself in man, than it perceives the irrationality of the desire from which it sprang; it becomes aware of the misery of life and the blessings of non-existence. This is Schopenhauer's pessimism, by which he is best known. True moral endeavour consists in suppressing the clamorous will to live—that is, in systematic asceticism; and Schopenhauer is fond of citing the Buddhist doctrine of Nirwana and the example of the Christian ascetics in support of his peculiar metaphysics and ethics. An English translation of *The World as Will and Idea* was published in 3 vols. in 1886.

[A. S.]

* **Schouvaloff**, COUNT PETER (b. July 15th, 1827), Russian diplomatist, embraced a military career, and by rapid promotion became a general in the Imperial Guard. From 1864-6 he was Governor of the Baltic Provinces, and was then appointed chief of the secret police. He was thus high in the confidence of the Czar; and to the jealousy of Prince Gortschakoff was generally attributed his appointment as ambassador at London in 1874. He was already known in this country, for in 1873 he had been sent by the Czar on a special mission to London, and had assured Lord Granville that Russia had no intention of permanently occupying Khiva, an assurance not borne out by facts. During the Russo-Turkish War of 1877-8, when war seemed

imminent between England and Russia, he discharged his difficult duties with the greatest ability. After the conclusion of the Treaty of San Stefano, Count Schouvaloff of his own responsibility undertook a journey to St. Petersburg, and succeeded in obtaining the Czar's consent to the revision of that treaty by the Congress of Berlin. At that congress he was second Russian plenipotentiary. In 1879 he returned to St. Petersburg, visiting on his way the principal European courts.

Schubert, FRANZ PETER (b. 1797, d. 1828), the composer, was born in a suburb of Vienna, where his father kept a small school. As a mere child he was distinguished for his extraordinary musical talent, and was engaged as leading soprano and first violin in church choirs. In 1808 he was admitted to the *convict*, or training school for imperial choristers, and during the few years of his residence there he composed several songs, fantasias, operettas, and concerted pieces. His first song was *Hagar's Lament*, composed in 1810. In 1814 he was forced to turn from music to the more profitable occupation of instructing the lowest form in his father's school, a duty which he patiently fulfilled for three years, during which much of his finest music was composed and hurriedly written down at odd moments. In 1818 he became music-master to a nobleman's family that resided during the summer at Zelész, in Hungary. He returned to Vienna in the following year, but visited Zelész once more in 1824. Meantime, in spite of continual disappointments and singular ill-fortune in the choice of librettos for the operas with which he attempted to take the stage, he was gradually becoming noticed in musical society. The *Twin Brothers* (*Zwillingbrüder*), an operetta, was written in 1819; the first part of *Lazarus*, a proposed trilogy, in 1820; the *Deutsche Tänze*, *Alfonso and Estrella*, an opera, and two symphonies (Nos. 7 and 8) in 1821-2; the *Conspirators* operetta (*Die Verschworenen*), the opera *Pierrabras*, and the well-known *Rosamunde* music in 1823; the *Octet* (Op. 166) in 1824; Symphony No. 9 and three piano sonatas in 1825; some string quartets, the *Forelle Quintet*, and the *Mass in F*, in 1826; and in 1828 the great *Sonata in C* (No. 10) and the *Mass in E flat*. But great and permanent as many of these longer works are now universally recognised to be, it is not to these, but to his creation of the true song, that Schubert owes his high place in the history of music. He is known to have written about six hundred songs in all, and amongst these are the most perfect examples of song that any nation has produced. Everything he touched seemed to turn to melody, and for the true lyrics of Goethe and Wilhelm Müller, he created the true lyrical counterpart in music, so that henceforth the words, the air, and the accompaniment are inseparable, and cannot be thought of apart.

The melody was borne in upon Schubert's mind generally after one or two perusals of the words, and instantly noted down. A few of the most celebrated of the songs may here be mentioned, with the dates of composition:—*Gretchen at the Spinning-Wheel* (*Am Spinnrade*, 1815), *Kolma's Lament* (*Klage*, 1815), *The Erlking* (*Erlkönig*, as first arranged, 1815), *The Wild Rose* (*Heidenröslein*, 1815), *The Maiden's Lament* (*Der Mädchen's Klage*, 1815), *The Wanderer* (*Der Wanderer*, 1816), *The King in Thule* (*Der König in Thule*, 1816), *Slumber Song* (*Schlummerlied*, 1817), *Gruppe aus dem Tartarus* (1817), *Litaney* (1818), the cycle of the *Miller's Daughter* (*Die Schöne Müllerin*, 1823), *The Dwarf* (*Der Zwerg*, 1823), *The Young Nun* (*Die Junge Nonne*, 1825), songs from Scott and *Ave Maria* (1825), "*Hark! hark! the lark*" (1826), *Sylvia* (1826), *The Crusade* (*Der Kreuzzug*, 1827), and *The Winter's Journey* (*Müller's Winterreise*, 1827-8). A number of songs, many of which count amongst his greatest works, were written in 1828, in which year he died of fever at the early age of thirty-one, almost in want. These songs were published after his death, with the title of the *Swan Song* (*Schwanengesang*). Of uncertain date we may mention *Death and the Girl* (*Der Tod und das Mädchen*), Schiller's *Dithyrambe*, and the songs of Mignon. Beethoven was among the few that recognised the "divine fire" in Schubert during his lifetime, but since his death his fame has been established by Schumann and Mendelssohn.

Sir George Grove's article on Schubert in his *Dictionary of Music and Musicians*, and the biography by Dr. Heinrich Kreissle (Franz Schubert, 1865).

[H. W. N.]

Schulze-Delitzsch, HERMANN (b. 1808, d. 1883), was a native of Saxony. After finishing his legal studies he obtained lucrative posts in the Saxon law courts, devoting his time, however, chiefly to the study of economic problems. In 1848 his native town sent him as deputy to the Berlin Assembly, and on the appointment of a commission to inquire into the condition of the working classes he was made its president. In 1861 he was elected for Berlin, which he continued to represent in the North German Parliament and in the Reichstag. Meanwhile his position as president of the Labour Inquiry Committee brought him in touch with bodies of workmen, and by 1866 he had drawn around him more than 1,600 labour associations. He was a strong individualist, advocating self-reliance and savings banks, and was therefore a vigorous opponent of Lassalle's theories. [LASSALLE.] His influence amongst the industrial classes extended to Belgium, Italy, and France. His chief works are:—*Das Associationsbuch* (1862), *Die Arbeiterklassen* (1863), *Die Vorschuss und Creditvereine als Volksbanken* (1867), *Kapitel zu einem Deutschen Arbeiterkatechismus* (1873).

M. W.—29*

Schumann, ROBERT ALEXANDER (b. June 8th, 1810; d. July 29th, 1856), a native of Saxony, was destined by his parents for the legal profession, and in 1829 entered Leipzig University. With law he made little progress, music commanding most of his time and attention. In 1830 he forsook law and took to music as a profession, intending to become a great pianoforte player. To this end he practised assiduously, and to make a short cut to perfection invented a contrivance which crippled his hand. His master, Wieck (whose daughter afterwards became Madame Schumann) urged the energetic student towards composition as a last resource. Heinrich Dorn now became his master, and under his care Schumann was gradually moulded into shape. It soon became evident that in composition the true outlet had been discovered for this masterly though impulsive mind, and his compositions for this first period—the "storm period" as Schumann called it—show how largely Dorn gave way to the vagaries of his talented pupil. To this period belong the *Abegg Variations*, the *Études Symphoniques*, the *Kreisleriana*, the *Papillons Fantaisies*, two sonatas in F sharp minor and G minor. The year 1840 marks a change. It begins what may be termed Schumann's "classical" period. This year he married Clara Wieck, whose playing of her husband's music has won him a popularity throughout Europe; he also received the degree of Doctor of Philosophy from the Jena University, and this year marks the beginning of the period during which most of his fine songs and lyrical compositions were written, the beauty of which has only been reached in similar works by Beethoven and Schubert. Schumann next turned to the highest form of the composer's art—compositions for the orchestra—his contributions to which have justified his title to rank as a master of the art. Chief among such orchestral works stand the four symphonies in B flat, D minor, C major, and E flat; an overture, scherzo and finale, a kind of symphony without a slow movement; the exceedingly fine piano quartet (Op. 44) in E flat major; three quartets, and other beautiful chamber music. To dramatic music Schumann has contributed a so-called profane oratorio, *Paradiese and the Peri* (1843); an opera, *Généviève* (1848); and the *Manfred* music (1848); and the music to the *Epilogue of Goethe's Faust* (1850); but in all these, while the music is always beautiful, there is a lack of dramatic power and of knowledge of stage capacity that would be fatal to success in this direction. Not the least important event in Schumann's life was the inauguration, in 1834, of the *Neue Zeitschrift für Musik*, a journal which was to be the organ of the new musical doctrines which Schumann, Wieck, Schunke, and other of its enthusiastic contributors were seeking to develop, and which subsequently became the recognised organ in

Germany of the party that would raise music more into the sphere of the poetical and the ideal. It enjoyed great success, but after ten years' active connection with it, the state of Schumann's health forced him to sever himself from this literary enterprise. The journal contained the expression of all Schumann's views on the subject of music, and on this account it constitutes a valuable contribution to the literature of the art. In 1853 the mental disease which had long troubled Schumann, and which twenty years previously had prompted him to attempt suicide, developed alarmingly, so much so that in 1854 he threw himself from one of the Rhine bridges, finally ending his life two years afterwards in a private asylum. That Schumann fully deserves the high place in art which is now being accorded to him no one will dispute. As a conductor he was a failure, as his experiences when director of the Düsseldorf Concerts (1850) prove; but in the field of creative art his exalted genius was far in advance of his day, and now that his wife has familiarised the world with his compositions, there is little doubt that as they become more known their composer will, in due course, find a place of honour among the greatest creators in this region of art. The second edition of his critical writings, *Gesammelte Schriften über Musik*, was published in 1875, and has been partially translated by F. H. Ritter.

Lives in German by Wasiliewski (1858) and Reissman (1875). [F. J. C.]

Schwanthaler, **LUDWIG MICHAEL VON** (b. 1802, d. 1848), German sculptor, was a native of Munich, and succeeded his father as court sculptor. He spent most of his life at his native town, and adorned it with many fine pieces of statuary in the Romantic style, of which school he was the leading spirit. Schwanthaler's chief works are: the pediments of the Walhalla, the statuettes of the Pinakothek, the bas-relief of the Barbarossa Hall, and the colossal statue of Bavaria, over fifty feet in height.

Schwarzenberg, (1) **KARL PHILIPP**, **PRINCE VON** (b. 1771, d. 1810), Austrian general, entered the army at an early age, and served against the Turks in 1789, and through the earlier campaigns of the war of the French revolution. He fought at Hohenlinden as field-marshal-lieutenant in 1799, and in 1805 commanded a division under Mack, succeeding in making his escape from the surrender at Ulm. In 1809 he fought brilliantly at Wagram, and commanded the rear-guard in the retreat to Znaim. He conducted the negotiations which preceded the marriage of the Emperor of the French to the Archduchess Maria-Louisa. In 1812 he commanded the Austrian detachment sent to aid Napoleon in the Russian campaign, and took care not to render him very efficient assist-

ance. During the campaigns of 1813-14 he was generalissimo of the allies, and, distracted by divided councils, proved not particularly efficient. He was saved by the Prussians from absolute defeat on the first day of Leipzig, and in the following months, acting under the orders of Metternich, did as little harm to the French as he could. After Blücher's victory at Laon, however, he met Napoleon at Arcis-sur-Aube (March 20th, 1814), and there fought a drawn battle with the French, which practically brought the campaign to an end, as it was followed by the junction with Blücher and the march on Paris. In 1815 he was marching to the rescue of the Prussians and English, at the head of the Russians and Austrians, when he heard of Waterloo. He died of apoplexy. His nephew, (2) **FELIX LUDWIG PRINCE VON SCHWARZENBERG** (b. 1800, d. 1852), was first celebrated as a diplomatist, and conducted the negotiations with Charles Albert of Sardinia after the Italian rebellion of 1848. On the outbreak of the revolution in Vienna he took up the reins of government (Nov. 21st, 1848), and by a severe policy of repression restored order throughout the empire.

* **Schweinfurth**, **GEORGE AUGUST** (b. 1836), African traveller, was born at Riga, and took his degree of Doctor of Philosophy at Berlin. From 1863 to 1866 he went on a botanical expedition to the Nile Valley, and penetrated to Khartoum. In 1868 he went again to Africa, the Humboldt Institution having subsidised his undertaking, and ascending the Nile arrived in the unknown district of Monbutto and discovered the river Welle, called by H. M. Stanley the Aruwini, an important tributary of the Congo. On his return to Europe he published *Im Herzen von Afrika* (*In the Heart of Africa*) in 1873. It is an important record of African discovery, and gained for its author the directorship of the Natural History Museum at Cairo. His subsequent explorations embraced the country between the Nile and the Red Sea. In 1886, in an address at Berlin, he commented severely upon the evils inflicted upon the Soudan by the British expeditions.

Scoresby, **WILLIAM**, **D.D.** (b. 1789, d. 1857), Arctic explorer, a native of Yorkshire, was educated in the neighbourhood of Blackwall. His father was a mariner, and he himself early became inspired with a fondness for the sea. In 1800 he secreted himself in his father's vessel until it was well out to sea on a voyage to Greenland; on being discovered, as there was no help for it, he was apprenticed there and then. His leisure was spent in study, and in a few years he was chief mate. In 1806 he spent a few months at the University of Edinburgh; and in 1807 was introduced to Sir Joseph Banks. After a

voyage as harpooner in 1809, he again returned to the University of Edinburgh. In 1810 he was appointed commander of the whaler *Revolution*, and, thereafter, of the *Esk*. Meanwhile he was making scientific observations, had supplied valuable facts to the Wernerian Society, picked up during his Greenland voyages, and was experimenting upon the temperature of the ocean; the results of these experiments are given in his work, *The Arctic Regions*, written in 1819. In 1822 he surveyed the eastern coast of Greenland for about 800 miles, and cleared away many errors respecting those latitudes. In the same year his wife, whom he had married in 1811, died, and, determining to become a clergyman, he gave up the sea, and became a student at Queen's College, Cambridge. He graduated M.A., and was granted the degree of D.D., thereafter receiving the appointment as clergyman to the Mariners' Church in Liverpool. He still continued his scientific observations, which were now chiefly in magnetism. His next appointment was in 1839 to the vicarage of Bradford, where his health gave way, and compelled him to resign. He made two voyages to America, during which he still continued his investigations; and in 1853 we find him sailing from Liverpool to prosecute his researches in the southern hemisphere. These have resulted in a better understanding of the compass. Besides *The Arctic Regions* already mentioned, he has also written a *Journal of a Voyage to the Northern Whale Fishery*, and a *Journal of a Voyage to Australia, and Round the World, for Magnetical Research*.

***Scott, CLEMENT WILLIAM** (b. 1841), dramatist and dramatic critic, was educated at Marlborough College, and became a clerk in the War Office in 1860. At the same time he contributed dramatic articles to several of the London papers, and on his retirement from the Civil Service in 1879 he became attached to the staff of the *Daily Telegraph*, in the capacity of dramatic critic. He also became editor of the popular *Theatre* magazine in 1880. Mr. Scott's ballads are universally appreciated. The most important collections of them are *Lays of a Londoner* (1882) and *Poems for Recitation* (1884). He has also edited some collections of stage stories, and published in volume form some descriptive articles of holiday rambles. Mr. Scott was the author of the very successful adaptations of the dramas of M. Sardou, *Diplomacy* and *Peril*, written in conjunction with Mr. B. C. Stephenson, and *Odette*, of which he was sole author. *The Cape Mail*, written for Mrs. Kendal, and *Sister Mary*, written in conjunction with Mr. Wilson Barrett, for Miss Lingard, also achieved complete success (1886).

Scott, DAVID (b. 1806, d. 1849), Scottish painter, was a native of Edinburgh, and studied art under his father, a landscape

painter, but from the first displayed attraction towards the terrible and the gigantic. His first picture was *The Hopes of Early Genius dispelled by Death*, and it was followed by *Lot and his Daughters fleeing from the Cities of the Plain*, which was rejected by the British Institution on account of its size. David Scott's peculiar mould of genius fitted admirably the spirit of Coleridge's *Ancient Mariner*, and his illustrations to that poem were very fine. In 1832 he exhibited *Sarpedon carried by Sleep and Death*, and in the following year, while on a visit to Rome, painted a very characteristic picture, *Family Discord—the Household Gods Destroyed*. *Nimrod the Mighty Hunter*, *Ariel and Caliban*, *The Alchymist Paracelsus*, *Orestes pursued by the Furies*, *Queen Elizabeth in the Globe Theatre* and *The Duke of Gloucester taken into the Water-gate of Calais* followed, and in 1847, shortly before his death, David Scott produced his masterpiece, *Vasco de Gama encountering the Spirit of the Cape*. Scott's illustrations of *The Pilgrim's Progress* were not at all inferior to those of the *Ancient Mariner*, and he contributed some admirable articles on *The Characteristics of the Great Masters to Blackwood's Magazine*. He was deeply disappointed at his want of success in the competition for the decoration of the Houses of Parliament, and the shock probably hastened his end.

W. B. Scott, *Life of David Scott*.

Scott, SIR GEORGE GILBERT, R.A., F.S.A. (b. 1811, d. March 17th, 1878), was the son of a clergyman, and grandson of the Rev. Thomas Scott, the celebrated author of the *Commentary on the Bible*—connections that doubtless inclined him to the study of church architecture. He was born at Gawcott, Bucks. As he early exhibited a taste for drawing ancient churches, his father placed him with an architect, a step that events proved to be a wise one. At that time Gothic architecture was attracting attention, and Gilbert Scott became perhaps its most ardent advocate. In 1841 he designed the Martyrs' Memorial at Oxford and the new church at Camberwell. In a competition for the rebuilding of the church of St. Nicholas at Hamburg, which had been burnt down, Mr. Scott's designs were accepted (1848); this work was completed not very long before the architect's death, the spire being 478 feet high, the highest in the world excepting that of Cologne Cathedral. In 1848 he furnished designs for the Cathedral Church at St. John's, Newfoundland, which was still unfinished when he died. Another competition with the best architects in Europe resulted in his securing the erection of the Hôtel de Ville and Senate House at Hamburg; he afterwards had the restoring of the parish church at Doncaster. Besides these achievements we may notice also the restoration of the Cathedrals of Ely, Lichfield, Hereford, Ripon,

Gloucester, Chester, St. Davids, St. Asaph, Bangor, Salisbury, Exeter, Peterborough, Worcester, Rochester, and Oxford. He has left traces of his handiwork on Chichester and Durham Cathedrals; the new Abbey gatehouse and the buildings on the north side of Westminster Abbey were designed by him. In addition to his work upon ecclesiastical edifices, he was the designer of many secular buildings; amongst the best are St. Pancras Station (Midland Railway terminus), the Albert Memorial, the Foreign Office, the Home and Colonial Offices, and, in conjunction with Sir Digby Wyatt, the India Office. He also restored Exeter, Merton, and New Colleges, Oxford; altered St. John's College, Cambridge; and entirely rebuilt the Glasgow University Buildings. He published:—*Plea for the Faithful Restoration of our Ancient Churches* (1852), *Remarks on Secular and Domestic Architecture* (1862), *Gleanings from Westminster Abbey* (1864), *Conservation of Ancient Architectural Monuments* (1864), and *Lectures on the Rise and Development of Mediæval Architecture* (1878-9). He received, of course, many honours; it was at the Queen's wish that he was made architect to the National Memorial to Prince Albert, for which in 1872 he was knighted. He became A.R.A. in 1855, R.A. in 1861, and President of the Institute of Architects in 1873.

The Builder, April 6th, 1878: Sir G. G. Scott, *Personal and Professional Recollections*, edited by his son, G. G. Scott (1879).

Scott, MICHAEL (b. 1789, d. 1835), humorist, was educated at the High School and University of Glasgow, his native town, and in 1806 went to Jamaica, where he remained until 1822. He returned to Scotland, and became engaged in mercantile transactions. His admirably conceived sketches, *Tom Cringle's Log*, were at first published incognito in *Blackwood's Magazine*, and appeared in volume form in 1834; *The Cruise of the Midge*, which was hardly so successful, appeared in 1836.

* **Scott, THE VERY REV. R.** [LIDDELL.]

Scott, STR WALTER (b. Aug. 15th, 1771; d. Sept. 21st, 1832), was the son of Walter Scott, a Writer to the Signet in Edinburgh, in which town Sir Walter was born, and of Anne Rutherford, the daughter of an Edinburgh medical professor. On his father's side the great novelist and poet was descended from the house of Buccleuch. He was delicate as a child, and became lame in his second year. Up to his eighth year he lived at his grandfather's farmhouse, Sandyknowe, near Smalholme Tower, amid scenes steeped with Border-history associations. In 1779 he returned home, and was sent to the High School, Edinburgh, where he remained until 1783. He was not a brilliant scholar, though his tenacious memory procured for him the title of "historian." It was in the playground rather

than in the class-room that he found vent for his activity, and we read of him fighting with his school-fellows—the combatants being bound to a plank so as to neutralise the effect of his lameness. He was fond of reading, however, and when he left the High School, he left it in his own words, "with a great quantity of general information, ill arranged, indeed, and collected without system, yet deeply impressed upon my mind." In 1783 he went to Kelso, where a sister of his father's resided, and here there came into his hands *Percy's Reliques of Ancient Poetry*, which increased the store of Scottish ballads that he had learned to recite at Sandyknowe. In the same year, his twelfth, he entered the Edinburgh University, attending only the Greek, Latin, and Logic classes—moral philosophy and history he took later on. As a classic, his attainments may be judged by the remark of his Greek professor, who said that "dunce he was, and dunce would remain." At this period he acquired a knowledge of French, Italian, and Spanish, and a few years later of German. In 1786, Scott, then fifteen years of age, was articled to his father for five years, and continued to do the drudgery of a common clerk until 1790, when he began to prepare for the bar. During this period his mind seems to have been forming for its ultimate flights, for we find him imbibing historical works and romances in deep draughts. He also made some juvenile attempts at poetry, and wrote essays for debating societies. In 1792 he was called to the bar, and about this time began to collect the Border lore with which his works abound. In 1796 he first appeared in print as the translator from the German of Bürger's ballads—a work that won him Monk Lewis's acquaintance—*Lenore* and *Wild Huntsman*. The following year (1797) he married Miss Carpenter, a lady of French parentage; and in 1798 again appeared before the public as the translator of Goethe's *Goetz von Berlichingen*. This was followed in 1799 by the *Glenfinlas*, the *Eve of St. John*, and the *Grey Brothers*. The same year he was appointed Deputy-Sheriff of Selkirkshire. In 1800-1 he was preparing his *Border Minstrelsy*, which was completed in 1803; this work, in the opinion of a critic, contained "the elements of a hundred historical romances," a remark that we now know to have been prophetic. This was his first work that brought him any kind of reputation. Then appeared the *Lay of the Last Minstrel* (1805), and his fame began to grow. In 1806 he was appointed to be one of the principal Clerks of Sessions, with a salary of £800 a year, and only a few hours' work in the forenoon during the sitting of the court. In connection with this appointment he had to go to London, where he met Caroline, Princess of Wales. He was now acquainted with the first men of the time, in the enjoyment of leisure and of a fixed revenue of upwards of £1,000

a year. In 1805 he had become a partner in the printing establishment of James Ballantyne and Company, and henceforth a stranger to leisure. In 1808 appeared *Marmion* and his edition of Dryden, which had been entered upon in 1805, the same year in which he began to think of novel-writing; in 1810 *The Lady of the Lake*, the most popular of all his poems; in 1811 *The Vision of Don Roderick*; in 1812 *Rokeby*; in 1814 his edition of Swift; and in 1815 *The Lord of the Isles*. For ten years (1815-25) his name scarcely appeared before the public as an author, though during this time volume after volume of the *Waverley Novels* was issued from the press. First came *Waverley* in 1814; then *Guy Mannering* in 1815; *The Antiquary*, *Old Mortality*, and *The Black Dwarf* in 1816; *Harold the Dauntless* and *Rob Roy* in 1817; *The Heart of Midlothian*, *The Bride of Lammermoor*, and *The Legend of Montrose* in 1819; *Ivanhoe*, *The Monastery*, and *The Abbot* in 1820; *Kenilworth* in 1821; *The Pirate* and *The Fortunes of Nigel* in 1822; *Peveril of the Peak* and *Quentin Durward* in 1823; *St. Ronan's Well* and *Redgauntlet* in 1824; *The Betrothed*, *The Talisman*, and *Lives of the Novelists* in 1825; *Woodstock* in 1826, with such rapidity that many were of opinion that there must be more than one man engaged in writing them. The identity of "the Great Unknown" became a matter of eager speculation, and it was not until the close of his career that Scott took upon himself the responsibility of any of them. We have already mentioned Scott's connection with the printing house of James Ballantyne and Company. This connection, which was formed in 1805, was kept a secret from his friends as well as from the public. Another secret connection was formed with a publishing house started under the management of John Ballantyne, a brother of James. Scott had quarrelled with Constable and Company, the publishers of the *Edinburgh Review*, and hoped to check them by starting an opposing publishing company. At the same time he also took an active part in promoting the scheme for establishing the *Quarterly Review*, which was intended to oppose the *Edinburgh Review*. Meanwhile, too, he had been purchasing land, beginning in 1811 with a farm, Abbotsford, of a hundred acres on the Tweed; in a few years new purchases were added, and Abbotsford became a large estate, and upon it was raised a baronial pile that led to a costly, magnificent style of life. It was in 1820 that he received his baronetcy, and from that date "to the final catastrophe in 1826, no mansion in Europe, of poet or of nobleman, could boast such a succession of guests, illustrious for rank or talent, as those who sat at Sir Walter Scott's board, and departed proud of having been so honoured. His family, meanwhile, grew up around him; his eldest son and daughter married; most of his early friends

continued to stand by his side; and few that saw the poet in 1825, a hale and seemingly happy man of fifty-four, could have guessed that there remained for him only a few more years (years of mortification and sorrow), before he should sink into the grave, "struck down by internal calamity, not by the gentle hand of time." This catastrophe was brought on through his connection with the publishing house of Ballantyne. In 1826 the Messrs. Constable stopped payment; this instantly led to the failure of the Ballantyne firm, with whose affairs Scott was hopelessly involved, and Scott's secret connection with the latter firm consequently came out. He declined to be dealt with as an ordinary bankrupt, and thereby be released from the claims of his creditors—he insisted on being allowed to pay the debt off in full; and so strenuous were his efforts in this direction that between January, 1826, and January, 1828, he acquired for his creditors the great sum of £40,000, and in a few years more the whole Ballantyne debt was paid. The year of this catastrophe (1826) was also the year in which he lost his wife, and wrote *Woodstock*. In 1827 appeared his *Life of Napoleon*, *Chronicles of the Canongate* (first series; second series, 1828); and *Tales of a Grandfather* (first series; second series, 1828; third series, 1829); *The Fair Maid of Perth* in 1828; in 1829 *Anne of Geierstein*, also a *History of Scotland*, vol. i., and he began the annotated edition of his collected novels and poems that proved most remunerative: in 1830 a couple of dramas. *Letters on Demonology*, fourth series of *Tales of a Grandfather*, and vol. ii. of the *History of Scotland*; and in 1831 *Count Robert and Castle Dangerous*—his last. In 1829 signs of decaying health began to appear, and in 1830 there came upon him a paralytic stroke—still he continued his titanic task. He had now retired to Abbotsford to reside there permanently, and in 1831 was persuaded to give up literary work. A tour to the Continent was unavailing, and after a few months' absence he returned home. His death occurred at Abbotsford, and he was buried in the ruins of Dryburgh Abbey. Goethe was once asked to put his opinion of Scott on paper; his reply was that Scott's art was so high that it was hard to give a formal opinion on it. Scott has been called the most unselfconscious of our modern poets. He differs from Byron, Shelley, and Wordsworth, in that he never seeks to draw a moral, or deal with the workings of the human mind. His material is the object-world; like Homer, he presents a scene and is content with this. Hence the strength and vividness of his lines. The same feature characterises his novels; his aim is entirely dramatic. His page is alive with action. He does not stay to delineate feelings; he gives the effect of those feelings, the conduct to which they lead. Hence his thrilling pathos and equally thrilling terror. To quote again from

Goethe: "All is great in the *Waverley Novels*—material, effect, character, execution." Mr. Hutton has pointed out that "the most striking feature of Scott's romances is that, for the most part, they are pivoted on public rather than private interests and passions. . . . Next, though most of these stories are rightly called romances, no one can help observing that they give the side of life that is unromantic quite as vigorously as the romantic side."

[W. B. R.]

***Scott, WILLIAM BELL** (b. 1811), poet, painter, etcher, and man of letters, a native of St. Leonards, near Edinburgh, and son of Robert Scott the engraver, was educated at the Edinburgh High School, and entered the antique class of the Academy of the Government Trustees for the Advancement of Art. In 1832 he drew from the antique in the British Museum; and, returning to Edinburgh, he put forth his earliest poems in *Tait's Magazine*, and in *The Edinburgh University Souvenir* for 1834. He finally left Edinburgh for London about 1836, and exhibited at the British Institution, in 1838, his first considerable picture, *The Old English Ballad Singer*, a scene with many figures. The same year appeared his first volume of poetry, *Hades, or the Transit and The Progress of Mind, an Ode*. In 1844 he undertook, at the request of the Board of Trade, the establishment of a school of art at Newcastle-on-Tyne, and while there he published in 1846 his only long poem, *The Year of the World, a Philosophical Poem on Redemption from the Fall*. In 1850 appeared his larger *Memoir of David Scott*, and about the same period his *Antiquarian Gleanings in the North of England, and Ornamental Designs for Silver and Gold Work, with Essay on Ornamental Design*. Under the title of *Chorea Sancti Viti, or Steps in the Life of Prince Legion*, he published (1851) a series of allegorical etchings; and in 1854 appeared the volume best known as *Poems by a Painter*. For five years afterwards he was employed on his most important work in painting, eight large pictures illustrating the history of the English Border, at Wallington Hall, the seat of Sir Walter Trevelyan, Bart.; and in 1863-4 the complement of this work was executed in the form of eighteen oil paintings on canvas for the spandrels of the arches in the saloon containing the "Border" subjects. These additional paintings, illustrating the ballad of Chevy Chase, are of an extraordinary vigour and originality. Meanwhile he had published in 1858 *Selections from the Works of*

David Scott, R.S.A., with a Memoir of his Life, etched and written by his Brother, and in 1861 his *Half-hour Lectures on the History and Practice of the Fine and Ornamental Arts*. In 1868 he completed, in encaustic, a series of mural paintings illustrating *The King's Quair*, on the staircase of Penkill Castle in Ayrshire, the residence of the family of Boyd. In 1869 came out *Albert Dürer, his Life and Works*, a critical biography, containing admirable etchings by the author, and in 1876 he republished a considerable mass of his poetry, with some not issued before—*Ballads, Studies from Nature, Sonnets*, etc.—a collection decorated with some of his best etched work, and with some etchings by Mr. L. Alma-Tadema. A folio volume, entitled *William Blake, Etchings from his Work, with Descriptive Text*, appeared in 1878; and in the following year he made a valuable contribution to English art-literature under the title of *The Little Masters* (of Germany). In 1882 he added to the list of his acquirements the title of architect, by building a hall at Penkill Castle, in a mediæval manner, with an open timber roof resting on carved stone corbels; and in the same year he published a fresh volume of poetry—a hundred short pieces, entitled *The Poet's Harvest Home*. With point and pen Mr. Scott has done an immense amount of fugitive artistic and literary work worthy of careful bringing together. Until 1886 he was an art examiner under the Education Board; and for over forty years of his life he exercised a strong and wholesome influence on younger men in the world of art and letters, notably on the band of enthusiasts now remembered as the Pre-Raphaelite Brotherhood. His own work, whether in art or letters, never fails to evince earnestness, individual thought, or deep learning; at times it is mainly these qualities, at times the less tangible poetic flash and fervour, that render the work of his hand and mind memorable, in whatever domain.

[H. B. F.]

Scott, WINFIELD (b. 1786, d. 1866), a distinguished American general, was the grandson of a Scottish Jacobite, who, after the disastrous battle of Culloden in 1746, emigrated to America and settled in Virginia. Young Scott studied law at William and Mary College under the American jurist, Benjamin Watkins Leigh, and was admitted to the bar in 1806. He soon, however, conceived a distaste to the practice of the law, and abandoned it for the military profession. He entered the army as a volunteer in 1807 on the proclamation of Jefferson, issued after the attack on the *Chesapeake*, and in 1808 became a captain of artillery. On the outbreak of the war with the English in 1812 he was ordered to the Canada frontier, where he was made prisoner at Queenstown Heights. He was, however, soon after exchanged, when he joined, with the rank of colonel, the army

under General Dearborn in the capacity of adjutant-general. He commanded the advance in the attack on Fort George in 1813, when he was severely injured by the explosion of a magazine at its surrender; and crossing the Niagara, he defeated the British at Chippewa in 1814. Then followed the bloody engagement at Lundy's Lane, in which Scott was severely wounded. At the conclusion of this war he was raised to the rank of major-general, was awarded by Congress a gold medal, and was offered, but declined, the Secretaryship of War. He next visited Europe in a military and diplomatic capacity (1814-16), and during the nullification troubles in 1832 he was sent to Charleston on a confidential mission which was completely successful. He subsequently showed great military tact and discretion in the dispute with the Cherokees in 1838, in the Canadian Rebellion of 1837-9, and in the boundary quarrel with New Brunswick in 1839, and in 1841 was promoted commander-in-chief. The annexation of Texas having resulted in a war with Mexico in 1846, Scott was ordered to the front in 1847, invested the city of Vera Cruz, which capitulated, captured Cerro Gordo, and subsequently gained the battles of Churubusco, Molino del Rey, and Chapultepec, after which he entered Mexico city in triumph (1848-9). In 1852 he unsuccessfully stood for the presidency as the Whig nominee, and in 1861 retired from active service. As a soldier, General Scott was frank and generous in disposition, bold in courage, and ardent in temperament, and to these qualities he combined a lofty sense of honour, unflinching integrity, and simplicity of manner. In 1835 he published *Infantry Tactics*, which had been preceded in 1825 by *General Regulations for the Army*; and he spent his latter days in writing his *Autobiography*.

Autobiography (1864); A. Sumpter, *Life of General Scott*; J. T. Headley, *Life of Scott*.

Scribe, AUGUSTIN EUGÈNE (b. 1791, d. 1861), the prolific writer who contributed over 400 dramas and operas to the French stage, was the son of a silk mercer in the Rue St. Denis, Paris, and destined for the bar. In 1810 he produced at the Variétés a light comedy, which, like its immediate successors, was a complete failure. Undeterred by this, and by dint of an inexhaustible invention and the possession of private means, Scribe was enabled to persist in his self-chosen career, and at last *Une Nuit de la Garde Nationale*, written in collaboration with Delestre Poirson, achieved in 1815 a brilliant success. From that date he exchanged law entirely for play-writing, and produced at the rate of several plays a year, acted at the Variétés, Vaudeville, Gymnase, Théâtre Français, and Opéra-Comique. For the Gymnase alone he wrote in ten years 150 plays. In this rapid composition he received the aid of numerous

collaborateurs, all of whom assign him the lion's share in their merit, which was generally dramatic rather than literary. His great talent lay in seizing the dramatic points of his subject, investing the merest nothings with an air of reality, and cleverly working out his *dénouement*. Of his vaudevilles, which are preferred by many of his admirers to his comedies, *Les Premières Amours*, *Le Mariage Enfantin*, *La Reine de Seize Ans*, and *Le Diplomate* are among the best. *Bertrand et Raton*, *La Camaraderie*, *Une Chaîne*, *Le Verre d'Eau*, *Adrienne Lecouvreur* are but a few among his most successful five-act dramas. He also wrote numerous librettos for Auber, Meyerbeer, and other composers. *Fra Diavolo*, *Robert le Diable*, *L'Étoile du Nord*, *La Juive*, *Le Prophète*, and *Les Huguenots* are from his pen. Several editions of his works appeared during his lifetime, and in 1874 a 50-volume edition was published. In 1836 Scribe became a member of the Academy, and in 1860 Napoleon III. nominated him a member of the Paris Municipal Council. He realised the largest fortune ever acquired by a French author from his works, and adopted as his motto, when he became a commander of the Légion d'Honneur, *Inde fortuna et libertas*, while over the entrance to his home at Sericourt was inscribed—

"Le théâtre a payé cet asile champêtre;
Vous qui passez, merci : je vous le dois peut-être."

E. Legouvé, *Conférences des Matinées Littéraires*; Sainte-Beuve, *Portraits Contemporains*.

Scrope, GEORGE POULETT, F.R.S. (b. 1797, d. 1876), geologist, was educated at Harrow and at St. John's College, Cambridge. He was originally called Thomson, but on his marriage in 1821, he took the name of his wife, the heiress of the Scrope family. He then travelled extensively, and studied the geological formation of the countries he visited. In 1824 he published his *Considerations on Volcanoes*, in which he combated the Wernerian theory of the aqueous origin of all rocks. In 1827 followed his *Geology and Extinct Volcanoes of Central France*, of which a second edition was published in 1862. From 1833 to 1868 he sat in Parliament as member for Stroud, and was known as "Pamphlet Scrope." His last publication of importance was a memoir written in 1859 against Von Buch's theory of elevation-craters.

Sebastiani, FRANÇOIS HORACE BASTIEN, COUNT, Marshal of France (b. 1772, d. 1851), was of obscure origin, but pretended to be of noble ancestry. He was educated for the Church, but entered the French army, and in 1799, after the battle of Verona, became General of Brigade. After the Peace of Amiens (1802), he was sent on a mission to the East, and published a report which, professedly commercial, was really intended to show how Egypt could be conquered by the

French. In 1806 he was sent to Constantinople as French ambassador, and induced the Sultan Selim to adhere to the friendship of France, thereby causing Admiral Duckworth to force the passage of the Dardanelles. He did good service to Napoleon during the remainder of his wars, although perhaps they were not as considerable as Sebastiani himself was inclined to imagine, and after the battle of Waterloo was one of the commissioners sent to negotiate with the allies. He filled several diplomatic and ministerial appointments under Louis Philippe. The story of his celebrated despatch, running, *L'ordre règne à Varsovic*, after the repression of the Polish rebellion of 1831, is more or less mythical.

Secchi, FATHER ANGELO (*b.* 1818, *d.* 1878), Italian astronomer, was a native of Regio, and entering the order of the Jesuits, taught mathematics at Georgetown College, Washington, U.S. He afterwards became professor of physics at the Collegio Romano; and after leaving Rome on the occasion of the Revolution of 1848 returned with Pius IX. in 1850, and was made Director of the Roman Observatory. Here he laboured until close upon his death, contributing to science some 300 papers on astronomical matters, and achieving some remarkable results in spectrum analysis. His three most popular works are *Le Soleil* (1870), *L'Unité des Forces Physiques* (1869), and *Le Stèle* (1879). He invented an instrument called the meteorograph, which registers automatically the variations of the barometer and thermometer.

Sedgwick, ADAM, F.R.S. (*b.* 1786, *d.* 1873), geologist, was a native of Dent, in Yorkshire, and was educated at Trinity College, Cambridge (B.A. 1808), where he became a fellow. He was ordained in 1817, and appointed Woodwardian professor of geology in the university in 1818. His scientific honours were numerous; he was elected F.R.S. in 1819, was president of the Geographical Society in 1829-30, and received the Royal Society's Copley medal in 1863. Professor Sedgwick was the founder of the Cambridge Philosophical Society, and increased the treasures in the Cambridge Geological Museum. His researches into the Palæozoic formations were most praiseworthy, and some of his conclusions are to be found in his *Synopsis of the Classification of the Palæozoic Rocks* (1855). Professor Sedgwick was a great controversialist, and clung to the old tenets in opposition to those of Darwin and Lyell. His *Discourse on the Studies of the University of Cambridge* was partly an attack on utilitarian views, and extracted a reply in the *Westminster Review* from J. S. Mill.

* **Seeböhm**, FREDERIC (*b.* Nov. 23rd, 1833), was born at Bradford, Yorkshire, and was educated at the Friends' School, York.

He was called to the bar at the Middle Temple in 1855, and soon after became a partner in the banking firm of Sharples and Co. at Hitchin. Mr. Seeböhm contributed some valuable articles on political and economic subjects to the reviews, and his larger works include *The Oxford Reformers* (1867), and a learned work on *The English Village Community* (1883).

* **Seeley**, PROFESSOR JOHN ROBERT (*b.* 1834), son of a publisher, was educated at the City of London School and Christ's College, Cambridge. He graduated B.A. in 1857, having been bracketed senior classic with three others, and senior Chancellor's medalist. Elected a fellow of his college in 1858, he continued a lecturer there for upwards of two years; he then received in his old school a classical mastership, which he retained till 1863, when he was appointed professor of Latin in University College, London. On Mr. Gladstone's recommendation, he received in 1869 the professorship of modern history at Cambridge, and in 1882 was elected to a professorial fellowship at Caius College, Cambridge. Meanwhile, in 1866, had appeared *Eccæ Homo: a Survey of the Life and Work of Jesus Christ*; it was published anonymously, and created considerable stir on account of its heterodoxy. Amongst the numerous replies it elicited was one from Mr. Gladstone, which appeared in the *Sunday at Home* in a series of articles. Besides several of his lectures, and *Lectures and Essays* (1870), Professor Seeley has published *Livy*, Book I., with *Introduction, Historical Examination, and Notes* (1866); in 1879 *Life and Times of Stein*; or, *Germany and Prussia in the Napoleonic Age* (3 vols.); in 1882 *Natural Religion, by the author of Eccæ Homo*, which created almost as much stir as its predecessor; in 1883 *The Expansion of England*, being two courses of lectures; and in 1886 *A Short History of Napoleon*.

* **Selborne**, THE RIGHT HON. ROUNDELL PALMER, EARL OF (*b.* 1812), ex-Lord Chancellor of England, the second son of the late Rev. William Jocelyn Palmer, D.D., rector of Mixbury, Oxon., was educated at Rugby and Winchester, and at Oxford University, where he took the Chancellor's prizes for Latin verse and essay in 1831, Newdigate prize for English verse, the subject being *Staffa*, and Dean Ireland's scholarship in 1832, and the Eldon law scholarship and a first-class in classics in 1834, in which year also he became a fellow of Magdalen College. He entered at Lincoln's Inn in 1834 (then aged twenty-two), was called to the bar in 1837, and became Q.C. in 1849. In 1847 he entered the House of Commons as Liberal member for Plymouth, and from 1861 to 1872 sat for Richmond. He was Solicitor-General from 1861-3, being knighted in 1861, and Attorney-General from 1863-6, but was out of office from 1868-72.

In 1872, on the retirement of Lord Hatherley as Lord Chancellor on account of failing eyesight, Sir Roundell Palmer was entrusted with the seals, and created a baron, and was awarded an earl's coronet in 1883. On the return of Mr. Gladstone to power in 1880 he again became Lord Chancellor, and retired with his party in June, 1885. Differing from Mr. Gladstone in his Irish policy, Lord Selborne declined to become Chancellor a third time on Mr. Gladstone's taking office in February, 1886. While still a practising counsel his lordship was an ardent law reformer, and was a member of commissions on marriage laws, law digest, judicature, naturalisation, extradition and neutrality laws. His name will always be remembered in the history of our legal institutions as the man whose good fortune it was to carry out the plans of his predecessors for the fusion of law and equity by the Judicature Act of 1873. His lordship takes a lively interest in all philanthropic and religious work; is a Sunday-school teacher, and an authority on hymnology. Besides collecting a volume of hymns, *Book of Praise* (1863), he has written an introduction to Lady Hampton's poetic *Musings on the Collects* (1879), and is associated in other publications of a similar nature.

Selim III. (b. 1761, d. 1808), Sultan of Turkey, was the son of Mustafa III., and received a liberal education. He began to correspond with De Choiseul, the French ambassador, on the possibility of regenerating Turkey, and his advent to the throne in 1789 was hailed with great enthusiasm. Unfortunately, he was utterly defeated by the Russians and Austrians, and compelled to sign ignominious treaties of peace. In 1798 he gained the support of England against Napoleon's designs, at the cost of the Ionian Islands, but in 1807, having espoused the French alliance, Turkey was invaded by the Russians from the north, while Admiral Duckworth forced the Dardanelles. He now attempted to Europeanise his army, but the Janissaries promptly mutinied and took the arsenal of Constantinople. Selim was deposed in favour of Mustafa IV., who soon afterwards caused him to be strangled.

Selwyn, THE RIGHT REV. GEORGE AUGUSTUS (b. 1809, d. 1878), bishop, was the son of William Selwyn, an eminent Queen's Counsel who was selected to be the "instructor of Prince Albert in the constitution and laws of his adopted country," and was educated at Eton and at St. John's College, Cambridge. Having obtained a fellowship at his college, he took up his residence at Eton as a private tutor, and was ordained in 1833 to the curacy of Windsor. After seven comparatively uneventful years, he was in 1841 consecrated first Bishop of New Zealand, the Episcopacy having just been extended to all the colonies of the British empire. In the Southern Pacific

Bishop Selwyn soon organised the new diocese in an admirable manner, and his *Visitation Journal* testifies to the great activity and indefatigable zeal which he expended on his work. He was a favourite in the colony, and his work was a great success—so much so that it was necessary in 1867 to subdivide the colony into seven dioceses. Shortly afterwards he was nominated Bishop of Lichfield. In 1855 he compiled his *Verbal Analysis of the Holy Bible*, and was the author of *Melanesian Mission*, and several volumes of sermons. His elder brother, WILLIAM SELWYN, D.D. (b. 1806, d. 1875), was educated at Eton and at St. John's College, Cambridge, taking his B.A. degree as senior classic and sixth wrangler in 1828. Taking holy orders, he became Canon of Ely Cathedral in 1833, and Lady Margaret professor of divinity at Cambridge in 1859, in which capacity he displayed much munificence in the encouragement of theological learning. In 1859 he became chaplain to the Queen. His chief work is *Horæ Hebraicae* (1848-60), and he was also the author of a critical edition of *Origen and Principles of Cathedral Reform*.

Rev. H. W. Tucker, M.A., *Memoir of the Life and Episcopate of George Augustus Selwyn* (1879).

Sen, KESHUB CHUNDER (b. 1838, d. 1884), Hindoo religionist, received an Anglo-Indian education, and in 1859 identified himself with the new Theistic Church, founded in 1830 by the Rajah Rammohun Roy. In 1866 he seceded from the parent body and founded the Brahmo-Somag, or reformed Theistic Church, which agreed with the religious system of the English Theists and rejected idolatry, while advocating the practical reforms of the education of women and the abolition of child-marriages. In 1870 he visited England, and his eloquence created some impression. Subsequently his views developed in the direction of mysticism, and there were in consequence schisms among his flock.

Professor Max Müller, *Biographical Essays*.

Senancour, ÉTIENNE PIVERT DE (b. 1770, d. 1846), the author of *Obermann*, was brought up in the seminary of St. Sulpice, in Paris, as a priest, but gave up his profession and retired to an isolated life in Switzerland in 1789. During the revolution he was declared an emigrant, but returned to Paris for a short time in 1798, and published his *Réveries sur la Nature Primitive de l'Homme*. He then went back to Switzerland for some years, and produced the *Letters* or meditations collected under the name of *Obermann* (1804). In middle life he settled in Paris as a man of letters, and published *De Napoléon* (1815), *Isabella*, another series of letters of the same character as *Obermann*, and *Libres Méditations d'un Solitaire Inconnu* (1819), but he remained almost unknown till his death, except to a very small band of admirers. The last of the

early sentimentalists and immediate followers of Rousseau, he is now chiefly remembered by Matthew Arnold's two poems, *Stanzas in Memory of the Author of Obermann* and *Obermann Once More*.

Sainte-Beuve's introduction to his edition of Obermann (1833).

Senior, NASSAU WILLIAM (b. 1790, d. June 4th, 1864), eldest son of the Rev. J. R. Senior, vicar of Dumford, Wilts, was born at Compton, Berks. He was educated at Eton and at Magdalen College, Oxford, and graduated in 1811 with a distinguished classical degree. He was called to the bar in 1819, and in 1836 appointed a Master in Chancery. He had received the professorship of political economy at Oxford in 1825, resigning it in 1830, and taking it up again from 1847-62. He was also examiner in economics for the London University. He was a member of the Poor Law Commission, upon whose report in 1834 is mainly based our present system of relief, which recognises as its fundamental principle that the most comfortable pauper must not be more comfortable than the least comfortable working man. His writings were for the most part on economic subjects, and comprise, amongst others:—*A Treatise on Political Economy* (1853), *A Journal kept in Turkey and Greece, etc., Biographical Sketches* (1863), and *Essays on Fiction* (1864), but he is chiefly remembered for his *Conversations with Thiers, Guizot, and other Distinguished Persons during the Second Empire*, edited in 1878 by his daughter, Mrs. Simpson, which are a mine of information for the student of recent European politics.

Serrano y Dominguez, FRANCISCO, DUKE DE LA TORRE, Field-Marshal of Spain (b. 1810, d. 1885), the son of a general, was born near Cadiz. While yet a youth he entered the Spanish army, and espoused the cause of Maria Christina. He rose rapidly, and at the age of thirty-three was sufficiently powerful to overthrow Espartero. On the restoration of Maria Christina he joined Narvaez in overthrowing the ministry of Olazaga. Serrano's influence over Queen Isabella was so great as to lead to dissensions between her and her husband, Don Francisco d'Assisi, and attempts were made to remove him from the Court. In 1849 he was made Captain-General of Granada, and henceforth acted as a Liberal. In 1854 he was implicated in an insurrectionary movement at Saragossa and exiled; on his restoration, which happened in July of the same year, he supported the coalition of Espartero and O'Donnell, declaring ultimately for the latter alone. It is impossible to give here a detailed statement of the different positions assumed by Serrano in his public career, considering that in that time there were "84 radical changes in Spanish ministries, 40 distinct *pronunciamientos*, or rebellions, and 12 changes in regard either to the persons or the

character of the supreme power in the State." In 1868 occurred the temporary overthrow of the Bourbon dynasty, and in this Serrano was the most prominent figure, becoming head of the Provisional Government. In 1869 the Cortes appointed him Regent of the Kingdom. On his resignation of the regency, which occurred in 1870, on the advent of King Amadeus, he was made chief commander of the forces sent against the Carlists, whom he succeeded in defeating. On returning to Madrid he succeeded Señor Sagasta with a new ministry, which, however, was very short-lived. Serrano was opposed to the republic of 1873, and being implicated in a seditious movement he had to fly the country. In great peril he fled to the house of the English minister, Mr. Layard, who dressed him up in disguise and accompanied him beyond the reach of danger. On returning, Serrano became head of the executive power of the republic, his government being recognised by the leading European powers. He also entered the field against the Carlists, and while on campaign, tidings reached him that Alfonso, Prince of the Asturias, had been proclaimed as King Alfonso XII., and that Canovas del Castillo had succeeded him as minister of the new sovereign. After this Serrano quitted Spain and resided in France. In 1875, however, he returned to Madrid and presented his homage and devotion to King Alfonso. From that time he was leader of the political party known as the Dynastic Left.

Servia, THE HEREDITARY PRINCES OF, were first recognised by the Porte in 1829. An insurrection, which had been temporarily successful, had indeed established an independent government in Servia under KARA GEORGE, Black George (b. 1765, d. 1816), a guerilla chief, who raised the standard of revolt in 1804, and in 1807 had liberated his country. But abandoned by the Russians in 1812, he was forced to fly, and the Servian army was dissolved (1813).

MILOSCH ORBENOVITCH (b. 1780, d. 1860), the son of peasants, a Servian warrior who had been opposed to Kara George, now opened negotiations with the Turks, and was appointed Governor of Servia by the Porte. At first he repressed all insurrectionary movements, but was compelled by the suspicions of the Porte to proclaim the sacred war (1815). When, however, Kara George ventured to return to Servia, Milosch rid himself of his rival by causing him to be put to death by the order of the Sultan. By a combination of boldness and cunning, he won concession after concession from the Sultan, and finally, on the demand of Russia, Servia was recognised as an autonomous principality, under the suzerainty of Turkey (Sept. 30th, 1829). Milosch I. proceeded to organise his possessions on the model of the Code Napoléon,

establishing an independent Church and a Skuptchina, or Parliament. He was, however, exceedingly arbitrary, particularly in the matter of taxation, and was made to abdicate in 1839.

MICHAEL II. (b. 1825, d. 1840), his son, was elected in his stead, and swore to obey a liberal constitution, but died in the following year; nor was his brother, MICHAEL III. (b. 1823, d. 1868), destined to enjoy at first a long lease of power. Taxation weighed heavily upon his subjects; and when an anti-ministerial insurrection broke out, the army refused to stand by him, and he was compelled to fly (1842).

The family of Obrenovitch having proved incapable of rule, the Servians remembered the name of their liberator, Kara George, and his son ALEXANDER KARAGEORGEVITCH (b. 1806, d. 1885) was chosen prince. He proved, however, weak and irresolute; and relying rather on foreign influence than on national support, became exceedingly unpopular in the country. First he placed his conduct of affairs in the hands of the Austrian, then of the Russian consul; and the Powers interfering, insisted on the four guarantees by which Russia was to resign her protectorate over Servia and the Danubian provinces. In the Crimean War Servia maintained a strict neutrality, and accordingly her position was not materially modified by the Treaty of Paris. In 1858, Alexander, now the humble servant of the Porte, was compelled to abdicate by the national party.

MILOSH I., the exile of 1839, was recalled, and on his death in 1860 was succeeded by MICHAEL III., the exile of 1842. He placed himself in good relations with the nationalist party, and when in 1862 the Turkish garrison at Belgrade, enraged apparently by the provocation of the inhabitants, fired upon the town, he insisted on the dismissal of the Turkish pasha; and by a firm attitude, backed by the representatives of the Powers, wrung the consent of the Porte to the withdrawal of the Turkish garrisons from Servia (1867). In the following year, however, Prince Michael was assassinated in Belgrade by the partisans of Alexander Karageorgevitch.

* MILAN IV. (b. 1855), the grand-nephew of Prince Michael, was chosen as his successor, and was brought over from Paris, where he was being educated. A regency was formed, which administered affairs until 1872, thwarting the Russian attempt to effect a union between Servia and Montenegro, under Prince Nikita of Montenegro, and affirming the hereditary rights of the Obrenovitch family. In 1871, Prince Alexander Karageorgevitch, who had fled into Hungary, was accused of complicity in the murder of Michael III., and, though at first acquitted from want of proof, was in the following year condemned to eight months' imprisonment. He was pardoned by the Emperor before the completion of the

sentence, and spent the remainder of his life in retirement. In 1875 Prince Milan married Natalie, daughter of the Russian Colonel Keschko. The revolt of Bosnia and Herzegovina against the Porte so fired the enthusiasm of the Servians that Prince Milan was dragged into the war on their behalf (June 30th, 1876). His army, commanded by the Russian General Tcherniaeff, was, however, beaten several times, and Prince Milan retired to Belgrade, where on Sept. 15th. he was proclaimed king by Tcherniaeff, but the Powers refused to countenance the act. An armistice concluded at the instigation of England failed to develop into a peace; but continued defeats forced Servia to accept the Turkish terms in February, 1877. On the entrance of the Russian army into Turkey, Servia again declared war; and, though seriously defeated in nearly every engagement, her independence was recognised by the Treaty of Berlin. On March 6th, 1882, Prince Milan was proclaimed king with the consent of the Powers; and on October 23rd, on his return from a visit to Prince Alexander of Bulgaria, escaped an attempt at assassination. In November, 1885, Prince Milan, without a declaration of hostilities, led his army across the Bulgarian frontier, actuated by motives of jealousy at the prospect of Prince Alexander becoming the ruler of a united Bulgaria. After decisive successes had been won by the Servian troops, Prince Alexander rallied his men, and drove the Servians out of Bulgaria. The intervention of Austria put a stop to further hostilities, and peace was signed in March, 1886.

SEVERN, JOSEPH (b. 1796, d. 1879), painter, was educated as an artist, and studied at the Royal Academy. In 1819 he exhibited his portrait of his friend, J. Keats, with whom he had become acquainted through Haydon. It is not too much to say that Severn's importance consists chiefly in the fact that he was a friend of Keats. He inspired the poet with some of his noblest themes, such as the *Ode to a Grecian Urn*, and when Keats's health broke down Severn accompanied him to Rome, and held him in his arms as he was dying (Feb. 23rd, 1821). The remainder of his days were chiefly spent at Rome, where he was British consul from 1861 to 1872. His best work, *The Rhyme of the Ancient Mariners*, was exhibited as far back as the Academy of 1827.

The Athenæum, Aug. 9th, 1879.

SEWARD, WILLIAM HENRY (b. 1801, d. 1872), American politician, was born at Florida, New York, and called to the bar in 1822. After making himself conspicuous in politics as a member of the Whig party, he was elected in 1838, after an unsuccessful

effort in 1834, Governor of New York, and was re-elected in 1840, but declined to be a candidate in 1842, and proceeded to work hard at his profession. His governorship was remarkable for internal reform, for his refusal to surrender to Virginia some coloured seamen charged with aiding a slave to escape, and his defiance of the British Government's demand for the surrender of MacLeod, charged with setting fire to the English steamer *Caroline*. In the election of 1844 he was a supporter of Henry Clay's candidature. In 1849 appeared his fine *Life of John Quincy Adams*, and he was elected to the Senate of the United States. He urged the admission of California to the Union, declaring that there was a "higher law" than the constitution. Already he had foretold the "irrepressible conflict;" and he now opposed the Compromise Bill, and helped to found the Republican party, to check the increase of slavery. In 1860 he was put forward as candidate for the presidency; but though he received 171 votes at the first ballot, Lincoln's claims were thought superior, and Seward put up with the Secretaryship of State. During the Civil War his conduct of affairs was extremely able, particularly during the Trent difficulty. On the occasion of the French invasion of Mexico, he persisted in recognising the government of Juarez; and compelled Napoleon III. to withdraw his army in 1866, by informing him that the United States would not recognise the effort to establish permanently a foreign and imperial government there. In 1865 when President Lincoln was murdered by Booth, a desperate attempt was made by Payne, one of his accomplices, to assassinate Mr. Seward, and it nearly succeeded. He became unpopular during his last years of office, owing to his support of President Johnson's ideas as to the reconstruction of the Union. He retired from Cabinet service in 1869, and in 1870 started on a journey round the world, his account of which was published after his death.

Biographical preface, by G. E. Baker, to Seward's Works.

Seymour, Sir B. [ALCESTER.]

Shaftesbury, THE RIGHT HON. ANTHONY ASHLEY-COOPER, 7TH EARL, K.G. (b. April 28th, 1801; d. Oct. 1st, 1885), the eminent social reformer, was a lineal descendant of the 1st Earl of Shaftesbury, the member of the Cabal, the leader of the Country Party, and the Achan of Dryden's satire. As Lord Ashley he was educated at Harrow and at Christ Church, Oxford, and before quitting the university, where he took a first-class in classics (1822), had begun to interest himself in that great humanitarian movement which has characterised his life. In 1826 he entered Parliament as member for Woodstock in the Tory interest, but his strongest sympathies were not with politics;

and although he had considerable experience of official life he had no desire for office, the details of which were irksome to him. Under Wellington he was Commissioner of the Board of Control (1828-30), under Peel a Lord of the Admiralty (1834-5) and an Ecclesiastical Commissioner from 1841-7. In 1830 he married Emily, daughter of the 6th Earl Cowper, who for forty years was, in his own words, "a wife as good, as true, and as deeply beloved as God ever gave to man," and by whom he had six sons and four daughters. In 1831 he was first returned for Dorsetshire, and for Bath in 1847, when he began to call himself a Liberal-Conservative. He was a cordial supporter of the efforts made in the cause of oppressed nationalities. He spoke energetically for the Poles, and he was conspicuous among those who offered a welcome to Garibaldi when the hero of Marsala and Naples visited this country. Philanthropy was in the air when Lord Ashley entered Parliament, and he cordially co-operated with Sadler in his advocacy of factory legislation, and became Parliamentary champion of the cause in 1833. Ignoring all the legislative principles and economic dogmas that were pressed against him, he stoutly urged government interference with industry, and proceeded with his collection of evidence, which, when published, sent a thrill of horror throughout England. In the cotton districts the children were literally worked to death, and wages generally were at a starvation rate. An ameliorative measure was passed in 1833, but it proved almost abortive. Nothing daunted, however, Lord Ashley continued his task, and in 1838 published a series of statistics showing the excessive mortality in factory districts. He was attacked by capitalists, who twitted him with interfering with their interests while he left the interests of his own class alone. But he was daily encouraged to persevere by those amongst whom he worked, and perhaps the best proof of this, or at least the most touching, was his meeting 270 convicted thieves at their request, to consult with them as to the means they could employ to lead better lives. In 1840 he began the second branch of his great remedial work when he obtained a commission to inquire into the employment of women and children in mines and collieries. The report of the commission is a prose *Inferno*, certainly the saddest and most melancholy document ever submitted to Parliament. Lord Ashley now effected the exclusion of female labour, and of boys under thirteen years, from mines altogether. In 1844, after going through many phases, and threatening to wreck more than one Government, the Ten Hours' Bill, making it illegal to employ young persons and women in factories, etc., for more than ten hours per day, became law, and at various times during the next ten years those modifications were

introduced into it which form the law that exists to this day. This, with his exertions for homeless and destitute children, was certainly the great work of his life, and was mainly due to his own exertions, although in a preface to a volume of his *Speeches* (1868) he pays a generous tribute to the efforts of those who had preceded him. But his work was not yet finished; juvenile crime was rapidly on the increase, and while the popular cry was for more prisons, Lord Shaftesbury's was for more schools. His powerful appeal in 1843 for the education of the children of the manufacturing districts was supported by the House; and the voluntary enterprise in Field Lane, which culminated in the Ragged School Union, of which he became president, was a step in the same direction. The great Education Act of 1870, with its far-reaching results, has somewhat obscured the work of the ragged schools, but their importance remains, for according to Lord Aberdeen they had rescued in 1880 over 300,000 children from a criminal life. In 1851, on the death of his father, for many years Chairman of Committees of the House of Lords, Lord Ashley became the Earl of Shaftesbury, and in the same year he originated the Shoe-black Brigade, which has been accompanied and followed by a score of other efforts towards ameliorating the condition of the poorest of the poor, such as the Public Health Act, the Common Lodging House Act, and the Act abolishing the agricultural gang. The brutal treatment of chimney-sweep boys by their masters was made punishable through his exertions; he helped the costermongers to organise their trade, and furnished them with means to start their barrows; he was one of the earliest supporters of building societies, and of the movement for the emancipation of freeholds. He also took the initiative in amending the lunacy laws, and for upwards of fifty years was chairman of the Lunacy Commission. Lord Shaftesbury was an ardent Evangelical, and his activity in religious enterprise was quite as beneficent as his labours for the social advancement of the masses. He was president of the Bible Society, of the Pastoral Aid Society, of the Society for the Conversion of the Jews; and many a great undertaking was launched at Exeter Hall chiefly through his powerful advocacy. It is not too much to say that the recent revival of Evangelical faith among the upper classes was due to Lord Shaftesbury's great example quite as much as to the efforts of divines. Religious questions were among those upon which he spoke in the House of Lords. The scope of the Public Worship Regulation Act of 1874 was so altered by his amendments that it was practically his measure; and being in the confidence of Lord Palmerston, to whom he was related, his advice was almost invariably sought by Palmerston in the bestowal of Church preferment; hence he came

to be known as the "Bishop-maker." One of his last appearances in public was at the Exeter Hall meeting held to celebrate the Luther tercentenary. His death, which occurred at Folkestone, was mourned as a national calamity. Lord Shaftesbury had the "enthusiasm of humanity," and he used generously for mankind the means put into his hands. Practical and clear-headed, he kept one great object before him, and by dint of determination succeeded. No doubt he made mistakes, and wasted more than once his high purposes and generous energies. But he accomplished some great successes. He did much good, substantial, and enduring work for the poor which but for him would certainly not have been done so soon, and perhaps not at all.

Hodder, *Life and Work of Lord Shaftesbury; The Record* (Supplement), Oct. 2nd, 1885; Alfred, *History of the Factory Movement*.

Shah Shuja. [AFGHANISTAN.]

Shairp, JOHN CAMPBELL (b. 1819, d. 1885), man of letters, was born in Linlithgowshire, of aristocratic descent, and was educated at Glasgow and Oxford. After spending some time at Rugby as assistant-master, he became, in 1861, professor of humanity in the University of St. Andrews, and in 1864 brought out a little volume of poems, *Kilmahoe, a Highland Pastoral*. In 1868 he published *Studies in Poetry and Philosophy*, and was shortly afterwards elected to the principalship of the united college of St. Salvador and St. Leonard in the University of St. Andrews. In 1870 appeared *Culture and Religion*, an argument addressed to several schools of agnostics, and in 1879 he contributed a volume on Burns to the *Men of Letters Series*, perhaps the least successful of his works. Amongst his other works are *The Poetic Interpretation of Nature* (1877) and *Aspects of Poetry* (1881), being lectures he had delivered as professor of poetry at Oxford, to which post he had been elected in 1877.

Athenaeum, Sept. 26th, 1885.

Shaw-Lefevre. [EVERSLEY and LEFEVRE.]

Shaw, SIR MARTIN ARCHER (b. 1770, d. 1850), President of the Royal Academy, was a native of Dublin, and having studied art became a fashionable portrait-painter in the Irish capital at the age of sixteen. In 1788 he arrived in London, and in the following year exhibited his first picture at the Royal Academy. Shaw was elected an Associate in 1798, and full Academician in 1800. He was for the next thirty years a dangerous rival to Lawrence, although his art was of a mediocre description, and in 1830 was elected his successor as President of the Royal Academy. Sir Martin Shaw's amusing conservatism is forcibly expressed in his didactic poem *Rhymes of Art* (1805) and in *Elements of Art* (1809); he

also wrote a tragedy, *Alasco*, of which the performance was prohibited by the authorities, and a novel, *Old Court* (1828). He resigned the presidency in 1845, but was induced to resume office. Among his best portraits are those of Sir Eyre Coote, Sir James Scarlett, and Thomas Moore; he is represented in the National Gallery by *The Infant Bacchus*, and a portrait of Mr. Morton the dramatist.

Life of Sir M. A. Shee, by his son.

Sheil, RICHARD LALOR (b. 1791, d. 1851), Irish politician and orator, the eldest son of Edward Sheil, a merchant of Cadiz, was born at Drumdowney, and passed his early years at Bellevue, near Waterford. A quick but moody lad, he was at first educated at home by an *émigré*, the Abbé de Griméau, and afterwards went to a French Roman Catholic School at Kensington and at Stonyhurst. He left Stonyhurst Nov. 15th, 1807, and went at once to Trinity College, Dublin. At Trinity, Sheil became a sound classical scholar. In 1809 Sheil the elder became bankrupt, but by the assistance of a connection, Dr. William Foley, means were found to put young Sheil to the bar; accordingly he took his B.A. degree in July, 1811, entered at Lincoln's Inn on Nov. 13th of the same year, and was called to the Irish bar in Hilary term, 1814. Even as a student he had shown strong dramatic tastes; he now began to look to the drama for support. His first play, *Adelaide*, written for Miss O'Neil, was produced with success at the Crow Street Theatre, Dublin, Feb. 19th, 1814, and afterwards, on May 23rd, 1816, at Covent Garden, with Kemble and Miss O'Neil in the leading parts; but in London it was a failure. The same actress, however, appeared in his next play, *The Apostate*, May 3rd, 1817, at Covent Garden, and the play was completely successful. He followed this up with *Bellamira*, *Evadne* (his best play), *The Huguenots*, *Montoni*, and an adaptation of Massinger's *Fatal Dowry*. Though attentive to such practice as he had, Sheil was forced to occupy himself in other ways, and in 1822 he wrote in the *New Monthly Magazine* a series of sketches of the Irish bar in collaboration with W. H. Curran. Hitherto he had played an inconsiderable part in politics. But in 1823 O'Connell founded the Catholic Association, and Sheil joined him with energy. He went in 1825 with O'Connell to London on a deputation to promote the Catholic Relief Bill, and to resist Mr. Goulburn's Bill for the suppression of the Catholic Association; the former, however, was lost, and the latter passed. When the Association was accordingly dissolved, Sheil suggested that simultaneous meetings should be held to protest throughout the country, and that a sectarian census should be taken. O'Connell, however, ingeniously evaded the Act by founding a new Catholic Association, as a mere charitable

body outside the Act, and in this new movement Sheil laboured hard, expending immense pains, as was his habit through life, in preparing his numerous speeches. By nature of poor appearance, shrill voice, and theatrical gesture, and by habit avoiding extempore speeches, he nevertheless worked his way to the foremost place among impassioned orators. For a speech on Jan. 19th, 1827, upon Wolfe Tone, the Government indicted him, but the prosecution was at first postponed and then abandoned. Though a close, he was not an unvarying follower of O'Connell, and differed from him in 1828 as to the proper attitude of the Association towards the Wellington Ministry. He, however, cordially supported O'Connell's candidature for county Clare. In July, 1828, upon the expiry of the Act of 1825, the old Catholic Association was revived: and in November a public dinner was given to Sheil in London. In the following year he diligently used his influence in preserving quiet in Ireland in order to leave the Ministry, then on the point of accepting Catholic Emancipation, perfect freedom of action, and with this view he proposed the immediate dissolution of the Association. After the measure passed he carried his disinterestedness still further, by refusing, at the risk of his popularity, to follow O'Connell in immediate further agitation, and, accordingly, he now began to attend more exclusively to his profession. He was hampered, however, by the fact that to him, as to O'Connell, the king was resolute not to give a silk gown. At length, however, he received this in Trinity term, 1830. On July 20th, 1830, he married a person of means, and turned his attention to Parliament. After contesting Louth unsuccessfully, Lord Anglesea brought him in, in the same year, for his borough of Milborne Port, Dorset. On the dissolution in 1831 he was elected for Louth. He was urgent in supporting a Reform Bill for Ireland identical with that for England, but at first, as was the case with Flood, his oratory was ill received in the House. Finding that the English Parliament was unwilling to follow out to its logical issue Catholic Emancipation, he, at length, joined O'Connell's repeal movement, not so much for repeal's sake as for reform's, poor-law and education reform being subjects in which he was especially interested. In the first Reformed Parliament he was elected for Tipperary, and gradually withdrew from the bar. In 1834 a painful incident occurred to him. The *Examiner* of Nov. 10th, 1833, had stated that certain Irish members had privately urged, while publicly opposing, the Coercion Bill of 1833. Upon being questioned in the House, Lord Althorp said that Sheil was one of these. A duel was with difficulty prevented, but eventually, on O'Connell's motion, a Committee of Privileges was formed, and Sheil's reputation was cleared. From the

final defeat of the repeal party in 1834, Sheil acted with the Whigs, and helped largely, in accordance with what was called the "Lichfield House Compact," to weld into one party Whigs, Radicals, and Irish members. While William IV. lived, office was impossible for him, but on the Queen's accession he received a Commissionership of Greenwich Hospital; on Aug. 29th, 1839, was appointed Vice-President of the Board of Trade, and a Privy Councillor, being the first Romanist member of the Council, and in 1841 Judge-Advocate-General. Though a vigorous Free Trader, he spoke mainly on Irish questions, approving the Maynooth Grant and appropriation of the Irish Church surplus revenue. In 1846 he became Master of the Mint, and probably might have been Chief Secretary for Ireland, but he shrank from the labour of the office. He was now member for Dungarvan, and at his contest in 1849 spoke of repeal as a "splendid phantom." In 1850, he accepted the post of Minister at Florence, and having received a severe shock from the news of his stepson's death, died suddenly on May 25th, 1851. [J. A. H.]

Shelley, Percy Bysshe (b. 1792, d. 1822), poet, essayist, and reformer, came of an ancient Sussex family, and was the eldest son of Mr. (afterwards Sir) Timothy Shelley, of Field Place, near Horsham, and his wife Elizabeth, born Pilfold. It was at Field Place, Aug. 4th, 1792, that the poet was born; he was called Percy on account of a distant connection with the Northumberland family, and Bysshe after his grandfather, who became Sir Bysshe Shelley, Bart., in 1806. The poet is said to have been a beautiful, gentle, and affectionate boy, not addicted to boyish sports, and decidedly uncommon in tastes and disposition from the first. When six years old he went to a day-school kept by the Rev. Mr. Edwards of Wurnham, where he began the study of Latin; and when turned ten he left this school for that of Dr. Greenlaw at Sion House, Brentford, where he appears to have been much persecuted by his school-fellows. Before he was twelve he was sent to Eton; and he experienced the same sort of treatment there, but had his own ways of defence, and eventually earned the approval of his school-fellows in many ways, and distinguished himself as a scholar. From Eton he passed to University College, Oxford (1810), already a budding author, having written a good deal in verse and prose, and actually published his first substantive work, *Zastrozzi: a Romance*. This was quickly followed by a volume called *Original Poetry by Victor and Cazire*, of which no copy has come down to us, and *Posthumous Fragments of Margaret Nicholson* (1810). While still at Oxford he published a second romance, *St. Irvyne, or the Rosicrucian* (1811); and he appears to have printed several things which

have not come down to us, as, for instance, a small poem entitled *An Essay on Love*, the greater part of a novel called *Leonora*, written in conjunction with Thomas Jefferson Hogg, afterwards his biographer; a volume entitled *A Poetical Essay on the Existing State of Things*, and a satire. The style of the *Poetical Essay* can be surmised from the statement that it was offered for sale to raise a fund "for assisting to maintain in prison Mr. Peter Finnerty, imprisoned for a libel." *The Necessity of Atheism*, a tract of which copies are extant, led to his expulsion from Oxford in March, 1811. He had been engaged to his cousin Harriet Grove, but this event brought about a rupture, which greatly affected Shelley; nevertheless, within six months he eloped with Harriett Westbrook, a school-fellow of his sisters, daughter of a retired proprietor of "the Mount Street Coffee-house," a man of some substance. It seems Harriett wished to escape from an oppressive home-life, and threw herself on the protection of Shelley, who chivalrously married her, without being really in love—a step which induced his father to cut off supplies, and which thus led the poet into severe straits. The young couple visited Edinburgh, York, and the Cumberland Lake country, remaining at Keswick till February, 1812. In the meantime Shelley had taken up very seriously with the political writings of Godwin, had entered into correspondence with the philosopher, and was projecting a campaign in Ireland, the aim of which was the furtherance of Catholic Emancipation and the Repeal of the Union Act. He had prepared an address to the Irish people, and, in the form of a novel called *Hubert Cawin* (unpublished, and probably lost), was writing an inquiry into the causes of the failure of the French Revolution to benefit mankind. He proceeded to Dublin with Harriett in February, 1812, and there published his *Address to the Irish People, Proposals for an Association, and Declaration of Rights*. Relinquishing this definite agitation in Ireland at the earnest instance of Godwin, the Shelleys visited Wales and Devonshire, and while resident at Lynmouth he used curious means of disseminating revolutionary ideas embodied in the *Declaration of Rights* and a broadside ballad called *The Devil's Walk*. These proceedings falling under the notice of the Government, Shelley left Devonshire, but not without having printed at Barnstaple *A Letter to Lord Ellenborough concerning a sentence passed on D. I. Eaton for publishing Paine's Age of Reason* (Part III.). This pamphlet, dealing with the important questions of a free press and freedom of opinion, is Shelley's first valuable work in prose; and in the same year he was busy upon his first considerable and memorable poem, *Queen Mab*. Another residence in Wales and another trip to Ireland are recorded; and in June, 1813, his first child, Ianthe,

was born. During this year *Queen Mab* was privately printed; some translations from the French and from Plutarch were done; *A Vindication of Natural Diet* was published, and the poet commenced the practice of vegetarianism. In the following year he published *A Refutation of Deism*, a dialogue of considerable literary merit; but he clearly understood that all this wonderful practical productiveness had not yet left anything sufficiently noteworthy to constitute an enduring reputation. At this point came the first real crisis in Shelley's career. The girl he had married, though agreeable and pretty, was not sufficiently removed from commonplace to make him a real companion; and at the age of twenty-two or thereabout he fell in love with Mary Godwin—a disbeliever, like himself, in the indissolubility of the marital contract, and a person nearer to his own intellectual level. In the summer of 1814 he separated from Harriett, though not in the material sense of deserting her without provision,—shortly before she gave birth to his first son, Charles Byshe; and in company with Mary Godwin he proceeded to the Continent. This removal from a home without genuine love and companionship to a real companionship of intellectual gifts and ardent affection on both sides must be counted as a blot on the character of the poet; but it must be recognised at its full worth in the development of that transcendent poetic gift which characterises his work from that time forth, and which first appears in the extant fragment of a prose romance entitled *The Assassins*, begun during this second and illicit honeymoon. From this point in the chronology of Shelley every date is associated with some noteworthy addition to the glories of English literature. Shelley and Mary returned to London in September; and early in 1815 Sir Byshe died. As heir to the baronetcy and estates, Shelley now obtained a suitable provision from his father, and set aside a due proportion for Harriett. He walked a London hospital in order to become more useful to the poor; and his subsequent residence at Bishopgate Heath and Marlow was characterised by much charitable ministration of an entirely personal kind. *Alastor* and several smaller poems and prose essays were written in 1815; and the book published in 1816, *Alastor, or the Spirit of Solitude*, etc., may be regarded as the first serious appeal to the cultivated section of the public. Mary's first child, William, was born in January, 1816; and in May they made a second Continental trip, during which Shelley was much with Byron in Switzerland. They returned to London in September, and settled at Marlow, where they mainly resided till the final departure of Shelley from England. In November, 1816, Harriett drowned herself; and in the following month, urged by the theoretical anti-matrimonialist Godwin, Shelley married Mary. The year 1817 was eventful: in

January the *Hymn to Intellectual Beauty* appeared in the *Examiner*, and later *A Proposal for Putting Reform to the Vote* was printed as a pamphlet; in the summer Shelley was deeply engaged upon his longest work, *Laon and Cythna*, and much harassed with a Chancery suit, resulting in the withdrawal of his and Harriett's children from his legal protection. He also wrote much of *Rosalind and Helen*; published *An Address to the People on the Death of the Princess Charlotte* (really about the execution of Brandreth, Turner, and Ludlam), and the *History of a Six Weeks' Tour*, a joint production of the poet and his second wife; and appears, moreover, to have begun a translation of Spinoza's *Tractatus*. He had immense trouble about the revision and issue of *Laon and Cythna*; and when it was completed and had begun to go out, the publishers insisted on its withdrawal to be altered in some material particulars. It appeared, and re-appeared as *The Revolt of Islam*, early in 1818; and in the spring, having added to his works a superb translation of the *Banquet* of Plato, Shelley and his family left England for Italy,—the poet never to return. He now began the composition of *Prometheus Unbound*, finished *Rosalind and Helen*, produced his *Lines Written among the Euganean Hills*, and *Julian and Maddalo*; and on reaching Venice he lost by death his infant daughter Clara. Much time was passed in travelling over Italy and seeing its wonders, and the poet's letters and note-books of all this period abound with beautiful descriptions and admirable remarks. It was probably early in 1819 that he wrote the fragment called *The Coliseum*: he completed the first three acts of *Prometheus* in the spring, sustained a bitter grief in the death of his son William, wrote his great tragedy *The Cenci* (printed later on at Leghorn), published *Rosalind and Helen*, and before the close of the year wrote *The Mask of Anarchy*, *Peter Bell the Third*, an important political letter on the trial of Richard Carlile, and the fourth act of *Prometheus Unbound*. It was in November, 1819, that his last child, Percy Florence (the present baronet), was born. Early in 1820 he went with his wife and child to Pisa, where much of the year was spent. This year's work includes more of the translation from Spinoza; and it was in the spring that *The Cenci* reached England and was there published. About August *Prometheus Unbound* appeared with several of Shelley's noblest minor poems; and he also issued anonymously his *Edipus Tyrannus*, or *Swellfoot the Tyrant*, and wrote *The Witch of Atlas*. In 1821 he wrote and published *Epipsychidion*, a poem of platonic love, inspired by the Contessina Emilia Viviani; wrote *The Defence of Poetry* (the best of his prose essays); witnessed the unwanted event of a second edition of one of his works (*The Cenci*); wrote and printed at Pisa, on the occasion of Keats's death, the greatest of modern elegiac poems, *Adonais*; was brought

forcibly before the public as the author of *Queen Mab*, which was pirated that year; wrote the lyrical drama *Hellas* (published in 1822); and continued the translation of Spinoza. In 1822 he translated scenes from Goethe's *Faust*, and was at work upon *The Triumph of Life*. He was again seeing a good deal of Byron at this time, and had arranged with him that Leigh Hunt should come out from England to start and edit a periodical called *The Liberal*. In the spring of 1822 the Shelleys and their friends Edward and Jane Williams moved from Pisa to Lerici (Casa Magni), where Shelley and Williams set up a small undecked Torbay-rigged cutter, the *Don Juan*. Boating was the poet's great delight; and, when Hunt and his family arrived, Shelley, Williams, and a sailor-lad went from Lerici in the *Don Juan* to Leghorn. Thence Shelley proceeded with Hunt to Pisa; and returning in the boat from Leghorn, he and Williams and the boy were drowned—the boat being lost in a squall. This event, so momentous in the history of English literature, took place on July 8th, 1822, before the poet had completed his thirtieth year. There is some suspicion that the *Don Juan* was purposely run down by Italian malefactors on board a felucca, intent on plunder. The remains were recovered after a terrible time of suspense to the widows; and on Aug. 16th Shelley's body was burnt by his friend Trelawny, the ashes being gathered together, coffered, and eventually buried in the Protestant burial-ground at Rome. Shelley was before all things a man with a passion for reforming the world, and an enthusiastic belief in human perfectibility: he was this before he became in the full sense a poet; and this he remained to the end. But it is as a poet that he is destined to be remembered for ever among the truly great. Keen as was his intellect and wide as were his culture and scholarship, it is yet in the utter exaltation of his verse that his most notable quality is found. In true singing power he surpassed all his contemporaries: his versatility was astonishing; *Prometheus Unbound* deals with the hopes and destinies of the human race in the largest and most original manner, and, although not wholly free from weaknesses, presents a sum-total of high creativeness, profound thought, and transcendent music such as cannot be found elsewhere in English literature, save in the great body of lyric work which he has left us. In *The Cenci* he reached the highest point attained in pure tragedy since Shakespeare; in *Adonais* the highest point of elegiac poetry since Milton; in *Epipsychidion* the highest point ever attained in the expression of love at once platonic and consuming; and in *Hellas* we have a final epitome of all that is best in Shelley. Though in that work the Greek revolution of 1821 is dealt with in a drama modelled broadly on

the *Persæ* of Æschylus, its choruses are in Shelley's own distinctive lyric style, and its blank verse is of the noblest movement.

Shelley's Prose Works (1880); *Shelley's Poetry, Library Edition* (1882); H. Buxton Forman, *The Shelley Library, an Essay in Bibliography* (1886); W. M. Rossetti, *Memoir of Shelley* (1886); Professor Dowden, *The Life of Percy Bysshe Shelley* (1888). [H. B. F.]

* **Sherbrooke, THE RIGHT HON. ROBERT LOWE, VISCOUNT, D.C.L., LL.D.** (b. 1811), the son of the late Rev. Robert Lowe, rector of Bingham, Notts, was educated at Winchester and at University College, Oxford (B.A. with honours, 1834). In 1842 he was called to the bar, and in the following year went to Australia, where he remained until 1851. During that period he was member of the Council of New South Wales, from 1843-50, and was then elected member for Sydney. On his return to England he sat for Kidderminster in the Liberal interest from 1852-9, for Calne from 1859-68, and was then elected the first member for the University of London. Having distinguished himself in an attack on Mr. Disraeli's Budget of 1852, he became Joint-Secretary to the Board of Control (Dec., 1852—Feb., 1855), Vice-President of the Board of Trade and Paymaster-General (Aug., 1855-8), and Vice-President of the Council on Education in June, 1859. He resigned this post in 1864 on account of a vote of censure carried against his department, but was subsequently entirely exonerated from blame. In 1866, as a leader of the seceding Liberals, or "Adullamites," he made some notable speeches against the Government Reform Bill, and was mainly instrumental in its rejection (*Speeches and Letters on Reform*, 1867). He refused office under Lord Derby, but in 1868 became Chancellor of the Exchequer in Mr. Gladstone's ministry, and a member of the Council on Education. His tax on matches proposed in the Budget of 1871 was unpopular, and had to be withdrawn. In Aug., 1873, Mr. Lowe was transferred to the Home Office, and resigned with his party in the following year. He distinguished himself by some bitterly sarcastic attacks upon the Royal Titles Bill of 1876; but Mr. Disraeli had his revenge when he extracted an apology from Mr. Lowe for an unauthorised assertion that the Queen had attempted to force the measure upon two previous ministries without success. When his party returned to power in 1880, Mr. Lowe was raised to the peerage as Viscount Sherbrooke, and ceased to take much part in public life. He first became a member of the senate of the University of London in 1860, and is D.C.L. Oxford and LL.D. Edinburgh. His *Poems of a Life* appeared in 1885.

* **Sheridan, PHILIP HENRY** (b. March 6th, 1831), American general, a native of Somerset, Ohio, graduated at the Military Academy, West Point, in 1853, and from 1855 to 1861

served on the frontiers of Texas and Oregon. In 1862 he became chief quartermaster under General Halleck, and having greatly distinguished himself in the earlier battles of the Civil War, notably at Stone River, was in April, 1864, appointed commander of cavalry in the army of the Potomac, and greatly harassed the enemy at Richmond. In August he was appointed to the command of the middle military division, and sent to operate against the Southerners in the Shenandoah Valley. During a temporary absence on Oct. 19th, his forces were attacked near Cedar Creek, and driven back by General Early, and his ride to the rescue and the conversion by the magic of his presence of defeat into victory, is one of the most celebrated events of the war. In November he was appointed major-general of the regular army in the place of McClellan, and was Grant's right-hand man during the final advance upon General Lee; his assaults upon the enemy's positions at Five Forks (April 1st, 1864), and Sailors' Creek, being particularly brilliant. After the war he held various military commands, and in 1867 was one of the numerous people who came to loggerheads with President Johnson. He was dismissed from the command of the fifth military district for removing the Governors of Louisiana and Texas.

G. W. Denison and P. C. Headley, *Lives of Sheridan*.

Sheridan, RICHARD BRINSLEY BUTLER (b. 1751, d. 1816), dramatist, orator, and politician, was born at Dublin. Both his grandfather, Dr. Sheridan, the friend of Swift, and his father, Thomas Sheridan, the author of a well-known dictionary and the rival of Garrick, were men of some mark. His mother, who died in 1766, was a woman of ability. After some early schooling in Dublin, he was sent to Harrow in 1762, where he did not distinguish himself. When he left school he joined a friend named Halhed in some literary enterprises. He ran away with Eliza Linley, a singer, was secretly married to her in France, and fought a duel in defence of his wife's honour. Without means or a profession—for his family were always on the verge of bankruptcy, and he was himself the most reckless of mankind—he turned to literature as his best resource. In 1775 his first comedy, *The Rivals*, after narrowly escaping being damned, won the great success which its brilliancy and wit well deserved. A slight but amusing farce, *St. Patrick's Day*, and the opera, *The Duenna*, whose success rivalled that of the *Beggar's Opera*, rapidly followed. In 1776 Sheridan managed to find money to become one of the proprietors of Drury Lane theatre, where in 1777 appeared the *Trip to Scarborough*, an adaptation from Vanbrugh's *Relapse*, and his most famous comedy, the *School for Scandal*, which at once won the popularity and appreciation which it still retains. In 1779 he wrote for the same theatre a *Monody to the*

Memory of Garrick, "the longest flight ever sustained by the author in verse," and in the same year *The Critic*, "his last legitimate offering on the shrine of the dramatic muse," for "politics had always held divided empire with literature in the tastes and studies of Mr. Sheridan," and the large income, the fame, and the powerful connections which his dramatic reputation secured, soon gave him excellent political openings. His social gifts brought him into intimacy with Fox, Burke, Windham, and other Whig leaders. In 1779 appeared the first number of *The Englishman*, to which periodical he contributed many a stinging attack on North, Germaine, and the rest of the Ministry. In 1780 Fox got him returned for Stafford. His first speeches were very successful, and though he had spoken but seldom, he was made an Under-Secretary of State under the Rockingham Ministry (1782). He went out of office when Fox quarrelled with Shelburne. Under the Coalition he became Secretary to the Treasury. He saved his seat for Stafford at the general election of 1783, so disastrous to his party, and the long years of opposition to which the Whigs were now condemned gave his brilliant but unsteady genius better opportunities of shining than would have been likely to follow from the routine of office. His most famous contribution to politics is his great speech on the wrongs of the Begums of Oude during the impeachment of Warren Hastings, an oration which excited an almost unparalleled enthusiasm, and which so cold and hostile a critic as Pitt declared surpassed all the eloquence of ancient or modern times. But as he grew older, his prospects became less satisfactory. Overwhelmed with debt and all sorts of difficulties, and often suffering from bad health, he adhered in middle life to all the irregularities of his youth. The boon-companion and close confidant of the Prince of Wales, he was more busied in pleasure than in serious politics. His strenuous advocacy of the Prince's cause in Parliament, especially during the Regency discussions of 1789, did little to improve his reputation. The death of his first wife in 1792 deprived him of a steady influence. He married again in 1795, but his second wife, Miss Ogle, a daughter of the Dean of Winchester, had neither the character nor the attractiveness of her predecessor. The fortunes of Drury Lane theatre, on which he chiefly depended for his income, being very precarious, he sought by slight adaptations of bad plays of Kotzebue, like *The Stranger* and *Pizarro*, to pander to the public taste for weak sentimentalism (1798). With Mrs. Siddons as Mrs. Haller, *The Stranger* obtained a remarkable success not due to its literary merits. In the great secession of the Whig party after the French revolution, Sheridan adhered to Fox. In 1804 he was made Receiver of the Duchy of Cornwall, and took an important part in

effecting an alliance between Sidmouth and the Whigs in 1806. For this he met an inadequate reward in the subordinate appointment of Treasurer of the Navy, though it is absurd to blame Fox and Grenville for refusing high office to a man of Sheridan's habits. With the fall of Grenville his political career came to a practical end. Ambitious to sit for Fox's old constituency, he wasted much money in contesting Westminster; while, in 1809, the burning down of Drury Lane completed the ruin of his fortunes. In 1810 he wantonly quarrelled with the Whig leaders by drawing up for the Prince of Wales a reply to a parliamentary address entirely different from that which they had themselves submitted to him; and as he would not go over with George to the Tories, he was henceforth isolated from all politics. In 1812 he lost his seat for Stafford, and with it that immunity from arrest which alone had kept him out of a sponging-house. The bailiffs seized on his furniture. His friends, wearied of continual importunity, or careless of his pressing distresses, turned a deaf ear to his complaints. He died in misery on July 7th, 1816. A magnificent funeral in Westminster Abbey still further heightened the tragic contrasts of his unhappy life. Few careers have been more brilliant than Sheridan's. The enthusiasm of the youthful Byron declared him to be the author of the best comedy, the best farce, the best opera, and the best oration of his time. And despite the artificial and unnatural atmosphere which surrounds his dramatic writings, the polished wit, the sprightly style, the finished intrigue, the consummate knowledge of dramatic effect, which they display, have given them a permanent place in literature and on the English stage. The unanimous applause of contemporaries is almost enough testimony to the overwhelming brilliancy and cleverness of his speeches. As a politician he played a characteristic, but hardly a serious, part in the history of his time, while his pre-eminent social gifts were the cause alike of his great success and his terrible decadence. But though there is much to blame, there is almost as much to pity in a career so chequered and so sad in its concluding scenes. Sheridan was vain, weak, insincere, and destitute of moral strength; but there was something in him that exercised an overpowering influence even on those who realised most clearly the defects of his character.

The chief source for Sheridan's history is his *Life* by Thomas Moore the poet, published in 1823, though it is not very deep or very complete; a short memoir by Professor Smyth, who was tutor to one of his sons; *Sheridaniana*, a volume of mere anecdote; an unsympathetic *Biographical and Critical Sketch*, by Leigh Hunt; and the *Life*, by Mrs. Oliphant, in the *English Men of Letters Series*, useful but slight, and not very strong on the political side, may also be mentioned. The *Croker Papers* throw some light

on the history of his last days. There have been innumerable editions of his plays, and to most a biographical sketch has been prefixed.

[T. F. T.]

***Sherif Pasha** (b. 1819), Egyptian statesman, was born at Constantinople of pure Ottoman lineage. He was educated chiefly in France, and in 1844 went to Egypt, where he became a member of the household of Prince Halim. He was persuaded by the Khedive, Said Pasha, to embrace a military career, and rose to the rank of Pasha, but retired in 1857, and became Minister of Foreign Affairs. He was thrice regent of Egypt during the absence of the Khedive Ismail, in 1865, 1867, and 1868, and in the last year was appointed Minister of the Interior and President of the Council of Ministers. In 1879, shortly after the dismissal by the Khedive of the Nubar-Wilson ministry, Sherif was recalled to power by the Khedive as an act of defiance to the Powers; but his downfall occurred shortly after the deposition of his master. In 1881 he became Prime Minister once more, but resigned on Feb. 3rd, 1882, when confronted by the rebellion of Araby Pasha, after wavering undecidedly between the nationalists and the representatives of the Anglo-French Control. He resumed office in August of that year, but resigned in January, 1886, because he considered that the affairs of Egypt were too much under the direction of England.

***Sherman, WILLIAM TECUMSEH** (b. 1820), an American general, entered the military academy 1836, graduated 1840, and was appointed second lieutenant of the 3rd Regiment of artillery. He served in the war against the Indians in Florida, 1840-2; went through the Mexican War, mainly in the adjutant-general's department; was brevetted captain May, 1848, for gallant and meritorious services in California, and resigned from the army in 1853. In the next ten years he was by turn a banker, a lawyer, a professor, and a railroad man. Upon the breaking out of the Civil War he offered his services to the U.S. Government, and was appointed, May 14th, 1861, colonel of the 13th Regiment of infantry, and was promoted almost immediately brigadier-general of volunteers. He served in the defences of Washington, and in the Manassas campaign, and commanded a brigade at the battle of Bull Run, July 21st, 1861. He served in the department of the Cumberland in the summer and autumn of the same year, and in the department of Missouri; and in February and March, 1862, in command at Paducah, he co-operated in Grant's advance up the Tennessee river. He was engaged at the battle of Shiloh, April 6th-7th, and was wounded. In May he was promoted to be major-general of volunteers. He was engaged in the siege of Corinth, May 15th to 30th; and in December commanded the expedition against Vicksburg, and the attempt to carry that place by *coup de main*. He was

placed in command of the 15th corps in Jan., 1863, and led in the same month the expedition against Arkansas Port, which place was carried by storm. He was next engaged with his corps in the siege of Vicksburg until the surrender of the place, July 4th, 1863. His commission of brigadier-general in the regular army bears the date of that day. At the battle of Chattanooga (Nov. 23rd-25th) he commanded the left wing of Grant's army in the attack upon Missionary Ridge. He was appointed to the command of the department and army of the Tennessee (Oct. 25th, 1863), and forced the Confederate general Longstreet to raise the siege of Knoxville (Dec. 1st). In the spring of 1864 he was appointed to the command of the military division of the Mississippi, comprising the whole theatre of war in the Mississippi Valley, with his headquarters at Nashville. This was a preliminary to Grant's plan for simultaneous operation of the eastern and western armies. Sherman organised an army of 100,000 men, and moved in May. The point he wished to gain was Atlanta, Georgia, but a considerable Confederate army under J. E. Johnston was in the way. Sherman commanded in this eventful campaign the armies of the Ohio, the Cumberland, and the Tennessee. The generals proceeded to manœuvre against one another with admirable skill. For a month, though there was no general action, there was severe fighting and constant skirmishing, and Sherman lost 9,000 men. Johnston retreated on Dallas, and from thence to Marietta, Georgia. From June 14th to 27th the operations against Marietta were a series of manœuvres, planned to force Johnston to fight in circumstances advantageous to Sherman, without much result. Johnston's position was well fortified, and Sherman at every move encountered only an entrenched line. He could not attempt to manœuvre Johnston out of his position without grave danger to his own communications, and hence endeavoured to carry the position on Kennesaw Mountain by storm (June 27th), and was repulsed, with a loss of 2,000 men. But Johnston withdrew from Marietta next day, and retired to the Chattahoochee, having always well fortified positions in his rear all the way to Atlanta, to which he finally withdrew July 9th. He had done great things in this skilful retreat, but it was thought at Richmond he had not done enough, and he was relieved of command, and Hood appointed in his place. This simplified things for Sherman. His whole endeavour had been to force a battle, and Hood was appointed to fight. Hood fought the battle of Peach Tree Creek (July 20th), lost 5,000 men, and was beaten. On the 22nd he fought the battle of Atlanta, with heavy losses never reported. Sherman lost 3,500. Hood fought three more battles in the same desperate way, and Atlanta surrendered (Sept. 2nd). Sherman held Atlanta

until Nov. 16th, when he set out upon his march to the sea, which was made in twenty-eight days, and traversed the Confederacy. Savannah surrendered Dec. 21st. On Jan. 15th, 1865, Sherman marched from the Savannah river into the Carolinas. Columbia, S.C., was occupied Feb. 17th. The battle of Averysboro was fought March 16th, that at Bentonville March 20th-21st. Raleigh, N.C. was occupied April 13th, and the Confederate army under J. E. Johnston surrendered at Durham Station, April 26th, 1865. Sherman succeeded to the position of lieutenant-general on July 25th, 1866. In November he was sent by the President upon a confidential mission to Mexico. He became general and commander-in-chief in March, 1869, upon Grant's accession to the presidency, and was retired at his own request in 1884, being then within a few months of the legal age of retirement. He was always equal to his opportunities, and in the number of Northern commanders is distinguished as the one who fought the most capable strategist of the Southern armies and the most reckless fighter, and defeated both, without that great preponderance in force which was the rule on the Northern side.

Memoirs of W. T. Sherman, by himself (2 vols., New York, 1875). [G. W. H.]

* **Sherrington, HELEN LEMMENS** (b. 1834), vocalist, was born in Lancashire, and studied in Holland under Verhulst, and afterwards at the Brussels Conservatoire, where she obtained the first prize for singing and declamation. In 1856 she appeared for the first time in London, singing in concerts and oratorios, though she did not attempt operatic parts until several years later. She possessed a fine soprano voice, and sang with much refinement and finish of style. In 1857 she was married to M. Lemmens, the eminent organist, and shortly after his death in 1881 she was appointed professor of singing at the Brussels Conservatoire.

Shield, WILLIAM (b. 1748, d. 1829), musical composer, was a native of Smalwell, Durham, and was at first apprenticed to a boat-builder. Meanwhile he had thoroughly grounded himself in music, and acquired, after the expiration of his indentures, a reputation at Scarborough as the leader of the concerts. In 1772 he appeared at the Italian Opera, and in 1773 became first viola. His comic opera, *The Flitch of Bacon*, produced in 1778, gained for him the post of composer to Covent Garden, which he held from 1778 to 1791, and again from 1792 to 1797. Among his other dramatic compositions may be mentioned *Rosina* (1783); *The Poor Soldier* (1784); *The Woodman* (1792); *The Italian Villagers* (1797); and *Two Faces under a Hood* (1807). He was also the author of many admirable songs, among which may be mentioned *Tom Moody*, *The Heaving of the Lead*, *The Arethusa*, *The Wolf*, and *Old Towler*.

Shilleto, THE REV. RICHARD (b. 1810, d. 1876), was educated at Trinity College, Cambridge, where he took a brilliant degree in 1832. He then became classical lecturer at Trinity and King's Colleges, and in 1867 was elected to a fellowship at St. Peter's College on account of his services to classical learning; he also received the appointments of assistant tutor, dean, and prælector to the college. He examined in the classical tripos in 1839 and 1840. Mr. Shilleto was the most accomplished Greek scholar of his time; and was a thoroughly successful tutor. He left little behind him, however; his published works consisting of an edition of Demosthenes' *De Falsâ Legatione* (last edition 1874), and the two first books of Thucydides, with notes, upon an edition of whose work he was engaged at the time of his death.

Shirley, WALTER WADDINGTON, D.D. (b. 1828, d. 1866), historian and controversialist, was the only son of Dr. W. A. Shirley (d. 1847), sometime Bishop of Sodor and Man, and was educated at Rugby and Oxford. He was associated with Lord Romilly, the Master of the Rolls, in preparing and editing several historical volumes that issued under the authority of his lordship. His best contributions to the History of England in this respect are:—*Fasciculi Zizaniorum Magistri Johannis Wyclif* (1858), and *Letters Illustrative of the Reign of Henry III.* (1863), of which works Professor Freeman speaks in terms of praise. In 1864 he became professor of ecclesiastical history, and Canon of Christ Church at Oxford, in succession to Dean Stanley, and in the following year completed his *Catalogue of the Original Works of J. Wyclif* (1865), the fullest yet produced. Amongst his other works are:—*Undogmatic Christianity* (1863), *Scholasticism* (1866), and *Some Accounts of the Church in the Apostolic Age* (1867).

* **Shorthouse**, JOSEPH HENRY (b. 1834), novelist, is a native of Birmingham, and was privately educated, and took up his residence at Croydon. His reputation rests upon one book, *John Inglesant* (1881), a romance of the Stuart period, which on its appearance was hailed as a work of singular charm of style and profundity of thought. Mr. Shorthouse has since published *The Platonism of Wordsworth* (1881), prefaces to George Herbert's *Temple* (1882), the *Golden Thoughts of Molinos* (1883), *The Little Schoolmaster Mark, a Spiritual Romance* (1883), and *Sir Percival, a Story of the Past and Present* (1886).

Siddons, MRS. SARAH (b. 1755, d. 1831), one of the greatest English tragic actresses, was the eldest daughter of Roger Kemble, a respectable provincial actor, and was born at Brecon, in South Wales. Sarah appeared early on the stage, going the usual rounds of juvenile characters without attracting much attention, and at the age of eighteen, being already noted for her beauty, married, with

the somewhat reluctant consent of her parents, Mr. Siddons, an actor in her father's company. Shortly afterwards, in 1775, she was invited by Garrick to join his company at Drury Lane, London, but in London she met with so little success that she failed at the end of the season to obtain a re-engagement. She returned to the provinces not a little mortified, only, however, to meet with an extraordinary series of successes at Birmingham, Manchester, York, and Bath. The growth of her provincial reputation soon determined her recall to the metropolis. In Oct., 1782, she again appeared at Drury Lane, as Isabella in *The Fatal Marriage*. The effect of the performance was unparalleled; she at once acquired the reputation of being the greatest actress of her day. During that season she appeared as Euphrasia, Zara, Jane Shore, Belvidera, and Calista. In subsequent seasons she maintained her reputation, and extended the circle of her characters, taking from Shakespeare alone Lady Macbeth, Queen Katherine, Constance, Portia, Isabella, Desdemona, Imogen, Hermione, and Volumnia. In comedy, although there was much to admire in her acting, she scarcely ever gave satisfaction. She became a favourite of George III. and his queen, and was in the habit of reading plays to them. In 1812 she retired from the stage, having realised a fortune equal to her wishes. Mrs. Siddons was one of the best English tragic actresses; indeed, she has been pronounced by competent critics to be without a rival. To see her acting Lady Macbeth to the Macbeth of her great brother, John Kemble (q.v.), was an intellectual treat the like of which is not given to the present generation. On the stage she was decidedly original, copying no one, but acting from nature and herself. But her genius was distinctly a stage genius; in other matters she was a woman of no extraordinary parts. Exemplary in everything, she bore an unblemished character and reputation, and in private life was as good and as amiable as in her public profession she was transcendently great.

James Boaden, *Memoirs of the Life of Mrs. Siddons* (1832); Thomas Campbell, *Life of Sarah Siddons* (2 vols., 1834).

* **Sidgwick**, PROFESSOR HENRY, LL.D. (b. May 31st, 1838), a native of Skipton, in Yorkshire, was educated at Rugby, and at Trinity College, Cambridge. He graduated as senior classic, and became a fellow and lecturer of his college in 1859. In 1869 he resigned his fellowship on account of the conditions of religious belief then attaching to fellowships; and in 1870 took a prominent part in establishing the scheme of Academic instruction for women in Cambridge. In 1875 he was appointed prælector of moral philosophy in Trinity College, and in 1883 Knightbridge professor of moral philosophy in the University of Cambridge. His works include the *Methods of Ethics* (1874), the *Principles*

of *Political Economy* (1883), and *Outlines of the History of Ethics* (1883). In 1885 Professor Sidgwick, as president of the Economic Section of the British Association, delivered an address on the *Scope and Method of Political Economy*. He has contributed to periodical literature numerous articles on philosophical and economical subjects. The chief characteristic of Professor Sidgwick's philosophical work is in seeking to reconcile lines of thought previously regarded as antagonistic. In ethics he aims at reconciling "Intuitionism" and "Utilitarianism." In political economy his object has been to find the right compromise between, or combination of, the traditional deductive method of English political economy and the views of the school—sometimes called "socialists of the chair"—predominant in Germany. He is LL.D. of the Universities of Edinburgh, Glasgow, and St. Andrews, and a prominent member of the Society for Psychological Research.

Sidmouth, HENRY ADDINGTON, 1st Viscount (b. May 30th, 1757; d. Feb. 15th, 1844), Prime Minister of England, was the son of a London physician in considerable practice, who belonged to a very old family of the lesser gentry, long seated in Oxfordshire. The statesman's father was family physician to Lord Chatham, and a considerable intimacy appears to have sprung up between the two families, which brought young Addington and William Pitt together at a very early age. The former was sent to Winchester in 1761, and in October, 1774, he went into residence at Brasenose, which then had the reputation of being the most studious college in the university. He took his degree in February, 1778, and in 1779 won the English essay prize, the subject being *The Affinity between Painting and Writing in point of Composition*. From Oxford Mr. Addington proceeded to Lincoln's Inn, and took chambers in Paper Buildings, and prepared to devote himself to the equity branch of the legal profession. But at the dissolution of Parliament in 1784 he was one of the many men returned to the House of Commons in the train of Mr. Pitt, representing Devizes, a borough which he continued to represent for more than twenty years. In 1786 he was selected by Pitt to second the Address in the House of Commons. He made his maiden speech on this occasion, and he does not seem to have courted the reputation of a debater. A few years afterwards, however, the post for which he was exactly suited fell vacant by the promotion of Mr. (afterwards Lord) Grenville to the Home Office, and on June 8th, 1789, he was elected to the Speaker's chair by a majority of seventy-three. It was then that for the first time an annual salary, amounting to £6,000 a year, was annexed to the office, which had previously been remunerated by fees, sinecures,

and other irregular contributions. In this position it is probable that Mr. Addington passed the happiest years of his life. He lived on terms of great intimacy with Pitt. But this pleasant intercourse was soon to be broken off. Pitt's determination to make Roman Catholic Emancipation a condition of the Act of Union led to his resignation of office, and the Speaker was solicited by the king to take his place. To this after some reluctance he consented, and received the seals from his Majesty on March 14th, 1801, the same day that Mr. Pitt surrendered them. Of all the ministers by whom George the Third was ever served, Mr. Addington seems to have been the favourite. "You are my Chancellor of the Exchequer," he said to him—and he seems never to have had a moment's difference of opinion with him during the three years that his administration lasted (March 14th, 1801—May 10th, 1804). The worst that can be said of Addington is that having been thrust into Pitt's place by no fault of his own, he objected to play the part of a warming-pan. For his reluctance to make way for Pitt almost as soon as his own administration had been formed, we cannot think he is to blame. On the Peace of Amiens, which was the one great work of his government, the verdict of history has not been altogether unfavourable. Pitt upheld it on the ground that England stood in need of rest, to gain strength for a renewal of the contest which he seems to have considered certain. In his eyes it was merely the drawing back for the purpose of springing forward. This was subsequently the opinion of Mr. Windham. The peace was concluded in March, 1802. But it only lasted for one year, and then it was seen where Addington's incompetence really lay. Nobody now blames him for the renewal of the war. But Addington had neither the force of character nor the breadth of view which his new responsibilities required. Addington's biographer is probably right in saying that the alleged inadequacy of his military and naval preparations, which was the ostensible ground on which he was assailed in the House of Commons, was in reality only an excuse, and that the great bulk of the Tory party, which had so long been led by Mr. Pitt, and which Mr. Pitt had in fact created, jumped at any pretext for restoring him to his old place. Personally, Addington was quite as popular as Mr. Pitt, and Canning's attacks upon him in the *Anti-Jacobin*, however justifiable, were never forgiven by a large circle of politicians. Addington retired, as we have seen, on May 10th, but he still retained in the House of Commons a certain number of followers, who made his quarrel their own, and constituted a source of weakness to the new administration, which Mr. Pitt was naturally anxious to remove. For this purpose overtures were made to

Addington, and favourably received by him; and on Jan. 11th, 1805, he kissed hands as Viscount Sidmouth, and Lord President of the Council, the Duke of Portland consenting to remain in the Cabinet without office. The reconciliation, however, was of short duration. Lord Sidmouth's friends in the House of Commons voted against Pitt on a motion respecting Lord Melville, and on Pitt's remonstrances, Lord Sidmouth, who had already nearly left the government on a question respecting Lord Melville's irregularities, now finally retired, and thus terminated a connection which had lasted more than twenty years. He still, however, remained the "King's friend." At his death he was probably the last surviving specimen of that school. Bearing this in mind, the adhesion of Lord Sidmouth to the coalition ministry which was formed on Mr. Pitt's death will be no surprise to us. He entered it as the king's representative, caring nothing for party, and prepared only to be the channel through which the king's wishes should, in a constitutional manner, be brought to bear upon the Cabinet. The public, however, did not look on his behaviour precisely from his own point of view, and though he lived to fill one of the highest offices of state for more than ten years, he never quite recovered the place in public estimation which he had held down to 1806. On the dismissal of the Grenville government in the spring of 1807, the Duke of Portland became the new Prime Minister, and so strong was the feeling against Lord Sidmouth entertained by Mr. Pitt's friends, that it was found impossible to include him in the new arrangements. The same difficulty was experienced under Mr. Perceval, and it was not till 1812, shortly before that statesman's assassination, that he was readmitted to office as President of the Council. In Lord Liverpool's government he was appointed to the Home Office, and he and Lord Eldon were long looked up to by the less Liberal section of the Tory party as their parliamentary chiefs. In process of time, Mr. Peel was added to the number, and they undoubtedly represented the predominant feeling of the country. It is chiefly, however, in connection with his official duties that the name of Lord Sidmouth is remembered, and for the repressive measures to which, after 1815, he felt compelled to have recourse. For these he has been severely blamed, perhaps without sufficient allowance being made for the great difficulties of his position, or for the real grounds of alarm which both the government and the country in general believed themselves to possess. It is to be remembered, moreover, that though Lord Sidmouth was Home Secretary at the time, Lord Castlereagh was supposed to be the moving spirit in the domestic policy of the government. By the year 1822, however, all these difficulties and dangers were surmounted, and Lord Sidmouth

handed over to his successor a comparatively tranquil office. The veteran statesman lived twenty-two years longer, of which the first ten were passed in active political life, though no longer as a member of the government. It is unnecessary to say that he remained to the last an uncompromising opponent of Roman Catholic Emancipation, and that he never enrolled himself in the little band of "Waverers" who carried the Reform Bill of 1832. In the year 1823 Lord Sidmouth, who had lost his first wife in 1811, married Mary Anne, only daughter of Lord Stowell, and widow of Thomas Townsend, of Honington Hall, in Warwickshire. With this lady, who died two years before her husband, he passed a happy old age, and died of natural decay at the White Lodge in Richmond Park. He was not a great statesman, and Fate unkindly thrust him into situations for which Nature had not fitted him. But he was an admirable specimen of an English gentleman, an excellent public servant, and one of those honest and straightforward politicians who, if sometimes obstacles to progress, are salutary monitors in the crooked paths of ambition.

Pellow, *Life of Sidmouth; Diaries and Correspondence of the First Lord Malmesbury; The Grenville Papers; Courts and Cabinets of George III.* [T. E. K.]

Siemens, SIR CARL WILHELM, F.R.S., LL.D., D.C.L. (b. 1823, d. 1883), a distinguished metallurgist and electrician, though for many years of his life a naturalised English subject, was entirely of German origin, and, like his scarcely less distinguished brother Werner, was born at Louthe, in Hanover, then under the sovereignty of George IV. However, all of his scientific career was passed in this country, and his principal discoveries were first promulgated in our midst. After receiving his preliminary training at the Lübeck Gymnasium, he passed to the Real-schule of Magdeburg, and thence to the University of Göttingen. Meantime, however, he began the practical study of engineering and electricity in the workshops of Count Stolberg, and in 1843 he migrated to London, where at a later date he was followed by his brother, who joined him in the various undertakings which are connected with the name of "Siemens Brothers," either as manufacturers of electric telegraph cables at Woolwich, or as iron smelters and makers of "Siemens steel" at Landore, near Swansea. In 1843 Siemens was still far distant from fortune. He was, however, an excellent physicist and mathematician, and though but slenderly provided with classical learning, was admirably fitted by the training, practical and theoretical, which he had received, for the career which he determined to follow. When a pupil in Hemly's laboratory he had heard how Elkington and Mason were depositing gold and silver on base metal by means of the electroplate process; and then

finding that he could improve on this mode of operation, he determined to see what luck England had in store for him. When he landed from the Hamburg steamer his whole available fortune consisted of a single thaler. Accustomed in Germany to see every act of men's lives controlled by government officials, he was dismayed to find that in all London there was no bureau where inventions were examined, pronounced on, and rewarded; and it is said that so ignorant was he of the language and the ways of the country where he was so soon to distinguish himself, that it was only after painful interrogation he learned that an "undertaker" undertook not to see to interests of living inventors, but to dispose of them after they were dead. Still worse, he found that his discovery had been anticipated, though the Birmingham electroplaters paid him handsomely for the various technical niceties which they had until then failed to hit upon. His subsequent career was one of almost uninterrupted invention and success. Werner kept for the most part to Prussia, where he had begun life as an artillery lieutenant; while Carl, or William as he preferred to be called, fixed his home in London, until he bought his beautiful country seat near Tunbridge Wells, where electricity played every part, from cooking the dinners to calling the servants, ripening the peaches and brushing the boots. His patents were endless. His chronometric governor, his anastatic printing, his regenerative furnace, his curious "selenium eye," his electric railways, his proposals for the conveyance of force from waterfalls like Niagara, and his steamer *Faraday* for laying the Direct United States Cable in 1874, are among a few of the inventions and contrivances with which his name is popularly connected. His ingenious experiments in ripening fruit under electricity, his labours in the direction of finding how electricity can best be applied to illumination, and his combined gas and coke stove, in which the air required for combustion is heated in passing to the burner, so that the warmth usually wasted below the grate and up the chimney is brought forward, and radiation of heat increased, were equally ingenious and scientific; while it is of course unnecessary to recall the steel-making process with which his fame is entwined and out of which a large portion of his ample fortune was earned. His work on the *Conservation of Solar Energy* (1882) was an ingenious endeavour to explain certain phenomena in solar physics on the principle of his own regenerative furnace; and though he had little time for writing, his numerous papers collected from the *Transactions* of the Royal Society, the Institute of Civil Engineers, the Iron and Steel Institute, and similar bodies, are full of valuable facts. Many honours fell to his share. He was chairman of the Society of Arts Council, president of the Iron and Steel

Institute, president of the Society of Telegraph Engineers, president of the Institute of Mechanical Engineers, president of the Midland Institute, and president of the British Association (1882). He was also F.R.S., LL.D. Dub. and Cantab., D.C.L. Oxon., and Ph.D. Gött., besides being member of numerous learned societies in France, Germany, America, and Russia, where he was scarcely less known than in the land of his adoption. [R. B.]

Sieyès, EMMANUEL JOSEPH (b. 1748, d. 1836), commonly called the ABBÉ SIEYÈS, was the fifth child of an honest bourgeois family, and received his schooling partly at home and partly at an institution of the Jesuits in his native town of Fréjus. He had a fancy for a military life, but his weakly health was pronounced an obstacle, and the ecclesiastical profession, for which he felt no kind of vocation, but a distaste, was fixed upon as the puny lad's destiny. So at fifteen he was packed off to Paris to study philosophy and theology at St. Sulpice. In 1775 he became a canon, and assisted as deputy of the diocese of Tréguier at the États de Bretagne, whence he brought back a profound horror of the privileged class. At a later period he was nominated the commissioner of the diocese to the upper chamber of the French clergy, and so came to reside in Paris, where he was highly esteemed for his administrative capacity. Already a pamphleteer of note, he brought out in 1789 his world-famous brochure, *Qu'est-ce que le Tiers-État?* to which the revolution was professedly a practical answer. He now became one of the most prominent statesmen in France. He acted as one of the deputies for Paris to the States-General, which at his suggestion assumed the name of National Assembly; joined in the attack on Robespierre, sat on the Committee of Public Safety, and in 1797 went to Berlin as ambassador. In 1798 he became president of the Directory, and after the 18th Brumaire one of the three consuls. He drew up several Constitutions, any one of which he thought might well be suited for the "good governance" of France, and advocated various schemes for the advancement of the French people. When these had been rejected he returned and remained steady to the constitutional principles he had first advocated, and under the Empire he is described as "buried in silence and morose meditation." He never joined Napoleon, who, however, on his return from Elba made him a count, although he (Sieyès) protested against his Constitution. At the Restoration he was exiled, and passed fifteen years in Belgium, whence he returned in 1830—the forgotten witness of a bygone age. The failure of all his schemes made him a misanthrope, and he looked upon himself as the victim of ingratitude, besotted ignorance, stupid calumny, and malignant envy. Those

few who had access to him in his later years describe him as reserved, absorbed, *immobile*, and practising more rigidly than ever *cette opiniâtre passion de se taire*. He belongs distinctly to the last century.

Glaser, *Des Opinions politiques de Sieyès et de sa Vie* (1800); E. de Beauverger, *Étude sur Sieyès* (1851); Carlyle, *History of the French Revolution*.

Sigourney, LYDIA HOWARD, *née* HUNTER (b. 1791, d. 1865), American authoress, was a native of Norwich, Connecticut, and married in 1819 Mr. Sigourney, of Hartford. Already she was known as an authoress. Her *Moral Pieces in Prose and Verse* had appeared in 1815, and it was quickly followed by the numerous effusions which gained for her, not undeservedly, the title of "the American Hemans." Among her works are:—*Letters to Young Ladies* (1833), *Pocahontas and other Poems* (1841), and *Pleasant Memories of Foreign Lands* (1842).

Mrs. Sigourney's *Letters* (1868).

Simeon, THE REV. CHARLES (b. 1758, d. 1836), divine, was a native of Reading, and was educated at Eton and at King's College, Cambridge, where he became impressed by religious ideas of an Evangelical character, and abandoned all fashion and extravagance. He was ordained priest in 1782, and became vicar of Trinity Church, Cambridge. In 1790 he became provost of King's College, and held both appointments until his death. Simeon's life was thus devoid of sensational events; but his influence was vast. He was the chief founder of the modern Evangelical school in the Church, and at first had to encounter many bitter attacks, which, however, gradually gave place to admiration. His preaching was fervent, impetuous, and convincing; his attractiveness, particularly to young men, very remarkable. His *Hora Homiletica* (1832), a collection of his sermons, had a circulation which was large even for volumes of religious literature.

Rev. W. Carus, *Memoirs of the Rev. C. Simeon* (1857).

* **Simeoni**, HIS EMINENCE GIOVANNI (b. 1816), Italian statesman, was born at Paliano, and having been ordained, became, in 1847, auditor to the nuncio at Madrid. In 1875 he became nuncio at Madrid, with the title of Archbishop of Chalcedonia *in partibus*. In the following year he succeeded Cardinal Antonelli as Secretary of State and Prefect of the Apostolic Palaces to Pius IX., and is supposed to have dictated his policy of resistance to the Falk Laws in Germany, and the education laws in France. On the accession of Leo XIII. in 1878, he was replaced by Cardinal Franchi, and became Prefect of the Propaganda.

* **Simon**, JULES (b. 1814), received from his parents the name of Jules François Simon Suisse; he discarded the François and the

Suisse, and is known only as Jules Simon. As a student at the Normal School he was a devoted follower of Victor Cousin (q.v.), whose successor as philosophy lecturer at the Sorbonne he became in 1839. In 1846 he attempted to get into the Chamber of Deputies, but was defeated; in 1848, however, he succeeded in being returned, taking his seat with the Moderate Left. He refused to take the oath of allegiance on the establishment of the Empire, and his philosophy lectures at the Sorbonne ceased. On his re-entrance into public life in 1869 he rapidly rose, and became one of the chiefs of the Republican party. In the Government of National Defence he held the post of Minister of Public Instruction, Public Worship, and Fine Arts; and in M. Thiers's first Cabinet his measures for the reform of the system of secondary education aroused the fury of the Clericals, and in May, 1873, he resigned. Jules Simon now became president of the Republican Left, and was one of the most energetic of the opposers of the designs of the Monarchists. In 1874 he became director of the *Sidels* newspaper, and in 1876, having been elected a life senator in the previous year, he was commissioned to form a Cabinet, and took the portfolio of the Interior (Dec. 13th). He was, however, unacceptable to Marshal MacMahon and the Right, and being blamed by letter by the Marshal-President for his too liberal attitude towards the press he promptly resigned (May 16th), and the great crisis of the republic ensued. On the death of M. Thiers, M. Jules Simon was chosen to pronounce his funeral oration. M. Jules Simon was reporter to the Commission which decided that the Chambers should return to Paris, and took a prominent part in the revision of the Constitution. His speeches, although as genuinely Republican as ever, began to be of a more Conservative tone, and he opposed in particular M. Ferry's bill for the expulsion of the religious orders. M. Jules Simon has published, among other works, some scholarly editions of the philosophers—Descartes, Bossuet, Malebranche, and Arnauld; a thoughtful treatise, *La Liberté; Souvenirs du 4 Septembre* (1874); and *Le Gouvernement de M. Thiers* (1878). He is in favour of Free Trade, and has a thorough knowledge of economics.

Simpson, GENERAL SIR JAMES, G.C.B. (b. 1792, d. 1868), British soldier, a native of Roxburghshire, entered the army in 1811, and served in the Peninsular War, and in the campaign of 1815. He gained the high approval of Sir Charles Napier while under him in the Mauritius, and was in consequence selected to serve as second in command under him during the Scinde campaign of 1845. He returned from India with a great reputation, and on the outbreak of the Crimean War he was sent out as chief of the staff.

On the death of Lord Raglan, Simpson succeeded him as commander-in-chief, but was hardly equal to the position, and failed disastrously in the second assault on the Redan (Sept. 8th, 1855). Soon afterwards he returned home, and was solaced with the rank of general and a G.C.B. His successor was Sir William Codrington.

Simpson, Sir James Young, Bart., M.D. (b. 1811, d. 1870), a celebrated physician, was born at Bathgate, Linlithgowshire. He entered Edinburgh University in 1825, and graduated M.D. in 1832. In 1840 he obtained the Chair of midwifery in the university, and in 1847 was appointed one of her Majesty's physicians in Scotland. In the same year he established for himself a European reputation by proving by experiment that chloroform could be used without danger in obstetrics. It gained for him the foreign associateship of the French Academy of Medicine, and the Monthyon prize from the French Academy of Sciences. At Edinburgh he became president of the Royal College of Physicians in 1849, and of the Medico-Chirurgical Society in 1853. He was created a baronet in 1866. A collected edition of his works was published in 1871. It includes *Homœopathy, its Tenets and Tendencies*, and *Acupuncture, a New Method of Arresting Surgical Hemorrhage and of Accelerating the Healing of Wounds* (1864). He was also a learned archaeologist, and his *Archæological Essays* were republished in 1872.

Dr. Duns, *Memoir of Sir J. Y. Simpson* (1873).

Simrock, Karl Joseph (b. 1802, d. 1876), poet and scholar, was the son of a music-seller, and was born at Bonn. He studied at the university of his native town and at Berlin, where he entered the civil service, but was deprived of his position during the revolutionary movements of 1830. Even before this he had begun that profound study of the *Nibelungenlied* by which he gained the highest reputation as a scholar of early German. The first edition was published in 1827, the final edition, with a special dictionary, in 1874. Returning to the Rhine, he devoted himself entirely to his favourite studies in early German history and poetry, and in 1850 was appointed professor of old German literature at the University at Bonn. In 1844 he published a volume of original poems, containing *Wieland der Schmied* (1835), but he will be rather remembered for his valuable editions of the early German poets and legends, such as *Gedichte Walthers von der Vogelweide* (1833), *Rheinagen* (1837), *Parzival* (1842), the *Heldenbuch* (1843-9), *Reineke Fuchs* (1845), *Tristan und Isolde* and *Deutsche Mythologie* (1855), *Lieder der Minnesinger* (1856), and the *Wartburgkrieg* (1858). He also issued a translation of Shakespeare (1865-7), and of Tegner's *Frithiof Saga* (1863), and an edition of Goethe's *West-östliche Divan* (1875).

* **Sims, George Robert** (b. 1847), journalist and dramatist, was educated at a school at Eastbourne, at Hanwell College, and at Bonn. In 1874 his first article was accepted by the *Weekly Dispatch*, and in the same year he became a contributor to *Punch*, under the editorship of Mr. Henry Sampson; and when the *Referee* was started, in 1877, he became a regular member of the staff, under the *nom de plume* of "Dagonet." In that paper the deservedly popular *Dagonet Ballads* first saw the light. Mr. Sims' first play was *Crutch and Toothpick*, produced at the Royalty, London, in 1879. It was a great success, and ran for 240 nights. *The Mother-in-Law*, first produced at the Prince of Wales's, Liverpool, in 1881, and the *Member for Slocum* at the Royalty, were quite as popular, and in September, 1881, his remarkable melodrama, *The Lights o' London*, was brought out by Mr. Wilson Barrett at the Princess's. *The Romany Rye* succeeded it in 1882. In 1884 Mr. Sims wrote two admirable comic operas, the music of which was by Mr. F. Clay, the *Marry Duchess*, produced at the Royalty, and the *Golden Ring* at the Alhambra. He has not, however, forsaken melodrama, and, aided by Mr. Henry Pettitt, wrote for the Adelphi Theatre *In the Ranks* (October, 1883), and *The Harbour Lights* (December, 1885), both of which had enormous runs. Mr. Sims is well known for his knowledge of the sadder side of London life; and it is not too much to say that his articles on *How the Poor Live*, contributed to the *Pictorial World* in 1883, were a very powerful stimulus to the subsequent outburst of philanthropic effort.

The Theatre, 1881.

Sinclair, Sir John, Bart. (b. 1754, d. 1835), economist and agriculturist, was educated at the Edinburgh High School, and Glasgow and Oxford Universities, and in 1775 was admitted a member of the Scotch Faculty of Advocates (1775). In 1780 he entered Parliament as member for Caithness-shire, and devoted himself to agricultural and financial improvements. His *History of the Public Revenue* appeared in 1784, and was rewarded by a baronetcy four years later. In 1793 he founded the British Board of Agriculture. His most important *Statistical Account of Scotland* appeared in 1798. In 1814 Sir John Sinclair was sworn of the Privy Council, and was to the last actively engaged in agricultural experiments and improvements.

Correspondence of Sir John Sinclair (1831); J. Sinclair (his son), *Life of Sir John Sinclair*.

Sindhia. [Gwalior.]

Sismondi, Jean Charles Simonde de (b. 1773, d. 1842), economist and historian, originally called Simonde, was born at Geneva, where his father, who was of Italian origin, was a Calvinist pastor. Educated by his parents, he was sent to Lyons as a clerk in the bank of his uncle Eynard, and in 1793

went to England for eighteen months with his parents, who were compelled to leave Geneva on account of their aristocratic leanings. He studied English institutions with much interest. The family then settled at Val Chiusa, in Italy, where Sismondi wrote his first work, *The Picture of Tuscan Agriculture* (1801), followed by a treatise on *Commercial Wealth* (1803), published after Sismondi's return to Geneva. Both works are strongly tinged with the views of Adam Smith, and gained for him the friendship of Necker and Mme. de Staël, as well as the post of Secretary to the Chamber of Commerce of his native department. The first volume of his great work on *The History of the Italian Republics of the Middle Ages* appeared in 1807, the sixteenth and last in 1818. It was the first of his works that he published under the name of Sismondi, a change due to his having discovered his genealogy in the course of his researches. *The History of the Italian Republics* is a monumental work, written with fire, exhibiting the results of a considerable amount of labour, and admirably arranged and proportioned. At the same time, it is distinctly in the nature of an apology, and in Sismondi the Republican was continually superior to the historian. For the next few years he lived much with Mme. de Staël, and during a visit to Italy wrote his *Memoir on the Paper Money of the Austrian States* (1810). The four volumes of his *Literature of the South of Europe* appeared between 1813 and 1829, and during the first year he paid a visit to Paris, and again in 1815, when his *Examination of the French Constitution* gained for him the friendship of the Emperor. He remained at Paris after the Restoration, although much grieved at the turn of affairs; and in 1859 paid a visit to England, where he married the sister-in-law of Sir James Mackintosh. After his marriage he returned to Geneva, and spent there the remainder of his days. His *New Principles of Political Economy*, published in 1819, are in direct contradiction to the doctrines of his early life, and in favour of State intervention. During his last years his chief work was his voluminous *History of the French*, published in 30 vols. between 1821 and 1844, the last volume being by Amédée Renée. It is not as great a work as that on the Italian Republics, being written in a tone of even more decided prejudice, occupied too exclusively with the history of the capital to the neglect of the provinces, and based in many places on inferior sources of information. Throughout Sismondi judges the men and events of the Middle Ages from a purely modern standpoint; he can never forget that he is a Republican, still less that he is a Protestant. He published besides the *History of the Renaissance of Italian Liberty* (1832); *Studies on the Constitutions of Free Peoples* (1836); and for Lardner's *Cyclopædia*, *The*

History of the Fall of the Roman Empire and a smaller *History of the Italian Republics*, of which the last is still a valued text-book.

Collections of his letters, such as *Fragments de son Journal et de son Correspondance avec Mme. de Sainte Aulaire* (1868); *Lettres inédites à Mme. L'Albany* (1864); also *La Vie et les Travaux de Sismondi* (1845).

* **Skene, WILLIAM FORBES, LL.D., D.C.L.** (b. 1809), a native of Kincardineshire, was educated at the High School, Edinburgh. He then went to Germany, and on his return went for a session to each of the Universities of Edinburgh and St. Andrews. He took up the study of the law, and became a Writer to the Signet. He is a member of various learned societies, has received the degree of LL.D. from Edinburgh University, and D.C.L. from Oxford. In 1881 he became, in succession to Dr. Hill Burton, her Majesty's Historiographer for Scotland. Among his works, which are of an archæological character, are:—*The Highlanders of Scotland, their Origin, History, and Antiquities* (1837), *Memorials of Scottish History* (1868), *The Four Ancient Books of Wales, etc.* (1869), *The Coronation Stone* (1869), *John of Fordun's Chronicles of the Scottish Nation* (1871), *Celtic Scotland, a History of Ancient Alban* (3 vols., 1876–80).

Sketchley, ARTHUR. [ROSE.]

Skobelev, MICHAEL DIMITRIÉVITCH (b. 1843, d. 1882), Russian soldier, was born near Moscow, became an officer of the staff, and in 1868 was sent into Turkestan, whence he was transferred to the army of the Caucasus. He took part in the expedition to Khiva as commander of the advance guard of General Lomakine's column (1873), and behaved with such distinction in that campaign and in the expeditions against Khokand that he became major-general at the age of thirty-two, and in 1876, having reduced Khokand after a campaign of three months, became its governor. He volunteered for the staff of the Grand-Duke Nicholas on the outbreak of the Russo-Turkish War, and in the battles round Plevna distinguished himself by cutting Osman Pasha's communications with the Balkans and by the brilliant capture of the Gravitz redoubt, from which, however, he was driven with loss on the following day. He led the advance upon Adrianople, and would have assaulted Constantinople itself had not peace been signed at San Stefano. Skobelev was now the darling of the nation, and was looked upon as the man who would lead the troops of the Czar across the Himalayas. In 1880 he distinguished himself by capturing Gook Tepe and so retrieving the disasters inflicted on the Russians by the Tekke Turcomans, and by the consequent reduction of the country, after the massacre of hundreds of the Tekkes. He wished to advance farther south, but was recalled by the Czar. An ardent Pan Slavist, Skobelev was hastily summoned from Paris to St.

Petersburg in February, 1882, on account of a speech delivered to the Serbian students, in which he announced the inevitableness of war between Russia and Germany. On July 7th "the White General," so-called from the colour of his horse and uniform, died suddenly at an hotel under mysterious circumstances.

Memoir of Skobelev (1886).

Sleeman, SIR WILLIAM HENRY (b. 1788, d. 1856), Indian official, entered the service of the East India Company, and in 1820 became agent in the Saugor and Nerbudda districts, and there by his vigour succeeded in suppressing the system of Thuggee. This led to his being appointed in 1839 commissioner for the suppression of Thuggee and Dacoity. He was appointed resident at Lucknow in 1842, and from the first recommended the annexation of the province, owing to the anarchy that prevailed. Shortly before his departure for England he had the satisfaction of seeing his advice carried out.

Smart, HENRY (b. 1813, d. 1879), the nephew of Sir George Thomas Smart (b. 1776, d. 1867), who in his day was celebrated as organist and composer to the Chapel Royal, and the introducer into England of Beethoven's *Mount of Olives* and Mendelssohn's *St. Paul*, was intended for the law, but became organist of a church at Blackburn in 1831; of St. Luke's, Old Street, in 1836; and of St. Pancras in 1864. He was one of the greatest organists of his day, and an exceptionally brilliant extemporiser. Besides, Smart was a composer of worth, and though his more ambitious works, such as the cantata *The Bride of Dunkerron* (1864) and the oratorio *Jacob* (1873), may be forgotten at no distant date, he will be remembered for his part-songs, among which may be mentioned *Ave Maria* and *Lady, rise*.

Smedley, FRANCIS EDWARD (b. 1818, d. 1864), novelist, was born at Marlow, and was the son of Francis Smedley, who was some time High Bailiff of Westminster. He was deformed from his infancy, and to while away the time he began to delineate some of his own experiences of life. These had been small enough, but the mysteries of a "private tutor's," which he published under the title of *Scenes from the Life of a Private Pupil*, first contributed to *Sharpe's London Magazine* (then a popular periodical), were so successful that the proprietor of that miscellany suggested an extension of the series, which was eventually published under the title of *Frank Fairleigh* (1850). *Lewis Arundel* (1852), *The Fortunes of the Colville Family* (1853), *Harry Coverdale's Courtship* (1854), *The Mysteries of Redgrave Court* (1859), and other stories followed in quick succession and with equal success. All these writings are marked by a certain masculinity, and abound in harmless fun. Mr. Smedley was also the author of a volume of poems

entitled *Gathered Leaves*, and was some time editor of *Sharpe's Magazine*. Several of his books were illustrated by Cruikshank and "Phiz."

Memorial preface by Edmund Yates to *Gathered Leaves* (1863).

* **Smiles, SAMUEL, LL.D.** (b. 1816), author and social reformer, was born at Haddington, N.B., and educated at Edinburgh University with a view to entering the medical profession. His father dying whilst he was still a student at Edinburgh, he was early thrown on his own resources, and as soon as he could, migrated to Leeds to practise medicine. He was not, however, long there, when the literary ambition, ever strong in him, determined him to relinquish his profession and to become, in 1837, editor of the *Leeds Times*, in succession to his friend Robert Nicoll (b. 1814, d. 1837), the Scottish poet, who had just gone home to die. In 1845 he left the editor's chair for the secretaryship of the Leeds and Thirsk Railway Company, and from 1852 to 1866 he was secretary to the South-Eastern Railway Company. It was during his stay in Leeds that he began that study of the subject of "self-help" that has given him the wide reputation he now enjoys. Among the first of his publications on this subject was the *Life of George Stephenson* (1857), which was followed in due course by *Self-Help* (1859)—the basis of which was a series of lectures to the working classes of Leeds—with the companion volumes of *Character* (1871), *Thrift* (1875), and *Duty* (1880). Still preaching the same eternal truth, Mr. Smiles wrote the *Lives of Engineers* (1862), *Industrial Biography* (1863), *George Moore* (1878), the merchant and philanthropist; *Life of Robert Dick* (1878), the Thurso geologist; and *Thomas Edward* (1876), the Scottish naturalist. In 1883 he edited the *Autobiography of James Nasmyth*. The manner and the matter of Mr. Smiles's books are alike admirable; but great as their literary merit is, the services they have rendered to sound morality are still more important. While they do not professedly inculcate any religious precepts or moral systems, their whole teaching is conducive to the formation of sound principles and an upright character. It is not failure, or being baffled, he teaches, that lowers a man, but despair and ceasing to strive; success is only an accident. Written in a lively and an attractive style, free from all preaching and prosiness, his works are impressive by the examples they exhibit of hard-working men raised by their own abilities, perseverance, and thrift, from obscurity to eminence. Mr. Smiles has also written *The Huguenots in England* (1867), and the *Huguenots in France* (1873), and other works. In 1878 he received the degree of LL.D. from Edinburgh. His brother, * **ROBERT SMILES** (b. 1818), is the author of a *Life of Henry Booth* (1869), the railway projector, *Life of Livingstone* (1885), and other works.

Smirke, SIR ROBERT, R.A. (b. 1780, d. 1867), architect, was the son of Robert Smirke, R.A. (b. 1752, d. 1845), a painter of some note in his day. The son was educated for his profession under Sir John Soane, and on the Continent. In 1799 he obtained the gold medal of the Royal Academy; was elected A.R.A. in 1808, and R.A. in 1811, and in 1820 appointed treasurer to the Academy. After building the late Covent Garden theatre (1809), and the Mint (1811), he was in 1823 entrusted with the erection of the British Museum, a work he carried on until 1847, when his brother Sydney (q.v.) undertook the completion of his splendid conception. In 1829 the General Post Office was erected from his designs. In 1831 he was knighted on the reconstitution of the Board of Works, to which he was for many years architect. Among his other public works in London are the College of Physicians (1825), and King's College (1831). After the destruction of York Minster by fire in 1829, he was entrusted with its restoration; and Lowther and Eastnor Castles, as well as the courts of justice at Gloucester, Hereford, and Perth, are fine examples of his talent. Smirke as a rule adhered to the Classic style, except in domestic architecture, to which he was one of the first to apply Gothic.

Smirke, SYDNEY, R.A. (b. 1799, d. 1877), architect, was a younger brother of the above, and was brought up in his office. He became A.R.A. in 1848, R.A. in 1860, professor of architecture in the Academy in 1861, and treasurer in 1862. In 1836, in conjunction with his brother, he erected the Oxford and Cambridge Club house in Pall Mall, and subsequently the Carlton Club. He restored the Temple Church in 1842, a portion of York Minster after the fire of 1840, and Lichfield Cathedral. As his brother's successor to the post of architect to the British Museum, he designed the Roman and Assyrian galleries, and also built the circular Reading Room after Panizzi's suggestion. From 1867 to 1874 he was engaged in building the exhibition rooms of the new Royal Academy in Burlington House.

Smith, ALBERT RICHARD (b. 1816, d. 1860), humorist, was born at Chertsey, and was the son of a doctor. He was educated for the medical profession, and in 1838, having become a member of the Royal College of Surgeons, went to Paris to finish his studies, and commenced practice with his father. His powers of entertainment, however, won him away from medicine, and between 1839 and 1840 he visited the small towns near London, giving a descriptive lecture on the Alps. In 1841 he settled in London, and began to write a series of novels for the magazines, the broad fun of which made them very popular. Among them were *The Adventures of Mr. Ledbury*, *The Scattergood*

Family, *The Marchioness of Brinvilliers*, *Christopher Tadpole*, and *The Pottleton Legacy*. He also wrote various sketches of life, several of which were illustrated by Leech; for instance, *The Natural History of the Flirt* (1848), *The Natural History of Evening Parties* (1849), and *The Gent and the Natural History of Stuck-up People* (1847). In 1849 a new entertainment was provided for the public in *A Month at Constantinople*, in 1850 he produced the *Overland Mail*, and in 1852, at the Egyptian Hall, his most popular monologue, *The Ascent of Mont Blanc*. In 1858 he went to China in search of a new field of observation, and his Chinese entertainment was received with great delight.

Smith, SIR FRANCIS PETTIT (b. 1808, d. 1874), mechanician, who shares with John Ericsson the credit of being the first to apply the screw propeller to navigation, was the son of a postmaster at Hythe, and became a farmer at Hendon. In 1834 he succeeded in constructing a model vessel propelled by a submerged screw, and in 1838, having perfected the invention, for which he had taken out a patent in 1836, it was submitted to the Admiralty. A company was formed, and the *Archimedes*, which made her first trips in 1839 and 1840, was constructed on the principle, and on the recommendation of Sir I. K. Brunel, it was applied to the *Great Eastern*. On the expiration of Mr. Smith's patent, there were 327 screw-vessels in the Royal Navy, and as many in the merchant service. In 1855 he was granted a Civil List pension, and knighted in 1871, having been appointed curator of the Patent Office Museum, South Kensington in 1860.

Smith, GEORGE (b. 1840, d. 1876), Assyriologist, was born at Cheltenham of poor parents, and became a printer in the firm of Messrs. Bradbury and Agnew. He gained the acquaintance of Sir Henry Rawlinson at the British Museum, and was employed by him in the preparation of the third volume of his *Cuneiform Inscriptions of Western Asia*. In 1870 Mr. Smith was appointed assistant to Dr. Birch, keeper of the Oriental antiquities, and in 1871 published his *Annals of Assurbani-pal*, a translation and transcription of the cuneiform inscriptions relating to Sardanapalus. In 1872 he deciphered at the British Museum the inscription containing the Chaldean account of the Deluge; in 1873, subsidised by the *Daily Telegraph*, he excavated at Kouyunjik, on the site of Nineveh, and unearthed the missing fragment of the Deluge story, together with other fragments of great value. In 1875 he was sent out to continue his excavation by the trustees of the British Museum, and published on his return his *Assyrian Discoveries and Chaldean Account of the Genesis*. His last journey was undertaken in 1876, and after discovering the site of the Hittite capital, Carchemish, he arrived at

Kouyunjik. Owing to the troubled state of the country, it was impossible to excavate, and on Aug. 29th he died at Aleppo. His other works were *The Assyrian Eponym Canon* (1875), *Ancient History from the Monuments—Assyria* (1875), and the posthumous *Ancient History of Babylonia from the Monuments* (1877), and *History of Sennacherib*, both edited by Professor Sayce.

Professor Sayce in *Nature*, vol. xiv.

* **Smith, GOLDWIN** (b. 1823), was educated at Eton and Oxford, graduating in 1845 with a first-class in classics. He gained several of the university prizes for essays, and in 1847 was elected a fellow of University College, Oxford. He was then called to the bar. In 1850 he received the appointment of assistant-secretary to the Royal Commission to inquire into the condition of the University of Oxford, and was secretary to the Second Oxford Commission; he was also placed on the Popular Education Commission (1858). From 1858 until 1866 he was Regius professor of modern history at Oxford, visiting America on a lecturing tour in 1864; he returned to that country in 1868, and settled there, receiving a professorship in the Cornell University, New York. In 1871 he went to Canada, and became a member of the Senate of Toronto University. He paid a visit to England in 1885-6. Mr. Goldwin Smith has republished several of his lectures, for instance:—*The Study of History* (1861); *The Foundation of the American Colonies* (1861); and *Three English Statesmen: Pym, Cromwell, and Pitt* (1867); has written *A Short History of England down to the Reformation* (1869), and contributed a monograph on *Couper* to the *English Men of Letters Series*. He has also written largely on the Irish questions, for instance:—*Irish History and Irish Characteristics* (1861); and *The Conduct of England to Ireland* (1882), and, although an ardent Liberal, was an outspoken opponent of Mr. Gladstone's Irish measures of 1886.

Smith, SIR HARRY GEORGE WAKELYN, G.C.B. (b. 1788, d. 1860), British soldier, saw service in the West Indies in 1805, and fought in the Peninsular and American Wars. He commanded a division in the Kaffir War of 1834-5, and in 1839 he was nominated adjutant-general to the forces in India. In the Sikh War his strategy won the battle of Aliwal (1846). From 1847 to 1854 he was Governor of the Cape of Good Hope, and was most successful in his conduct of the Kaffir War of 1851-2.

Smith, HENRY JOHN STEPHEN, F.R.S. (b. 1826, d. 1883), mathematician, was of Irish origin, and was educated at Rugby and at Balliol College, Oxford, where he was a scholar. He obtained the Ireland scholarship (1848), double first in classics and mathematics (1849), and the senior mathematical scholarship (1851), a set of distinctions almost unique. He was

shortly afterwards elected to a fellowship at Balliol, and held it until he was appointed to a professorial fellowship at Corpus, Balliol, however, keeping him as a nominal fellow. In 1861 he was made Savilian professor of geometry, and in 1874 keeper of the University Museum. Professor Smith was a man of the most varied knowledge, and a most accomplished conversationalist. He was an energetic member of the Hebdomadal Council, a member of the Royal Committee on Scientific Education, and in 1877 became a member of the University of Oxford Commission. An ardent Liberal, he came forward as a candidate for the representation of the university in Parliament in 1878, but was easily defeated. It is as a pure mathematician that Professor Smith will be remembered; and he was no unworthy successor to Gauss in the importance of his discoveries. The theory of numbers, the theories of elliptic functions and modern geometry are the three subjects he chiefly embraced; but most of his work unfortunately remains in manuscript. Reference may be made, however, to his *Report on the Theory of Numbers* in the British Association volumes for 1859-63 and 1865; to his papers in the *Philosophical Transactions* of the Royal Society for 1861 and 1867; to his memoir on *Modular Equations in Elliptic Functions* in the *Atti* of the Accademia dei Lincei, Rome, for 1877; and his completion of an investigation by Reimann in the *Messenger of Mathematics* for May, 1881. The breadth of his mathematical knowledge is admirably displayed in his introduction to the collected edition of Clifford's works.

Mr. J. W. L. Glaisher in the *Academy*, Feb. 17th, 1883.

Smith, JAMES (b. 1775, d. 1839), and **HORACE** (b. 1779, d. 1849), sons of Robert Smith, solicitor to the Board of Ordnance, are chiefly to be remembered for their joint-work, *Rejected Addresses*, which appeared in 1812. They were suggested by the management of Drury Lane offering a prize of £20 for an address to be spoken on the reopening of the theatre, and consisted of some wonderful parodies of the chief poets of the day. Scott said of his, "I must have done this myself, but I can't remember when." Their earliest literary efforts appeared in the *Pic-Nic* newspaper (1802), and the *Mirror* (1807-10). James had followed in the footsteps of his father as a solicitor, receiving the latter's business and official appointment. Horace, who joined the Stock Exchange, wrote some twenty novels, among them being *Gaieties and Gravities*, *Brambletye House*, *Reuben Apsley*, *Zillah*, and *Heads and Tails*, perhaps his best (1836).

Smith, JOSEPH (b. 1805, d. 1844), founder of Mormonism, born in Windsor county, Vermont, U.S., was the son of a farmer. In 1823 his prophetic career began. He was then living in seclusion, and an angel, according

to his own account, appeared to him with supernatural messages. Other visits of a similar kind followed, during which it was revealed to him that under a certain mountain he would find important records. These were written on thin plates of metal, and in a strange language which, with supernatural aid, he was able to translate (1827). Such was Smith's account of the origin of the *Book of Mormon*, so called from a mythical prophet who was said to have compiled it, which consists of the history of America from a remote period down to the fifth century. In style this book is an imitation of the English Bible, and has been pronounced by authorities to be an imposture. It is, in fact, copied nearly verbatim from an MS. romance written by one Spalding in 1816. It was published in 1830; and those that believed Smith's tale formed themselves under his leadership into a new society with the title, "The Church of Jesus Christ of Latter-Day Saints," at Manchester, New York. As this body grew, it was opposed by violence, and Smith was subjected to a considerable amount of prosecution. It was whispered that the elders practised polygamy. The saints were now frequently compelled to change their location, nevertheless their numbers increased considerably, and in 1837 they sent missionaries to England. In 1839 Smith built a city on the Mississippi named Nauvoo. Quarrels broke out amongst Smith's followers, and led to the interference of the American authorities. In 1844 Smith was arrested on a charge of treason; the mob broke into the prison, seized, and murdered him. Under his successor, Brigham Young, the Mormons moved to Utah, and there established their present settlement in Salt Lake City. [YOUNG.]

Gunnison, *The Mormons or Latter-Day Saints; The Mormons or Latter-Day Saints, with Memoirs of the Life of Joseph Smith.*

Smith, ROBERT ANGUS, F.R.S., LL.D. (b. 1817, d. 1884), man of science, was born near Glasgow, educated at the grammar school and university of his native town, and from 1839 to 1841 studied chemistry under Liebig at Giessen. As assistant to Dr. Playfair, he served on the Royal Commission of inquiry into the health of towns, having in the meantime settled at Manchester as a professional chemist. He was from this time much engaged in the analysis of air and water, and his paper on *The Air of Towns*, published in the *Chemical Society's Journal* in 1858, was an important contribution to sanitary knowledge. Further investigations followed: in the air of mines, while he was serving on the Mines Commission; in the constitution of the atmosphere (1864); and in disinfectants. He was appointed inspector-general of alkali works for the United Kingdom, under the Alkali Act of 1863, and was also inspector under the Rivers Pollution Act. Dr. Angus

Smith was vice-president of the Chemical Society in 1858, became F.R.S. in 1859, and LL.D., Edinburgh, in 1882; he was also for some years president of the Literary and Philosophical Society of Manchester. Perhaps the most valuable of Dr. Smith's labours are to be found in the Transactions of the learned societies and in his official reports. Among them may be mentioned a report *On the Air and Water of Towns*, read before the British Association in 1848; *On Putrefaction of the Blood* (1863); *On the Examination of Air* (1867). He was also the author of many works in volume form, for instance:—*A Memoir of John Dalton, and History of the Atomic Theory up to his Time* (1856); *Disinfectants and Disinfection* (1869); *Rain and Air*; *Beginnings of a Chemical Climatology* (1872); *Loch Etive and the Sons of Usnach*, a speculation as to the origins of Celtic literature and history (1879); *Measurement of the Actinism of the Sun's Rays and of Daylight* (1880); and *A Century of Science in Manchester* (1883).

Smith, SYDNEY (b. June 3rd, 1771; d. Feb. 22nd, 1845), canon of St. Paul's, was born at Woodford, in Essex. He was educated at Winchester College, and subsequently at New College, Oxford, where he obtained a fellowship. Having taken orders, he became curate of Nether Avon, in Wiltshire, where the squire of the village, an ancestor of Sir Michael Hicks-Beach, proposed to him to accompany his son as tutor on a tour in Germany. This project having been prevented by the war, Sydney and his pupil took refuge in Edinburgh, where the former preached in Charlotte Chapel, and formed the friendships with Jeffrey, Brougham, and Horner, which resulted in the establishment of the *Edinburgh Review*. The first number appeared in October, 1802, and immediately obtained an immense success. Sydney Smith continued to be one of the principal contributors for nearly thirty years. In 1804 he removed to London, became preacher at the Foundling Hospital, delivered his excellent lectures on moral philosophy at the Royal Institution, and in 1807 produced, under the name of Peter Plymley, the most characteristic specimen of his humour, *Letters to my Brother Abraham, who lives in the Country*. The theme was the necessity of redressing the grievances of the Roman Catholics, and never perhaps was a practical subject treated in a manner at once so humorous and so convincing. The brief return of the Whigs to office gained him the living of Foston-le-Clay, in the Yorkshire wolds, where he was obliged to build a parsonage. Though attentive to his parochial duties, he spent sufficient time in London to be regarded as one of the chief ornaments of society, especially of the brilliant circle at Holland House. After many years of steady writing for the *Edinburgh Review*, where his

gifted pen was exerted in support of every good cause except missions, which he invariably viewed with prejudice, he was in 1828 appointed by Lord Lyndhurst a canon of Bristol, and exchanged his Yorkshire living for Combe Florey, in Somersetshire. His sermon before the Bristol corporation in favour of Catholic Emancipation occasioned warm controversy; and a few years later he equally distinguished himself in the cause of the Reform Bill by his famous apologue of *Mrs. Partington's Fight with the Atlantic Ocean*. At this time he was made canon of St. Paul's by Earl Grey, and Lord Melbourne afterwards greatly regretted that he had not been made a bishop. He had ceased writing for the *Edinburgh Review*; but an attack on the revenues of cathedral chapters produced in 1837 his last important work—one of the wittiest—his *Letters to Archdeacon Singleton*. Unlike most men of kindred faculties, Sydney Smith was equally eminent as a wit and a humorist. His wit depended principally upon a quick perception of ludicrous differences and resemblances; his humour upon a gift of playful exaggeration, based upon the shrewdest common-sense. As is rarely the case, his talents were even more brilliantly displayed in conversation than in authorship. They were always exerted in the best causes, and from the most disinterested motives. Few who have raised so much laughter have done so much good. The foundations of his character were sense, kindness, and manly independence. Had he chosen to forswear his convictions, he might have risen to the highest dignities.

His essays in the *Edinburgh Review* and most of his other writings were collected by himself, and his *Life* has been written by his daughter, Lady Holland, and by Mr. Stuart J. Reid.

[R. G.]

Smith, THOMAS SOUTHWOOD (b. 1788, d. 1861), sanitary reformer, was born at Martock, in Somersetshire; studied at the University of Edinburgh (M.D. 1816), and in 1824, having settled in London, was appointed Physician to the London Fever Hospital. His *Treatise on Fever* was an admirable statement of the connection between pauperism and disease; and his papers on *The Use of the Dead to the Living*, which originally appeared in the *Westminster Review*, led to the passing of the Anatomy Act, and hence to the disappearance of body-snatching. In 1833 Dr. Southwood Smith was appointed a member of the Central Board of the Factory Commission, and the Factory Act of that year was based upon his report. The Children's Employment Commission followed in 1840, and Dr. Southwood Smith was successful in collecting some most important evidence about the employment of women and young children. In 1837 he was sent by the Poor Law Commissioners to investigate the sanitary condition of Whitechapel and Bethnal Green, was examined at great length before the Health of Towns Committee

of 1839, and in 1847 was appointed on the Metropolitan Sanitary Commission. In 1848 he was appointed medical member of the Board of Health under the Public Health Act, and in 1850 retired from practice. Dr. Southwood Smith was one of the original contributors to the *Westminster Review*, his article on *Bentham's System of Education* appearing in the first number. His most important works were *The Divine Government* (1814) and *The Philosophy of Health* (1834).

* **Smith, WILLIAM, LL.D., D.C.L.** (b. 1813), was educated at the University of London, where he distinguished himself as a classic. With a view to entering the legal profession he began the study of the law, which, however, he abandoned, and devoted himself to classical literature. An edition of *The Apology, Phædo, and Crito*, of Socrates appeared in 1840, and in the same year an edition of *Tacitus*. His *Dictionary of Greek and Roman Antiquities* appeared in 1842, the *Dictionary of Greek and Roman Biography and Mythology* in 1849, and the *Dictionary of Greek and Roman Geography* was published in 1857. In 1850 he had commenced a series of less advanced dictionaries, containing in an abridged form suited for the needs of schools the material of the larger works just mentioned. In 1853 the *Students' Manuals of History* began to appear, and included *The Student's Greece*, *The Student's Rome*, *The Student's Hume*, *The Student's France*, *The Student's Hallam*, etc.; in 1854 he published an edition of Gibbon's *Decline and Fall*, in 1855 *A Latin-English Dictionary*, in 1860 the first volume of the *Dictionary of the Bible*, and three years afterwards the remaining two volumes. *The Student's Manual of English Literature* appeared in 1864, and *Principia Latina* from 1860-66. His *Student's Latin Grammar* appeared in 1863, his adaptation of *Curtius's Greek Grammar* in the same year, his *Initia Græca* in 1865, in 1870 his *English-Latin Dictionary*, and in 1875 his *Atlas of Bible and Classical Geography*. All these books, as well as others associated with the name of Dr. Smith, are well known to students, who owe him a debt of gratitude for having thus put into convenient shape the stores of classic lore. Some of his works have run through nearly thirty editions. While engaged with his publications, from 1853 to 1866, he was classical examiner in the University of London, and from 1867 was editor of the *Quarterly Review*. In conjunction with Professor Wace, he edited the *Dictionary of Christian Biography* (1877-80). In 1870 he had conferred on him the degree of D.C.L. by the University of Oxford.

* **Smith, THE RIGHT HON. WILLIAM HENRY, D.C.L.** (b. 1825), son of William Henry Smith, bookseller, publisher, and news-agent in the Strand, was born in London. He was educated at Tavistock Grammar School, and

thereafter joined his father's business. His first attempt to enter Parliament was in 1865, when he contested Westminster in the Conservative interest against John Stuart Mill, without success, however. In 1868 the same constituency returned him in preference to his former opponent, and he represented it until 1885. During the years 1874-7 he was Financial Secretary to the Treasury, after which he succeeded Mr. Ward Hunt as First Lord of the Admiralty, with a seat in the Cabinet. His sound business capacities and the convincing logic of his speeches made him an important factor among the Conservative leaders. In 1879 Oxford University conferred on him the degree of D.C.L. During Lord Salisbury's tenure of office in 1885 Mr. Smith was Secretary of State for War, but during the last week of the ministry's existence he became Chief Secretary to the Lord Lieutenant of Ireland (January, 1886). He was first returned for the new London division of the Strand in 1885. On the formation of Lord Salisbury's second ministry in 1886, Mr. Smith again became Chief Secretary for War, a post which he resigned in 1887, becoming First Lord of the Treasury and leader of the House of Commons. He was a member of the London School Board from 1870 to 1874. Mr. Smith's political character is seen in his acts. Thus, he supported Mr. Forster's Education Bill, has sought the reduction of taxation, and endeavoured to direct attention to such social disorders as pauperism. His proposals for the establishment of a peasant proprietary in Ireland have attracted attention.

* **Smith, Professor William Robertson** (b. 1846), a native of Aberdeenshire, was educated at the Aberdeen University, at Edinburgh, at Bonn, and Göttingen. In 1868-70 he was assistant professor in physics at Edinburgh. In 1870 he received the professorship of Hebrew in the Free Church Divinity Hall, Aberdeen. He now became a contributor to the *Encyclopædia Britannica*, where, in an article on the Mosaic Books, he used expressions that the Free Church of Scotland was unable to regard as other than signs of heterodoxy. He was accordingly suspended from delivering his lectures, and after a prolonged trial he was in 1881 removed altogether from his professorial duties by the General Assembly. He was a member of the committee appointed to revise the Old Testament. In 1879-80 he travelled in Arabia, and admirably described his journey in letters to *The Scotsman*. In 1883 he succeeded Professor Palmer in the Chair of Arabic in the University of Cambridge, and resigned in 1886, on his appointment as librarian of the Cambridge University Library. He is also joint editor with Professor Baynes of the ninth edition of the *Encyclopædia Britannica*, and besides his contributions to periodical literature has published *The Old Testament in the Jewish Church* (1880),

M.W.—30*

The Prophets of Israel, etc. (1882), and *Kinship and Marriage in Early Arabia* in 1885.

Smith, Sir William Sidney, commonly known as **Sir Sidney Smith** (b. 1765, d. 1840), British sailor, went to sea at the age of twelve, and in 1793 served under Lord Hood at Toulon. From 1796-8 he was a French prisoner of war, but effecting his escape, was sent in the *Tiger*, 80 guns, to the Mediterranean. In March, 1799, he threw himself into St. Jean d'Acre, and there, aided by the native chief, Djézzar, stood a siege of sixty-one days from Napoleon Bonaparte, and caused him to retire. After Bonaparte had left Egypt, he concluded the convention of El-Arish with General Kleber for the French evacuation of the country, but the British government refused to ratify it. In 1801 he was wounded at the battle of Alexandria, and became a rear-admiral in 1804. In 1806 he commanded the English squadron off Sicily, and in 1807 was engaged in the expedition to the Dardanelles under Duckworth. He became full admiral in 1821, and passed his last years at Paris.

Smyth, William Henry (b. 1788, d. 1866), British admiral, was born at Westminster, entered the navy at sixteen, and greatly distinguished himself in 1810 as commander of a gunboat during the defence of Cadiz. In 1813 he became a lieutenant, and captain in 1815. All this while he had been making extensive surveys on his own account, and his charts gained such high praise from experts that in 1815 he was appointed to undertake the survey of the Mediterranean for the government. Without the slightest feeling of jealousy, he exchanged with Captain Gauthier de Parc, who was engaged on a similar commission for the French government, documents, information, and instruments, and in 1820 arranged with the French Hydrographical Office the interchange of all data and charts. The result was that the survey was of the most thorough character. In 1824 he became post-captain, and retired from active service, becoming vice-admiral in 1858 and admiral in 1863. He was constantly employed on government commissions, and from 1839 to 1842 was superintendent of the building of the Cardiff Docks. For some years he lived in London, where he was one of the founders of the Royal Geographical Society, and twice its president, and held official positions in the learned societies. Admiral Smyth was a distinguished astronomer, and his *Celestial Cycle* (1844) was in its day a good text-book, but his chief works are connected with his Mediterranean survey. His *Sketch of the Present State of the Island of Sardinia* appeared in 1828, and his elaborate monograph, *The Mediterranean: a Memoir, Physical, Historical, and Nautical*, in 1854. He also furthered the cause of science by translating some of the selected works of

Arago, and Benzon's *History of the New World*.

Fraser's Magazine, vol. lxxiii.

Snider, JACOB (b. 1820, d. 1866), inventor, was a native of Philadelphia, U.S., and began life as a wine merchant. He failed, however in that capacity, and in 1859 came to England, bringing with him some specimens of his invention, the Mount Storm breechloader, made out of converted United States rifles. They were submitted to the authorities at the War Office, and to the French government, but in the latter quarter he met with no encouragement. He was at that time in considerable want, and the speculations in which he engaged did not strengthen his resources. After much hesitation the War Office rejected the Mount Storm breechloader, but accepted another plan for the conversion of Enfield rifles into breechloaders, with central-fire cartridges, the gun now associated with his name. He was, however, constantly involved in disputes as to payment for materials, and the amount of remuneration that was due to him. Snider succumbed to poverty and anxiety on October 25th, 1866, while the public was making tardy preparations to relieve his necessities.

J. Scoffern, in *Belgravia*, vol. i.

Soane, SIR JOHN (b. 1752, d. 1837), architect, was the son of a builder of Reading, and studied for his future profession at the Royal Academy and in Italy, whither he was sent with an Academy pension. In 1788 he was appointed architect to the Bank of England, which edifice he began to enlarge in 1800, and in 1806 was professor of architecture at the Royal Academy. His chief works are the Dulwich Gallery, the offices of the Board of Trade and Privy Council at Whitehall, the State Paper Office in St. James's Park, and the Law Courts in Westminster Hall, which were happily pulled down in 1883. He was knighted in 1831, and in 1833, the year of his retirement from professional life, he bequeathed to the nation his museum of works of art, and his house in Lincoln's Inn Fields.

Somerville, MARY, *née* FAIRFAX (b. 1780, d. 1872), well-known for her scientific researches, and for her popular and educational scientific works, was the daughter of Vice-Admiral Sir William George Fairfax, a Scottish naval officer. Mary was a great reader, learned Euclid surreptitiously while quite a girl, and at the same period got up a knowledge of Latin in order to be able to read Newton's *Principia*, and was educated at a school at Musselburgh, a small town in Midlothian. Her first important contribution to science was made in 1826, when she presented to the Royal Society a paper on the magnetising powers of the more refrangible solar rays, the object of which was to prove that these rays of the solar spectrum have

a strong magnetic influence. This paper led to much discussion, which was only terminated many years later by the investigations of the German electricians, Riess and Moser, who showed that the action upon the magnetic needle was not caused by the violet rays. In 1831 Mrs. Somerville brought out her original treatise on the *Mechanism of the Heavens*, and in 1834 published a work *On the Connection of the Physical Sciences*, which has been referred to by Humboldt as "the generally exact and admirable treatise." In 1848 appeared the work by which, perhaps, she is most generally known, her *Physical Geography*, and in 1869, at the age of eighty-nine, she published a volume *On Molecular and Microscopic Science*, which contains a complete conspectus of some of the most recent and most abstruse researches of modern science. Mrs. Somerville was twice married, her first husband being Captain Greig, a naval officer, and her second being her cousin, Dr. William Somerville. In 1835 she received a literary pension of £300. Shortly after her death in December, 1872, a movement was started to commemorate her name, which culminated in the establishment of the Somerville Hall at Oxford, and the Mary Somerville scholarship in mathematics for women.

Personal Recollections of Mrs. Somerville, by her daughter, Martha Somerville; *Quarterly Review*, January, 1874.

Sontag, HENRIETTA (b. 1805, d. 1854), singer, was a native of Coblenz, and made her appearance on the stage when quite a child. At fifteen she made her *début* at Prague in Boïeldieu's *John of Paris*. After becoming the *prima donna* of Berlin, she achieved great success at Paris and London in 1828. She was recognised, indeed, as a worthy rival of Malibran. In 1830 she married an Italian nobleman, Count Rossi, and retired from the stage, but in 1849, owing to his pecuniary losses, she reappeared at Her Majesty's Theatre. A visit to the United States followed in 1854, and she died while on a tour in Mexico.

Sothorn, EDWARD ASKEW (b. 1830, d. 1881), comedian, was born at Liverpool, and was intended by his parents for the Church, but about 1851 went on the stage, and made his first appearance at the Boston National Theatre as Dr. Pangloss in the *Heir at Law*. After a very uphill struggle he succeeded in gaining a footing at Laura Keane's Theatre, New York; and in 1858 appeared in the character of Lord Dundreary in Tom Taylor's *Our American Cousin*. This was originally one of the subordinate parts in the play; but it was gradually elaborated by Mr. Sothorn until it became one of the most celebrated creations of the century, full of refined and undemonstrative humour. He appeared in it for more than 1,100 times in the United States, and then repeated the performance for 496 nights

at the Haymarket. In 1864 he created the second great part with which his name is associated, David Garrick in T. W. Robertson's adaptation from the French play, *Sullivan*. He reappeared in England in 1874, but achieved no permanent success in any of the plays with which he was connected, among which may be mentioned Oxenford's *Brother Sam*, and Byron's *The Prompter's Box*. In 1878 he returned to America.

Soulouque, FAUSTEN (b. 1785, d. 1867), negro Emperor of Hayti, was originally a slave, and entering the army attained the rank of general. In 1847 he was elected president of the Hayti republic, and in 1849, having crushed the Mulatto opposition by a series of massacres, was elected emperor. His rule was tyrannical in the extreme, and having been deposed in 1859, he retired to France. Prince Louis Napoleon was greeted with shouts of "Soulouque" when he appeared in the streets after the *coup d'état*.

G. d'Alaux, *Soulouque et son Empire*.

Soult, NICOLAS JEAN DE DIEU, Duke of Dalmatia and Marshal of France (b. 1769, d. 1851) was the son of a notary. In 1785 he entered the Royal Regiment of Infantry as a private, and by 1792 he had risen to the rank of adjutant-major. By his conduct at Fleurus he won the brevet of general of brigade; in 1799 he was appointed general of division under Massena, whose recommendation of Soult to Napoleon led to the former's being offered one of the four colonelships of the Consular army. Soult was now devoted to Napoleon. In 1804 he obtained the *baton* of Marshal of France, an appointment which his achievements in the campaign with Austria that closed with Austerlitz amply justified, and in 1807 became Duke of Dalmatia for his exertions in carrying out the Treaty of Tilsit. In 1808 Soult, at the head of the second corps, entered Spain, and attacked Sir John Moore, causing the retreat to Corunna, and, though defeated, forced the English to evacuate the country. He next conquered Portugal, and governed the country until the arrival of Wellington at Coimbra, and Beresford at Chaves. In 1809 he was commander-in-chief in Spain, and continued, with slight exceptions, to meet with success until he was defeated by Beresford at Albuera in 1811, while attempting to succour Badajoz. In 1813 his power in Spain was practically shattered at the battle of Salamanca, after which he went to aid Napoleon in Germany. The French defeat at Vittoria, however, necessitated Soult's return to Spain. The contest that he now engaged in with Wellington, from October, 1813, to April, 1814, by universal consent proved him to be a master of military tactics; and the defeats at Orthez and Toulouse are attributed to the superiority of Wellington's soldiers over Soult's, not to superior generalship. After Toulouse Soult

became an adherent of Louis XVIII., whom, however, he as quickly deserted on Napoleon's escape from Elba. After Waterloo he was proscribed, and withdrew to Düsseldorf until 1819, when he was allowed to return to France. Louis Philippe, after the revolution of July, 1830, appointed him Minister of War, and during the greater part of the reign Soult was generally a member of the Government. In October, 1832, he became President of the Council, and governed with military rigour until overthrown by his colleague, M. Thiers, July, 1834. In 1838 he was sent as ambassador to England, where he was welcomed with great enthusiasm. He was *filé* by his former antagonist, the Duke of Wellington; and whenever the two aged warriors appeared together, they were received with acclamation. In 1839 he assumed the offices of President of the Council and Minister of Foreign Affairs, but was overthrown on March 1st, 1840. In October Guizot's ministry was formed, and Soult, despite advancing years, and occasional infirmities of temper, continued to hold the portfolios of the council and of war. In 1847 Soult was raised to the dignity of a peer of France, and in the following year ceased to take any further active part in politics.

Soult, *Mémoires*; Napier, *History of the Peninsular War*.

Soumet, ALEXANDRE (b. 1788, d. 1845), French dramatist, was educated for the army, but early displayed inclinations to literature. His tragedies *Clytemnestre* and *Saül* were played in 1822 with considerable success, and were followed by *Une Fête de Néron* (1829), and *Norma* (1831), upon which the libretto of the more celebrated opera is founded. Soumet was also a poet of some power. He occupies in French dramatic literature a position by the side of, but slightly inferior to, Casimir Delavigne (q.v.).

Southcott, JOANNA (b. 1750, d. 1814), a native of Devonshire, was in her youth a domestic servant, and joined the Methodists. In 1792, having previously laid claim to prophetic gifts, she declared herself to be the woman spoken of in the twelfth chapter of Revelation, and immediately began to pour forth her inspirations in prose and verse. Her followers increased in number; they purchased her writings, and also seals, which latter were passports to heaven. At length, when she was upwards of sixty years of age, she prophesied that on the 18th of October, 1814, at midnight, she would bring forth a second Shiloh, or Prince of Peace. The consequence was that her followers prepared a most expensive cradle, and spent money in every way to give the miraculous babe a suitable reception. It was, however, never born, and Joanna herself died in December of the same year. A post-mortem examination revealed the fact that her appearance of

pregnancy was due to dropsy. Her converts still believed in her, and thought that she would rise again. In 1851 there were still four Southcottian congregations in England.

Southey, ROBERT, D.C.L. (b. Aug. 12th, 1774; d. March 21st, 1843), poet, essayist, and historian, was the son of a Bristol linen-draper, and was born in the western city. Educated first in several local seminaries, he was sent by his uncle, the Rev. Herbert Hill, in 1788, to Westminster School. Making a strong stand against flogging, and writing on this subject in a magazine conducted by the senior boys, he was expelled from the school in 1792, and the same year entered Balliol College, Oxford. The result of Southey's training at the university was not very important from the intellectual point of view, for, except an intense love of poetry, he carried nothing away with him but an affection for rowing. Soon after his leaving the university a noteworthy event occurred, i.e. his meeting with Coleridge. The two friends were deeply moved by the French revolution, and in conjunction with a third associate, Lovell, they formed a beneficent humanitarian scheme, which went under the name of *Pantisocracy*. The three dreamers married three sisters of Bristol, named Fricker, and for a time congregated under Southey's roof. In 1794 Southey published *Wat Tyler*, which will sufficiently show the influence he was then under; *Joan of Arc* appeared in 1796, and various collections of *Poems* in 1795-7 and 1801. Southey paid two visits to Lisbon, where his uncle was chaplain of the British factory, and the earliest result of these visits was manifest in his *Letters from Spain and Portugal*. His first great poem, *Thalaba the Destroyer*, a blank-verse delineation of the perils and triumphs of an Arabian hero who engaged in conflict with the powers of evil, was published in 1801. For several years Southey experienced the difficulties of an uncertain livelihood, but he at length accepted the post of private secretary to the Irish Chancellor of the Exchequer, worth £350 per annum. This appointment, however, he only held for six months, and in 1804 he entered formally upon the profession of literature, taking up his abode on the banks of the Greta, near Keswick, in the very centre of the Lake Country. Coleridge and Wordsworth were his near neighbours. His *Madoe*—a Welshman's supposed discovery and conquest of Mexico—was published in 1805, and the *Curse of Kehama*, a tale of the Hindoo mythology, in 1810. Southey was appointed Poet Laureate in 1813, and in the succeeding year he issued his *Roderick*, a blank-verse epic on the last of the Goths, together with a volume of *Odes*. In 1815 appeared a collection of *Minor Poems*, and the *Carmen Triumphale*. Two works followed in the next year, viz., *The Poet's Pilgrimage to Waterloo*, and *The Lay of the Laureate*. His

Vision of Judgment, published in 1821, excited the sarcastic powers of Byron. This was succeeded at intervals by other poetical compositions, including *A Tale of Paraguay*, *All for Love*, and the *Pilgrim to Compostella*. Although Southey's poems exhibited unusual powers of versification and much imagination, they never acquired great popularity. As a prose writer he was far more successful, and his *Life of Lord Nelson* (1813) and *Life of John Wesley* (1820) have taken rank as English classics. This voluminous writer also produced interesting works on Sir Thomas More, the British admirals, Cowper, Chatterton, and Kirke White. He further wrote *The Book of the Church*, *A History of the Peninsular War*, *A History of Brazil*, *Essays Moral and Political*, *The Select Works of the Early British Poets*, *The Doctor*—a work crammed with the odds and ends of research—*Lives of Cromwell and Bunyan*, *English Anthology*, and a *Life of Dr. Andrew Bell*, etc. The poet's son-in-law, the Rev. J. W. Warter, edited his *Commonplace Book* in 1849-51; and selections from his poetical works appeared in 1831, followed by selections from his prose works in 1832. The degree of D.C.L. was conferred upon Southey by the University of Oxford in 1821. The poet declined a baronetcy from Sir Robert Peel, but in 1835 accepted from that statesman a pension of £300 per annum. Southey lost his first wife in 1837, and in 1839 he entered into a second marriage with Caroline Bowles, herself a poet of no mean order. The later years of the Laureate's life were marked by mental weakness and gloom, and by anxious care. He began, as he himself expressed it, to die at the top, and expired at Greta, March 21st, 1843. Notwithstanding Southey's great poetic ambition, his works in verse are not such as to appeal permanently to mankind. His Oriental poems are the best, but they lack the power of enlisting human sympathy. They are sometimes exquisite, occasionally splendid, and invariably correct in construction, but the subjects are not happy, and there is not in the poems that all-compelling force which will give them immortality. Southey's best efforts in verse, judged by the popular standard, are his lyrical poems, which include such favourites as *Lord William*, *Mary the Maid of the Inn*, and *The Old Woman of Berkeley*. His biographical and historical works will no doubt retain their place in English literature, but his posthumous reputation was injured by the iron necessity which rarely suffered him to leave his desk.

Southey's *Life and Correspondence*, edited by his son (1849-50); Browne's *Life of Southey* (1854); *Selection from Southey's Letters*, by his son-in-law, J. W. Warter (1856); Southey's *Commonplace Book* (1849-51). [G. B. S.]

Sparks, JARED (b. 1789, d. 1866), American man of letters, was of humble origin, but managed through the generosity of his friends to receive an education at Harvard University.

In 1871 he became mathematical tutor there, and from 1819 to 1823 was pastor of a Unitarian church at Baltimore. He then devoted himself to literature, was appointed professor of ancient and modern history at Harvard in 1839, and its president in 1849. He is chiefly remembered for his *Life and Writings of Washington* (12 vols., 1834-7), and has also published *Diplomatic Correspondence of the American Revolution*, *Life of Governor Morris*, *Franklin's Works*, and the *Library of American Biography* (1834-8).

Spedding, JAMES, D.D. (b. 1810, d. 1881), was educated at Trinity College, Cambridge. He graduated in 1831, being placed in the second class in classics, and among the junior optimes in mathematics, and became an honorary fellow of his college. His uneventful life was devoted to research, especially to the study of Bacon's life and works. His edition of Bacon's works, projected in 1847, was undertaken in conjunction with Mr. R. L. Ellis. Mr. Ellis, however, died before the completion of the *Novum Organum*, and with the exception of occasional help from Mr. D. D. Heath, Mr. Spedding was left to carry on the work alone. The edition began to appear in 1857, and was finished in seven volumes. Then followed the *Life and Letters of Bacon*, completed in 1876. Spedding's edition is the only complete edition of Bacon, and is enriched with most valuable notes. In his *Life* of this great philosopher, too, every scrap of information is collected together; it is to this source that every future biographer of Bacon must refer. Mr. Spedding met his death from injuries inflicted by a cab, the approach of which, on account of his deafness, he had not heard. His minor works include:—*Publishers and Authors* (1867); *Reviews and Discussions not relating to Bacon* (1869); *Evenings with a Reviewer, or Macaulay and Bacon* (1882); and some *Studies in English History*, written in conjunction with Mr. J. Gairdner.

Speke, JOHN HANNING (b. 1827, d. 1864), an African explorer, was born at Jordans, Somersetshire, and entering the army, obtained the rank of lieutenant in 1850, and that of captain in due course. He was several years in India, and saw active service under Lord Gough in the Himalayas. In 1854 he met Captain Burton at Aden, and joined his expedition into the Harrar and Somali country. In 1857 he again joined him in an expedition fitted out by the Geographical Society for the identification of the sources of the Nile. They discovered lake Tanganyika; and, Burton being detained by illness, Captain Speke went on alone, and discovered the south end of the Victoria Nyanza, which he declared to be the true source of the Nile. In 1861 he started on his last great expedition in company with Captain Grant (q.v.), in which the western side of the Victoria Nyanza was traced until

the outlet of the Nile was reached, whence the travellers passed through the kingdoms of Karagwe and Uganda, where they were met by Sir Samuel Baker. Speke received the gold medal of the Royal Geographical Society in 1861. He died of a gun accident near Bath on Sept. 15th, 1864. His chief works are:—*A Journal of the Discovery of the Source of the Nile* (1863), and *What led to the Discovery of the Source of the Nile* (1864).

* **Spencer, HERBERT** (b. 1820), an English metaphysician, and the founder of a philosophical school, was born at Derby, where his father was a teacher of mathematics. From him and his uncle, a Congregational minister, most of his early education was received. At the age of seventeen he was articled to a civil engineer, and for seven or eight years followed the profession with some success. Indeed, had not the sudden abatement of the railway mania lessened the demand for engineers, he would have continued to practise a craft for which he had considerable aptitude. But being forced, like John Tyndall (q.v.) under similar circumstances, to look about for some other means of livelihood, he gradually drifted into literature as a profession. He had already contributed several professional papers to the *Civil Engineer and Architect's Journal*, and in the course of 1842 a series of letters by him, *On the Proper Sphere of Government*, had appeared in the *Nonconformist*. They were, like so many others of his magazine writings, reprinted in pamphlet form, and constitute the basis of the views on the same theme which he subsequently advocated and expounded. He now took up his residence in London, and between 1848-52 was employed on the *Economist*, the *Westminster Review*, and the *Edinburgh Review*. At the house of Dr. Chapman, editor of the *Westminster*, he met George Henry Lewes and Miss Evans ("George Eliot"), and became the lifelong friend of both. His first work of any importance was *Social Statics, or the Conditions Essential to Human Happiness Specified and the First Developed* (1851). This book still enjoys a wide popularity, especially in America, and though in some respects it does not represent the author's matured views, it may be regarded as the best text-book of sound democratic political philosophy that has ever been published. Four years later appeared what is usually regarded as his greatest contribution to philosophy—namely, his *Principles of Psychology*. In this treatise he endeavours to analyse the relations between mind and matter. "The universal law of intelligence," he tells us, "flows directly from the co-operation of mind and nature, in the genesis of our ideas. It is thus, that just in proportion as there is persistency in the order or relationship of events in nature, so will there be persistency in the connection which subsists between two corresponding states of

consciousness. The succession or co-existence of external phenomena produces, of course, a like succession or co-existence in our mental perceptions; and when any two physical states often occur together, there is at length established an internal tendency for these states always to recur in the same order. Stating, therefore, this law, the author first traces the growth of the human intelligence through the lower phenomena of reflex action and instinct, then shows how our unconscious life merges in a succession of conscious phenomena, and lastly carries us upward and through the region of memory, etc., to the highest exercise of reason and the normal development of the feelings." Between this period and 1882, when he visited the United States and delivered some lectures, numerous works flowed from his pen, several of them arousing bitter controversies, but all adding more or less to his reputation and consolidating the school which regards him as its master. The chief of these are:—*Essays: Scientific, Political, and Speculative* (3 vols., 1858-74); *First Principles* (1862), in which he deals with biological problems generally, and throughout shows the bent which Lewes had given to his studies; and *Education, Intellectual, Moral, and Physical* (1861), a series of reprinted papers, the value of which had already been recognised in America, where an unauthorised edition had appeared the year before the author thought of collecting them for publication in England. It is one of the most popular of Mr. Spencer's works, the easy style in which it is written attracting to its pages many who have neither the leisure nor the learning for grappling with his more ponderous volumes. Its influence has been apparent in the changes which have taken place in the systems and methods of education subsequently to its publication, not only in this country, but in the United States. Science has been more and more introduced into elementary education, while rote-learning has to a great extent given place to methods by which the natural curiosity of the pupil is excited, his observing faculties strengthened, and his judgment appealed to. Among his other writings may be mentioned:—*Classification of the Sciences, with Reasons for Dissenting from M. Comte* (1864), *Principles of Biology* (1864), *Spontaneous Generation and the Hypothesis of Physiological Units* (1870), *Recent Discussions in Science, Philosophy, and Morals* (1871), *The Study of Sociology* (1872), and *Descriptive Sociology* (1872-86), a compilation by different writers under his direction, in which facts illustrative of his doctrines are culled from the works of travellers and ethnologists. In *The Coming Slavery* (1884) he issued a bitter attack on the follies of Socialism, and in *Man versus the State* (1885) he returned to his old doctrine of *laissez-faire*, or the non-interference of Government in concerns which can be better arranged between

man and man by means of private contract. He has also renewed his former opposition to Comteism, and in consequence figured in a somewhat acrid controversy with the apostles of that creed. Mr. Spencer was always an evolutionist, and Darwinism has found in him a keen advocate, it being his endeavour to apply its doctrines to the phenomena of mind and society as well as to the question of the origin of plants and animals.

Spencer, JOHN CHARLES SPENCER, 3RD EARL (b. 1782, d. 1845), better known as Viscount Althorp, was educated at Harrow and at Trinity College, Cambridge. At Cambridge he kept horses and betted, but took his degree in 1802. In 1802 he was returned for Okehampton, but in 1806 was defeated by Lord Henry Petty for Cambridge University, Lord Palmerston being at the bottom of the poll. He became, however, a Commissioner for the Treasury, and was shortly afterwards returned for Northampton. On the break-up of the Whig government he retired for awhile from politics, but in 1809 took a prominent part in the parliamentary proceedings against the Duke of York on the ground of his being dictated by corrupt motives in his appointments. Lord Althorp now definitely connected himself with the Whig party, and supported it steadily during years of opposition. He felt particularly strongly on the subject of Catholic Emancipation, and refused, because that measure was no part of its programme, to enter the Canning ministry of 1826. He was appointed by Lord Goderich the Chairman of the Finance Committee, much to the indignation of Mr. Herries, the Chancellor of the Exchequer; and after the Duke of Wellington became Premier, Lord Althorp courageously undertook to lead the disorganised Whig party in the Lower House. When the ministry were defeated on a division on the Civil List, Lord Althorp became Lord Grey's Chancellor of the Exchequer, and led the Government in the House of Commons (1830). During the debates on the Reform Bill he displayed great tactical skill; it was upon him that the management in committee chiefly devolved, and when the second bill was rejected by the House of Lords he made a fine speech, in which he exhorted the people to act within the Constitution. In the same year (1831) he carried a Game Act. As the struggle went on Lord Althorp wrote to Earl Grey deprecating a creation of peers, and preferring to make use of the privileges of the Commons for the purpose of forcing the Lords. The bill was accordingly taken up to the Lords; ministers were defeated in committee, and resigned; the Duke tried his hand at government, but in vain, and at last the bill passed, through a large secession of Tory peers. During this period Lord Althorp had to soothe the resentment of the king

at the libellous attacks that were made against him. He was returned to the Reformed Parliament for Northamptonshire, and promptly had to deal with the thorny Irish question. Attacked by the Tories and Radicals, Lord Althorp managed the House with some skill, although not with any particular energy; the Irish Church and Coercion Bills passed through the Commons, but the former was greatly modified in the Lords by the striking out of the appropriation clause. In 1834 he had a violent altercation with Mr. Sheil, which nearly terminated in a duel. [SHEIL.] The Budget of this session was popular, but the Government became rapidly weaker. Mr. Ward's motion against the Irish Church was followed by the resignation of Mr. Stanley and Sir John Graham, and Lord Althorp and Earl Grey came to loggerheads over the renewal of the Coercion Bill. Lord Althorp wished that the clauses prohibiting public meetings should be given up; and went so far as to threaten to resign on Lord Grey's refusal, but eventually gave way. Through the indiscretion of the Chief Secretary these facts became known to O'Connell, and when he elicited the truth in debate, Lord Althorp thought it necessary to resign. Earl Grey felt unable to go on without him; and so the ministry came to an end. He continued to hold office under Lord Melbourne (1834); but when in November the death of his father raised him to the Upper House, William IV. seized the opportunity of the leadership of the Commons being vacant as a pretence for dismissing the ministry. Earl Spencer thereupon retired from public life, and devoted his time chiefly to agricultural pursuits, becoming President of the Smithfield Cattle Club and of the Royal Agricultural Society (1838), of which institution he was one of the chief promoters. Lord Althorp was known as "honest Lord Althorp," and he was in every way a worthy transmitter of the great Whig traditions.

Sir D. le Marchant, *Memoir of Viscount Althorp, Earl Spencer.* [L.C.S.]

***Spencer**, THE RIGHT HON. JOHN POYNTZ SPENCER, 5TH EARL, K.G. (b. Oct. 27th, 1836), son of the 4th Earl, was educated at Harrow School and at Trinity College, Cambridge (B.A. 1857). For a few months he represented South Northamptonshire in the House of Commons in the Liberal interest, but on his father's death, in the same year, was summoned to the House of Lords. From 1859 to 1861 he was Groom of the Stole to the Prince Consort, and to the Prince of Wales from 1862 to 1866. In 1868 he was appointed Lord Lieutenant of Ireland, and retained that appointment until the fall of the ministry in 1874. The tenor of affairs, with the exception of the Belfast riots of 1872, was on the whole extremely peaceful. During the Disraeli administration, Lord Spencer took

considerable part in the debates on foreign and Irish questions; and in 1880, on the return of Mr. Gladstone to office, he became Lord President of the Council. In 1882, on the resignation of Earl Cowper, Lord Spencer succeeded him as Lord Lieutenant of Ireland, and arrived in Dublin on May 6th, the day of the murder of Lord Frederick Cavendish and Mr. Burke. Ably seconded by the new Chief Secretary, Mr. Trevelyan, Lord Spencer applied himself to the restoration of law and order throughout the country; and using with great determination the provisions of the Prevention of Crimes Act, he dealt out even-handed justice alike to the Orangemen of the north and the Home Rulers of the south. His proceedings were frequently attacked with great bitterness by the Irish members in Parliament, notably in connection with the execution of Myles Joyce for the Maamtrasna murders of 1884. Lord Spencer, however, stood manfully to his post in spite of obloquy, until the fall of the Government in June, 1885, having, however, resigned the office of Lord President of the Council in April, 1883. In the Gladstone Government of 1886, Lord Spencer once more accepted office, becoming again Lord President of the Council. He spoke several times in support of the Premier's Irish measures, laying especial stress on the necessity of regarding the Land Purchase Bill as an integral part of the Home Rule scheme before the country. Lord Spencer is an ardent sportsman, and a crack rifle-shot.

***Spielhagen**, FRIEDRICH (b. 1829), German novelist, was born at Magdeburg, and educated at the Universities of Berlin, Bonn, and Greifswald. Adopting a literary career, he published in succession the novels *Clara Vere* in 1857, and *On the Downs* in 1858. It was not until 1860 that Spielhagen obtained the place he now holds as one of the greatest of German novelists, when he published *Problematical Natures*, with a sequel, *From Darkness to Light*, which appeared in 1861. Among his subsequent masterpieces were *Hammer and Anvil* (1869), *Ever Forward* (1872), *What the Swallow Sang* (1873), *The Breaking of the Storm* (1878), and *Hans of the Owls* in 1884. Several of these novels have been translated into English. Spielhagen is also the author of translations from Emerson, Roscoe, and others, a book of travels, *From Naples to Syracuse* (1878), and some clever comedies—*Love for Love* (1875), *The Jovial Councillor* (1875), and *Hans and Greta* (1876).

Spohr, LUDWIG (b. 1784, d. 1859), violinist and composer, was born at Seesen, Brunswick, and showing great proficiency on the violin became a pupil of Franz Eck. In 1805 he became musical director at the Court of Saxe-Gotha, and in 1813 director of the theatre at Vienna, where he produced his operas, *Faust*, *Jessonda*, and *Zemira und Azor*. He visited

Paris in 1819, London in 1820, and was *Kapellmeister* at the Court of Hesse-Cassel from 1823 to 1857. His oratorios, *The Last Judgment* (1826), *Calvary* (1835), and *The Fall of Babylon* (1840), were received with great enthusiasm in this country, and the first is an especially fine work. Among the most remarkable of his remaining compositions are an opera, *The Alchymist*, a c minor symphony, and the symphony known as *Die Weihe der Töne* (*The Consecration of Sound*). Spøhr composed very many kinds of music, and his instrumental works, despite faults of affectation, are still highly esteemed. As a violinist, he was considered one of the best quartet leaders in Europe, and his *Violinschule* is a very complete work on that instrument.

Spøhr's *Autobiography* (trans. 1864).

Spontini, GASPARE LUIGI PACIFICO (*b.* 1774, *d.* 1851), Italian composer, was born at Majolati, near Jesi, in the Papal States, of peasant parents. He received a musical education at Naples, and in 1796, when seventeen years old, produced at Rome his opera *I Puntigli delle Donne* with brilliant success. Until 1803 he lived chiefly at Naples, producing operas with great rapidity, but then repaired to Paris. At first he failed to please, but his opera *Milton* (1804), and still more the *Festale* (1807), were pronounced admirable works of art, and Spontini became chamber-composer to the Empress Josephine. His next opera was *Fernando Cortez*, which shows traces of the influence of Gluck as the *Vestale* does of Mozart. It was also a triumph, and Spontini became conductor of the Italian Opera, but was dismissed in 1812, to be reinstated at the restoration of the Bourbons in 1814. In 1820 the magnificent offers of the King of Prussia tempted him to Berlin, and there was produced in its final form his grand opera *Olympia* (May 14th, 1821), one of the finest musical creations of the century. It was, however, speedily eclipsed by Weber's *Freischütz*, and Spontini's glory was on the wane. He produced, however, several more grand operas, *Nourmahal* (founded on Moore's *Lalla Rookh*), in 1822, *Alcidor* in 1823, and *Agnes von Hohenstaufen*, in which he again caught the popular ear, in 1829. Here Spontini was once more at his best, but it was his last work of importance. The opposition against him in Berlin increased rapidly, and when King William III. died in 1840, his position was most unenviable. An injudicious letter to the new king caused him to be condemned to nine months' imprisonment, but the sentence was remitted. Spontini retired to Italy, and in 1843 settled in Paris, where, his genius having become extinct, his remaining years were passed in much unhappiness. He died at the place of his birth.

Spottiswoode, WILLIAM, F.R.S. (*b.* 1825, *d.* 1883), son of Andrew Spottiswoode, publisher, was descended from an old Scottish family.

He was born in London, and after some years at Eton and Harrow entered Balliol College, Oxford, in 1842. In 1845 he took a first-class in mathematics, and won both the junior and senior university mathematical scholarships. For a time, after leaving college, he continued to lecture at Balliol, although he was now head of the Queen's printers, his father having retired. He was an accomplished Oriental scholar as well as a mathematician, and contributed a paper on Indian astronomy to the *Journal of the Asiatic Society*. In 1847 he published his *Meditationes Analyticae*—a work dealing with the more abstruse mathematics. In 1857 he published *A Tarantass Journey through Eastern Russia*—the result of a tour made in 1856. As an investigator and expounder of the subtle phenomena of polarisation he was not surpassed, and his treatise *The Polarisation of Light* went through several editions. His work on these subjects is chiefly to be found in the *Transactions of the Royal Society*, through which they were addressed to the scientific world, and such journals as the *Philosophical Magazine*. Important papers that he read before other societies are:—To the Geographical Society, *Typical Mountain Ranges, an Application of the Calculus to Physical Geography*; to the Musical Society, *Beats and Combination Tones*; and to the Astronomical Society, *A Method of Determining Longitude*. Amongst the honours he deservedly won was his appointment, in 1879, as president of the Royal Society; he was also chosen president of the Mathematical Society in 1871, and of the British Association at Dublin in 1878. He was interred in Westminster Abbey.

* **Spurgeon**, THE REV. CHARLES HADDON (*b.* 1834), a native of Kelvedon, Essex, son of the Rev. John Spurgeon, who attained some popularity as a preacher in a chapel in Upper Street, Islington, was educated at Colchester, and thereafter became an usher at Newmarket. He first began to engage in Church work at Cambridge, in connection with a congregation that had been presided over by Robert Hall, distributing tracts and occasionally appearing in the pulpit. He delivered his first sermon at Tversham, a little place near Cambridge. He soon acquired a sort of local celebrity, and became known as the "Boy Preacher." While he was yet seventeen years of age, he was invited to take a small Baptist chapel at Waterbeach. This he accepted, and continued there for two years, working with great diligence, and exhibiting the characteristics that have since made him famous. From Waterbeach he removed, in 1853, to London, to a Baptist chapel in New Park Street, Southwark, which soon became so crowded that it had to be enlarged, his congregation meanwhile meeting in Exeter Hall. Here he became an object of more attention than ever, and when he returned to Southwark the building was still

too small, and he had to engage the Surrey Music Hall. It was here that a panic occurred in October, 1856, through someone during the service crying "Fire!" No fewer than seven persons were crushed to death. In 1861 the Metropolitan Tabernacle was opened, and since then Mr. Spurgeon has there continued his ministrations to a congregation numbering about 6,000. The number of communicants attending the Tabernacle is over 4,500, and the monthly baptisms average fifty. In connection with the Tabernacle is a Pastors' College, which has sent forth preachers and colporteurs in hundreds. Besides the Pastors' College there are almshouses, schools, and the Stockwell Orphanage, all offshoots of the Tabernacle, or rather all, like it, the result of Mr. Spurgeon's activity. His Jubilee was celebrated in 1884. Mr. Spurgeon's writings are voluminous; but among them may be mentioned *The Saint and his Saviour* (1st ed. 1867), *John Ploughman's Talk* (1868), *The Treasury of David* (1872), *The Metropolitan Tabernacle: its History and Work* (1876), and countless collections of sermons, such as *Trumpet Calls to Christian Energy* (1875), *Farm Sermons* (1882), and *The Present Truth* (1883). His *Speeches at Home and Abroad* (edited by G. H. Pike) appeared in 1878, and gave an admirable idea of the peculiar combination of humour and religious exaltation which has made Mr. Spurgeon a power in the land. Mr. Spurgeon is an active politician, and opposed Mr. Gladstone's Irish measures of 1886 in some very trenchant letters.

The Life of C. H. Spurgeon (1860); A. S. Dyer, C. H. Spurgeon; G. J. Stevenson, *Life and Labours of C. H. Spurgeon*.

Spurzheim, JOHANN KASPAR (b. 1776, d. 1832), phrenologist, was born near Trèves, and educated as a doctor at Vienna, where he became acquainted with Dr. Gall (q.v.). He accompanied his instructor when, in 1805, Gall was forced to leave Vienna, and after helping him to write the *Recherches sur le Système Nerveux* at Paris, came to England in 1814, and lectured in various towns. He visited England again in 1826, but lived chiefly in Paris. He died at Boston while on a lecturing tour. His phrenological system, which pushed its conclusions further than Gall, may best be studied in *The Anatomy of the Brain* (1826).

A. Carmichael, *A Memoir of the Life and Philosophy of Spurzheim*.

Stadion, JOHANN PHILIPP, COUNT (b. 1763, d. 1824), Austrian statesman, entered the diplomatic service, and was sent by Prince Kaunitz as ambassador to Stockholm and to England. In 1797 he was sent on an important mission of conciliation to Berlin, and in 1804, as ambassador at St. Petersburg, helped to form the third coalition against France. After the peace of Pressburg he became Minister of Foreign Affairs, and in 1809

he effected a rupture with Napoleon. The results were disastrous, and Count Stadion lived in retirement until 1812, when, acting in concert with Metternich, he negotiated the Treaty of Töplitz with the northern Powers, assisted at the conferences of Frankfurt and Chatillon, and in 1814 signed the Treaty of Paris. His last years were devoted to the reorganisation of Austrian finance.

Stael-Holstein, ANNE LOUISE GERMAINE, BARONNE DE (b. 1766, d. 1817), the only child of Necker, Minister of Finance under Louis XVI., was brought up under the combined influence of her mother's Calvinism and the philosophy of her father's friends. At the age of fifteen she annotated Montesquieu's *Esprit des Lois*, but her health failing from over-study, she was allowed to run wild in the country, where she read Rousseau and Richardson's novels. In 1786 she married the Swedish ambassador, the Baron de Staël-Holstein, and in 1788 published her *Letters on the Character and Writings of J. J. Rousseau*, having already written several novels and a drama, *Sophie, or Secret Sentiments*, which had been published anonymously. Sharing the political opinions of her father, and imbued with a love of liberty by her study of Rousseau, she hailed the revolution with enthusiasm, and stayed in Paris. During the Reign of Terror, she exerted herself to save both the royal family and many of her friends. After the terrible days of September she fled, first to Coppet, her father's seat in Switzerland, which soon became an asylum for refugees, and in 1793 made a visit to England, where she wrote *Reflections upon the Trial of the Queen*, and on her return, *Reflections upon the Peace, Addressed to Mr. Pitt and the French*. In 1796 she published her essay on the *Passions*, and on the fall of Robespierre returned with her husband to Paris, where, as the centre of a brilliant literary and political circle, she sought the happiness which a loveless marriage denied her in domestic life. She was afterwards separated from her husband, but reunited to him before his death in 1802. Her *Essay on Literature*, in which she announced her theory of the perfectibility of the human race, was published in 1800. Her antagonism to Napoleon, whose ambition she always opposed, had already commenced, and in 1802 she was banished from Paris, and did not return until his fall. During her exile, described in the *Ten Years of Exile*, published after her death, she lived partly at Coppet, which soon acquired a literary celebrity, but, owing to Napoleon's brutal persecution, led chiefly a wandering life. During her visit to Weimar in 1803, she became intimately acquainted with Goethe, Schiller, and the Ducal family, and by her book on *Germany*, of which the first edition was destroyed by Napoleon's order, not only introduced German literature into France, but helped to originate the

Romantic movement in French literature. During this time she also wrote her novels *Delphine* (1802), and *Corinne* (1807). In 1812 she married privately M. de Rocca, a young officer in the hussars. On the fall of Napoleon she returned to Paris, where she enjoyed, as far as failing health permitted, the society of her old political and literary friends, and wrote her *Considerations on the French Revolution*.

Mme. de Staël, *Œuvres Complètes* (1820-21; 2nd ed. 1830); *Œuvres Inédites* (1836); A. Stevens, *Mme. de Staël, a Study of Her Life and Times*; Maria Norris, *Life and Times of Mme. de Staël*; A. de Launay, *Memoirs of Mme. de Staël*.

* **Stainer, JOHN**, Mus. Doc. (b. 1840), became at the age of seven a chorister in St. Paul's Cathedral, which he left in 1856 for St. Michael's College, Tenbury; here he was organist for three years. He then became organist of Magdalen College, Oxford, which appointment he retained until his removal to St. Paul's in 1872. Meanwhile he had become in 1859 Mus. Bac.; in 1863 B.A. from St. Edmund's Hall; in 1865 Mus. Doc.; and in 1866 M.A., and had succeeded Dr. S. Elvey as organist to the University of Oxford. Under his training the Magdalen choir gained an efficiency unequalled in the university. In 1881 he succeeded Mr. Sullivan as principal of the National Training School, London, where for many years he had been professor of the organ and harmony, and in 1882 became inspector of music in the elementary schools in succession to Dr. Hullah. He is also a member of the Council of the Royal College of Music. Besides being one of the greatest organists of his time, he has also gained distinction as a composer of Church music; his oratorio, *Gideon*, was produced with success in 1875, and in 1878 his cantata, *The Daughter of Jairus*, was performed at the Worcester Festival. He has also contributed to the literature of his subject; among his writings are a *Theory of Harmony* (1871), and *Music of the Bible* (1879). Together with Mr. W. A. Barrett, he edited a *Dictionary of Musical Terms* (1876), and wrote with G. P. Bevan *A Handbook to the Cathedral of St. Paul* (1883). He is the editor of the series of *Music Primers*.

Stanfield, WILLIAM CLARKSON, R.A. (b. 1793, d. 1867), landscape painter, was the son of Irish parents, and began life as a sailor. In that capacity he came in contact with Douglas Jerrold, and painted some scenes for his theatricals on board ship. Stanfield was compelled to retire from the navy through an accident, and became a scene painter at the Theatre Royal, Edinburgh, and at the old Royalty and Drury Lane, London. At the same time he began to practise landscape-painting; his *Market-boats on the Scheldt*, exhibited at the British Institution in 1826, was a great success; he became A.R.A. in 1832, and R.A. in 1835. Stanfield's fame was now at its height, and year after year visitors to

the Academy admired the finish of his pictures and their admirable truth. Of his more celebrated pictures, *The Battle of Trafalgar*; *Zuyder Zee*; *Guidicca, Venice*; and *Como*, are in the National Gallery, and *A Boat on the Scheldt* and *Sands near Boulogne* in the South Kensington Gallery.

The lists of his works in *The Catalogue of the National Gallery*; and *Ottley's Painters and Engravers*.

* **Stanford, CHARLES VILLIERS** (b. 1852), composer and conductor, was born in Dublin, and became a choral scholar of Queen's College, Cambridge. In 1873 he became organist at Trinity College, Cambridge, whence he took an honours degree in 1874, and became conductor to the Cambridge University Musical Society, which, under his management, rose to an excellence unprecedented in either university. Having studied at intervals during the next two or three years in Leipzig and Berlin, he acquired a wide reputation in England for his music to Tennyson's *Queen Mary*, when it was represented at the Lyceum in 1876, for an overture at the Gloucester Festival of 1877, and a symphony in B flat performed at the Crystal Palace in 1879. Meantime he had also published Klopstock's *Resurrection* (1876); *God is Our Hope and Strength* (1877); *La Belle Dame sans Merci* (1878); a sonata in A major for piano and violoncello (1878); and a morning and evening service in B flat (1879). His first work on a large scale, *The Veiled Prophet*, an opera in three acts founded on Moore's poem, was first performed at Hanover in 1881, and was received with great favour. It was succeeded in the following year by an *Elegiac Symphony in D minor*, performed at Cambridge, and a *Serenade* for orchestra produced at the Birmingham Festival. In 1882 he also published *Father O'Flynn*, perhaps the most popular of all his songs, music to Mr. Browning's three *Cavalier Times*, and a quartet in F major. In 1883 the three-act opera of *Savonarola* was produced at Hamburg. It was repeated in London in 1884. In 1884 his *Canterbury Pilgrims*, to a libretto by Mr. Gilbert A'Beckett, was produced with some success at Drury Lane, and in the same year his *Elegiac Ode*, a musical setting of Walt Whitman's burial hymn for President Lincoln, was given at the Norwich Festival. He has also written music for the choruses of the *Ajias* (1882), and the *Eumenides* (1886). Of his remaining compositions, we may mention:—*Three Intermezzi for Piano and Violoncello* (1880); *Klopstock's Awake, my heart* (1881); and *Songs of Old Ireland* (1883).

* **Stanhope, THE RIGHT HON. EVELYN**, M.P. (b. 1840), the second son of the 5th Earl Stanhope, was educated at Harrow, and at Christ Church, Oxford. He took his degree in 1862, and in the same year was elected a fellow of All Souls. Mr. Stanhope was called to the bar in 1865. In 1874 he was returned

to Parliament for Mid-Lincolnshire in the Conservative interest, and in 1875 became Secretary to the Board of Trade, whence in 1878 he was transferred to the office of Under Secretary of State for India, in which capacity he defended Lord Lytton's policy as having created a "strong, independent, and friendly Afghanistan." In the Conservative ministry of 1885-6 he was Vice-President of the Council on Education from June to August, and then became President of the Board of Trade with a seat in the Cabinet. Mr. Stanhope was returned for the South Lindsay (Horncastle) Division of Lincolnshire in 1886, in 1886 was appointed Secretary of State for the Colonies, and in 1887 Secretary of State for War.

Stanhope, LADY HESTER LUCY (b. 1776, d. 1839), daughter of the 3rd Earl Stanhope, acted for some years as secretary to her uncle, William Pitt, who obtained for her in 1806 a pension of £1,200. It was to her that he is supposed to have said after the battle of Austerlitz, "Roll up the map of Europe." After his death she lived for some time at Constantinople, and after a farewell visit to England to realise her property in 1810, she wandered about Syria. In 1813 she established herself at the deserted convent of Mar Elias, adopted the dress and manners of an Arab chief, and turning the convent into a fortress, became the protectress of all the distressed. The Arabs believed her to be a prophetess; and, becoming deeply tinged with Oriental mysticism, she soon began to lay claims to inspiration. In 1832 she defied Mehemet Ali to take her fortress, and the Pasha thought it wise to leave her alone; she also sheltered hundreds of fugitives after the siege of Acre. Throughout her last years she was in constant want of money; and she died without a single European near her. Her very interesting *Memoirs* were published in 1845-6.

Lady Hester Stanhope's Memoirs; Kinglake's *Bothen*, chap. viii.

Stanhope, PHILIP HENRY STANHOPE, 5TH EARL, F.R.S., D.C.L. (b. 1805, d. 1875), the eldest son of the 4th earl, was educated at Christ Church, Oxford, and in 1830, soon after leaving Oxford, was returned to the House of Commons for Wootton Bassett, under the title of Lord Mahon (1830). On the disfranchisement of that borough in 1832, he was returned for Hertford, though subsequently unseated on petition. He was more successful at the general election of December, 1834, and held his seat, not, however, without several sharp contests, down to 1852, when he was defeated by Sir Thomas Chambers. He was not only a supporter, but also a personal friend, of the late Sir Robert Peel, who appointed him as his literary executor, jointly with the late Lord Cardwell. Under this statesman he served

in his first short administration in 1834-5, and again in 1845-6 as Secretary to the Board of Control. He succeeded to his father's title and estates in 1855. He acted for many years as president of the Society of Antiquaries, having been first elected to that Chair as far back as 1846. He was also president of the Royal Literary Fund, a fellow of the Royal Society, and a trustee of the British Museum. He was elected Lord Rector of the University of Aberdeen in 1858, and his name is well-known at Oxford as the founder of the Stanhope prize for the study of modern history. Lord Stanhope never took a very prominent part in the proceedings of the Upper House of Parliament, but in 1858 he was instrumental in effecting the removal of what are known as the "State services" from the Prayer-Book, with the exception of that for Her Majesty's accession to the crown. It is rather as an historian than as a politician or a statesman that Lord Stanhope will be remembered hereafter, at all events by those who recognise in him the Lord Mahon who achieved such great fame by his *History of the War of the Succession in Spain* (1832), his *Life of Belisarius* (1829), and his *History of England from the Peace of Utrecht down to the Peace of Versailles* (1836-54), a work which has proved almost as widely popular in America as in this country, in spite of a long controversy which was carried on between its author and Mr. Sparks. For the purposes of this history Lord Mahon was enabled to have access to, and examine carefully the Stuart papers; and his account of the rising of 1745, and of the adventures of Charles Edward, was printed separately in a popular form, and has passed through several editions. He has been blamed for saying that if Charles Edward had marched on from Derby upon London, he would probably have succeeded in his enterprise. But Lord Stanhope by no means implied that the family would have remained long on the throne. In 1870 he published his *History of the Reign of Queen Anne*, intended as a connecting link between Lord Macaulay's history and his own. He was the author also of a most interesting *Life of Pitt*, for which he was able to secure much valuable information through his relationship with Pitt's niece, Lady Hester Stanhope. These two works, *The History of England* and the *Life of the Younger Pitt*, are now, as they deserve to be, English classics, and leave us little reason to regret that the ground was not covered by Macaulay. Of course in brilliancy of diction, and power of dramatic narration, Lord Stanhope must yield to the great literary *sabreur* who wrote history as if he were leading a charge of cavalry. But there is a quiet charm in Lord Stanhope's style, and an air of truthfulness and simplicity in all that he says, which makes his pages fully as attractive in the long run as the gorgeous rhetoric and dashing generalisation

of Macaulay. Moreover, Lord Stanhope can always be relied upon, and is strikingly impartial; in this respect he is superior to most historians in our literature, and equal to the best. His contributions to fugitive literature were collected in 1863 under the title of *Miscellanies*. [T. E. K.]

Stanley, THE VERY REV. ARTHUR PENRYN, D.D. (b. Dec. 13th, 1815; d. July 18th, 1881), Dean of Westminster, was the second son of Edward Stanley, rector of Alderley, and afterwards Bishop of Norwich, and the nephew of the 1st Lord Stanley of Alderley. He was born at Alderley, in Cheshire, was sent in 1824 to a private school at Seaforth, near Liverpool, and in 1829 went to Rugby, where he was profoundly influenced by Dr. Arnold. In 1834 he gained a scholarship at Balliol, and had an almost unique career of distinction at the university, gaining the Ireland scholarship and a first-class in classics, the Newdigate prize, the subject being *The Gypsies*, the Latin essay prize, the English essay prize. Stanley took orders in 1839, though full of mental difficulties as to subscription, and in the following year obtained a fellowship at University College, where he remained for twelve years as tutor, being also secretary to the University Commission from 1850 to 1852. In 1845 he was appointed select preacher to the university, and afterwards published the *Sermons and Addresses on the Apostolic Age*, delivered from the university pulpit. His chief literary work, however, during this period was his noble *Life of Arnold* (1844), which preserved, in a literary form of rare excellence, the marked personality of that great teacher. It was followed in 1850 by his *Memoir of Bishop Stanley*. In 1851 Stanley was presented to a canonry at Canterbury, where he spent some of the happiest years of his life, chiefly in the society of his mother. To the comparative leisure of that period we owe his *Commentary on the Epistles to the Corinthians* (1854), the only one of his writings that embraces pure scholarship; *The Historical Memorials of Canterbury Cathedral* (1854), a work into which he threw all his love for the place, and *Sinai and Palestine* (1855), the result of a prolonged tour with his friend Theodore Walrond, and perhaps the most popular of all his books. In 1858 he gave up his Canterbury home for a canonry at Christ Church, attached to the professorship of ecclesiastical history, to which he had been appointed two years previously. His *Introductory Lectures on the Study of Ecclesiastical History* gained immediate recognition, and were followed by his *Lectures on the Eastern Church* (1861), and *Lectures on the Jewish Church* (three series, 1862-75), in which Stanley reproduced the past with a vividness and power of diction which stamped him as one of the greatest masters of English prose. The treatment adopted in the lectures is

emphatically that of a Broad Churchman, and Stanley had by this time become recognised as one of the leaders of that party. Although not a contributor to the *Essays and Reviews*, he had defended their authors in behalf of the cause of liberty of opinion. In 1862 Stanley accompanied the Prince of Wales to the East, and in the following year was appointed to the Deanery at Westminster. There was a considerable opposition to the appointment, and its leader was Dr. Wordsworth, afterwards Bishop of Lincoln. His marriage in 1863 to Lady Augusta Bruce, daughter of the 7th Earl of Elgin, who had been the devoted attendant of the Duchess of Kent, and who was one of the brightest and purest elements of London society, supplied him with a thoroughly sympathetic wife. Dean Stanley was accustomed to say that he never really lived until his marriage; he ceased to be a retired student, and began to fill an important position in public life. His literary productions during this period of his life embrace the popular *Historical Memorials of Westminster Abbey* (1867), *Essays on Questions in Church and State from 1850 to 1870* (1870), *The Athanasian Creed* (1871), *Lectures on the Church of Scotland* (1871), *Addresses and Sermons at St. Andrews* delivered in the capacity of Lord Rector (1877), and *Christian Institutions: Essays on Ecclesiastical Subjects* (1881). Of these the *Essays on Questions in Church and State* give by far the best idea of Dean Stanley's position in the Establishment; they exhibit all the freedom from sacerdotalism, the sympathy with things secular, which aroused the opposition of the more orthodox party, and the warmth of enthusiasm with which he came forward on behalf of anyone whom he believed to be suffering for conscience' sake. When Bishop Colenso was under the ban of Convocation, he asked him to preach from the Abbey pulpit; he sheltered Père Hyacinthe when he broke with the Roman Catholic hierarchy; he gave his warm support to Dr. Dollinger and the Old Catholic movement. Of course it could not be expected that the spectacle of a learned layman like Professor Max Müller addressing a congregation at Westminster would pass absolutely without challenge; and Dean Stanley, especially when he was speaking before the Lower House of Convocation, frequently seemed to court opposition. In 1872, while attending that assembly, he made a speech in favour of the suppression of the Athanasian Creed in the services of the Church, which was unfavourably received in many quarters, and was the cause of an unsuccessful attempt to exclude the Dean from the list of select preachers to the University of Oxford. Stanley, however, shaped his course without much deference to opinion; his opponents respected while they condemned him; in society he was universally popular, owing to the charm of his manner and the delight of his conversation. To the poor he was always the same,

and the efforts of his wife, his sister Mary, and himself, to improve the social condition of the working classes round Westminster were endless. In 1874 the Dean went to St. Petersburg to solemnise the marriage of the Duke and Duchess of Edinburgh according to the English ritual; it was there that Lady Augusta, who accompanied him as representative of the Queen, caught the chill that in 1876 proved fatal to her. Dean Stanley never recovered her loss; and, although his visit to the United States in 1878 cheered and for a time invigorated him, he ceased to be capable of much effort after the spring of 1880, when his sister Mary followed his wife to the grave. He was buried in Westminster Abbey.

A. J. C. Hare in *Macmillan's Magazine*, vol. xlv.;
The Times Obituary. [L. C. S.]

Stanley, EDWARD JOHN, 2ND BARON STANLEY OF ALDERLEY (b. 1802, d. 1869), statesman, was educated at Eton and Oxford (B.A. 1823), and in 1831 entered Parliament for the borough of Hindon, Wilts. The borough being disfranchised, he sat in the Reformed Parliament for North Cheshire, and was Under-Secretary of State for the Colonies (1823-4), Under-Secretary for Home Affairs (1834), and Patronage Secretary to the Treasury (1835-41). In June he was made Paymaster of the Forces, but resigned with his colleagues in September, and was rejected by his constituents. In 1846, however, he re-entered Parliament, and served under Lord John Russell as Under-Secretary for Foreign Affairs, a difficult post when Lord Palmerston was Foreign Secretary. In 1848 he was raised to the peerage as Lord Eddisbury, and in 1850 he succeeded his father as Lord Stanley of Alderley. After holding the conjoint offices of Paymaster of the Forces and Vice-President of the Board of Trade, he was President of the Board from 1855-8. From 1860-6 he was Postmaster-General with a seat in the Cabinet, but the infirmity of his health prevented his joining the Gladstone ministry of 1868.

* **Stanley, THE RIGHT HON. COLONEL FREDERICK ARTHUR STANLEY, BARON, G.C.B.** (b. 1841), the younger son of the 14th Earl of Derby, formerly Prime Minister of England, was educated at Eton, and in 1858 entered the Grenadier Guards, whence he retired with the rank of captain in 1865. He subsequently became colonel of the 3rd and 4th Battalions of the King's Own. From 1866-8 he represented Preston in the Conservative interest, from 1868-85 North Lancashire, and in 1885 and 1886 the Blackpool Division of Lancashire. Colonel Stanley was Civil Lord of the Admiralty in 1868, Financial Secretary to the War Office from 1874-7, Secretary to the Treasury from 1877-8, and Secretary of State for War with a seat in the Cabinet from 1878-80. In the Conservative

ministry of 1885 and 1886 Sir F. Stanley was Secretary of State for the Colonies. The chief incident of his administration was the recall of Sir C. Warren from Bechuanaland. In August, 1886, he became President of the Board of Trade, and was raised to the peerage as Baron Stanley of Preston.

* **Stanley, HENRY MORTON** (b. 1840), explorer, a native of Denbigh, Wales, was at the age of three placed in the poor-house at St. Asaph. After teaching in a school, he at the age of fifteen became a cabin boy, and went to New Orleans. His name at this time was John Rowlands, but a merchant named Stanley adopting him he assumed the latter name. His adopting father dying without a will, he of course got nothing, and having to earn a livelihood joined first the Confederate army, and then became an officer on a steamer in the Federal service. In 1867 he went with the British army to Abyssinia as correspondent to the *New York Herald*. In 1870 he was sent on behalf of the same paper in search of Dr. Livingstone, who had been dead to the world for upwards of two years, and in nine months after his arrival on the African coast succeeded in finding the object of his search at Ujiji, on Lake Tanganyika. He explored the north end of the lake in his company, and on his return to England published *How I Found Livingstone* (1872). He received numerous rewards, among them being the patrons' medal of the Royal Geographical Society. He was the *Herald's* special correspondent during the Ashantee War, and published *Coomassie and Magdala* in 1874. In the latter year he was despatched on an expedition jointly fitted out by the *Daily Telegraph* and the *New York Herald*, the results of which were published on his return in *Through the Dark Continent* (1878). Briefly speaking, they consisted in the circumnavigation of the Victoria Nyanza, of which he estimated the area at 21,500 square miles; the circumnavigation of Lake Tanganyika, which he proved to be not connected in any way with the Albert Nyanza, and the survey of some 780 miles of the River Luabala, or Livingstone, as he renamed it, which he reported to be continuously navigable, and capable of being made an important road for commerce. A controversy arose on his return concerning the somewhat indiscriminate slaughter of natives which occurred during his adventures. In 1879 he again returned to Africa, and made the Congo his head-quarters. He was despatched by the African International Association, of which the head-quarters were at Brussels; the supplies were munificently aided by the King of the Belgians with £50,000. Despite considerable difficulties, and the presence of a rival in the shape of M. de Brazza, who was annexing large districts in the interests of France, Mr. Stanley and his intrepid companions succeeded in establishing

trading stations some 800 miles from the sea, and in 1884 the Congo Free State was founded. Mr. Stanley, who declined to be its first governor, published in 1885 *The Congo, and the Founding of its Free State*. In 1886 the resources of the association were reported to be in an unfavourable condition. In 1887 Mr. Stanley started on an expedition to relieve Emin Pasha.

C. Rowlands, *H. M. Stanley: the Story of his Life; Nature*, vol. xvii.

***Stansfeld**, THE RIGHT HON. JAMES, M.P. (b. 1820), was educated at University College, London, and called to the bar in 1849. In 1859 he was first returned for Halifax as an advanced Liberal. He was a Lord of the Admiralty from 1863 to 1864, when he resigned in consequence of his intimacy with Mazzini, which was antagonistic to public opinion; Under-Secretary of State for India in 1866; Third Lord of the Treasury from 1868-9, Financial Secretary to the Treasury from 1869-71, and President of the Local Government Board from 1871-4. Mr. Stansfeld was now one of the most prominent members of the Liberal party, but he was excluded from the ministry of 1880, owing to his objection to the Contagious Diseases Acts, and it was not until 1886 that he again held office, when he became President of the Local Government Board, with a seat in the Cabinet, in succession to Mr. Chamberlain.

Staunton, HOWARD (b. 1810, d. 1874), scholar, was educated at Oxford, but left the University without taking a degree, and coming to London embraced a literary career. He is chiefly remembered for his edition of *Shakespeare* (1857-60), which was illustrated by Sir John Gilbert, R.A., and the acuteness of the textual emendations of which stamped him as one of the soundest critics of the day. His fine reproduction of the first folio edition of *Shakespeare* (1623) appeared in 1866, and his contributions to periodical literature on the subject were most valuable. *The Great Schools of England* was published by him in 1865. Mr. Staunton was a great authority on chess, and in 1843 defeated M. St. Amand, the amateur champion of Europe. Among his works on the subject may be mentioned *The Chess Player's Handbook* (1847) and *Chess Praxis* (1860).

Stein, HEINRICH FRIEDRICH KARL, BARON VON (b. 1757, d. 1831), Prussian statesman, a native of Nassau, belonged to a Rhenish-Franconian family of old standing. After studying at Göttingen (1773-7) he entered the Prussian civil service, and by 1784 had risen to be director of the mines at Wettin, in Westphalia. A visit to England in 1786 led to an admiration for her institutions, which he endeavoured to introduce into Prussia. In 1797, after other preferments, he became President of the Westphalian Chambers, and in

1804 he entered, on the death of Struensee, the Prussian ministry as chief of the department of Finance and Trade. After the Peace of Tilsit, having risen in the estimation of his sovereign, he was appointed Prime Minister, and began the administrative and political reforms known as *Stein's System*, which had for their object the development of the internal resources of his country. These reforms embraced the abolition of serfage, a tax upon the nobles for their manorial privileges, equality of classes before the law, universal obligatory military service, promotion in the State by merit alone, and the English municipal system. His abilities meanwhile awakened Napoleon's jealousy, and he was compelled to retire into private life, leaving Hardenberg to carry on his work. He retired to Prague, and became the head of the *Tugendbund*, a secret national society, associating with the bitterest of Napoleon's foes. In 1812 he went to St. Petersburg, and there aided in bringing together the allied action against Napoleon. He now became the central figure in European diplomacy, and continued his activity till the Peace of Paris, when his public career practically ended. The Congress of Vienna bitterly disappointed him, and although appointed in 1827 a member of the Berlin Council of State, he had little real authority. To an understanding of the history of the period during which he flourished Stein's correspondence is most valuable; it comprises letters to Humboldt, Gneisenau, Eichhorn, Niebuhr, etc.

Pertz, *Leben des Freiherrn von Stein*; Stern, *Stein und seine Zeit*; Professor Seeley, *Life and Times of Stein*.

Steinmetz, CARL FRIEDRICH (b. 1796, d. 1877), Prussian general, was educated in the Prussian military schools, and served in the campaigns against Napoleon of 1813 and 1815. After being employed in the military topography offices, he distinguished himself in 1848 in the suppression of the revolution, and in the same year commanded a regiment in the War of the Duchies. In the Austro-Prussian War (1866) he commanded the 5th army corps, and in three consecutive days beat three different corps of the enemy. He was elected a member of the Diet of the North German Federation in 1867. In the Franco-German War he was placed at the head of the 1st army, and, aided by the 2nd army under Prince Frederick Charles, completed the investment of Marshal Bazaine in Metz. On Sept. 9th, 1870, the veteran resigned, partly on account of his infirmities, partly because of differences of opinion with his prince, Frederick Charles, and Manteuffel, who was to be his successor. He was rewarded with a seat in the Upper Chamber of Prussia, and the military governorship of Posen and Silesia.

Stendhal. [BEYLE.]

* **Stephen**, THE HON. SIR JAMES FITZ-JAMES, K.C.S.I. (b. 1829), jurist, the son of the late SIR JAMES STEPHEN (b. 1790, d. 1859), sometime Permanent Under-Secretary for the Colonies and Professor of Modern History at Cambridge University, was educated at Eton and Trinity College, Cambridge. Called to the bar in 1854, he became a Q.C. in 1868, was Recorder of Newark-on-Trent from 1859-69. From December, 1869, to 1872 he was Legal Member of the Council of the Governor-General of India. Sir James Stephen was Professor of Common Law at the Inns of Court from 1875-9, and was then appointed a Judge of the High Court of Judicature. He is the author of some most valuable legal works:—*General View of the Common Law of England* (1863), and edition of Roscoe's *Digest of the Law of Evidence* (1868), *A Digest of the Law of Evidence* (1876), *A Digest of the Criminal Law* (1877), *A History of the Criminal Law of England* (1883). *Essays of a Barrister* were reprinted in 1862, *Liberty, Equality, and Fraternity* (on the Woman's Rights question) appeared in 1873, and *The Story of Neucumar and the Impeachment of Sir Elijah Impey* in 1885.

* **Stephen**, LESLIE (b. 1832), brother of the above, was educated at Eton, King's College, and Trinity Hall, Cambridge (B.A. 1854), of which establishment he became a fellow. Mr. Stephen took to literature as a profession, and published *The Playground of Europe* (1871); *Essays on Free-thinking and Plain-speaking* (1873); *Hours in a Library*, three series (1874-9); *A History of English Thought in the Eighteenth Century* (1876); *The Science of Ethics* (1882); *A Life of Henry Fawcett* (1885). Mr. Stephen edited Richardson's works with a biographical essay in 1883, and contributed *Johnson, Pope, and Swift to the English Men of Letters Series*. He was editor of the *Cornhill Magazine* from 1871 to 1882, when he became editor of the *Dictionary of National Biography*. He was appointed Clark lecturer on English literature at Cambridge University in 1883, but resigned his appointment the same year.

* **Stephens**, JAMES (b. circa 1820), the ex head-centre of the Fenian organisation, began life as an engineer student at Kilkenny. He plunged into the "Young Ireland" movement, acted as Smith O'Brien's lieutenant in 1848, and was badly wounded at Ballingarry. He effected his escape, and settled for some years in Paris, where he studied secret organisation. In 1858 he started the Fenian organisation, the nucleus being the Phoenix National and Literary Society of Skibberden, of which Jeremiah Donovan, afterwards known as O'Donovan Rossa, was a member. It spread over Kerry and Cork, and in 1859 an unsuccessful attempt was made by Government to suppress it by bringing the ringleaders to trial. Stephens

reorganised the organisation out of the "Young Ireland" materials, and a parallel organisation was started in America. Stephens was head-centre of the English branch of the I.R.B. (Irish Revolutionary Brotherhood), and styled himself C.O.I.R. (Central Organiser of the Irish Revolution). The term "Fenian" was adopted by the American head-centre, O'Mahony, from the ancient Irish militia, or Fianna. As time went on, Stephens's movement came into collision with the constitutional National League, inaugurated by Mr. Martin and The O'Donoghue; and in 1865 the Fenian paper, the *Irish People*, was seized. Stephens lived under an alias near Dublin for some months, but was at length arrested. He was placed in Richmond prison, but had friends among the officials, and easily effected his escape. He proceeded to America, and thence directed the mad insurrection of 1867, of which the principal features were the attempt to seize Chester Castle, the rescue of Fenian prisoners at Manchester, and the Clerkenwell explosion. Subsequently Stephens established his head-quarters at Paris, and thence directed Fenian conspiracies, although out of sympathy with the dynamite faction known as the "Clan-na-Gael." At the request of the British Government he was compelled to leave the French capital in 1866.

A. M. Sullivan, *New Ireland*.

Stephenson, GEORGE (b. 1781, d. 1848), first saw the light in Wylam, a small village on Tyneside. His father belonged to the commonest class of colliers, and was of course obliged to send his son to work at an early age. So when six or seven George became a *trapper*. After serving as trapper for a few years, he became a *scater*; a waiter is a boy employed to pick the slates and dross from the coal as it comes to the surface; his wages were now five shillings a week. He was next promoted to the office of driver of a "gin"—a horse-machine; then being a steady lad, he was given charge of the pumping-machine, and received ten shillings per week. Stephenson's next position was that of brakesman, his duty being to stop the engine when the coals reached the pit's mouth; in this capacity he had twelve shillings a week, and made many little mechanical improvements in the machinery of which he had charge. His work as brakesman was not hard, there being intervals in which he had nothing to do. During these intervals he worked sums in arithmetic on his slate, which, when full, he sent to a schoolmaster, who corrected the sums and gave him new ones. Some spare time was also spent in cleaning and repairing his fellow-workmen's clocks and watches, making and repairing shoes and clothes; this enabled him to give his son Robert an education. By-and-by, in addition to these jobs, we find him

mending engines and pumps, and, in fact, doing all the mechanical doctoring about Killingworth. Those who trusted him once with any difficult work trusted him again. In 1815 he invented a safety lamp, for which he was publicly entertained at a banquet in the Assembly Rooms at Newcastle, and presented with a silver tankard, together with 1,000 guineas, a testimonial for his being the "Discoverer of the Safety Lamp." It is, however, his connection with the locomotive that has enrolled him in the book of fame, and of that connection we have accordingly here to speak. It was at Killingworth that Stephenson constructed his first locomotive, which was placed upon the rails on July 25th, 1814. This locomotive, like others then made, was altogether different from the locomotive of the present day. Smooth rails had not yet been thought of, and it was customary to have a rack rail, into which a pinion on the engine-shaft worked, it being thought that the smooth rail on the smooth wheel would not offer sufficient adhesion. Stephenson, however, after one or two experiments satisfied himself that the friction would be ample. Stephenson's second locomotive was made in 1815, and in 1816 he made more engines, each attempt resulting in some simplification of the working parts. These engines were used to draw the coal at Killingworth. In 1822 we find five of Stephenson's locomotives at the Hilton Colliery Railway, of which he became manager. The first engines employed on the Stockton and Darlington Railway, which was opened in 1825, were Stephenson's, and travelled at the rate of from six to eight miles an hour. In 1826 Stephenson was appointed to survey the line for a railway between Liverpool and Manchester, and in 1829 a prize of £500 was offered for the best engine. There were three competitors, of which the *Rocket*, Stephenson's engine, was one. Just before the trial he applied the blast-pipe to the *Rocket*, which, in consequence, attained the then astonishing speed of twenty-nine miles per hour, the next speed attained at the competition being only twenty-two miles per hour. The blast-pipe is a contrivance for using the waste high-pressure steam which it throws into the chimney, and thereby adds enormously to the strength of the fire; this was the invention of Mr. Hackworth. The *Rocket* also had a multitubular boiler, the effect of which is to increase the heating surface, and thereby give a greater steam-making power. Stephenson's great difficulty was to get the machinery of his locomotives properly made, a difficulty that was not overcome until the Liverpool and Manchester Railway was started. His last years were very prosperous and not very eventful.

Our Coal and Our Coal-pits, the People in Them and the Scenes around Them; Smiles, *Lives of the Engineers*; Fairbairn, *The Life of Sir W. Fairbairn*.

Stephenson, ROBERT (b. 1803, d. 1859), son of the preceding, in the brilliance of his engineering achievements outshone his father. What he owed that father for his eminence may be gathered from the latter's remarks at a dinner at Newcastle:—"I have worked my way, but I have worked as hard as any man in the world, and I have overcome obstacles which it falls to the lot of but few men to encounter. I have known the day, when my son was a child, that after my daily labour was at an end, I have gone home to my single room and cleaned clocks and watches, in order that I might be able to put my child to school. I had felt myself too acutely the loss of an education, not to be sensible of how much advantage one would be to him." Accordingly he sent his son Robert to a school at Long Benton, and afterwards to the school of a Mr. Bruce, at Newcastle, one of the best in the neighbourhood, though rather expensive for Stephenson. Here Robert remained three years, his father also deriving benefit; for he studied with his son, and in this way educated himself. At the age of fifteen Robert left school, and was apprenticed to Mr. Nicholas Wood, at Killingworth, to learn the business of the colliery. In 1820 his father sent him for a session to Edinburgh University, where Hope was professor of chemistry, Sir John Leslie of natural philosophy, and Jameson of natural history. Here he remained six months, bringing home with him the prize for mathematics; in this short time he is said to have done as much as ordinary students do in a three years' course. In 1822 he was apprenticed to his father, and went into the locomotive factory at Newcastle; his health, however, gave way in a couple of years, and he went to South America to report on the gold and silver mines of Columbia and Venezuela. In 1827 he returned to England, and took charge of the factory at Newcastle, thus enabling his father to enter into the arrangements of the Liverpool and Manchester Railway. He now devoted himself entirely to the study of the locomotive, and proved of great assistance to his father; indeed, it is said that without him the *Rocket* would not have won the £500 prize offered by the Liverpool and Manchester Railway directors. Robert saw the defects of the *Rocket*, and constructed the *Planet*, which forms the type of the locomotives of the present day. He also, at this time, designed an engine specially fitted for the curves of American railways, naming it the *Bogie*. In 1833 he undertook the survey of the London and Birmingham Railway, and settled in London. This undertaking was full of difficulties; one man, who had contracted for the Kilsby tunnel, died from anxiety at the terrible responsibility he had undertaken. The discovery of a hidden quicksand gave rise to the proposal that the tunnel should be abandoned

altogether. Stephenson would not hear of it, however, and in the end overcame all obstacles. Such was his energy in superintending this great undertaking, that he walked twenty times between London and Birmingham, while he was still attending to the factory at Newcastle. With his father he was consulted upon the Belgian system of railways, and in 1844 obtained from King Leopold the Cross of the Legion of Honour; similar honours were bestowed on him from Norway. He also did much in connection with the railways of Switzerland, Germany, Denmark, Tuscany, Canada, Egypt, and India. He was the champion maker of locomotives as Brunel was of stationary engines. He was opposed to Brunel in the matter of gauges. As to his bridges, they made his name famous all over the world. The principal are the high-level one at Newcastle, the Victoria Bridge at Berwick, the bridge across the Nile, the Conway Bridge, the Britannia Bridge across the Menai Straits, and the Victoria Bridge over the St. Lawrence. It is not possible for us to give a full account of what Stephenson did for engineering science; for besides his actual achievements, such as those enumerated, we have reports of his on the London and Liverpool systems of waterworks. In 1847 he became M.P. for Whitby in the Conservative interest. He was liberal in the promotion of science, and as an example of this may be mentioned the fact of his fitting up a yacht, the best he could get, for Professor Piazzi Smyth, who was sent out with very limited means to Tenerife to make scientific observations. In 1855 he paid off a debt of £3,100 for the Newcastle Literary and Philosophical Society, an expression of gratitude for the benefits he himself had received from it in early life. He died soon after his rival, Brunel. His benevolence was unbounded, and every year he expended thousands in doing good unseen.

[W. B. R.]

* **Sterling, ANTOINETTE** (b. 1850), an eminent public singer, was born in the State of New York, and studied singing under Abella in New York, in Germany under Marchesi and Pauline Viardot, and in London under Manuel Garcia. Her fame was well-established in her own country before she came to England, where she first appeared in 1873 at one of the Covent Garden Promenade Concerts. In 1875 she married Mr. John MacKinlay, and adopted this country as her own, singing frequently at oratorios and concerts. Her voice is a rich contralto of great depth and power; her exquisite singing of ballads is especially to be commended.

Sterling, JOHN (b. 1806, d. 1844), man of letters, was born at Kames Castle, in Bute, which his father, Edward Sterling (b. 1773, d. 1847), afterwards of considerable reputa-

tion as editor of the *Times*, had rented for a few years. After living for some years in Glamorganshire, and for a time near Paris, the family settled in London in 1815, and John Sterling went to Glasgow University in 1823, and to Trinity College, Cambridge, in the following year. Whilst there he was a pupil of Julius Hare (q.v.), but in 1826 he migrated to Trinity Hall, and in 1827 left Cambridge altogether, and became for a short time the editor of the *Athenaeum* in London. Here he became an enthusiastic follower of Coleridge, and an enthusiastic sympathiser with Torrijos and the Spanish refugees of 1823. His engagement to Miss Barton only just prevented him from taking part in the disastrous expedition of 1830, and for the next two years he was in St. Vincent managing family property. After his return he published *Arthur Comingsby* (1833), a partially didactic novel, and in 1834 was ordained curate to Julius Hare at Hurstmonceux. After a few months' experience he gave up his orders on account of ill-health, and at the same time became acquainted with Carlyle. The rest of his life was given up to literature, and the vain pursuit of health. A volume of *Poems* appeared in 1839, and his tragedy of *Strafford* in 1843. He also wrote several bright and ingenious articles for the magazines, and after his death his works were collected in 2 vols. by Archdeacon Hare. But Sterling will not be remembered for his works, but entirely as the hero of Carlyle's *Life of John Sterling* (1851). It was written as an answer to Hare's memoir, prefixed to the collected works, and is generally accepted as one of the finest works of biographical art.

Stevens, ALFRED (b. 1817, d. 1875), sculptor, was a native of Blandford, Dorset, and having displayed artistic tastes, was sent to Rome, and became a pupil of Thorwaldsen. He returned to England in 1843, and was engaged in decorative work, a fine instance of his art being Dorchester House, Park Lane. In 1850 he became director of the Sheffield School of Art, and proved a remarkably efficient instructor. In 1857 he accepted, in an evil hour for himself, the Government commission to execute the monument to the Duke of Wellington in St. Paul's Cathedral. The sum voted for the work, £14,000, proved altogether inadequate; and Stevens had to spend upon it much of his private means. Besides, there were constant complaints of the slowness with which the work was being executed; and eventually, worn down by anxiety, he left it to be finished by others.

* **Stevens, JOSEPH** (b. 1832), Belgian painter, was born at Brussels. As an artist, he was chiefly self-taught, and about the year 1840 began to acquire a great reputation as a painter of animals, especially of dogs. His pictures were exhibited at the Salons of Paris

and Brussels, and among the more famous of his earlier pictures may be mentioned *The Dog carrying his Master's Dinner at his Neck* (1847), *The Unconscious Philosopher* and an *Episode in the Dog Market, Paris*, exhibited at the Great Exhibition of 1855, and subsequently placed in the Museum at Brussels; *Ozen* and *A Happy Moment* (1859). He contributed *Protection* to the International Exhibition of 1871, and obtained the first prize in the general competition open to every style of painting. At the Historical Exhibition of Belgian Art, held in 1880 to celebrate the fiftieth anniversary of Belgian Independence, he was one of the principal exhibitors of animal subjects. His brother, ALFRED STEVENS (b. 1828), studied art under Navez in Belgium, and Roqueplan at Paris. He has acquired considerable celebrity as a painter in *genre*, and among his more remarkable pictures may be mentioned *The Lady in Pink*, now in the Museum at Brussels, and *The Visit*, bought by the King of the Belgians, two of the eighteen canvases contributed by him to the Universal Exhibition of 1867, when he obtained a first-class medal; *Spring*, now in the Royal Palace of Brussels (1869). He obtained a first-class medal at the International Exhibition of 1878, and was one of the chief exhibitors in *genre* at the Historical Exhibition of Belgian Art held in 1880.

Stevenson, ROBERT (b. 1770, d. 1850), an eminent engineer, was a native of Glasgow, and the son of a West India merchant. He was educated for the Scottish ministry, but his mother having married a second time an engineer, Mr. Thomas Smith, Robert Stevenson became his assistant. When only nineteen he constructed the Little Cumbrae Lighthouse, on the Clyde, and was taken into partnership by his stepfather. In 1810 he completed the Bell Rock Lighthouse, with which his name is chiefly associated, a work of immense labour, which occupied him for seven years. He published an account of the work in 1824. Stevenson was the inventor of the intermittent and flashing exhibition of light, by which the security of vessels in narrow seas was greatly increased, and of the movable beam-crane and balance-crane. He erected several important bridges at Glasgow and Stirling, and was the author of the scheme for the improvement of the Calton Hill, Edinburgh.

Life of Robert Stevenson, by his son, David Stevenson.

* **Stevenson, ROBERT LOUIS BALFOUR** (b. Nov. 13th, 1850), novelist, the grandson of the above, and the son of Thomas Stevenson, known for a remarkable work on *Light-house Optics*, was educated in his native town, Edinburgh, attending different schools and the university. He was intended for an engineer, his family having been for three generations engineers to the Board of Northern Lighthouses; but was never an energetic

member of the profession, and soon gave it up altogether. He was called to the Scottish bar, but received only one brief. He then travelled, his last experience being that of an emigrant to San Francisco. Since then he has been an invalid, and has devoted himself to novel writing. His published works are:—*An Inland Voyage* (1878), *Edinburgh Picturesque Notes* (1879), *Travels with a Donkey* (1879), *Virginibus Puerisque* (1881), *Familiar Studies of Men and Books* (1882), *New Arabian Nights* (1882), *Treasure Island* (1883), *The Silverado Squatters* (1883), *A Child's Garden of Verse* (1885), *The Dynamiter* (1885), *Prince Otto* (1885), *Strange Case of Dr. Jekyll and Mr. Hyde* (1885), and *Kidnapped* (1886). Mr. Stevenson's popularity has been earned by a most felicitous combination of style, wit, and descriptive power.

Stewart, ALEXANDER TURNER (b. 1802, d. 1876), American millionaire, was a native of Belfast, Ireland, studied at Trinity College, Dublin, and emigrated to New York in 1818. He was at first employed in teaching; but returned to Ireland, in poor circumstances, and invested his all in Irish lace. In 1823 he opened a store in Broad Street, New York, which eventually developed into an enormous business, with branches and factories in Europe. A. T. Stewart eventually became a rival of Astor and Vanderbilt in point of wealth. He took little or no part in public affairs, but relieved the necessities of the Irish peasants during the famine, and of the French during the Franco-German War. He established a home for working girls at New York, and a model garden city on Long Island. In 1878 his body was stolen from the tomb, money being the object of the miscreants, but it was eventually recovered somewhat mysteriously.

* **Stewart, BALFOUR, F.R.S., LL.D.** (b. 1828), physicist, the son of a merchant, was born in Edinburgh. He went first to the University of St. Andrews, and thence to Edinburgh, where he graduated. He chiefly occupied himself during his academical career in mathematics, and is said to have re-discovered Le Grange's method of dealing with the differential calculus. From college he went into a mercantile house for four years, and was two or three years in Australia. On his return he became Principal Forbes's assistant at Edinburgh for three years (1856-8). He was appointed director of the Magnetic Observatory at Kew in 1859, and professor of physics in Owens College, Manchester, in 1870. He received the degree of LL.D. from the University of Edinburgh, and in 1868 had the Rumford medal of the Royal Society conferred on him for his discovery of the equality between the absorptive and radiative powers of bodies. He is the author of many publications, the subjects dealt with being heat and light, meteorology, magnetism, sun-spots,

solar physics. Amongst his works are:—*An Elementary Treatise on Heat* (1866); *Lessons on Elementary Physics* (1870); *Conservation of Energy* (1873); and *The Unseen Universe* (1876), and *The Paradoxical Philosophy* (1878), two remarkable speculative works written in conjunction with Professor Tait. In conjunction with Professor Gee he wrote *Lessons in Elementary Practical Physics* for the *Manuals for Students* series (1885).

* **Stewart, GENERAL SIR DONALD MARTIN, BART., G.C.B., K.C.S.I., C.I.E.** (b. 1824), was educated at Aberdeen University, and entered the Bengal army in 1840. Captain in 1854, he commanded the volunteers in the Allyghur district on the outbreak of the Mutiny, and at some peril succeeded in carrying despatches from the governor of the north-west provinces to Delhi. He was then appointed deputy-assistant adjutant-general; and served as assistant adjutant-general at Lucknow, and in the campaign in Rohilcund. In the Abyssinian campaign of 1867-8 he commanded the Bengal brigade with the rank of major-general, and was created C.B. In the Afghan War of 1879-80, General Stewart led the Candahar column; and occupied the town on Jan. 8th, 1879. After the occupation of Cabul by Sir F. Roberts, General Stewart advanced from Candahar, and having defeated the enemy with great loss at Ghuznee (Nov. 19th, 1880), he effected a junction with the Cabul force. When Roberts had started on his famous march to the relief of Candahar, General Stewart conveyed the less efficient troops by way of Jellalabad to India. He was rewarded with the thanks of Parliament and a baronetcy. Sir Donald was commander-in-chief in India from 1881-5; and then became a member of the Council of India.

Stewart, DUGALD (b. 1753, d. 1828), was the son of Dr. Matthew Stewart, professor of mathematics in the University of Edinburgh, in which town Dugald was born and educated, attending first the High School and then the University. At that time the names of Bacon and Newton were paramount in the world of thought, and it was accordingly upon their methods that young Stewart was reared. In 1771 he entered the University of Glasgow, and enjoyed the privilege of sitting at the feet of Dr. Thomas Reid. In 1772 he returned to Edinburgh, and at the age of nineteen took in hand the mathematical classes of the University in the room of his father, whose ill-health compelled him to find a substitute. These duties Stewart conducted for three years, and was then formally appointed conjoint professor of mathematics; he also filled the moral philosophy Chair during the sessions 1778-9. In 1785 Dr. Ferguson resigned the moral philosophy Chair, and Stewart was appointed his successor; this position he continued to hold until 1810, including in his lectures a course on political

philosophy, under which title he dealt in politics and political economy. Besides his academical work Stewart wrote in 1792 vol. i. of the *Elements of the Philosophy of the Human Mind* (vol. ii. appearing in 1814, and vol. iii. in 1826); in 1793, *Account of the Life and Writings of Adam Smith*; in 1810, the *Philosophical Essays*; and in 1828, *The Philosophy of the Active and Moral Powers*; he also wrote other minor works. His *Collected Works* were edited by Sir William Hamilton, and among them appeared his *Lectures on Political Economy*. Meanwhile, in 1806, he had been appointed to the writership of the *Edinburgh Gazette*, a post worth £300 per annum. In 1822 he was struck with paralysis, but continued his studies; another stroke, however, came upon him in 1828, the year of his death. Stewart's name cannot, perhaps, be rightly associated with any particular extension of philosophic thought. He did much, however, for education, and his classes were attended by the sons of most of the great Whigs of the day; his culture, too, and refinement tended materially to exalt the tone of speculative discussion. He opposed the rationalism that set in with the works of Locke, Berkeley, and Hume. [W. B. R.]

Stewart, MAJOR-GEN. SIR HERBERT, C.B. (b. 1843, d. 1885), was educated at Winchester College, and read for the bar, but entered the army in 1864. After serving as deputy assistant quartermaster-general in the Bengal Presidency in 1872-3, he joined the 3rd Dragoon Guards. He served in the Zulu War, became lieutenant-colonel in 1880, and in the Boer War was taken prisoner at the battle of Majuba Hill. After serving as aide-de-camp to the Lord-Lieutenant of Ireland, he went through the Egyptian campaign of 1882, and occupied the citadel of Cairo after the battle of Tel-el-Kebir. For his services he was created C.B. and extra aide-de-camp to the Queen. In the Soudanese campaign of 1884 he behaved with great valour at the battles of El-Teb and Tamai. In December, 1884, he was placed in command of the column sent from Korti towards Metemneh, to open up communications with General Gordon at Khartoum. After winning a brilliant victory at Abu-Klea (January 17th, 1885), he died of wounds received in an engagement on the 19th at Gubat.

* **Stirling, FANNY, née CLIFTON** (b. 1816), the daughter of an officer, took to the stage owing to family misfortunes, and made her first appearance at the Coburg Theatre in 1833. She next appeared at the East London and Pavilion Theatres, and married Mr. Edward Stirling, the stage-manager of the latter. In 1839 Mrs. Stirling was at Drury Lane under Macready, and was an admirable Beatrice in *Much Ado About Nothing*, and Celia in *As You Like It*. A series of fine performances as a Shakespearian heroine at the

Princess's, in 1845, completed her claim to the highest honours of the legitimate drama. During a season at the Strand, in 1849, she assumed the part of the heroine in Sir T. Martin's version of *King Ren's Daughter*, and in 1852 she won general approbation by her fine rendering of the part of Peg Woffington in *Masks and Faces*. For several years she was at the Olympic Theatre, playing Lady Teazle; Mrs. Trotter Southdown, in *To Oblige Benson*; Madame de Fontanges, in *Plot and Passion*, etc. From 1858 to 1869 she confined herself chiefly to revivals; and for the next ten years was occupied chiefly in dramatic readings and her duties as professor of elocution at the London Academy of Music. In 1879 she returned to the stage, and among the most remarkable of her subsequent performances were the Nurse in *Romeo and Juliet* at the Lyceum, the Marquise de Saint Maur in a revival of *Caste* at the Haymarket, and Martha in *Faust* at the Lyceum. In Sept., 1886, her retirement was again announced.

* **Stirling**, JOHN HUTCHINSON, LL.D. (b. 1820), metaphysician, was born at Glasgow, entered the university of his native town, and graduated in medicine in 1842. After about nine years' practice he betook himself entirely to literary pursuits. Dr. Stirling is well known as the introducer of Hegelianism into England, and his treatise, *The Secret of Hegel, being the Hegelian System in Origin, Principle, Form, and Matter* (1865), is a notable work. It was followed by *Sir William Hamilton, being the Philosophy of Perception* (1865), *Jerrold, Tennyson, Macaulay, and other Essays* (1868), and some works written in opposition to the doctrines of the disciples of Darwin, such as *As Regards Protoplasm* (1869). His *Lectures on the Philosophy of Law* appeared in 1873, *Burns in Drama, together with Saved Leaves*, in 1878, and *The Community of Property* in 1886. Dr. Stirling has translated Schwegler's *Handbook of the History of Philosophy* and Kant's *Text-book to Kant*.

Stirling-Maxwell. [MAXWELL.]

Stockmar, CHRISTIAN FRIEDRICH, BARON VON (b. 1787, d. 1863), was a native of Coburg, where he received his education, and also at the Universities of Würzburg, Erlangen, and Jena. His studies had lain chiefly in the direction of medicine, and in 1812 he organised a military hospital at Coburg. While in a Saxon regiment on the Rhine, as chief physician, he made the acquaintance of Stein. In 1816 he became physician-in-ordinary to Prince Leopold of Coburg, afterwards exchanging this post for those of secretary, keeper of the privy purse, and comptroller of the household. He was engaged in the negotiations which preceded the elevation of Leopold to the throne of Belgium (1831). In 1836

he came to England, and was one of the chief negotiators of the marriage between Queen Victoria and Prince Albert of Saxe-Coburg. To the Prince Consort he was always a true friend, giving him the advice which he sincerely believed to be for the best; but his ideas were governed by routine, and he was not popular in England. He retired from public life in 1858, one of his last acts being to negotiate the marriage of the Crown Prince of Prussia with Princess Victoria of England. He died at Coburg.

Notabilia from the Papers of Baron von Stockmar, edited by his son; Sir T. Martin, Life of the Prince Consort.

* **Stocks**, LUMB, R.A. (b. 1812), a well-known engraver, is a native of Lightcliffe, near Halifax, and was educated at Horton, near Bradford. He began to be known as a line engraver in 1833, and speedily acquired a representative reputation. At first he confined himself chiefly to the annuals, and next executed several fine plates for Finden's Gallery, notably *Moses going to the Fair*, after Maclise, and *Nell Gwynne*, after Charles Landseer. He also engraved a number of plates from pictures in the Vernon Gallery and Royal Collections, several for the Art Union of London, and for the Fine Arts Association in London. Wilkie, Mulready, Webster, Mr. Frith, Sir F. Leighton, and Sir Noel Paton, are among the artists whose works have been popularised by Mr. Lumb Stocks. He was elected A.R.A. in 1853, and R.A. in 1872.

* **Stokes**, GEORGE GABRIEL, F.R.S. (b. 1819), man of science, was born at Skreen, county Sligo. He was educated at schools at Dublin and Bristol, and at Pembroke College, Cambridge, where he took his degree in 1841 as Senior Wrangler and first Smith's prizeman, and in the same year became fellow of his college. In 1849 he was elected Lucasian professor of mathematics in Cambridge University, an office he still holds. Professor Stokes was elected F.R.S. in 1831, was awarded the Rumford medal in 1852, when he read a most important paper on *The Change in the Refrangibility of Light or Fluorescence*, and became secretary to the society in 1854. He was president of the British Association at the Exeter meeting in 1869. Up to 1864 Professor Stokes had contributed the results of some seventy distinct investigations to the transactions of learned societies. His papers on *Hydrokinetic Equations and Waves* are to be found in the *Cambridge and Dublin Mathematical Journal*. In pure mathematics he made some most valuable improvements in the methods of discovering *The Critical Values of the Sums of Periodic Series*, and the *Numerical Calculation of Definite Integrals and Infinite Series*. In applied mathematics he contributed to the Transactions of the Cambridge Philosophical Society some admirable papers on *The Friction of Fluids in Motion* (1845); *On the Effects of*

the *Internal Friction of Fluids on Pendulums* (1850). His researches on the undulatory theory of light are most acute, and are chiefly to be found in the *Cambridge Philosophical Transactions*. He had fully apprehended the basis of spectrum analysis as early as 1852, that is, before Balfour Stewart or Kirchhoff. His *Mathematical and Physical Papers*, reprinted from original *Journals and Transactions*, began to appear in 1880, and his Burnett lectures on *Light* in 1884.

Professor Tait is *Nature*, vol. xii.

Stokes, WILLIAM, M.D., F.R.S. (b. 1804, d. 1877), was the son of Dr. Whitley Stokes, in his day a distinguished physician. He was educated at the University of Edinburgh, where he took the degree of M.D. in 1825, and in the following year was appointed physician to the Meath Hospital and county of Dublin Infirmary, a position he held for fifty years. In 1845 he succeeded his father as Regius professor of physics in the University of Dublin, and held that appointment until his death. He represented the Crown in the General Medical Council from 1858 to 1877. As a clinical lecturer Dr. Stokes was without a rival, and his published works mark an era in medicine. Among them are:—*Diagnosis and Treatment of the Diseases of the Chest* (1837), *Lectures on the Theory and Practice of Medicine* (1837), *Treatise on the Diseases of the Heart and Aorta* (1855), and *Lectures on Continued Fevers* (1874). Dr. Stokes was an ardent patriot, and in private life a person of rare humour.

Professor Mahaffy in *Macmillan's Magazine*, vol. xxxvii.

Stolberg, CHRISTIAN, COUNT (b. 1748, d. 1821), and **FRIEDRICH LEOPOLD, COUNT** (b. 1750, d. 1819), German poets, were the descendants of an old Holstein family. They were educated at the University of Göttingen, and travelled with Goethe and Lavater in Switzerland and North Italy. The elder brother wrote some unimportant poems, which show signs of the influence of Klopstock, and some good translations of Greek plays. Friedrich Leopold was minister of the bishopric of Lübeck from 1777 to 1789, and subsequently ambassador at Berlin. In 1800, however, he became a convert to Roman Catholicism, and resigned his offices, settling down at Münster. His important *History of the Religion of Jesus Christ* was published between 1811 and 1818, and is a most able production. His other works include some beautiful poems, a romance, *Die Insel* (1788), *Reise durch Deutschland*, etc. (1794), *Leben Alfreds des Grossen* (1815), and some translations of Homer, Æschylus, and St. Augustine.

***Stone, MARCUS, R.A.** (b. 1840), artist, the son of the late FRANK STONE, A.R.A. (b. 1800, d. 1859), a painter of good repute, acquired his knowledge of art in his father's

studio, though he was chiefly self-taught. His first exhibit in the Academy was *Rest*, in 1858, and *Silent Pleading* in the following year was a marked success, as was the *Sword of the Lord and of Gideon* of 1860. *Claudius accuses Hero* (1861), *On the Road from Waterloo to Paris* (1862), *Stealing the Keys* (1866), and *Royalists seeking Refuge in the House of a Puritan* (1867), were also memorable pictures. Mr. Stone's subsequent paintings showed no falling off of power. Among them may be mentioned *Henry VIII. and Anne Boleyn* (1870), *Edward II. and Piers Gaveston* (1872), *Sain et Sauvé* (1875), *An Appeal for Mercy* (1876), *In the Shade* (1879), *Married for Love* (1881), *Il y en a Toujours un Autre* (1882), purchased by the Royal Academy from the Chantrey Bequest Fund; *An Offer of Marriage* (1883), *Fallen Out and Reconciled* (1884), *A Gambler's Wife* (1885).

The Art Journal for 1890.

Storey, GEORGE ADOLPHUS, A.R.A. (b. 1834), a native of London, early showed a love of art; while studying mathematics at Paris he painted at the Louvre under the direction of M. Jean Dulong. On his return to England he entered an architect's office, but began to study art at Mr. Leigh's school in Newman Street, and at the Royal Academy. He also at this time made the acquaintance of Mr. Leslie, R.A., whose influence upon his work has been considerable. Mr. Storey's first picture was exhibited in 1852, and in 1864 his *Meeting of William Seymour with Lady Arabella Stuart at the Court of James I.* was very favourably noticed. In the interim he had been painting, principally portraits, in Spain. In 1865 *A Royal Challenge* was remarkable for its humour and delicacy of painting, characteristics for which his subsequent works are specially noteworthy. Of those we may mention:—*Breakfast* (1866), *The Shy Pupil* (1868), *The Old Soldier* (1869), *A Duet* (1870), *Rosy Cheeks* (1871), *Scandal and Mistress Dorothy* (1873), *Grandmother's Christmas Visitors* (1874), *Caught* (1875), *A Dancing Lesson* (1876), *Sweet Margery* (1878), *Daphne* (1880), *The Coral Necklace* (1881), *Out for a Walk* (1882), *The Connoisseur* (1883), *A Shy Lover* (1884), *As good as Gold* (1885), *On Guard* and *A Violin Player* (1886). Many of the figures of Mr. Storey's pictures are portraits. He was elected A.R.A. in 1876.

Story, JOSEPH (b. 1799, d. 1845), American jurist, was a native of Massachusetts, and was educated at Harvard College. In 1805 he was elected to the State legislature, and in 1811 was appointed Associate Justice of the Supreme Court of the United States, a post he filled for thirty-four years. Story became law professor at Harvard in 1829. He is chiefly remembered as a writer of legal treatises which are considered of the highest authority. Among them the most important are his *Commentary on the Constitution of the*

United States (1833), *Commentaries on the Conflict of Laws* (1834), *Commentaries on Equity of Jurisprudence* (1836), *On the Law of Agency* (1839), and *On the Law of Bills of Sale* (1843).

W. W. Story, *Life of Joseph Story*.

Stothard, THOMAS, R.A. (b. 1755, d. 1834), designer, was the son of an inn-keeper in Long Acre, and was at first apprenticed to a pattern-drawer, but was eventually allowed to devote himself to art. He became known about 1778 as an illustrator of great delicacy, through the plates in the *Town and Country Magazine*, Bell's *British Poets*, and the *Nocturnal's Magazine*. His first style was formed on that of Mortimer, but it rapidly improved until it reached a high excellence of humour combined with much feminine grace and beauty. Stothard was called by Turner the Giotto of England. Among his more important works are his designs for Boydell's *Shakespeare*, *The Pilgrim's Progress*, *Robinson Crusoe*, *The Rape of the Lock*, and the *Poems of Samuel Rogers*. He was also a painter in oil and sepia, but his paintings never attained the same degree of perfection as his designs, although the *Canterbury Pilgrims* and the *Flecht of Bacon* were very popular. He exhibited at the Royal Academy between 1778 and 1824; became R.A. in 1794, and librarian to the Royal Academy in 1817. His son, CHARLES ALFRED STOTHARD (b. 1786, d. 1821), had a high reputation as a delineator of old monuments.

Mrs. A. E. Bray, *Life of T. Stothard*.

* **Stoughton, THE REV. JOHN, D.D.** (b. Nov. 18th, 1807), was born in the city of Norwich, and educated at New College, St. John's Wood, and University College, London. He was minister at the Independent Chapel, Windsor, from 1832 to 1843, and at the Independent Chapel, Kensington, from 1843 to 1875. Mr. Stoughton then retired from the pastorate, but subsequently filled two professorships at New College. He was Congregational Lecturer in 1855, and chairman of the Congregational Union in 1856. In 1869 he received the diploma of D.D. at Edinburgh. He is the author of numerous well-known works, of which the principal are:—*Haunts and Homes of Martin Luther* (1875); *Our English Bible* (1878); *Progress of Divine Revelation* (1878); *Historical Theology* (1880); *Footprints of Italian Reformers* (1881); *The History of Religion in England from the Opening of the Long Parliament to 1850*, in 8 vols. (1881-4); and *Spanish Reformers* (1883).

Stowe, HARRIET BEECHER. [BEECHER-STOWE.]

Stowell, WILLIAM SCOTT, BARON (b. 1745, d. 1836), a distinguished probate and admiralty lawyer, was the elder brother of Lord Eldon (q.v.). After spending some time at the Newcastle Grammar School, he repaired to Oxford, where in his twentieth year he became a tutor. He remained in residence at Oxford

for eighteen years, and about the year 1779, having become a barrister, selected for the scene of his practice the cloistered courts of Doctors' Commons. In 1787 he became King's Advocate-General, and in 1788 Judge of the Consistory Court and Privy Counsellor, and was knighted. In 1790 he entered Parliament, sitting first for Downton, and afterwards for nearly twenty years for Oxford University. In 1798 he was nominated Judge of the High Court of Admiralty, and in 1812 created a peer. Lord Stowell was more distinguished for learning than for oratorical talents. He had the good fortune to live in an age when the greatest maritime questions which had ever presented themselves for adjudication arose, and through his extraordinary genius he framed and laid down that great comprehensive chart of maritime law which has become the rule of his successors and the admiration of foreign jurists. And what he thus achieved in the wide field of international jurisprudence, he accomplished also with equal success in the narrower spheres of ecclesiastical, matrimonial, and testamentary law.

W. E. Surtees, *Lives of Lords Stowell and Eldon* (1846); Horace Twiss, *Life of Lord Eldon*.

Strangford, THE HON. GEORGE SIDNEY SMYTHE, 7TH VISCOUNT (b. 1814, d. 1857), was born at Stockholm, where his father was ambassador. He was educated at Eton, and St. John's College, Cambridge, and in the year 1841 was returned to Parliament for the city of Canterbury. He belonged to that little list of youthful politicians who acquired or assumed the title of "Young England," and in acting his part he fairly out-Heroded Herod. He was a Tory of the school of Hurrell Froude, and wished to see the Church of England freed from all State control. His speeches on the Maynooth Bill in 1845, and on the Ecclesiastical Titles Bill in 1851, are all to this effect. But, their extravagance apart, they are very clever, and his sketches of Sir Robert Peel and Mr. Gladstone are admirable. Smythe, in fact, was almost as great a master of phraseology as Mr. Disraeli himself. Though belonging naturally to the Protectionist party, he accepted office from Sir Robert Peel, and was Under-Secretary for Foreign Affairs from January to July, 1846. He retained his seat for Canterbury down to 1852, when he retired from politics. In 1855 he succeeded to the peerage, but he never spoke in the House of Lords, and died at the early age of forty-three. He never realised his early promise, and of all the brilliant young men who clustered round the author of *Coningsby*, he did the least in proportion to the vigour of his genius. Besides the *Historic Fancies*, he published a translation of the minor poems of Camoens, and was a frequent contributor to the political literature of the day. [T. E. K.]

Strangford, PERCY ELLEN FREDERICK WILLIAM SMYTHE, 8TH VISCOUNT (b. 1826, d. 1869), brother of the above, was born at St. Petersburg, and educated at Harrow, and at Merton College, Oxford, where he was a postmaster. He early became a most accomplished Orientalist; and while *attaché* to the embassy at Constantinople (1845-57) and Oriental secretary (1857-8), he acquired a most profound knowledge of Eastern affairs. His linguistic attainments were marvellous, but the only results of his knowledge were some chapters in Lady Strangford's *Eastern Shores of the Adriatic* and some *Letters and Papers on Philological and Kindred Subjects* (1878). At the time of his death he was president of the Asiatic Society.

Stratford de Redcliffe, STRATFORD CANNING, VISCOUNT, K.G. (b. Nov. 4th, 1786; d. Aug. 14th, 1880), diplomatist, was the son of a London merchant and a cousin of George Canning (q.v.). He was educated at Eton, and at King's College, Cambridge, but in 1807 left the university, though keeping his terms, to fill the post of *précis* writer in the Foreign Office, and was appointed second secretary to the mission to Copenhagen. In 1808 he was appointed secretary to Sir Robert Adair's Mission to Constantinople, sent to negotiate peace between England and the Porte. In April, 1810, he was left in charge of the Embassy, and in 1812 negotiated the Treaty of Bucharest, by which peace was concluded between Turkey and Russia, and thus the Czar was enabled to ruin the Grand Army of Napoleon. Appointed minister-plenipotentiary to Switzerland in 1814, he took part in the treaty by which the Helvetic Confederacy was formed, and was present at the Congress of Vienna. He was sent to Washington in 1820 to settle the north-west boundary question, but the American Senate declined to ratify his arrangements. Sir Stratford Canning was despatched by his cousin, George Canning, who was now Premier, to St. Petersburg in 1824, to discover the intentions of the Czar Alexander with regard to Greece; and about that period so aroused the hostility of the Grand Duke Nicholas that when he in turn became Czar he refused to receive Canning as British ambassador (1833). Meanwhile, Canning had been sent (in 1826) as ambassador to Constantinople, to influence the Sultan Mahmud (q.v.) in favour of the Greeks. His mission was unsuccessful, and after the "untoward event" of the battle of Navarino, diplomatic relations were broken off and Canning returned to England. He received a G.C.B., and in 1828 was returned to Parliament for Old Sarum as a moderate Tory. In 1831 he was despatched by Lord Palmerston on a special mission to Constantinople, and negotiated the definitive treaty of July, 1832, between the Porte and Greece.

After the rebuff by the Czar Nicholas, Canning was for nine years without diplomatic employment, and sat from 1835 to 1842 as Conservative member for East Lynn. On the advent of Sir Robert Peel to power in 1841, Sir Stratford Canning was sent by Lord Aberdeen to Constantinople, and for seventeen years was supreme director of Turkish policy. No influence could compare with that of "the Great Eltchi," who positively caused the Sultan Abd-el-Medjid to tremble before him, and reduced his ministers to the position of mere dependents, secretly chafing under the arbitrary yoke. His great aims were, first to stave off the ruin of Turkey by internal reforms, especially in the direction of placing Christians on an equality with Mahometans and the tributary States on a footing with Turkey; and secondly, to exclude all other foreign influence, especially that of the Czar Nicholas, whom he hated with a personal hatred which he never attempted to disguise. In 1852 he was raised to the peerage, and chose the title of Viscount Stratford de Redcliffe, wishing to commemorate the benefactions of his ancestor William Canning to the Church of St. Mary Redcliffe at Bristol. In the same year, while the dispute concerning the Holy Places was still unsettled, he unwisely took leave of absence to England, leaving the management of affairs in the hands of Colonel Rose [STRATHNAIRN], who was hardly equal to the task of an intellectual wrestle with the Russian envoy, Prince Mentschikoff. On his return to Constantinople Lord Stratford began a vigorous diplomatic duel with the Prince, and won a complete victory by so shaping the concessions of the Porte that the refusal of the Czar to accept them gave to his conduct an appearance of wanton aggression upon the rights of nations, and enlisted the sympathy of Europe on the side of Turkey. During the war he inspired the Sultan with courage, concentrated the efforts of England, and brought influence to bear on the neutral States, his master-stroke being the occupation of the Danubian Provinces by Austria, through which alone the Crimean campaign was brought to a successful conclusion. In 1858 he returned to England. He was made K.G. in 1869. Lord Stratford spoke on rare occasions in the House of Lords, but the eloquence of his tongue was not equal to that of the pen which had given forth his pungent and all-embracing despatches. Lord Stratford was a poet and scholar of more than mediocre abilities. His youthful production, *Buonaparte*, drew praise from Lord Byron, and a collection entitled *Shadows of the Past* appeared in 1866. A theological work, *Why am I a Christian?* appeared in 1873, and a drama, *Alfred in Athelney*, in 1876.

A. W. Kinglake, *Invasion of the Crimea: Dictionary of National Biography*. [L. C. S.]

Strathnairn, FIELD-MARSHAL HUGH ROSE, BARON, K.C.B. (b. 1803, d. 1885), was the son of Sir George Rose, Clerk of Parliaments, entered the army in 1820, but had no chance of distinction until 1840, when he was sent to organise the Turkish defence against Mehemet Ali Pasha, who was advancing upon Constantinople. [EGYPT.] For this service he was made consul-general for Syria, and in 1848 secretary to Lord Stratford de Redcliffe. He was *chargé d'affaires* in the winter of 1853-4, during the absence of Lord Stratford, and by ordering a British naval demonstration in Turkish waters, kept up the courage of the Sultan. During the Crimean War he was commissioner at the head-quarters of the French army, and was then nominated a K.C.B. On the outbreak of the Indian Mutiny, Sir Hugh Rose was placed in command of the Central India Field Force, and in 1858 won a series of brilliant victories against the rebels. In February the garrison of Segore was relieved, and he then laid siege to Jhansi, commanded by its gallant Ranees. After beating off a relieving force under Tantia Topee, he took the place by storm on April 3rd. The battle of Kunch, in which the Ranees was again defeated, was followed by the fall of Calpee. The sudden capture by the rebels of the fortress of Gwalior necessitated a prolongation of the campaign; at the battle of Morar the enemy was defeated, and the war closed with the death of the Ranees at Kotah-Ki-Serai. Sir Hugh Rose succeeded Lord Clyde as commander-in-chief in India, and from 1865-70 was commander-in-chief in Ireland. His military career now came to an end. He was raised to the peerage as Baron Strathnairn of Jhansi in 1866, and became field-marshal in 1877.

Strauss, DAVID FRIEDRICH (b. 1808, d. 1874), critic, was the son of a retail merchant of Ludwigsburg, in Würtemberg. Having studied at the Theological Institute at Tübingen, where he came under the influence of Baur, he was ordained in 1830, and after acting for a few months as tutor in the seminary at Maulbronn, he visited Berlin in 1831, with a view to attending the lectures of Hegel and Schleiermacher. Soon after Hegel's death he returned to a subordinate position in Tübingen University, and began the preparation of the work that first brought his name into prominence. *The Life of Jesus Critically Examined* (*Das Leben Jesu kritisch bearbeitet*) was published in 1835, and soon aroused an embittered controversy in Europe. It treated the Gospel narratives as natural growths of myth, and displayed an ingenuity and depth of learning extraordinary in a man of twenty-seven. After the appearance of the first volume he was deprived of his position at the university, and having tried to support himself as a schoolmaster in his native town, he settled at Stuttgart in 1836, and

next year issued his *Polemics* (*Streitschriften*), in answer to his opponents. In 1838 his treatise, *On the Transient and Permanent in Christianity*, seemed to promise a compromise between him and the orthodox Liberals, and in 1839 the Zurich Government ventured to appoint him professor of dogmatics and Church history at their university. But they were obliged to repeal their decision at once, and shortly afterwards fell before the storm of popular indignation. Strauss, however, retained a pension, and the Chair was left vacant. His second great work, *The Christian Doctrine of Faith* (*Christliche Glaubenslehre*), appeared in 1839-41, and then he turned for many years from theological subjects to politics and history. In 1847 he delivered the brilliant historical lectures on *The Romanticist on the Throne of the Cæsars, or Julian the Apostate*, pointed with perceptible satire against Friedrich William IV. He was expected to play a prominent part in the movement of 1848, but disappointed his supporters by his coldness towards revolution and socialism, and by his pamphlet *Political and Theological Liberalism* (1848). He went to reside at Munich, where he published his *Life of Schubart* the poet (1849), and in 1851 we find him at Cologne, and in 1854 in Heidelberg. He was next engaged upon a *Life of Nicodemus Frischlin* (1855), and a full account of the *Life and Times of Ulrich von Hutten* (1858, translated 1874), on the whole his most valuable contribution to modern history. In 1864 he published his new *Life of Jesus for the German People*, and in the following year the *Christ of the Creeds and the Jesus of History* (*Der Christus des Glaubens und der Jesus der Geschichte*). In 1865 also he removed to Darmstadt, where he became an intimate friend of the Princess Alice, at whose request he delivered the lectures on Voltaire, that in their published shape form one of his most luminous biographical essays, *Voltaire* (1870). At the outbreak of the Franco-German War he wrote to Renan, defending the German position, and afterwards published his two letters, with Renan's reply, under the title *War and Peace* (*Krieg und Friede*, 1870). In 1872 he returned to his native Ludwigsburg, and in the same year published his last work, *The Old Faith and the New* (*Der alte und der neue Glaube*), in which he defined what he regarded as his most advanced and final position; this was found to differ very considerably from the conclusions of his earlier works. Much was given up that he had before regarded as still tenable, and nearly all parties were united in the outcry that immediately arose, liberal theologians condemning him for abandonment of their last strongholds of faith, and socialistic politicians for his patriotic support of the Imperial Government. Strauss's *Collected Works* were published in 1876-8.

W. Lang, David Friedrich Strauss, eine

Charakteristik (1874); E. Zeller, *David F. Strauss in seinem Leben und Schriften geschildert* (1874, trans. 1874).

* **STRAUSS, JOHANN** (b. 1825), German composer, the eldest of the three sons of JOHANN STRAUSS (1805–49), a celebrated dance-music writer and conductor, was educated for business. He had, however, been able to study music secretly by the aid of his mother, and when only six years old had composed his first waltz (*First Thought*). At last, in 1844, he broke through the restraint exercised over him, and became conductor at Doumaegee's, at Hietzing, where he already played his own compositions. After his father's death he united the two bands, and made a tour through Austria, Poland, and Germany, and undertook for ten years the direction of the summer concerts in the Petropaulowski Park at St. Petersburg. In 1863 he became conductor of the Court balls, but resigned this post when he had made an assured success on the stage. In addition to his 400 waltzes of world-wide celebrity, among which may be mentioned *The Blue Danube*, he has written a number of operettas—*Indigo* and *The Forty Thieves* (1871), *The Carnival in Rome*, *The Bat*, *Prince Methusalem*, *Cagliostro*, *The Merry War*. His brother JOSEPH STRAUSS (b. 1827, d. 1870) wrote in all 283 works, rivalling in excellence those of his brother. * **EDUARD STRAUSS** (b. 1835) devoted himself to music from the first, and in 1862 made his first appearance in the Dianasaal. In 1865 he succeeded his brother at St. Petersburg, and in 1870 became conductor of the Court balls. He has visited the principal towns of Germany, and in 1885 came over to London, where his band was one of the principal attractions at the Inventions Exhibition at South Kensington. He has composed over 200 pieces of music.

Grove's Dictionary of Music.

Street, GEORGE EDMUND, R.A. (b. 1824, d. 1881), architect, a native of Woodford, Essex, was educated at the Collegiate School, Camberwell. He began the study of architecture at Winchester, and was thereafter five years under Sir Gilbert Scott, whom he assisted in the great church at Hamburg. Like his master, he favoured the Gothic style of architecture. In 1856 he made his reputation by appearing second to Messrs. Clutton and Burges in the competition for Lille Cathedral. Among his works as an architect are the Cuddesdon Theological College, entrusted to him by Bishop Wilberforce; Uppingham College; St. Philip and St. James's Church, Oxford; St. Peter's, Torquay; All Saints', Clifton; St. Saviour's, Eastbourne; St. Margaret's, Liverpool; and St. Mary Magdalen, Paddington. He has restored the churches of Eccleshall, Wantage, Uffington, Stone, and Jesus College Chapel, Oxford. The nave of Bristol Cathedral is also his

M.W.—31

work, and he restored Carlisle Cathedral and the south transept of York Minster. His greatest work in cathedrals, however, was the restoration of Christ Church, Dublin. His name, perhaps, is more particularly to be remembered by the Royal Courts of Justice, Strand, London. For this work there was a very keen competition amongst the most distinguished architects, Street's former master, Sir Gilbert Scott, included; from amongst these Street was selected for the great undertaking, with which he was still engaged when he died. The controversy that arose concerning it was prolonged, and eventually his plans were only carried out in a mutilated form. Mr. Street's literary works include *The Brick and Marble Architecture of North Italy in the Middle Ages* (1855) and *Some Account of Gothic Architecture in Spain* (1865). He held appointments as architect to the dioceses of Oxford, York, Ripon, and Winchester. In 1866 he was elected A.R.A., in 1871 R.A., and president of the Royal Institute of British Architects in 1881. Mr. Street was, as a rule, constant to English Gothic, although some of his earlier churches—for instance, St. James's, Westminster—were in the Italian Gothic style. He was one of the four or five great architects of his time, and perhaps in scholarship and resource surpassed them all.

Strickland, AGNES (b. 1796, d. 1874), was the daughter of Mr. Thomas Strickland, of Roydon Hall, Suffolk. Her earlier literary efforts are collected in a volume entitled *Historic Scenes, and other Poetic Fancies*. She wrote popular books for the young, among which may be mentioned *The Pilgrims of Walsingham* (1835). In 1840 appeared the first volume of *Lives of the Queens of England from the Norman Conquest*, the last in 1849; in this work she was assisted by her sister Elizabeth. In conjunction the two sisters next produced, in 1850, *Lives of the Queens of Scotland and English Princesses connected with the Royal Succession of Great Britain*. Agnes's next work was *The Bachelor Kings of England* (1862). Other of her books are *How Will It End?* (1865), and *Lives of the Seven Bishops* (1866). In recognition of her literary labours Mr. Gladstone in 1871 placed her on the Civil List, and she received a pension of £100. As an historical biographer Miss Strickland was more remarkable for the thoroughness with which she collected her materials than for her critical penetration.

Struve, FRIEDRICH GEORGE WILHELM VON (b. 1793, d. 1864), Danish astronomer, was a native of Altona, and studied at Dorpat University. In 1813 he entered the Dorpat Observatory, of which he became director in 1817. In 1839 he was nominated the director of the newly erected Russian observatory at Pultowa. There he remained for the greater part of his life, cataloguing nebulae and

double stars, and determining parallaxes. His great task was the triangulation of Livonia, and the determination of the meridian in the Baltic Provinces. His chief works were:—*Catalogus novus Stellarum Duplimum* (1827); *Études d'Astronomie Stellaire* (1847); *Stellarum Fiscarum, imprimis Compositarum Positiones Medice* (1852); and *L'Arc du Méridien entre le Danube et la Mer Glaciale* (1862).

* **Stubbs**, THE RIGHT REV. WILLIAM, D.D., Bishop of Chester (b. 1825), historian, was born at Knaresborough, and educated at Ripon Grammar School and at Christ Church, Oxford, where in 1848 he obtained a first in classics, and was elected fellow of Trinity College. Ordained in the same year, he became vicar of Navestock, in Essex, in 1850. The publication in 1858 of an unassuming but most laborious and scholarly sketch of the episcopal succession in England in his *Registrum Sacrum Anglicanum* established his reputation as an investigator of mediæval history. In 1862 he became librarian to the Archbishop's Library at Lambeth. Soon after he began his great series of editions of mediæval chronicles for the Rolls collection. These editions are of unique value for the study of English history, and comprise not only exhaustive critical editions of works of the first importance, hitherto inedited, or at best badly edited and very imperfectly understood, but also long and brilliant prefaces which contain some of the best work that Dr. Stubbs has ever produced. Of special importance is the great cycle of editions centring round the reign of Henry II., a period which he has particularly made his own. In 1864 and 1865 came two volumes of *Chronicles and Memorials of Richard I.* Next followed (in 1867) two more volumes of the *Chronicle of Henry II. and Richard I.*, generally ascribed to Benedict of Peterborough, with a preface of great critical power that with very great probability assigned the authorship to Richard Fitz-Neal, Bishop of London. Between 1868 and 1871 the four volumes of Roger Hoveden's *Chronicle* of the same period were issued, with introductions, throwing a new and fuller light on the reign and character of the great Henry. The *Historical Collections* of Walter of Coventry followed in 1872-3; while an edition of the *Historical Works* of Ralph Diceto in 1876 and those of Gervase of Canterbury in 1879-80 worthily complete the series. In 1874 fresh ground was opened up by the *Memorials of St. Dunstan*, a collection of contemporary and other lives of the saint, with a preface that vindicated the great archbishop's real place in English history. Later on the *Chronicles and Memorials of Edward I. and Edward II.* (1882-3) threw new light on another critical period of English history. But important as they are, his contributions to the Rolls series are only one aspect of his historical work. In 1866 his appointment

as Regius professor of modern history at Oxford gave a great stimulus to the rising school of history there. During the eighteen years he retained that appointment, the position of modern history in the university became very much improved and strengthened. Soon after his appointment at Oxford he began, in conjunction with the Rev. A. W. Haddan, the publication of a great collection of *Councils and Ecclesiastical Documents relating to Great Britain and Ireland*, based on the *Concilia* of Spelman and Wilkins (1869-73), in which he was specially responsible for the Anglo-Saxon part. This undertaking, brought to a premature termination by Mr. Haddan's death, has unfortunately never been resumed. In 1870 he published *Select Charters and other Illustrations of English Constitutional History from the Earliest Period to the Reign of Edward I.*, a handbook which has profoundly influenced English historical study by giving the student in a complete and accessible form a carefully selected collection of the most important original texts for that branch of research. It also prepared the way for the author's greatest and best known work, *The Constitutional History of England in its Origin and Development*, the three volumes of which, published between 1874 and 1878, gave for the first time an adequate and complete view of the growth of the institutions which give English history its greatest importance. In 1879 his distinction as a theologian no less than an historian was recognised by his appointment to a canonry at St. Paul's, while in 1884 he was consecrated Bishop of Chester. Almost the last historical work from him was his masterly historical report drawn up for the Commission on Ecclesiastical Courts. A selection from his public lectures between the years 1867 and 1884 appeared in 1886. Dr. Stubbs stands by universal recognition at the head of English historical scholars. There is hardly an aspect of English mediæval history on which he has not thrown new light, while in constitutional and ecclesiastical history his work is quite unique. He unites to colossal learning and unwearied research a thoroughness and patience surpassing that of the German scholar, and historical power and insight of the highest kind. In matters of fact he is the most accurate and trustworthy of all historians, and it has been said that he never makes a mistake. His judgment is invariably sober and impartial, and his only object is to find out the truth. His strong ecclesiastical and political sympathies only serve to make more real and vivid to him the continuity of Church and Constitution. As a writer he is always strong and clear. Most of his work is addressed only to the professed student, in which literary effect would be out of place, but in passages where the subject demands it he can rise to a high pitch of eloquence. His wonderful pictures of the character and last days of Henry

II. are unfortunately not very accessible to the general reader, but in almost the only book he has ever written for a wide public, his little sketch on the *Early Plantagenets*, he has shown power of popularisation almost as great as his capacity as an investigator of original sources. His example has given a most powerful impetus to the scientific study of history in England.

Sturgeon, WILLIAM (b. 1783, d. 1850), began life in the humble capacity of a shoemaker's apprentice. For more than twenty years he was a common soldier—first in the Militia and then in the Royal Artillery. It was during this period that he made himself conversant with the electric and magnetic discoveries that were then startling the world. In 1823 and 1824 *Essays on Electro-Magnetism* by him appeared in the *Philosophical Magazine*, and in 1825 he described a complete set of new electro-magnetic apparatus in the *Transactions of the Society of Arts*. In 1836 he described a contrivance for uniting the negative and positive electric currents in one direction. He was editor of the *Annals of Electricity, Magnetism, and Chemistry*; conducted *The Annals of Philosophical Discovery*, and published in 1843 *A Course of Twelve Elementary Lectures on Galvanism*.

Sue, Eugène (b. 1801, d. 1857), French novelist, was born at Paris, and began life as an army doctor. Having become the possessor of a fortune of some £1,600 a year, he retired from his profession, and took to writing novels at first for amusement, afterwards from necessity. His first successes were in tales of the sea, such as *Kernock le Pirate* (1830), and in 1835-7 he published an extraordinarily inaccurate *Histoire de la Marine Française*, whereupon some members of the French navy presented him with a medal for the "history he had not written." The height of his popularity was attained by the novels *Les Mystères de Paris* (1842) and *Le Juif Errant* (1844-5), which ran through countless editions, and was translated into numerous languages. In *Les Sept Péchés Capitaux* (1847-9) he advocated Fourier's Socialistic ideas, and *Les Mystères du Peuple* (1849) was condemned by the courts of law as an immoral production. After this his reputation waned; he was elected a member of the Legislative Assembly in 1850, but proscribed after the *Coup d'État*, and ended his days at Annecy.

Suleiman Pasha (b. 1840, d. 1879), Turkish general, entered the army in 1861, and in 1867 fought, with the grade of major, in the Cretan campaign. In 1874 he was appointed general of brigade, with the rank of Pasha. He took part in the conspiracy which terminated in the overthrow of the Sultan Abd-el-Aziz (q.v.), and was promoted to be general of division by Murad V. He took part in the Servian campaign, and in

Jan., 1877, as commander-in-chief in Montenegro, commenced some brilliant operations, which were cut short by the declaration of war by Russia. Suleiman Pasha's first operations against the new enemy were highly successful; he drove General Gourko from Eski-Zagra into the Shipka Pass (July 30th), and, following up this advantage, fought him for a week for the possession of that important defile. He was, however, compelled to abandon the attempt after a final attack on Sept. 17th. In October he was appointed commander-in-chief in the place of Mehemet-Ali Pasha, and ordered to relieve Plevna. His attempt, however, failed; and abandoning any attempt to make a stand at Tatar Bazardjik, he fled over the Rhodope mountains, his rear being ably defended by Baker Pasha (q.v.), and thence conveyed his troops by sea to Gallipoli and Constantinople. He was relieved of his command, and in the following year put on his trial for high treason. The accusation was by no means substantiated; nevertheless, he was deprived of his rank and condemned to fifteen years' imprisonment. He died at Bagdad.

Sullivan, ALEXANDER MARTIN (b. 1830, d. 1884), Irish politician, was the son of peasant parents at Castletown, county Cork, and going to Dublin, became employed as illustrator to various periodicals. He was also an energetic journalist, and was editor and proprietor of the *Nation* between 1855 and 1876. Mr. Sullivan was an ardent Nationalist, and in 1866 was imprisoned for four months on a charge of sedition. On his release he refused a national testimonial that had been subscribed for him. At the general election of 1874 he was returned for Louth, and in 1880 for Meath. Mr. Sullivan was an energetic follower of Mr. Parnell until 1881, when he disapproved of the resistance of the party to the Irish Land Act. He was called to the English bar in 1876, and was a frequent speaker on temperance platforms. His chief work was *New Ireland* (1877), a sketch of the Nationalist movement during its developments subsequent to the O'Connell agitation. * **THE RIGHT HON. TIMOTHY DANIEL SULLIVAN** (b. 1827), brother of the above, succeeded him as editor and proprietor of the *Nation*, and is an ardent member of the Nationalist party. He is also the poet of the Parnellite movement, and the author of the well-known song, *God Save Ireland* (*Poems*, fourth edition). He was elected Lord Mayor of Dublin in 1885. He entered the House of Commons in 1880 as member for co. Westmeath, and in 1885 was first returned for the College Green division of Dublin.

* **Sullivan, SIR ARTHUR SBYMOUR** (b. 1842), the well-known composer, the son of the late Thomas Sullivan, for some time bandmaster at Sandhurst, entered the Chapel Royal in 1864, and in 1866 became the first

Mendelssohn scholar. From 1856-8 he studied at the Royal Academy under Sterndale Bennett and John Goes, and from 1858-61 at Leipzig. On his return to London he brought with him the *Tempest* music, which was performed with great éclat at the Crystal Palace. *The Wedding March*, written to celebrate the marriage of the Princess of Wales, and *The Enchanted Isle*, a ballet, were produced in 1863. His next work of importance was the masque *Kenilworth*, for the Birmingham Festival of 1864. In 1866 his *Symphony in E* and a *Violoncello Concerto* were produced at the Crystal Palace; and an overture, *In Memoriam*, dedicated to his father, at the Norwich Festival. *Cox and Box*, his first essay in comic dramatic music, was written in collaboration with F. C. Burnand in 1867, and in the same year the *Marmion* overture was written for and performed by the Philharmonic Society. *The Prodigal Son*, his first oratorio, was given at the Worcester Festival (1869); and his *Ouverture di Ballo* at Birmingham in 1870. For the opening of the International Exhibition of 1871 he wrote his cantata *On Shore and Sea* and a *Te Deum* on the recovery of the Prince of Wales in 1872. *The Light of the World* was written for the Birmingham Festival of 1873, *The Martyr of Antioch* for Leeds in 1880, and the cantata *The Golden Legend* for the Leeds Festival of 1886. It was in 1871 that Sullivan began, with *Thespis*, or the *Gods Grown Old*, his collaboration with Mr. W. S. Gilbert, which has resulted in a series of unique comic operas. [GILBERT.] Sullivan has also written numerous songs which are as well known as his operas—such as *Sweethearts*, *The Lost Chord*, and *The Distant Shore*. He was principal of the National Training School (1876 and 1881), and was knighted (1883) on the opening of the Royal College of Music, of the council of which he is a member. He was made Mus. Doc. Cambridge in 1876 and Oxford 1879.

Grove's Dictionary of Music.

***Sullivan, BARRY** (b. 1824), tragedian, was born in Birmingham, and made his first appearance on the stage at Cork in 1840. Having achieved a reputation in the provinces, he made his *début* in London, at the Haymarket, in *Hamlet* (1852). It was a fair success, but it was not until 1855, when, during a second engagement at the Haymarket, he played Claude Melnotte to Miss Faucit's Pauline, and Jacques to her Rosalind, that he was recognised as an artist of first-rate ability. He migrated in the same year to the Haymarket, to Sadler's Wells in 1857, and, after a visit to the United States, appeared at the St. James's Theatre in *Hamlet* (1860). From 1860 to 1866 he was in Australia, and on his return to England appeared at Drury Lane in two of his finest impersonations—Faustbridge, in *King John*, and Macbeth. Both performances were full of

originality. In 1868 he was manager of the Holborn Theatre, and then "starred" in England, the United States, Canada, and Australia. His engagements during this period in London were brief; his last appearance being in 1879 at Mr. Buckstone's benefit. In 1885 an apparently unfounded rumour was current that he proposed to stand for Parliament in the Home Rule interest.

***Sully, JAMES** (b. 1842), a native of Bridgewater, Somerset, was educated at the Independent College, Taunton. In 1868 he graduated M.A. at the London University, winning the gold medal in philosophy. In 1878 he was appointed examiner in mental and moral science at the London University, and in 1883 examiner at the University of Cambridge for the moral sciences tripos. In 1886 he received the degree of LL.D. from the University of St. Andrews. Mr. Sully published in 1874 *Sensation and Intuition*, in 1877 *Pessimism*, in 1880 *Illusions*, and in 1884 *Outlines of Psychology*. He is mainly attached to the small English school of psychology, and largely follows Professor Bain. He has also made an exhaustive study of the German psychologists, and especially those who have introduced the experimental study of the subject, and has embodied all their best results.

***Sully, JEAN MOUNET** (b. 1841), French tragedian, was born at Bergerac, in Dordogne, and resolved, despite the objections of his family, to embrace a theatrical career. In 1861 he entered the Conservatoire, and in 1868, having gained the first prize for tragedy, made a brilliant *début* at the Odéon. During the Franco-German War he was an officer in the Garde Mobile, but in 1872 he returned to the stage, and at the Théâtre Français gained a brilliant success in the rôle of Oreste. He was elected *sociétaire* in 1874. Among M. Mounet Sully's subsequent triumphs were Didier in *Marion Delorme* (1873), Gerald in *L'Étrangère* (1878), and his fine renderings of Victor Hugo's creations, notably Hernani (1878) and Ruy Blas, which were among the chief attractions during the visit of the company of the Théâtre Français to England in 1879. In October, 1886, M. Mounet Sully made a further advance in his art by his fine impersonation of the character of Hamlet in the adaptation of Dumas père and M. Paul Meurice.

Sulpice. [GAVARNI.]

Sumner, CHARLES (b. 1811, d. 1874), a native of Boston, graduated at Harvard in 1830, studied the law under Mr. Justice Story, and was called to the bar in 1834. He soon after spent three years in Europe, and returning to Boston in 1840 he resumed practice, and in 1845 produced a profound impression by his denunciation of war as a means of adjusting quarrels between nations, in a speech delivered at Boston on *The True Grandeur of Nations*. In 1860 he was elected a

senator, and became an ardent anti-slavery advocate. In 1856 he delivered his speech, *The Crime against Kansas*, which so enraged the Southern party that Preston S. Brooks, a Southern member of Congress, attacked him with a heavy cane in the Senate, and injured him so severely that he was disabled for three years. In 1859 he was re-elected to the Senate, and soon delivered his speech, *The Barbarism of Slavery*. From 1861 to 1871 he was chairman of the committee on foreign relations in the Senate. During the *Alabama* dispute with England he was a strong supporter of the United States claims. His speeches and writings, which are chiefly legal, have been collected, and are published in four volumes.

Sumner, THE MOST REV. JOHN BIRD, D.D. (b. 1780, d. 1862), Archbishop of Canterbury, was the eldest son of the Rev. Robert Sumner, sometime vicar of Kenilworth. He was educated at Eton, and at King's College, Cambridge, where he was a scholar and afterwards a fellow. He took his B.A. degree in 1802, was appointed assistant-master at Eton, and in 1803 took holy orders. In 1818 he became rector of Mapledurham, Oxfordshire. Sumner was already known as an author from his *Apostolical Preaching Considered in an Examination of St. Paul's Epistles* (1815); and a *Treatise on the Records of the Creation, and Moral Attributes of the Creator* (1816), which gained one of the Burnett prizes. *Evidences of Christianity derived from its Nature and Reception*, and other works, increased his literary reputation, and in 1828 he was made Bishop of Chester on the recommendation of the Duke of Wellington. Twenty years of earnest work followed, and in 1848 Dr. Sumner was created Archbishop of Canterbury on the recommendation of Lord John Russell. Under the influence of his just though conciliatory administration, the Church, which had so lately been agitated by the Tractarian movement, enjoyed a period of not unnecessary repose. His attitude during the "Papal aggression" panic was particularly moderate and dignified. His brother, the RIGHT REV. CHARLES RICHARD SUMNER (b. 1790, d. 1874), was from 1827 to 1869 Bishop of Winchester.

Sussex, H.R.H. AUGUSTUS FREDERICK, DUKE OF (b. 1773, d. 1843), sixth son of George the Third, studied at Göttingen, and visited Italy while still a minor, where he married Lady Augusta Murray, daughter of the Earl of Dunmore. The king, offended at this union, had it pronounced null and void; which, however, did not lead to the separation of the young pair. The duke was, moreover, inclined to favour the Whigs, which, with his marriage, succeeded in estranging him from his father. He was a patron of art, science, and literature, and collected a most extensive library.

Sweden and Norway were united under one rule in 1814. At the beginning of the century GUSTAVUS IV. (b. 1778, d. 1837), of the house of Vasa, was on the Swedish throne, having succeeded his father, GUSTAVUS III., in 1792, under the regency of his uncle, the Duke of Sudermania. Owing to the young king's rashness, which was probably that of one insane, Sweden was plunged ineffectively into European complications. French troops occupied Pomerania in 1807. A war with Russia, begun in 1808, terminated in the occupation of Finland. In 1809, accordingly, there was a revolution in favour of the Duke of Sudermania, and Gustavus, having abdicated, spent the remainder of his days in Germany under the name of Colonel Gustafson.

His uncle, who took the title of CHARLES XIII. (b. 1748, d. 1818), succeeded in concluding peace with Russia and France, but was old and without issue. Prince Christian of Holstein-Augustenberg was nominated his heir, but on the death of the latter in 1810 it became necessary to choose a fresh successor. Contrary to the wish of the king, the design was formed of offering the succession to the crown to Bernadotte, one of Napoleon's marshals, who was famed alike for his humanity and military skill. In 1810, accordingly, Bernadotte was elected crown-prince by the four orders, and the old king lived to see Sweden become an important monarchy through the genius of his adopted son. On the death of Charles XIII. Bernadotte was crowned under the title of Charles XIV.

CHARLES XIV., JEAN BAPTISTE JULES BERNADETTE (b. 1764, d. 1844), was the son of a lawyer of Pau. In his eighteenth year he entered the French army, and by the year 1794 had become general of division. He first met Napoleon before the Italian campaign, having brought up reinforcements from the army of the Sambre and Meuse. His suspicions of Bonaparte's designs caused him to accept from the directory the appointment of minister at Vienna, where he was in some danger through a mob-attack on his hotel. In 1798 he married Mlle. Clary, sister-in-law of Joseph Bonaparte. In 1799 he was for six months Minister of War, and in 1804, on the creation of the empire, became Marshal of France, and in 1806 Prince of Ponte-Corvo. Having gained a victory over the Prussians at Halle, he was in 1807 placed in the military command of the Hanse Towns and Northern Germany. Having acquired credit for moderation and humanity in the war between France and Sweden of 1807-8 he was offered the succession to the crown of Sweden in 1810, and accepted it against the wish of Napoleon. Bernadotte immediately went to Sweden, and was adopted by Charles XIII., under the name of Charles John, as heir to the throne. The refusal of Sweden to support the Continental system of the

exclusion of English merchandise soon produced a want of cordiality between the Crown Prince and Napoleon, and in 1812, Sweden consented at the conference of Åbo to join the European coalition, on the understanding that Denmark should be despoiled of Norway. His part in the campaign of 1813 was important. To him was entrusted the command of the army that defended Berlin, and he defeated Oudinot at Grossbeeren (August 23rd). Nevertheless, divided between the desire of obtaining Norway and the hope of being placed on the French throne, his subsequent action was lukewarm, and he lent tardy aid to Blücher at the battle of Leipzig. He took no part in the campaign of 1814; but returning home cleverly effected the annexation of Norway to Sweden. In 1818 he succeeded the old king, Charles XIII., and proved a most popular ruler. The prosperity of the country increased rapidly under his benevolent despotism, to which, however, in the last years of his reign an opposition began to arise, headed by the Crown Prince Oscar.

Toussard-Lafosse, *Hist. de Charles XIV.*; Héricourt, *Étude biog. sur Charles XIV.*; Sarrans, *Hist. de Bernadotte*; Geijer, *Konung Karls XIV. Johan Historia*.

OSCAR I. (b. 1799, d. 1859) succeeded his father in 1844. He had previously married Joséphine, the daughter of Eugène de Beauharnais. His reign was singularly peaceful and uneventful.

CHARLES XV. (b. 1826, d. 1872), succeeded his father on the death of the latter in 1859. A poet, brave and impulsive, he was much beloved by the nation, which in spite of the character of their monarch enjoyed peace under him, though there was much excitement during the Prusso-Danish War of 1865, and a strong desire to intervene on behalf of Denmark. His reign was marked by constitutional reform; in place of four orders of nobility, clergy, middle-class, and peasantry, two chambers, an upper and lower, were formed in 1864, and the suffrage was extended in 1869. King Charles was much opposed to capital punishment. He married Princess Louisa of Orange in 1850, but had no male issue.

* OSCAR II. (b. Jan. 21st, 1829), his brother, accordingly succeeded him, having previously served in the navy. He had married the Princess Sophia of Orange-Nassau in 1857, and his heir, Prince Gustavus, was born in the following year. King Oscar was crowned in 1873, and at once set to work to develop the Swedish mercantile navy. His reign, despite occasional discontent in Norway, has been most prosperous. He visited Denmark and Germany in 1880, and England in 1881. King Oscar inherits the poetic gifts of his family, and has translated Herder's *Cid*, Goethe's *Faust* and Tasso into Swedish, besides publishing several volumes of original verse. His interesting monograph on *Charles XII.* was translated into English in 1879.

* SWINBURNE, ALGERNON CHARLES (b. 1837), poet and essayist, son of the late Admiral Charles Henry Swinburne and his wife Lady Jane Henrietta, daughter of George, 3rd Earl of Ashburnham, was born in Pimlico, and in 1857 entered as a commoner at Balliol College, Oxford. Although he passed from the University without taking a degree, he was one of a small band of youths (all more or less distinguished since) who wrote, and under the editorship of Mr. John Nichol (author of *Hannibal*) published a periodical entitled *Undergraduate Papers*. In 1860 he published two plays, *The Queen-Mother* and *Rosamond*, which, though immature in many respects, are distinctly remarkable, and might reasonably have attracted more attention than they did. Between the issue of this first volume and that of the next, he contributed a little verse and prose to *The Spectator* and *Once-a-Week*, and (in 1864) issued some verses in a tale from another hand, called *The Children of the Chapel*. In 1865 he made his mark once for all by publishing *Atalanta in Calydon*, a tragedy on the Greek model, showing great creative power, high scholarship, and lyric qualities of a wholly individual kind. This was followed in the same year by *Chastelard*, a tragedy dealing with an episode in the life of Mary Queen of Scots. In 1866 appeared a *Selection from the Poetry of Byron*, edited and prefaced by Mr. Swinburne; and in the summer of the same year came out the volume of *Poems and Ballads*, which was at once withdrawn from circulation by the firm of Moxon. The severe handling which this volume received drew from the young poet a bitter retort, entitled *Notes on Poems and Reviews* (1866). Mr. Swinburne next became a contributor to *The Fortnightly Review* and other magazines, and in 1867 published *A Song of Italy*. His next volume was in prose, *William Blake, a Critical Essay*. This was a real contribution towards the knowledge and understanding of the extraordinary poet, painter, and prophet whose name it bears. In the same year appeared a poetical pamphlet entitled *Siena*, and a prose pamphlet, *Notes on the Royal Academy Exhibition, 1868*, written in conjunction with Mr. W. M. Rossetti. *Christabel and the Lyrical and Imaginative Poems of S. T. Coleridge*, arranged and introduced by Mr. Swinburne, was published in 1869; and by this time his powers as a critic had become truly noteworthy. Among his periodical papers should be specially commended those on designs by old masters at Florence, on the text of Shelley, on Victor Hugo's *L'Homme qui Rit*, and on the poems of D. G. Rossetti. In 1870 he published, as a pamphlet, his *Ode on the Proclamation of the French Republic, September 4th, 1870*, one of the noblest odes (properly so called) in our tongue; and in the following year he marked another step upwards in issuing *Songs before Sunrise*, a book full of republican optimism, but instinct with

true lyric fervour and very high qualities of style, imagery, rhetoric and metrification. It was in this same year that he published in a "holiday book" called *Pleasure* the sumptuous prelude to the then unfinished poem, *Tristram of Lyonesse*, and printed in *The Fortnightly* an admirable criticism of John Ford. In 1872, in the same review, appeared his essay on *L'Année Terrible*; and in the form of a pamphlet, entitled *Under the Microscope*, he published a scathing retort on Mr. Robert Buchanan, who had been attacking the so-called "Fleshly School." A series of political sonnets called *Diræ* found place among his next fugitive writings, and appeared in *The Examiner* (1873); and in 1874 he published *Bothwell, a Tragedy*, a volume dealing with another episode in Mary Stuart's career. In this book Mr. Swinburne, though his vigour as a dramatic poet remained undiminished, let language and metre get the better of him, and carry him beyond the limits reasonable for a tragedy. His next work, *George Chapman, a Critical Essay* (1875), perhaps reaches his highest point in prose writing; and in the same year he issued an excellent essay on Charles Wells, afterwards published as an introduction to Mr. Buxton Forman's edition of that author's dramatic poem, *Joseph and his Brethren*. His *Essays and Studies* were issued in a collected form in 1876, as were also some previously published poems, under the new title of *Songs of Two Nations*. From about the same time, Mr. Swinburne made important contributions to the *Encyclopædia Britannica*—articles on poets and men of letters. A second tragedy on the Greek model, *Erechtheus*, came out in 1876, and showed in some matters an increase of power. In the same year a political pamphlet was added to the poet's published works—*Note of an English Republican on the Muscovite Crusade*. In 1877 came out, in a magazine, another instalment of *Tristram*, under the separate title of *The Sailing of the Swallow*, and a new critical volume, entitled *A Note on Charlotte Brontë*, as well as *A Year's Letters by Mrs. Horace Mannors*, in *The Tatler*, an early story in a defunct newspaper. The Brontë book has much good criticism in it, but the style is inferior to that of the *Essays and Studies*. In 1878 Mr. Swinburne published a "second series" of *Poems and Ballads*, a collection bringing together a number of his fugitive poems. This was followed, at a longer interval than usual, by *A Study of Shakespeare, Songs of the Spring-Tides*, and *Studies in Song*, all of which belong to the year 1880, besides an anonymous volume of parodies, entitled *Specimens of Modern Poets: The Heptalogia, or the Seven against Sene; a Cap with Seven Bells*. In this book the author had imitated himself as well as the Laureate, Mr. Browning, and others; but this device did not avail to conceal the parentage. In the following year (1881) Mr. Swinburne completed the trilogy of the Scot-

tish queen, by the publication of *Mary Stuart, a Tragedy*, and issued a further parody of Lord Tennyson; and in 1882 came out the long-expected *Tristram of Lyonesse*, with other poems. *Tristram* consists of nine cantos, with a prelude, and embodies some of Mr. Swinburne's most luxuriant poetical work, without being a great poem. A choice volume followed it in 1883, *A Century of Roundels*, a hundred short poems, displaying vast ingenuity and wonderful ease in dealing with that difficult exotic form usually known as the rondel. To this year also belongs another of Mr. Swinburne's contributions to Shelleyan criticism, a preface written in French to a translation in that language of Shelley's tragedy, *The Cenci*. In 1884 appeared *A Midsummer Holiday, and other Poems*; and in 1885 *Marino Faliero*, a tragedy, in which Mr. Swinburne almost succeeds where Byron had almost failed before him. In 1886 he published *A Study of Victor Hugo*, and, under the title of *Miscellanies*, a second collection of his best essays and criticisms. The two volumes last named are among the weightiest and most instructive of his prose works—the former, taken together with his other essays on Victor Hugo, being by far the most valuable of extant expositions of the great French poet, dramatist, and romancist. The salient qualities of Mr. Swinburne's works, in verse as in prose, are intense enthusiasm of advocacy or attack, impulsiveness in the widest and highest sense, an absolute need to sing or declaim, as if singing and declaiming were a part of his inmost nature, a generous catholicity of praise for whatever may be good, a most unworlly hatred of all that is mean, sordid, or stupid, and an entire absence (perhaps an utter scorn) of reticence or reserve. The width and variety of his reading, and the range of his subjects, political, literary, social, and artistic, are astonishing, and serve more than aught else to mark his maturity. To his reliash for the "delight of battle" the world is greatly beholden. Setting aside the individual lyric loveliness of much that he has been impelled to sing, there is a great mass of good things which he has been impelled to say. His criticisms usually go to the heart or the root of the matter; and, though he deals out superlatives with lavish affluence, a careful reader will find variety in these, and sound reasons for the critic's awards and condemnations. He has availed to enrich English prose with much enduring work, and to develop English prosody with a very strong hand. With his great classical learning he has brought to the treatment of modern themes a vast store of the world's best lore; and he has contributed to English song poems that are more essentially modern than anything in the contemporary poetry of this land.

H. Buxton Forman, *Our Living Poets, an Essay in Criticism; The Bibliography of Swinburne*.

***Sybel**, HEINRICH VON (b. 1817), historian, a native of Düsseldorf, studied at Berlin under Ranke, took his degree at Bonn, where he was elected professor in 1844. In 1845 he accepted a professorship at Marburg. In 1856 Maximilian II. gave him a Chair at Munich, where he became a member of the Academy, and in 1858 secretary to the Historical Commission. He returned to Bonn as professor in 1861, and the university elected him deputy to the Prussian Landtag. Here from 1862-4 he opposed Bismarck's Polish policy, and in 1867 was returned as a National Liberal to the Constituent Assembly of the Confederation of North Germany. He was first returned to the Imperial Parliament in 1874, was nominated director of the State Archives, and member of the Berlin Academy in 1875. Of his historical works, the best known in England is the *History of the Revolution from 1789 to 1795* (1853-7), of which the *History of the Revolution from 1795 to 1800* (1872-4) is a continuation. This work has been translated into English, and contains the result of careful investigation, combined with a brilliant and imposing style. He has also written a *History of the First Crusade* (1841), *The Origin of the German Monarchy* (1844), *The German Nation and the Empire* (1860), *The Rise of Europe against Napoleon I.* (1860), besides numerous smaller works. In 1878 he undertook the publication of the documents of the State Archives, to be completed in 70 vols.

Syme, JAMES (b. 1799, d. 1870), surgeon, in 1817 studied anatomy at Edinburgh University under Dr. Barclay, and subsequently under Liston. In 1821 becoming M.R.C.S. of London, he was appointed house-surgeon to the Edinburgh Infirmary, and in 1823 began to lecture on anatomy and surgery. A quarrel with Liston brought his connection with the Royal Infirmary to an end, and so he made Minto House into a hospital, and began to lecture there. In 1833 he obtained the professorship of clinical surgery in the University of Edinburgh. In 1847 he accepted the same professorship in University College, London; he soon, however, returned to his former Chair in Edinburgh, and continued to hold it until 1869. The chief advances due to him in surgery are: excision of a diseased joint (it was formerly the custom in such cases to amputate the limb), amputation of the foot at the ankle-joint (an operation for aneurism), and the explanation of bone formation from the periosteum. Among his writings are:—*A Treatise on the Excision of Diseased Joints*, *Principles of Surgery*, and *Diseases of the Rectum* (1832).

Paterson, *Memorial of J. Syme* (1874).

***Symonds**, JOHN ADDINGTON (b. 1840), man of letters, was educated at Harrow School, and at Balliol College, Oxford, where

he obtained the Newdigate, and a first-class in classics (1862). He was elected to a fellowship at Magdalen in 1872, and won the English essay prize in 1873. The *magnum opus* of Mr. Symonds is his *Renaissance in Italy* (6 vols., 1875-86), a singularly attractive study of a singularly attractive subject. He has also written an *Introduction to the Study of Dante* (1873); *Studies of the Greek Poets*, 2 series (1873-6); *Sketches in Italy and Greece* (1874); *Sketches and Studies in Italy* (1879); *Italian Byways* (1883); *Shakespeare's Predecessors in the English Drama* (1884), and *Shelley in the English Men of Letters Series*. His poetical works include *The Sonnets of Michael Angelo Buonarroti and Campanella translated* (1878); two collections of sonnets, *Animi Figura* (1882) and *Vagabunduli Libellus* (1884), and *Win, Women, and Song* (1884).

T

***Taafe**, EDUARD, COUNT (b. 1833), Austrian statesman, the descendant of an Irish family, was educated with the Emperor Francis Joseph, and having entered the royal service in 1857 as Secretary of the Hungarian Government, administered the Duchy of Salzburg and Upper Austria from 1863-7. He then became Minister of the Interior, and from April, 1869, to January, 1870, was Minister of War and President of the Council (Prime Minister). After being Minister of War and of the Interior in the Potocki Cabinet, he became Governor of the Tyrol in 1871. Count Taafe succeeded Count Auersperg as President of the Council and Minister of the Interior in 1879, and has since shown great ability in mediating between conflicting creeds and nationalities. Although adopting as a rule in foreign affairs a very pacific tone, he made in Oct., 1886, an important declaration in favour of the maintenance of the Treaty of Berlin, which was a bold retort to the threatened occupation of Bulgaria by Russia.

Tadema, LAWRENCE ALMA. [ALMA-TADEMA.]

Taglioni, MARIA (b. 1804, d. 1884), danseuse, born at Stockholm, was the daughter of an Italian ballet-master. Taught by her father, she made a successful first appearance at Vienna in 1822. In 1827 she made her *début* in Paris in the *Sicilian*, and at once acquired the reputation of being among the foremost of ballet-dancers. The French capital was her head-quarters until 1832. A similar success attended her performances in the other Continental capitals; and in London as well, where she appeared in 1838. She composed, in concert with St. Georges and Offenbach, for her friend Emma Livory, the ballet of the *Papillon*. She married Count Gilbert de Voisins in 1832, and in 1847 retired

from the stage. She had amassed a considerable fortune, which, however, she lost in consequence of the Franco-German War. She thereupon withdrew to London, where she gave lessons in dancing and deportment to young ladies.

Reminiscences of Tagliani, published in *The Times*, April 29th, 1884.

* **Taine**, HIPPOLYTE ADOLPHE, D.C.L. (b. 1828), the brilliant French writer, was educated at the Collège Bourbon (now the Condorcet Lyceum), and the École Normale. His great aptitude for study and originality of thought early made itself remarkable; but the independent spirit fostered by the system of education in vogue at the École Normale brought him into conflict with the authorities. After the Clerical reaction under the Second Empire, having previously held several inferior posts at Toulon, Nevers, and Poitiers, he withdrew altogether from both Government and private educational work, and devoted himself to literature. In 1853 he took the degree of Doctor of Letters, and his brilliant paradoxical style and new theory of criticism as an exact science were already manifested in one of the theses written for this occasion, and published in book form as *La Fontaine and his Fables* (1853). In 1854 he competed for and won the prize offered by the Academy for an essay on *Livy*, which was followed by a constant succession of works from his pen, never lacking in boldness, vivacity, and originality. Among them were:—*Critical and Historical Essays* (1858), *New Critical and Historical Essays* (1865), *The French Philosophers of the Nineteenth Century* (1857). Subsequently, in 1861, he came to England to study at the British Museum, and in 1863 appeared the first three volumes of his *History of English Literature*, applying to literature generally the tests formerly applied to the individual, and examining what he felt to be the three great factors in its production, i.e., the race of the people, their social conditions, the tendencies of the time of production. It was proposed for the Academy prize, but rejected on the motion of Dupanloup, the Bishop of Orleans, by reason of the alleged heresy and fatalism of the author. In this year, however, Taine was appointed examiner in literature at St. Cyr, and in 1864 professor at the School of Fine Arts in Paris. This office gave rise to his *Philosophy of Art* (1865), *Philosophy of Art in Italy* (1866), *The Ideal in Art* (1867), *The Philosophy of Art in the Netherlands* (1868), and in *Greece* (1869). In 1871 Oxford conferred on him the degree of Doctor of Civil Law, and in 1878 he was at length admitted to the French Academy. His latest and most considerable work is *The Origin of Contemporary France*, of which the first section, *L'Ancien Régime*, appeared in 1876, the three parts of the second section, dealing with the Revolution itself, in 1878, 1882, and 1886.

M.W.—31*

A third section, *Post-Revolutionary France*, is promised. Besides the above-mentioned works, M. Taine has published *Travels in the Pyrenees* (1855), *English Positivism* (a study on J. S. Mill) (1864), *On Intelligence* (1870), and *Notes on England* (1872).

Leopold Katscher, in the *Nineteenth Century*, July, 1886; biographical sketch by W. Fraser prefixed to his translation of *Notes on England* (1872).

Tait, THE MOST REVEREND ARCHIBALD CAMPBELL, Archbishop of Canterbury (b. 1811, d. Dec. 3rd, 1882), son of Mr. Crawford Tait and of Susan, fourth daughter of Sir Islay Campbell, was born in Edinburgh, and was of Presbyterian descent. He was educated at the Edinburgh Academy and the University of Glasgow. In 1830 he obtained the Snell exhibition, with which he went to Balliol College, Oxford. Asked by Dr. Jenkyns, at that time master of the college, what he had come to Oxford for, young Tait replied, "To improve myself, sir, and to make friends." At Balliol he was elected to an open scholarship, and in 1833 graduated B.A. He then received a fellowship at his college, became tutor and dean, and in 1836 took his M.A. In 1841, when he had become senior tutor of Balliol, Tait's name came before the world as one of the "Four Tutors," who united in publicly protesting against the construction put upon the Thirty-nine Articles by John Henry Newman (q.v.) in *Tract for the Times* No. 90—the publication of which tract marked the culminating point of the Oxford Movement. The next event in Mr. Tait's life was in 1842, when he received the head-mastership of Rugby School, rendered vacant by the death of Dr. Arnold. Shortly after this, Dr. Tait became engaged to Miss Catherine Spooner, daughter of Archdeacon Spooner, Vicar of Elmdon, the marriage taking place in 1843. At Rugby Dr. Tait continued to work so hard as to permanently affect his health, and when the Government of Lord John Russell offered him the Deanery of Carlisle, he was no doubt influenced in accepting it by the prospect of at least the relief that comes from change. During his six years as Dean of Carlisle he had to bear the grief of losing five members of his family, young children, from scarlet fever. His next step was in 1856, when he was appointed Dr. Bloomfield's successor as Bishop of London. Dr. Tait now threw himself vigorously into the labours of his new field, and in a few years was able to raise nearly £350,000 for the building of churches, schools, and parsonages in the poorer districts of London; he also increased the clergymen in his diocese. In 1862 he was offered the Archbishopric of York, which he declined. Then, in 1868, came the offer and acceptance of the Archbishopric of Canterbury. During his tenure of this high office Dr. Tait had to give counsel in the matter of disestablishing the Irish Church;

he had also to grapple with difficulties connected with the ultra-ritualistic section of the Church, and the Public Worship Regulation Act of 1874 received his entire sanction. He also took a keen interest in University Reform. The best known of his works is *The Dangers and Safeguards of Modern Theology* (1861); in it he enforces the Christian virtue of tolerance, especially in controversy. Others are:—*The Word of God and the Ground of Faith* (1863), *Charge to the Clergy* (1866), *Some Thoughts on the Duties of the Church of England* (1876). He also published two volumes of sermons, and contributed articles on education and kindred topics to periodical literature. Without being an exceptionally brilliant man, he was thoroughly equal to the duties of his high office, hardly ever making a false step, and yet knowing when it was necessary to be firm. [W. B. R.]

* **Tait, PETER GUTHRIE** (b. 1831), man of science, was born at Dalkeith, and educated at the Edinburgh Academy, Edinburgh University, and St. Peter's College, Cambridge, where he took his degree in 1852 as senior wrangler and Smith's prizeman. He became a fellow of his college; professor of mathematics at Queen's College, Belfast, in 1854; and professor of natural philosophy at Edinburgh University in 1860. Professor Tait is one of the greatest living authorities on natural philosophy, and his works embrace a very wide range of research. In conjunction with W. J. Steele, he wrote the *Dynamics of a Particle* (1856), and with Sir William Thomson, vol. i. of *A Treatise on Natural Philosophy* (1867), of which a second edition appeared in 1879. His *Elementary Treatise on Quaternions* appeared in 1866; his sketch of *Thermodynamics* in 1868; some popular *Lectures on some Advances in Physical Science* in 1876; *Heat* in 1884; *Light* in 1884; and *Properties of Matter* in 1885. Together with Shairp, he edited the *Life and Letters of J. D. Forbes*, and wrote, in conjunction with Balfour Stewart, two remarkable works on the possibility of reconciling science and religion, *The Unseen Universe* (1874) and *The Paradisaical Philosophy* (1878).

Talbot, WILLIAM HENRY FOX, F.R.S. (b. 1800, d. 1877), the rival of Daguerre, was of the Shrewsbury family, and educated at Harrow, and at Trinity College, Cambridge. In the Reformed Parliament he sat for Chippenham, but subsequently devoted himself to scientific research. Independently of Daguerre, and in ignorance of his labours, Mr. Talbot set himself to discover the art of fixing images formed in the *camera lucida*, and just managed to forestall him by sending a paper, on the *Art of Photogenic Drawing*, to the Royal Society (*Philological Magazine*, March, 1839). His *Pencil of Nature* (1844) relates his successive discoveries up to that date; but he subsequently advanced, about 1844, to the

instantaneous process, and in 1858 to polyglyptic engraving. He was elected F.R.S. in 1842. Mr. Talbot's later researches embraced general science, etymology, and cuneiform inscriptions, and he was vice-president of the Royal Society of Literature.

Talfourd, SIR THOMAS NOON (b. 1796, d. 1854), man of letters, was the son of a brewer at Reading, and was educated at the grammar school of that town. Called to the bar at the Middle Temple in 1821, he went the Western Circuit, and acted as law reporter to the *Times*. In 1833 he was made serjeant-at-law, and after being Recorder of Banbury became judge of Common Pleas in 1849. Talfourd represented Reading in the Whig interest from 1835-41, and again from 1847-9, and was the author of the important Copyright Act of 1842. His tragedy, *Ion*, at first printed for private circulation, was produced by Macready at Covent Garden with great success in 1836, and was followed by the admirable *Glencoe* and the *Athenian Captive*, produced at the Haymarket in 1838. Talfourd also wrote the well-known *Memoirs and Correspondence* (1837) and *Final Memoirs* (1848) of his friend Charles Lamb, and accounts of some vacation rambles. He was struck by a fatal fit of apoplexy while addressing the grand jury at the Stafford Assizes.

Talleyrand-Périgord, CHARLES MAURICE DE (b. Jan. 13th, 1764; d. May 20th, 1838), French diplomatist, was born at Paris, and descended from one of the most illustrious families of France. While still a child, Talleyrand met with an accident that lamed him for life, and deprived him of his birthright; for on the death of his father, the Comte de Talleyrand, his younger brother succeeded to the title, the reason alleged being that he was not a cripple. He was educated for the priesthood at the Collège d'Harcourt at St. Sulpice, and at the Sorbonne. By the time he was twenty years of age he had shown himself to be endowed with such power that his family began to acknowledge him, and, on the coronation of Louis XVI., in 1774, introduced him to society as the Abbé de Périgord. In 1780 he was appointed general agent for the clergy of France, an office that he held for eight years, becoming in 1788 Bishop of Autun. He was appointed by the clergy of his diocese deputy to the States-General in 1789, and in that capacity advocated the abolition of tithes and the transference of Church lands to the State. Such measures made him popular, and he was chosen, with others, to draw up the Constitution of 1790. At the same time he resigned his bishopric. Meanwhile he had shared in important projects, amongst them the introducing of a uniform system of weights and measures, the organisation of a financial system, the re-arranging of the national territory into districts better adapted for government purposes than the

old provinces, and the drawing up of a report upon public instruction that served as a model for future changes in French education. In 1792 Talleyrand was sent by the Republican party to England as a member of the embassy, where he remained until 1794, when, having previously been proscribed for supposed Royalist intrigues, he was obliged to leave by the "Alien Bill," and sailed for the United States. In 1796 he returned to Paris, and in the following year was appointed Minister of Foreign Affairs. Dismissed by the Directory in 1799, he sought the friendship of Bonaparte, devoted himself to Napoleon, and supported him on the 18th Brumaire. For the next seven years he was the executant of Napoleon's diplomatic schemes, particularly the treaties that followed the victories of the Consulate. The Peace of Amiens was also his work, and so, too, was the brutally unprincipled seizure of the Duc d'Enghien, by which Europe was again compelled to prepare for war (1804). Talleyrand was actively employed in preparing Paris for the creation of the Empire; and when the European coalition of 1805 was formed, he prevented Prussia from taking the field until after the defeat of Austria at Austerlitz, by detaining the ambassador, Haugwitz, at Vienna. The establishment of the Rhenish Confederacy of 1806 was also due to his manipulation, and he received as his reward the title of Prince of Benevento. But a barrier was growing up between Talleyrand and Napoleon; they differed on the policy of the annexation of Spain, and when, in 1808, French affairs in that country took an evil turn, the rupture between the two became complete. During the remainder of the Empire, Talleyrand was actively engaged in Royalist intrigues. He dictated to the Senate the terms of Napoleon's deposition, and on the first restoration of the Bourbons, he became Minister of Foreign Affairs and representative of France at the Congress of Vienna. He returned to France after the battle of Waterloo, and became again Minister of Foreign Affairs, with Fouché for a colleague. Unable, however, to obtain what he considered honourable terms from the Congress of Vienna, and alarmed at the Royalist reaction, he resigned on Sept. 28th. During the remainder of the rule of the elder Bourbon line, Talleyrand had great influence as the oracle to which the younger generation, led by Thiers and Guizot, repaired for advice and guidance. From 1830 to 1835 he was French minister in London, where he was extremely popular, and worked zealously for the maintenance of the *entente cordiale*. The rest of his life was spent in retirement, and he left behind him some memoirs as yet unpublished. Talleyrand had all the qualities that contribute to success in diplomacy — unscrupulousness, versatility, audacity, and wit. It is probable, however, that he never uttered half

the good things that are usually attributed to him.

Salle, Vie Politique du Prince de Talleyrand; T. Lafosse, Histoire Politique et Vie Intime de Talleyrand; Pichot, Souvenirs Intimes du Prince de Talleyrand; Lord Dalling, Historical Characters; The Mémoires of Lamartine and Guizot.

Talma, FRANÇOIS JOSEPH (b. 1763, d. 1826), French tragedian, was the son of a Parisian dentist, and made his *début* as an actor at the Comédie Française. His first triumph was gained in Chenier's *Charles IX.* (1789), and in 1791 he founded the opposition Théâtre Français at the Palais Royal. His splendid creations of Othello, and of Egisthe in the *Agamemnon*, placed him at the head of his profession during the time of the Republic, and he was highly regarded by Napoleon and Louis XVIII. In 1817 he played to enthusiastic London audiences for a brief season. He confined himself to tragedy in his later years, although by no means destitute of comic powers, and he was unequalled for his combination of force with dignity. Among his finest impersonations were Mauguy in *Les Templiers* (1805), Sylla (1821), Oreste in *Soumet's Clytemnestre* (1822), and Charles IX. (1826).

Mme. Talma, Etudes Théâtrales; and memoirs of Talma by Tissot, Duval, Moreau, Langier, Lemercier, and Alexandre Dumas.

Tamburini, ANTONIO (b. 1800, d. 1876), baritone, the son of a bandmaster, was born in Faenza. Being delicate, young Tamburini studied the science of music and singing, and when he was twelve years old he sang in the choruses of the operas given during the fair at Faenza. At this early period, too, he was impressed by the two great tenors David and Donizelli, the contralto Signora Pisaroni, and the soprano Signora Mombelli. Running away from home in 1818, he appeared on the lyric stage in Generali's opera, *La Contessa di Col-Erbo*: this was at a small town named Cento, where he made a great impression. After this he performed at Bologna, making a decided hit in *La Cenerentola* and *Italiani in Algeri* of Rossini. Thereafter he continued to sing in various Continental towns, among them Venice, where Rossini heard him. At Rome he sang with Madame de Meric-Lalande and David in Rossini's *Mosè in Egitto*. In 1832 he went to Paris, and appeared as Dandini in *La Cenerentola* at the Italian Opera House. In the same year he came to London, and between these two cities, London and Paris, the remainder of his professional career was divided. Tamburini was the last survivor of the famous quartet, including besides himself Grisi, Rubini, and Lablache, for which Bellini wrote *I Puritani*. His wife was at one time a prima donna, and one of his daughters married the tenor Signor Gardoni. Of Tamburini the *Athenæum* says:—"He was most careful and conscientious in the exercise

of his vocation—a truly honourable and estimable man, as well as a consummate artist.”

Athenæum, 1876.

Tann, LUDWIG, BARON VON DER (b. 1815, d. 1881), Bavarian soldier, was educated at Munich, and entered the Bavarian army in 1833. His rise was rapid, and in 1848 he rendered distinguished service in the Schleswig-Holstein campaign against the Danes. In 1860 he was made lieutenant-general, and placed at the head of a division. In the Austrian and Prussian War of 1866 he was chief of the staff to Prince Charles of Bavaria, commander-in-chief of the South German contingent; and, in spite of the ill-success of the Bavarian operations during that campaign, was made commandant-general of Munich in 1869. On the outbreak of the Franco-German war, Von der Tann commanded the 1st Bavarian Corps in the 3rd Army, commanded by the Crown Prince of Prussia. He defeated General de Failly at Beaumont on Aug. 30th, 1870, and on Sept. 1st began the great struggle of Sedan by taking the village of Bazeilles. Detached from the investment of Paris to command the forces on the Loire, he occupied Orleans, but was forced to retreat from thence by General d'Aurelle, and then served under Prince Frederick Charles in the operations against Chanzu. On his return to Bavaria he commanded for some years the 1st Army Corps.

Tantia Topee (b. circa 1819, d. 1859), the lieutenant of Nana Sahib (q.v.) in the Indian Mutiny, is said to have been a relation of his master. He first comes prominently forward as the superintendent of the massacre of the Cawnpore garrison on the Ganges, and commanded at the battle of Bithoor against Havelock after Cawnpore had been reoccupied. While Lucknow was being relieved, he made several vigorous attacks on the garrison at Cawnpore, and kept up the struggle for several months, in conjunction with the Rhanee of Jhansee after the flight of Nana Sahib into Nepal. Their great coup was the seizure of the fortress of Gwalior from the Maharajah Sindhia; but Tantia's courage, unlike that of the warrior queen, failed him at the pinch, and he fled. Nevertheless, by a succession of rapid marches, he kept the field, and it was not until April, 1859, that he was caught. The rebel was tried and executed.

Taunton, THE RIGHT HON. HENRY LABOUCHERE, BARON (b. 1798, d. 1869), was the son of a rich London banker, and graduated at Oxford in 1820. The next few years he spent in travel, chiefly in North America. On his return to England he was elected M.P. for St. Michaels, in the Liberal interest, and in 1830 he was returned for Taunton, a constituency he continued to represent for thirty years. Mr. Labouchere was a prominent man amongst the junior Liberals of

his day; and held various minor offices in Liberal administrations. In 1846 he was President of the Board of Trade, and again in 1855, and in 1858 he became Secretary of State for the Colonies. In 1859 he was created a peer, with the title of Baron Taunton.

Times, July 14th, 1869.

***Taylor**, GENERAL SIR ALEXANDER, K.C.B. (b. 1826), the son of William Taylor, of Dublin, was educated at Addiscombe, and entered the Bengal Engineers in 1843. He served in the Sutlej campaign of 1846 and in the Punjaub campaign of 1848-9. In 1847 he was promoted to the rank of captain, and directed the engineers at the siege of Delhi. The plan of operations was entirely his, and it was by his rare energy and skill that the capture of the place was eventually accomplished. [SIR A. WILSON.] He received the thanks of the Governor-General of India. Taylor became a lieutenant-colonel in 1858, and colonel in 1864. His last active service was in 1864, when he commanded the Royal Engineers in the Umbayla campaign. He was promoted lieutenant-general in 1877, when he became a K.C.B., general in 1878, and is president of the Royal Engineering College, Cooper's Hill.

Taylor, BAYARD (b. 1825, d. 1878), American man of letters, was a native of Chester County, Pennsylvania, and the son of a farmer. He received a common-school education, and in 1842 became apprentice in a printing office in West Chester. He began to contribute to the magazines, and with the money thus earned made a trip to Europe. The exceedingly popular *Views Afoot, or Europe Seen with Knapsack and Staff* (1846), was the result; and gained him a position on the staff of the *Tribune*, in the pages of which many of his subsequent works of travel first appeared. *El Dorado, or Adventures in the Path of Empire*—i.e., California, Panama, and Mexico—was published in 1850, and *A Journey to Central Africa*, during which he ascended the Nile to lat. 12° 30' N., in 1854, and *The Land of the Saracens* in the same year. Other expeditions are recorded in *A Visit to India, China, and Japan* (1855), *Northern Travel* (1858), and *Travels in Greece and Russia, with an Excursion to Crete* (1859). Meanwhile Mr. Taylor had also been publishing numerous volumes of genuine if not particularly inspired poetry—*Rhymes of Travel* (1848), *A Book of Romances, Lyrics, and Songs* (1851), and *Poems and Ballads* (1854); also some stories of American life, among which were *Hannah Thurston* (1863), and *The Story of Kennett* (1866). Bayard Taylor received in due course the diplomatic appointment which sooner or later falls to a distinguished American author. He was Secretary of Legation at St. Petersburg from 1862-3, and part of the time *chargé d'affaires*. In 1870-1 appeared the work by which his name is now chiefly remembered,

the bold and scholarly translation in the original metres of Goethe's *Faust, Parts 1 and 2*. In 1874 he revisited Egypt, and attended the millennial celebration of the settlement of Iceland (*Egypt and Iceland in 1874*). *The Mosque of the Gods* was published in 1872; *Lars, a Pastoral of Norway*, in 1873; *The Prophet, a Tragedy*, in 1874. In 1876 he composed the *National Ode* which was read at Philadelphia at the Centennial Festival. In 1878 Mr. Taylor was appointed United States Minister at Berlin, and was at his post when he died. Several uniform editions of his numerous works, of which the last was *Prince Deukalion* (1878), have been published. Although not a poet in the highest sense of the word, Bayard Taylor's place among the lyricists of our time is unquestionably a high one.

Life and Letters of Bayard Taylor, edited by M. Hansen-Taylor and H. E. Scudder (1884.)

Taylor, Sir Henry, C.M.G. (b. 1800, d. 1886), poet, essayist, and Civil Servant, was a native of Bishop-Middleham, in Durham. He was educated at home by his father, Mr. George Taylor, a gentleman farmer, who, finding him an unprofitable pupil, indulged a fancy the boy had to go to sea. In 1814 Taylor went as a midshipman on board H.M.S. *Elephant*, and afterwards made a voyage to Quebec on board another ship. In less than a year he returned home and resumed his education without much assistance; and at sixteen he was appointed a clerk in the Store-Keeper-General's Office. In 1820 he went to Barbados in connection with this employment, which he lost in a few months by the absorption of the office into other departments of the service. He returned to his father's residence, Witton Hall, and pursued literary studies, produced a good deal of poetry, and at twenty-two found himself a full-fledged professional critic—the mighty Gifford having accepted, paid for, and published in the *Quarterly Review* a lively article by Taylor on Moore's *Irish Melodies*. It was probably about this time that he wrote a drama on the subject of King Philip II., which remained in manuscript until he destroyed it in later life with other early writings. In 1823 he became acquainted with Southey, who greatly impressed and influenced him; and in the same year he went to London to seek his fortunes in the world of letters, undertook the editorship of the *London Magazine*, but relinquished it after a short time and re-entered the service of the State as a clerk in the Colonial Office. For the next eight-and-forty years Taylor's time was divided between Colonial administration and literature. He entered upon his new duties at a time when the momentous question of abolishing slavery in the British dominions was rendering the duties of the Colonial Office peculiarly arduous, though peculiarly interesting. In the

settlement of this question he took for years an important part. Meanwhile, he continued his connection with the *Quarterly Review*, and wrote his first tragedy, *Isaac Commens*, a work of great vigour and originality, which appeared anonymously in 1827, and which Southey reviewed favourably in the *Quarterly*. It was Southey who suggested the subject of Taylor's masterpiece, *Philip van Artevelde*, begun in 1828, but not completed and published till 1834, owing to the absorbing nature of Colonial Office occupations at that time. This work at once established its author in a prominent literary position, and gave him the *entrée* into the highest social and literary circles. In 1836 he published, under the title of *The Statesman*, a prose volume containing "commentaries on official life and the ways in which men may best be managed and administrative business be conducted." It contains a good deal of practical wisdom, and some caustic satire which was wholly misunderstood. In 1838 he had been projecting a drama on the subject of Thomas A'Becket, which he relinquished in favour of *Edwin the Fair*. In the following year he married Miss Alice Spring Rice, daughter of Lord Monteagle; and in 1840 he published a Digest of the despatches of Charles Elliot, then Minister in China, with Comments and a Summary. In 1842 *Edwin the Fair*, at length completed, was published; and shortly after this event Taylor's health broke down, and he passed the winter of 1843-4 in Italy, relieved for a time from official cares. A small volume of lyrical poetry (*Poems*) was issued in 1845, and two years later came out *The Eve of the Conquest, and other Poems* (some reprinted from the previous volume). His *Notes from Life, in Six Essays*, also appeared in 1847; and in the same year he was offered, and declined, the office of Permanent Under-Secretary of State for the Colonies; and an adaptation of *Philip van Artevelde* for the stage, by Macready, was brought out at the Princess's theatre, only to fail. In 1849 he published *Notes from Books*, a volume of criticism specially valuable to lovers and students of Wordsworth, to whose work more than half of it is devoted. In 1850 appeared *The Virgin Widow, a Play*, since renamed *A Sicilian Summer*; and in 1862 he issued the last of his dramatic works, *St. Clement's Eve, a Play*. In the same year the honorary degree of D.C.L. was conferred on him by the University of Oxford. In 1864 he edited a selection from the poems of Mr. Aubrey de Vere; and in 1868 he published a pamphlet entitled *Crime Considered in a Letter to the Right Hon. W. E. Gladstone, M.P.* In the next year his distinguished services to the State, and his high literary gifts, were recognised by the award of a Knight Commandership of the Order of St. Michael and St. George; and it was in contemplation to confer upon him a life peerage, but this fell

through with the rejection of the Life Peerage Bill. In 1872 Sir Henry Taylor retired from the Colonial Office; and two years later he printed privately the first instalment of his *Autobiography*, of which the second instalment made the like limited appearance in 1877. The intention that, so far as the public were concerned, this should be a posthumous book, was abandoned in 1885, when Sir Henry published a revised and extended edition of the work, the issue of which he did not long survive: he died at Bournemouth in the spring of 1886. The extent of his works is small when compared with the length of his life; and this was the result, not only of occupation in the public service, but also of a conviction that a moderate amount of good work is best calculated to give a man's writings a chance with posterity. Those of Sir Henry Taylor should be long remembered for rare qualities: his characters, Isaac Comnenus, Philip, Dunstan (in *Edwin the Fair*), are drawn with great vigour, consistency, and vitality, and are at the same time carefully thought-out historic types almost unrivalled in the literature of the author's period. In *Philip van Artevelde*, more particularly, an historic episode unfolds itself in what must be called the grand manner; and the two plays composing that work are richly fraught with wisdom, while the tragedy of Van Artevelde's fall is profoundly moving. Sir Henry Taylor's miscellaneous poetry is unequal; but some of it is too good to perish readily. [H. B. F.]

Sir Henry Taylor's *Autobiography* (1885).

Taylor, ISAAC (b. 1787, d. 1865), man of letters and mechanic, was the son and grandson of Isaac Taylors, of whom the first was a copper-plate printer, the second an artist and eminent Nonconformist divine, Taylor of Ongar. Educated by his father, he at first aimed at art, but eventually devoted himself to literature. In 1818 he contributed to the *Eclectic Review*, and between 1822 and 1827 published *Elements of Thought, Characters of Theophrastus, a History of the Transmission of Ancient Books to Modern Times, and a Translation of Herodotus*. His popular *Natural History of Enthusiasm* appeared in 1829, *Spiritual Despotism* in 1835, and *The Physical Theory of Another Life* in 1836. Among his later works were volumes on *The Restoration of Belief, Ultimate Civilisation, and The Spirit of Hebrew Prophecy*. Isaac Taylor was an accomplished artist, and during the last years of his life was occupied with the invention of engraving by machinery the copper rolls used in calico printing, which revolutionised that industry. His sister, JANE TAYLOR (b. 1783, d. 1824), his inseparable companion, was the authoress of the *Q. Q. Papers*, and together with another sister, Ann (Mrs. Gilbert, of Nottingham), of the well-known *Hymns for Infant Minds*.

Taylor, COLONEL PHILIP MEADOWS (b. 1808, d. 1876), novelist and Indian administrator, was a native of Liverpool, and in 1824 became attached to the Court of the Nizam of the Deccan. After serving the government of the Deccan in various capacities, he was appointed by the Nizam, in 1850, to administer the dominions of the young Rajah of Shorapore. He kept the country quiet during the Mutiny without British aid, and was in consequence appointed by the British Government Deputy Commissioner of the Western ceded districts of the Deccan. In 1866 he retired from public life. His novels of Indian life are, or were, enormously popular among Anglo-Indians, especially *The Confessions of a Thug* (1839). This was followed by *Tippoo Sultaun* (1840), *Tara* (1863), based on the story of Sivagee, the founder of the Mahratta Empire, *Ralph Darnell* (1865), *Sella* (1873), and *A Noble Queen* (1878).

Meadows Taylor, *The Story of my Life*, edited by his daughter (1877).

Taylor, GENERAL REYNELL GEORGE, C.B., C.S.I. (b. 1822, d. 1886), the youngest son of the late Lieut.-General T. W. Taylor, formerly lieut.-governor of the R.M.C., Sandhurst, entered the Bengal army in 1840. He served with great distinction in the Gwalior campaign (1843), in the campaign on the Sutlej (1845-6), and in the Punjab campaign of 1848-9. On the outbreak of hostilities he was left in command of the Derajat district, and by his heroic capture of the Fort of Lukhi without a single European soldier, and with one miserable piece of ordnance charged with stones, accomplished great things towards the reduction of the Trans-Indus districts. He was subsequently present at the siege of Mooltan. After the battle of Sorojkhond he received the brevet of major-general. In 1863 he served on the north-west frontier, and was present at the storming of the Umballa Pass and the subsequent engagements. In 1877 he returned to England, leaving behind him the name of the "Bayard" of the Punjab army, and a monument in the Christian mission he established at Derajat. Towards the end of his military career he was appointed commissioner of Umballa and Umritsur. In Dec., 1880, he was made general, and was subsequently selected to carry Lord Lawrence's coronet at his public funeral in Westminster Abbey.

Taylor, TOM (b. 1817, d. 1880), dramatist and editor of *Punch*, was the son of a brewer at Bishopwearmouth, and was educated at Glasgow University and Trinity College, Cambridge, where he was elected a fellow in 1842, having obtained a first-class in the classical tripos. In 1844 he set up as an author in London, from 1845 to 1847 was professor of English language and literature at University College, London, was

called to the bar in 1846, and went the Northern Circuit, being employed at the same time as leader-writer for the *Morning Chronicle* and *Daily News*, and as occasional contributor to *Punch*. In 1860, however, he obtained a Government appointment, and gave up circuit; and in 1852 he was appointed secretary to the Public Health Board, with a salary of £1,000 a year, retiring on a pension. Tom Taylor was a cultured writer on art; at the time of his death he was art critic to the *Times* and the *Graphic*, and he was the author of the admirable lives of *B. R. Haydon* (1852), *C. R. Leslie* (1859), and *Sir Joshua Reynolds* (1865). Perhaps he was not quite so successful as the editor of *Punch*, a post he held from 1874 to 1880. It is as a dramatist that he is now remembered. Beginning with plays for the Keeleys, such as *To Parents and Guardians*, he then wrote a series of burlesques in conjunction with Albert Smith, and between 1850 and 1854 collaborated with Mr. A. W. Dubourg in the highly successful comedy *New Men and Old Acres*, and with Charles Reade in *Masks and Faces*, an adaptation of the latter's novel *Peg Woffington*, besides producing the plays *Plot and Passion*, *The Vicar of Wakefield*, and *Sir Roger de Coverley*. In 1852 he wrote the popular farce *Our Clerks*, and in 1854 *To Oblige Benson*, a French adaptation, which was followed by *A Blighted Being*. In 1858 *Our American Cousin* was produced at Laura Keane's theatre, New York, the play in which Mr. Sothorn subsequently elaborated his immortal creation, Lord Dundreary. In 1859 came the *Fool's Revenge*, a not very successful adaptation of *Le Roi s'Amuse*; and in 1860 the popular *Overland Route*. *The Ticket-of-Leave Man*, Tom Taylor's best play, was produced at the Olympic in 1873, with Mr. Henry Neville as Bob Brierly. *An Unequal Match* followed. Meanwhile, in 1870, he had begun his series of historical plays with *'Twixt Axe and Crown*, written for Mrs. Rousby, as also was *Joan of Arc* (1870). *Lady Clancarty* was produced in 1873 and *Anne Boleyn* in 1876. It was the only one of Tom Taylor's plays that failed at all disastrously, and it was his last. His knowledge of stagecraft was consummate.

Mr. Joseph Hatton, *The True Story of Punch in London Society*, vol. xxx.

Taylor, ZACHARY (b. 1784, d. 1850), 12th President of the United States, was the son of Richard Taylor, a colonel in the American army during the War of Independence. Zachary worked on a Kentucky plantation until 1808, when he joined the army as a lieutenant, receiving a captaincy two years later. He soon afterwards was advanced to the rank of major on account of his gallantry in defending Fort Harrison, on the Wabash, against the Indian chief Tecumseh. He was actively engaged in the Indian wars of the

period, and for his services continued to be promoted. When, in 1845, the United States resolved to annex Texas, a Mexican province, Taylor, now a general, was sent against the Mexicans, who opposed the annexation, with 4,000 men. Hostilities commenced on the crossing of the Rio Grande by the Mexican general with a force of 6,000; he was driven back by General Taylor, and war was thereafter declared by the United States against Mexico. Taylor, in spite of his successes, was compelled to play a subordinate part to General Winfield Scott (q.v.). The most notable event of the war was the victory won by Taylor at Buena Vista with only 500 regulars and 5,000 volunteers over a Mexican army 21,000 strong, commanded by Santa Anna. The feeling excited by this victory was such that Taylor became the most popular man in the States; was nominated for the Presidency, and elected in 1850, his opponents being General Cass, Democrat, and Martin Van Buren and Charles Adams, Free-soil candidates. He did not long enjoy his honours as President, for in the July of the same year as his election, four months after his inauguration, he died; his end having been doubtless hastened by the unaccustomed worry of politics. It is probable that "Old Rough-and-Ready," as his men called him, would hardly have developed into a statesman.

* **Tchernaiieff, MICHAEL GREGOROVITCH** (b. 1828), Russian general, entered the army in 1847, and served in the Crimean War and in the campaign of 1859 against the Khivans. In 1863 he was sent at the head of an expedition into Khokand, and in 1865 took, on the second attempt, the important town of Tashkend. He was received with enthusiasm in Russia; but not obtaining active employment retired from the army, and in 1874 became editor of a paper devoted to Panславism. On the declaration of war by Servia against Turkey in 1876, he was placed in command of the Servian forces, but suffered a series of defeats, and raised considerable indignation in Europe by proclaiming Prince Milan King of Servia. In 1882 he was appointed Governor of Tashkend, in succession to General Kauffman.

Tegetthoff, WILHELM, BARON VON (b. 1827, d. 1871), Austrian admiral, was a native of Styria, entered the navy in 1845, and served at the siege of Venice in 1849. He accompanied the Archduke Maximilian to Mexico in 1861, and commanding the Austrian squadron in the Danish War of 1864 he defeated the Danish fleet off Heligoland, and became rear-admiral. In the war of 1866 with Prussia and Italy he again commanded the Austrian fleet, and defeated the Italians under Persano at Lissa. He became then full admiral, and commander-in-chief of the Austrian navy in 1868.

Tegner, **ESIAS** (b. 1782, d. 1846), Swedish poet, was the son of a parish priest, but, managing to obtain a good education, became in 1812 professor of Greek in the University of Lund, and in 1824 Bishop of Wexiö. He discharged the duties of his position with zeal until 1840, when he became insane. In 1829 he was honoured with the office of crowning Oehlenschläger with the poetic crown. His chief poems are two religious idyls, *The Consecration of a Priest* and *The Young Communicants*; *Axel*, a romance (1821); and *Frithiof's Saga* (1820-5). Tegner has found English translators in R. G. Latham, G. Stephens, and Longfellow. His position among modern poets is doubtless a high one, although of late a considerable reaction has set in against the worship with which he was at first greeted. As a man he was no less entitled to respect.

Böttiger, *Teckning af Tegner's Lefnad.*

Teignmouth, **JOHN SHORE, BARON** (b. 1751, d. 1834), a native of Devonshire, was descended from a family connected with the East India Company, and consequently, after finishing his education, went in 1769 to Bengal as a cadet. In 1773 he became Persian translator and secretary to the provincial council of Moorsheadabad, and was nominated a member of the general committee of revenue. This latter office brought him in contact with Warren Hastings, with whom he came to England in 1785. Returning in the following year to Calcutta as a member of the Supreme Council, he introduced many reforms, among them the revenue settlement of 1793. In the same year he succeeded Lord Cornwallis as governor-general, and was created a baronet. He adopted the policy of non-intervention in the affairs of the native princes, and the consequence was the Kuddlah campaign (1795), in which the Mah-rattas completely crushed the Nizam, and thereby greatly increased their own power. Lord Teignmouth's policy with regard to Oude was of a similarly temporising character, and led to no satisfactory result. In 1797 he returned to England as Lord Teignmouth, and devoted the remainder of his life to philanthropic objects. He became a member of the "Clapham Sect," another member being Wilberforce. He was the first president of the British and Foreign Bible Society. He was also president of the Asiatic Society. He published the *Life, Writings, and Correspondence of Sir W. Jones* (1804), and an edition of *The Works of Sir W. Jones*, with a *Memoir* (1807); also pamphlets on religious questions.

Memoir of the Life and Correspondence of John, Lord Teignmouth, by his son.

Telford, **THOMAS** (b. 1757, d. 1834), an eminent Scottish engineer, was born in Eakdale, Dumfriesshire, of peasant parents, and spent his early days in tending his father's

sheep and writing poetry. He afterwards became a stonemason, and about the year 1780 removed to Edinburgh. He next repaired to London, in 1783, where he obtained employment under Sir William Chambers, in the erection of Somerset House. Telford's merits were soon perceived, and in the next year he was appointed superintendent of some large works in connection with Portsmouth Dockyard. He subsequently settled at Shrewsbury, and was in due course appointed county surveyor of Shropshire, in which capacity he constructed two bridges over the Severn, and other public works. His first great work, however, was the Ellesmere Canal, 103 miles long, which occupied him from 1795 to 1805. In 1801 he received a commission from the government to "report on the state of Scotland," one result of which report was his construction of the Caledonian Canal (opened in 1823), running across Inverness-shire and uniting the fresh-water lochs with the sea. He also constructed the Glasgow Paisley and Ardrossan Canal, the Birmingham and Liverpool Junction Canal, the Macclesfield Canal, and the Gotha Canal in Sweden; completed the Gloucester and Berkeley Canal, and entirely reconstructed the Birmingham Canal. He introduced many improvements in road-making, as is seen in the great highway from London to Holyhead, completed in 1815; and executed over 1,000 miles of road in the Scottish Highlands, Lanarkshire and Dumfriesshire. Mr. Telford was the most consummate engineer of his day, and his public works are numerous. He also carried out the St. Katharine's Docks in London (1828), the Menai Suspension Bridge (1819-26), the Broomielaw bridge at Glasgow, the Dean at Edinburgh, the Conway in North Wales, the Ober at Gloucester, and about 1,200 other bridges; and the harbours at Banff, Peterhead, Fortrose, Cullen, Fraserburgh, and Kirkwall. He was frequently consulted by foreign governments, especially by Russia. He was buried in Westminster Abbey.

The Life of Thomas Telford, Civil Engineer, written by Himself (1838); *Smiles, Lives of the Engineers*; *Edinburgh Review* (Oct., 1839).

* **Temple**, **THE RIGHT REV. FREDERICK**, D.D. (b. Nov. 20th, 1821), Bishop of London, was educated at Tiverton Grammar School, and at Balliol College, Oxford, where he was a scholar (B.A., with a double first-class, 1842). He was elected fellow and mathematical tutor of his college; was ordained in 1846; was principal of the training college at Kneller Hall, Twickenham, from 1848 to 1855; and inspector of schools from 1855 to 1858. He then succeeded Dr. Goulburn (q.v.) as head-master of Rugby. His *Sermons Preached in Rugby Chapel* were published in 1861. Dr. Temple's position as a leader of the Broad Church party was clearly marked in 1860 by his writing the first of the *Essays and Reviews*, that on the *Education of the*

World. Owing to his opinions, his appointment to the bishopric of Exeter, in 1863, on the recommendation of Mr. Gladstone, met with considerable opposition, which found a mouthpiece in Bishop Trower at the ceremony of the confirmation of Dr. Temple's election, but without avail. After distinguishing himself in the diocese of Exeter by great powers of organisation and advocacy, notably in the temperance cause, he was appointed Bishop of London, in succession to Dr. Jackson, in 1885.

* **Temple, SIR RICHARD, BART., K.C.S.I., C.I.E.** (b. 1828), Indian administrator, was educated at Rugby School and Haileybury College, and in 1846 entered the Bengal Civil Service. Rising rapidly in his profession, he became successively Private Secretary to Lord Lawrence in the Punjab, British Resident at the Court of the Nizam of the Deccan, Foreign Secretary to the Government of India, and Secretary to the Order of the Star of India. From 1868 to 1874 he was Financial Member of the Government of India, and was Lieutenant-Governor of Bengal from 1874 to 1877, and Governor of Bombay from 1877 to 1880. Sir Richard Temple's powers as an administrator were seen to the greatest advantage during the famine years of 1874 and 1877. During the first of these visitations his services as the distributor of relief were invaluable, and in 1876 he was rewarded with a baronetcy. During the Afghan War of 1878-80 he was of the greatest assistance to the Candahar column, particularly by pushing on the railway to Quetta, which at one time was being constructed at the rate of a mile a day. For these services he received the thanks of Parliament. On his return to England he unsuccessfully contested East Worcestershire in the Conservative interest, and was first returned for South Worcestershire in 1885. Sir Richard Temple is a member of the Council of the Royal Geographical Society and the British Association, has been president of the Social Science Congress, and a member of the London School Board, of which he was elected vice-chairman in December, 1885. He has travelled in most parts of the globe, and is the author of numerous official reports, *India in 1880* (1880), *Men and Events of My Time in India* (1882), and *Oriental Experiences; a Selection of Essays and Addresses* (1883).

Tennant, WILLIAM (b. 1785, d. 1846), poet and Orientalist, was born at East Anstruther, Fife, and educated at a school in the place, and at the University of St. Andrews, whither he went in 1799. In 1801 he became clerk to his brother, who was a corn factor at Glasgow. In 1812 he published his humorous poem, *Anster Fair*, which gradually became famous, and was at length favourably noticed by Jeffrey in the *Edinburgh Review*. In 1813

Tennant had accepted the situation of parish schoolmaster at Denino, near St. Andrews, became teacher at Lasswade, near Edinburgh, in 1816, and in 1835 professor of Oriental languages in the University of St. Andrews. In 1840 he published grammars of the Syriac and Chaldee languages. He was also the author of a poem, *The Thane of Fife* (1822), a tragedy, *Cardinal Beaton* (1823), and a drama, *John Balliol* (1825), but their success was indifferent.

Tennent, SIR JAMES EMERSON (b. 1794, d. 1869), son of a merchant of Belfast, where he was born, was educated at Trinity College, Dublin. After travelling on the Continent, he was in 1831 called to the bar. Marrying an heiress, the same year, he abandoned his profession, and in 1832 was returned to Parliament by his native town. He opposed the Irish Municipal Bill and the Irish Tithe Act, and thereby his popularity was affected among his constituents. At first an adherent of Earl Grey, he severed himself from that connection (1834) on the dissensions in the Grey Cabinet breaking out that led to the formation of the party jocularly styled the "Derby Dilly," of which party Tennent became a member, subsequently becoming, like the rest of them, a supporter of Sir Robert Peel. In 1837 he was again returned to Parliament by Belfast; in 1841, however, he was unseated on petition. Recovering his seat in 1842, he retained it until 1845, being afterwards, in 1852, returned by Lisburn. Meanwhile he had been, under Peel, Secretary to the Indian Board; during the years 1845-50 he was Civil Secretary to the Government of Ceylon; in 1852 he was Secretary to the Poor-Law Board; and from 1852 to 1867 he held the post of Secretary to the Board of Trade, on retiring from which he received a baronetcy. He published several books of travel and sketches; one of these, *Ceylon: an Account of the Island, Physical, Historical, and Topographical, with Notices of its Natural History, Antiquities, and Productions*, going through three editions in the year of its publication (1859). Among the remainder may be mentioned:—*A Picture of Greece* (1826); *Letters from the Ægean* (1829); *A History of Modern Greece* (1830); *Travels in Belgium* (1841); and *The Natural History of Ceylon* (1860).

* **Tenniel, JOHN** (b. 1820), artist, was born in London, and educated at a private school. His draughtsmanship was self-taught, and at the age of five-and-twenty he was successful in one of the cartoon competitions at Westminster, and painted a fresco in the palace. He was also a skilled painter in oils, but his pictures were comparatively few in number, and he soon abandoned canvas almost entirely for wood. Mr. Tenniel became known as a book-illustrator of great delicacy and finish, particularly happy when his subjects were taken from fairy lore. Among

the works that have received additional charm from his pencil are:—*Æsop's Fables* (1848); Moore's *Lalla Rookh* (1861); Longfellow's *Tales of a Wayside Inn* (1867); *The Ingoldsby Legends* (1864); Poe's *Poetical Works* (1866); *The Legends and Lyrics* of Miss Procter (1866); and her brother's *Dramatic Scenes* (1857); Lewis Carroll's *Alice in Wonderland* (1866); and *Through the Looking-glass* (1872); and Miss Gatty's *Parables from Nature* (1880). But Mr. Tenniel's fame rests not so much upon these graceful creations as upon his contributions to *Punch*. He began to contribute to that paper in 1851, and upon the death of Leech in 1864 was recognised as being without a rival as the designer of political cartoons. Year after year, with hardly a single break, his well-known initials appeared at the foot of the weekly full-page illustration; and the artist's popularity, far from diminishing, seemed only to increase with the lapse of time. If Mr. Tenniel has not the fulness of Leech's humour, he is his superior by a considerable altitude as an artist, both in his knowledge of the human form and in his power of dramatic effect; again, the topics of his cartoons are evidently taken from a wider range of reading. Mr. Tenniel restricts himself to the ludicrous by no means so exclusively as did Leech; but frequently appeals in the most admirable manner to the pathetic and the terrible. No more faithful representative of current public opinion could possibly be desired, whether the period under review be that of the American Civil War, the struggle between France and Germany, or the Egyptian and Soudanese complications of 1884 and 1885. To select for special mention a few from among the many of Mr. Tenniel's historical achievements is a difficult task, but, perhaps, the following cartoons stand out most conspicuously from among their companions: *What Nicholas heard in the Shell* (1854); *Injured Innocence and his Billet Doo* (Napoleon III. as the wolf in sheep's clothing apologising to England for the annexation of Nice and Savoy) (1860); *A Derby Obstruction and A Derby Spill* (Mr. Disraeli as a costermonger opposing Lord Palmerston's ministry) (1861); *Up a Tree* (President Lincoln as the 'coon, the reference being to the Trent affair) (1862); *D'Israeli in Triumph; or the Modern Sphinx* (suggested by Mr. Poynter's *Israel in Egypt*) (1867); *Rugin's Political School* (Mr. Disraeli "educating" his party) (1867); *The Rival Conjurors* (the Chancellors of the Exchequer, Mr. Lowe, and Mr. Disraeli) (1869); and some strikingly prophetic cartoons just before the collapse of the Second Empire; *A Perilous Passage* (Napoleon in the character of Blondin crossing the Niagara rapids of revolution); *Renewing the Lease* (the Plébicite); and *A Vision on the Way—Beware!* (Napoleon I. appearing to Napoleon III. as he goes to join the army). Later on came *Mosè in Egitto* (on the occasion of the purchase of the Suez

Canal shares); *Napoleon at St. Helena* (on Lord Beaconsfield's defeat at the general election of 1880); *Where will He go to Nest?* (Mr. Gladstone as the hen, Mr. Chamberlain as the duckling); *Out of the way Old 'un, and let me have a shot at him* (Lord R. Churchill and Sir S. Northcote as clown and pantaloon); Mr. Gladstone as the *Political Mrs. Gummidge*, and many other instances of Mr. Tenniel's wit, humour, and pathos, which are too well known to need individual recapitulation.

Mr. Joseph Hatton in *London Society*, vol. xxx; Mr. Tenniel's *Cartoons from Punch*, Series I. and II., were republished in 1884-70; his cartoons on Lord Beaconsfield, Mr. Gladstone, and Mr. Bright reappeared in the replications from *Punch* of 1878.

* **Tennyson, ALFRED, BARON** (b. 1809), poet, son of the Rev. George Clayton Tennyson, LL.D., and his wife Elizabeth, born Fytche, first saw the light at Somersby, near Horncastle, in Lincolnshire, on Aug. 6th, 1809. Dr. Tennyson, whose father was George Tennyson, of Bayon Manor, a lawyer of considerable wealth, was descended from the Plantagenets through the Norman family of D'Eyncourt. He was rector of Somersby and Enderby, and vicar of Great Grimsby; and his wife was a daughter of the Vicar of Louth. Aristocracy and orthodoxy, therefore, were well represented in the influences which moulded the early life of the future Laureate. His home was beautifully situated, and surrounded by picturesque scenery. His father was a man of fine and powerful character and considerable attainments; and his mother was "a sweet and gentle and most imaginative woman." It is not remarkable that three of the sons of these parents should have turned out poets. His early education was conducted partly at home and partly at a village school; and he showed, when very young, a thoughtful and imaginative vein. His first verses were written on a slate when he was quite a child; and while still in early youth he wrote, at his grandfather's request, an elegy on the death of his grandmother. Then we hear of his pouring forth verses under the inspiration of the sound of the sea, of which he was passionately fond. Together with his elder brother Charles, he was sent in due time to Louth Grammar School, and it was in that town that the publication of his first literary venture was arranged. This venture was not a single-handed one, but was shared by Charles. *Poems by Two Brothers* was purchased of the two youths by Messrs. J. and J. Jackson, printers, of Louth, and published by them and by Messrs. Simpkin and Marshall of London in 1827; but it was only many years afterwards that the book attracted notice by reason of the world-wide fame subsequently acquired by one of the authors. In 1828 the "Two Brothers" joined their elder brother Frederick at Trinity College, Cambridge. Here Alfred

Tennyson formed important friendships, and notably that which was eventually to be connected with one of his greatest works. Arthur Henry Hallam, who was also entered at Trinity in 1828, must be reckoned as the most considerable of those who influenced Tennyson's life when a young man, although he was a year and a half the future Laureate's junior. In this first year at college, Tennyson wrote *The Lover's Tale*, which, though more than once on the point of publication, was not really given to the world by its author till 1879. In 1829 Tennyson and Hallam were both competitors for the Chancellor's gold medal, the subject being *Timbuctoo*. Tennyson's poem, in blank verse, gained the prize, and was printed that year as the leading item in the *Provisional Academicæ*. This work, though juvenile in some respects, was one of rare promise, and was cordially recognised by the *Athenæum*, then lately established; and in the following year a still more unmistakable earnest of high poetic acquirement was given in the shape of the little volume of *Poems Chiefly Lyrical*, issued by Mr. Effingham Wilson. Although of the fifty-three poems forming that collection twenty-three have been rejected by their author, and some of the others have been largely revised, there is scarcely a page in the volume that is not noteworthy in a high degree; the short piece entitled *The Poet* were alone sufficient to establish a lyric reputation; and that is but one among many exquisite strains in the book of 1830. About the same time Dr. Tennyson died, and Charles Tennyson made his first separate appearance in a volume of *Sonnets and Fugitive Pieces*. Leigh Hunt reviewed the two books together in *The Tatler*, while the *Poems Chiefly Lyrical* formed the subject of a paper contributed by Arthur Hallam to *The Englishman's Magazine* (Aug., 1831). After contributing a few pieces to ephemeral publications, Tennyson prepared a second collection for the press, and in the winter of 1832 appeared the volume of *Poems*, bearing the date 1833, published by Moxon. This book far surpassed the former one in power, containing *A Dream of Fair Women*, *The Palace of Art*, *Enone*, *The Lady of Shalott*, and many of the poet's most admired productions. Of the thirty-one pieces which the little book contained, fifteen were afterwards rejected by the author, and others were much altered, usually for the better. Tennyson had now merited the distinction of being noticed in the same savage and truculent style as his great predecessor Keats, by Wilson in *Blackwood's Magazine*, and by Lockhart in the *Quarterly Review*. Towards the end of 1833 he sustained a profound sorrow in the death of Arthur Hallam who died while at Vienna with his father. It seems likely that this event had more to do with Tennyson's almost unbroken silence between 1833 and 1842 than the attitude of the critical

press. Leaving Cambridge without taking a degree, the poet passed his life quietly with his mother and sisters, or with an uncle at Caistor, or among friends in London. With the exception of *St. Agnes*, in *The Keepsake* (1837), and the stanzas "Oh! that 'twere possible," in *The Tribute* (stanzas afterwards embodied in *Maud*), Tennyson did not again come before the public till 1842, when he published his *Poems* in two volumes, adding to what he had selected for preservation from the books of 1830 and 1833, *Morte d'Arthur*, *The Gardener's Daughter*, *Dora*, *Ulysses*, *Locksley Hall*, *Godiva*, *The Two Voices*, and many others of his most perfect minor poems. This collection at once secured him a wide recognition; and in 1845, by Sir Robert Peel's advice, the Queen awarded him a Civil List pension of £200 a year. Edward Bulwer (afterwards Lord Lytton) attacked the poet and the pension with hysterical virulence in *The New Timon*, and Tennyson, under the pseudonym of "Alcibiades," replied in *Punch* with the well-known stanzas, *The New Timon and the Poets*, quickly followed by the *Afterthought*, later known by the title of *Literary Squabbles*. In 1847 appeared *The Princess, a Medley*, in blank verse, into which were subsequently introduced some of the deepest and most melodious lyric poems in the language. This was followed in 1850 by *In Memoriam*, perhaps the most solid and earnest poetic tribute ever paid to a dead friend's memory. In the same year, on the death of Wordsworth, Tennyson became Poet Laureate; and it was in 1850, also, that he married Miss Emily Sellwood, daughter of Mr. Henry Sellwood, of Horncastle, and took up his residence at Twickenham. During the next four years but a few short poems were added to the published works of the Laureate, the most notable being the *Ode on the Death of the Duke of Wellington* (1852) and *The Charge of the Light Brigade* (1854). In 1855 the Laureate received from the University of Oxford the honorary degree of D.C.L., and *Maud and other Poems* appeared, but without attaining that popularity to which superlative merits of poetic impulse and perfect workmanship entitle the leading piece. In 1859 the *Idylls of the King* achieved a vast success, which more than made amends for the comparative failure of *Maud*; and in the same year Tennyson put forth in *Once-a-Week* the first of a series of vernacular monologues, showing in a certain sense great dramatic power—*The Grandmother's Apology*. In 1860, *Sea Dreams, an Idyll*, appeared in *Macmillan's Magazine*, and *Tithonus* in *The Cornhill Magazine*. These were followed by *The Sailor Boy* (in *The Victoria Regia*) in 1861, the *Exhibition Ode* in 1862, and *A Welcome* (to the Princess Alexandra) in 1863; and in 1864 appeared a new volume, *Enoch Arden and other Poems*. The year 1865 was marked by the loss of his mother, his

election as a member of the Royal Society, and his refusal of a baronetcy, repeated three years later. In 1868 a few short poems appeared in magazines, and in 1869 *Lucretius* came out in *Macmillan's*, and *The Holy Grail and other Poems*, as a separate volume, announced as "completing" the *Idylls*. *The Window, or the Songs of the Wrens*, with music by Sullivan, followed in 1870; and the next three years were marked by a further "completion" of the Arthurian cycle of poems—*The Last Tournament* appearing in *The Contemporary Review*, and *Gareth and Lynette* in a volume with a reprint of *The Last Tournament*. In 1875 *Queen Mary*, a drama, appeared both as a book and in a condensed form at the Lyceum theatre; and in the same year *The Lover's Tale* was piratically printed and sold. A second historic drama, *Harold*, followed in 1876; and in 1877 some short pieces appeared in *The Nineteenth Century*, which in 1878 contained *The Revenge, a Ballad of the Fleet*, and in 1879 *The Defence of Lucknow*. In the same year the drama of *The Falcon* was produced at the St. James's theatre, and *The Lover's Tale*, of which a part had been privately printed in 1833, and pirated in 1875, and another part had appeared in the *Holy Grail* volume as *The Golden Supper*, was revised, and issued as a whole. In 1880 the volume of *Ballads and other Poems* gave a fresh impetus to the Laureate's fame, while the issue of the sonnets of his brother, the Rev. Charles Tennyson-Turner, who had died the year before, gave him the opportunity of recording in noble verse his sorrow for that partner of his first literary venture. He was also invited to stand for the Lord Rectorship of Glasgow University, but withdrew. In 1881 *The Cup* was successfully produced at the Lyceum; and a dramatic monologue, entitled *Despair*, came out in the *Nineteenth Century*. Another drama by Tennyson was brought out at the Globe theatre in 1882, under the title of *The Promise of May*, but was not published at the time; and it was not till 1884 that *The Cup* and *The Falcon* appeared as a single volume. In the same year the historical drama of *Becket* was published, and the Laureate was raised to the peerage under the title of Baron Tennyson of Aldworth and Farringford. In 1886 appeared *Tiresias and other Poems*, and a second volume containing, with two smaller pieces, *Locksley Hall, Sixty Years After*, and *The Promise of May*. It is difficult to overrate the importance of Lord Tennyson's achievements. His life's work is of that magnitude—not in area, but in quality and variety—that we are too close yet to judge securely of it as a whole. There is certainly no volume from his pen that does not teem with beauties special to his hand. The melody of his verse, the purity and strength of his diction, the profound emotional impulse of the dominant mood in each case, the significance and dignity of

theme, the absolute sanity and highmindedness that characterise his view of things, the rich inventiveness in metre and in matters of form generally, and the admirable self-restraint displayed in the exercise of his extraordinary gifts, are matters beyond question or cavil. It may be open to grave doubt whether posterity will be able to afford room in its working library for precisely those works which are most ambitious in form; and if it be a reproach to have written no single large work of superlative and sustained merit, it is to be feared that no one of the dramas will save Lord Tennyson from that imputation. The *Idylls of the King* can scarcely do so; for, spite of all that has been written to show that they are one great poem, they must be regarded eventually as that for which they were designed—a series of exquisite episodes. *In Memoriam* itself is almost too varied in its moods and themes to be considered as other than a profound and wondrous book of lyrics; *The Princess* lacks the stern reality needful for a great poem; and *Maud*, which is in truth a great poem, is so in the sense in which many dozens of pieces of the same parentage are great. Posterity may, after all, be graciously pleased to recognise that the absence of any one work in which those superlative merits associated with the name of Tennyson are sustained throughout an imposing structure, whether epic or dramatic, is no reproach at all; that to have preserved throughout a long life the high poetic mood, and to have faced in that mood the many themes that most seriously occupy the modern mind, is in itself a greater *tour de force* than the writing of many epics.

Henry J. Jennings, *Lord Tennyson, a Biographical Sketch* (1884). [H. B. F.]

Tenterden, THE RIGHT HON. CHARLES ABBOT, BARON (b. 1762, d. 1832), an eminent lawyer, was born within the precincts of Canterbury Cathedral, and was the son of a Canterbury hair-dresser. He spent some time at the King's School, Canterbury, where he gained a scholarship which enabled him to proceed to Corpus Christi College, Oxford. At Oxford he had a brilliant career, became a fellow of his college, and took, amongst other prizes, the Chancellor's prize for his essay on *The Use and Abuse of Satire*, which was greatly admired and published in 1786. He next entered the family of Mr. Justice Buller as a tutor with the idea of taking orders, but that learned judge perceiving the exceptional powers of the young man, strongly urged him to become a barrister. This advice young Abbot subsequently determined to follow, and accordingly entered himself at the Temple in 1787. He practised for some time as a special pleader, and with success. Next year he was called to the Bar, and joined the Oxford Circuit. He soon acquired a fair share of work, and he had the good luck to be retained

as junior in all the State prosecutions for the next ten years, under the attorney-generalships of Eldon, Redesdale, Ellenborough, and Perceval. In 1801 he became Recorder of Oxford, and in 1802 he finished his work, upon which he had been long engaged, on the *Law of Merchant Ships and Seamen*. His practice still grew, and according to the Income Tax Returns for the year 1807 he drew an income of over £8,000 a year. Offers of puisne judgeships now came, but Abbot would have none of them—at least not yet. He likewise declined silk, conscious that his "temperament and disposition disqualified him as a leader," and that as a junior his services would be "more usefully employed and in greater requisition." But the hard work of a successful junior requires herculean strength, and Abbot's health began in time to feel the strain. In 1816 his constitution was alarmingly shattered, and he was forced to seek a few weeks' repose. Lord Eldon once more tempted him with a puisne-judgeship, and the offer was accepted. Scarcely ever was a better selection made. Abbot was much less an advocate than an arbitrator; his qualities were eminently fitted for judicial office, and these were only seen after he was elevated to the bench. After some three months on the bench of Common Pleas, he was transferred in 1816 to the King's Bench, thence again, in 1818, to the post of Lord Chief Justice, in succession to Lord Ellenborough. In 1827 he was created a peer. He died on Nov. 4th, 1832, and was buried in the Foundling Hospital. Lord Tenterden's name has a foremost place among English lawyers. In a subject so complicated as the English law he was complete master of every branch. Severely exact in his application of the law, and dexterous in effectuating it, he abominated all quibbling, and was as impartial as he was unprejudiced. Yet Lord Tenterden was no unprejudiced politician; he was an unbending Tory of the least desirable type. He pitted his giant powers against the Test and Corporation Acts, Catholic Emancipation, and all progressive measures. In legislation he was the instrument of a few not unimportant acts. It is to him we owe 9 Geo. IV. cc. 14 and 15, for limitation of actions and for the prevention of a failure of justice by reason of a variance between records and writings produced in evidence.

[W. M.]

Terrys, THE, a family of living actresses, comprise the sisters Kate, Ellen, Marion, and Florence. *Miss KATE TERRY (b. 1844) made her first appearance on the stage at the Princess's, under the management of Mr. Charles Kean, as Robin in the *Merry Wives of Windsor* (1861). She then played in a succession of juvenile parts, and her Prince Arthur, in a performance of *King John* at Windsor Castle in 1862, gained high praise

from Lord Macaulay. A long step in advance was taken when in 1862 Miss Terry undertook the part of Mrs. Union in *Friends and Foes*, and in 1863 appeared at the Lyceum under the Fechter management as Ophelia. During the remainder of her brief career Miss Terry was generally accepted as the leading emotional actress of the day. She appeared in a succession of characters from Shakespeare, Lord Lytton, and Sheridan Knowles; and all her impersonations, especially Juliet, and Julia in the *Hunchback*, were charmingly spontaneous and alive. She retired from the stage in 1867, shortly before her marriage with Mr. Arthur Lewis. *Miss ELLEN TERRY (b. 1848) also made her first appearance at the Princess's, as Manilius in the *Winter's Tale* in 1866; and, like her sister, became known as a most talented exponent of juvenile character. In 1863 she began to appear in *ingénue* parts; and her Gertrude in *The Little Treasure* was recognised as entirely unconventional and full of intelligence. Her next notable performance was Philippa Chester in *The Wandering Heir* (1874), and in 1875 her Portia in a revival of the *Merchant of Venice* at the Prince of Wales's was hailed as a most artistic performance, as, too, was her Clara Douglas in *Money*. But Miss Terry set the seal upon her fame by her deeply poetic creation at the Court Theatre of the heroine in Mr. W. G. Wills's play, *Olivia*, founded on the *Vicar of Wakefield*. In 1878 she joined the Lyceum company, and was subsequently associated with the chief productions under Mr. Irving's management. Her first appearance there was as Ophelia in the Hamlet of Mr. Irving, and among her subsequent impersonations were Pauline in the *Lady of Lyons*, and Camma in Tennyson's *Cup*, Letitia Hardy in the *Belle's Stratagem*, Desdemona, Juliet, Beatrice, and Margaret in Mr. Wills's version of *Faust*. She married Mr. Charles Kelly (verè Wardell), who died in 1885. [IRVING.] *Miss MARION TERRY (b. 1866) made her *début* at Manchester in 1873 as Ophelia, and in the same year appeared before a London audience for the first time at the Olympic in a revival of *A Game of Rumps*. In 1876 she was the original Dorothy in Mr. Gilbert's *Dan'l Druce*, and created the part of Belinda Treherne in the same dramatist's *Engaged*. She also took up with the greatest success Mrs. Kendal's parts in *Pygmalion and Galatea* and the *Palace of Truth*. She was associated with the Haymarket theatre under the earlier part of the Bancroft management (1879), and migrated to the Court under that of Mr. Clayton. *Miss FLORENCE TERRY (b. circa 1869) first appeared on the London stage in 1870 at the Adelphi in a version of *Le Malade Imaginaire*. She was the original Little Nell of Halliday's play, and among her other parts were Lady Betty Noel in *Lady Clancarty*, Cynisca in *Pygmalion and Galatea*, Dorothy in *Dan'l Druce*, Olivia, and Nerissa in the *Merchant of*

Venice at the Lyceum. She retired from the stage in 1882 shortly before her marriage with Mr. William Morris.

Teuffel, WILHELM SIGISMUND (b. 1820, d. 1872), German philologist, was born at Ludwigsbürg, and studied at the University of Tübingen, where he became a *privat-docent*, and was appointed extraordinary professor of classical philology in 1849, and ordinary professor in 1857. His chief work is his *History of Roman Literature* (1870), which has been translated into English, and is generally regarded as a standard work. He also wrote the *Characteristics of Horace* (1842), and *Studies and Characteristics of the Greeks and Romans* (1871).

Tewfik Pasha. [EGYPT.]

***Thackeray, ANNE ISABELLA** (b. 1838), the daughter of the late William Makepeace Thackeray, inherited much of her father's literary genius. She began to write stories as a child, but was advised by her father to read and study, and to give up fiction till she was older. Her first story appeared in the *Cornhill Magazine* in 1860, and was called *Little Scholars in the London Schools*. It was followed by *The Story of Elizabeth* (1863); *To Esther, and other Sketches* (1869); *Old Kensington* (1873), a charming story of quiet English life; *Toilers and Spinners and other Essays* (1874); *Miss Angel* (1875); *Madame de Sévigné*, a biography (1881); *A Book of Sibylls*, reprinted from the *Cornhill Magazine*, a series of biographical sketches of Mrs. Barbauld, Miss Edgeworth, Mrs. Opie, and Miss Austen (1883); *Mrs. Dymond* (1885). In 1877 Miss Thackeray was married to her cousin, Mr. Richmond Ritchie.

Thackeray, WILLIAM MAKEPEACE (b. 1811, d. 1863), was born at Calcutta, July 19th, 1811, and was the son of an Indian Civil Servant. He received his education at the Charterhouse School, and spent a year at Cambridge, which he left without taking a degree. Intending to be an artist, he studied at Paris, but, with all the remarkable talent for the pictorial representation of character and humorous incident subsequently displayed in the illustrations of his own writings, he could never learn to draw correctly, and, fortunately for his fame, was thrown upon literature for his support. His patrimony had been dissipated by unfortunate investments and unsuccessful speculations, and his life was for some time one of struggle. In 1837, however, he formed his connection with *Fraser's Magazine*, in which successively appeared *The Great Hogarty Diamond*, the *Yellowplush Papers*, *The Luck of Barry Lyndon*, and other masterpieces, which revealed him to discriminating readers as, with the possible exception of Dickens, the greatest humourist of his day. In 1840 he published the *Paris Sketch Book*,

chiefly reprinted from American periodicals; and in 1842 began to write for *Punch*, where his power as a satirist was shown by his *Book of Snobs*, and his more genial vein of humour by the *Ballads of Policeman X*. *Punch's Prize Novelists*, *Rebecca and Rowena*, and other admirable burlesques, appeared about this time; his amusing children's story, *The Rose and the Ring*, somewhat later. He at length felt emboldened to vie with Dickens as a writer of serial fiction, and *Vanity Fair* (completed in 1848), equal to his rival's best works in wit and humour, and greatly superior in the delineation of life and character, placed him at the summit of contemporary fiction. *Pendennis* (1850), *Esmond*, the most artistic of his fictions (1852), and *The Newcomes* (1854) fully maintained his reputation. Yet Thackeray could hardly be called a happy man; he suffered frequently from illness: he was not exempt from pecuniary cares, and his marriage, though it had brought him two highly gifted daughters, had darkened his life by his wife's hopeless insanity. Failing to enter Parliament or obtain a post in the public service, he determined to appear as a lecturer. His two series of lectures on the *English Humourists of the Eighteenth Century* and the *Four Georges*, delivered in the United States as well as in England, proved most successful, and placed him at ease. His next novel, *The Virginians*, a kind of sequel to *Esmond*, though possessing much merit, is comparatively tame. Decadence is still further apparent in his last works, *Lovel the Widower*, *Philip*, and the unfinished *Denis Duval*, contributed to the *Cornhill Magazine*, which had been commenced under his editorship in 1859. Much of the old fire, however, breaks out in the *Roundabout Papers*, also written for the *Cornhill*. He retired from the editorship in 1862, and died very suddenly on Dec. 24th, 1863. Thackeray was one of the greatest writers of his country in his age, its first satirist, and almost its first novelist. His genius was most original. His style and manner were entirely his own, though he was not above occasionally borrowing situations from Balzac and Charles de Bernard. He may be compared with the former writer, both as regards the nature of his work and the quality of his intellect; but the labour of his life appears diminutive by the side of Balzac's gigantic productiveness. If, however, Thackeray is less prolific than Balzac, he is much more amusing. His chief novels, and still more his inimitable burlesques, provoke incessant laughter, and yet tragedy forms the background of the former; irony pervades the whole, and his pathos is exquisite. He occasionally contracts a taint from the vulgarity he assails, and his lucid style sometimes fatigues by its mannerism. He has been accused of cynicism on account of the large proportion of odious or ridiculous individuals among his characters; but his vindication is that, although a great novelist

and humourist, he was above all things a satirist, and amiable personages could not subserve his purposes of exposing the besetting sins of English society. Meanness, folly, and pretence, rather than flagrant vice, are the main objects of his attack; and his indignation expresses the solid worth and manliness of his own character. No adequate biography of him has been written.

Anthony Trollope, *Thackeray*, in *English Men of Letters* series. [R. G.]

Thalberg, SIGISMUND (b. 1812, d. 1871), musician, was the natural son of Prince Dietrichstein, and was born at Geneva. He was taken as a boy to study at Vienna under Sechter and Hummel. His development was very rapid, and when but fifteen years old his performances attracted great attention in Viennese concerts and drawing-rooms, while a tour through Germany three years later earned him a brilliant reputation as a virtuoso. At Paris he studied under Pixis and at London under Moscheles, and determined to devote himself entirely to the pianoforte. He made tours through Belgium, Holland, England, and Russia, earning both honours and riches. Thalberg's playing was of the purely virtuoso type, and unrivalled in its kind. He had a flexibility of finger and power of wrist that enabled him to produce the most wonderful orchestral effects. But unfortunately the musician was lost in the virtuoso; he belonged entirely to the class of artist whose aim is to produce technical rather than poetic effects, and his compositions are all characterised by the same tendency. His two operas, *Florinda*, performed in London in 1851, and *Christina di Svezia*, were deficient in dramatic effect, and were failures. In 1855 Thalberg went to Brazil and afterwards to the United States, on his return whence, in 1858, he married the daughter of Lablache, and lived in retirement until 1862, when he again visited Paris and London, and undertook a second journey to Brazil. His daughter Mlle. Zäre Thalberg is a successful operatic singer.

Thénard, LOUIS JACQUES (b. 1777, d. 1857), French chemist, was born at La Louptière, and after studying chemistry at Paris became in 1810 professor at the Collège de France, to which appointment were afterwards added the Chairs at the École Polytechnique and in the philosophical faculty of the university. He retired from his official posts in 1840. His chief work was *Traité de Chimie Élémentaire* (1813-17), and he collaborated with Gay-Lussac in *Recherches Physico-Chimiques* (1816).

Theodore of Abyssinia. [ABYSSINIA.]

Thesiger. [CHELMSFORD.]

Thierry, AMÉDÉE SIMON DOMINIQUE (b. 1797, d. 1873), like his brother Augustin, com-

menced life as teacher and journalist. He contributed articles to *Revue Encyclopédique*, and was associated with the editors of the *Globe*, but after the publication in 1826 of his *Résumé of the History of Guienne*, he earned, by his *History of the Gauls* (1828), a not unworthy place among historians. The value of this book is impaired by the limited light which philological studies had then thrown over the subject, but the merit of his *History of Gaul under the Roman Administration* (1840-42), is more substantial. The earlier work procured him a professorship at Besançon, but the liberality of his opinions led to his suspension by the Martignac ministry; after the July revolution he was appointed prefect of the Haute-Saône, and in 1831 elected a member of the Academy. In 1838 he was summoned as master of requisitions to the Council of State, and in 1860 the Emperor made him a senator. The Légion d'Honneur was bestowed on him in 1846; ten years later he was promoted commander, and 1868 grand officer. His other works are:—*Stories from Roman History in the Fifth Century*, *History of Attila and his Successors* (1856); *Saint Jérôme and Christian Society in Rome* (1867); and *Saint Chrysostom and the Empress Eudoxia* (1872). His reputation has been overshadowed by that of his brother, in whose brilliance and quick intelligence he was lacking, but it has been remarked that the elder would have done well to possess some of the younger's prudence.

Thierry, JACQUES NICOLAS AUGUSTIN (b. 1795, d. 1856), the elder of the two brother historians, was educated first at his native town, Blois, and in 1811 entered the École Normale at Paris. In 1813 he became a teacher at Compiègne, but returning to Paris the following year, embraced a literary career. He was associated (1814-17), with Saint Simon as his secretary and disciple, calling himself the adopted son of his master, and writing with him several political and social pamphlets. But he began already to tread an independent path in *Des Nations et de leurs Rapports Matériels* (1816), and from 1817-20 worked on the staff of the *Censeur Européen*. It was in seeking weapons against the claims of the privileged classes that he was led into the investigation of the various Teutonic invasions, and the formation of the communes in the middle ages. From Sir Walter Scott he learnt the art of reviving the past in graphic and picturesque details, and claimed to have planted the standard of historical reform in France, although as a matter of fact accuracy in him was entirely subordinated to the picturesque. In 1820 he contributed *Ten Letters on French History* to the *Courier Français*, afterwards increased to fifteen, and in 1825 published his most important work, the *History of the Conquest of England by the Normans*, the labour of which had been so excessive as to cost him his eyesight when but thirty-one years of

age. But his friends, his brother, and above all his wife Julie de Querangal (m. 1831, d. 1844), gave the afflicted author faithful and loving help, and during this time he wrote *Ten Years of Historical Study* (1827); *Narratives of the Merovingian Era* (1840); edited with several others the *Unedited Documents of the History of the Third Estate*, which furnished him with materials for his *Municipal History of Amiens* (1849-56), and an *Essay on the History of the Formation and of the Progress of the Third Estate* (1853). Several complete editions of his works have been published, and the principal translated into English. In 1830 Augustin Thierry was elected a member of the French Academy, and in 1831 decorated with the Légion d'Honneur, of which he became an officer in 1837 and commander in 1845.

Guign'nt, *Notice sur la Vie et les Travaux d'Aug. Thierry.*

Thiers, Louis ADOLPHE (b. April 15th, 1797, d. Sept. 3rd, 1877), President of the French Republic, was a native of Marseilles, and the son of a small shopkeeper or merchant; his mother was a cousin of André Chénier. He was educated at the lycée of his native town, took his law degree at Aix, where he began his lifelong friendship with MIGNER (q.v.), and in 1821 arrived at Paris to seek his fortune, sharing an apartment with his friend. He attached himself to the Liberal party, and was introduced by a fellow-townsmen to the editor of the *Constitutionnel*, writing on art and politics. "*Ce n'est pas un parvenu, c'est un arrivé qui ira plus loin que nous tous.*" Talleyrand is said to have prophesied concerning him, and to have given him this advice, "*You wish to rise: make enemies.*" The injunction he certainly carried out in his *Histoire de la Révolution Française*, the ten volumes of which appeared between 1823 and 1827. This work is rather in the nature of a partisan protest than of dignified history; its sources of information are frequently trivial and inadequate; nevertheless, it is a fine work of art, and it served its purpose. Thiers, at its conclusion, was a famous man. It is said that he contemplated a voyage of circumnavigation of the world when the Polignac ministry came into power (1829), but he remained to fight the battle of constitutionalism. In his new organ, the *National*, he formulated the celebrated doctrine, *Le Roi règne et ne gouverne pas*; he drew up the protest of the journalists against the ordinances, and in an interview with Madame Adelaide, paved the way for the accession of Louis Philippe. Under the Orleanist régime he sat in the Chamber for Aix, and became Secretary-General of Finance. In the tribune he was at first a failure, but by adopting a familiar colloquial style, feathered with sarcasms, rapidly gained the ear of the house. Thiers was Minister of the

Interior in the Soult Cabinet of 1832, but exchanged to the department of Commerce and public Works (Dec., 1832—April, 1834). Under his administration the Triumphal Arch and Madeleine were completed, and the statue of Napoleon placed on the Vendôme Column. He was elected a member of the Academy in 1833. He was also responsible for the arrest of the Duchesse de Berri; and as Minister of the Interior, a post he assumed in 1834, suppressed insurrections in Lyons and Paris, and was in consequence bitterly reproached as a turncoat. In 1836 he formed his first ministry, in which he was President of the Council and Minister of Foreign Affairs, but it fell after five months, owing to the refusal of Louis Philippe to countenance active intervention in Spain on behalf of the regent Christina. During his tenure of office he had shown himself to be strongly protectionist. He was recalled to power in 1840, and began to bid against England for control of affairs in the East by supporting Mehemet Ali, but was completely foiled by Lord Palmerston's convention between the Sultan and the Four Powers—Great Britain, Austria, Prussia, and Russia. Thiers actually went so far as to call out the reserves, but the king refused to allow him to make a warlike speech on the opening of the Chambers; he resigned Oct. 29th, and was succeeded by Guizot, who was considered to have intrigued to bring about his fall. The chief incident of his administration had been the solemn removal of the ashes of Napoleon from St. Helena to Paris, and the consequent revival of the Napoleonic ideal. The moment was therefore exceedingly opportune for the publication of the two first volumes of Thiers' *Histoire du Consulat et de l'Empire*, in which he defended Imperialism, much as he had before defended the Republic. The book has the same merits and demerits as the *History of the Revolution*, the former being chiefly literary, the latter consisting in superficiality and an inability to weigh evidence; the journalist, in fact, supplants the historian. The last of the twenty volumes did not appear until 1862. In 1846 Thiers placed himself in active antagonism to Guizot, censuring his domestic policy as based on corruption, his management of foreign affairs as unpatriotic. Hence he remained in opposition to the end of the reign, until in the teeth of the revolution he was summoned by the king to form a Cabinet with Odillon Barrot (Feb. 24th). His refusal to have recourse to the military until after a delay of four-and-twenty hours, contributed materially to the overthrow of the Orleans dynasty. The Republic was proclaimed, and Thiers took his seat on the right of the Assembly. He combated socialism with all his might, publishing at this time *Du Droit de Propriété*, and approved of the presidency of Louis Napoleon, who flattered him by asking him to act as his minister. Gradually he saw that he had made a mistake, and tried

to put forward Changarnier against the President; *L'Empire est fait*, he exclaimed, in alarm. In consequence, on the night of the *coup d'état* he was arrested and banished, but was allowed to return to Paris in 1852. It was not until 1863 that he re-entered public life, spending the interval in writing his history, when he was returned to the Corps Législatif by the second circumscription of Paris, and became a member of the small Opposition. His attention was chiefly directed to foreign affairs. He disapproved of the Italian campaign on the somewhat cynical ground that France would be weaker from the creation of a united Italy; but he was justified in his condemnation of the Mexican expedition. "There is no blunder left for the Emperor to commit," he exclaimed. The defeat of Austria at Sadowa, and the evident possibility of a united Germany, were the subjects of his utmost alarm, and he continually declared that something must be done to restore the military prestige of France. He was opposed to the declaration of war against Germany in 1870, but only because he saw that the nation was unprepared for the struggle. Thiers refused to take part in the Government of National Defence, but patriotically consented to visit the courts of Europe on the desperate mission of obtaining help for France, and then vainly attempted, in concert with Jules Ferry, to arrange an armistice with Prince Bismarck. Paris fell. Thiers was returned to the Assembly at Bordeaux by twenty-six departments, and on Feb. 16th, 1871, was declared chief of the Executive Power of the French Republic, and it was agreed by the *Pacte de Bordeaux* that discussions as to forms of government must be postponed. He then went to Versailles to arrange the terms of the peace, and succeeded in so far softening the iron heart of the German Chancellor, who respected him as much as he scorned Jules Ferry, that by the terms of the treaty, although Alsace and Lorraine were lost, Belfort was allowed to remain French. The outbreak of the Commune was suppressed by the aid of Marshal MacMahon, but not before Thiers's house had been burnt to the ground, and then he set himself to pay off the indemnity as fast as possible, so that France might be freed from foreign occupation. To the spirit of the *Pacte de Bordeaux*, he remained loyal throughout. "The Republic," he declared, "divided France the least;" and in August, 1871, he accepted the title of President of the French Republic. "I am an old disciple of monarchy," he said, on Nov. 29th, "I am what is called a monarchist, who adopts the Republic for two reasons: because he has engaged himself, and because at present he practically cannot do anything else." The President's mistake was his complete identification of his short-lived ministries with himself by too frequent appearances in the tribune. He was conscious

that the monarchical majority, as soon as the indemnity was in a fair way to being paid off, would dismiss him "with not even the eight days which a lacquey gets," and after a defeat, resigned with great equanimity (May 24th, 1874). After his downfall he ceased to play much part in politics until just before his sudden death, when he came forth as a vigorous opponent of the royalist *Ministère de Combat* of the 16th of May. His loss, on the eve of a most critical election, was deeply deplored by the true friends of France; it may be doubted whether he would have materially aided the republican cause, which indeed was strengthened by the circumstance that at his death attention was naturally fixed upon the last and greatest part of his career. It is extremely difficult to pass a verdict upon Thiers. He has been called a place-hunter, and certainly his modifications of opinion were most remarkable; on the other hand, he made undoubted sacrifices to political principle. His foreign policy has been censured as immoral; unquestionably, it consisted in the aggrandisement of France at all costs, and part of the responsibility for the Franco-German War must be laid to his door. But his detractors will never be able to blind the eyes of posterity to the great fact that it was to Thiers that the French nation turned in the hour of her agony, and that her appeal was not in vain. He was hardly an orator, but probably said more good things than any Frenchman after Talleyrand. Perhaps the best of them was his estimate of his great opponent's policy, "M. Guizot croit à Dieu et au diable; et en passe outre."

Among the materials for a life of Thiers may be mentioned Francis Franck, *Vie de M. Thiers*; A. Laya, *Études Historiques sur la Vie privée, politique, et littéraire de M. A. Thiers*, and *Histoire populaire de M. A. Thiers*; N. W. Senior, *Conversations with M. Thiers*, M. Guizot, and other distinguished Persons during the Second Empire; Jules Simon, *Le Gouvernement de M. Thiers*; T. Juste, *M. Thiers*; *Quarterly Review*, vol. cxlvi.; *Discours Parlementaires de M. Thiers*, publiés par M. Calmon (1879); *Histoire de la Révolution du 4 Septembre et de l'Insurrection du 18 Mars*, M. Thiers's depositions before Commissions of Enquiry (1883). [L. C. S.]

Thirlwall, RIGHT REV. CONNOP, D.D. (b. 1797, d. 1875), historian and theologian, was the son of the Rev. Caspar Thirlwall, and was born in Stepney, where his father was lecturer of St. Dunstan's. In boyhood he displayed extraordinary precocity of intellect, as may be seen in a little volume called *Primitia*, consisting of essays and poems written in his twelfth year. His letters during his school-time at the Charterhouse are perhaps even more remarkable for mature thought and solidity of style. At Trinity College, Cambridge, he entered upon a most brilliant university career, being Craven scholar in his first year, and senior Chancellor's medallist in 1818. After travelling abroad, especially in Germany, he enrolled himself, much against

his will, at Lincoln's Inn, but devoted all his leisure to literature and philosophy. In 1825 he published a translation of Schleiermacher's *Essay on St. Luke*, which may be regarded as almost the first definite introduction of German theology into England, and brought Thirlwall into prominence amongst men of thought. At the same time, he also translated some of Tieck's stories, and became a member of the debating club, in his account of which, in the *Autobiography*, J. S. Mill gives the well-known estimate of Thirlwall's powers as the best speaker he had ever heard before or since. Weary of the law, he returned to Cambridge in 1827, and was ordained, intending to gain leisure for literary pursuits. He continued to reside at Cambridge, as a fellow of Trinity, till 1834, giving remarkable lectures on classical subjects and history, and contending for the Liberal side in all university questions, especially as to the admission of Dissenters to degrees. During the earlier years of this period, also, he was engaged, together with Julius Hare, in the translation of Niebuhr's *History of Rome*, through which the new methods of historical criticism first became familiar to English scholars. In 1834 he accepted the living of the little village of Kirby Underdale, in Yorkshire, where he composed the greater part of the *History of Greece* (1835-47), to which he owes his permanent place among historians and men of letters. By a strange coincidence, he and his old schoolfellow, Grote, were thus, unknown to each other, engaged upon the same task during the same years. Each humbly admitted the superiority of the other's work, and both histories are now recognised as the standard English authorities on the subject. In 1840 Lord Melbourne recommended Thirlwall for the See of St. David's, and a period of new and varied activity began. The bishop resided at Abergwilli, near Carmarthen, and soon learned to speak Welsh with the accuracy of a native. He now devoted himself to the superintendence of his diocese, never publishing anything more in the regular course of literature, though his triennial charges form most important contributions to the ecclesiastical history of thirty eventful years, and may perhaps still be regarded as theological text-books. They have been published entire, as two volumes of the *Remains, Literary and Theological* (1877), and deal with such subjects as *The Tractarian Controversy* (1842), *Dr. Newman on Development* (1848), *The Gorham Case* (1851), *Essays and Reviews* (1863), and *The Vatican Council* (1872). In the House of Lords he spoke seldom, but his speech in favour of the disestablishment of the Irish Church had great effect on the result. He was also one of the scholars appointed to take part in the revision of the Authorised Version of the Bible, and it was partly to secure more time for these labours

that he resigned his see in the year preceding his death.

Letters of Bishop Thirlwall, edited by Dean Perowne and the Rev. L. Stokes (1881); *Letters of Bishop Thirlwall*, edited by Dean Stanley (1881); *Edinburgh Review*, 1876, article by Dean Plumptre.

Thistlewood, ARTHUR (b. 1772, d. 1820), conspirator, was the son of a Lincolnshire farmer. In 1797 he became a lieutenant in the militia, married a lady of means, and by her speedy death became possessed of a fortune. Gambling and dissipation, however, speedily ruined him, and he began to take part in political agitation. In 1816 he was arrested as a leader in the Spa Fields riots, and kept for a while in prison. A further period of imprisonment was entailed by his sending a challenge to Lord Sidmouth, the Home Secretary. He resolved to have revenge, and in a garret in Cato Street hatched a conspiracy for the murder of several members of the Cabinet while at a dinner at Lord Harrowby's, and the establishment of a provisional government. The blow was to have been struck on Feb. 23rd, but on the same day the gang were apprehended, and Thistlewood, who killed one of the officers of the law, suffered as a traitor, with four others.

* **Thomas, ANNIE** (b. 1838), a popular novelist, was born at Aldborough, Suffolk, and began her literary career as a contributor to *London Society*. Among her novels we may mention *The Cross of Honour* (1863); *Denis Donne* (1864); *Walter Goring* (1866); *False Colours* (1869); *A Passion in Tatters* (1872); "*He Cometh Not*," *She Said* (1873); *No Alternative* (1874); *Blotted Out* (1876); *A London Season* (1879); *Fashion's Gay Mart* (1880); *Eyre of Blendon and Our Sex* (1881); *Best for Her*, *Allerton Towers*, and *Society's Puppets* (1882); *Friends and Lovers* and *Tenifer* (1883); *Kato Valiant* (1884); *No Medium* (1885). Her novels, which are written in a light and popular style, are much read, many of them having passed through several editions. In 1867 Miss Thomas was married to the Rev. Pender H. Cudlip.

* **Thomas, ARTHUR GORING** (b. 1851), composer, was born near Eastbourne, and after being educated at Haileybury School, and studying music for a time in Paris, he became a student at the Royal Academy of Music in London. At the Norwich Festival of 1881 his cantata of the *Sun-Worshippers* attracted much attention, and his opera of *Esmeralda*, produced at Covent Garden in 1883, enjoyed, perhaps, the greatest success of any recent operatic work, at all events by an English composer. It was repeated in the following year with great enthusiasm, and in 1885 was succeeded by *Nadeshda*, a great opera on Russian life and history. Mr. Thomas has also published several songs,

such as *Le Roi Henri* (1871) and *A Summer Night* (1881).

***Thomas, CHARLES LOUIS AMBROISE** (b. 1811), composer, was born at Metz, where his father was a teacher of music. Having already acquired considerable skill in music, especially on the piano, he entered the Conservatoire in Paris in 1828, where he won the first prizes for execution and counterpoint, so that he was enabled to study for three years in the chief towns of Italy. Having returned to Paris, he began his career as operatic composer in 1836, with *La Double Échelle*, a comic opera in one act. Several others of the same class followed, the most remarkable being *Le Panier Fleuri* (1839) and *Le Guerillero* (1842). After five years' retirement, he came forward in 1849 with *Le Caid*, a comic opera in three acts that achieved an extraordinary success. It was followed by *Raymond, ou le Secret de la Reine* (1851), *La Cour de Célémène* (1855), *Psyché* (1856), and *Le Carnaval de Venise* (1857). But for *Le Roman d'Elvire* (1860), there was now another pause of ten years, till, in 1867 and 1868, M. Thomas produced his two masterpieces, *Mignon* and *Hamlet*. Both these operas have been received with enthusiasm in all the principal theatres of Europe. In England *Mignon* is an especial favourite. On Auber's death, in 1871, it was evident that M. Ambroise Thomas was the only composer worthy to succeed him in the direction of the Paris Conservatoire of Music. He was accordingly at once elected to the position he now holds. Since then his most remarkable productions have been *Mina*, a comic opera (1875), and *Françoise de Rimini*, produced in 1882, but finished at an earlier date. His incidental music, composed for the adaptation of *Hamlet*, performed at the Comédie Française, was of great merit (1886). He has also written chamber music, and a few songs and Church choruses. He is a Member of the Institute.

Thompson, ELIZABETH. [BUTLER.]

***Thompson, SIR HENRY, F.R.C.S.** (b. 1820), surgeon, a native of Framlingham, Suffolk, was educated at University College, London, in the hospital of which he became, in 1853 assistant surgeon, in 1863 surgeon, and in 1866 professor of clinical surgery. In 1852, and again in 1860, he gained the Jacksonian prize of the Royal College of Surgeons. In 1863 he published *Practical Lithotomy and Lithotrixy*, and in 1867 was knighted, having meanwhile received several continental distinctions. Sir Henry has also studied painting, and has frequently exhibited at the Royal Academy. He is an advocate of total abstinence, alleging that alcohol is not only unnecessary, but actually harmful. Cremation, too, receives his support. Besides his medical works, he has published *A Catalogue of Blue and White Nankin Porcelain*, an illustrated account of his own collection (1878), and is understood

to be the author of two extremely clever novels of medical life, written under the pseudonym of "Pen Oliver," namely *Charley Kingston's Aunt* (1886), and *All But* (1886).

Thompson, THE REV. WILLIAM HEPPWORTH, D.D. (b. 1810, d. 1886), Master of Trinity College, Cambridge, was the son of a solicitor at York, and was educated privately, and at Trinity College, Cambridge, where he was elected scholar in 1830. In 1832 he took his degree as senior optime and fourth classic, and was Chancellor's medallist. He was elected a fellow of Trinity in 1834, and was for a time non-resident, taking school-work at Leicester, but returned to the college in the capacity of assistant tutor in 1837. In 1844 he was appointed tutor, and held that office until he was made Regius professor of Greek, with the accompanying canonry at Ely, in 1853. As a lecturer Thompson made a great reputation; and as a scholar, particularly as a student of Plato, he held a marked position. He was distinctly of the school of Thirlwall rather than that of Porson. The principal literary results of his studies are to be found in the *Transactions* of the Cambridge Philosophical Society, in his notes to Archer Butler's lectures on the *History of Greek Philosophy* (1856), and in his valuable editions of the *Gorgias* and *Phædrus* of Plato, published in 1871. On Whewell's death, in 1866, Dr. Thompson was appointed Master of Trinity. As such he played an important part in carrying out the changes recommended by the university commission respecting the election of fellows and the tenure of fellowships at Trinity. These reforms were adopted by Trinity in 1872, and were subsequently made the basis of the statutes of all the other colleges. When, however, Dr. Thompson presided over the meetings held in 1877-8 to consider further reforms, it was found that he had lost much of his ardour for change. He took great interest in the scholastic side of his college life, and was a good disciplinarian. He left a reputation behind him as a sayer of good things.

C. Trotter in *The Cambridge Review*, October 13th and 20th, 1886.

Thoms, WILLIAM JOHN (b. 1803, d. 1885), son of Mr. N. Thoms, secretary to the first commission of Revenue Inquiry, was privately educated. He then entered the Secretary's office at Chelsea Hospital, and while there contributed to the *Foreign Quarterly Review* among other periodicals. In 1838 he became secretary to the Camden Society, which position he held until 1873, and in the same year (1838) was chosen a Fellow of the Society of Antiquaries. During the years 1845-82 he was deputy librarian in the House of Lords. In 1828 Mr. Thoms published *A Collection of Early Prose Romances*; in 1834 *Lays and Legends of Various Nations*; in 1838 *The Book of the*

Court, and in 1865 *Three Notelets on Shakespeare*. He was the editor of *Anecdotes and Traditions* (1839), *Caxton's Reynard the Fox* (1842, etc.), and *Stow's Survey of London* (1842). He was the originator of *Notes and Queries*, and for many years editor of the paper (1849-73). In 1873 he published his last work, *The Longevity of Man*, in which he demolished many of the supposed instances of people living to the age of a hundred.

Thomson, ALLEN, F.R.S., D.C.L., LL.D. (b. 1809, d. 1884), son of Dr. John Thomson, professor of surgery in the University of Edinburgh, was educated in the High School, and at the university of his native city, completing his studies at Paris. Graduating M.D. in 1830, he thereupon began to give extramural lectures. In 1839 he was appointed to the anatomy Chair at Marischal College, Aberdeen; then in 1842 to the same Chair in the Edinburgh Institute of Medicine; and in 1848 to the Glasgow University Anatomy Chair. In 1877 he gave up his professional work, and in the same year was president of the British Association. The special field of Dr. Thomson's researches was embryology, and though his published writings are not numerous, they are among the best work in that department. He contributed to Todd's *Cyclopædia of Anatomy*, and the articles there on *Circulation*, *Generation*, and *Ovum* show the results of his own investigations. In 1847 he published *Outlines of Physiology*, which he left unfinished. He was one of the editors of several editions of Quain's *Anatomy*, contributed papers to British and Foreign medical publications, and to the Royal Societies of Edinburgh and London. Dr. Thomson adopted Darwin's views of development, and did much by his able expositions to his pupils to further their acceptance. He was a fellow of the Royal Societies of Edinburgh and London, LL.D. of Edinburgh and Glasgow, and D.C.L. of Oxford.

Thomson, SIR CHARLES WYVILLE, F.R.S. (b. 1830, d. 1882), man of science, a native of Linlithgowshire, was educated at Merchiston Castle School, and the University of Edinburgh. His father was Mr. Andrew Thomson, a surgeon in the service of the East India Company. In 1850 Sir Charles became a lecturer on botany at King's College, Aberdeen. In 1853 he succeeded Professor William Hincks to the Natural History Chair in Queen's College, Cork, and in the following year he became professor of mineralogy and geology in Queen's College, Belfast, where he was mainly instrumental in founding the museum in connection with that college. In 1867 he was vice-president of the jury on Raw Products at the Paris Exhibition. In the dredging expeditions of the *Lightning* and *Porcupine* in 1868 and 1869 he took part; and afterwards gave to the world the substance of his discoveries with regard to the fauna of the Atlantic in

The Depths of the Sea (1869). In 1869 he became a fellow of the Royal Society, and in 1870 professor of natural history in the University of Edinburgh, an appointment which he resigned in December, 1881. In 1872 he was appointed the scientific chief of the *Challenger* expedition, commanded by Sir G. S. Nares. The exploring party was absent from England for three and a half years, during which time 68,890 miles were surveyed, and systematic observations made at 362 stations in the open sea. The great fact established by Professor Thomson was the existence of animal life at great depths, and he discovered many new species. On his return he was knighted, and received the Royal Society's gold medal, and was entrusted by the Government with the task of describing and drawing up the report on the natural history specimens collected during the expedition. In 1877 he delivered the Rede lecture at Cambridge, and in 1878 he presided over the Geographical Section of the British Association at Dublin. Sir Wyville Thomson published a preliminary account of the *Challenger* expedition, *The Voyage of the Challenger—the Atlantic* (1876-8), but the greater work of the complete record of the expedition was left unfinished.

Nature, 1882.

Thomson, JAMES (b. 1834, d. 1882), poet, was born at Port Glasgow, and brought up at the Caledonian Orphan Asylum, both parents having died whilst he was very young. Upon leaving school he adopted the profession of schoolmaster in the army, and though such work was naturally extremely distasteful to him, he performed his scholastic duties thoroughly and conscientiously till 1862, when he resigned his post, and became a fellow-clerk with his friend, Mr. Charles Bradlaugh, who was then acting as manager to a solicitor named Levison. In 1860 he became a contributor to the *National Reformer*, then just established, and in its pages were published *The Dead Year*, *To our Ladies of Death*, and his best known poem, *The City of Dreadful Night* (1874), which was at once recognised by competent judges as a work of genius, and was highly praised by George Eliot, Mr. W. M. Rossetti, Oliver Madox Brown, and other eminent critics. In the following year he seceded from the *National Reformer*, and began to contribute to the periodical *Cope's Tobacco Plant*. Other works of his which deserve mention are:—*Tasso to Leonora* (1856), *The Doom of a City* (written in 1857), *Sunday at Hampstead* (1863), *Sunday up the River* (1868), *Vane's Story* (1880), *A Voice from the Nile* (1881), *Insomnia* (1882). His verse is full of brilliancy and vigour, and though his tone is generally that of profound despair, here and there we find touches of joyous and graceful humour. Shelley may be said to have been his model, though he did not servilely follow him as an

imitator; for the poet Heine he cherished profound admiration. The Secularists claim him as one of them; but though much in his writings, more especially in *The Story of a Famous Old Jewish Firm* (1876), shows hostility and bitterness towards Christianity, still there is much also to be found opposed to the Secularist doctrines. Much has been said about his Pessimism, but his was not the Pessimism of Schopenhauer, but rather the personal weariness of life, to which the loss by early death of the woman he loved is said to have contributed.

Bertram Dobell, *Memoir of the late James Thomson.*

***Thomson, THE RIGHT HON. AND MOST REVEREND WILLIAM, D.D.,** Lord Archbishop of York (b. 1819), was educated at Shrewsbury School, under Dr. Butler, and at Queen's College, Oxford. Graduating in 1840, he two years later entered holy orders, became curate first of St. Nicholas's, Guildford, and then at Cuddesdon, whence he returned to his college as tutor, a position that he occupied for over eight years, becoming in that period dean and bursar successively. In 1848, and in 1856, he was appointed select preacher to the university, and in 1853 Bampton lecturer, his subject being *The Atoning Work of Christ*. In 1855 he married Miss Zoë Skene, granddaughter of James Skene, of Rubilaw, to whom Sir Walter Scott dedicated the fourth canto of *Marmion*. In the same year he became chaplain to the Queen, was appointed to the living of All Souls', Langham Place, and at the unusually early age of thirty-six was elected to the position of provost of Queen's College, Oxford. In 1858 he was elected to the preachment of Lincoln's Inn; in 1861 became Bishop of Gloucester and Bristol; and in 1862 he succeeded Dr. Longley, who had been translated to Canterbury, as Archbishop of York. Dr. Thomson, during his connection with Oxford, was an active advocate of university reform, and in 1859 published a pamphlet, *An Open College Best for All*, in which he contended for the abolition of all preferences and local restriction in regard to the university endowments. Among his works, perhaps the best known is *An Outline of the Necessary Laws of Thought*, a logical treatise (1848). He has also published collections of sermons, such as *Sermons preached in Lincoln's Inn Chapel* (1861), *Life in the Light of God's Word* (1868), *The Limits of Philosophical Enquiry* (1868), *Word, Work, and Will: Collected Papers* (1879), and many single sermons and charges. He also edited *Aids to Faith* (1861, etc.), was one of the projectors of the *Speaker's Commentary to the New Testament*, and a contributor to Dr. Smith's *Dictionary of the Bible*. Of Church questions Dr. Thomson has always taken liberal views. He conducted the Public Worship Bill through committee in the House of Lords, his speeches on ecclesiastical questions,

such as the Burials Bill, have always commanded marked attention, and he is an earnest supporter of the temperance movement.

***Thomson, SIR WILLIAM, F.R.S., D.C.L., LL.D.** (b. June 25th, 1824), natural philosopher, the son of James Thomson, LL.D., late professor of mathematics at Glasgow University, was born at Belfast. At the age of eleven he entered Glasgow University, and having studied there for the usual period, matriculated at Peterhouse, Cambridge, where he was elected to a fellowship in 1845, having graduated as second wrangler and first Smith's prizeman. He resigned his fellowship on his marriage in 1852, but was re-elected in 1872. He went to Paris to study chemistry under Regnault. In 1846, at the age of twenty-two, he was elected to the chair of natural philosophy in Glasgow University, in succession to Dr. Meikleham, an appointment he still holds. Already Professor Thomson was a noted figure in the world of science. At the age of seventeen he contributed a remarkable paper on the *Uniform Motion of Heat in Homogeneous Uniform Bodies* to the *Cambridge Mathematical Journal*, and another in 1842 on *The Linear Motion of Heat*. In 1845 there appeared in Liouville's *Journal de Mathématiques* a paper on the *Elementary Laws of Statical Electricity*, in which he supported Coulomb's theory of the fundamental laws of electric attraction and repulsion in opposition to Sir W. Snow Harris and Faraday. From 1846 to 1861 he edited the *Cambridge and Dublin Mathematical Journal*—for so he re-christened the paper—and contributed to it some very important papers on *The Statement of Principles on which the Mathematical Theory is Propounded, and Geometrical Investigations with Reference to the Distribution of Electricity on Spherical Conductors*. About the same time he developed the theory of *Electrical Images* in a memoir contributed to Liouville's *Journal*. His *Papers on Electrostatics and Magnetism* were republished in 1872. His researches led him to invent several wonderful instruments, the quadrant electrometer, the portable electrometer, and the absolute electrometer. Almost as important is his work on thermo-dynamics. His discoveries were communicated in a series of papers to the Royal Society of Edinburgh, the first of which was written in 1849. It is a critical account of Carnot's memoir of 1824, *Réflexions sur la Puissance Motrice du Feu*, and embodies the results of the discoveries of Dr. Joule (q.v.) on the mechanical equivalent of heat. The two friends, working together, subsequently showed how to define a thermo-dynamic scale of temperature with which air thermometers and other gas thermometers agree as closely as they agree with one another. These investigations led him to the discovery of the theory of "dissipation of energy." It was announced in a paper on the *Secular Cooling of the Earth*, read at the

Glasgow Geological Institute in 1852. It argued that "the earth was a fiery body, like the sun, and that it has been gradually cooling down to the present day;" further, that the time will arrive when it will become cool to the core, and life will cease to be found because of the lowness of the temperature. He supposes that the light and heat of the sun originated from the arrested motion of cosmical bodies that have fallen into it; all planetary matter is gravitating towards the sun. In 1855 he delivered the Bakerian lecture on the *Electrodynamics of Qualities of Metals*, in which he announced his discovery of the "electric convention of heat," that is, that a current flowing in an unequally heated iron bar carries heat from the cold parts to the hot parts, while in copper the current has an equalising effect upon the distribution of temperature throughout. These important researches were followed by calculations on the size of atoms, the determination of the earth's rigidity, and the promulgation of the vortex-atom theory. He is, however, best known to the general public for his work in connection with submarine telegraphy. By his "law of squares" he established the fact that in cables similar in lateral dimensions the retardation of signals is proportional to the square of the lengths; and invented the "mirror galvanometer," by means of which the messages sent along the cable of 1858 were read, besides a regulator and other important patents. The cable of 1858 failed, but it had showed the possibility of success, and although the cable of 1865 broke, Thomson's measures for "storing and playing out" prevented a repetition of the catastrophe in 1866, and the great task was completed. Thomson received the honour of knighthood and became D.C.L. Oxford, and LL.D. Cambridge and Edinburgh. He afterwards invented the beautiful "siphon recorder" for recording signals on long telegraphic lines. He was president of the British Association at the Edinburgh meeting of 1871. Sir William Thomson is a skilful navigator, and published in 1876 some valuable *Tables for Facilitating the Use of Sumner's Method at Sea*. He has also invented a new form of mariner's compass, and an apparatus for deep-sea dredging. In conjunction with Professor Tait (q.v.) he published the commencement of a monumental treatise on *Natural Philosophy* in 1867, of which a second edition appeared in 1879. In 1880 he edited his brother's, Professor James Thomson's, *Treatise on Arithmetic*. Sir William Thomson's *Mathematical and Physical Papers* began to appear in collected form in 1882. The following estimate of his talents was contributed to *Nature* by Professor Helmholtz:—"His particular merit, in my opinion, consists in his treatment of mathematical physics. He has striven with great consistency to purify the mathematical theory from hypothetical assumptions which

are not pure expressions of facts. In this way he has done very much to destroy the old unnatural separation between experimental and mathematical physics, and to reduce the latter to a precise and pure expression of the laws of phenomena. . . . His electrical instruments and methods of observation, by which he has rendered, amongst other things, electrical phenomena as precisely measurable as magnetic or galvanic forces, give the most striking illustration of how much can be gained for practical purposes by a close insight into theoretical questions; and his papers on thermo-dynamics, and the experimental confirmations of several most surprising theoretical conclusions deduced from Carnot's axiom, point in the same direction."

Nature, vol. xiv.; *Practical Magazine*, vol. vi.; *Dublin University Magazine*, vol. lxxix.

Thoreau, HENRY DAVID (b. 1817, d. 1862), essayist, was born at Concord, Mass., where his father was a small farmer and pencil-maker. He studied at Cambridge, near Boston, and graduated there in 1837, after which he returned to Concord, became intimate with Emerson and Margaret Fuller, and was soon a characteristic member of the new Transcendental School. Between 1837 and 1840 he wrote several short essays, generally descriptive of American scenery, and he became a regular contributor to the *Dial* from 1840 to 1844. During much of this time he had been living in Emerson's house, but in 1845 he built himself a wooden hut in the woods by Walden Pool, and continued to live there, a cultured hermit, for two and a half years, interrupted only by visits to friends and a brief imprisonment for neglect of taxes. *Walden, or Life in the Woods*, his account of this sojourn, was published in 1854, and is the most widely popular of his works. He also wrote *The Maine Woods* and *A Week on the Concord and Merrimack Rivers* (1849). In 1859 he became acquainted with John Brown (q.v.), and immediately after his death he delivered a lecture in his defence, *A Plea for Captain John Brown* (1859). The remainder of his life was, in fact, given up to the Liberatorist cause. Thoreau combined in himself high culture with the primitive discernment of a savage. He came very near to nature. Nothing escaped his notice, and over birds and beasts and fishes his influence was almost magical. He knew also the ways of the water and the nature of every tree. He had simplified life till he had realised the fine savage in himself. And thus he lives in Emerson's description (*Thoreau*) as perhaps the most interesting figure of all the Transcendental circle.

F. B. Sanborn, *H. D. Thoreau* (1893).

Thornbury, GEORGE WALTER (b. 1828, d. 1876), miscellaneous writer, was the son of a London solicitor, and for a short time studied painting, but eventually took up literature as

a profession. He wrote in nearly every conceivable style; poetry, fiction, biography, critical and antiquarian works being produced with great rapidity by his prolific pen. Among his works may be mentioned *Lays and Legends of the New World* (1851), *Monarchs of the Main* (1855), *Shakespeare's England in the Reign of Elizabeth* (1856), *Songs of the Cavaliers and Roundheads* (1857), a valuable *Life of Turner* (1861), *Legendary and Historic Ballads* (1873), two volumes of *Old and New London* (1873 and 1874), and a novel, *Wildfire* (1874).

* **Thornton**, THE RIGHT HON. SIR EDWARD, G.C.B., D.C.L., LL.D. (b. 1817), diplomatist, was educated at Trinity College, Cambridge (B.A. as Senior Optime 1840). In 1842 he entered the diplomatic service, and after being attached to the mission at Turin, was employed in various capacities in South America, becoming envoy extraordinary and minister plenipotentiary to the Emperor of Brazil (1865-67). From 1867 to 1881 he was envoy extraordinary and minister plenipotentiary to the United States, and was Special Commissioner to represent Great Britain at the Centennial Exhibition at Philadelphia. From 1881 to 1884 he represented England at the Court of St. Petersburg, and was then transferred to the Porte, where he displayed great diplomatic skill during the crisis initiated by the unification of the Bulgarias under Prince Alexander. This appointment he resigned in 1886. He became a member of the Privy Council in 1871, and a G.C.B. in 1883, and is D.C.L. Oxford, and LL.D. Harvard.

* **Thornycroft**, HAMO, A.R.A. (b. March 9th, 1850), sculptor, the son of distinguished sculptors (v.i.), was born in London, and educated at Macclesfield Grammar School, and University College School, London. He studied art at the Royal Academy School, and in the Elgin room at the British Museum, and in December, 1870, bore off the silver medal in the antique school. He first came before the public in the Royal Academy exhibition of 1871 with a bust of the late Dr. Sharpey, professor of physiology at University College. In the same year he visited Italy. During 1872 he was aiding his father in the Park Lane fountain. A bronze statuette of *Lord Mayo* was his most notable production in 1874. In the Academy of 1876 Mr. Thornycroft was well represented by *A Warrior bearing a Wounded Youth from the Field of Battle*, which had won the gold medal of the council in the previous year. In 1877 came the notable *Lot's Wife*; and *Stepping Stones*, an early work, only then executed in marble in 1879. *Artemis*, and the statuette, *A Youth Putting the Stone* (1880), were fine examples of the imaginative side of art, and deservedly gained for their author the associateship of the Royal Academy in January, 1881. The former was again exhibited, in marble, in 1882. His chief contribution to the exhibition of that

year was *Tewcer*, a nude statue of heroic size, which was bought for the nation out of the Chantry Fund. *The Earl of Beaconsfield* followed in 1882; the imaginative *Sonata of Beethoven* in 1883; *The Mower* in 1884, the equestrian statue of *Edward I.* in 1885, and *The Sower* in 1886. In the same year he received the second class medal for sculpture at the Antwerp Exhibition, and was awarded the gold medal at the Berlin Exhibition of 1886.

The Magazine of Art, vol. iv. (November, 1880—October, 1881).

* **Thornycroft**, MARY (b. 1814), the daughter of John Francis the sculptor, followed her father's profession, and began to exhibit at the Royal Academy at an early age. In 1840 she married Mr. Thornycroft, one of her father's pupils, and afterwards a sculptor of note, and then spent three years in Rome, where she formed the acquaintance of the great sculptors Gibson and Thorwaldsen. On her return to England she executed, by the Queen's command, some admirable statues of the Royal children: the Princess Royal, the Prince of Wales, Princess Alice, and Prince Alfred. They were conceived in the character of *The Four Seasons*, and were afterwards exhibited at the Royal Academy. Her graceful *Skippping Girl* attracted much attention at the Universal Exhibition of 1855. After that date Mrs. Thornycroft chiefly confined herself to portraiture; and among her numerous creations, all of which possess merit, may be mentioned the statues of *Princess Beatrice* (1861); *The Princess of Wales* (1863); *Three Sisters* (1865); *The Princess Louise* (1871); *Princess Christian and Princess Louise* (1875); and *The Duchess of Edinburgh* (1877).

Thorwaldsen, ALBERT BERTEL (b. 1770, d. 1844), the great Danish sculptor, was of Icelandic origin. His father was a drunken carver of ship and figure-heads, and it was intended that his son should follow the same calling. The child's talent soon, however, demonstrated itself, and he was put to study at the free school of the Danish Academy, where he made rapid progress, although he received no other sort of education, and began to study the rudiments of his own language for the first time at the age of thirty-five. On his arrival in Italy, whither he was sent in 1796 by the Academy after having gained the gold medal, he was quite unacquainted with the Italian language. Notwithstanding this, his artistic nature enabled him to receive the fertilising influence of the unparalleled masterpieces he now saw, and he said of himself, "I was born on March 8th, 1797 (the date of his arrival in Rome): up to that time I did not exist." Imbued with the art teachings of Winckelmann, he set to work to make numerous copies of classical models, and attracted the attention of Zoëga, the Danish art critic. In 1798 he sent to Copenhagen his first

independent work, *Bacchus and Ariadne*; but, despite the great strides he had made in art, he was, under stress of poverty, on the point of leaving Rome in 1802, when the English banker, Mr. Hope, entering his studio, saw his *Jason*, which had already excited the admiration of Canova, ordered a copy in marble, and thus enabled the artist to remain where alone his genius could find adequate expression. His success was now rapid, and perhaps one of its best proofs is the fact that it was not until 1828 that the order which had been the turning-point in his career was completed. Orders were showered in from all sides, and during the ensuing years some of his greatest masterpieces were executed—the famous *Venus with the Apple*, *Ganymede and the Eagle*, the *Adonis* for the Prince of Bavaria, *Hector and Paris*, *A Genio Lumen*, *Amor on a Lion*, *Amor wounded by a Bee*, and in 1812 his *Entry of Alexander into Babylon*, executed for the Quirinal in honour of Napoleon's anticipated visit, proclaimed him without a rival in groups of sculpture. In 1819, after repeated entreaties, he paid a visit to his native country, where he was received with wild enthusiasm, and undertook, amongst other things, the statues of Christ and the twelve Apostles for the Frue Kirke at Copenhagen. In 1820 he returned to Rome, visiting on the way Berlin, Dresden, Warsaw, where Alexander I. sat to him, and Vienna. Despite the jealousy displayed towards him as a Protestant and a foreigner, he was selected by Cardinal Consalvi to execute the monument to Pius VII. erected in St. Peter's (1831), and after having been chosen a member of all the principal art schools in Europe, he was elected as the three years' president of the Academy of St. Luke at Rome. In 1837 he returned finally to Denmark, where his countrymen received him with more than royal honours, and continued to treat him with almost idolatrous distinction until his sudden death in 1844. After providing for his natural daughter, Thorwaldsen devoted his fortune to the erection at Copenhagen, as a bequest to his country, of a museum in which originals or copies of all his works were to be assembled, and his own remains to be laid. Besides those already mentioned, a few of the most important of the 400 and odd works of his conception may be mentioned the beautiful medallions *Night and Morning* and *The Abduction of Briseis*; the equestrian statue of the *Emperor Alexander*; the statue of *Prince Poniatowski*; and the *Dying Lion*, hewn out of rock at Lucerne, in commemoration of the Swiss Guards who fell on Aug. 10th, 1793.

Thiele's *Den Danske Billedhugger B. T. og hans Vaerker*, with engravings of all his works; E. Plon, *Thorwaldsen, his Life and Works*, translated by Mrs. Cashel Hoey; Barnard, *The Life of Thorwaldsen*.

Thurlow, THE RIGHT HON. EDWARD, BARON (b. 1732, d. 1806), Lord Chancellor of

Great Britain, was the son of a Suffolk clergyman, and was educated at Cambridge, from which he was expelled for disorderly conduct. After his being called to the bar in 1754 he made rapid progress in his profession, becoming Attorney-general in 1771. A steady supporter of the policy of Lord North, he gained the confidence of George III., and became Lord Chancellor with a peerage in 1778. With the exception of a short interval in 1783, he held the Great Seal till 1792 when he was removed at the request of Pitt. His career thus lies wholly outside the century, for he retired to Brighton, where, after several years of obscurity, he died in 1806.

Campbell's *Lives of the Chancellors*.

Ticknor, GEORGE, LL.B. (b. 1807, d. 1871), American man of letters, was a native of Boston, graduated at Dartmouth College, and was called to the bar. He soon abandoned that profession and travelled in Europe. On his return to America he was appointed professor of modern languages at Harvard (1819), but resigned that post in 1834. In 1849 he published his *History of Spanish Literature*, a valuable work upon which his reputation mainly rests. His *Life of Prescott* (1864) is a sympathetic account of a kindred spirit. Ticknor knew all the celebrities of Europe, and was a man of great integrity.

Hillard, *Life, Letters, and Journals of George Ticknor* (1878).

Tidemand, ADOLPHUS (b. 1816, d. 1876), Norwegian painter, was born at Mandel, and studied art at the Copenhagen and Düsseldorf Academies. On his return to Norway he gained a high reputation as a painter of landscape and *genre*. He was appointed painter to the crown, and employed to decorate the royal castle of Oscarshall, near Christiania. Besides being a household word in his own country, Tidemand gained a European reputation by his contributions to the great exhibitions. To that of 1855 he sent *Funerals in the Country: Norway*, which gained a first-class medal, and to that of 1867, *A Strange Combat in Norway*, and *The Administration of the Sacraments*. His last picture was *The Foundation of the Town of Christiania* (1876), painted for the King of Sweden.

Tieck, JOHANN LUDWIG (b. 1773, d. 1853), the poet and novelist, was born in Berlin, and after studying at Halle and Göttingen, began his literary career in 1795 under the superintendence of the old publisher Nicolai. In 1796 he published *Abdullah*, *William Lovell*, and *Peter Leberrecht*, three novels of little value, *William Lovell*, an imaginary picture of English life, being perhaps the best. But next year *Peter Leberrecht's Fairy Tales* appeared, and Tieck at once became a popular author. After a short residence in Hamburg he settled in Jena at the end of the century, and attached himself to Novalis and the

Schlegels. He was soon regarded as the living ensample of the Romantic School, and carried out in art what the Schlegels preached in theory. His dramas, built on the ancient legends, *St. Genovera* (1800) and *The Emperor Octavian* (1804), are true types of romanticism; but still more mediæval and mysterious are the *Tales* by which he is best known. Most of these have been translated into English; *The Fair-haired Eckbert*, *The Runenberg*, *The Trusty Eckart*, and *The Elves*, by Carlyle (*German Romance*, 1827), and these four may be taken as fair examples of Tieck at his best. We find in them all the romantic elements—enchanted woods, pilgrims, monks, knights and maidens. Tieck was also the satirist of the school, and in *Puss in Boots* (*Der Gesticelte Kater*) and *Topsy Turvy* (*Die Verkehrte Welt*) he was thought to have laid on the lash for his masters very smartly. Perhaps the highest service, however, which he did to literature at Jena, was his admirable translation of *Don Quixote* (1799–1801). In 1805 he visited Italy, and after his return wandered from one town of Germany to another, staying longest in Munich (1808–11) and Tübingen, continually producing new dramas and tales, most of which were included under the common title of *Phantasms*, a series beginning in 1812. In 1817–18 he was in London, and in 1819 was appointed director of the theatre at Dresden. With his residence there, which lasted till he was summoned to Berlin by Frederick William IV. in 1840, a new epoch began, and his remaining works, such as *The Revolt in the Cevennes* (1826), *The Poet's Life*, an account of Shakespeare and his times (1828), *Ferner the Genius* (1831), and *Vittoria Accorombona* (1840), have the tone of a sensible but dullish man of the world. In 1825 he published the complete translation of *Shakespeare* that had been begun by A. W. Schlegel, and he also edited two volumes of old English and old German plays. In his peaceful old age in Berlin he enjoyed the friendship of most of the distinguished men of the new generation.

Carlyle's *Essay on Tieck* (1827); Heine's *Romantische Schule*, part ii.

Tierney, GEORGE (b. 1761, d. 1830), statesman, the son of a merchant, was of Irish descent, though born at Gibraltar. Educated at Eton, and at Peterhouse, Cambridge, he was intended for the bar, but soon threw up the legal profession for a public career. In 1796 he entered Parliament as member for Southwark; and joining the Whig party, became conspicuous in debate, and was one of Pitt's most powerful antagonists. In 1796 he was spoken of by Pitt in language that he thought of an insulting character, and thereupon called Pitt out. The meeting took place on Putney Heath. Both parties, however, came out of the fray uninjured. In 1801 he became treasurer of the

navy under Addington, and a member of the Privy Council. Rejected by the constituency of Southwark in 1806, he was returned by Athlone, afterwards by Bandon Bridge, Appleby, and Knaresborough. In the government of Fox and Grenville (1806) he held the position of Irish secretary, and then of President of the Board of Control, resigning with the rest of the ministry in 1807. He in 1817 became leader of the Opposition in the House of Commons, and on the formation of the Canning ministry in 1827 was appointed Master of the Mint. He was an authority on questions of finance, and for many years brought forward a series of resolutions in opposition to the Chancellor of the Exchequer's Budget. Tierney consistently supported Whitbread in his hostile attitude to the war with France, though he did not refuse to join in the vote of thanks to Nelson on account of the battle of the Nile. He retired with Lord Goderich in 1828, leaving behind him the reputation of one of the best speakers of his day, his *forte* being an easy delivery and pleasant conversational style. Such a reputation, however, is naturally of an evanescent character, and Tierney's claims to solid statesmanship were very limited. He published *The Real Situation of the East India Company considered in Reference to their Rights and Privileges* (1787).

Tilden, SAMUEL JONES (b. 1814, d. 1886), son of Elam Tilden, farmer and merchant, entered Yale College, Connecticut, in 1833, but graduated at the University of New York. In 1841, having taken up the legal profession, he was called to the bar, and began to practise in New York. He became in 1844 editor of the *Morning News*, a paper started to advocate the election of Polk as president. In 1845 he was elected to the New York Assembly, was a delegate to the State Constitutional Convention of 1846, and again to that of 1867. In 1866 he became chairman of the Democratic State Convention. He took a leading part in exposing the "Tammany Ring" (1871); and it was his analysis of the Broadway Bank accounts that showed how the members of the Ring shared the public money, and that provided the evidence for their conviction. Returned to the General Assembly, 1872, he was in 1874 elected Governor of New York, and soon distinguished himself again by overthrowing the "Canal Ring." In 1876 he was Democratic candidate for the presidency, but was defeated by the Republican candidate, R. B. Hayes, by one vote only, owing to a double return by three states. Fraud had evidently been employed, and public opinion was decidedly against the Republicans; but the disputed votes were given against Mr. Tilden. He soon after retired from public life.

Timbs, JOHN, F.S.A. (b. 1801, d. 1875), miscellaneous writer, was a native of London,

and was educated at Hemel Hempstead. He became an assistant in a shop at Dorking, and thence, in 1820, sent to the *Monthly Magazine* a series of papers entitled *A Picturesque Promenade round Dorking*. His long and active literary career witnessed the publication of some 150 volumes, among which were *Lives of Wits and Humorists*, *London Clubs and Club Life*, and the *Romance of London*. He edited the *Mirror* (1827-38), and from 1842-58 was working editor of the *Illustrated London News*.

Tischendorf, LOBEGOTT FRIEDRICH CONSTANTIN VON (b. 1815, d. 1874), Biblical scholar, was born in Lengenfeld, in the Saxon Voigtland. After studying at Leipzig he became a *privat-docent* there in 1839, was appointed professor-extraordinary of theology in 1845, and ordinary professor in 1859. Tischendorf made three journeys to the East in search of materials for his great work, a revised text of the New Testament, and on the third occasion (1859) returned with a valuable Greek Testament of the fourth century. His *Novum Testamentum Triglotum, Græce, Latine, Germanice*, was published in 1854 and 1865, and his edition of the *Septuagint* in 1840. They are both classics. The remainder of his works consist chiefly in editions of Biblical texts, such as the *Evangelia Apocrypha* (1853) and the *Codex Sinaiticus* (1854).

* **Tisza**, KOLOMAN (b. 1830), Hungarian statesman, was born at Geszt, and on the outbreak of the revolution of 1848 had just become a clerk of the Ministry of Public Instruction. He spent the next few years in travel, and in 1859 came forward as a champion of Hungarian Protestantism. In 1860 he was returned to the Hungarian Chamber, and became leader of the Left Centre. His followers effected a fusion with Deák's party, and in 1875 M. Tisza became Minister of the Interior and President of the Hungarian Cabinet. He displayed great financial skill, and supported Count Andrássy's foreign policy. For a few weeks during 1878 he was out of office in consequence of financial complications resulting from the occupation of Bosnia and Herzegovina by Austria, but resumed it before the meeting of the Hungarian Parliament, and during the following years kept in power through his great powers of conciliation and his skill in the management of the somewhat turbulent chamber. In October, 1886, in answer to interpellations, he made an important statement of the intention of the Austro-Hungarian monarchy to resist any infraction of the Treaty of Berlin, and of her determination to abide by the German alliance.

Tite, SIR WILLIAM (b. 1802, d. 1874), architect, became a pupil of Laing, the architect of the Custom House. His first

great work was the Scottish Church in Regent's Square, Gray's Inn Road, and he was also part architect with Cockerell of the London and Westminster Bank. His name is, however, chiefly associated with the Royal Exchange, completed in 1844. From 1855 to 1873 Tite represented Bath in the House of Commons, and was knighted in 1869.

Titien's, or **Tietjens**, THERESA (b. 1834, d. 1877), operatic singer, was a native of Hamburg, and belonged to the upper mercantile class. Introduced to Mme. Kornet, the wife of the director of the Stadt Theatre of her native town, she received a little musical training, and in 1848 made her appearance in Auber's opera, *Le Maçon*. After overcoming the reluctance of her mother she made her professional *début* at Altona as Agatha in *Der Freischütz*, and was received with great enthusiasm. In 1849 she sang at Frankfurt, and three years afterwards was engaged at Vienna, where she made an extraordinary impression in the part of Mathilde in *William Tell*. In the spring of 1858 she made her first appearance in London as Valentine in *Les Huguenots*, and her Viennese engagement coming to an end she was for many years *prima donna assoluta* at Her Majesty's. Her voice, a soprano of great volume and purity, combined with her dignified acting, made her without a rival in parts like Norma, Semiramide, Medea, and Fidelio. Her Margarita, introduced to London audiences in 1861, was a splendid performance. Titien's was equally great in oratorio, upon which she entered in 1859, when she sang in the *Creation* in the Crystal Palace, and it was for her that Sir Julius Benedict wrote his *Saint Cecilia*, *Saint Peter*, and *Richard Cœur-de-Lion*. She made a successful concert tour in the United States in 1875. Her last appearance was on May 19th, 1877, in *Il Trovatore*; her last great creation was the rôle of Ortrud in Wagner's *Lohengrin* (1875). Mlle. Titien's was not only the greatest artist of her time, but a noble woman, and was sincerely regretted by all who knew her.

Mrs. Cachel Hoey in *Belgravia*, vol. xiv.

Tocqueville, ALEXIS CHARLES HENRI CLÉREL DE (b. 1805, d. 1859), French politician and political philosopher, a native of Verneuil, in the department of Seine-et-Oise, was descended from an old family, the Clérels, proprietors of Tocqueville, in Normandy. His mother was a granddaughter of Malesherbes. He was educated at the College of Metz, then studied law, and in 1825 was called to the bar. He thereafter, in 1827, received an appointment as magistrate at Versailles, which he resigned in 1831 to proceed, in company with his friend Gustave de Beaumont, to America, to examine the penitentiary system there. The result of this was *Du Système Pénitentiaire aux États-Unis*, published in 1833, and *De la Démocratie en*

Amérique, published in 1835-40. In 1839 he was returned to the Chamber of Deputies by the department of Manche. In the Chamber he proposed the abolition of slavery, and was an earnest advocate of reforms in criminal law and prison discipline. After the revolution in 1848, he was returned to the National Assembly by the department of Manche, and voted for the banishment of the House of Orleans. After acting as vice-president of the Committee of Public Instruction, and being a member of the committee on the constitution, he became in 1849 Minister of Foreign Affairs. This post he held for only five months, resigning with the other members of the ministry at the end of Oct., 1849. After the *coup d'état* of 1851, for his opposition to which he was thrown into prison, he took himself to 'Tocqueville, and turned his attention to agriculture. In 1856 appeared *L'Ancien Régime et la Révolution*. In 1860 his *Œuvres et Correspondance Inédites* were published by M. de Beaumont. It is as the author of *Democracy in America* that De Tocqueville is chiefly remembered, the best disquisition that has yet been written on the institutions of the United States. Concerning it John Stuart Mill wrote that "it is not risking too much to affirm of these volumes, that they contain the first analytical inquiry into the influence of democracy." The aim of this work is, in De Tocqueville's own words, to show that democracy is the inevitable government of the future, and that it is only a question of an orderly or a lawless democracy. It is written in the calm and dispassionate spirit which characterised all De Tocqueville's writings. In none of them is this temper better displayed than in his *Ancien Régime*, a profound exposition of the causes of the French Revolution, which is considered by many to be his greatest although it is not his most popular work.

Biography by M. de Beaumont prefixed to *Œuvres et Correspondance Inédites*.

Todd, ROBERT BENTLEY, F.R.S. (b. 1810, d. 1860), the son of a Dr. L. H. Todd, a distinguished surgeon and professor at Dublin, was educated at Trinity College, Dublin, and coming to London set up a practice as a physician, and became a member of the Royal College of Physicians. He projected with Dr. Grant a great work, *The Cyclopædia of Anatomy and Physiology*, which was eventually completed after many tedious delays (1836-59). He was also the editor, in conjunction with Mr. Bowman, of *The Physiological Anatomy and Physiology of Man* (1845-56), and was the author of *Clinical Lectures* (1860); *Practical Remarks on Gout* (1843); and *The Description and Physiological Anatomy of the Brain* (1845), works which established a distinct advance in the science of which they treat. He was appointed professor of physiology and of general and morbid anatomy at King's College in 1837, and was the

projector, in 1847, of the valuable St. John's Training Institution for Nurses, which supplied Miss Nightingale with many of her fellow-labourers.

Todhunter, ISAAC, F.R.S., Sc. Doc. (b. 1820, d. 1884), was the son of a Dissenting minister, and began life as tutor in a school, whence he proceeded to University College, London, and then, at the age of twenty-four, entered St. John's College, Cambridge, as an undergraduate. In 1848 he graduated as Senior Wrangler, being also Smith's prizeman. Elected to a fellowship at St. John's, he became assistant tutor and principal mathematical lecturer. It is upon his mathematical treatises, however, that Dr. Todhunter's reputation rests; these are known all over the world, and include the *Differential Calculus*, *Integral Calculus*, *Analytical Statics*, *Plane Co-ordinate Geometry*, *Plane Trigonometry*, *Spherical Trigonometry*. His *Algebra*, *Trigonometry*, and *Euclid* are well-known text-books. More profound are *Researches on the Calculus of Variations* (an essay that won him the Adams prize in 1871); *A History of the Mathematical Theories of Attraction, and the Figure of the Earth* (1873). He wrote also *An Account of the Writings of Whewell* (1876). For his services to mathematics, Todhunter was appointed honorary fellow of his college, and he was among the first to receive the degree of Doctor in Science (1883).

Todleben, FRANZ EDUARD, COUNT (b. 1818, d. 1884), a Russian general of German extraction, and the son of a merchant of Courland, entered the school of cadets at Riga in 1829, and in 1842 became an officer in the Engineers. At first employed in constructing the fortifications of Kieff, he fought against the Circassians from 1846-8. Todleben was a captain on the outbreak of the Crimean War in 1854, and after serving on the Danube, went to the Crimea, and there, at the eleventh hour, constructed the defences of the fortress of Sebastopol, including the Redan, which held out against the Allies for a year. He conducted the defence in person, and was severely wounded in the foot; nevertheless, after the fall of Sebastopol he went northwards, inspected the fortresses of Nicolaieff, and strengthened the defence of Cronstadt. Todleben was now looked upon as one of the most famous engineers of his time; he speedily rose to the rank of general, and was sent to command at Nicolaieff. After the peace he served as aide-de-camp to the Grand Duke Nicholas, wrote a *Narrative of the War in the Crimea*, and visited England in 1865. Nevertheless, he did not enjoy court popularity, and though employed as chief of the department of engineers at the Russian War Office, saw no active service for several years. After General Krüdener had signally failed to take Plevna by storm during the Russo-Turkish War of

1877, owing to the gallant resistance of Osman Pasha, General Todleben was summoned to the front, and proceeded to reduce the place by investment. The Turkish general was compelled to surrender on Dec. 9th. [OSMAN PASHA.] In April, 1878, for the last weeks of the war, he replaced the Grand Duke Nicholas as commander-in-chief of the Russian army in Europe, and was then made a Count. Todleben was Governor of Odessa from 1878-80, but spent the last years of his life in retirement.

Tolstoi, ALEXIS CONSTANTINOVITCH, COUNT (b. 1818, d. 1875), one of the foremost of Russian dramatists and poets, was born in a romantic district, Russia Minor, where he was surrounded by the beauties of nature, a picturesque and characteristic nationality, and the associations of an historical past. His poetic imagination was further stimulated by his early acquaintance with foreign lands and their peoples, acquired on his travels with his uncle, A. Perowsky. During this time he won the love of Goethe, who predicted a great future for him. On the conclusion of his studies at Moscow, Count Tolstoi entered the diplomatic service, but soon relinquished this calling, and travelled, principally in Germany, France, and Italy. His earliest literary attempts, some lyrical poems, were published on his return in various Russian periodicals, and soon attracted considerable attention. During the Crimean War (1853-6) Tolstoi obeyed the dictates of his patriotism and served in the active army, but withdrew into retirement on the conclusion of peace, and lived on his estates near St. Petersburg, where he devoted himself entirely to literary pursuits. Among his principal works are the epic narratives, *The Sinner* (1858), *The Dragon* (1875); the historical novel, *Prince Serbrennyi* (1863); and the dramas, *The Death of Ivan the Terrible*, *Tzar Fedor Ioannovitch*, and *Tzar Boris*. The first of these and the novel have been translated into English, and a selection from his poems, of which a complete edition appeared in 1878, has been done into German.

Bormüller, *Biographisches Schriftsteller-Lexikon der Gegenwart*.

* **Tolstoi, LEO NIKOLAIÉVITCH, COUNT** (b. 1829), the Russian novelist and social reformer, a descendant of Count Peter Tolstoi, the friend and comrade of Peter the Great, was left an orphan at an early age. He received the usual education of a Russian noble, first on the maternal estate, Jasnaja Poljana, near Toula, the scene of his later labours, and afterwards at the University of Kazan, where he entered the faculty of Eastern languages (1843). At the close of his second year at the university he withdrew to his estate, where he spent several years in study until 1851, when he accompanied his brother to the Caucasus, and entered the army. Here

he began to write his earliest works, *The Cossacks* and *Childhood and Youth*, both of which are translated into English, and on the outbreak of the Crimean War (1853) was transferred to the Danube, where he served on the staff of Prince Gortschakoff. Appointed to the command of a mountain battery he took part in the defence of Sebastopol. His observations of these scenes are recorded in the stirring narratives, *Sebastopol in December, in May, and in August*. On the conclusion of peace he resigned his commission, and passing the winters at St. Petersburg and Moscow, the summers on his estate, devoted himself entirely to literary work until 1861, when he became a magistrate, and retired to the country, where he devoted much time to the education and improvement of the peasantry, taught in the schools, and wrote educational works which have become standard works in Russia. His two most important literary works are the novels *War and Peace* (1860), and *Anna Karenina* (1875-77), both translated into French. As a novelist Tolstoi is a faithful portrayer of human nature, and it has been remarked that no foreigner who is unacquainted with his works can have an adequate idea of Russia of the nineteenth century; he studies his characters, not as isolated individuals, but in relation to the complex influences surrounding them. As a narrator he is excellent; his pictures are large in conception and finished in detail, but he is inferior to his great contemporary Tourganieff in style. To the great chagrin of his literary admirers, Tolstoi has relinquished fiction since the last-mentioned work, and given himself up to the earnest working out of the problems of life, the attainment of a higher religious and moral philosophy. From the study of the New Testament he has come to the conclusion that in the adoption of a communistic life lies the hope of humanity. Carrying his doctrine into practice, he works with the peasantry, and occupies himself with shoemaking. Of his writings on this subject, *My Religion* was published in the *Nouvelle Revue. Christ's Christianity*, an English translation from unpublished MSS., appeared in 1885; *Money, Science, and Art*, and *What Must We Do?* are still in MS. A collected edition of his works, 10 vols., appeared in 1880.

Vicomte de Vogtle, *Le Roman Russe*.

Tooke, JOHN HORNE (b. 1736, d. 1812), a well-known politician and philologist, was the son of a wealthy London poulterer, named John Horne, and was educated at Eton and Cambridge. At the wish of his father he took orders, and became in 1760 incumbent of New Brentford; but he preferred the profession of the law, and accordingly entered at the Temple. He at the same time became an active politician, a violent opponent of the ministry, and a friend of John Wilkes, with

whom, however, he subsequently quarrelled. In 1777 he was sentenced to a year's imprisonment, with a fine of £200, for starting a subscription on behalf of the "Americans murdered at Lexington." In 1779 he was refused his call to the bar, because he had been ordained a priest. Five years later he was tried for treason, made a brilliant speech in his own defence, and was acquitted. In 1801 he was returned to Parliament for Old Sarum, but was not allowed to take his seat on account of having been in orders. His chief literary work was *Epea Pteroenta; or, The Diversions of Purley* (1786-1805), which treats of language, following Locke's theory that abstract words are derived from sensible ideas. In 1782 he adopted the surname of Tooke, from his benefactor, William Tooke, of Purley.

Alexander Stephens, *Life of J. Horne Tooke* (1813).

* **Toole**, JOHN LAWRENCE (b. 1832), comedian, and the son of the civic toastmaster, was educated at the City of London School, and made his first appearance on the boards at the Haymarket Theatre in 1852. After playing in Ireland and the provinces, he appeared at the Lyceum, under Charles Dillon's management, from 1856-9, and then became a member of the new Adelphi company. In the same year he created Mr. Spriggins, in *Ça en parle Français*; and 1862, Caleb Plummer, in Mr. Boucicault's *Dot*, founded on *The Cricket on the Hearth*. This was one of the semi-pathetic, semi-ludicrous characters in which Mr. Toole was particularly at home, and similar to it were his Joe Bright in *Through Fire and Water* (1868), Michael Garner in H. J. Byron's *Dearer than Life*, produced at the Queen's in 1868, and Dick Dolland, in *Uncle Dick's Darling* (1869), at the Gaiety. At the same theatre he appeared in *Paul Pry* and the *Spitalfields Weaver*. Mr. Toole made a successful tour in the United States in 1875, and in November, 1879, became lessee and manager of the Folly Theatre, subsequently rechristened "Toole's." The most successful plays subsequently produced were Mr. H. J. Byron's *A Fool and his Money* and *The Upper Crust*, and Mr. Burnand's burlesques, *Stage-Dora* and *Paw Claudian*. Mr. Toole is also known for his humorous sketches, of which *Trying a Magistrate* is perhaps the most popular.

Topete, JUAN BATTISTA (b. 1821, d. 1885), Spanish politician and sailor, was born at Tlacotalpa in Mexico, and entered the navy. He gained a high reputation for valour in the service, and the outbreak of the revolution of 1868 found him in command of the Spanish ironclads in the port of Cadiz. He co-operated with Prim against the Isabelists, and became a member of the Provisional Government. His efforts to suppress the Cuban insurrection were vigorous but ineffect-

ive. Admiral Topete was the chief supporter of the candidature of the Duke of Montpensier for the vacant throne, but nevertheless accepted office during the brief reign of Amadeus. After the accession of Alfonso XII. he retired into private life.

Tourganieff. [TURGUENEFF.]

Toussaint, FRANÇOIS DOMINIQUE (b. 1743, d. 1803), son of African slaves, was born at Buda, San Domingo. When, in 1791, the French Convention granted the rights of French citizens to people of colour, Toussaint struggled on the side of royalty; in 1794, however, when all slaves were declared free, he went over to the side of the republic. His services against a British force that had landed at San Domingo, and his rescue of Laveaux, the republican commander, led the Directory to appoint Toussaint chief of the army of the island. In a few years he had the whole island under his control, and so justly did he exercise his power, that trade and agriculture began appreciably to expand. In 1801 Bonaparte, by proclamation, sought to restore slavery in San Domingo, and sent thither a fleet to enforce his decree. Toussaint resisted, without success, however, and he was obliged to surrender. He was afterwards arrested, sent to Paris, and died there after undergoing nearly a year's imprisonment.

Toynbee, ARNOLD (b. 1852, d. 1883), was the second son of JOSEPH TOYNBEE, F.R.S. (b. 1816, d. 1866), the well-known aural surgeon, and author of *The Use of the Artificial Membra Tympani* (1857), *The Deaf and Dumb* (1858), and *The Diseases of the Ear* (1860), who also devoted much attention to questions of social and sanitary importance. The son was for some time a pupil of Mr. Powles, of Blackheath. After having taken his degree at Balliol College, Oxford (1878), he was appointed tutor to the Indian Civil Service students at that college, and his work led him deeply into the doctrines of the standard political economists. He quarrelled with them for their application of their theories irrespective of the development of society. As bursar of his college, he also rendered himself familiar with the land question, and during the last years of his life he made some attempt to put into practical shape the result of his earlier studies. He advocated a new political economy and the reform of the Church. Although neither a socialist nor a democrat, he had strong sympathy with the labouring classes, and felt deeply the necessity for a change in their condition. In spite of delicate health, he worked assiduously, lived for some time in Whitechapel, mixing with the people themselves, and lectured to working-men in the North of England. His death was owing to the breakdown which followed the strain of two lectures which he gave in St. Andrew's

Hall, Newman Street, on Henry George's *Progress and Poverty*. Professor Jowett has prefixed a short memoir of him to his *Lectures on the Industrial Revolution in England*, published after his death. The university settlement in Whitechapel, Toynbee Hall, founded in great measure to further his theories of improvement, was named after him.

Professor Jowett, *Memoir*.

Tregelles, SAMUEL PRIDEAUX, LL.D. (b. 1813, d. 1875), Biblical scholar, a native of Falmouth, was educated at the classical school of his native town, and at the age of twenty-five turned to the study of the New Testament. In 1844 appeared the text of the Apocalypse, the first part of the great labour of his life, a critical edition of the text of the New Testament. It was completed in 1872; it gained him the degree of LL.D. St. Andrews in 1850, and for some time before his death he was in receipt of a Civil List pension. Dr. Tregelles was joint editor with the Rev. T. H. Horne and the Rev. S. Davidson (q.v.) of the tenth edition of the *Introduction to the Critical Study and Knowledge of the Holy Scriptures*, and was also the author of *Remarks on the Book of Daniel* (1847), and *The Jansenists* (1851).

Trelawny, EDWARD JOHN (b. 1792, d. 1881), a native of Cornwall, after a few years at school, went at the age of eleven to sea. He eventually appeared in London, and produced *The Younger Son*, an autobiographical novel. In 1821 he made Shelley's acquaintance at Pisa, and, shortly after, Byron's. When Shelley was drowned, it was Trelawny who burned his body on the shore, in accordance with the poet's wishes. In 1823 Trelawny embarked with Lord Byron for Ithaca, and went on a diplomatic mission to the Greek government, conveying Byron's and the London committee's views on the liberation of Greece. During the struggle for Greece he acted as aide-de-camp to one of the Greek chiefs, Odysseus, whose daughter he married. On returning to London he was made much of in society, and afterwards betook himself to amateur farming in Monmouthshire. He published *Recollections of Shelley and Byron* (1858). This he revised in 1878, and published under the title of *Records of Shelley, Byron, and the Author*. In Millais' well-known picture, *The North-West Passage*, the weather-beaten face is Trelawny's—the only authentic portrait of him existing. When he died, his niece, according to previous instructions, conveyed his body to Gotha, where it was cremated; the ashes were then taken to Rome, and placed beside the remains of Shelley and Keats.

Trench, THE MOST REV. RICHARD CHENEVIX, D.D. (b. 1807, d. 1886), a native of Dublin, was educated at Harrow, and Trinity College, Cambridge, where he graduated in 1829. In the same year he was ordained deacon, and after

holding a curacy at Hadleigh (1833) became incumbent of Curdridge; this he resigned in 1841, becoming curate of Archdeacon Wilberforce at Alverstoke. In 1845 he was appointed rector of Itchin Stoke, Hulsean lecturer at Cambridge, and one of the select preachers; in 1847 professor of theology in King's College, London; in 1856 Dean of Westminster, and in 1864 Archbishop of Dublin; the latter office he resigned in 1884. He earnestly opposed the disestablishment of the Irish Church, and worked vigorously in reorganising it. His published writings are numerous and valuable. Among them are:—*Notes on the Parables* (1841), *Notes on the Miracles* (1846), *Study of Words* (1851), *Synonyms of the New Testament* (1854), *English Past and Present* (1855), *A Household Book of English Poetry*, *Plutarch* (1874), and *Medieval Church History* (1878). He also published two volumes of poems in 1837. He was one of the editors of the *Speaker's Commentary*.

Trendelenburg, FRIEDRICH ADOLF (b. 1802, d. 1872), German philosopher, was a native of Eutin, in Oldenburg, and after studying at Leipzig and Berlin, became professor of philosophy at the latter university in 1833. In 1846 he was elected a member of the Academy of Sciences, and in the following year secretary to the section of history and philosophy. In 1869 he was elected Secretary to the Academy of Moral Sciences. He was the representative of Berlin in the Upper Chamber from 1849 to 1851. He is chiefly remembered for his labours on Aristotle, an edition of the *De Animâ* (1833), a treatise, *Elementa Logices Aristotelicæ* (1837), and *The History of the Doctrine of the Categories* (1846). He also in his *Logical Researches* (1840) combated the doctrines of Hegel and Herbart, and became in consequence involved in various disputations.

Trevelyan, SIR CHARLES EDWARD, BART. (b. 1807, d. 1886), an Indian civilian, was the son of Archdeacon Trevelyan, of Taunton, and brother-in-law of Lord Macaulay, and was educated at Haileybury College, with a view to his entering the Civil Service of the East India Company. After some service in India, he became, in 1840, Assistant-Secretary to the Treasury, and was subsequently for some time engaged with Sir Stafford Northcote in carrying out Mr. Gladstone's reforms in the civil establishments. He was a short time, in the year 1859, Governor of Madras, from which post he was recalled on his publicly disapproving the levying of certain new taxes by the Indian government. From 1862 to 1865 he was Financial Minister in India. He was knighted in 1848, and made a baronet in 1874. Sir Charles Trevelyan was the advocate of many administrative reforms both at home and in India, and among those in effecting which he was a chief instrument were the abolition of Indian transit and

town duties, promotion of native education in India, the abolition of army purchase, and the mitigation of London pauperism. He was the author of the *Education of the People of India*, *Purchase System in the British Army* (1867), *The Devonshire Labourer* (1869), *London Pauperism* (1870), and *Christianity and Hinduism Contrasted* (1881).

* **Trevelyan**, THE RIGHT HON. SIR GEORGE OTTO, BART. (b. 1838), the son of Sir Charles Trevelyan and Hannah More Macaulay, sister of Lord Macaulay, was educated at Harrow School and at Trinity College, Cambridge, where he was second in the classical tripos (1861), then spent some years in India, whence he contributed *Letters of a Competition Wallah to Macmillan's Magazine* (re-published 1864). *Cawnpore*, an account of that terrible tragedy, was published in 1866. In the same year he was returned for the Border Burghs in the Liberal interest, and for Hawick Burghs in 1868. Mr. Trevelyan distinguished himself by his vigorous advocacy of army reform (*Speeches on Army Reform*, published 1870), and of the admission of the agricultural labourer to the franchise. He was Civil Lord of the Admiralty from Dec., 1868, to July, 1870, when he resigned on a point connected with the Education Bill. In 1880 he became Parliamentary Secretary to the Admiralty, and in May, 1882, Chief Secretary to the Lord Lieutenant of Ireland, in succession to Lord Frederick Cavendish. In that capacity Mr. Trevelyan discharged his difficult task with the utmost courage and devotion, and may fairly be said to have succeeded in re-establishing the existence of law and order. From November, 1884, to June, 1886, he was Chancellor of the Duchy of Lancaster, with a seat in the Cabinet; and in Feb., 1886, became Secretary for Scotland, but resigned on March 26th, on account of his disagreement with Mr. Gladstone's Irish proposals. At the general election he lost his seat. Mr. Trevelyan, who became a baronet in 1886, is the author of two admirable biographies, *The Life and Letters of Lord Macaulay* (1876), and *The Early Times of Charles James Fox* (1880). His minor works include a drama, *Horace at the University of Athens* (1861), and *The Ladies in Parliament* (1869).

* **Tricoupis**, CHARILAOS (b. 1832), Greek statesman, the son of SPIRIDION TRICOUPIS (b. 1788, d. 1873), a Greek diplomatist, and the author of a *History of the Greek Revolution*, was born at Nauplia, and having studied at Paris, was called to the bar at Athens. In 1852 he entered the diplomatic service as *attaché* to the Legation of London, and was promoted secretary in 1855, and *chargé d'affaires* in 1863. In 1865 he was entrusted with the negotiations for the cession of the Ionian Isles by England to Greece, and in the following year received the portfolio of Foreign

Affairs. He now became the rival of the Premier, M. Coumoundouros, and twice replaced him as President of the Council, in 1877 and 1879, and again formed a ministry in 1881, but speedily resigned because his policy in view of the refusal of the Porte to carry out the provisions of the Berlin Treaty with regard to the Greek frontier was considered too pacific. He was again Prime Minister from March, 1882, to March, 1885. In 1886, when the refusal of Greece to disarm her troops on the Turkish frontier had entailed a naval demonstration by the Powers, and the resignation of the bellicose Premier, M. Del-yannis, M. Tricoupis was again called upon to form a Ministry.

* **Trochu**, LOUIS JULES (b. 1815), French general, born in Brittany, after being educated in the military academy at St. Cyr, entered the army at the age of seventeen. He soon merited the notice of his superiors, and from being a lieutenant was advanced to the position of adjutant. In the Crimean War his diligence and bravery earned promotion to a generalship of division. He served in the war in Italy of 1859, and in the Franco-German War of 1870-1. On the outbreak of the Franco-German War he became Governor of Paris, and after the proclamation of the republic, commander-in-chief of the forces. His conduct of the defence was censured as being too cautious, and on Jan. 22nd, 1871, he resigned his military command, and in February his civil appointment. After occupying the office of President of the Council of Morbihan, to which he was appointed in 1871, he retired from active life altogether in 1873, in consequence of an unsuccessful action for libel against the *Figaro*. He published in 1867 *La Vérité sur l'Armée Française en 1867*, a pamphlet which drew down upon him the displeasure of the court, and in 1873 *Pour la Vérité et pour la Justice*, and several other writings in defence of his administration.

* **Trollope**, ANTHONY (b. 1815, d. 1882), novelist, was the son of a barrister and of Mrs. Frances Trollope, the authoress of some clever novels and a bitter book of travels, *The Domestic Manners of Americans*, and after three years at Harrow School, went to a private school at Sunbury, thence to Winchester College, and thence back to Harrow again. After a school career of great unhappiness, he was for six weeks a master in a school at Brussels, and in 1834 became a clerk in the Post Office. About this time the family were in sore straits from illness and poverty, being kept from absolute starvation only by the indefatigable energy of Mrs. Trollope. The future novelist informs us that the first twenty-six years of his life were years "of suffering, disgrace, and inward remorse." In 1841 he was sent to Ireland as a surveyor's clerk, and went to live at Banagher on the Shannon, where he learnt to ride to hounds,

and began to enjoy life, and in 1844 married Miss Rose Heseltine. In 1847 and 1848 appeared his first two novels, *The Macdermolts of Ballycloran* and *The Kellys and the O'Kellys*, but they fell completely flat. *La Vendée* (1850), an historical novel, was an equal failure, and from 1851-3 he was exclusively employed in the extension of the rural delivery of letters in England. In 1855 *The Warden* was published, containing the first of those admirable groups of ecclesiastics and county magnates in drawing which the author excelled. *Barchester Towers* followed in 1857, and Trollope's reputation was now made. The same happy vein of quiet and delicately satirical observation was followed up in *Doctor Thorne* (1858), *Framley Parsonage* (1861), and *The Last Chronicle of Barset* (1867), which concluded the series. Trollope had made permanent additions to the portrait gallery of English literature in Mrs. Proudie, Archdeacon Grantley, and Mr. Crawley of Hogglostock. Among the less marked successes of this period of Trollope's literary career were *The Three Clerks* (1858), *Orley Farm* (1862), and *The Small House at Allington* (1864). All this time Trollope was actively engaged upon his official vocations, and was sent by the Post Office in 1858 to make a treaty with the Khedive of Egypt for the conveyance of English mails through that country. His missions for the Post Office enabled him to write the popular books of travel *The West Indies and the Spanish Main* (1859), *North America* (1862), and *Tales of all Countries* (1861-70). In 1867 he resigned his place in the Post Office, and devoted himself entirely to literature. He was at this period engaged in a second series of novels, in which the interest is chiefly political, and centres round that deservedly popular creation, the Duchess of Omnium. They include *Can You Forgive Her?* (1864), *Phineas Finn* (1869), *Phineas Redux* (1874), *The Prime Minister* (1876), and *The Duke's Children* (1880). Among the novels of Trollope's later life, which it is impossible to classify, may be mentioned *Ralph the Heir* (1871), *The Eustace Diamonds* (1873), *Is He Popenjoy?* (1878), *Marion Fay* (1882), and *The Land Leaguers*, published posthumously. Trollope's later volumes of travels were as popular as those of an earlier date: they include *Australia and New Zealand* (1873), and *South Africa* (1878). He contributed a volume on *Cæsar* to the series of *Ancient Classics for English Readers*, and one on *Thackeray* to the *English Men of Letters Series*.

Anthony Trollope: an Autobiography, edited by H. M. Trollope (1883), in which a full list of Mr. Trollope's writings is given.

Trübner, NICHOLAS (b. 1817, d. 1884), publisher and scholar, was a native of Heidelberg, and was apprenticed to Mohr, a publisher of that town. After being employed in publishing offices in Hamburg and Frank-

furt he received in 1843 the offer of a place in the house of Messrs. Longmans, and in 1852 he set up in business on his own account, first in Paternoster Row, then on Ludgate Hill. For a while he published *belles lettres*; for instance, some of Charles Reade's most popular novels, and many of the works of American humorists, but he gradually established a reputation as the publisher of works of philology, religious philosophy, and Oriental literature. His *Oriental Record* was a publication of high merit, and his reputation abroad, especially in America, was considerable.

Truro, THE RIGHT HON. THOMAS WILDE, BARON (b. 1782, d. 1855), Lord Chancellor of Great Britain, was the son of Thomas Wilde, a London attorney, and practised for some twelve years with success as an attorney (1805-17). Becoming dissatisfied with the limited sphere in which he had to act, and conscious that his powers were adapted to a more extended range, he joined the Inner Temple, and was called to the bar in 1817, aged thirty-five. Overcoming many obstacles, one of which was an impediment in his speech, he showed unexampled perseverance, and soon won general confidence. In 1820 he was retained as junior counsel in defence of Queen Caroline, who was so pleased with his exertions that she appointed him one of her executors. Briefs now came in rapidly, and in 1824 he felt justified in accepting the degree of the coif offered him by Lord Eldon. King's Serjeant in 1827, he soon acquired an enormous practice, and his habitual industry and inherent ability drew from Lord Tenterden (who cannot be accused of flattery) the encomium that he had "industry enough to succeed without talent, and talent enough to succeed without industry." In 1831 he entered the House of Commons for Newark, sitting on the Whig side of the House, and became Solicitor-General, with the customary knighthood, in 1840. He was Attorney-General for two months in 1841, and again for four days in 1846. On the death of Sir Nicholas Tindal in that year he was promoted to the office of Lord Chief Justice of the Common Pleas. This post he held for four years, when he resigned to become Lord Chancellor. He was created in 1850 Baron Truro of Bowes in Middlesex. He held the seals for nineteen months only, the Russell ministry being compelled to retire in February, 1852, when Lord Truro was necessarily superseded. Lord Truro was much engaged in promoting various important law reforms. He established a system of paying the fees into court by means of stamps, and greatly reduced their amount; he created the Court of Lords Justices to remedy the evil of delay; and he was associated with Lord St. Leonards in carrying out the report of the commission on the pleading and practice in Chancery.

Lord Campbell's *Lives of the Chancellors; Gentleman's Magazine*, December, 1855.

* **Tseng**, HIS EXCELLENCY THE MARQUIS (b. 1836), Chinese diplomatist, is the son of the Marquis Tseng Kwo-fan, who in his day played a great part in Chinese affairs. The Marquis early entered the Chinese diplomatic service, and received instruction in statecraft from his father, and cousin Kwo Ta-jen. In 1878 he succeeded the latter as Minister of China to the Courts of London and Paris, to which that of St. Petersburg was added shortly afterwards (1879). He was sent to the capital of the Czar to negotiate the retrocession of the province of Kulja, and in September succeeded in arranging a treaty by which Russia ceded the northern part of the district, receiving in exchange 5,000,000 roubles. During the state of undeclared war that ensued between France and China in consequence of French operations in Tonquin, the Marquis Tseng made several unsuccessful efforts to effect an accommodation (1883-5), and in the latter year signed an important convention with Lord Salisbury, by which a fixed import-duty was placed upon imported opium.

Tucker, CHARLOTTE. [A. L. O. E.]

Tulloch, REV. JOHN, D.D. (b. 1823, d. 1886), Scottish theologian, was born in the parish of Tibbermuir in Perthshire, studied at the University of St. Andrews, and was ordained in 1844. After holding a charge at Dundee and the living of Kettins, he became principal of the theological college of St. Andrews University (1854), which appointment he received chiefly through the influence of Bunsen, who had been pleased with a review of his *Hippolytus* which the young minister had contributed to one of the magazines. Shortly afterwards he became better known through winning one of the Burnett prizes for an essay on *Theism* (1855). He next brought out a volume consisting of lectures delivered at Edinburgh under the title of *Leaders of the Reformation* (1859), followed by *Puritanism and its Leaders* (1861). His most valuable book was an able and thoughtful one on *Rational Theology and Christian Philosophy in England in the Eighteenth Century* (1872), into which he put a great deal more care and thought than he bestowed on any other work. In 1876 he produced a volume of sermons, *Facts of Religion and Life*, dedicated to the Queen, whose chaplain he was, which attracted considerable attention from their broad views. In 1885 he published *Movements of Religious Thought*. He had a share in founding the *Contemporary Review*, and was the last editor of *Fraser's Magazine*. Dr. Tulloch was a gifted theologian, and was intimate with the speculative literature of Germany. He was a man of broad sympathies, and was a staunch Liberal. On his own Church his influence was eminently good, and was always exercised on the side of tolerance and progress. In 1878 he was chosen Moderator to the Church of Scotland.

M.W.—32*

Tunis, THE BEYS OF, originally officials sent by the Porte to collect taxes, became in the seventeenth century hereditary princes, sometimes tributary to the Sultan, but during the greater part of the eighteenth century to the Dey of Algiers. HAMUDA PASHA (1782-1814), who succeeded his father Ali Bey, gained his point not only in successfully repudiating the Algerian tribute, but in massacring the Turkish garrison (1811), and so established the actual independence of his country, although the ceremony of investiture was continued. Hamuda Bey's successor, his brother OTHMAN, reigned three months, and was murdered by his cousin, Muhamad Bey. MUHAMAD BEY (1814-23) was compelled by the naval attack of Lord Exmouth to abolish Christian slavery throughout his dominions (1816), and the determination of the Powers was further enforced by a declaration of the Congress of Aix-la-Chapelle. Nevertheless, the evil was far from being altogether extirpated. HUSSEIN BEY (1823-35), fearing that the Porte would reduce him to complete vassal-dom, began the policy of relying upon French support, which eventually resulted in annexation of Tunis by France. In 1830 he ceded by treaty a site—the Carthaginian citadel—for a memorial chapel to Louis IX., and French vessels were constantly seen in the harbour of Goletta. SIDI MUSTAPHA BEY (1835-9), like his brother, wavered between the French and the Porte, and was compelled in consequence to submit to numerous affronts from the French consul. SIDI AHMED BEY (1839-55) was the last of the Beys of Tunis who enjoyed any real importance, and even he was constantly distracted between alternative policies. The chapel on Carthage Hill began to assume the character of a French fortress, and the Bey, in order to conciliate England, proceeded to abolish negro-slavery throughout his dominions. Indeed, English aid seemed the only possible way of salvation from utter extinction by the Porte, which began to demand a tribute, or absorption by France. The efforts of Sir Stratford Canning, however, produced a better understanding between the Bey and the Sultan; and during the Crimean War Ahmed Bey aided his suzerain with men and money. SIDI MUHAMAD BEY (1855-9) was the son of Hussein Bey, and a man of bad health and immersed in the cares of a seraglio. He inclined to the English alliance, and promised to grant a constitution to his subjects. The arbitrary execution of a Jew for the crime of reviling the Bey necessitated the intervention of the Powers, and in order to avert their wrath Sidi Muhamad promulgated a liberal Constitution with regular tribunals. * MUHAMAD ES SADYK (b. 1813) succeeded his brother, Sidi Muhamad, in 1859. By the advice of Mr. Wood, the English ambassador, he strengthened the relations between Tunis and the Porte, and was invested with the title of

"my governor-general." At the same time he was profuse in his promises of attachment to Napoleon III., then on a visit to Algiers. In 1861 the Legislative Assembly met at Tunis for the first time, but two years later the Bey began his financial difficulties by borrowing £1,400,000. Invasions of Arabs from Algeria produced strained relations with France, and the emperor demanded the abrogation of the Constitution; heavy taxation caused the people of Tunis to rebel, not without the connivance of the French consul, and it seemed as if the Bey would have to abdicate; but he was saved by the intervention of Italy. In 1865, at the suggestion of the English ambassador, the relations between the Bey and the Sultan were formulated in a vizirial letter, and promulgated by firman in 1871. But the financial difficulties of the Bey increased; in 1868 he became hopelessly bankrupt, and an international financial commission was created. The Franco-German War gave him a further lease of independence, but in 1875 M. Roustan became consul-general and *chargé d'affaires* of the French republic at Tunis, and began a system of threats and demands which must have been as iron to the soul of Muhammad es Sadyk. The alleged insecurity of the Algerian frontier, disputes about the ownership of landed property by a French company—the Société Marseillaise—and the angry intervention of Italy, hastened on the inevitable; and in May, 1881, the French invaded Tunis on the pretext that Algerian territory had been violated by the Khroumir tribe. It was soon seen, however, that this was no mere police expedition; the French troops rapidly closed round the capital, and the Bey was forced on the 12th to sign a treaty at the palace of the Bardo establishing a French protectorate. A campaign of some severity was, however, necessary before the country was reduced. In the following year M. Roustan was recalled, and his successor, M. Cambon, forced the Bey to release his brother, MUHAMAD TAIB BEY (b. 1821), who had been imprisoned in April, 1881, for aiming at the throne, his instigator having been M. Roustan.

A. M. Broadley, *Tunis Past and Present* (1882).

* **Tupper**, HON. SIR CHARLES, K.C.M.G., C.B. (b. 1821), Canadian statesman, a native of Aylesford, Nova Scotia, was educated at Acadia College, Horton, N.S., and adopted the medical profession. Mr. Tupper also played a prominent part in Canadian politics, and was several times sent to England as delegate to confer with the Imperial Government. He was for twenty-nine years member of Parliament for his native county, and at the union of the provinces became premier of Nova Scotia. In 1870 he became a member of the Privy Council of the Dominion, and later in the year its president (1870-2), from which post he was transferred to the Ministry of Inland Revenues. He became Minister of

Customs in 1873. After some years of opposition Mr. Tupper was made Minister of Public Works (1878-9), and of Railways and Canals (1879-83). In the last year he was appointed High Commissioner in Great Britain for the Dominion of Canada.

* **Tupper**, MARTIN FARQUHAR (b. 1810), poet and prose writer, son of a London surgeon, was educated at the Charterhouse and at Christ Church, Oxford. He studied law, and was called to the bar in 1835. Previous to this he had figured as an author, having in 1832 published some poems, which, however, attracted little notice. In 1838 there appeared *Proverbial Philosophy*, in connection with which Tupper is chiefly known. The success of this publication was extraordinary; it was lengthened into four series, some of which went through more than fifty editions. An illustrated edition of the whole work appeared in 1881. Among Tupper's other works are *The Crock of Gold and Heart, a Social Novel* (1844), *Probabilities, an Aid to Faith* (1847), *Stephen Langton, a Tale* (1858), *Raleigh, his Life and his Death*, an historical play (1866), *Washington, a Drama* (1876), and *My Life as an Author* (1886). He received a public testimonial in 1883.

Turgueneff, IVAN SERGEEVITCH (b. 1818, d. 1883), the greatest Russian author of his time, was born at Orel, Oct. 28th, 1818, and was the son of an officer of cuirassiers. When he was ten his family removed to Moscow, where he received the best education Russia could then afford, but which, upon proceeding to the University of Berlin in 1838, he found to be exceedingly superficial and defective. He returned to Russia after three years, having become thoroughly imbued with the ideas of the West without losing his hold upon those of his own country. For some years he lived the life of a country gentleman, apparently devoted to field sports, but insensibly acquiring that intimate knowledge of his nation which was to qualify him to become the chief painter of its manners and representative of its aspirations. A series of sketches in a periodical, subsequently known as *Tales of a Sportsman*, revealed his powers to the public and to himself. In 1852 he was imprisoned for a month for an article on the death of Gogol, and interned for two years more in the country, which enforced residence he turned to excellent account. In 1855 he published *Dmitri Rudin*; in 1858, *Helene*, and *A Nest of Nobles* translated into English by Mr. Ralston under the title of *Liza*; in 1862, *Fathers and Sons*, the work in which he has most fully analysed the social and political tendencies of Russia; in 1865, *Smoke*; in 1877, *Spring Floods*, and *Virgin Soil* translated into English by Ashton Dilke, a masterly description of the Nihilistic movement. The intervals between these great works were occupied by shorter stories of the highest merit. Among them may be

mentioned:—*Three Portraits, A Correspondence, Asaja, Apparitions, The Adventures of Lieutenant Jergunoff, The Jew, The Dog, A King Lear of the Steppes, A Gentleman of the Steppes, Pünnin and Balbúrín*, and the terribly sombre *Diary of a Superfluous Man*. His last publication, *Senilia*, a series of little prose poems, is especially distinguished in an unusual degree by invention, fancy, and pathos. In 1863 he removed to Baden, whence after the Franco-German War he transferred himself to Paris, where, notwithstanding numerous short visits to Russia, he mainly resided till his death. He died on Sept. 3rd, 1883. Turguenoff's claims to distinction are manifold: as a literary artist of the highest rank; as the great delineator and interpreter of the Russian people; and as one of the few intensely patriotic Russian writers who have succeeded in being perfectly candid and impartial, in being entirely just to foreigners and fair to every shade of opinion among their own countrymen. Few writers inspire such thorough confidence. The only drawback to the charm of his writings is their pervading melancholy, imperfectly relieved by a humour entirely exempt from bitterness, and the numerous poetical and idyllic passages interspersed. This misfortune, inseparable from any truthful portrait of Russia under existing circumstances, extended to the author himself, and threw a shade of sadness over a life singularly pure, noble, and honourable. [R. G.]

Turner, Dawson, F.R.S. (b. 1775, d. 1858), botanist and antiquarian, was a native of Great Yarmouth, and after being educated at Pembroke College, Cambridge, became a member of the Linnean Society in 1797 and F.R.S. in 1802. He published some valuable botanical works, among which were *Synopsis of the British Fuci* (1802), a three-volume work on *Fuci* (1808-19), and the *Botanist's Guide through England and Wales* (1805). He was also an antiquarian, and edited in 1845 the *History of the Religious Orders of Norwich*, besides annotating Cotman's *Architectural Antiquities of Normandy*.

Turner, JOSEPH MALLORD WILLIAM, R.A. (b. 1775, d. 1851), the greatest English landscape painter, and to be reckoned always without question in the first rank of the world's artists, was born on April 23rd, 1775, of mean parentage, his father being a small hair-dresser in Maiden Lane, Covent Garden. Except in art he was educated of course imperfectly, but in art matters he had what was no doubt the best training of his day, since when he was fourteen years old he was admitted to the schools of the Royal Academy, nor did he when he was a youth lack the encouragement and advantage of association with connoisseurs of art. Having been well grounded in perspective under Thomas Malton, and learnt something of architecture, he and his comrade Girtin began to frequent

the house of Dr. Munro, where he drew in the evening and had access to the collection of his patron. It must have been at that time, or very soon after, that he made those drawings in neutral tint—blue-grey, or slightly brown—which are so interesting to the collector. They were often of mountainous scenes; yet he had never seen the mountains: they were of Italy, and Italy was still closed to him. The truth about these early drawings probably is that they were very free translations of other men's work then before him, and their great value is in the proof that they afford of how immediate was his command of an unerring hand, and of how early his vision of the world and of art was refined, poetic, and exalted. The next stage of his work in order of date—yet it was a stage after all less poetic—was that in which Turner produced, still almost in monochrome, his large and small architectural drawings, chiefly of the English Cathedrals. Many of these drawings were made for engraving—for publication, that is, in serials by no means under his own control; and that was no doubt his introduction to the art of engraving, of some branches of which he was hereafter to make himself a master, and by which he was to popularise, or cause to be popularised, so many of his later and more important works. In 1799, when only twenty-four years old, he was elected an Associate of the Royal Academy. That may have been due to the oil pictures which he had sent for exhibition pretty regularly since 1793; and he did not afterwards relax his labours in the department of oil painting. But it is essential to note that he was an important and fertile contributor of water-colours, and his prestige is half of it due to his control of the peculiarly English art that he and Girtin did so much to develop. By the early part of the nineteenth century Turner's range was beginning to be apparent. He was influenced by the Dutch, influenced even by the Venetians, influenced perhaps most of all by Claude and Poussin. Yet it now became visible that, great as was his capacity for absorbing the art teaching of others, he was working out a method and establishing aims of his own. *Calais Pier, The Frosty Morning, and Crossing the Brook*, were among the most memorable and epoch-making pictures of the first twenty years of the century; and in 1829 came the *Ulysses Deriding Polyphemus*, a revelry of colour the like of which was new to the English School. Meanwhile, his water-colour drawings had shown at least a corresponding advance. "He soon," says Mr. Redgrave, "found the heaviness which resulted from laying in the gradations of light and dark with grey and afterwards representing the hue of each object by tinting it with colour, and proceeded to treat the whole surface of his picture with colour, and using at once the pigments by which it might be

represented, and by delicate hatchings achieved wonderful qualities of broken hues, air tints, and atmosphere." Having long ago been made a full Academician, it may be supposed that Turner stood high in the estimation of his comrades and of the world; yet he was popular neither personally nor as an artist. Many of his pictures he was unable, and some he was unwilling, to sell; and if his mode of life had not been economical, there were times when he would have wanted ready money. But he was a keen man of business, and gradually amassed property which made him more and more independent of contemporary popularity. He was hard in commercial dealings even with artists, yet to artists with whom he had no business dealings he was kind and helpful. He was a man of several unfortunate and undignified love affairs, and of a few deep friendships. Thus he cherished to the end of his days a vivid remembrance of his relations with his patron-friend Mr. Fawkes of Farnley; and when he was reproached for the too great sombreness of his noble picture of the *Burial of Wilkie*, replied that he wished there had been nothing but black upon his palette. It is time we returned more particularly to the consideration of his art, and gave some details of those works in engraving which did so much to widen and make permanent his fame. As regards engraving he came at a fortunate moment—lived, rather, through an illustrious epoch; for it was not till he was more than middle-aged that the great English engravers in mezzotint ceased their labour, and when he died he still left behind him some of the finest line engravers ever produced by any school. Dunkarton, Lupton, and Charles Turner were among the great engravers in mezzotint; William Miller and John Pye among the delicate engravers with the burin. Turner's *Liber Studiorum* was the first important work by which he sought to popularise his inventions, and it was intended to be, and indeed became, the abstract and brief chronicle of his art. It showed more than any other work ever showed the range of his achievements; it dealt triumphantly with mountainous and pastoral landscapes, with the implements of the farm-yard, and with the pageant of the sky. Nor did it exclude mythological and what was called historical subject; while architectural and marine themes were sufficiently abundant throughout its course. He began the *Liber Studiorum* in 1807; he arrested its progress—for he never actually finished it—in 1819. For it he made a series of sepia drawings, most of which are at the National Gallery; it must be understood that, being chiefly memorandum and suggestion, they are less important than the prints for which they prepared the way. The leading lines of the prints were first etched by Turner; then Turner or some professional engraver in mezzotint supplied the light and

shade of the picture. Fine impressions of these prints have now a great value. To the *Liber* succeeded Turner's two other great serial works, *The Southern Coast* and the *England and Wales*. Both were engraved in line, under Turner's minute direction, *The Southern Coast* being as a whole the more manly of the two in method. For both these series, but especially for the *England and Wales*, noble and important drawings were prepared by Turner, and these drawings, unlike the sepia sketches for the *Liber Studiorum*, are among the most cherished possessions of the collector. Of two other series, *The Rivers of England* and *The Ports of England*, mention, however brief, must be made; and *The Rivers of France* may be referred to in proof of the assertion that Turner's command of French landscape was infinitely deeper and more comprehensive than that of any French painter. Even in his middle and later life Turner was an occasional book-illustrator; and by his contributions to the edition of the *Italy* of 1830, and of the *Poems* of 1834, he gave to Rogers an immortality which the wary banker had counted on in engaging him. In the popular estimation there was from 1840 or thereabouts a falling off in the quality of Turner's art; but Mr. Ruskin, while admitting the truth of the opinion to some extent, has written in the handbook to his own collection of drawings some noble passages on the peculiar graces of Turner's almost latest days. The superb blue drawing of *Zug*, and the morning and evening visions of Lucerne, to name no others, show how much splendour of poetry remained to Turner till nearly the end. Even the latest pictures of Venice, which he contributed to the Academy, have merits and enterprising boldnesses of their own. But before 1850 Turner's health had finally broken, and on Dec. 19th, 1851, he died, not at his house in Queen Anne Street, but obscurely, and under a feigned name, in a lodging looking upon the river at Chelsea. It was then found that he had made a splendid bequest of pictures and drawings to the nation, and that he had left the bulk of his money for the benefit of the artists who should succeed him. Besides the works already mentioned, there are to be included among his finer pieces *Dido Building Carthage*; *The Sun rising in a Mist*; *The Burning of the Houses of Parliament*; *Rain, Steam, and Speed*; and *The Fighting Temeraire*.

First, all the writings of Ruskin; then Thornbury's *Life*, Hamerton's *Life*, and Cosmo Monkhouse's *Life* of the painter; then Rawlinson's *Turner's Liber Studiorum*, Stopford Brooke's *Notes on the Liber Studiorum*, Pye and Roget's *Notes on the Liber Studiorum*, Wedmore's *Studies in English Art*, and Redgrave's *Century of Painters of the English School*. [F. W.]

TURNER, SHARON (b. 1768, d. 1847), the Anglo-Saxon historian, was of Yorkshire parentage, and having been educated at a private school in Clerkenwell, was articulated at

the age of fifteen to an attorney in the Temple. On the death of his master, before the term of his articles had expired, he took over the business, and continued to exercise his profession while engaged in the laborious research involved by his historical undertakings. According to his own statement, the death-song of Ragnar Lodbrog led him to the composition of his best work, the *History of the Anglo-Saxons*, in 3 vols. (1799-1805), for which he referred to the original Anglo-Saxon MSS., and by so doing gave an impulse to the study of the origins of our history. This first work was followed by a *History of England during the Middle Ages to the Death of Henry VIII.* (1814-24), and subsequently by two more volumes, completing the narrative to the death of Elizabeth. In 1832 he published the first volume of his *Sacred History of the World* (complete in 3 vols.), in which he maintained the authenticity of the Scriptures. After 1816 his life was that of an invalid, as he was much afflicted with nervous asthma, but he continued his literary activity until within a short time of his death. His minor works were *Sacred Meditations of a Layman*, *Proslution on the Greatness of Britain*, *Richard III.* (a poem), and several articles in the *Quarterly Review*. The Crown awarded him a pension of £200, and among his literary and artistic friends may be mentioned Robert Southey, the elder Disraeli, and Sir Martin Shee.

* **Twain, MARK**, is the well-known pseudonym of SAMUEL LANGHORNE CLEMENS (b. Nov. 30th, 1835), American humorist, a native of Florida, in the State of Missouri. His early education was meagre, and at thirteen he was apprenticed to the trade of a printer. His restless American temperament soon exhibited itself, and he travelled from place to place, finding employment as a compositor for the newspapers. In 1855 he took service on a Mississippi river steamboat, and rose in time to be pilot. This occupation enabled him to observe many strange and picturesque phases of life, some of which he has described in his volume entitled *Life on the Mississippi*. The sharp contrasts and dramatic incidents presented by the ever-varying stream of travel had the effect of awakening his literary powers, and he took to writing for the newspapers. A sailor's phrase in taking soundings, "Mark twain," i.e., "Mark two fathoms," suggested the singular pseudonym by which he is best known. In 1861 he went to Nevada as private secretary to his brother, who had been appointed secretary of that territory. Here his adventurous spirit and love of the humorous found ample opportunity for gratification. Nevada was then overrun with a motley crowd of refugees from justice, and adventurers from every part of the world, and Clemens entered fully into the happy-go-lucky spirit of this frontier

life. Many of the sketches embodied in *The Jumping Frog* and in *Roughing It* were produced at this time, appearing in local or Eastern newspapers, or in the *Virginia City Enterprise*, of which Clemens was for a while city editor. His earnings from these sources were invested in Nevada mining stock, but a sudden decline in values swept away most of his capital. Removing to San Francisco, he became acquainted with Bret Harte, in conjunction with whom he assisted in editing the *Californian* newspaper. A second venture in the gold-mining country was unsuccessful, and Clemens returned to San Francisco with impaired health, which, however, was restored by a six months' residence in the Sandwich Islands during 1864. After his return to San Francisco he made his *début* as a lecturer, in which capacity his quiet drollery was the source of infinite amusement to his audiences. The success of these lectures in California and San Francisco was such that in 1867 he came to New York, and in the same year his *Jumping Frog* volume was published. The humour of the sketches and the novelty of the scenes depicted were at once appreciated. In the same year he joined a party of religious tourists on board of the *Quaker City*, making a voyage to Egypt and Palestine, and paying brief visits to France, Italy, and the Levant. The entertaining record of this journey was published in 1869, under the title of *The Innocents Abroad; or, the New Pilgrims' Progress*. The book achieved a remarkable success, and Mark Twain became famous the world over. In five years from the date of its publication, the aggregate sale of the author's works exceeded 240,000 copies. After his return to America, Clemens made his home for a while in Buffalo, where he edited a daily paper, the *Buffalo Express*. His marriage, and a visit to England in 1872, preceded the appearance of his next volume, *Roughing It*, which was produced in 1873. Having abandoned his editorial work, he removed to Hartford, Connecticut, which has continued to be his residence ever since. In collaboration with his neighbour and brother-humorist, Mr. Charles Dudley Warner, he wrote *The Gilded Age*, which was published in 1874. In its dramatised form the piece has attained considerable popularity, owing to Mr. John T. Raymond's admirable impersonation of the character of Col. Sellers. Col. Sellers is a sort of American Micawber. But while Micawber's golden dreams are the merest moonshine, Sellers is always a man of ideas, and his schemes possess a certain plausibility of their own. The difference is due to traits that are purely national, and Sellers remains a genuine American type. The conception of Col. Sellers is Mark Twain's own, and it is perhaps his best creation. His principal works since 1874 have been *The Adventures of Tom Sawyer* (1876), *A Tramp Abroad* (1880), *The Prince and the Pauper* (1882), *Life*

on the *Mississippi* (1883), and *Huckleberry Finn* (1885). Of late years he has given a series of entertainments in conjunction with Mr. George W. Cable, the author of *Old Creole Days* in the principal cities of America, which have attracted large audiences. The popularity of his books continues undiminished, although the first freshness of the author's humour has departed. Among humorists Mark Twain may be classed as a low comedian. The type to which he belongs is very frequent in his country. Mr. Clemens, however, possesses a great advantage over his humbler competitors in the wide field for observation which his wanderings have offered, as well as in his greater fertility of invention. Indeed, apart from the humour which they exhibit, the local colouring of certain of his books gives them a special value. Mark Twain and Bret Harte between them have given their readers a vivid representation of life at a Western mining camp before the days of transcontinental railroads. But whereas the former sees only the sordid and grotesque side of men and events, Bret Harte exhibits them in their more touching, heroic, or picturesque aspects. Twain gives us farce, Harte serious drama. There is nothing of the literary artist in Twain. Like the majority of American humorists, he writes in a colloquial style, effective enough in places, but soon lapsing into monotony. It has been well pointed out that while Mark Twain's humour consists chiefly in ludicrous exaggeration, his exaggeration deals rather with incident and situation than with character. Many of these comic situations are supremely laughable, but the tendency of the author is to overdo the jest. Mark Twain has compelled us to laugh in spite of ourselves, and sometimes, it is to be feared, in spite of our better selves. [E. J. H.]

Twisleton, THE HON. EDWARD TURNER BOYD (b. 1809, d. 1874), a brother of the 13th Lord Saye and Sele, was educated at Winchester College, and at Balliol College, Oxford, where he was elected a fellow. Called to the bar in 1835, he was Assistant Poor-Law Commissioner in England and Scotland, and Chief Poor-Law Commissioner in Ireland from 1839 to 1849. He sat on the Oxford University, English Public Schools, and Civil Service Commissions. His chief literary work was the elaborate *The Handwriting of Junius, Professionally Investigated* by Mr. Charles Chabot, Expert; with a Preface and Collateral Evidence (1871), in which the theory of Sir Philip Francis being the author of the letters is most strongly substantiated.

Twiss, HORACE (b. 1787, d. 1849), the biographer of Lord Eldon, was a nephew of Mrs. Siddons, and was called to the bar in 1811. He entered Parliament in 1820, and for some time enjoyed a reputation as a very finished orator; and in 1828 he became

Under-Secretary for the Colonies in the Duke of Wellington's Administration. The Reform Bill of 1832 cut short his Parliamentary career, and eventually he was forced to add to his earnings at the bar by becoming a Parliamentary summary-writer for the *Times* newspaper. In 1844 he was appointed Vice-Chancellor of the Duchy of Lancaster. Mr. Twiss was the author of *The Carib Chief, a Tragedy*, which was performed at Drury Lane Theatre in 1819; *An Enquiry into the Means of Consolidating and Digesting the Laws of England* (1826); and the ever-entertaining *Biography of Lord Eldon* (1844).

Gentleman's Magazine, June, 1849.

* **Twiss**, SIR TRAVERS, Q.C., F.R.S., D.C.L. (b. 1810), jurist, was educated at University College, Oxford (B.A., with a second in classics and a first in mathematics, 1830), and became a fellow and tutor of his college. After being public examiner in classics and mathematics from 1835 to 1839, he became professor of political economy in the University of Oxford from 1842 to 1849, professor of international law in King's College, London, from 1852 to 1855; from 1855 to 1870 he was professor of civil law in the University of Oxford. Meanwhile, Mr. Twiss had been called to the bar, became an advocate of Doctors' Commons in 1841, and a Q.C. in 1867. He was Chancellor of the Diocese of London from 1858-72, Advocate-General of the Admiralty from 1862-72, and of the Crown from 1867-72. His works include editions of *Bracton and The Black Book of the Admiralty* (1858); *The Oregon Territory, its History and Discovery* (1846); *View of the Progress of Political Economy in Europe* (1847); *The Letters Apostolic of Pope Pius IX.* (1851); *The Law of Nations Considered as Independent Political Communities* (1861-3); and *Belligerent Right on the High Seas* (1884).

Tyler, JOHN (b. 1790, d. 1862), the tenth President of the United States, was born in Charles City, Virginia, graduated at William and Mary College in 1806, and three years later was admitted to the bar. After being for several years a member of the State Legislature, he entered Congress in 1816 as a Republican, and subsequently became identified with the Whig party, zealously supporting Mr. Clay for the presidency in 1839. In 1840 he was nominated Vice-President, General Harrison being President. In consequence of Harrison's death the next year (1841), Tyler became President. He soon began to quarrel with Clay and the majority of those who had elected him to the Vice-Presidency, and on his vetoing the National Bank Bill all his colleagues resigned. Tyler reconstructed his Cabinet with the aid of the Democrats, and among the chief measures which he effected during his term was the annexation of Texas in the teeth of the opposition of Congress. After the expiration of

his term of office he retired into private life until 1861, when he was president of the futile "peace convention" at Washington. On the outbreak of the war he espoused the side of the South, and was returned to the Confederate Congress.

Wise, *Life of President Tyler*.

* **Tylor**, EDWARD BURNETT, F.R.S., D.C.L., LL.D. (b. 1832), was educated at Tottenham, in the school of the Society of Friends. In 1856 he joined the late Mr. Henry Christy in a scientific journey in Mexico, where a beginning was made of the Christy Collection, illustrative of the history of civilisation, which is now incorporated in the British Museum. In 1861 he published *Anahuac, or Mexico and the Mexicans*; in 1865, *Researches into the Early History of Mankind*; in 1871, *Primitive Culture*, which is a continuation of the early history of mankind, and carries on, in the words of the author, "the investigation of culture into other branches of thought and belief, art and custom;" in 1881, *Anthropology, an Introduction to the Study of Man and Civilisation*; in 1884, *Life of Dr. Rolleston*, prefixed to his *Scientific Papers and Addresses*. In 1871 he was elected fellow of the Royal Society; in 1873 received the degree of LL.D. from the University of St. Andrews, and in 1875 D.C.L. from Oxford. During 1879-80 he was president of the Anthropological Institute. In 1884 he became Keeper of the Oxford University Museum, and was appointed reader in anthropology. Mr. Tylor's work may, in his own words, be described as the bringing forth of new evidence and argument on "the doctrine of survival in culture, the bearing of directly-expressive language and the invention of numerals on the problem of early civilisation, the place of myth in the primitive history of the human mind, the development of the animistic philosophy of religion, and the origin of rites and ceremonies."

* **Tyndall**, JOHN, F.R.S., D.C.L., LL.D. (b. 1820), man of science, was born in the village of Leighlin Bridge, Carlow, Ireland, and was the son of a member of the Irish constabulary. His education was conducted at a school in the neighbourhood, and in great part by his father, who constantly exercised his mind in theology. In 1839 he joined the Irish Ordnance Survey; and in 1844, his wishes to go to America being thwarted by his friends, he became a railway engineer. This position he exchanged in 1847 for that of master at Queenwood College, Hants, where he devoted himself to chemical research. In 1848, in company with his friend Frankland, he repaired to the University of Marburg, studied under the great Bunsen, and became known to the scientific world as the author of a luminous treatise on *The Magnetoelectric Properties of Crystals*, and in 1851 repaired to

the laboratory of Professor Magnus, of Berlin. Elected F.R.S. in 1853, he was in June of that year appointed to the Chair of natural philosophy in the Royal Institution of Great Britain, conjoined with the post of superintendent, an office in which he succeeded Faraday. He was now investigating diamagnetism, and the result of his discoveries are to be found in the volume *Researches on Diamagnetism and Magnetic Crystalline Action* (1870). Meanwhile Professor Tyndall had visited the Alps for purposes of recreation in 1849, and speedily began to go there yearly for the purposes of studying the glacier formation. In 1856 he made a memorable expedition to Switzerland, in company with Professor Huxley, which resulted in a joint treatise *On the Structure and Motion of Glaciers*. His adventures and discoveries are recorded in *The Glaciers of the Alps* (1860); *Mountaineering* (1861); *A Vacation Tour* (1863); *Hours of Exercise in the Alps* (1871); *The Forms of Water in Clouds and Rivers, Ice and Glaciers* (1872). During these later years he was continuing his researches into the question of the molecular constitution of matter, and in 1863 published his deeply interesting volume on *Heat as a Mode of Motion*, in which he summarised his researches into the relations of radiant heat to gases and vapours. His Rede lecture of 1865 was also *On Radiation*. In the same year appeared a volume on *Sound*, intended to supply the want of a popular book on the subject, and a similar volume on *Light* in 1870. In 1872 Professor Tyndall went on a lecturing tour in the United States, and his *Lectures on Light* ran through numerous editions. In 1874 he was president of the meeting of the British Association at Belfast, and his address, which assailed several of the dogmas of revealed religion, produced considerable stir. For several years he was scientific adviser to the Board of Trade and the Lighthouse authorities, but resigned those appointments in 1883, in consequence of a disagreement with Mr. Chamberlain, the President of the Board of Trade. He is Rumford medallist of the Royal Society, D.C.L. Oxford, and LL.D. Cambridge and Edinburgh. Among Professor Tyndall's other works may be mentioned:—*Faraday as a Discoverer* (1868); *Natural Philosophy in Easy Lessons* (1869); *On the Scientific Use of the Imagination* (1870); the highly popular *Fragments of Science*, of which the first volume appeared in 1871; *On the Transmission of Sound by the Atmosphere* (1874); *Fermentation* (1877); *Lessons in Electricity* (1876); and *Essays on the Floating Matter of the Air, in Relation to Putrefaction and Infection* (1881). As an exponent of scientific discoveries, Professor Tyndall occupies the foremost place among his contemporaries, his only rival being his friend Professor Huxley. It would be almost impossible to over-estimate the value of their labours, or

their importance in the modification of the thought of the present generation.

U

Überweg, FRIEDRICH (b. 1826, d. 1871), a German philosopher, was a native of Leichlingen, and after studying at Göttingen and Berlin, became teacher at Eberfeld in 1851. He then migrated to Bonn, where he became *privat-docent*. In 1862 he was appointed extraordinary professor of philosophy at Königsberg, and in 1867 ordinary professor, an appointment he held until his death. His most important works are:—*System der Logik und Geschichte der logischen Lehren* (1857), which has been translated into English by T. M. Lindsay (*A System of Logic and History of Logical Doctrines*); and *Grundriss der Geschichte der Philosophie von Thales bis auf die Gegenwart* (1863–6), translated by G. S. Morris (*A History of Philosophy from Thales to the Present Time*), and an edition of Aristotle's *On the Poetic Art*.

F. A. Lange, *Friedrich Überweg*.

Uganda, THE KINGS OF, rule over a district in Central Africa, about 300 miles long by 60 broad, extending round the north and west shores of Central Africa. The dynasty, which boasts an uninterrupted list of thirty-six sovereigns, is said to have been founded in the fourteenth century by the Kintu, a priest of Ethiopic family. The great part of the history of Uganda has won its way to the region of fable, but it becomes trustworthy with SUNA II. (b. 1820, d. 1860), who began to reign in 1836. He was a great warrior, hospitable to strangers, but brutally tyrannical to his subjects, whom he tortured and put to death by hundreds. One of his greatest feats was the reduction of the Wasoga, of whom he is said to have massacred 30,000 after they had submitted. The operation occupied five days. MRESA (b. 1841, d. 1885) was his successor, being elected by the chiefs in preference to Kagumba, the eldest son of Suna. He put all his brothers to death, and, at first, ruled with great brutality; but some years after his accession was converted to Mahometanism by an Arab, and became more humane. He was a great conqueror, and had the most exalted notions of the greatness of his position as Emperor (Kabaka) of Uganda, being also excessively proud of his blue blood. In his later years he sent embassies to the Khedive's pasha at Gondokoro, to the Seyyid of Zanzibar, and was exceedingly hospitable to the travellers, Speke and Grant, Baker, Stanley, and Livingstone, who speak of him in terms of genuine admiration. He also allowed missionaries free access to his dominions, although his mind was much perplexed by the fact that the Christians had two antagonistic faiths. *MWANGA (b. circa 1869), his son and successor, in disposition resembled his grandfather more closely than his father.

Several missionaries were put to death by him with great brutality, including Bishop Hannington.

H. M. Stanley, *Through the Dark Continent*; Speke, *Journal of the Discovery of the Sources of the Nile*.

Uhland, LUDWIG (b. 1787, d. 1862), poet and politician, was born at Tübingen, and studied at the university there. Following the example of the Romantic poets supreme in Germany during his youth, he plunged into the study of the old ballads and myths, the religion and dress of the Middle Ages, and he soon began to compose poems and ballads that are certainly the nearest German approach to the old originals. His verses were first collected in 1815, and have been republished again and again. Everyone knows *The Shepherd* (*Der schöne Schäfer zog so nah*), *The Castle by the Sea* (*Hast du das Schloss gesehen?*), *The Dream* (*Im schönsten Garten wallten*), *The Hostess' Daughter* (*Es zogen drei Burtsche*), and *The Luck of Edenhall*. Many of Uhland's ballads have become really national, and many of his songs are true lyrics, though over all his works, as over the whole Romantic School, of which he, rather than Heine, may be called the last poet, there hangs the shadow of unreality. All his best work was done between the years 1804 and 1816. After this he almost ceased to be a poet, though in 1819 he published *Louis of Bavaria* (*Ludwig der Baiern*), one of his two dramas, the other being *Duke Ernest of Swabia* (*Herzog Ernst von Schwaben*). In 1812 he had settled at Stuttgart as an advocate, and, being an ardent Liberal of those times, was soon drawn into political life. He was elected to the Assembly of Würtemberg in 1819, but in 1830 his political career was interrupted by an appointment to the professorship of German literature and language at Tübingen. After three years, however, he resigned the position and returned to the Assembly. In 1844 he published a valuable collection of old German ballads (*Alte hoch- und niederdeutsche Volkslieder*), with critical notes. More scientific and critical than the *Wunderhorn*, it remains the best edition of the ballads yet published for all ordinary purposes. In 1848 he was naturally elected a member of the parliament at Frankfurt, and there made every endeavour to secure the unity of Germany without the exclusion of the Austrian empire. During the reactionary period that followed he took less part in political life, and returned to his philological researches. After his death his valuable notes for a history of poetry and the sagas were separately published (*Schriften zu Geschichte der Dichtung und Sage*, 1865–75). A large number of Uhland's poems and ballads have been translated into English, several by Longfellow.

Ludwig Uhland's Leben, by his widow (1874); Karl Mayer, *Ludwig Uhland, seine Freunde und Zeitgenossen* (1867); Heine, *Romantische Schule*, part iii.

Uhrich, JEAN JACQUES ALEXIS (b. 1802, d. 1886), French general, was a native of Phalsbourg in Alsace, and entered the army in 1820. In 1855 he became general of division, and served in the Crimea, and after the Italian campaign passed into the reserve. On the outbreak of the Franco-German War he re-entered the service, and was made commander of Strasburg. The place was invested on Aug. 8th, 1870, and surrendered on Sept. 27th, after a most gallant defence. He retired from the service in Dec., 1872, having in the same year published *Documents relatifs au Siège de Strasburg*, and, at the time of his death, had become almost forgotten. His funeral was made the occasion of an anti-German demonstration by his fellow-Alsatians.

Ukert, FRIEDRICH AUGUST (b. 1780, d. 1851), was born at Eutin, educated at Halle and Jena, and was successively inspector at the Gotha gymnasium and librarian at the ducal library. His chief writings are a valuable *Geography of the Greeks and Romans* (1818-46), and *On Deities, Heroes, and Genius* (1850). He also aided Heeren in his *History of the European States*.

* **Ulrici, HERMANN** (b. 1806), a German philosopher and critic, was a native of Pforten, studied at Leipzig, Halle, and Berlin, and became a magistrate at Frankfurt. In 1834 he became professor of philosophy at Halle. He is chiefly known as a critic of Shakespeare; and his *Shakespeare's Dramatic Art* (1839, translated by Dr. L. Schmitz), an excellent treatise on Shakespeare's plays, is full of sound, and occasionally aggravating, common sense, profound learning, and a certain amount of poetic sympathy. Among Professor Ulrici's other works may be mentioned *A History of Greek Poetry* (1835), *On the Principle and Method of Hegelian Philosophy* (1841), *The Fundamental Principle of Philosophy* (1845-6), *God and Nature* (1862), *God and the Soul* (1874).

Urquhart, DAVID (b. 1805, d. 1877), younger son of David Urquhart of Braelanwell, Kirkmichael, Cromarty, studied at St. John's College, Oxford. After travelling with Lord Cochrane in Greece, he entered the diplomatic service, and in 1835 became secretary of the embassy at Constantinople. While in this position he conceived the greatest aversion to Russian policy, and henceforth made it his business to expose and denounce that policy. In 1841 he returned to England, having already published several vigorous attacks upon Russia, and thereby become known. In 1847 he was returned to Parliament by Stafford in the Conservative interest, and here he took every opportunity of attacking Lord Palmerston's foreign policy. Meanwhile many shared Urquhart's convictions, and followers had been gathering round him. When, however, he persistently con-

tended, on the breaking out of the Crimean War, that the English Cabinet, in conjunction with Russia, was aiming at the overthrow of Turkey, it was felt that he was going too far. His adherents consequently began to fall away, and by-and-by he lost all power. He wrote and published many books on his favourite subject, and was the means of introducing the Turkish bath into England.

Usibepu. [ZULULAND.]

V

* **Vambéry, ARMINIUS** (b. 1832), Hungarian traveller, lost his father when he was only a few months old, and his mother was left to bring up a large family in poverty. At the age of twelve he was apprenticed to a ladies' dressmaker, and subsequently became a waiter with tutorial duties in the village inn. He next repaired to the Pressburg gymnasium, where he did well, and afterwards became a teacher at Pesth, visiting peripatetically in the vacations Vienna, Prague, and other towns in the Austrian monarchy. Through the patronage of Baron Joseph Eötvös (q.v.) he was enabled to extend the area of his travels, and in 1853 set out for Constantinople. In 1858 he published his *German-Turkish Dictionary*, still the only available one the German traveller can get in Constantinople. He next visited many unfrequented parts in the East in the disguise of a dervish, and crossed the deserts of the Oxus to Khiva. He then proceeded to Bokhara, Samarkand, Herat, and Meshed, and retraced his steps by Teheran and Trebizond to the Turkish capital. Thus he spent 1860-4. He has since become professor of Oriental languages at the University of Pesth. Professor Vambéry has written largely on Eastern politics, and when the delimitation of the Russo-Afghan frontier came up for settlement in 1885 he undertook a lecturing tour in this country, protesting against the encroachments of Russia. He has published *An Account of my Travels in Central Asia* (1865), and he is the author also of *Manners and Customs in Oriental Countries* (1876), *Primitive Civilisation of the Turco-Tartar Peoples* (1879), *The Coming Struggle for India* (1885), and his *Life and Adventures* (1886).

Van Buren, MARTIN (b. 1782, d. 1862), an American statesman, and eighth President of the United States, began the study of law at fourteen, and at eighteen was an active politician. In 1812 he was elected a senator in the Legislature of New York State, and from 1815 to 1819 was Attorney-General of the State. In 1818 he was the leading spirit in a clique of political wire-pullers or "bosses," who controlled for many years the politics of the Democratic party in New York

State, and which is known in the political history of that State as "the Albany Regency." In 1821 Mr. Van Buren was elected to the United States Senate, and also as member of the convention to revise the constitution of his native State. He was re-elected to the United States Senate in 1827, and in 1828 was elected Governor of the State of New York. In March, 1829, he was appointed Secretary of State in the Cabinet of President Jackson, but resigned in April, accepted the appointment of minister to England, and went to that country, but the nomination was rejected by the Senate in his absence. He was elected in 1832 Vice-President of the United States, Jackson being President; and in 1836 was elected President, as Jackson's political heir, charged with the conduct of the various conflicts that had resulted from Jackson's theories. His administration fell upon evil days for the prosperity of the people. Jackson's war upon the United States Bank had so unsettled the whole financial system of the country, that a financial crisis became inevitable. It came in 1837. Van Buren, nevertheless, true to the implied requirements of his relation to Jackson, continued the foolish financial policy that in lieu of reasons was based upon the shibboleth of "metallic money." In his administration, too, there was some danger of foreign complication, due to an insurrection in Canada, which received assistance and encouragement from the American side of the line. The slavery agitation was a chronic cause of disturbance, and was so persistently continued that a resolution was introduced into the House of Representatives, but withdrawn, to the effect that it was expedient the Union should be dissolved. The canvass for the choice of the next President was the most exciting that had ever been known in the United States up to that time. Mr. Van Buren was the candidate of the Democrats, General William Henry Harrison of the Whigs, and the main issue was the calamity produced by the Democratic policy in finance. General Harrison was elected by a great majority, receiving 234 out of 294 electoral votes. In 1844, Mr. Van Buren was again a candidate, but did not receive the nomination of his party. In 1848 the Democrats nominated Mr. Cass, and in their platform approved of the introduction of slavery into Texas, then recently admitted to the Union. Mr. Van Buren opposed this, and stood as an independent candidate, thus dividing the Democratic vote of his own State and defeating Mr. Cass. He wrote in his retirement from public life an *Inquiry into the Origin and Course of Political Parties in the United States*. Mr. Van Buren was distinguished in his time as a singularly adroit politician. For his skill in handling the various elements of party machinery he acquired the sobriquet of the "Little Magician." He owed his rise to

this skill and to his relation to the popular side of the issues that originated in Jackson's administration; and while he was a man of respectable qualities, he was not in any sense pre-eminent.

Thomas H. Benton, *Thirty Years in the United States Senate* (New York, 1873); James Hammond, *History of Political Parties in the State of New York* (Buffalo, 1850). [G. W. H.]

Vanderbilt, CORNELIUS (b. 1794, d. 1877), American millionaire, was born of humble Dutch parentage at Staten Island, New York, and after receiving a scanty education became a waterman. In 1811, at the age of seventeen, he started a ferry-boat between New York and Staten Island, and thus, aided by the salary he received for teaching at a school, earned 9,000 dollars. In 1817 he became captain of a steamer plying between New York and New Brunswick, and opened an hotel at the latter place. In 1829 he started a line of steamboats on the Hudson, and, gradually enlarging his operations, opened the Nicaragua and California line in 1851, and the Havre and New York line in 1857. In 1862 he aided the Federal Government by the splendid gift of the steamer *Vanderbilt*, for which he received the thanks of Congress. "The Commodore's" latest speculations were in railways, by which he added to his enormous wealth. He founded the Vanderbilt University of the Methodist Free Church in 1872. His son, WILLIAM HENRY VANDERBILT (b. 1821, d. 1883), increased the enormous wealth (four-fifths of the total estate of £20,000,000) left him by his father by speculation chiefly in railways. He was the owner of the famous trotting mare Maud S. It is probable that he doubled the money left him by his father, and before the War of Rates of 1881 he was certainly the richest man in the world.

Vansittart, THE RIGHT HON. NICHOLAS (b. 1766, d. 1851), less commonly known as Baron Bexley, was the son of a former Governor of Bengal, and was educated at Christ Church, Oxford (B.A. 1791). He was called to the bar in 1792, and afterwards became a bencher of Lincoln's Inn. In 1796 he was returned to Parliament by Hastings in the Tory interest, and in 1802 by Old Sarum; he sat for Harwich from 1812 to 1823, when he was elevated to the peerage. In 1801 he was sent to Denmark on a futile attempt to detach that power from the Northern Alliance. Mr. Vansittart's official career began in 1804, when he was appointed a Lord of the Treasury in Ireland, and he was Chief Secretary to the Lord Lieutenant in 1805-6. In the Grenville-Fox ministry he was Joint Secretary to the Treasury. In 1811 he proposed his celebrated resolutions, in opposition to those of Mr. Horner which advocated a return to cash payments. One of them affirmed that bank-notes were equal to

gold despite the fact that a hundred pounds of notes could only purchase £86 10s. 6d. of gold. In 1812 he succeeded Mr. Perceval as Chancellor of the Exchequer, and held that office under Lord Liverpool until 1823. As Chancellor of the Exchequer Mr. Vansittart was by no means lucid, but the charge of deliberately mystifying the House, which is sometimes brought against him, will not bear examination. In 1823 he was raised to the peerage as Lord Bexley, and practically ceased to take part in public life, although he held office as Chancellor of the Duchy of Lancaster down to 1828. He was much interested in religious effort, and was an able president of the British and Foreign Bible Society.

Varley, JOHN (b. 1778, d. 1842), and **CORNELIUS** (b. 1781, d. 1873), water-colour painters, were the sons of a man who had no definite profession, but was at one time tutor to the son of Earl Stanhope. John Varley was first sent to a silversmith's, but on the death of his father found employment first under a portrait painter and then under an architectural draughtsman. In 1798 he exhibited his first picture, a *View of Peterborough Cathedral*, at the Royal Academy, and continued to send pictures until 1804, when he became one of the original members of the Water-Colour Society. John Varley was a most prolific painter, and sometimes sent as many as forty paintings to one exhibition. Hence his works were frequently executed without care; but when at his best he was undoubtedly a fine landscape artist, and no man has done fuller justice to the smiling banks of the Thames, or—a more frequent subject—the sunlit sides of a Welsh mountain. John Varley was a teacher of repute, and among his pupils was Mr. Holman Hunt. He was also a firm believer in astrology, and wrote an extraordinary treatise on *Zodiacal Physiognomy* (1828). **CORNELIUS VARLEY** was educated by an uncle as a manufacturer of philosophical instruments, but about 1800 joined his brother John in the study of art. He sent *A Wood Scene* to the Academy of 1803, and in the following year became, with his brother, an original member of the Water-Colour Society, to which he was a frequent exhibitor until 1821. His works were chiefly classical, and marked by careful refinement. Among them may be mentioned *A Mountain Pastoral* (1809), *Palemon and Lavinia* (1811), and *The Vale of Tempe* (1820). Between 1821 and 1859 he exhibited with regularity at the Royal Academy. Cornelius Varley was also a clever man of science; among his inventions may be mentioned the graphic telescope and improvements in the microscop.

Redgrave, *Dictionary of Artists of the English School*.

Varnhagen von Ense, CARL AUGUST LUDWIG PHILIPP (b. 1785, d. 1858), man of

letters and diplomatist, was a native of Düsseldorf, and, having studied at Berlin and Halle, entered the Austrian army and was severely wounded at Wagram. In 1810 he went to Paris in the train of Prince Carl von Schwarzenberg, and saw the festivities which accompanied the marriage of Napoleon with Maria Louisa. In the War of Liberation he fought in the Russian army, and entered Paris with the Allies. He entered the diplomatic service of Prussia in 1814, and in the same year married Rahel Levin, the eminent Jewess, "with the head of a sage and the heart of an Apostle," who had long been the centre of the intellect of Berlin. With her he lived a life of cloudless happiness until her death in 1833. Varnhagen's chief diplomatic missions were to the Congress of Vienna as secretary to Hardenberg (q.v.), that of ambassador to Baden in the same year, and of envoy to Hesse-Cassel in 1829. But his chief importance lies in his acquaintance with the heroes of his time, and his power of reproducing their greatness. His chief works are:—*Biographische Denkmale* (1824-30); *Leben des Feldmarschall's Keith* (1844); *Leben des Fürsten Blücher von Wahlstadt* (1845); *Denkwürdigkeiten*, with the well-known chapter in which he endeavours to prove Napoleon to have been a man of no ability (1840-6); *Rahel* (1834); *Galerie von Bildnissen aus Rahel's Umgang* (1836).

***Vaughan, VERY REV. CHARLES JOHN, D.D.** (b. 1816), Dean of Llandaff, son of the Rev. E. T. Vaughan, vicar of St. Martin's, Leicester, was educated at Rugby under Arnold, and at Trinity College, Cambridge. After a distinguished career he was bracketed senior classic in 1838, becoming in the same year a fellow of his college. Having taken holy orders, he became vicar of St. Martin's, Leicester, in 1841; and in 1844 he was appointed to the head-mastership of Harrow, which post he retained for fifteen years. In 1851 he was selected as chaplain-in-ordinary to the Queen. In 1860, the year after his resignation of the Harrow mastership, he was made vicar of Doncaster, in 1869 Master of the Temple, in 1879 Dean of Llandaff, and in 1882 one of the Deputy Clerks of the Closet in Ordinary to Her Majesty. Dean Vaughan has published, among other works:—*Memorials of Harrow Sundays* (1859); *The Church of the First Days* (1864); *Christ Satisfying the Instincts of Humanity* (1870); *Half-hours in the Temple Church* (1871); *Temple Sermons* (1881); *Heroes of Faith* (four lectures), 1876; the well-known *Family Prayers* (1871), and *Family Prayer and Sermon Book* (1880); also an annotated edition of the *Epistle to the Romans* (1870); *Lectures on the Philippians* (1862), and on *The Revelation of St. John* (1863); *The Epistle to the Philippians, with Translation and Notes* (1885); and the *Epistles of St. Paul for English Readers* (1864), etc.

• **Veitch, JOHN** (b. 1829), philosopher and writer, was born at Peebles, and educated at the University of Edinburgh, where he took high honours in logic and metaphysics. In 1855 he was appointed assistant to the late Sir William Hamilton, professor of logic and metaphysics in the University of St. Andrews, and in 1860 succeeded Professor Fraser in the Chair of logic, metaphysics, and rhetoric. Four years later he was made professor of logic and metaphysics in the University of Glasgow. He has published:—*The Method, Meditations, and Selections from the Principles of Descartes, with Introductory Essay* (6th ed. 1879); *Memoir of Sir William Hamilton* (1869); *Lucretius and the Atomic Theory* (1875); *The Tweed and other Poems* (1875); *The History and Poetry of the Scottish Border* (1878); *Institutes of Logic* (1885), Sir William Hamilton's *Lectures on Metaphysics and Logic*, were edited by Professor Veitch, in conjunction with Professor Mansel, in 1859-60, and in 1882 he wrote a biographical sketch of Sir W. Hamilton for the *Philosophical Classics Series*, edited by Professor Knight.

• **Verdi, GIUSEPPE** (b. 1814), the most prolific operatic writer of his or any age, and the foremost representative of the Italian school, is the son of an innkeeper at Rancola in the duchy of Parma. In 1833 he studied under Lavigna at Milan, and his first work, *Oberto Conte di San Bonifazio*, a musical drama, was produced in 1839, at La Scala Theatre, of which his master was the director. This achieved such unequivocal success that he at once received commissions for new works, but its successors were not received with like applause. Influenced, perhaps, by these failures, and the death of his young wife, Verdi now turned his attention to tragic themes, and in 1842 *Nabucodonosor* was performed at the same theatre, and followed in 1843 by *I Lombardi*, which at once raised him to the front rank of Italian composers. Of his thirty operas the greater part have become established favourites among the lovers of Italian music in every country, and are distinguished by their vigorous and dramatic treatment from the languishing and sentimental writing of his predecessors. They are opposed in style and treatment to the severer methods of the modern German school, although his later works show some departure from the earlier in this respect; and although no imitator, the Italian did not show himself entirely uninfluenced by the great German innovators. Among the principal of his works are:—*Ernani* (1844); *Alzire* (1845); *Attila* (1847); *Rigoletto* (1851), regarded by himself as his masterpiece; *Il Trovatore*, of which the libretto is founded on Hugo's *Le Roi s'Amuse* (1853); *La Traviata*, of which *La Dame aux Camélias* is the subject (1854); *I Vespri Siciliani* (1855); *Aroldo* (1857); *Un Ballo in Maschera* (1859);

Macbeth (1865); *Don Carlos* (1867); *Giocanni D'Arco* (1868); *Aida* (1871); *Montezuma* (1872). A new work, *Othello*, is promised at an early date. Verdi has not restricted himself to operatic composition. Among his numerous other works may be mentioned his *Requiem Mass*, written in honour of his countryman Manzoni, and performed at Milan in 1874. Having taken an active part in the movement for Italian liberation, Verdi was a member of the National Assembly of Parma which in 1859 voted the annexation of the duchy to Sardinia; was elected a deputy to the Italian Parliament in 1861; became Minister of Public Instruction for the improvement of the Italian Musical Institute, 1871; and a senator of the Italian kingdom, 1872. He is a member of the Legion of Honour, of the French and Prussian Academies of Fine Arts, and has received numerous decorations—the Grand Cross of the Russian Order of St. Stanislaus (1862); of the Order of the Crown of Italy, and the Egyptian Order of Osmanli (1872); and the Austrian Order of Franz-Joseph (1875). Signor Verdi principally lives in retirement at Genoa.

Mendel and Reissmann, *Musikalisches Conversations-Lexicon*.

• **Vereschagin, VASSILI** (b. 1842), Russian painter, was born in the government of Novgorod, and was destined for the navy, but turned to painting, and entered the Academy of Fine Arts at St. Petersburg. In 1831 his first picture, *The Lovers of Penelope slain by Ulysses*, obtained a silver medal, but Vereschagin destroyed it as being too classical. He next came to Paris, where he studied under Gérôme, and exhibited at the Salon of 1866 *Douchobortsiki singing the Psalms*. During the following years he was gathering materials for a great series of landscape and military paintings, and for that purpose travelled in India, took part in General Kauffman's Central Asian expedition, and fought in the Russo-Turkish War. His pictures of the Turkestan campaign were placed in a special gallery at the Moscow museum; and in 1880 he exhibited at Paris two series of pictures, 146 in number, the subjects of which were taken from his Indian and Turkish experiences. Vereschagin then turned to subjects taken from the New Testament, which he treated in an exceedingly realistic manner. The anti-religious conception of his *Holy Family* and *Resurrection* were the cause of their being withdrawn from the Künstlerhaus Exhibition at Vienna in October, 1885, by the order of the archbishop.

Magazine of Art, 1884; *Pall Mall Gazette*, Dec. 9th, 1885.

• **Verlat, CHARLES** (b. 1824), Belgian painter, was born at Antwerp, and studied art under M. de Keyser, and at the Academy of his native town. After acquiring some

celebrity in Belgium by a picture in *genre*, *The Two Friends*, and another on an historical subject, *Tintoretto Instructing his Daughter*, he established himself in Paris in 1847. Among his most famous pictures, of which the subjects are chiefly animal and historical, are:—*Godfrey de Bouillon at the Taking of Jerusalem*, painted for the Belgian government, and *Buffaloes Attacked by a Tiger* (1855); *A Monkey House* (1863); at the Universal Exhibition of 1867, *The Virgin and the Infant Jesus*, purchased by the Empress of the French; *Wolf!* bought by the King of the Belgians; at that of 1868, *Not Christ but Barabbas*, and *The Lion and the Serpent*. In 1881 he painted a fine panorama of the *Battle of Waterloo*.

* **Verne, JULES** (b. 1828), a popular French author, a native of Nantes, was educated at his native town, and at Paris, where he studied the law. He first came before the public as a dramatist in 1850, with a comedy in verse, *Les Pailles Rompues*; but his fame chiefly rests upon his stories, which have gained an immense circulation throughout Europe, through their delightful mixture of wild adventure and scientific possibilities or impossibilities. Some of them, notably *The Children of Captain Grant*, *Round the World*, and *Michael Strogoff*, have been dramatised with a considerable measure of success. Jules Verne's stories are familiar to every schoolboy of this country through translations, among which the following may be mentioned:—*Five Weeks in a Balloon* (1870); *A Journey to the Centre of the Earth* (1872); *From the Earth to the Moon*, *Twenty Thousand Leagues under the Sea*, and *Meridiana* (1873); *Dr. Ox's Experiment*, *The Fur Country*, *Round the World in Eighty Days*, *A Floating City* and *the Blockade Runners*, and *The English at the North Pole* (1874); *The Mysterious Island*, and *The Survivors of the Chancellor* (1875); *The Mysterious Document* (*Les Enfants de Capitaine Grant*), *The Adventures of Captain Hatteras*, and *Martin Paz* (1876); *Michael Strogoff*, *A Voyage Round the World*, and *The Child of the Cavern* (1877); *Hector Servadac* (1878); *Dick Sands* (1879); *The Begum's Fortune* (1880); *The Steam House*, and *The Giant Raft* (1881); *Godfrey Morgan*, and *The Green Ray* (1883). M. Jules Verne is also the author of an *Illustrated Geography of France* (1867–8), and *General History of Famous Travels and Travellers* (1879), which has been translated. In 1886 one of his relatives made an attempt to assassinate him.

Vernet, JEAN ÉMILE HORACE (b. 1789, d. 1863), French painter, son of Carle Vernet, a famous battle painter, and the grandson of Joseph Vernet, a painter of sea-pictures, was born at Bordeaux. He studied art in a casual manner in the studios of his father and other artists, and soon began to paint battle scenes in imitation of his father. He became a favourite

of the Empress Maria Louisa and Jerome Napoleon, and gained a medal at the Salon of 1812 for a picture representing the *Capture of an Entrenched Camp near Galatz*. He fought in the National Guard in 1814 and 1815, distinguishing himself at Clichy; and continued faithful to Bonapartism after the Restoration. His pictures were chiefly chosen from subjects taken from the Napoleonic legend, and their engravings were to be seen in every cottage. Among them may be mentioned, *Napoleon on the Eve of Waterloo*, *The Rock of St. Helena*, and *The Bridge of Arcola*, varied by paintings of *Jemmapes*, *Valmy*, and so forth. They combined force and movement with a scientific exactitude of detail. In 1826 Horace Vernet became a member of the Academy des Beaux Arts, and shortly afterwards accepted commissions from the Comte d'Artois, afterwards Charles X., who entrusted him with the decoration of the ceiling of the Louvre, and the execution of a fine equestrian group, *The Review in the Champ de Mars*. In 1828 Vernet was appointed director of the School of Art at Rome, but his pictures during this period, chiefly on Italian subjects, were hardly worthy of him. In 1835 he returned to Paris, and resumed his battle-paintings with the happiest results. *The Siege of Anvers* and *The Siege of Constantine* belong to this period; and between 1836 and 1841 he was engaged in painting a series of pictures for the Constantinian Gallery at Versailles. In 1842 and 1843, after a quarrel with Charles X., he spent some months in Russia, and, during his later years, travelled extensively in Africa and the East. *The Smalah of Abd-el-Kader Surprised* (1845) was in his best manner; and his pictures of Arab life were full of spirit. His later battle-scenes were failures, and he painted little after 1855, in which year he gained the grand medal of honour at the Great Exhibition. Horace Vernet was a great but not a very great artist; his fame has of late years been somewhat discounted, and was undoubtedly due, in a certain measure, to the enthusiasm for things military with which the French nation was inspired during the period of the later Bourbons and of the Second Empire.

Durande, Joseph, Carle, et Horace Vernet; Lagrange, Les Vernet.

Vestris, MADAME LUCIA ELIZABETH, afterwards MRS. MATHEWS, *née* BARTOLOZZI (b. 1797, d. 1854), the celebrated English actress, was the granddaughter of Francesco Bartolozzi (q.v.), the well-known engraver. In the course of a liberal education, she evinced an early talent for music, as well as a retentive memory, and soon became mistress of the French and Italian languages. In 1813—aged sixteen—she became the wife of M. Armand Vestris (b. 1787, d. 1825), the ballet-dancer, grandson of Vestris "Le Dieu de la Danse," a dissolute individual, who

deserted her three years after their marriage. Driven by domestic necessity, Madame Vestris adopted the stage, and made her first appearance in Paris, with indifferent success, in July, 1815, as Proserpina in Winter's *Il Ratto di Proserpina*. After a sojourn of three years in Paris, she returned to England in 1819, and appeared upon the boards of Drury Lane in February, 1820, as Lilla, in the *Siege of Belgrade*. Adela, in the *Haunted Tower*, was her second performance, and after a few other impersonations she fascinated the town by her inimitable acting in the part of Giovanni. The story of her subsequent career is the story of a series of triumphs. In 1825 John Poole brought out *Paul Pry* at the Haymarket, which at once became the rage, and in which Madame Vestris, in the character of Phoebe, introduced *Cherry Ripe*, a song which was echoed from one end of the land to the other. In 1830 she undertook the direction of the Olympic, and that little theatre was soon rendered by her the most fashionable and attractive in London. In 1838 she married Charles James Mathews (q.v.), the comedian, and spent a honeymoon in America. She subsequently became lessee of Covent Garden, and in 1847 opened the Lyceum. She retired in 1854, and died of a severe illness in 1856. With Madame Vestris, acting and singing were an impulse. She had none of the learning of a school; she trusted only to her innate feeling and taste. Although perhaps unequal to the personation of the higher class of theatrical heroines, she was unrivalled in vaudeville and extravaganza.

Gentleman's Magazine, Sept., 1856; *Bentley's Miscellany*, Sept., 1856.

* **Vezin**, HERMANN (b. 1829), actor, was born in Philadelphia, and graduated at the University of Pennsylvania. In 1850 he adopted the dramatic profession, and appeared on the stage at York, England. His first appearance in London was in 1852 as Pembroke in *King John*, under the management of Charles Kean. After a visit to America, he played leading Shakespearian characters at the Surrey (1859), and in 1860 was Laertes to Fechter's Hamlet. In 1863 he married Mrs. Charles Young, an actress of considerable repute, who had played Desdemona to Phelps's Othello. In 1867, he produced Mr. W. G. Wills's *Man o' Airie* at the Olympic, and scored a great success. His next performances of importance were Murdock Mac Kane in Westland Marston's *Life for Life* (1869), Sigurd in the *White Pilgrim* (1874), Jacques in *As You Like It* (1875), and Dan'l Druce in Mr. Gilbert's play of that name. In 1877 he played De Taldé in the *Danischeffs*, and in 1878 Dr. Primrose in Mr. W. G. Wills's *Olivia*, one of the finest creations of this refined and accomplished actor. In the same year he appeared as Pierre Lorange in *Proof*

at the Adelphi, where he had a long engagement. In 1886 he produced at the Opera Comique, and afterwards at Toole's, *Bachelors*, a successful adaptation from the German by himself and Mr. Robert Buchanan, together with a revival of *Dr. Davy*.

* **Viardot-Garcia**, PAULINE MICHELLE (b. 1821), a celebrated singer, daughter of Manuel del Populo Garcia, the famous tenor, and sister of Madame Malibran, was born in Paris. Her musical talent manifested itself early, and she was afterwards considered by Liszt as one of his best pupils at the pianoforte. She spoke several languages with ease and correctness, and had much skill in drawing and painting. Her father died in 1832, and the cultivation of her voice was carried on by her brother Manuel; she possessed a mezzo-soprano of great power and compass, rendered so flexible by diligent study that she could sing Chopin's mazurkas, and even gave at one of her concerts in Paris a transcription of Tartini's sonata *Le Trille du Diable*. In 1839 she appeared for the first time in London, at Her Majesty's Theatre, as Desdemona in *Othello*, and was received with great applause, her audience at once recognising the similarity of the voices of the two sisters, the lamented Madame Malibran having sung for the last time only three years before. The same year she joined the Italian Operatic Company in Paris, and in the spring of 1840 was married to M. Viardot, a French writer, at that time the director of the Italian Opera in Paris. Subsequently she appeared with great success in Madrid, Vienna, St. Petersburg, Berlin, Dresden, and other German towns, returning regularly each year to England for the London season. Since 1862 she has retired from the stage, and spends her time in Paris or Baden-Baden, working diligently at composition. An opera of hers, *The Last of the Magyars*, was given at Weimar in 1869, and she is the composer of many songs and some pianoforte music.

Victor, CLAUDE, Duke of Belluno and Marshal of France (b. 1764, d. 1841), originally called Claude Perrin, was a native of the Vosges, entered the French army as a drummer-boy in 1782, and rose by sheer ability to be general of division in 1799. He attached himself to Napoleon, and at the battle of Marengo (1800) greatly contributed to the victory. After serving as Governor of Batavia (the Netherlands) and Ambassador to Copenhagen, he received the grade of marshal for his gallant conduct at Friedland (1807). After the Peace of Tilsit he was appointed Resident in Prussia, and created Duke of Belluno. In 1808 he was sent with the 1st Army Corps into Spain, and at first carried all before him against the Spanish generals. In 1809, however, he was badly defeated by Wellington at Talavera, a battle which he persuaded King Joseph to fight against the

advice of Jourdan, his proper military adviser, and then laid unsuccessful siege to Cadiz. On March 1st, 1811, he was defeated at Barossa by an expedition from the town, and driven from his lines. In 1812 he was recalled to take part in the Russian campaign, but quarrelled with Napoleon in 1814 because of the severe rebuke he received for not occupying the bridge of Montereau. Victor thereupon became a partisan of the Bourbons, by whom he was made Minister of War (1821-3). He was then appointed ambassador at Vienna, but speedily returned, the Austrian Court refusing to recognise his title.

Victor Emmanuel II., FIRST KING OF ITALY (b. 1820, d. 1878), was the eldest of the two sons of Charles Albert, King of Sardinia, and of the Archduchess Mary Theresa of Austria, sister of Leopold II., Grand Duke of Tuscany. Both Victor Emmanuel and his brother Ferdinand, Duke of Genoa, received an excellent education. When only twenty-two, Victor Emmanuel married his first cousin, the Archduchess Mary Adelaide, the daughter of the Archduke Ranieri of Austria, Viceroy of the Lombard-Venetian kingdom. Several children were born from this union, among them being Humbert, afterwards King of Italy; Amadeus, Duke of Aosta and ex-King of Spain; Clotilde, wife of Prince Napoleon; and Maria Pia, Queen of Portugal. During the Austro-Sardinian War of 1848-9, Victor Emmanuel, who was then styled Duke of Savoy, commanded the brave Brigade of Savoy, and displayed very great gallantry at the battles of Goita and Novara. He became King of Sardinia on the evening of March 23rd, 1849, after the disastrous battle of Novara, when the onerous and humiliating conditions of peace imposed by the Austrian Marshal Radetzky compelled Charles Albert to abdicate in favour of his son. Victor Emmanuel ascended the throne under the most unfavourable circumstances and strongest influences to divert him from preserving the liberal Constitution granted by his father to his subjects. A victorious enemy encamped within a few miles from the capital was offering him Parma and Modena if he consented to abolish the Constitution. His own army was shattered and bewildered by the suddenness of its reverses; Genoa, republican at heart, had declared herself against the peace, and revolted from the new king; the Sardinian treasury was quite exhausted, and even the little personal property belonging to the House of Savoy had been sold by Charles Albert on behalf of the Italian independence; a large portion of the Piedmontese aristocracy, and many of his generals, urged him to revoke the Constitution, and the same advice was repeated by an Austrian mother and an Austrian wife. But he stood firm, and his simple and constant answer to them all was: "I must keep my oath to my people." The revolution of Genoa was sup-

pressed soon after with little loss of life. From Austria Victor Emmanuel succeeded in obtaining a treaty of peace upon comparatively easy terms. He chose as his ministers such men as D'Azeglio, La Marmora, and Cavour. With their assistance he restored the finances, reorganised the army, increased the strength and importance of the kingdom, improved the system of public education, encouraged commerce by useful treaties with foreign nations, and, notwithstanding the menaces from the Vatican, he maintained religious liberty in his State. The clergy enjoyed at that time in Piedmont more privileges than in any other part of the Catholic world, and when they were abusing them to raise their voices against the Constitution and civil progress, the *Siccardi* law was promulgated, by which priests were placed on the same level of civil equality with laymen. Every means was used to deter the king from giving his assent to that law, though it had been already voted by the Parliament, but he knew too well his duties as constitutional king, and gave his sanction. It was thought by the Clericals to be a mark of the wrath of Heaven that in the short time of ten days the grave closed over the remains of his mother and of his consort; and as if all these misfortunes were not great enough, one month later, on Feb. 10th, 1855, the Duke of Genoa, his only brother, was also taken away from him. The wish to see Italy united, and free from her foreign oppressors, became with him such an absorbing idea that it never departed from him for one single moment; but he clearly saw that a contest single-handed with Austria was hopeless. To strengthen his position, and secure for his country the attention and sympathy of the Western Powers, he despatched a force of 18,000 of his soldiers to co-operate with the British and French armies against Russia. They behaved with the greatest bravery, and it became generally known that the military organisation of Sardinia was of the most complete character. Victor Emmanuel visited about the same time the Courts of Paris and London, where he was received with the greatest enthusiasm. At the Congress of Paris of 1856, through Cavour, the condition of oppressed Italy was shown to the Powers, notwithstanding the protests of the Austrian Representative, Count de Buol. That led to a closer alliance with France, which was cemented on Jan. 30th, 1859, by the marriage of the eldest daughter of Victor Emmanuel, the Princess Clotilde, with Prince Jerome Napoleon, first cousin of Napoleon III. The co-operation of France in the successful war against Austria was secured in 1859. Victor Emmanuel fought with the greatest gallantry, now taking the leadership in battle, and now as a simple soldier, which in the battle of Palestro (May 30th, 1859) endeared him so much to the French Zouaves that they gave him the rank and nickname of their *Corporal*. After a series of

sanguinary engagements the Austrians were routed, and Lombardy was annexed to the kingdom of Sardinia. But the abrupt termination of the war, and the Villafranca armistice, so much grieved Count Cavour, that he retired broken-hearted to Switzerland, and Victor Emmanuel alone had to use all his strength to overcome the political and diplomatic embarrassments which followed. Cavour, however, soon returned to power, and during 1860 the Grand Duchy of Tuscany, the Duchies of Parma and Modena, and the Papal Legations, voted for their annexation to the monarchy of Victor Emmanuel and his descendants. At the same time, Garibaldi, at the head of the "thousand heroes," landed at Marsala, in Sicily, defeated the Neapolitan troops at Calatafimi, took Palermo, and after many successful engagements entered Naples, and the inhabitants of the old kingdom of the Two Sicilies declared themselves subjects of Victor Emmanuel. The battle of Castelfidardo (Sept. 18th, 1860) and the surrender of Ancona (Sept. 29th following) rendered the king master of the Marches and Umbria, and the inhabitants proclaimed their annexation to his State. He then, at the head of his army, met Garibaldi near Gaeta, and was saluted by him as "King of Italy," and this title was soon after confirmed by the Italian Parliament and acknowledged by the Powers. The painful, but necessary, cession of Nice and Savoy, the cradle of his family, to France, was a deep wound to Victor Emmanuel; but the greatest disaster was the death of Count Cavour (1861), which by all the world was deemed to entail the ruin of Italy. The king, however, though deprived of the assistance of this great minister, was able to accomplish, favoured by the circumstances, the liberation of Venice (1866) and Rome (1870). The first was the result of the offensive and defensive alliance concluded with Prussia against Austria, which compelled the latter to withdraw all her forces from Italy and surrender the Venetian provinces to Victor Emmanuel. The second was the consequence of the Franco-Prussian War of 1870-1. The withdrawal of the French troops was followed by the occupation of Rome on Sept. 20th, 1870, and it became the capital of the Italian monarchy. Victor Emmanuel, after having achieved the redemption of Italy, had little more to live for, and after a very short illness, not yet fifty-eight years old, he breathed his last on his little iron camp-bed on the ground-floor of the Quirinal Palace at Rome, on Jan. 9th, 1878. Victor Emmanuel's life from the day in which he received the crown from his father, Charles Albert, at Novara, till its end, was one of marvellous romance. His characteristic traits were honesty of purpose and love of his country and his people, who early gave him the name of *Ré Galantuomo* or *King Honestman*. He was universally beloved by his subjects, and above all by those of the hum-

blest classes, who looked on him as a father. He was buried in the Pantheon at Rome.

Biografia di Vittorio Emanuele II.; Ranalli. *L'Italia dopo il 1859*; Bersezio, *Il Regno di Vittorio Emanuele II.*; E. Dicey, *Victor Emmanuel*. [A. O.]

* **Victoria Alexandrina**, QUEEN OF GREAT BRITAIN AND IRELAND, AND EMPRESS OF INDIA (b. May 24th, 1819), only child of Edward, Duke of Kent, fourth son of George III., and of the Princess Louisa Victoria of Saxe-Coburg, is the sixth Sovereign of the House of Hanover. Her father dying in 1820, and neither George IV. nor his brothers, the Dukes of York and Clarence, having issue, she became heir-presumptive to the throne. Her early years were spent under the supervision of the Duchess of Northumberland, and were naturally uneventful. Her first public appearance was on her twelfth birthday at a ball given in her honour by the King and Queen, and four days afterwards she attended a drawing-room. It was only about this time that she knew that she was heir-presumptive to the throne. In 1834 she was confirmed at the Chapel Royal, St. James. When she came of age a grand ball was given at Buckingham Palace, her first partner being the Earl of Arundel and Surrey. In less than a month after this King William IV. died, and the young princess was awakened at two o'clock in the morning by the Archbishop of Canterbury and the Lord Chamberlain to hear the fact that she was Queen of England. The coronation ceremony took place in Westminster Abbey, June 28th. Hitherto, from the reign of George I., the crowns of England and Hanover had been united, but now, the Hanoverian crown being under the Salic law, which forbade a woman to wear it, they were separated, the late king's younger brother, the Duke of Cumberland, receiving the latter. When the young Queen took up the reins of power, the Whigs, under Lord Melbourne, were in office. The Queen rather favoured this party, and trusted implicitly in Lord Melbourne; and though they had a majority against them in the Commons, the Whigs managed to defer their final resignation until 1841. In 1839, indeed, they resigned, and Sir Robert Peel came in, but speedily sent in his resignation on the "Bedchamber question." This was the refusal of the Queen to make changes in her immediate attendants, who were chiefly ladies of Whig principles, at the demand of the minister. She was supported in this line of conduct by the advice of Lord Melbourne and his colleagues. In 1840, Feb. 10th, Her Majesty married His Royal Highness Prince Albert of Saxe-Coburg-Gotha (q.v.), by whom she had nine children, four sons and five daughters; the union was one of unalloyed happiness. In 1841, when Lord Melbourne resigned, Sir Robert Peel undertook to form an administration, which lasted till 1846. During this important period

the Income Tax was introduced and the Corn Laws repealed. Respecting Peel's resignation, which followed soon after the repeal of the Corn Laws, Her Majesty wrote: "Yesterday was a very hard day for me. I had to part with Sir Robert Peel and Lord Aberdeen, who are irreparable losses to the country and to me. They were both so much overcome that it quite upset me. We have in them two devoted friends. We felt so safe with them. Never during the five years that they were with me did they ever recommend a person or a thing that was not for my or the country's best, and never for the party's advantage only." Peel was followed by Lord John Russell (1846-52), whose administration is marked by the repeal of the Navigation Laws. In the autumn of 1848 the Queen, with the Prince Consort, paid her first visit to Balmoral, at that time a small whitewashed castle built of granite. In the following year she visited Ireland, and was received with the wildest demonstrations of enthusiasm. In May, 1851, came the brilliant ceremonial connected with the opening of the Great Exhibition. At the end of the same year Lord Palmerston's escapades as Foreign Secretary were brought to a conclusion, and he was forced to resign on account of his recognition of Louis Napoleon's *coup d'état* without consulting Her Majesty or his colleagues. She had previously drawn up a minute in which his duties were defined in most telling phrases. The death of the Duke of Wellington in September, 1852, was a severe blow to Her Majesty, as may be seen from the following, addressed to the King of the Belgians:—"He [the Duke] was the pride and good genius, as it were, of this country—the most loyal and devoted subject, and the staunchest supporter the Crown ever had. We shall soon stand sadly alone. Aberdeen is almost the only personal friend of the kind left to us—Melbourne, Peel, Liverpool, now the Duke—all gone!" In 1852 the Earl of Derby became Premier; being defeated on the Budget proposals, however, he had to give place in the same year to the Aberdeen coalition ministry. In 1853 another visit was paid to Ireland for the purpose of opening the great Art and Industrial Exhibition at Dublin. Then came on the Crimean War, the mismanagement of which led to the resignation of the Aberdeen coalition ministry in 1855. Lord Palmerston came next, closed the Russian War, as well as wars with Persia and China, and in 1858, after an uneventful tenure of office, was thrown out on the Conspiracy to Murder Bill. The Earl of Derby now held office for a few months, when Lord Palmerston was again reinstated (June, 1859). In 1858 the Indian Mutiny was put down, and the possessions of the East India Company were transferred to the Crown. In 1865, on the death of Lord Palmerston, the ministry was re-arranged

under Earl Russell, and in 1866 was defeated on a clause in the Reform Bill. The Conservatives now took office under Lord Derby, and carried the Reform Bill of 1867. In February, 1868, Lord Derby resigning, Mr. Disraeli became Premier, himself resigning in December, owing to the result of the general election. Thereupon Mr. Gladstone took office, and remained in power until his defeat at the general election of 1874. Meanwhile, during the years 1868-74, the Irish Church had been disestablished, the Elementary Education Act, an Irish Land Act, and the Ballot Act had become law; purchase in the army had been abolished; the fusion of law and equity had been effected; and the *Alabama* claims decided. In 1874 Mr. Disraeli was again Premier, and in 1877 Her Majesty was proclaimed Empress of India at a great durbar at Delhi. The chief events during the Conservative administration were connected with foreign and colonial affairs, and included the Treaty of Berlin, the acquisition of Cyprus, the establishment of the Dual Control in Egypt, the wars with Zululand and Afghanistan. In 1877 the Queen paid a visit to Lord Beaconsfield at Hughenden. In 1880 Mr. Gladstone came into office, and his administration was marked at home by another Irish Land Act, intended as a settlement of the agrarian question, which had been forced on by Mr. Parnell; a Reform Act; and an Election Expenses Act; and abroad by the temporary settlement of the outstanding questions connected with the Berlin Treaty, wars with the Boers of the Transvaal, the Egyptians under Araby Pasha, and the Arabs of the Soudan. The closing months of the ministry were marked by a grave dispute with Russia concerning the Afghan frontier. In 1885 Mr. Gladstone was defeated on the Budget resolutions, and Lord Salisbury became Prime Minister. He held office until January, 1886, and succeeded in bringing the Afghan frontier question to a peaceful conclusion, besides preventing a war between Turkey and Greece. The results of the general election of 1885 did not place the Conservatives in a majority, and having been defeated by Mr. Jesse Collings on a motion in favour of the encouragement of small holdings, they resigned. Mr. Gladstone then took office again; and, having announced his adherence to Home Rule for Ireland, introduced a "Bill for the Better Government of Ireland," and a land-purchase scheme. The former was thrown out, and Mr. Gladstone appealed to the country with the result that he lost a large number of seats. The Liberal party was hopelessly divided, and the Conservatives returned to power under Lord Salisbury in August, 1886, having, with the help of the Liberal Unionists, a good working majority over the followers of Mr. Gladstone and Mr. Parnell. Such have been the main changes in Her Majesty's responsible advisers, and

may be taken to reflect her official life. Her career has not altogether been without incident, and several attempts, happily unsuccessful, have been made upon her life—the first in June, 1840, by a lad named Oxford; the second in May, 1842, by John Francis, who was transported for life; the third in July of the same year by Bean, who received eighteen months' imprisonment; the fourth in 1849, by William Hamilton, an Irishman, who was transported for seven years; the fifth in April, 1882, by Roderick Maclean, who was ordered to be confined during Her Majesty's pleasure. Her Majesty's domestic afflictions both as a wife and as a mother have weighed heavily upon her. On March 16th, 1861, she lost her mother; this bereavement was followed in a few months by the sudden death of the Prince Consort. The latter blow doubtless affected her whole mode of life, and imposed upon her a period of seclusion. The deaths of the Princess Alice, and of Prince Leopold, Duke of Albany, were additional sources of grief. Her Majesty has published *The Early Days of his Royal Highness the Prince Consort* (1867); *Leaves from the Journal of our Life in the Highlands* (1867); and *More Leaves from the Journal of our Life in the Highlands* (1884). Her Majesty's fondness for Scotland is well known, and at Balmoral she spends a considerable part of every year. Her visits to the Continent have been numerous. Her Majesty was present at the opening of Parliament in 1871, and again in 1880. On both occasions the speech from the throne was read by the Lord Chancellor. She was present at the opening of the New Law Courts in 1884. During the year 1886 Her Majesty took part in several public ceremonies of importance, notably the opening of the Indian and Colonial Exhibition at South Kensington, and was received with demonstrations of loyalty by all classes of the community. The jubilee of her great and glorious reign was reached in the year 1887. The following children have been born to Her Majesty: the Princess Victoria (b. 1840), married in 1858 to the Crown Prince of Prussia; Albert Edward, Prince of Wales (b. 1841), married, 1863, the Princess Alexandra of Denmark; Princess Alice (b. 1843, d. 1878), married, 1862, to Prince Louis of Hesse-Darmstadt; Prince Alfred, Duke of Edinburgh (b. 1844), married, 1874, the Grand Duchess Marie Alexandrovna of Russia; Princess Helena (b. 1846), married, 1866, to Prince Christian of Schleswig-Holstein; Princess Louise (b. 1848), married, 1871, to the Marquis of Lorne; Prince Arthur, Duke of Connaught (b. 1850), married, 1879, the Princess Louise of Hohenzollern; Prince Leopold, Duke of Albany (b. 1853, d. 1884), married, 1882, the Princess Hélène of Waldeck-Pyrmont; and Princess Beatrice (b. 1857), married, 1885, to Prince Henry of Battenberg.

Sir T. Martin, *Life of the Prince Consort*; The Greville Memoirs; Justin McCarthy, *History of Our Own Times*; The Life and Times of Queen Victoria; Molesworth, *History of England to the Fall of the Gladstone Ministry*; S. Walpole, *History of England since 1815*.

Vigny, ALFRED VICTOR, COMTE DE (b. 1799, d. 1864), was born at Loches of a Royalist family, and served for a short period after the Restoration in the royal body-guard. In 1826, however, he married Miss Bunbury, an Englishwoman of fortune, and soon retired from the army. His first collection of *Poèmes* had been published in 1822, and *Elloa, ou la Sœur des Anges*, in 1824. After he had definitely adopted literature as his pursuit in life he became one of the leaders of the Romantic movement, and his *Poèmes Antiques et Modernes* (1826-37) were hailed as one of the finest productions of the new school. In the same year appeared an historical romance, *Cinq-Mars*, which achieved a high degree of popularity. Alfred de Vigny was also a dramatist; *Chatterton* (1835) was most favourably received, and he had previously adapted *Othello* and *Macbeth*. It is, however, chiefly as a poet, possessing much of Victor Hugo's fire, with more restraint, that he will be remembered. It was not until after his death that his *Destinées*: *Poèmes Philosophiques* were given to the world. An edition of his *Œuvres Complètes* appeared in 1883.

A. France, *Alfred de Vigny*; Mirecourt, *Les Contemporains*; Sainte-Beuve, *Portraits Contemporains*.

• **Villari, PASQUALE** (b. 1827), Italian man of letters, was born at Naples, and having studied law at the university of his native town, began to practise that profession. In 1847, however, he was imprisoned for his share in the revolution of that year, and on being set at liberty went to Florence, where he took pupils, and was engaged in historical research. In 1859 he became professor of history at the University of Pisa, and in 1866 professor of history at the Institute of Higher Studies at Florence. Professor Villari is famous as the author of two monumental works, which are invaluable to the student of Italian history: *The Story of Saconarola and his Times* (1859-61, English translation 1863), and *Machiavelli and his Times* (3 vols., 1877-82; English translations of vols. i. and ii., 1878). He is also the author of an edition of the works of Beccaria, with a memoir (1854): *Antiche Leggende et Tradizioni che illustrano la Divina Commedia* (1865); *Saggi Critici Storici et Letterari* (1868); and *Le Lettere Meridionale*, essays on the social question in Italy (1878).

Villemain, AREL FRANÇOIS (b. 1790, d. 1870), French man of letters, was a native of Paris, and in 1810 was appointed assistant-professor of rhetoric at the Lycée Charlemagne. He obtained several prizes from the Institute for essays and declamation, and in

1814 became Guizot's assistant in the Chair of modern history at the Sorbonne, where in 1816 he became professor of eloquence. He founded the school of eclectic criticism, which held fixed rules and literary forms to be of small account in comparison with the true and the beautiful. He was elected to the Academy in 1821. In 1819 he published his *Histoire de Cromwell; Discours et Mélanges Littéraires* in 1823; *Nouvelles Mélanges* in 1827; and an admirable *Cours de la Littérature Française*, 5 vols., between 1828 and 1838. He was returned to the Chamber of Deputies by Evreux in 1829, and was Minister of Public Instruction from 1839 to 1844, when the state of his health forced him to resign. He threw up his appointment at the Sorbonne on the establishment of the Second Empire. The more important of his subsequent publications were:—*Études de Littérature Ancienne et Étrangère* (1846), *Tableau de l'Éloquence Chrétienne au Quatrième Siècle* (1846), *Souvenirs d'Histoire et de Littérature* (1853), and *Choix d'Études sur la Littérature Contemporaine* (1857).

Villeneuve, PIERRE CHARLES SYLVESTRE DE (b. 1763, d. 1806), French admiral, was born at Valensole, entered the navy at an early age, and in 1793 became captain. In 1796 he was to have taken part in the expedition to Ireland, but was detained by contrary winds in the Mediterranean. In 1796 he commanded the right wing of the French fleet at the battle of Aboukir; and, through inability to see the signals, contributed considerably to Nelson's victory. In 1804 he was created vice-admiral, and placed in command of the fleet which was to effect the French invasion of England. His plan, which was to lure Nelson on a wild-goose chase across the Atlantic, and then set free the French fleets that were being blockaded at Ferrol and Brest, was an able one; but he only executed the first part of it, and on his return to European waters was defeated by Sir Robert Calder, and then, though reinforced by the Ferrol fleet, he foolishly put into Cadiz. Napoleon saw that all hope of invading England was at an end, and the army of Boulogne was sent to the Danube. Villeneuve, overwhelmed by the bitter reproaches of Napoleon, received orders not to refuse battle with the English if he found them inferior in force. On Oct. 19th he left Cadiz, and met Nelson off Cape Trafalgar on the 21st. After that glorious victory he was a prisoner in England until April, 1806, when he was allowed to return to France. He was found dead at an hotel at Rennes under circumstances that pointed to suicide.

***Villiers, THE RIGHT HON. CHARLES PELHAM** (b. 1802), third son of the Hon. George Villiers, and brother of the Earl of Clarendon, was educated at Haileybury College, where he was the pupil of Malthus, and

of Sir James Mackintosh. He was designed for an Indian career, but not being sufficiently robust he abandoned this, and proceeded to St. John's College, Cambridge, where he graduated in 1824. In 1826 he contested Hull as a Free Trader and supporter of Huskisson and Canning, being defeated by a small majority. In 1827 he was called to the bar at Lincoln's Inn. In 1832 he became an Assistant Commissioner on the Poor Law Commission then appointed, which led to the Poor Law Amendment Act of 1834. For this post his economic studies well qualified him, and enabled him also to profit greatly from the facts brought under his notice. Thereafter he became secretary to the Master of the Rolls, and examiner in the Court of Chancery. In 1835 he was a candidate for the representation of Wolverhampton, advocating the same principles as he had previously done at Hull, and being returned as a Free Trader. About this time appeared in the political arena the Radical Reform party, which embraced such names as Molesworth, Hume, James Mill, and Grote, and of this party Villiers became a member, having for his special subject in Parliament the promoting of the repeal of the Corn Laws. In 1838 he first made his annual motion in favour of Free Trade, and persistently continued to do so until it was established. The story of Mr. Villiers' life is for the next few years the history of the Corn Law agitation. After the struggle against Protection was ended, the next question associated with Mr. Villiers' name was the licensing question (1853-4), and he was elected chairman of the Select Committee on Public Houses. In 1859 he was asked to join the Government by Lord Palmerston, and accepted the presidency of the Poor Law Board with a seat in the Cabinet. In 1861, after the report of the Select Committee to inquire into the laws regarding the irremovable poor, he introduced a Bill on that subject, with a view to improve their condition. This was the first of a series of measures that Mr. Villiers successfully carried through Parliament, all bearing the marks of a clear appreciation of the economic doctrines of Adam Smith and Malthus. Of this series mention may be made of the Union Assessment Act (1862), the Union Chargeability Act (1865), the Union Relief Aid Acts, and the Public Works Act. He presided over the Poor Law Board for seven years, resigning with the rest of his colleagues in 1866. He continuously represented Wolverhampton for more than fifty years, his jubilee having been celebrated in 1885, during which time he was always on the side of reform. He had the rare fortune of witnessing the realisation of all those great measures that comprised his political programme at the commencement of his public career; among these measures, besides Free Trade, are municipal reform, extension of the franchise, the ballot, Irish

disestablishment, and a system of national education. [COBDEN; BRIGHT.]

John Morley, *Life of Richard Cobden*; *The Free Trade Speeches of the Right Hon. C. P. Villiers*.

Viollet-le-Duc, EUGÈNE EMMANUEL (b. 1814, d. 1879), French architect, was a native of Paris, and studied ancient art in Italy and Greece, and on his return to France became famous as a restorer of historic monuments. In 1840 he was engaged upon the restoration of the Sainte-Chapelle, in 1845 of Notre Dame, and in 1846 of the Abbaye of Saint Denis. He took an active part in the defence of Paris as commander of a volunteer force of engineers; and subsequently was a vigorous member of the advanced Republican party, who returned him on several occasions to the Municipal Council. Viollet-le-Duc was the author of various works on architecture which are still in great repute. His *Dictionnaire de l'Architecture Française* appeared from 1853-69, and was published in a revised form as the *Dictionnaire Raisonné du Mobilier Français* (1854-75); his *Chapelles de Notre Dame de Paris* was published in 1869. The following of his works have been translated into English:—*Military Architecture of the Middle Ages* (1860); *How to Build a House* (1874); *Annals of a Fortress* (1875); *Habitation of Man in All Ages* (1875); *Restoration* (1876); *Lectures on Architecture* (1876); and *Mont-Blanc* (1877).

Viotti, GIOVANNI BATTISTA (b. 1753, d. 1824), violinist, was born in Piedmont, and exhibiting the most precocious powers, became violinist at the Chapel Royal, Turin. In 1780, however, he began to travel over Europe with his master, Pugnani; and in 1782 was received with great enthusiasm at Paris. There he remained until the outbreak of the revolution, when he retired to England, but after many years of the most brilliant success was obliged to flee from thence to Hamburg, on account of the unfounded suspicion that he was a revolutionary spy. He returned to England in 1795, and while professedly occupied as a wine merchant wrote his admirable concertos in A, B, C, and D. In 1818 he returned to Paris, and became director of the opera. His efforts to raise the status of that institution failed; and in 1822 he was dismissed. Viotti retired, broken-hearted, to die at Brighton.

* **Virchow**, RUDOLF (b. 1821), a German pathologist, ethnologist, and politician, was born at Cöslin, in Pomerania. Selecting medicine as his profession, he entered the University of Berlin, where he graduated in 1843, and in 1847 became lecturer in that institution. In the same year he was commissioned by the Government to investigate the outbreak of typhus in Silesia, and in conjunction with Reinhardt founded and edited

the *Archiv für Pathologie, Anatomie und Physiologie*. In 1848 Germany, in common with the rest of Europe, was smitten by the revolutionary-epidemic which had burst out in Paris, and Virchow, like many of the young *savants* of his native land, became affected by it, and before he was conscious whither the agitation was leading was swept into the political turmoil of the times. He established a journal called the *Medical Reformer*, and a Democratic club, in which he distinguished himself as an orator of a particularly trenchant type. The result was that he was elected a member of the National Assembly, though refused admittance on the ground of his being, from a Parliamentary point of view, a minor, and, when the Conservative reaction set in, lost his university office, and had his journal suppressed. He was, however, appointed to the Chair of pathological anatomy in Würzburg, and on the publication of his work on *Cellular Pathology* attained so much distinction that he was recalled to fill a similar professorship in Berlin. From that date (1856) his benches were crowded with students from all parts of Europe, and, mainly through the reputation he imparted to it, the Berlin School of Medicine enjoyed a prosperity it had never previously known. In 1859, on the revival of the Liberal cause, Virchow became a member of the Municipal Council, when, mainly through his exertions, the arbitrary police system of Berlin was reformed. Soon after, he was chosen deputy by the Electoral College of Saarbrück, and by two of the Berlin colleges. Electing to sit for one of the latter, he rapidly rose to the leadership of the Liberal Opposition, and as such made a firm stand against the encroachments of the reactionaries under the guise of the royal prerogative. In January, 1863, he carried an address in which the Prussian ministry were accused of having violated the Constitution, and in June, 1865 having defeated the Government in their attempt to create a navy, the bitterness of his language was such that Count Bismarck challenged him to a duel. Since that date Virchow has continued in the front rank of the Liberal party, though he has gradually abated somewhat of his virulence, no longer desiring to be considered a Republican, or even a Radical, but only an opponent of those measures which seem in contradiction to the spirit of the Constitution. In 1878 he resigned his seat, and made over the leadership of the *Deutsche Freisinnige*—or German Liberal party—to Eugène Richter, and finally retired from political life, for the purpose of devoting the rest of his career to those scientific pursuits which, if they were not entirely neglected during the heat of public debates, suffered materially from the scant attention which could be spared to them. He has accordingly spent much time in ethnological researches in the Caucasus, and, in conjunction with Dr. Schliemann, on the supposed sites of Troy and

Mycenæ, and in a strenuous opposition to the evolutionary theories which, by the advocacy of Hæckel and others, have attained such popularity in Germany. At most of the scientific congresses he is a prominent figure, and almost all of the medical and other societies of Europe and America, and several of the universities, have bestowed their honorary diplomas on him. His principal works, in addition to a great number of medical, physiological, pathological, ethnographical, and political papers and pamphlets, are the following:—*De Rheumate Corneæ* (1843), his inaugural thesis for the degree of M.D.; *Phlebitis, Thrombosis, Embolism, and Leucæmia* (1845-7), his claim to be the discoverer of "white cell blood" having been contested by the late Prof. Bennett of Edinburgh; *The Celloid Tumours of the Ovary* (1847); *Typhoid Fever in Silesia* (1848); *Collected Papers* (1856); *Cellular Pathology* (1856), of which many editions in different languages have appeared; and *Morbus Spedalska* (1859).

* **Vogt, KARL** (b. 1817), man of science, was born at Giessen, studied at the university of that town, and at Bern, where his father became clinical professor. Thence he went to Neuchâtel, and aided Agassiz in his works on natural history. In 1847 he became professor at the University of Giessen, but in the following year was compelled to quit Germany on account of his active participation in the democratic movements of the time. He retired to Switzerland, and in 1852 was appointed professor at the University of Geneva. Karl Vogt was the apostle of scientific materialism, and his numerous works have naturally aroused considerable controversy. The chief of them are:—*Researches into the Societies of Animals* (1851); *Scenes in the Life of Animals* (1852); *Science and Superstition* (1855); *Lessons on Man* (1864); *Lessons on Useful and Harmful Animals* (1865); and the well-known *Lessons on Man, his Place in Creation and in the History of the Earth* (1878).

B. Weber, Professor Karl Vogt, *Historisch und Physiologisch Geschildert*.

Voss, JORAN HENRICH (b. 1751, d. 1826), a German poet and translator, was born at Sommersdorf in Mecklenburg, and educated at New Brandenburg and the University of Göttingen, where he studied philology under Heyne. Here he became a member of the *Hainbund* (a literary society of the Göttingen students), and formed an intimacy with Klopstock and Claudius. After leaving the university, he was appointed in 1778 rector of the public school in Otterndorf, and transferred in 1782 to Eutin in Oldenburg, where he remained for twenty years as rector of the gymnasium. The latter years of his life were passed at Heidelberg, where in 1805 a professorial Chair and a pension of one thousand florins were offered to him by

the Elector of Bavaria. His best known poem is *Luiise* (1795), a pastoral or idyl of great beauty and elegance, which has been compared to Theocritus, Goethe taking it as a model for his *Hermann und Dorothea*. He was a profound and elegant classical scholar, and his translations from Homer, Virgil, Ovid, Theocritus, Hesiod, Aristophanes, and others, are considered among the best in the German language. English also was familiar to him, and his translation of Shakespeare (1816-26), though it has been superseded by that of Schlegel, has much real value. In this latter work he was aided by his two sons.

Dr. Th. Schmid, *Lebensbeschreibung und Charakteristik*.

W

* **Wace, THE REV. HENRY, D.D.** (b. 1836), was educated at Marlborough and at Brasenose College, Oxford, and took his B.A. degree in 1860 with a second-class in classics and mathematics. Ordained in 1861, he was curate at St. Luke's, Berwick Street, from 1861-3; at St. James's, Piccadilly, from 1863-9; and from 1870-2 lecturer at Grosvenor Chapel, South Audley Street. In the last year he was appointed chaplain to Lincoln's Inn. Mr. Wace was Boyle lecturer at Oxford in 1874, the subject being *Christianity and Morality*; and in 1879 Bampton lecturer on *The Foundations of Faith*. In 1875 he was appointed professor of ecclesiastical history at King's College, London, and in 1880 preacher of Lincoln's Inn. He was select preacher at Cambridge in 1878, and at Oxford from 1880-2. In that year he became D.D. of the University of Edinburgh. In 1881 he had been nominated a prebendary of St. Paul's, became chaplain to the Archbishop of Canterbury in 1883, and in the same year he was appointed principal of King's College, London. Dr. Wace is the editor, in conjunction with Dr. William Smith, of the *Dictionary of Christian Biography* (1877, etc.), and has republished his Boyle and Bampton lectures, and some lectures on *The Gospel and its Witnesses* (1883).

* **Waddington, WILLIAM HENRY** (b. Dec. 11th, 1826), French statesman, was born in Paris. His father was of English birth, but had settled in France as a cotton manufacturer, and afterwards became a naturalised French subject. Educated at Rugby and at Trinity College, Cambridge, William Henry Waddington took his degree in 1849 with a first-class in the classical tripos and a Chancellor's medal. He was also a distinguished member of the Second Trinity Boat Club, and rowed No. 6 in the victorious Cambridge eight of 1849, although he was not a member of the crew in the second contest held later in the year. Returning to France he became

engaged in business, and occupied his leisure with archaeological studies. His chief works were:—*Voyage Archéologique en Grèce et en Asie Mineure*, the record of an expedition undertaken by the order of the French Government (1847-77); an edition of the *Édit de Dioclétien*, with a commentary (1864); *Mélanges de Numismatique et de Philologie* (1861-7); and *Inscriptions Grecques et Latines de Syrie* (1870). These labours gained for him in 1865 the membership of the French Academy of Inscriptions. M. Waddington did not enter public life until 1871, when he was returned to the Assembly by the department of the Aisne. He was an active supporter of M. Thiers, and for a few days before the President's resignation, in 1873, he was Minister of Public Instruction. During the constitutional struggles which followed, M. Waddington, although frequently voting with the Right Centre, was thoroughly Republican. In 1876 he was returned to the Senate by the same department, and became Minister of Public Instruction in M. Dufaure's Cabinet, continuing in office under M. Jules Simon, resigning on May 16th with the rest of the ministry. His educational projects, most of which were rejected by the Senate, were distinctly anti-clerical in spirit. In December he became Minister of Foreign Affairs in M. Dufaure's second Cabinet, and in 1878 went to the Berlin Congress as French Plenipotentiary. There he had considerable influence as the representative of a nation occupying a mediatorial position, and persuaded the Powers to agree in principle to the rectification of the Greek frontier. Subsequent disclosures served also to prove that he came to an understanding with the English plenipotentiaries with regard to the future occupation of Tunis by France. In February, 1879, he became President of the Council in place of M. Dufaure; but his Cabinet, too Republican for the Senate and too Conservative for the Chamber, was never strong, and on Dec. 27th M. Waddington tendered his resignation. In July, 1883, he became French ambassador at the English Court.

***Wade**, SIR THOMAS FRANCIS, K.C.B. (b. 1818), diplomatist, was educated at Harrow, and entered the 81st Foot in 1838. Eventually he exchanged into the 98th Regiment, and retired as lieutenant in 1847. He saw service in China in 1842, and in the following year was appointed interpreter to the garrison of Hong-Kong. Mr. Wade became Assistant Chinese Secretary in 1847, Vice-Consul at Shanghai in 1855, and Chinese Secretary at Hong-Kong in 1855. In that capacity he was attached to Lord Elgin's mission (1857-9) and to Mr. Bruce's mission (1859), and to Lord Elgin's mission of 1860. In 1862 Mr. Wade was appointed Chinese Secretary and Translator to the Chinese Legation, and was *chargé d'affaires* at Peking from 1864-5 and 1869-71,

when he became envoy-extraordinary and Chief Superintendent of British Trade in China. In that capacity he exacted satisfaction from the Chinese Government for the murder of the traveller Margary, and concluded the Chefoo trading convention with the Court of Peking. It was not ratified, owing to the unpopularity in China of the opium clauses, but formed the basis of the arrangement of 1886.

Waghorn, THOMAS, Lieut. R.N. (b. 1800, d. 1850), entered the navy in 1812, and became lieutenant in 1816. In 1824 he volunteered for the expedition to Arracan, and then returned to his work in the Bengal pilot service at Calcutta. He was at this time much occupied with schemes for an overland route to India, and persuaded the Bombay Steam Company to take up his ideas. In 1832 he memorialised the East India Company on the subject of a railway through Egypt, and in 1837, having gained the friendship of Mehemet Ali, he introduced fast sailing boats on the Nile, relays of horses across the desert to Suez, and despatch boats from thence to Mocha and Jiddah. In 1837, however, the mail system was taken out of his hands by the English government to his great loss, and he met with countless obstacles from official and commercial jealousy. In 1847 he finally ruined himself by experiments for carrying the overland mails by way of Trieste instead of *via* Marseilles; and shortly afterwards lost all hope of regaining his losses through the Peninsular and Oriental packet company taking the whole of the overland carrying business into their hands. It was not until shortly before his death that the Government thought fit to recognise, by the bestowal of a pension, his noble services in the cause of civilisation.

Bentley's Miscellany, vol. xxvii.; *Household Words*, vol. i.

Wagner, WILHELM RICHARD (b. May 22nd, 1813; d. Feb. 13th, 1883), a native of Leipzig, was educated at the Kreuz-schule, Dresden, and matriculated at Leipzig University in 1830. He conceived a passion for music through an acquaintance with Beethoven's works, studied under Weinlig, and progressed sufficiently to become chorus-master at Würzburg theatre (1833), which he left the following year for the more responsible post of conductor at Magdeburg, where he produced his opera, *Das Liebesverbot*, founded on Shakespeare's *Measure for Measure*, which was unsuccessful. In 1836 he married his first wife, became music-director at Riga theatre (1838), and turned his attention to the composing of *Rienzi*, an opera in five acts. In 1839 he visited Paris, endeavouring to get this opera produced, but without success. From 1842-9 he was occupied as conductor of the Royal Opera, Dresden—a great advance upon his other theatre engagements,

and one which enabled him to produce *Rienzi* himself. His pen was now busy, and in 1843 *Der Fliegende Holländer*, in three acts, was composed and performed, and two years afterwards *Tannhäuser* saw the light at Dresden. These works constitute Wagner's early operas, and being based upon the accepted forms, are held by many to be his best efforts. A taste for politics now brought Wagner into disgrace, and he was exiled for the part he played in the Dresden revolutionary movements. He fled to Zürich, and there, through Liszt's instrumentality, produced *Lohengrin* on Aug. 28th, 1850. From 1855 to 1863 he conducted performances in Germany and Russia, and a series of philharmonic concerts in London. In 1864 he won the ear of his famous patron, Ludwig II. of Bavaria, and from that time to the year of his death Wagner wanted for nothing that the extravagant wealth of the royal amateur could command. Now was Wagner's opportunity, now the new art theories were to be pushed to further development. *Der Ring des Nibelungen* was begun—parts 1 and 2, *Das Rheingold* and *Die Walküre*, being given at Munich in 1869 and 1870 respectively. This instalment of the great tetralogy, or opera in series, completed by the production of parts 3 and 4, *Siegfried* and the *Götterdämmerung* at Bayreuth in 1876, was a fulfilment of much of what *Lohengrin* had only been the herald. It delighted the royal patron whose distinguished approbation Wagner had already acknowledged in two other equally advanced works, *Tristan und Isolde* (Munich, 1865), and *Die Meistersinger*, produced at Munich in 1868—works which embody the Wagnerian theory of the importance of dramatic truth as well as of musical beauty. *Parsifal*, his last great work, was produced in the summer of 1882. In 1870 Wagner married again, this time Cosima von Bülow, née Liszt, with whom he settled at Bayreuth (1872), which he only left to conduct a Wagner festival in London (1877), and subsequently to pay a visit to Italy (1883), in which land, the home of all that is greatest in opera tradition, he strangely enough breathed his last. Wagner made himself famous; and history will know him as the apostle of "the music of the future." An exposition of his ideas is to be found in his *Gesammelte Schriften und Dichtungen* (1871), including *Oper und Drama* (1852), and in *Beethoven* (1870), translated by E. Dannreuther, 1880. In brief, his theory and teachings consisted in no longer allowing the musical or singing side of opera to crush the dramatic or acting side, and one of its most important features was the "theory of phrase," or *leitmotiv*, by which a particular phrase of music is associated with particular characters and incidents in the drama. In instrumentation also Wagner introduced many new and striking effects. It must be admitted that Wagner did much towards realising his

object, and even towards convincing many minds of the soundness of his principles. There are some people, however, who doubt whether opera needed reforming, to say nothing of being revolutionised, and are content to accept it as reformed by Gluck, and raised to its highest eminence by Mozart, Weber, and Meyerbeer. Time alone can show whether his method of *musica parlante*, or recitative, is to be preferred to the set air, and whether the accepted system of opera, as seen, say, in *Don Giovanni* or *Les Huguenots*, in which air, duet, chorus, etc., follow upon each other with a continuity which the story of the libretto keeps up, is to be preferred to the principle which puts dramatic art above vocal display, which takes from the lyric drama much that gave it variety and relief, and which, when found in the most advanced of the examples which Wagner created, the grandly poetic libretti of which are from his own pen, must be admitted sometimes to possess sameness. It is, however, by no means only as a musician that Wagner will be remembered. Great as his services to music were, his services to the dramatic aspect of opera were still greater. It was his invariable aim that poetry, *mise-en-scène*, and music should aid each other, and that none of them should have undue prominence. As poetic dramas his libretti will always be held in very high esteem, and compared with them the old-fashioned libretti of Italian opera seem inexpressibly tasteless. Familiar with the stage from his childhood, he possessed a thorough knowledge of dramatic effect, and his works were always produced with the advantage of faultless scenery and costume. He was an unsparing and even violent critic of work of which he did not approve, and by his prose writings he won for himself many enemies. He has had, of course, a crowd of imitators, from Verdi in *Aida* downwards, and composers of small merit have borrowed from him with more zeal than discretion, reproducing even his worst mannerisms. But apart from all unintelligent imitation, Wagner's influence on every branch of the musical drama has been immense, and will probably be lasting. The excellent work which he has done as poet, musician, and stage manager, entitles him to a very high place among the artists of the century.

Hueffer, R. *Wagner and the Music of the Future*; Glasenapp, *Wagner's Leben und Werke*.
[F. J. C.]

Waitz, Georg (b. 1813, d. 1886), German historian, and one of the greatest of the pupils of Ranke, was a native of Flensburg in Schleswig, and was educated at Kiel and Berlin. He aided Ranke in the composition of the *Annals of the German Empire*, and for that purpose explored many of the great German, Danish, and French libraries. In 1842 he was appointed professor at Kiel, and during the next years

was an ardent advocate of the independence of the duchies, while advocating a German unity to be effected through common reforms. From 1848 to 1875 he held a professorship at the University of Göttingen, and was then appointed by the Berlin Academy of Sciences the successor of Pertz as editor of the *Monumenta Germaniæ Historica*, to which he contributed some valuable monographs. His chief works are:—*History of the German Constitution* (1844–78); *History of Schleswig-Holstein*, a monumental work (1851–4); a learned monograph, *Lübeck under Wullenweber*—a statesman of the Hanseatic League (1845–6); also *The Life and the Teaching of Ulfilas* (1840); *The Ancient Law of the Salian Franks* (1846); and *The German Emperors from Charles the Great to Maximilian* (1878).

Wakefield, EDWARD GIBBON (b. 1796, d. 1862), was born in London, March 20th, 1796, and was the son of Edward Wakefield, author of *Ireland, Statistical and Political*. He was educated for a surveyor, but through the influence of his first wife's connections obtained a diplomatic appointment at Turin, and after her death lived at Paris. In 1826 he was the chief actor in a most discreditable affair—the abduction of a young lady named Turner, who was induced to marry him at Gretna Green by the representation that her father's affairs were involved, and that Wakefield alone could save him from ruin. Wakefield's motive seems rather to have been a love of adventure than cupidity, but he was justly imprisoned for three years, and the marriage annulled by Act of Parliament. Most men would have sunk under a blow which to Wakefield proved the spring of fame and public usefulness. In confinement he turned his active mind to the study of Colonial questions, and detected the cause of the slow progress of the Colonies in the grants or sales of land in unmanageably large properties, and the omission to provide a sufficiency of labour. He was thus led to originate the Wakefield System of disposing of land in small parcels, and employing the price received in importing immigrants into the colony. These views were advocated with rare literary skill in his *Letter from Sydney* (1829), an exposure of the evils of the existing system so graphic and vivid that it is almost impossible to believe the unquestionable fact that it was composed in prison at the antipodes of the place described, which the writer never saw. His work on the *Punishment of Death in the Metropolis*, also written in confinement, is equally striking, and may be compared to the thief and prison scenes in *Oliver Twist*. After his liberation, Wakefield succeeded in obtaining the confidence of Colonel Torrens and other economical reformers, under whose auspices the South Australian Association was formed to carry his system into effect. Scarcely was the new colony launched when the enterprising Wakefield became managing

director of the New Zealand Company, and in 1838 he accompanied Lord Durham to Canada as his private secretary. The famous Durham report, the charter of Colonial self-government, though principally written by Charles Buller, was mainly inspired by Wakefield. In 1839 he rendered a yet greater service to his country by compelling, through the decided action of the New Zealand Company, an unwilling government to annex New Zealand, just in time to prevent its becoming a French possession. The colonisation of New Zealand mainly occupied him until 1846, when he was prostrated by a fit occasioned by overwork, and long hovered between life and death. Finding on his recovery that the control of the New Zealand Company had passed into other hands, he virtually seceded from it, and joined with Lord Lyttleton and other High Churchmen in founding Canterbury as a Church of England colony, which proved a most successful experiment. In 1852 he proceeded to New Zealand, and took an active part in local politics, until at the close of 1854 he experienced another attack of illness, from which he never entirely rallied. He died on May 16th, 1862. Wakefield's moral and intellectual character were both singularly unequal. He was generous and magnanimous, a man of large heart and large brain, yet self-interested, and capable, as we have seen, of an act of downright criminality. He had an extraordinary faculty for captivating and managing men, but seldom or never succeeded in retaining their confidence to the last. His shrewdness did not preserve him from extraordinary paradoxes, both in theory and practice. When every deduction has been made, it remains indisputably true that no colonial statesman of his time rivalled him in insight and genius; and that England owes him one of her noblest colonies, and many of the principles which guide the administration of all. As a writer of homely, vehement, yet pure and classical English, Wakefield has few superiors. His principal works, besides those already mentioned, are:—*England and America* (1833) and *The Art of Colonisation* (1849). A portion of his correspondence on the formation of the Canterbury Settlement was published in New Zealand after his death, and gives an admirable idea of his varied powers. [R. G.]

***Wales, H. R. H. ALBERT EDWARD, PRINCE OF, Field-Marshal, K.G., K.T., K.P., G.C.B., G.C.S.I., G.C.M.G.** (b. Nov. 9th, 1841), heir-apparent to the British throne, born at Buckingham Palace, was educated first of all privately; then proceeding to Edinburgh in 1859 studied at the university there for the session, and afterwards entered at Christ Church, Oxford, where he remained for a year, and in 1861 went to Trinity College, Cambridge. In 1860 he visited Canada and the United States,

and was received with great enthusiasm by the people of those countries. He spent the summer vacation of 1861 at the Curragh Camp, having been in 1858 gazetted to a colonelcy. In the autumn of the same year he went to the German military manoeuvres. In 1862 with Dean Stanley (q.v.) he visited Jerusalem and other places in the East, and in the following year married the Princess Alexandra of Denmark, by whom he has issue two sons and three daughters. In 1863 His Royal Highness took the oaths and his seat as a peer of the realm, under the title of Duke of Cornwall. In December, 1871, he was attacked by fever similar in character to that which had carried off the Prince Consort. The widespread anxiety caused by His Royal Highness's precarious condition was followed by the memorable public thanksgiving in St. Paul's Cathedral, Feb. 27th, 1872, when the Queen and he made a royal progress thither. On Oct. 11th, 1875, the Prince proceeded on a visit to India in the *Serapis*, arriving at Bombay on Nov. 8th. Among the places visited were Goa, a Portuguese settlement, Ceylon, Madras, Calcutta, Benares, Lucknow, Cawnpore, Delhi, Lahore, Agra, Gwalior, Bambussa, where a grand tiger hunt, at which the Prince shot six tigers, was instituted in his honour. When he left Bombay he brought with him in the *Serapis* eighty wild animals, also many examples of Indian produce and art (Dr. Russell's *Tour of the Prince of Wales in India*). In 1878 he was re-elected to the Grand Mastership of the Freemasons, and in the same year he was thanked for his great exertions in connection with the Paris Exhibition. The Prince was made a Field-Marshal of the German army in 1883 on the occasion of his visit to Berlin to celebrate the silver wedding of his sister and the Prince Imperial, or Crown Prince as he is usually called here. In 1884 he made his maiden speech in the House of Lords on behalf of a motion in favour of the better housing of the poor, and was a member of the Royal Commission appointed to consider this great social question. The activity of His Royal Highness is indeed admirable; during many years of the Queen's reign the burden of court and public ceremonial has fallen almost entirely on his shoulders, and he has proved fully able to sustain it. His speeches have the merit of invariable appropriateness and lucidity. Among the many institutions in which he has given substantial assistance may be mentioned the Royal College of Music and the annual exhibitions held at South Kensington between 1883 and 1886. A testimonial was projected to commemorate his exertions on behalf of the Colonial and Indian Exhibition of 1886, but the Prince declined the gift, and suggested that the fund should be devoted to the erection of an Imperial Institute in commemoration of Her Majesty's jubilee. The Prince is a practical

m.w.—33

agriculturist of much ability, and rarely fails to carry off several of the chief prizes at the Smithfield Cattle Show.

Walewski, ALEXANDRE FLORIAN JOSEPH COLONNA, COUNT (b. 1810, d. 1868), French statesman, was the natural son of Napoleon I. and the Polish Countess Walewska. In 1830 he took an active part in the cause of Polish independence, and when it had failed entered the French service, becoming a naturalised French subject in 1833. At first a soldier, he quitted the service in 1838, and became known as the editor of the *Messenger*, and the author of some successful plays. After 1840 he was employed on diplomatic missions. When Louis Napoleon became President of the French Republic, he became in rapid succession minister at Florence, Naples, Madrid, and London. He was at the last place at the time of the *coup d'état* (Dec. 2nd, 1851), and cleverly took advantage of Lord Palmerston's spoken declarations in favour of the new French Government. From 1855 to 1860 he was Minister of Foreign Affairs, and as such presided over the Congress of Paris after the Crimean War. From 1860 to 1863 he was Minister of State, and in 1865 became President of the Corps Législatif.

Walker, FREDERICK, A.R.A. (b. 1840, d. 1875), painter, was a native of Marylebone, and studied art at the British Museum, Leigh's School, and the Royal Academy. He became an accomplished wood engraver, and was employed by Thackeray in engraving his illustrations for his own novels. It was doubtless to Walker that the woodcuts owed what artistic merit they possessed. Walker also drew for *Good Words*, *Once a Week*, and *Sunday at Home*. Meanwhile he had become a frequent contributor to the exhibitions of the Society of Painters in Water Colours, of which he became an associate in 1864, and full member in 1866. Among his finest pictures in water-colours were:—*Fisherman and Boy* (1867); *Wayfarers* (1870); *The Village* (1873); *The Rainbow* (1874); and *The Fishmonger's Shop* (1875). Walker's first oil picture in the Royal Academy was the *Lost Path* (1863), and it was followed by the admirable *Bathers* (1867); *The Vagrants* (1868), now in the National Gallery; *The Old Gate* (1869); *The Plough* (1870); *At the Bar* (1871); and *The Harbour of Refuge* (1872). Walker was duly elected an A.R.A. in 1871. Among the artists of the English school he must always hold an honourable place. His landscapes had a delicacy of sentiment and harmony of colour which were quite unique, and his figure-drawing was nearly perfect. He combined the true love of nature entertained by the Romantic school with the correctness and propriety of the classical school.

* **Wallace**, ALFRED RUSSEL, F.R.S., D.C.L. (b. 1822), naturalist, a native of

Monmouthshire, was originally intended for an architect. Abandoning this profession, however, he accompanied Mr. Bates to America, visiting more especially the Amazon. The result of his explorations there he published in 1853 in *A Narrative of Travels on the Amazon and Rio Negro*, and in *Palm Trees of the Amazon and their Uses*. A year or two after this he set out for the Malays, returning to England in 1862; thereafter he published, in 1869, *The Malay Archipelago*, and in 1871 *Contributions to the Theory of Natural Selection*. He was also meanwhile contributing papers to learned societies on natural history subjects. In 1866 appeared *The Scientific Aspect of the Supernatural*; in 1871, *Water not Convex, the Earth not a Globe*; in 1872, *The Action of Natural Selection on Man*; in 1875, *On Miracles and Modern Spiritualism*; in 1876, *The Geographical Distribution of Animals, etc.*; in 1878, *Tropical Nature*; *Australasia*; *The Psycho-Physiological Sciences and their Assailants*; in 1880, *Island Life*; in 1882, *Land Nationalisation*; in 1884, *Forty-five Years of Registration Statistics*, an attempt to prove vaccination to be both useless and dangerous. In 1868 he received the royal medal of the Royal Society. He has also written on the question of land nationalisation. In 1881 he was placed on the Civil List for a pension of £100 per annum, and in 1882 received the degree of D.C.L. from the Dublin University. His position in the world of science is one of great importance; and he shares with Darwin the honour of having conceived and demonstrated by elaborate investigations the doctrine of the evolution of species.

Wallace, WILLIAM VINCENT (b. 1814, d. 1865), musician and composer, was born at Waterford, Ireland, and received his first instruction in music from his father, who held the post of bandmaster to the garrison of the town. At the age of fifteen he was already a proficient on most musical instruments, and was appointed director of the Philharmonic Society in Dublin. In 1832 he undertook a sea-voyage to Australia in order to restore his broken health; gave a series of very successful concerts in Sydney, and then travelled through Oceania, India, North and South America. From 1841 to 1853 he lived almost entirely in America, making Mexico, and subsequently New York, his head-quarters. His first opera, *Maritana*, was produced in 1846, and received with much applause both in London and Vienna. *Lurline* was given in London in 1860, and the *Amber Witch* the following year. They were followed by the *Maid of Zürich*, *Gulnare*, and *Olga*. Other well-known operas of his are *Matilda of Hungary* (1847), *Love's Triumph* (1862), *The Desert Flower* (1863). In addition to his operas he has left a number of songs and compositions for the pianoforte. Mr. Wallace was a thorough and conscientious musician, and the admirable score

of his operas, particularly of *Lurline*, is highly to be commended.

Pouglin's *Memoirs of W. V. Wallace* (in French).

Wallachia. [ROUMANIA.]

* **Walpole, THE RIGHT HON. SPENCER HORATIO** (b. 1806), son of the late Mr. Thomas Walpole, was educated at Eton, and at Trinity College, Cambridge. Adopting the legal profession, he was called to the bar in 1831, and soon began to acquire a lucrative practice at the Chancery Court, becoming a Q.C. in 1846. In the same year he was returned to Parliament in the Conservative interest for Midhurst. In 1852 he was appointed Secretary of State for the Home Department under Lord Derby, and as such had the managing of the Militia Bill of that year. In this measure he introduced a clause enfranchising all who had served two years in the militia, which excited great opposition and had to be withdrawn. In 1856 he was returned to Parliament for Cambridge University, and continued to represent that constituency until 1882, when he resigned, having meanwhile, in 1856, become chairman of the Great Western Railway. In 1858 he was again appointed to the Home Office under Lord Derby, resigning, however, in the following year on the question of Reform. He returned to the Home Office in Lord Derby's third administration (1866), but resigned in May, 1867, in consequence of the strictures that were cast upon the authorities for their conduct on the occasion of the Reform riot in Hyde Park. He retained his seat in the Cabinet, however, until the fall of the ministry (1868).

Walter, JOHN (b. 1773, d. 1847), became in 1803 joint proprietor and manager of the *Times*, in succession to his father, who founded that paper in 1788 and died in 1812, and it is the extraordinary success that attended his efforts in connection with this journal that made him famous. He was the first to introduce König's invention of the application of steam to printing (1814), and to him the press is thus indebted for its marvellous development of recent years. Returned in 1832 to Parliament by Berkshire, where Bearwood, an estate that he had purchased, is situated, he continued to represent that county until 1837, when a difference of opinion between him and his constituents about the poor laws led to his retirement. In 1840 he contested Southwark unsuccessfully; in 1841, however, he was returned for the borough of Nottingham. On his death he left his interest in the *Times* to his son, John Walter, who continued the management, and with such success that it has now become the leading journal of Europe.

* **Walter, JOHN** (b. 1818), son of the above, was educated at Eton, and at Exeter College, Oxford. In 1847 he was called to the bar at

Lincoln's Inn. In 1843 he had unsuccessfully contested Nottingham as a Liberal-Conservative; he appeared again in 1847, and was returned. He continued to represent Nottingham until 1859. He then was elected for Berkshire, which constituency returned him in 1868, 1874, and 1880, having once rejected him in 1865. Like his father, whom he succeeded, it is by his connection with the *Times* that Mr. Walter is chiefly known. Under him the paper has more than maintained its efficiency, and has seldom failed in its character of being the truest representative of average public opinion.

Wappers, ÉGIDE CHARLES GUSTAVE, BARON (b. 1803, d. 1874). Belgian painter, was educated at the Brussels Academy and at Paris, where he became an ardent disciple of Romantic art. On his return to Brussels he became the leader of a school which cast off the fetters of classicism and sought to revive the lost traditions of Rubens and the Flemish school. *An Episode of the Belgian Revolution* was received with great enthusiasm, and was followed by *Charles I.'s Farewell to his Children*, *The Temptation of St. Anthony*, *The Punishment of Anne Boleyn*, and other works. He painted *The Defence of Rhodes by the Knights of St. John* for King Louis Philippe, and *The Great Fishery of Anvers* for the Queen. From 1846-53 he was director of the Academy of Fine Arts at Brussels, and first painter to the King of the Belgians, and received the title of baron in 1847.

Ward, ARTEMUS, is the well-known pseudonym of CHARLES FARRER BROWNE or BROWN (b. 1834, d. 1867), American humorist. But little is known in regard to the details of Browne's life, and on certain points such sources of information as we possess do not agree. He was born at Waterford, Maine, and his father, Levi Browne, from whom he inherited his quaint characteristic humour, was a storekeeper and farmer, who died when Charles was but thirteen. Charles received a common-school education, and at fourteen was apprenticed to a printer at Lancaster, New Hampshire. He worked for a few years as compositor on various local newspapers, after which he resided for three years in Boston, where he was employed in the office of the *Carpet Bag*, a humorous journal, edited by B. P. Shillaber ("Mrs. Partington"). Browne's first literary effusions appeared in the *Carpet Bag*. From Boston he went to Ohio, and settled for awhile at Toledo, where he was employed on the staff of the *Commercial* of that city. His witty contributions made a reputation for the newspaper, but his own remuneration was absurdly small. In 1857 he removed to Cleveland, Ohio, becoming local editor of the Cleveland *Plaindealer*. It was at this time that he adopted the pseudonym of Artemus Ward, which was the actual name of an eccentric old showman

whose acquaintance Browne made while in Cleveland. Browne had always been exceedingly fond of the circus and the "museums" (as cheap curiosity shows are called in America). Some of his best sketches appeared in the columns of the *Plaindealer*, but he received little money for his work. Hearing many of his own jokes and stories repeated at negro minstrel entertainments, to the great amusement of the hearers, he conceived the idea of appearing as a humorous lecturer, but the plan seems not to have been put into successful operation until 1861. In 1860 he left Cleveland for New York, becoming editor of *Vanity Fair*, a comic journal which enjoyed but a brief existence. On Dec. 23rd, 1861, he gave his first lecture, *The Babes in the Wood*, at Clinton Hall, New York. The unique and amusing advertisements which he issued contributed their share to the success of the entertainment. The titles of his two lectures, *The Babes in the Wood* and *Sixty Minutes in Africa*, were designed to mystify the public, the "lecture" being a string of his characteristic jokes and stories and nothing else. The manner of his delivery was serious and almost melancholy, and its effect is said to have been exceedingly comic. His first volume of sketches, entitled *Artemus Ward, his Book*, appeared in May, 1862, and met with considerable success, especially in England. Later, he made the journey to San Francisco by way of Panama, returning through Utah in 1863. Polygamy as practised by the Mormons had already been the subject of some of his *Artemus Ward Papers*, and he had long wished to acquire new literary material by visiting the Mormons in their home. This desire was now fulfilled, and he added a lecture on Mormonism to his stock, accompanying its delivery with panoramic views. In 1866 he visited England, whither his reputation had preceded him. In fact, he became, and still remains, more popular in England than in his own country, where the peculiar quality of his humour was less of a novelty than abroad. Lectures which in the provincial towns of America had often been delivered to thin houses were rapturously received in London. He became a regular contributor to *Punch*, and the success for which he had laboured so long was well within his grasp, when he was attacked by consumption, of which he died at Southampton. Such of his sketches as have been preserved were published under the titles of *Artemus Ward, his Book*; *Artemus Ward, his Travels*; and *Artemus Ward in London*. These have since been collected in a single volume, wrongly entitled *The Complete Works of Artemus Ward*. Browne has had many imitators, but in his own field he remains unrivalled. The cacography which he affected has been sedulously followed by his copyists, but it is the least part of his humorous expression, although he himself set considerable

value on it. Exuberant animal spirits, a love of mystification, a shrewd perception of human foibles, these, united with good nature, good sense, and good feeling, are the characteristics of his humour, as they were of the man himself. Sometimes his wit assumes the form of a premeditated "bull," as when he says, "It would have been ten dollars in Jeff Davis's pocket if he had never been born." The local colour of his sketches is admirably touched in. The schoolmaster, the editor, the village "squire," although barely outlined, are well hit off; and the spirit and tone of rural society in America are caught to the very life. He cudgelled his brains incessantly for humorous ideas, but the effort was generally successful and never apparent, and he found great enjoyment in his own jests.

Scribner's Monthly, vols. xxi. and xxii.

[E. J. H.]

Ward, EDWARD MATTHEW, R.A. (b. 1816, d. 1879), historical painter, was born in Pimlico, and as a student at the Academy was one of Wilkie's pupils. His art education was completed at Rome, and at Munich, where he studied fresco under Cornelius. His first picture exhibited at the Royal Academy was *Cimabue*, in 1839; and his *Johnson reading the MS. of the "Tiear of Wakefield"* was one of the masterpieces of the exhibition of 1843. It was followed in 1845 by his *Johnson in Lord Chesterfield's Anteroom*; and in 1846 he was elected A.R.A., and full Academician in 1855. Ward was commissioned in 1843 to paint eight pictures for the corridor of the House of Commons; they include:—*The Landing of Charles II.*, *The Acquittal of the Seven Bishops*, and *The Last Sleep of Argyle*. His *Disgrace of Lord Clarendon* (1846), *The South Sea Bubble* (1847), and *James II. receiving the News of the Landing of the Prince of Orange* (1850), are in the National Gallery, with *Dr. Johnson at Lord Chesterfield's*; and among Ward's other pictures may be mentioned:—*Charlotte Corday led to Execution*; *The Dying Moments of Charles II.*; *The Eve of St. Bartholomew*; and *William III. at Windsor*. During his last years he suffered much from depression, and finally put an end to his own existence.

J. Dafforne, *Life and Works of E. M. Ward* (1879).

Ward, JAMES, R.A. (b. 1769, d. 1859), animal painter, was a native of London, and was first apprenticed to an engraver. He was at first an engraver in mezzotint, and executed an admirable *Mrs. Billington* after Sir John Reynolds. He then turned to painting, and produced some wonderfully exact imitations of Morland. In 1804 Ward was appointed painter and mezzotint engraver to the Prince of Wales; became A.R.A. in 1807, and R.A. in 1811. His contributions to the Royal Academy were numerous, and his cattle especially were full of individuality and strength.

Two of his best pictures, *The Bull Bait* and *The Bull*, were painted in the last century; but in 1828 his famous *Landscape with Cattle*—*Alderney Bull, Cow and Calf*, was exhibited at the British Institution, and is now in the National Gallery, together with his *Council of Horses*; *Lake and Tower in Tabley Park*; *Landscape, Gadale Scar*; and *The Boa Serpent Seizing a Horse*, painted after George, III.'s favourite charger, Adonis.

Ward, ROBERT PLUMER (b. 1765, d. 1860), man of letters, was born in Spain, where his father was a merchant, was educated at a school at Walthamstow, and at Christ Church, Oxford, and was called to the bar in 1790. He went the Northern Circuit, and having sat for a brief period in Parliament as member for Cocker-mouth (1803-5), was appointed one of the Welsh judges. He returned, however, to political life in the same year, and was made Under-Secretary of State for Foreign Affairs. In 1807 he was returned for Haslemere, and appointed a Lord of the Admiralty. Mr. Ward is chiefly remembered for his writings, more especially his novels, of which *Tremaine, or the Man of Refinement*, appeared in 1825; *De Vere, or the Man of Independence*, in 1827; and *De Clifford, or the Constant Man*, in 1841. He also published a *History of the Law of Nations* in 1795. His son, SIR HENRY GEORGE WARD, entered the diplomatic service, and served in that capacity at Stockholm, the Hague, and Madrid. In 1832 he was returned to Parliament for St. Albans in the Whig interest, and in 1837 by Sheffield. He became known as a strong opponent of the Irish Church, and when, in 1834, the Government, on his bringing forward a motion against that Establishment, determined to appoint a commission of inquiry, the more Conservative members of the Cabinet—Mr. Stanley, Sir James Graham, the Duke of Richmond, and Lord Ripon—at once resigned. In 1846 he became Secretary to the Admiralty, and three years later Governor of the Ionian Islands. In 1856 he was appointed Governor of Ceylon, and in 1860 Governor of the Madras Presidency, but was soon carried off by cholera.

Ward, WILLIAM GEORGE, D.D. (b. 1812, d. 1882), theologian, was the son of Mr. Ward, formerly director of the Bank of England and member for the City. The son was educated at Winchester College, and at Christ Church, Oxford, and took his degree in 1834. He obtained a fellowship at Balliol, where he remained for some years as mathematical tutor. Mr. Ward plunged with zeal into the Tractarian Movement inaugurated by Newman and Pusey, and in 1844 published a remarkable work, *The Ideal of a Christian Church Considered in Comparison with its Existing Practice*. It commented on the Reformation in a hostile spirit, and was condemned by Convocation by 776 votes against 386. Mr. Ward was further degraded from his M.A.

degree. Shortly afterwards he seceded to the Church of Rome. Ward was for many years editor of the *Dublin Review*, and lectured on theology at St. Edmund's College, Herts. A collection of his able *Essays on the Philosophy of Theism*, written in opposition to J. S. Mill, was published in 1884.

Wardlaw, RALPH, D.D. (b. 1779, d. 1853), Scottish Congregationalist minister, was a native of Dalkeith, and educated at the University of Glasgow. He was at first a Presbyterian, but eventually embraced the doctrines of Congregationalism, and in 1803 was elected minister of that denomination in Glasgow, where he was subsequently appointed professor of theology at the Congregational Hall. His influence in Glasgow was very great, and his jubilee was celebrated in 1853. Among his writings were numerous collections of sermons, *Lectures on Systematic Theology* (1844); also *Discourses on the Socinian Controversy* (1814); and *Discourses on the Sabbath* (1832).

Dr. W. L. Alexander, *Life and Writings of Ralph Wardlaw*.

* **Warner**, CHARLES DUDLEY (b. 1829), American humorist, a native of Plainfield, Mass., was educated at a district school at Charlemont, and at the Oneida Seminary, New York. After taking his Bachelor's degree at Hamilton College in 1851, he spent some time on the Missouri frontier, and was called to the bar at Philadelphia in 1856. In 1860 he became editor of the *Press* at Hartford, with which the *Courant* was amalgamated in 1867. Here first appeared his very popular sketches, *My Summer in a Garden* (1870), which were followed in 1872 by *Saunterings*, *Backlog Studies* in 1876, and *Being a Boy* (1877). In *The Wilderness*, *Mummies and Moslems*, *In the Levant*, and *A Roundabout Journey*, are among his other works of this kind. Mr. Warner was the author, in conjunction with Mark Twain (q.v.), of *The Gilded Age*. In 1881 he published a work on *Captain John Smith*, and in the same year the first volume of the *American Men of Letters* appeared under his editorship. He has contributed *Washington Irving* to the series.

* **Warren**, SIR CHARLES, G.C.M.G., F.R.S. (b. 1840), Chief Commissioner of the Metropolitan Police, the son of the late Major-General Sir Charles Warren, was educated at Cheltenham College, Sandhurst, and Woolwich. He entered the Royal Engineers in 1857, became captain in 1869, major and lieutenant-colonel in 1878, and colonel in 1882. From 1867 to 1870 he conducted a series of excavations for the Palestine Exploration Fund, chiefly round the walls of the enclosure of the temple of Jerusalem, and wrote on the subject some interesting works. He contributed to *The Recovery of Jerusalem* (1871), in conjunction with Captain (now Sir Charles) Wilson and

others, a book to which Dean Stanley wrote an introduction; wrote *Underground Jerusalem* (1876); *The Temple or the Tomb* (1880); and, in conjunction with Captain Conder, *Jerusalem* (1884), for the Palestine Exploration Fund. In 1876 he was special commissioner to settle the boundary of the Orange Free State, and in the following year to settle the land question of West Griqualand. He commanded the Diamond Fields Horse during the Gaika War of 1878, and the field force in Bechuanaland during the same year. During the Zulu War he organised a volunteer force for the assistance of the Transvaal and Natal in the capacity of commander-in-chief and administrator of Griqualand West. Major Warren returned to England in 1880, and was appointed instructor of surveying at Chatham; and in 1882 went to Egypt and was engaged in special duty in restoring the authority of the Khedive in the desert, and bringing to justice the murderers of Professor Palmer's party. [PALMER.] From 1884-5 he was special commissioner in Bechuanaland and commander of the field force, the object of his mission being to check the filibustering incursions of the Boers from the Transvaal. On his return to England he unsuccessfully contested a division of Sheffield in the Liberal interest; was appointed commander of the forces at Souakim in January, 1886; and in April Chief Commissioner of the Metropolitan Police, in succession to Sir E. Henderson, resigned.

Warren, SAMUEL (b. 1807, d. 1877), moralist, lawyer, and novelist, was born in Denbighshire, the son of a Wesleyan minister, who afterwards took orders in the Church of England. He studied medicine at Edinburgh and law at the Inner Temple. He turned to good account his medical knowledge and his student days at the Temple in contributing to *Blackwood's Magazine* his popular *Diary of a Late Physician*. Called to the bar in 1837, he had a weary waiting for briefs, for attorneys already began to regard him with suspicion; and his great novel, *Ten Thousand a Year* (1841), did not allay that suspicion. It showed Mr. Warren to be a better novelist than lawyer. A work of incident, not of character or description, it had a remarkable sum of success. There is considerable artistic skill displayed in the construction of the story, the interest is well sustained, and the absurdity of the now obsolete fictions relating to the law of real property is fully illustrated. In 1847 appeared *Now and Then*, which aims at the illustration of a higher moral; and his faithful allegiance to the Conservative party gained him silk in 1851, and the recordership of Hull in 1852. Mr. Warren entered Parliament in 1856, and three years later Lord Chelmsford appointed him a Master in Lunacy. He wrote *The Moral and Intellectual Development of the Age* (1854), in the pages of which,

as indeed in the pages of all his literary works, morality and social order are amiably reflected; *A Popular and Practical Introduction to Law Studies* (1835), *Blackstone Systematised and Abridged* (1857), and *The Lily and the Bee* (1851), a rhapsodical poem on the Great Exhibition of 1851, on the merits of which there is much disagreement among critics. Tauchnitz published a collected German edition of Warren's works in 1843, and an English edition appeared in 1853.

Blackwood's Magazine, 1877; *London Quarterly Review*, January, 1856.

* **Waterhouse, ALFRED, R.A.** (b. July 19th, 1830), architect, was born at Liverpool, and educated at the Grove House School, Tottenham. He embraced the profession of architecture, and studied under Mr. Richard Lane, of Manchester. Mr. Waterhouse first came prominently before the public as the architect of the Manchester Assize Courts, and for that city he also built the Owens College and the Town Hall. He was also the architect of Girton College, Cambridge, and partially reconstructed Caius and Pembroke Colleges, as well as Balliol College, Oxford. Among his chief works in London are the Natural History Museum at South Kensington, opened in 1881, and the New University and National Liberal Clubs. Among the mansions which he has erected may be mentioned Eaton Hall, Cheshire; Heythrop, Oxfordshire; and Iwerne Minster, Dorset. Mr. Waterhouse became an A.R.A. in 1878 and an R.A. in 1885. In 1878 he gained the gold medal of the Royal Institute of British Architects, also the Grand Prix for architecture at the Paris Exhibition of 1867, and a "rappel" at that of 1878. He became Associate of the Vienna Academy in 1869, and of that of Brussels in 1886.

Waterton, CHARLES (b. 1782, d. 1865), naturalist, was the son of Thomas Waterton, of Walton Hall, Wakefield, and was educated in the Catholic faith. Educated at Stonyhurst College, he developed there a taste for natural history. Accordingly he spent many years in foreign travel, and on his return published a record of his *Wanderings in South America between the Years 1812 and 1822*. Written in racy style and full of keen observation, the book was a great success. But Waterton was not a real man of science, although an admirable field naturalist; and his only other work of account is *Essays in Natural History*, originally contributed to *London's Magazine*. He was one of the best stuffers in the world, and at Walton Hall made a fine collection of stuffed animals, among which was a gorilla, whose features he made to resemble those of Martin Luther.

R. Hobson, C. Waterton: *his Home, Habits, and Handiwork*.

Watson, MUSGRAVE LEWTHWAITE (b. 1804, d. 1866), sculptor, the son of a Cumber-

land yeoman, was articled to a solicitor at Carlisle at the age of seventeen; but, leaving the law, he came up to London in 1824, and in 1825, on the advice of Flaxman, went to study in Rome. After his return in 1828, he worked as modeller to Chantrey, Bailey, and Behnes. His chief achievements are the statues of Lord Eldon and Lord Stowell in the library of University College, Oxford, the statue of Queen Elizabeth in the Royal Exchange, and one of the bas-reliefs of the battle off Cape St. Vincent on the pedestal of the Nelson column.

Dr. H. Lonsdale, *Life and Works of M. L. Watson* (1866).

Watt, JAMES, LL.D. (b. 1736, d. 1819), engineer and inventor, son of a Greenock merchant, who was also a member of the town council and a magistrate, was educated in the schools of Greenock. He early displayed a partiality for the mechanical arts; and at the age of eighteen proceeded to London, and apprenticed himself to a mathematical instrument-maker. The state of his health obliged him to return to Scotland, and in twelve months' time he was back in Glasgow endeavouring to set up in business there. The trade corporation, however, considering him as an intruder upon their privileges, opposed him; he found assistance, nevertheless, from the professors of the university, who conferred upon him the title and office of mathematical instrument maker to the university. He held this position until 1763, when he married and began business as an engineer. During the session 1763-4 the professor of natural philosophy sent Watt a model of Newcomen's engine to be repaired. This he soon did, but in doing so remarked many defects in the machine. Watt immediately began to investigate these defects with a view to finding out how they might be remedied. This resulted in the discovery that about four-fifths of the steam, and consequently of the fuel, was wasted. How this waste was to be avoided was the problem now before him, and in 1765 he hit upon the expedient of the separate condenser. The next great improvement in the steam-engine due to Watt lay in making steam the motive-power. Newcomen's engine was really not a steam-engine at all; the motive-power in it was atmospheric pressure, steam being used only to produce a vacuum in the cylinder, into which a piston was then pushed by atmospheric pressure. Watt contrived to make the steam act directly upon the piston. With these improvements Watt's claim to be the inventor of the steam-engine is supposed to be undeniable. He had now to bring his invention into notice, and so entered into partnership with Dr. Roebuck, proprietor of the Carron Iron Works. Nothing, however, came of this, as Roebuck got into financial difficulties. Watt was now occupied with various engineering works, the mere enumeration of which would occupy too much

space. In 1774 he was invited by Matthew Boulton of Birmingham to enter into partnership with him for the manufacture of engines. Watt's engine soon began to supersede all others, and he continued to make improvements. He invented the crank and fly-wheel, the double-acting principle, parallel motion, the smokeless furnace, and the regulating action of the governor. He made many other inventions, among them the copying press, and a system of warming houses by steam, unconnected with the steam-engine. In 1800 he retired from business, in 1811 he aided the Glasgow Waterworks Company with a plan for supplying the town with better water, and in 1812, at the request of the Lords Commissioners of the Admiralty, advised upon the Sheerness Dockyard, then in course of construction. Watt was not merely a mechanic, he was also a philosopher, and possessed literary powers of a high order; proofs of these exist in his contributions to the *Philosophical Transactions*. He was a man, too, of admirable character; abhorred "all sorts of forwardness, parade, and pretension, and was not only kind and affectionate, but generous, and considerate of the feelings of all around him." He was a member of the Royal Societies of Edinburgh and London, as also of many Continental bodies, and an LL.D. of Glasgow University.

J. P. Muirhead, *Life of James Watt*.

* **Watts**, GEORGE FREDERICK, R.A. (b. 1820), one of our greatest artists, was born in London, and first attracted the attention of the public by his cartoon, *Caractacus led in Triumph through the Streets of Rome*, exhibited in Westminster Hall in 1842. He subsequently spent three years in Italy, and formed his style after that of the old Italian masters—Giorgione, Titian, Michael Angelo, and Raphael. Among his pictures we may mention:—*Echo*, and *Alfred inciting the Saxons to prevent the Landing of the Danes* (1847); *Paola and Francesca* and *Fata Morgana* (1848); *Life's Illusion* (1849); *The Return of the Dove to the Ark* (1869); *Love and Death* (1877); *Time, Death, and Judgment* (1878); *Watchman, what of the Night?* (1880); *The Four Horses of the Revelation* (1883); *The Happy Warrior* (1884); *Hope* (1886). His fresco, *The Red Cross Knight overcoming the Dragon*, is to be seen in one of the waiting halls in Westminster-Palace, and his *School of Legislation* is in the dining-hall of Lincoln's Inn. He is a great advocate for mural paintings, and has adorned many private houses with his frescoes. It is much to be regretted that, although he adopts Italian methods, the common fate of decay is overtaking his wall-pictures in England, while some frescoes of his at Florence, executed many years ago, are still in excellent preservation. He is always one of the most liberal contributors to the free exhibition of pictures held annually in the East End, and

a mosaic of his *Time, Death, and Judgment* has been placed outside the Church of St. Jude's, Whitechapel. His paintings are full of thought, feeling, and poetic inspiration, and he may fitly be called the ideal painter of this century. Subsequently to 1880 he produced many portraits, a branch of art in which he is very successful. His principle is to represent the man or woman as a whole, to seize upon the leading idea or characteristic to the neglect of smaller details. As instances of this we may quote his portraits of Joachim, Cardinal Manning, William Morris, and the Dean of Westminster. In 1886 he made a munificent gift of some of his most celebrated pictures to the nation.

* **Watts**, THEODORE (b. 1836), man of letters, was born at St. Ives, but for many years has lived in London. Originally trained as a naturalist, his father having been an active member of many scientific societies, Mr. Watts was afterwards educated for the law, and passed his legal examination in 1863. He first attracted attention in England and America as a writer of sonnets, which appeared in various periodicals and gained him the notice of several prominent poets, among others the late D. G. Rossetti, whose most intimate friend he afterwards became. One result of this intimacy with the poet-painter was that Mr. Watts made a critical study of the Old Masters in Florence, Venice, and Rome, and after Rossetti's death expounded the principles of his art in the *Nineteenth Century* and elsewhere. As literary and artistic critic Mr. Watts made his *début* in the *Examiner*. This was during the brief but brilliant editorship of Professor Minto, when such contributors as A. C. Swinburne, William Black, W. Bell Scott, and others, seemed likely to revive the traditions of the journal which had been made classic by Leigh Hunt and Fonblanque. When Professor Minto retired from the *Examiner* Mr. Watts also retired, and became the chief writer in the *Athenæum*, where, and in his treatises on poetical subjects in the ninth edition of the *Encyclopædia Britannica*, he founded a school of criticism which discarded conventional authority and sought to test all literary effects by the light of first principles merely. Mr. Watts has been an active contributor to the *Nineteenth Century*, *The Quarterly Review*, and Ward's *English Poets*. His articles in the *Encyclopædia Britannica* are to be reproduced in a volume on *Poetics*. His speciality is as an expounder of the Romantic movement, and in *Aylwin*, a poetic romance, he has endeavoured to carry into scenes of contemporary life those principles of purely Romantic art which have heretofore found expression solely in pictures of the past. A full account of his theories and practice in connection with the sonnet may be seen in Mr. William Sharp's *Sonnets of this Century*,

and in D. G. Rossetti's letters to Hall Caine, published in *Recollections of Rossetti*, and in Dr. Karl Leutner's *Ueber das Sonett in der englischen Dichtung*. His *Reminiscences of George Borrow*, which originally appeared in the *Athenæum*, will shortly appear in book-form.

* **Wauters, ÉMILE** (b. 1846), Belgian painter, was born at Brussels, and having had a careful training in art, began early in life to exhibit in the Belgian galleries. He became of importance as an historical painter, and exhibited in 1872 *Mary of Burgundy before the Magistrates of Ghent*. In the International Exhibition of 1878 he obtained a medal of honour, and another at Munich in 1879, and the grand medal at the International Exhibition at Berlin in 1883. In the first year he decorated the "Lion's Staircase" at the Brussels Hôtel de Ville, and in 1881 painted the great panorama, *Cairo and the Banks of the Nile*. *John IV. and the Tradersmen of Brussels* (1878), and *A View of Cairo* (1883), are also important pictures. He is a member of several Academies.

Weber, CARL MARIA FRIEDRICH ERNST, FREIHERR VON (b. 1786, d. 1826), was a native of Eutin, in Holstein, the ninth son of Franz Anton von Weber, some time lieutenant in the Elector Palatine's service, and subsequently kapellmeister, musical or theatrical impresario as occasion offered. Desiring that his son should become a musical genius, the father manifested a zeal, active rather than judicious, in his education, though Carl Maria, with the generosity which was his most distinguishing trait, always regarded him with the tenderest love and gratitude. Having studied under Heuschkel, Michel Haydn, and Kalcher during the intervals of repose in their busy lives, and having produced three operas, *The Power of Love and Wine*, *The Dumb Girl of the Forest*, and *Peter Schmoll*, besides numerous other works which were accidentally destroyed, Weber arrived at Vienna in 1803, where he became the pupil of the fashionable composer the Abbé Vogler. In 1804 he received, through the interest of the latter, the post of operatic composer at Breslau, exchanged in 1806 for an appointment at Carlsruhe to Prince Eugène of Würtemberg. The exigencies of the war brought about the extinction of his office, and after making a professional tour Weber accepted, in 1807, the post of private secretary to the brother of his late master at Stuttgart. Hence he and his father were driven in disgrace in 1810, owing to the defalcation of the latter, of which his son magnanimously bore the blame, and the next years were spent in constant travelling and in earnest application to his art. In 1810 his opera *Sylvana* was given at Frankfurt and *Abu Hassan* at Darmstadt. In 1813 he received the post of theatrical director at Prague, and here, moved by the great patriotic reaction that was stirring the pulses of young Germany, he composed the music to Körner's *Lyre and Sword*.

In 1817 he was called to undertake the direction of the newly formed German opera at Dresden, a position in which he had much to suffer from the machinations of his Italian rival, Morlacchi. Through this, as through his later trials, Weber showed himself superior to the jealousy and intrigue so often associated with an artistic career. From this appointment date his masterpieces, the *Jubilee Overture* (1818), *Preciosa* and *Der Freischütz*, produced at Berlin (1821), *Euryanthe*, at Vienna (1823), and *Oberon*, written for the English public while the hand of death was already upon him. Despite his failing health, Weber himself superintended its production at Covent Garden a few weeks before his death (1826). In 1844 his remains were removed to Dresden, and in 1860 a monument by Riechel was erected to him in the same city. Weber composed a large quantity of chamber, piano-forte, and vocal music in addition to his operas, all of which bears that stamp of nationality which appeals so peculiarly to the hearts of the German people. Among them may be mentioned the *Concertstück* and the *Invitation à la Valse*. He married in 1817 Caroline Brand, the well-known singer, and was related by marriage to Mozart, who was the husband of his cousin, Constance Weber.

Sir Julius Benedict, *Weber, in Hueffer's Great Musicians series; The Life of an Artist, translated from the German of M. M. von Weber by J. Palgrave Simpson.* [A. M. C.]

Webster, BENJAMIN NOTTINGHAM (b. 1800, d. 1882), actor, was a native of Bath, and was educated for the navy. After the peace of 1815, however, he changed his plans, and studied first for the musical profession then for that of an actor. His first appearance was at Warwick in 1823, and in 1825 he came up to London. His performance at a very short notice of the part of Pompey in *Measure for Measure* was considered very good, and in 1829 he accepted an engagement at the Haymarket, in *Lodgings for Single Gentlemen*. In 1837 he became lessee of that theatre, and maintained a high standard of drama, Knowles, Lytton, and Jerrold being among his playwrights; Macready, Phelps, Buckstone, Charles Mathews, and Mrs. Stirling among his company. Webster himself was seldom without a part, and his impersonations are still remembered, especially those of Triplet in *Masks and Faces*, and Tartuffe. In 1844 he became lessee of the Adelphi as well, where he produced Boucicault's *Old Heads and Young Hearts*. The Haymarket was handed over to Buckstone in 1853, and in 1858 the new Adelphi Theatre was opened. Mr. Webster's adaptation, *One Touch of Nature*, was produced in 1859, and the part of Pen Holder was regarded as one of his best creations, and Robert Landry in *The Dead Heart* (1859) was an equal success. Mr. Webster also undertook later on the leaseholdship of the Olympe, Princess's, and the St.

James's. In 1874, on his retirement from the stage, he received a farewell benefit at Drury Lane. Mr. Webster always took great interest in the welfare of the humbler members of his profession.

Webster, DANIEL (b. 1782, d. 1852), American statesman, was the son of a small farmer at Salisbury (now Franklin), in the State of New Hampshire. His feeble health as a child threatened to debar him from pursuing any active employment, and extraordinary efforts were made by his father to endow him with a good education. Entering Dartmouth College in 1797, he graduated in 1801, after which he taught school at Fryeburg, Maine, for a few months before finally embracing the profession of the law. Admitted to the bar in 1805, he began practice at Boscawen, N.H., whence he removed in 1806 to Portsmouth, then the capital of the State. Here the thoroughness of his early studies and the commanding force of his intellect brought him at once to the front. Sent to Congress in 1812 as a representative of the Federal party (a position to which he was re-elected in 1814), he took an important part in the debates upon the conduct of the war with England, the embargo upon American shipping, and the renewal of the charter of the U.S. Bank. On all these questions he took a firm but moderate position, and a resolution passed by the House upon his motion tended greatly to restore the stability of American finance. Removing to Boston in 1816, he devoted himself entirely to his profession until 1823. In 1818 he successfully argued the famous appeal in the Dartmouth College case before the Supreme Court at Washington, involving the question of the right of a State Legislature to modify the charter of a private corporation. In 1820 Webster was chosen a member of the Convention which was called to revise the Constitution of Massachusetts after the erection of Maine into a separate State. In December of the same year he pronounced his celebrated discourse on the occasion of the two-hundredth anniversary of the landing of the Pilgrim Fathers. Among other famous orations by Webster may be mentioned that of June 17th, 1825, on laying the corner-stone of the Bunker Hill monument; that of June 17th, 1843, upon the completion of the edifice; the eulogy on Adams and Jefferson, Aug. 2nd, 1826; and the address on laying the corner-stone of the Capitol extension, July 4th, 1851. In 1822 he was again elected to the House of Representatives, and in 1827 was chosen U.S. Senator from Massachusetts, in which office he continued until 1841. While in Congress he spoke in opposition to the principles of the Holy Alliance (December, 1823), assisted in revising the criminal law of the United States while acting as chairman of the Judiciary Committee of the House; defined the position

of his party (the Whigs) on the question of Protection and the tariff, and crushed the dogma of "nullification" (i.e., the asserted right of a State to override an Act of Congress) in his famous reply to Paul H. Hayne, delivered June 26-27th, 1830. In 1839 he visited England, where he was received with distinction. The Whigs were victorious in the presidential election of 1840, and Webster accepted the office of Secretary of State under President Harrison. During his term negotiations were conducted which resulted in the settlement of the dispute with England as to the north-western frontier. Webster resigned in 1843, being unable to support the policy of President Tyler, who had succeeded Harrison on the latter's death in 1841. Re-elected to the Senate in 1845, he opposed the annexation of Texas, as well as the acquisition of California. Webster was an unsuccessful candidate for the Whig nomination to the Presidency in 1848. Violent debates on the question of the extension of slavery to the newly annexed territories occupied Congress in this and the succeeding years, finally resulting in the adoption of compromise measures. Webster was held to have abandoned his former attitude in a speech which he delivered March 7th, 1850, announcing his intention to support the Fugitive Slave Bill. In the same year he was appointed Secretary of State by President Fillmore, a post which he retained until his death. At the Whig Convention of 1852 Webster was again a candidate for the presidential nomination, and was again unfortunate. His death, which occurred in October of that year, was the consequence of a fall from his carriage in the preceding May. Webster was a man of great stature and extraordinary vigour, and was passionately devoted to rural and agricultural pursuits. By common consent he was pronounced the foremost American of his day.

George Ticknor Curtis, *Life of Daniel Webster*.
[E. J. H.]

Webster, NOAH (b. 1758, d. 1843), American lexicographer, was born at Hartford, Connecticut. He graduated at Yale College in 1778, and was then called to the bar, but, adopting teaching as a profession, opened an academy at Goshen, New York State. His *Grammatical Institute of the English Language* appeared between 1783 and 1785, and was followed by his *Spelling Book* (1790). His *Examination into the Leading Principles of the American Constitution* (1787) was a work of merit. Noah Webster is, however, chiefly remembered for his labours in the field in which he first won distinction, that of etymology. His *Compendious Dictionary of the English Language* appeared in 1806; his *Philosophical and Practical Grammar* in 1807; and his laborious and, despite occasional blunders, scholarly *American Dictionary of the*

English Language in 1838. It ran through several editions during his lifetime, and still keeps its place as a standard work.

E. Scudder, N. Webster (*American Men of Letters*).

Webster, THOMAS, R.A. (b. 1800, d. 1886), was born in Pimlico, and educated in the choir of the Chapel Royal, St. James's. He chose an artist's career, and studied at the Royal Academy, where, in 1825, he obtained the first medal in the school of painting. Soon afterwards he began to exhibit at the Royal Academy and the British Institution, and his pictures, chiefly in *genre*, soon began to attract notice. *Football*, sent to the Academy in 1839, was warmly praised, and in 1841 he exhibited the three highly popular pictures, *The Smile*, *The Frown*, and *The Boy with many Friends*. *Please to Remember the Grotto*, of 1846, is almost equally happy in its conception. Mr. Webster became a full Academician in that year, and continued to exhibit with great regularity until 1876, when he resigned his membership. For a year or two afterwards he sent pictures as an ordinary contributor. Among Mr. Webster's later pictures may be mentioned *Good-Night* (1847); *Dotheboys Hall* (1848); *A School Playground* (1852); *Roast Pig* (1862); *The Battle of Waterloo* and *A Game of Draughts* (1864); *My Back Kitchen* (1865); *The Wreck Ashore* (1874), and *A Birthday Tea Party* (1876).

* **Wedmore, FREDERICK** (b. 1844), is the author of *Studies in English Art* (1876), of *The Masters of Genre Painting* (1880), and, amongst other works, of a volume of "poetical prose fiction," *Pastorals of France*. He has dwelt largely in his critical writings upon masters hitherto comparatively little known to the English reader; Méryon, for example. Mr. Wedmore holds appointments on the *Standard* and *Academy* newspapers. In 1886 he visited America, and gave before the two principal universities in the United States the art lectures he had already delivered in several English cities.

Weekes, HENRY, R.A. (b. 1807, d. 1877), sculptor, was a native of Canterbury, studied art under Behnes, and eventually became an assistant to Chantrey, of whose studio he became the occupier after Chantrey's death. Weekes was elected an A.R.A. in 1857, an R.A. in 1863, and professor of sculpture at the Royal Academy in 1873. Among his ideal works were *The Shepherd* and *The Suppliant*, but he chiefly excelled in portraiture, and executed, among other works, a bust of the Queen, the first taken after her accession; that of Dean Buckland in the National Portrait Gallery, the monuments to Shelley and Mary Wollstonecraft at Christ Church, Bournemouth, and the statue of Hunter for the Museum of the College of Surgeons, and of Charles II. for the House of Lords. He executed the statues of Ridley,

Latimer, and Cranmer for the Martyrs' Memorial at Oxford; and the group of *America* for the Albert Memorial in Hyde Park.

* **Weir, HARRISON** (b. 1824), a native of Lewes, Sussex, and son of John Weir, formerly of Somerset House, was educated at an academy in Camberwell. Until about 1843 he was a wood engraver, thereafter a wood draughtsman, painting also in water-colours and sometimes in oil. His first exhibited picture was in oil, viz., the *Dead Shot*; this was in 1842, at the British Institution. In 1847 he was elected a member of the New Society of Painters in Water-Colours. His subjects comprise all kinds of animals, also flowers, fruit, and landscapes, and his admirable drawings of animal life are well known to all readers of periodical literature; he is essentially the children's friend. He has also written the *Poetry of Nature*; *Every Day in the Country*; *Animal Stories, Old and New*, besides numerous contributions to periodical literature on natural history subjects. He is well known as a poultry and pigeon fancier, and has carried off prizes at shows with his exhibits. He is also a successful fruit and flower cultivator.

Wellesley, THE MOST HON. RICHARD COLLEY, MARQUIS WELLESLEY AND 2ND EARL OF MORNINGTON, K.G. (b. June 20th, 1760; d. Sept. 25th, 1842), was a native of Dublin. He was sent to Eton at an early age, where he laid the foundations of the scholarship for which he was so famous in after-life, and from Eton proceeded to Christ Church, Oxford, where he was distinguished for his proficiency in the classics. At both Eton and Oxford he was a contemporary of Lord Grenville, who shared his literary tastes as he did his political opinions. His father, the first Lord Mornington, died before he came of age, and in 1781 he took his seat in the Irish House of Lords. Four years afterwards he was returned to the English House of Commons for the borough of Beeralston, in Cornwall, and in 1790 for Windsor. In the year 1797 he was raised to the British peerage as Baron Wellesley, and appointed Governor-General of India. For the great military events of which India was the theatre during Lord Wellesley's viceroyalty, our readers are referred to the article on the Duke of Wellington. His civil administration had been so successful that the revenue of the East India Company was raised from seven millions to fifteen millions a year; while his famous viceregal progress through the northern states of India, which was conducted with a magnificence striking even to Asiatic eyes, had the best possible effect in strengthening our relations with the native princes. In 1799 he was created Marquis Wellesley, in the peerage of Ireland, and in 1805 he returned to England. He at once began to take an active part in political life,

and, had Mr. Pitt lived, he would probably have joined his administration. As it was, he attached himself to the Pittite Tories, who recognised Mr. Canning as their leader, and who were in close relations with what was called the "New Opposition," namely, Lord Spencer, Mr. Windham, and Lord Grenville, who had been members of Pitt's first Government, but did not join the second. A difference of opinion on the subject of the war divided this party from the Whigs proper, and Lord Wellesley and Mr. Canning soon came to be regarded as its leading representatives. In 1809, at the earnest request of Mr. Canning, Lord Wellesley was despatched as ambassador extraordinary to Madrid, in the hope that he might be able to rouse the Spanish Government to some more vigorous efforts in support of Sir Arthur Wellesley. But failing in this attempt, he was induced to return to England and accept the post vacated by Mr. Canning after his quarrel with Lord Castlereagh. Accordingly, in the following December (1809), he received the seals of the Foreign Department, which he held for about two years, resigning them again in January, 1812. The history of his connection with Mr. Perceval's Government is rather obscure. But the truth seems to be that the habits which he had acquired in India made him too impatient of contradiction for the part of an English Cabinet minister. He was unquestionably the ablest and the best informed of all Mr. Perceval's colleagues, and that the Prime Minister understood his value is clear from the efforts which he made to keep him. But the Marquis complained that he was not attended to, that his advice was never taken, that in spite of all his representations the war in the Peninsula was allowed to languish, and, gradually absenting himself from the meetings of the Cabinet, took to forming a party of his own, to whom he was allowed to lay down the law uncontradicted. There is no doubt that in the advice which he gave to the Government he was in the right, but till Wellington's successes inspired them with new courage they did not venture to act up to it, though they did not consent, as the Whigs desired they should, to abandon the struggle altogether. The final result was that Wellesley threw up the Foreign Office, and henceforth allied himself more closely with Lords Grey and Grenville. On the assassination of Mr. Perceval, he was sent for by the Prince Regent, and he and Mr. Canning endeavoured to form an administration. But the attempt failed, and Lord Wellesley remained out of office for another ten years, during which time he continued to be a consistent supporter of the Roman Catholic claims, and did all that lay in his power to spur the Government on to an energetic support of his brother, now Earl of Wellington. After the peace he opposed the

measures introduced by Government for the preservation of order, though Lord Grenville supported them, and, generally speaking, made himself a thorn in the side of Lord Liverpool's administration. In December, 1821, however, he was offered, and he accepted, the Lord-Lieutenancy of Ireland, which, curiously enough, he resigned in March, 1828, soon after the formation of his brother's administration. He was restored to it, however, by Lord Grey, in 1833, and resigned it finally in December, 1834. Although an Irishman and a pro-Catholic, his administration (1821-8) was not upon the whole successful. In 1835, on the return of Lord Melbourne to power, Lord Wellesley was appointed Lord Chamberlain, but finally retired from public life a few months afterwards, and went back to his favourite classics. Lord Wellesley was a Latin scholar of the old type, a thorough master of the language without being a deep philologist, and belonging to the school which is called elegant rather than philosophic. His Latin verses, with those of Addison, Gray, Lord Grenville, and two or three others, rank as English as well as Latin classics, and his *Lines on Eton College*, and *Salix Babylonica*, are masterpieces. He died at Kingston House, Knightsbridge, and was buried, at his own request, in the chapel at Eton College, surmounted by the Latin epitaph which he had himself written for the purpose.

Robert Boniere Pearce, *Memoirs and Correspondence of the Most Noble Richard, Marquis Wellesley* (1846); *Despatches, Minutes, and Correspondence of the Marquis Wellesley during his Administration in India*, edited by Mr. Montgomery Martin (1840); *Despatches and Correspondence of the Marquis Wellesley, K.G., during his Lordship's Mission to Spain as Ambassador Extraordinary to the Supreme Junta*, edited by Montgomery Martin (1838). [T. E. K.]

Wellington, ARTHUR WELLESLEY, DUKE OF, K.G., K.G.C.B. (b. May 12th, 1769; d. Sept. 14th, 1852), general and statesman, was born either in Dublin, or at Dangan Castle, in the county of Meath. His family name in the male line was Cowley, or Colley, a branch of which in the seventeenth century intermarried with another Anglo-Irish family, the Weasleys, and eventually assumed their name. Garrett Wesley, son of the first Baron Mornington, was made an earl, and became the father of four sons, of whom the eldest became the Marquis Wellesley (q.v.), and the youngest, Arthur, Duke of Wellington. The family continued to call themselves Wesley down to the year 1796, when for some reason they began to spell the name Wellesley. Arthur was sent to a preparatory school at Chelsea, where he learned little, and afterwards to Eton, where, if possible, he learned less. But when, at the age of fifteen, he was removed from Eton and sent to the Military Academy of Angers, in France, he exhibited more powers of application, and made fair

progress. In March, 1787, he was gazetted to an ensigncy in the 41st Regiment, and in the following December became lieutenant. He got his company in June, 1791, and in April, 1793, was appointed to a majority in the 33rd. Six months afterwards he became lieutenant-colonel of the regiment, and remained plain Colonel Wesley, or Wellesley, for another nine years. When Wellesley first joined his regiment in Ireland Lord Westmoreland was Lord Lieutenant, and he appointed the young officer on his staff. It was at this time that he became engaged to Lady Catherine Pakenham, daughter of the Earl of Longford, but want of means prevented their immediate marriage, and in 1794 he set sail with his regiment for Holland. Early in June he landed at Ostend, and during the short and disastrous campaign that followed he displayed high military qualities, especially during the retreat from Arnheim to Bremen. Being next ordered to India, he landed at Calcutta on the 17th of February, 1797, and now his career had commenced in real earnest. His brother, Lord Mornington, a man as able as himself, was now Governor-General. The most powerful enemy of the English at the time was Tippoo, Sultan of Mysore, whose capital was Seringapatam. That he had entered into an alliance with the French for the purpose of driving the British out of India is beyond dispute, and the two Wellesleys both came to the conclusion that war with him sooner or later was inevitable. It broke out early in the year 1799, and by the middle of April General Harris found himself under the walls of Seringapatam. By the 4th of May a practicable breach had been effected, and the town was taken by storm and given up to plunder. After four-and-twenty hours Colonel Wellesley was appointed commandant, and before noon on the 7th order was perfectly restored. On the settlement of the province Colonel Wellesley remained there as governor, and in this capacity displayed great talents for administration. He soon perceived that he would have to deal with the Mahratta Confederacy as he had lately dealt with Mysore. There were three Mahratta chiefs, Scindiah, Holkar, and the Rajah of Berar, besides their nominal suzerain "the Peshwar," whom the English had secured upon their side. The unavoidable rupture occurred in 1803, when Wellesley, at the head of 8,000 men, of whom only 1,500 were Europeans, attacked and defeated the Mahratta army of 50,000 men, with 128 guns, and posted in a very strong position at Assaye. The battle of Argaum, fought three months afterwards, on Dec. 15th, brought the war to a conclusion, and placed the Mahrattas finally under the English yoke. One year more General Wellesley remained in India to settle the newly acquired territories; and then, in September, 1805, he returned to England. Eighteen months after-

wards he became Chief Secretary for Ireland in the Duke of Portland's administration, an office which he seems to have held, notwithstanding his repeated absences, till April, 1809, when he returned to the Peninsula for good. In 1806 he married his early love, Lady Catherine Pakenham, and in 1807 he commanded the military force which accompanied Lord Cathcart to Copenhagen, when he was despatched to seize the Danish fleet. On this occasion he defeated the Danes at the battle of Kioge; and returned in the following September to his Irish duties, which were again interrupted by the first expedition to Portugal (1808). In three months he had fought and gained the two battles of Roliça and Vimiera, which effectually disposed of the idea that English soldiers were inferior to French. The fruits of his victories were lost by the Convention of Cintra, which permitted the French to evacuate Portugal; but during the winter of 1808-9, the British Government, learning to have more faith in the representations of Sir Arthur Wellesley, resolved finally to entrust him with the command-in-chief of another Portuguese expedition, which set sail from Plymouth on the 16th of April, 1809. His first exploit was the passage of the Douro, and the expulsion of Soult from Oporto and from Portugal. He then turned southward to confront Marshal Victor; and forming a junction with the Spanish army under Cuesta, pushed on into Spain, and at Talavera, on the 27th and 28th of July, fought the first of his great Peninsular battles, which ended in the defeat of the French with heavy loss on both sides. But the victory was a barren one, and the English general soon found it necessary to retrace his steps and confine himself to the defence of Portugal. During the winter of 1809-10 Wellington had occupied himself with the construction of the celebrated lines of Torres Vedras; and thither, after winning the battle of Busaco, on the 27th of August, he finally retired in the autumn of 1810, and remained till the beginning of March, 1811. This winter, spent within the lines of Torres Vedras, was the turning point in the Peninsular War. When the best of Napoleon's marshals, with the finest army which had yet been collected in Spain, recoiled baffled from that impenetrable position, the knell of French ascendancy was sounded. Wellington followed up Masséna with all speed, but the French general showed himself a master of his craft, and made good his retreat into Spain. Two more battles were fought during this campaign, Albuera and Fuentes d'Honoro—the latter being a struggle for the possession of Almeida, which on the defeat of Masséna fell into Wellington's hands, and made him master of Portugal. The chief events in the campaign of 1812 were the captures of Ciudad Rodrigo and Badajoz, the battle of Salamanca, and the

siege of Burgos. By obtaining possession of the two first-named fortresses Wellington had in his hands the keys of Western Spain, and the battle of Salamanca, in which the French were out-maneuvred and completely routed in less than two hours, besides its great moral effect on Europe in general, opened to him the gates of Madrid. For Ciudad Rodrigo and Badajoz he had been created Earl of Wellington, and Salamanca made him a marquis. The Spanish Government made him Duke of Ciudad Rodrigo, and the Portuguese Marquess of Torres Vedras. On the 12th he entered the Spanish capital amid great rejoicings; but the campaign which had begun so brilliantly was destined to end in clouds. Wellington found it necessary to make a move towards the north, and laid siege to the castle, contrary to the advice of the engineer officers, without sufficient guns. The attack failed completely, and he was now again obliged to retreat to the frontier of Portugal, not without heavy losses by the way, where he went into winter quarters about the end of November. The winter was occupied by Wellington in completely reorganising the Spanish armies; and in the spring of 1813, when he again moved forward, he waved his hat over his head as he crossed the boundary stream between the two countries, and cried, "Farewell, Portugal!" The brilliant operations which followed are too well known to need description. Wellington broke up his cantonments on May 15th, and after a series of masterly movements came up with the enemy at Vittoria, where, on June 21st, 1813, he fought the great battle which takes its name from that town, and scattered the French army like a flock of sheep. For the battle of Vittoria Wellington was created a field-marshal. The storming of San Sebastian followed. The passage of the Bidassoa, and the surrender of Pampeluna, took place in October; and on the 7th of November all preparations were complete for an advance into French territory. After five days' hard fighting, chiefly on the Nive and the Nivelle, his object was accomplished, and on the 14th of December the English army went into winter quarters in the neighbourhood of Biarritz and St. Jean de Luz. The campaign of 1814 lasted only from the 14th of February to the 17th of April, but it witnessed two desperate battles, namely Orthez and Toulouse, in which Wellington was again victorious, while the passage of the Adour was another of those feats of arms in which he was supposed peculiarly to excel. But the Peninsular War was now over. On the 17th of April an armistice was signed between the French and English armies, and in the following June Wellington returned to England. He employed the interval in visiting both Paris and Madrid on political business, though he did not succeed in overcoming the coolness with which, strange to say, the restored

Bourbons everywhere received him. But in his own country he was welcomed like a god. The Prince Regent created him a Duke, and Parliament voted him five hundred thousand pounds for the purchase of an estate. He was at that moment the greatest man in Europe, greater than any of the crowned heads who visited England in that memorable summer; and what is more remarkable, his good fortune never deserted him. He was one of the few heroes of the world whom Nemesis has spared. His crowning triumph, however, was yet to come. While the Allies were disputing at Vienna Napoleon reappeared in France, and Wellington, who had succeeded Lord Castlereagh in January as the English representative, immediately quitted the Congress and set out for Brussels, to take the command of the "Anglo-Netherland army." The battle of Waterloo once more consigned Napoleon to the exile which this time was destined to be final, and decided the condition of Europe for another half-century. Of the debatable points connected with that famous action we shall say but little here. Two things, however, are certain. Wellington had formed a clear and definite plan of action in case the fight should go against him, which does not look as if he was surprised; and in the second place the French were repulsed all along the line before the Prussian army arrived upon the field of battle. Had they not come up Waterloo might have been another Talavera, but it would still have been what Napoleon allowed Talavera to be, a great victory. This crowning glory to a glorious career brought peace to Europe and a total change of life to Wellington. After commanding the army of occupation in France for some years he returned to England, and in 1818 became Master-General of the Ordnance, a post which he continued to hold down to 1827. During the remainder of Lord Liverpool's administration he was frequently employed as the representative of England abroad; and was present in that capacity at the Congress of Vienna in 1822, when he made a vain endeavour to arrest the reactionary policy of the courts of Vienna and St. Petersburg. In the following year he undertook an equally fruitless mission to Madrid for the sake of preventing the march of French troops into Spain to put down the insurrectionary movement against absolutism. In 1826 he was sent to St. Petersburg to arrive at some understanding with Russia on the Eastern question and the Turko-Greek War, which was then at its height, and he obtained Russia's signature to a protocol, which in his opinion effected all that was required. When this protocol was expanded into the Treaty of London (July, 1827), the Duke of Wellington strongly disapproved of it, thinking that it was so worded as to justify the use of force compelling Turkey to make peace. He always repudiated this constructic

contending that it simply empowered the Allies to make use of force in protecting their own commerce from the piracy which the war encouraged. The Duke of Wellington's construction of the treaty was certainly the most obvious, and that "untoward event," the battle of Navarino, was an unfortunate confirmation of it; but both were probably sincere. In the beginning of the year 1827 Wellington was made commander-in-chief, but resigned when Mr. Canning became Prime Minister, only, however, to resume his duties under Mr. Canning's successor, Lord Goderich. On the speedy break-up of that Government, the Duke himself, in January, 1828, became Prime Minister. The Duke of Wellington's foreign policy, both before and after he became Prime Minister, has been to some extent misunderstood. At the death of Lord Castlereagh in 1822 Wellington was fifty-three. The greater part of his life had been passed out of England, and at the head of an army. He had thus enjoyed but limited opportunities of studying his own country, and had contracted military habits of mind not always to be accommodated to the working of popular institutions. On the other hand, in his knowledge of the sovereigns and statesmen of Europe, and of everything that comes under the head of foreign affairs, he surpassed all Englishmen either of his own or any other day. The result was that, although his convictions were anti-democratic, he knew too much of the Continental monarchies to be very much in love with absolutism; and the logical conclusion from these two premises was a policy of non-intervention "all round." In English politics there are three special passages in the Duke's career which require elucidation, though we cannot dwell on them at any length. They are: his relations with Mr. Canning, his carriage of Roman Catholic Emancipation, and his resistance to parliamentary reform. The misunderstanding between the Duke and Mr. Canning was extremely unfortunate, for a government with Mr. Canning at its head, and the Duke of Wellington as Foreign Secretary, would have been the strongest which the country had possessed since 1801, and might have saved us from many great disasters. However, it was not to be; the Duke, who disliked Canning in consequence of his quarrel with Lord Castlereagh, and also because he suspected him of intriguing with the Whigs during the lifetime of Lord Liverpool, refused to serve under him, and the opportunity was lost. Of the Duke's own ministry great hopes were entertained, but they were doomed to disappointment. He was not in office long enough for his foreign policy to have fair play, and we cannot now tell what would have been the effect of it. An unfortunate quarrel with Mr. Huskisson (q.v.), and his concession of Roman Catholic Emancipation in 1829, which led to his duel with

Lord Winchelsea, broke up the Tory party, and in the following year, being defeated on a question relating to the Civil List, the Duke resigned, and made way for the Whigs, and with them for parliamentary reform. That in advising his sovereign to consent to Roman Catholic Emancipation the Duke of Wellington was actuated by the most honourable and patriotic motives, is as certain as that in proposing it to Parliament without having first prepared their followers for so abrupt and violent a change the ministry made a great mistake. But of all the political blunders which the Duke ever made, the greatest was his memorable declaration in October, 1830, that not only was parliamentary reform not required, but that our representative system, as it then stood, was as near perfection as possible. From a position so decisively taken up there was no receding. The Duke and Lord Lyndhurst led the Opposition to reform in the House of Lords, and the latter, indeed, was the more active of the two. But popular indignation all centred on the Duke. His windows were broken, his carriage was attacked, though locked doors and pistols saved him from any personal injury, and he was mobbed on horseback on his return from the City, and narrowly escaped violence. After the passage of the Reform Bill, the Duke, with his usual excellent sense, accommodated himself to the new order of affairs, and for some years fulfilled a most useful function as moderator between the Lords and the Commons, preventing by forbearance and conciliation several collisions. On the dismissal of the Whig ministry in November, 1834, during the absence of Sir Robert Peel in Rome, the Duke undertook the formation of a Conservative ministry, and combined the duties of several departments in his own person. In 1842, on the formation of Sir Robert Peel's Government, he again became commander-in-chief, a post which he retained till his death. He supported the Repeal of the Corn Laws rather than endanger the existence of a Conservative government, though his disinterested conduct was unable to avert its downfall. Early in 1848 he wrote his celebrated letters to Sir John Burgoyne on the defences of the country, to which we owe all the measures which have subsequently been adopted for the fortification of our docks and arsenals, and the internal protection of the country. In the same year he superintended the preparations that were made in London for the reception of the Chartist mob under Feargus O'Connor (q.v.). This was the last great service which he performed to his country, though he still appeared to be in excellent health, and his well-known figure, in blue frock coat, white trousers, white neckcloth, and narrow-brimmed hat, was as familiar to the people of London as ever. At the end of the season of 1862 he left London for Walmer Castle, where, from the

middle of August to the middle of September, he continued in his usual health. On the morning of the 14th he seemed unwell, and rapidly grew worse. Epileptic fits ensued; before noon his Grace became unconscious, and about half-past three breathed his last, so quietly that his attendants were scarcely aware of it. He was buried in St. Paul's Cathedral with all the pomp and pageantry of a State funeral, and no man who ever lived deserved it more. The memory of the Duke of Wellington is the common property of the world, and his character should be an example to all future generations. He marched through duty to glory, and won an immortality of renown without the sacrifice of a single virtue.

Cornewall Lewis; *Diary of Charles Abbot, First Lord Colchester* (1861); *Greville Memoirs* (1874); *Croker Papers* (1884); *Napier's History of the Peninsular War*. [T. E. K.]

Wells, CHARLES JEREMIAH (b. 1800, d. 1879), poet, was born in London, educated at Edmonton, where he formed a friendship with Keats and Horne the author of *Orion*, and subsequently articulated to a solicitor. His first work, *Stories after Nature*, was published in 1822, and two years later appeared his drama, *Joseph and his Brethren*, which was received by the public with indifference and neglect, though it has since been pronounced by the best of our literary critics to be "the most Shakespearian drama since Shakespeare's day." On this poem Hazlitt is said to have remarked: "By-the-by, I have read your poem; I consider it shows great genius; and—I advise you to stick to your profession." Wells, however, stuck neither to law nor to literature; he retired to South Wales, and occupied himself with gardening and fishing. About 1840 he left England, and took up his abode at Quimper in Brittany, and finally settled at Marseilles, where he died. The only writings of his that remain to us, in addition to those already mentioned, are a sonnet to Chaucer in *Chaucer Modernised*, one more *Story after Nature*, and two papers on *Boar-hunting in Brittany*, though he is said to have destroyed about ten volumes of manuscript poetry after the death of his wife. Wells possessed great dramatic power, and poetic genius of the highest quality. To Mr. Swinburne, D. G. Rossetti, Horne, and Mr. Theodore Watts, belongs the honour of trying to restore a neglected man of genius to his rightful place among the poets of this century.

Prefatory note to *Joseph and his Brethren*, by A. C. Swinburne; *Athenæum* for April 8th, 1876, and March 8th, 1879, two articles by Mr. Theodore Watts.

* **Wells, HENRY TANWORTH, R.A.** (b. 1828), was born in London, and when quite a

lad began to acquire a considerable reputation as a miniature painter. In this branch of art he gained great popularity, but after 1860 he began to exhibit in oils. His picture, *Volunteers at a Firing Point* (1866), was well received, and so were his subsequent efforts, which were for the most part in portraiture, among which may be mentioned *Victoria Regina* (the Queen receiving the news of the death of William IV.) (1880); *Friends at Yeenden*, a group of well-known artists (1882); and *Leaving the Common* (1883). He was elected A.R.A. in 1866, and R.A. in 1870.

* **Wells, SIR THOMAS SPENCER, BART.** (b. 1818), a distinguished surgeon, was educated at Trinity College, Dublin. He studied for his profession at Dublin, Leeds, and St. Thomas's Hospital, London, and became M.R.C.S. in 1841, and F.R.C.S. in 1844. At first a surgeon in the navy, Mr. Wells greatly distinguished himself during the Crimean War as surgeon to the British civil hospitals at Smyrna and Rankoi (1854-6). On his return to England, Mr. Wells established himself in practice in London, and became known for his wonderful treatment of the diseases of women. Some of his operations have revolutionised that branch of medicine which he has made his own. Mr. Wells was vice-president of the Royal College of Surgeons in 1879 and 1880, delivered the Hunterian Oration in 1882, and was president of the college in 1883. He was created a baronet in the same year.

* **Wemyss, THE RIGHT HON. FRANCIS WEMYSS CHARTERIS, EARL OF** (b. 1818), son of the 8th earl, his mother being a daughter of the 2nd Earl of Lucan, was educated at Eton, and at Christchurch, Oxford, where he graduated in 1840. In 1841 he entered Parliament as member for East Gloucestershire, which constituency he continued to represent until 1846, when, becoming a convert to Sir Robert Peel's Free Trade policy, he gave up his seat by accepting the Chiltern Hundreds. In 1847 he was returned for Haddingtonshire as a Liberal-Conservative, and remained member for that constituency until the death of his father in 1883 necessitated his removal to the Upper House. From 1853-5 he was a Lord of the Treasury. When Lord Elcho, the Earl of Wemyss was known chiefly through his connection with the Volunteer movement and the National Rifle Association. He is colonel of the London Scottish Rifle Volunteers, and, indeed, may be regarded as the founder of this popular regiment. In politics he has played a very independent part; and his favourite topic is the evils of State Interference.

Wensleydale, THE RIGHT HON. JAMES PARKE, BARON (b. 1782, d. 1868), born at Highfield, near Liverpool, was educated at Macclesfield Grammar School, and Trinity College, Cambridge, where, after taking a brilliant degree, he was elected a fellow in

1804. Called to the bar in 1813, he became a judge in the Court of Queen's Bench in 1828, and in 1834 was transferred to the Exchequer. In 1833 he was sworn of the Privy Council, and in 1856 was created Baron Wensleydale by patent "for the term of his natural life." The House of Lords, however, decided that the patent gave no right to the recipient to sit and vote in the House of Peers, and the title was accordingly created afresh.

* **Werder**, AUGUST KARL LEOPOLD, COUNT VON (b. 1808), Prussian general, entered the Prussian Guards in 1825, and was nominated officer in the following year. In 1842 and 1843 he accompanied the Russian army in the campaign of the Caucasus, and on his return rose rapidly in the service, becoming major-general in 1863, lieutenant-general in 1866, in which year he commanded the 3rd Division of Infantry in the army of Prince Frederick Charles in the Austrian campaign. In the Franco-Prussian War he commanded the Baden and Württemberg corps, which was reinforced by a division of Landwehr. With these he laid siege to Strasbourg on Aug. 24th, and compelled the place to surrender on Sept. 27th. He was next ordered to oppose the Army of the East under Bourbaki. With part of his forces siege was laid to Belfort; with the other part he entrenched himself at Héricourt. A three days' battle (Jan. 15th to 17th, 1871) resulted in the complete defeat of the French, who fled pell-mell into Switzerland. General Werder retired from the army in 1879, and received the title of Count. He was subsequently attached to the German embassy at St. Petersburg.

Werner, ABRAHAM GOTTLOB (b. 1750, d. 1817), geologist, was a native of Wehrau in Ober-Lausitz, and studied at Leipzig University. In 1775 he became professor of mineralogy at Freiburg, and speedily became celebrated as a teacher. His cabinet of minerals contained some 100,000 specimens, carefully tabulated according to their external appearance. He also made several shrewd guesses on geology, laying especial stress on the sedimentary formation of rocks. His *New Theory on the Formation of Mineral Veins* was published in 1791. The "Wernerian" theories on the formation of rocks held the field until the advent of Lyell.

Configliachi and Frisch, *Lives of A. G. Werner*.

Werner, FRIEDRICH LUDWIG ZACHARIAS (b. 1768, d. 1823), the mad dramatist, was the son of a professor of history in Königsberg, and in 1784 he studied under Kant at his native university. After a wild and dissolute youth he ran away with a disreputable woman to Warsaw in 1792, and entered the civil service there. In the course of his life he divorced three wives after brief unions. Having returned to Königsberg in 1801 to attend his dying mother, he published his

first vast drama, *The Sons of the Valley* (*Die Söhne des Thals*) in 1803. This extraordinary effusion is supposed to represent an episode in the history of the Templars, and contains an incomprehensible jumble of Freemasonry, Rosicrucian philosophy, and every mysticism that has ever benighted the earth. Nevertheless it has been regarded in its time as a masterpiece of emancipated vigour and imaginative genius. Werner returned to Warsaw in 1804, but in 1805 he was in Berlin, and there, in the next two successive years, he produced *The Cross on the Baltic* (*Das Kreuz am Ostsee*), and *Martin Luther, or the Consecration of Strength* (*Die Weihe der Kraft*). Both are written in the same wild and restless style, but the description of the ancient heathen Prussians in the former, and the gradual advance of the crosses, is not without some poetic value. In 1808 he set off on a flying tour through Europe, and next year reached Coppet, where he was patronised by A. W. Schlegel and Madame de Staël. *Attila, King of the Huns* (1808), and *Wanda, Queen of the Sarmatians* (1810), were semi-historical, semi-mystical tragedies of the same class as the others. After their production Werner arrived in Rome (1811), and the result could easily have been foreseen. He became a vehement Roman Catholic, was ordained priest in 1814, and set about preaching sermons as ecstatic as his dramas to crowded and astonished congregations in Vienna. He only published two more compositions worthy of mention, *The Twenty-fourth of February* (*Der vierundzwanzigste Februar*, 1815), and *The Mother of the Maccabees* (*Die Mutter der Maccabäer*, 1820), the former of which, in spite of the horror of the story, comes nearer to the true drama than any of his other works. Werner is a type of the German "Romantic" spirit at its very worst. He lived in an atmosphere of lustful sentiment, and crammed his works with the supernatural. He mistook mystic vagueness for religion, and confusion for imagination. Yet, though none except critics will ever read his works again, he was at one time regarded as a great dramatist, and a high representative of German literature. Between him and his friend Hoffmann there is little to choose, though perhaps Hoffmann had less madness and more genius.

J. E. Hitzig, *Lebensabriß*; Professor Schütz, *Werner's Biographie und Charakteristik* (1841); Carlyle, *Essay on Werner* (1828); and Madame de Staël, *De l'Allemagne*.

Wesley, SAMUEL SEBASTIAN, Mus. Doc. (b. 1810, d. 1876), musician, was educated at Christ's Hospital, and in 1819 was chosen chorister of the Chapel Royal, St. James's, where he remained until 1827, when he was appointed organist of St. James's, Hampstead Road. In 1835 he was appointed organist of Exeter Cathedral, in 1842 of the Parish Church, Leeds, in 1849 of Winchester Cathedral, and in 1876 of Gloucester Cathedral. Dr.

Wesley was an energetic choirmaster, and the services which were under his control reached great excellence. His anthems, notably *The Wilderness*, and *Blessed be the God and Father*, are impressive and artistic to a high degree.

West, BENJAMIN, P.R.A. (b. 1738, d. 1820), was born of Quaker parents in Springfield, Pennsylvania. He began to paint portraits when quite a lad, and in 1760 went to study art in Italy. He arrived in London in 1763, and his *Orestes and Pylades*, now in the National Gallery, speedily made its mark, and he was commissioned by George III. to execute the *Departure of Regulus from Rome*. In 1772 West was appointed historical painter to the king, and in 1792 succeeded Reynolds as President of the Royal Academy. His picture of the *Death of Wolfe* was remarkable if only for the fact that West in it abandoned the absurdities of clothing moderns in classic costume, and it was followed by *Christ Healing the Sick*, *Christ Rejected*, and *Death on the Pale Horse*, West's last great picture. The progress of time has materially diminished West's reputation; his art is now recognised as conventional and uninspired, whereas at the beginning of the century it was regarded as near perfection. At least, however, his aims were high; and his permanent influence, slight as it was, was for good rather than for evil.

Westbury, THE RIGHT HON. RICHARD BETHELL, BARON (b. 1800, d. 1873), was the son of a physician at Bradford-on-Avon, Wilts. After spending some time at the Bristol Grammar School, he repaired to Oxford to begin a brilliant career. He matriculated at the age of fourteen, won a college scholarship at fifteen, and obtained a first-class in classics and a second-class in mathematics at eighteen. In 1823 he was called to the bar at the Middle Temple, and his keen and bright intellect, logical force, exquisite precision, and abnormal memory soon brought him a first-rate practice in the Chancery courts. In 1840 he took silk, and in 1851 became Vice-Chancellor of the Duchy of Lancaster, and in the same year also entered Parliament as Liberal member for Aylesbury. Next year he became Solicitor-General, in which capacity he was a valued henchman to Mr. Gladstone in passing the Succession Duty Act. As Attorney-General in 1856 and again in 1859, he acquired a name as a legislator by his Probate and Divorce Acts and the Fraudulent Trustees Act of 1857. He succeeded Lord Campbell as Lord Chancellor in 1861, and was compelled to resign in 1865 on a question of an official appointment, which, though betraying a certain laxity of administration, did not reflect on his own personal honour. He afterwards rendered great public service as arbitrator in the European Assurance Society, and to his initiative is due the present educational

activity of the Inns of Court. He died July 23rd, 1873. Lord Westbury occupied almost a unique position among Lord Chancellors. He was no slave to precedent. He ever asserted broad principles and doctrines, and his knowledge of English law and of the general principles of jurisprudence was almost complete. His judgments, great especially in patent law, company law, and ecclesiastical appeals, are lit up with many sarcastic remarks and Hogarthian sallies.

The Law Journal, Solicitor's Journal, and The Law Times, July 26th, 1873. [W. M.]

***Westcott, THE REV. BROOKE FOSS, D.D.** (b. 1825), was educated at Trinity College, Cambridge, and graduated B.A. in 1848, being bracketed senior classic. He was second Chancellor's medallist, won the Battie University scholarship in 1846, Sir William Browne's medals for the Greek ode in 1846 and in 1847, the Bachelor's Latin essay prize in 1847 and in 1849, and the Norrisian prize in 1850. In 1849 he became a fellow of Trinity, and was ordained deacon and priest. In 1852 he was appointed to an assistant-mastership at Harrow, became examining-chaplain to the Bishop of Peterborough in 1868, and canon of Peterborough Cathedral in 1869. In 1870 he succeeded Dr. J. A. Jeremie as professor of divinity at Cambridge, in 1875 became honorary chaplain to the Queen, and in 1879 a chaplain-in-ordinary. He was on the Revision Committee of the New Testament. He contributed to Dr. Smith's *Dictionary of the Bible* and to the *Speaker's Commentary*. He has published sermons and many other works, among them being *A General Survey of the History of the Canon of the New Testament during the First Four Centuries* (1855, fifth ed. 1881), *On the Religious Office of the Universities* (1873), *An Introduction to the Study of the Gospels* (1860, fourth ed. 1872), *The Revisers and the Greek Text of the New Testament* (1882), *The Historic Faith* (1883), *The Revelation of the Father, etc.* (1884), and *The New Testament in Greek* (1885).

Westmacott, SIR RICHARD, R.A. (b. 1775, d. 1866), sculptor, was born in Mount Street, Grosvenor Square, and inheriting a taste for art from his father, who was a statuary, went to Italy in 1793, and gained the gold medal for sculpture in the Academy of St. Luke, besides obtaining a prize for sculpture at Florence and the Pope's medal at Rome. In 1797 he returned to England, and in 1806 completed the statue of Addison for Westminster Abbey. In 1816 he became R.A., was appointed professor of sculpture at the Royal Academy in 1827, and was knighted in 1837. Westmacott's creative power is to be seen in nearly every street and public building in London, and Calcutta is adorned by his fine statue of Lord William Bentinck. Among his other important statues are those of Pitt,

Fox, and Perceval in the Abbey, Erskine in Lincoln's Inn; those of Sir R. Abercromby and Lord Collingwood in St. Paul's; the Duke of Bedford and C. J. Fox in Russell and Bloomsbury Squares; George Canning in St. Margaret's, Nelson at the Liverpool Exchange, and George III. on Snow Hill. He also designed the *Achilles* in Hyde Park, a portion of the frieze of the Marble Arch, and the pediment of the British Museum, his last important work. Among his ideal subjects were *Hero and Leander* (1820) and *Euphrosyne* (1837). Despite his conventionality, Westmacott was a sculptor of merit, his figures being distinctly imposing and well proportioned.

Westmacott, RICHARD, R.A. (b. 1799, d. 1872), sculptor, the son of the above, was educated for the law, but soon abandoned that profession for that of his father. His first exhibition to the Academy was a delicate *Girl with a Bird* (1827), followed by *The Reaper* in 1829. In 1838 he was elected A.R.A., R.A. in 1849, and professor of sculpture in 1857. He was a well-known lecturer on art; published a treatise *On Colouring Statues and A Handbook of Sculpture, Ancient and Modern* (1864). Among the younger Westmacott's chief works may be mentioned:—*Venus and Ascanius* (1831), *The Cymbal Player* (1832), and *Narcissus* (1833); in relief, *Mercury presenting Pandora to Prometheus* (1834), *Venus instructing Cupid*, and *Paolo and Francesca* (1838); monuments of Archbishop Howley and Lord Hardwicke, and the pediment of the Royal Exchange.

Wharnccliffe, THE RIGHT HON. JAMES ARCHIBALD STUART WORTLEY MACKENZIE, 1st BARON (b. 1776, d. 1845), was educated at the Charterhouse, and served in the army from 1791–1801. In 1797 he was returned in the Tory interest for Bossiney in Cornwall, and in 1812 attracted attention by his motion in favour of the formation of "a strong and efficient ministry," which was the cause of the temporary overthrow of the Tory government. From 1818–26 he sat for Yorkshire, but on account of his opposition to Catholic Emancipation he incurred great unpopularity, and was accordingly raised to the peerage. Lord Wharnccliffe was the chief organiser of the band of Tory "Waverers" who secured the passing of the Reform Bill. In the Peel ministry of 1834 he was Lord Privy Seal, and in that of 1841 Lord President of the Council. He died rather suddenly, shortly after Peel had announced his conversion to Free Trade, having opposed the Premier's innovations with considerable warmth at the meetings of the Cabinet.

Greville Memoirs, second series, vol. II.

Whately, RICHARD, D.D. (b. 1787, d. 1863), an eminent thinker and writer, entered at Oriel College, Oxford, in 1805, and took his M.A. in 1812. He became a fellow of Oriel in 1811,

and after a short experience of a country living at Halesworth, in Suffolk (1822–5), was appointed principal of St. Alban's Hall, Oxford, in 1825. In 1819 he brought out his *Historical Doubts relative to Napoleon Bonaparte*, an ingenious attempt to show by parody the absurdity of sceptical criticism; and in 1822 he was Bampton lecturer, publishing his addresses under the title of *The Use and Abuse of Party Feeling in Religion*. The lively interest he had taken in social subjects well qualified him for the post of professor of political economy at Oxford, to which he was appointed in 1830, and in the following year his nomination to the Archbishopric of Dublin was severely commented on by certain sections of the English Church. A good appointment, however, it turned out to be, and he was of immense service in organising a national system of education in Ireland. Archbishop Whately was the author of:—*Elements of Rhetoric* (1825); *The Elements of Logic* (1826), upon which several strictures have been passed by Hamilton; *Introduction to Political Economy* (1831); *Sermons* (1835); *Essays on Some of the Dangers to Christian Faith which may arise from the Teaching or the Conduct of its Professors* (1839); *Kingdom of Christ* (1841), and other works. His language was luminous and aphoristic, and he had a quaint, original, and, at the same time, powerful style of thought. He was comparatively deficient in general reading, and had a total disregard of authority. This gave a singular finish to his work, for it is distinctly destructive and not constructive. As a logician, Whately's importance was rather in the impulse he gave to the study than for what he himself accomplished. As a Churchman he held a very definite position. He was a strong Liberal, supporting Jewish Emancipation and the subsidising of Maynooth, and at Oxford was the leader of a distinct school. Dr. Newman was at first one of his followers, though afterwards the chief leader in the movement against the Church becoming Liberalised. In Ireland he lived down suspicion through his energy and kindness of heart, and was one of the most popular of the Archbishops of Dublin.

Life and Correspondence of Archbishop Whately, by his daughter (1866); *Miscellaneous Remains of Richard Whately* (1864); W. J. Fitzpatrick, *Memoirs of Richard Whately, with a Glance at his Contemporaries and Times* (1864); *Edinburgh Review*, cxx. 372.

Wheaton, HENRY (b. 1785, d. 1848), American jurist, was born at Providence, Rhode Island; and, having graduated at Brown University, was admitted to the New York bar. After a visit to Europe, he settled in New York; in 1815 became judge in the Marine Court, and in 1816 reporter of the proceedings of the Supreme Court in the United States. In that capacity he published the valuable *Reports of Cases argued and*

Determined in the Supreme Courts of the United States. In 1827 he was appointed *chargé d'affaires* at Copenhagen, in 1834 at Berlin, and was in 1837 named minister-pleni-potentiary to the King of Prussia. He was recalled in 1846, and a few weeks before his death accepted the Chair of international law in Harvard University. Wheaton's great work was his *Elements of International Law* (1836), which is still a standard authority; he also published a *Digest of the Law of Marine Captures and Prizes* (1815); *History of the Law of Nations in Europe and America* (1845).

Wheatstone, SIR CHARLES, F.R.S., LL.D. (b. 1802, d. 1875), an English physicist and electrician, was born at Gloucester, where he was apprenticed to the art of a musical instrument maker. On commencing art for himself he removed to London, and there, while diligently pursuing his trade, he began to lay the foundations of his future fame by investigating the acoustic principles involved in the construction of his violins, flutes, and trombones. The result appeared in 1823 in a paper on *New Experiments on Sound*, which, like his subsequent writings on the undulatory theory of light, he illustrated by a number of ingenious models, which have since then been extensively utilised for educational purposes. In 1833 he communicated a paper *On Acoustic Figures* to the Royal Society, and in 1834 another by which he demonstrated that the velocity of electricity is greater than that of light. These researches led to his election as professor of natural philosophy in King's College, London, and two years later as F.R.S. In the course of the lectures which he delivered in that year he proved, by sending a current of electricity through four miles of copper wire, that communication by the electric telegraph was practicable, though the experiments of Oersted, of a still earlier date, had robbed Wheatstone of the claims which have been put forward to his being the discoverer of the principle of telegraphy. Mr. (afterwards Sir) W. F. Cooke had also been experimenting in the same direction, and with results so much the same, that in May, 1837, he and Wheatstone took out a patent in their joint names "for improvements in giving signals and sounding alarms in distant places by means of electric currents transmitted through metallic circuits." This was the first patent registered for any telegraphic instrument, and may be regarded as the germ of that vast system of electrical communications which cover the world as with a network. This instrument had five needles, and as constructed along the Black-wall Railway in 1838, consisted of insulated copper wires enclosed in an iron tube. This form, however, only a small portion of Wheatstone's discoveries and inventions. For example, he shares with Brewster the inven-

tion of the stereoscope, which he described in his paper on binocular vision read before the Royal Society in 1838; and was the first to "synchronise" (or keep going at the same time from a central clock) a number of clocks by means of electro-magnetism. His automatic telegraph; his telegraph barometer and thermometer, by which an observer at the foot of a mountain can read the instruments on the summit; and his machine for the conversion of dynamical into electrical force, may also be mentioned as among the many instruments which we owe to the ingenuity of Wheatstone. Most of these were patented, and consequently were productive of substantial pecuniary reward to the inventor. He had not, however, any reason to complain of neglect by his fellow-labourers. Beside many honours of a like character, he received twice—in 1840 and 1843—the Royal medal of the Royal Society, and in 1848 the Copley medal of the same society, besides acting for a time as one of its vice-presidents. He was a corresponding member of the Institute of France, and of the most distinguished academies and societies of this country and the Continent. In 1868 he was knighted, and next year was created LL.D. by the University of Edinburgh. [R. B.]

Wheeler, SIR HUGH, K.C.B. (b. 1789, d. 1857), British soldier, the son of Captain Hugh Wheeler, was educated at Richmond, Surrey, and the Bath Grammar School; in 1803 he joined the Bengal Infantry, and rising through sheer merit attained the rank of colonel in 1846. He distinguished himself in the Sutlej campaign, and became general and aide-de-camp to her Majesty. In 1850 he was nominated a K.C.B., and placed in command of the Cawnpore district. In 1857, when the mutiny was imminent, he made preparations for defence, but, unfortunately, had confidence in the arch-rebel, Nana Sahib (q.v.), in whose care he placed his treasury. When the Nana turned his forces against Cawnpore, Wheeler held out bravely behind his mud walls from June 5th until June 26th, when he was severely wounded. He then concluded an armistice by which the English garrison and the women were to be allowed to reach Benares in safety. He was massacred on the Ganges on the following day, with the other victims of the Nana's vengeance.

Sir G. O. Trevelyan, *Cawnpore*; Kay, *Indian Mutiny*.

Whewell, WILLIAM, D.D., LL.D. (b. 1794, d. 1866), a native of Lancaster, was the son of a carpenter, for which trade Whewell himself was destined, but showing an aptitude for mathematics at the Lancaster Grammar School, he was sent to Trinity College, Cambridge, instead. Here he graduated B.A. in 1816, being second wrangler and second Smith's prizeman. He became a fellow of his college, afterwards tutor, then in 1828

professor of mineralogy, in 1838 professor of moral theology or casuistry, in 1841 master of Trinity College, being in the same year president of the British Association, and in 1855 Vice-Chancellor of the University of Cambridge. He was also president of the Geological Society, and an active member of the Cambridge Philosophical Society. Dr. Whewell's published works are very numerous, and on a great variety of topics. The earlier ones deal with mathematical subjects, such as the *Dynamics, Treatise on Conic Sections, Mechanics of Engineering*; he also prepared an edition of Newton's *Principia*. He contributed papers on electricity, magnetism, heat, the tides, as well as others on metaphysical and literary topics, to learned societies and to periodicals of a scientific character. Among his larger and later publications are the Bridgewater treatise on *Astronomy and General Physics* (1833), *History of the Inductive Sciences* (3 vols., 1837), *The Philosophy of the Inductive Sciences* (2 vols., 1840, republished in 1858-61, under the title of *History of Scientific Ideas, Elements of Morality, including Polity* (1845), *Lectures on Systematic Morality* (1846), and an edition of Grotius's *De Jure Belli et Pacis* (1854). He wrote also on educational reform, lectured on political economy, preached and published sermons and addresses, and translated from the German of Goethe and Auerbach; indeed, so varied were his attainments, that Sydney Smith said of him that "science was his chief forte and omniscience his *foible*." So overwhelming was his learning that his brother fellows, so the story goes, conspired to put him down by showing him that he did not know everything. Accordingly they got up a smattering of Chinese music, feeling convinced that on that point he would be ignorant. When they made Chinese music the subject of conversation at table, he refrained from taking part in the argument until the others had almost exhausted themselves, then he joined in with the remark, "My knowledge of Chinese music was imperfect, and to a certain extent incorrect, when I wrote the article that you have taken your information from." Whewell was a great admirer of Kant's philosophy, and strenuously opposed John Stuart Mill, who, in the preface to his great work on *Logic*, confesses that without the aid derived from the *History of the Inductive Sciences* the inductive portion of his work would probably not have been written. Whewell's character was an interesting one, and thoroughly English. He was powerful physically as well as intellectually; he was overbearing and boisterous; yet withal he was esteemed. The "Master's Hostel," a building containing numerous sets of rooms for members of Trinity, was a gift from him to his college. Dr. Todhunter edited an *Account of his Writings, with Selections from his Literary and Scientific Correspondence*, which appeared in 1876. [W. B. R.]

* **Whistler, JAMES ABBOTT MCNEILL** (b. circa 1835), an artist of American parentage, and one who, trained in France and working chiefly in England, shows in all his labour the vivacity and alertness, the sensibility and the refinement, of the American temperament. He was sent as a youth to the Military Academy at West Point on the Hudson, and his earliest copperplate—"a curiosity but not a work of art"—was wrought in the service of the American Government; but in or about 1857 he came to Europe, and entered, in Paris, the studio of Gleyre. He had seen and become interested in etching, and before he exhibited any painting which won attention he produced twelve plates—the "French set"—which obtained not only the respect but the admiration of the connoisseur. That was in 1859. They were published from the house of his brother-in-law, Mr. Seymour Haden, in Sloane Street, for Whistler had just then come to England. And in the same year he wrought not a few of the finest plates of his Thames subjects, which were publicly issued some time later. In 1863 there was exhibited his picture of *The White Girl*, which may perhaps be described as a harmony in white, cream colour, and tawny-brown. His *Lady at the Piano* is of about the same period. To these succeeded the portrait of his mother and the portrait of Carlyle, which are assuredly among the most impressive canvasses Mr. Whistler has given us. After painting several nocturnes, chiefly visions of the river, the artistic merit of which was keenly disputed by some critics, Mr. Whistler returned, as far as his practice in oil painting is concerned, chiefly to portraiture, and produced a portrait of Lady Archibald Campbell, more than one of Lady Meux (these were exhibited at the Salon with more approval than in London), a quite exquisite portrait of Señor Sarasate, which was the one attraction at that year's exhibition of the Society of British Artists, and still more lately, portraits of Mr. Henry Dixey, the American burlesque actor, of Mrs. E. W. Godwin, and of Lady Colin Campbell. The merits of all these works, their certain instinct of "selection," their charm of arrangement, their distinction and refinement of handling, that part of the world which calls itself "artistic" is gradually getting to recognise. But Mr. Whistler's efforts, the evidences of that labour "which excuses itself only by reason of its quality," have not, as is obvious from the earlier portion of this notice, been confined to oil painting. He has proved himself an ether who, in his own way, is unsurpassed or unequalled. He has, in one or two exhibitions of pastels, both of Venice and of the figure, shown the pregnant brevity and the artistic economy of his method with this material. His pretty suggestions in water-colour have witnessed hardly less conclusively to the refinement of his vision and the dexterity of his hand. Almost alone, among serious artists of

our generation, he has devoted himself a little to lithography, and the rare impressions of his drawings on stone display the utmost delicacy of treatment. But perhaps it is as an etcher that he is surest to be remembered; it is not too much to say that posterity is bound to be concerned with so substantial an array of exquisite work with the etching needle. No less than two hundred and fourteen etchings and dry points from Mr. Whistler's hand have been catalogued and described, and these range from the French subjects of 1857 or '58 down to the Chelsea shop subjects of 1885 and 1886. Prominent amongst them are some forty or fifty plates of Venetian themes, wrought in Venice chiefly in 1879. Mr. Whistler was, in the spring of 1886, elected president of the Society of British Artists, a choice significant of very surprising changes and reforms in that body. Mr. Whistler has written and delivered a lecture upon art, which, in remembrance of the hour at which it was given, it pleased him to entitle "Ten o'Clock." [F. W.]

Whitbread, SAMUEL (b. 1758, d. 1815), statesman, a native of London, was the son of a wealthy brewer, whose business he subsequently carried on. He was educated at St. John's College, Cambridge, and in 1790 was returned to Parliament in the Whig interest for the borough of Steyning, a seat which he shortly exchanged for Bedford. He was a warm personal friend of Charles Fox, and in 1805 was selected to conduct the attack upon Lord Melville's official administration. He married a daughter of the first Earl Grey. After the death of Fox he was one of the most influential members of the Whig party. Mr. Whitbread committed suicide during an attack of insanity.

White, HENRY KIRKE (b. 1785, d. 1806), poet, was the son of a Nottingham butcher, and at the age of six began to learn writing, arithmetic, and French, and to cultivate the muses. Some lines, *On being Confined to School one Pleasant Summer Morning*, written at the age of thirteen, are equal to many he afterwards produced. At the age of fourteen he was sent to work at a stocking-loom, where he remained till 1799, when he entered an attorney's office. He now spent his spare time in learning Latin, Greek, and some four of the modern languages, as well as electricity and music, and in exercising his pen on prose and poetry in various ways. Already indulging in sceptical speculations, he was seriously arrested in 1803 by a strong religious fervour, which had such an influence on him that all his subsequent works are tinged by it. In 1804 he brought out a volume of poems, which was abused in some review. This little book, however, gained him the friendship of Southey. White had long cherished the notion of a university education, and of eventually becoming a

clergyman. By the liberality of friends he was entered, in 1805, as a sizar at St. John's College, Cambridge. Here his application to books was so intense that his health speedily sank under it.

Southey, *Remains of Henry Kirke White*; *London Magazine*, Dec., 1824.

White, JOSEPH BLANCO (b. 1775, d. 1841), was born of an Irish family settled in Seville. Educated at a Dominican convent, and afterwards at the University of Seville, he was ordained sub-deacon in 1796 and priest in 1799. For a while he was a strong devotee, but lapsed into infidelity, and came to England in 1810. In 1814 he became a clergyman of the Church of England, only to abandon orthodoxy four years afterwards, and after passing through various other phases of faith became a Unitarian in 1835. Hence he thought it necessary to leave the house of Archbishop Whately, to whose son he had been tutor for some years, and died at Liverpool. Blanco White was a friend of many of the great men of his time—for instance, Coleridge, Whately, J. H. Newman, and J. S. Mill—and was himself a man of rare ability. He produced, however, nothing of permanent importance, except his great sonnet on *Night*, owing to his want of ballast. Among his works may be mentioned *Letters from Spain by Don Leucadio Dollado* (1821) and *Practical and Internal Evidence against Catholicism* (1825).

Blanco White's *Autobiography and Correspondence*, edited by J. H. Thom.

Whitehead, CHARLES (b. 1804, d. 1862), poet, novelist, and dramatist, was a native of London. His parents were in comfortable circumstances, his father being a wine merchant in the city. He began life as a clerk in a commercial house. In 1831 he published *The Solitary*, and seems shortly afterwards to have become an author by profession. *The Solitary* is a poem of reflection and emotion rather than incident, with here and there a few lines of description, but mainly depending for its interest on the originality and force of its abstract ideas. The influence of Shelley is apparent, but there is nevertheless marked originality of treatment. In 1834 Whitehead published anonymously the *Autobiography of Jack Ketch*. This work is entirely one of fiction, and is for the most part a farcical travesty on the broadly grotesque and semi-gruesome idea of the inner life of the public hangman. Nevertheless, it contained passages of the utmost seriousness and of almost pathetic gravity, evincing throughout the dexterous hand of a skilful literary workman, and in its more notable passages the powerful grasp of a master of tragic art. There can be little doubt that the success of this book gave rise to one of the most interesting incidents in Whitehead's career, viz., his being asked by Messrs. Chapman and Hall

to associate himself with Seymour in the production of the book which afterwards became famous as *The Pickwick Papers*. He declined the offer, assigning as his reason that he was unequal to the task of producing the copy with sufficient regularity. He then recommended to the publishers the young author of the *Sketches by Boz*. As a result of this piece of good-fellowship on Whitehead's part, the two writers continued good friends for some time. In 1842 Mr. Bentley published the novel *Richard Savage*, the work by which Whitehead will be chiefly remembered. Of this work Dickens often spoke with "great admiration," while Dante Rossetti writes of it as "very remarkable—a real character really worked out." Among Whitehead's other works of importance may be cited the *Cavalier*, a poetic drama; the *Earl of Essex*, an historical romance; *Smiles and Tears*, a collection of stories and essays; and a *Life of Sir Walter Raleigh*. He also contributed largely to magazines and journals. Whitehead's talents were great, and he was fortunately situated for the exhibition of them. On the publication of *Richard Savage* he had every prospect of a brilliant career. Unhappily he fell into habits of intemperance. Thinking to make a fresh start in life, he accepted a journalistic appointment at Melbourne in 1857. But his fatal propensity remained with him. His wife—he had no children—died. He sank lower and lower, and in 1862 he died from the effects of destitution. Some of Whitehead's later poetical work is very good, and perhaps the sonnet by him, so greatly admired by Dante Rossetti, is one of his latest efforts in that form. The *Spanish Marriage*, a fragment of a poetical drama, published in a Melbourne magazine, has many fine passages. It is a matter for grave disappointment that a man with Whitehead's powers should have done so little permanent poetical work; just as it is a matter for regret that one possessed of his abilities should have executed so little, comparatively speaking, in the higher walks of fiction. But what he has done in both these departments of literature entitles him to a higher place than he at present holds.

[H. T. M. B.]

* **Whitman, WALT** (b. 1819), poet, son of Walter Whitman and his wife Louisa, was born at West Hills, in the township of Huntington, Long Island, New York State, on the 31st of May, 1819. His father was descended from an English family who settled at Huntington about 1660; and his mother, a Van Velsor, came of a Dutch family of farmers also settled in Long Island. Walter Whitman, who was born in 1789, was brought up to be a carpenter, and married in 1816. Walt (or, as he was christened, Walter) was

the second son of this marriage, and passed his early years at West Hills and Brooklyn, attending the public schools of the latter place until he was thirteen years old. He was employed for a short time in a lawyer's office, then in a doctor's, and next at a printing-house, where he learnt type-setting. He kept to the printing trade for some two years or so, and then (1836) became a teacher in country schools and a writer of articles for magazines and newspapers. In 1839-40 he edited and published at Huntington *The Long Islander*, a weekly newspaper. For about twelve years he earned a living by blending the occupations of author and compositor. From 1840-5 he followed these pursuits in New York city, passing the summers in the country, and doing some farm work. During the next two years he edited *The Eagle* newspaper at Brooklyn, and then passed on a working expedition with his brother Jefferson through all the middle States, down the Ohio and Mississippi, and back by the Mississippi and Missouri, Lakes Michigan, Huron, and Erie, Niagara Falls and Lower Canada, and then through Central New York and down the Hudson. He appears about 1849 on the editorial staff of *The Crescent* daily newspaper at New Orleans; and in 1850 he published *The Freeman* newspaper in Brooklyn. In 1851 he took up carpentering, and built houses in Brooklyn for sale—a business which threatened to become too profitable for his taste, and was abandoned in favour of his real mission. This he found in 1854, after completing his education in the remarkable way sketched above. This mission was to preach the gospel of democracy and of the natural man. To qualify for this he had passed all available time among men and women, and in the open air, absorbing into himself nature, character, art, and indeed all that makes up the external universe. A new departure in literature had been definitely shaping itself in his mind for some two or three years; and in 1854 he began to write down a series of compositions more absolutely original and unprecedented than, perhaps, anything in literature. In 1855 these compositions, twelve in number, were published under the title of *Leaves of Grass*, Whitman himself helping to set the types. The book attracted little attention, and had scarcely any sale; but it fell into the hands of a few people of advanced views and high understanding, to whom it was at once evident that a new and a great thing had come to birth. Nowise discouraged by the narrowness of his reception, Whitman went on with his work, adding new poems and revising those already printed; and in 1856 he issued a second edition, containing thirty-two pieces. This also was but little noticed or sold. In 1860 a handsome edition of *Leaves of Grass* was published at Boston with some additional poems called *Enfance d'Adam*, which were

grossly misunderstood, as they still are, and gave great offence. The publishers would have fought the book's battle manfully, but on the outbreak of the Secession War they closed their establishment, and engaged in the defence of the union. Whitman also (1862), leaving Brooklyn and New York for good, went to the seat of war, wintered partly in the Army of the Potomac, and began that noble ministrations among the wounded, now so generally known, culminating (1864) in his first illness (called by the doctors hospital malaria), and continued after a short interval till the war was over. Before the close of the war he was appointed to a clerkship in the Department of the Interior at Washington, but was shortly dismissed by Secretary Harlan as the author of *Leaves of Grass*. At the time he was still using his leisure hours to tend the wounded in the hospitals, and was composing *President Lincoln's Funeral Hymn*. He was immediately appointed to another clerkship, in the Attorney-General's office. In 1865 he published *Walt Whitman's Drum-Taps*, a series of poems connected with the war; and, after it came from the press, he added the poem on the death of Lincoln called *When Lilacs last in the Dooryard bloomed* and other poems. In 1866 he prepared a fresh edition of *Leaves of Grass*, much revised and added to, classified in the order intended to be final, and with a special series called *Songs Before Parting*. The book included the *Drum-Taps*, and though printed in 1866, bears the date 1867 on the title. In 1870 another edition of *Leaves of Grass* (revised again) appeared at Washington, simultaneously with a separate volume of poems called *Passage to India*, some old and some new, and a prose volume, *Democratic Vistas*. In 1871 he delivered at the opening of the American Institute, and also published, a new poem, *After all not to Create Only* (now called *Song of the Exposition*). This short piece first comes into *Leaves of Grass* in an edition of 1872, including *Passage to India*. In that year he delivered at the Commencement, Dartmouth College, another new poem, *As a Strong Bird on Pinions Free*, issued the same year with an important preface and some short poems. At the opening of 1873 he had an attack of paralysis, and lost his mother by death. Here ended his official career; and he took up his residence at Camden, in New Jersey, near his brother, Colonel Whitman. There he remained ill and much disabled for some years; but in 1875 he produced a fresh prose work, *Memoranda during the War*, issued at Camden; and, while reprinting *Leaves of Grass* (the edition dated 1876, and known as the "Centennial Edition"), he also prepared a companion volume of prose and verse under the title of *Two Rivulets*. The new volume included a fresh general preface, a section specially called *Two Rivulets* (verse and prose running parallel), and *Centennial Songs* (among

which *The Song of the Exposition* is a reprint). The rest of the book consists of former separate works bound up with the new; these are *Democratic Vistas*, *As a Strong Bird*, *Memoranda*, and *Passage to India*, again separated from *Leaves of Grass*. During the next two years his health was to some extent restored; and in 1879 he travelled to Missouri, Kansas, Colorado, etc. The summer of 1880 he passed in Canada. In 1881 Messrs. Osgood of Boston issued a new edition of *Leaves of Grass*, but suppressed it on an absurd threat of prosecution. The stereotyped plates were transferred to the author, who published from them the "author's edition" at Camden (1882). In 1883 the book, finally revised, and containing in all 293 poems, was published at Philadelphia, together with an autobiographical volume entitled *Specimen Days and Collect*, consisting mainly of Whitman's prose writings old and new. It is necessary to name these various issues of *Leaves of Grass*, because Walt Whitman consistently allows that title to cover all his poetical work, and each new edition contains as a rule some fresh feature of importance. The term *poet* does not fully describe Walt Whitman: the word *prophet* would come nearer; but that might be misunderstood. Schopenhauer has been well described as "the great prophet of the world's despair." Walt Whitman may be termed conversely the great prophet of the world's hope. Of all optimists he is the most absolute: his faith in the ultimate perfection of the scheme of things never wavers; he sees promises of eventual good in all that is evil—nay, he even discerns a present good in what is evil; he will hear of no annihilation of the individual and no ultimate loss or failure for any human creature; and it is the endeavour of his writings to inspire every man and woman with a sense of his or her personal dignity. His works convey the impression of a man more at one with the external universe, more at peace, through faith in the highest sense of that word, about the great questions that exercise the soul, than perhaps anyone whose writings are extant. Nothing of the nature of a complaint has ever proceeded from him; and he sounds all the chords of human feeling with the depth and urgency of one who has suffered, in his own person and by sympathy, all woes and agonies, but whose spirit is too great to be turned by any suffering from the clear faith that "all is well." The principal defects with which Whitman is vulgarly charged are his perfectly primeval outspokenness, and a want of attention to form. Both matters are essential in his work, and must eventually be accepted as part and parcel of the religion he has felt impelled to preach. His work is too full of wisdom, poetry, and the highest aspirations for mankind, to be let drop on account of its obvious inconveniences to a generation nurtured as

we have been; the world will have to consider its messages earnestly, and they must be taken as they are.

R. Maurice Bucke, M.D., Walt Whitman (1868). [H. B. F.]

* **Whittier**, JOHN GREENLEAF (b. Dec. 17th, 1807), American poet, was born at Haverhill, Massachusetts, of Quaker parents. During his early years he worked as a farm-boy and shoemaker's assistant, receiving the rudiments of education at home; but in 1825 he was sent to a Friends' School, where he remained for a year. In 1829 he went to Boston to edit the *American Manufacturer*, and in 1830 became editor of *The New England Weekly Review*, published at Hartford, Connecticut. Two years afterwards, however, he returned to Haverhill, where for the next four years he occupied himself with the editorship of the *Haverhill Gazette*, the care of his farm, and attendance at the Massachusetts Legislature. Meanwhile, in 1831, he had published *Legends of New England*, a collection of Indian traditions, and shortly afterwards a poetical tale, *Moll Pitcher*. A *Memoir of Brainerd*, prefixed to a second edition of his literary works, followed in 1832. In 1836 he became one of the secretaries of the American Anti-Slavery Society, and two years afterwards was appointed editor of the *Pennsylvania Freeman*, published in that city as one of the organs of the Abolitionists. In it some of his finest lyrics appeared, and such was the ardour of his advocacy that his office was sacked by the mob. In 1840 he returned to Massachusetts, and settled down at Amesbury. After awhile journalism ceased to attract him, his last editorial connections being with the *Lowell Standard* and the *National Era*. Whittier's third volume was *Mogg Megone* (1835), founded on the story of the chief of the Saco Indians; it was followed by *Lays of Home* (1843), *The Stranger in Lowell* (1845), and *Supernaturalism in New England* (1847), the two last being in prose. Then came *Leaves from Margaret Smith's Journal* (1849), a collection of anti-slavery poems *The Voices of Freedom* (1849), and *Old Portraits and Modern Sketches* (1850). In the last year appeared Whittier's *Songs of Labour and other Poems*, containing *The Drovers*, *The Huskers*, *The Lumbermen*, etc., in which the poet is seen in his happiest vein. In 1852 came *The Chapel of the Hermits and other Poems*, and another collection—*The Panorama and other Poems*—containing *The Hermit of Thebaid* and *The Barefoot Boy*, in 1856. Whittier's next works were *Home Ballads and Poems* (1860), *In War Time and other Poems* (1863), *National Lyrics* (1865-6), *Snow-Bound*, a beautiful idyl of New England life and manners (1866), *The Tent on the Beach and other Poems* (1867), *Among the Hills and other Poems* (1868), *Miriam and other Poems* (1870), *Ballads of New*

England (1870), *The Pennsylvania Pilgrim and other Poems* (1872), *Mabel Martin, a Harvest Idyl* (1876), *The Vision of Eckard and other Poems* (1878), *The King's Missive and other Poems* (1881) *The Bay of Seven Islands and other Poems* (1885). In 1875 Whittier edited a collection of *Songs of Three Centuries*, and numerous collections of his works, both in verse and prose, have been published.

Biographical Notices by W. S. Kennedy and F. H. Underwood; Mr. W. M. Rossetti's critical notice to the edition of Whittier published in *Moxon's British Poets*; B. H. Stoddard in *Scribner's Monthly*, vol. xviii.

Whyte-Melville, GEORGE JOHN (b. 1821, d. 1878), novelist, was the son of a Fifeshire landowner, and born near St. Andrews. He was educated at Eton, and entered the Coldstream Guards in 1839, but retired from the army in 1849, having risen to the rank of captain. On the outbreak of the Crimean War, however, he joined the cavalry of the Turkish contingent, and remained in that service until the declaration of peace. The novel, *The Interpreter* (1853), was based on his adventures in the Turkish service, but it is by no means one of Whyte-Melville's best. His first work of fiction, *Digby Grand* (1853), indicated the line in which he was to excel, the novel of sporting and country-house society. It was followed by *Tilbury Nogo* (1854), *General Bounce* (1854), *Kate Coventry* (1856), *Holmby House* (1860), *Good for Nothing* (1861), *The Brookes of Bridlemere* (1864), *Coriase* (1866), *Bones and I* (1868), *M or N* (1869), *Satanella* (1872), *Uncle John* (1874), *Katerfelto* (1875), *Sister Louise* (1876), *Black but Comely* (1879). Without being exactly a great writer of fiction, Major Whyte-Melville was, and is, one of the most popular of authors. His main strength lay in the description of the ordinary scenes of amusement in the life of a country landowner, the cover-side, the steeple-chase, and the meet. Few accounts of a run have been better done than that in *Market Harborough*, and the steeple-chase in *Black but Comely* is almost as admirable. But he had other qualities as well: he could fashion a sufficiently interesting, if not particularly intricate, plot; and he could delineate a variety of character-types with finish and no small sense of humour. Few men have better appreciated the English gentleman, and General Bounce and Uncle John are men such as it does one good to come across. Whyte-Melville had in himself all the best instincts of the class; and he was also a scholar of ability. His *Translation of Horace into English Verse* (1850) has much positive merit; and he turned his knowledge of ancient literature to admirable account in the novels *The Gladiators* (1863) and *Sarchedon* (1871), a work based on the story of Semiramis. *The Queen's Maries* (1862), the scene

of which is placed at Holyrood, is not equal to these two books. As the bard of the hunting-field Whyte-Melville is *facile princeps* in recent times, and his songs, such as *The Clipper that stands in the stall at the top*, and *Drink, puppy, drink*, will long preserve his memory. A collection of his *Songs and Verses* appeared in 1869. He was an admirable rider, but met his death while galloping across a piece of ploughed land, through a fall from his horse.

Wieland, CHRISTOPH MARTIN (b. 1733, d. 1813), the man of letters, was the son of the pietistic and Evangelical parson of Oberholz, near Biberach, in Swabia. After studying at Tübingen University, he went to Zurich in 1752 on a long visit to Bodmer, then engaged in turning portions of Biblical history into dreary epics. Wieland adopted his manner, and produced *The Sacrifices of Abraham* and several other moral poems and tales. After 1754 a change of tone was noticed, and in 1760 it culminated with Wieland's return to Biberach, where he produced not only the first German translation of Shakespeare (1762-6), but his satirical and dubious romances of *Nadine* (1762) and *Agathon* (1766), not to mention others of still less modest conception. The poem *Musarion*, in which, as in *Agathon*, Wieland draws the comparison between ethereal and worldly love decidedly in favour of the latter, appeared in 1768, and, curiously enough, in the next year he was appointed professor of philosophy at Erfurt. In 1772 he was invited by the Duchess Amalie of Weimar to act as tutor to her two sons, and he held this position till the arrival of Goethe three years later. In 1773 he began the publication of the *German Mercury* (*Deutscher Mercur*), a monthly magazine, which he continued to edit till his death; and in the same year he wrote *The Men of Abdera* (*Geschichte der Abderiten*), the best of his prose works, and one of the finest satires in the German language. Like many of Wieland's works, it represents the difficulties of a high romantic nature surrounded by the materialised citizens of every-day life. But in this case he has had the art to retain our admiration for the ideal in spite of its absurdities and sufferings. His next important work was *Oberon* (1780), his finest poem, and the last worthy of mention. It is a kind of German *Don Juan*, set in fairyland, and is perhaps the nearest approach to Byronic ease and directness in the German language. For the rest of his life, but for the production of two more romances of minor importance, *Peregrinus Proteus* (1791) and *Agatho-demon* (1798), Wieland was chiefly engaged in translations of the classics, as of *Lucian* (1788-9) and *Cicero's Letters* (1808-12). In 1798 he retired for some years to a country house at Ossmanstadt on the Ilm, between Weimar and Apolda, and there he is buried,

though he spent the closing years of his life at Weimar. Wieland's career and influence both belong properly to the last century, but his purity of language and unflinching lucidity of thought have given him a very distinct and, on the whole, a high position in German literature. As he had modelled both style and thought on the best French writers, it has been the custom to compare him to Voltaire; but he had little of Voltaire's destructive energy, and, if he must have another name than his own, we might rather call him the German Lucian in prose, and in verse perhaps even the German Byron.

L. F. Otterdinger, *Wieland's Leben und Wirken*; and especially Goethe's Address, *Ze brüderlichem Andenken Wielands* (1813), included in his works; Madame de Staël, *De l'Allemagne*.

Wiertz, ANTOINE (b. 1806, d. 1865), Belgian artist, was a native of Dinant, on the Meuse, and, inspired with a desire for fame, repaired to Antwerp, where he lived in the direst poverty, working assiduously at his art. He just managed to keep himself alive, and in 1821 received a small pension from the Government. In 1832 he gained the Prix de Rome, and was thus able to visit Italy. There he commenced his gigantic picture the *Combat over the Body of Patroclus*, which was enthusiastically admired by Thorwaldsen, but which was "akied" at the Paris Salon in 1836. His masterpiece, *Le Triomphe de Christ*, was painted after his removal to Brussels in 1848, and in 1858 a studio, now called the *Musée Wiertz*, was erected for him by the Government. Here he proceeded to execute in rapid succession a number of gigantic pictures, undoubtedly works of genius, but stamped by a growing delight in the revolting, as the titles of some of them show; for instance, *L'Enfant Brûlé*; *L'Inhumation Précipitée*; *Faim, Folie, Crime*; *Le Suicide*; and *Pensées et Visions d'une Tête Coupée*. On his death he was buried in the grounds of the Musée Wiertz.

Art Journal, vol. xxi.; *Macmillan's Magazine*, vol. xl.; *Fraser's Magazine*, vol. lxxxv.

Wigan, ALFRED SYDNEY (b. 1814, d. 1878), actor, was a native of Blackheath, and began life as a teacher of music. In 1838, however, he took to the stage, making his first appearance at the St. James's, under the name of Sydney. In the following year he assumed that of Wigan, and appeared at Covent Garden in Sheridan Knowles' *Love*. In 1841 he married Miss LEONORA PINCOTT (b. 1805, d. 1884), an actress of repute. For the next fifteen years the Wigans played at the chief London theatres, and gained a high reputation as clever and finished delineators of character. Mr. Wigan's merits appeared in pieces like *The Bengal Tiger*, *The Lucky Friday*, *Still Waters Run Deep*, and *Retribution*. In 1853 he became manager of the Olympic, in 1860 of the St. James's, where he

remained until 1863; he then accepted an engagement at the Queen's, Long Acre; and played at the Gaiety in 1868 and 1869. The Wignans retired from the stage in 1874.

Wilberforce, SAMUEL, D.D. (b. Sept. 7th, 1805; d. July 19th, 1873), Bishop of Winchester and Oxford, the third son of William Wilberforce (q.v.), was born at Clapham Common, near London. There were three other sons, two of whom took orders, while the third was called to the bar; all of them became Roman Catholics between the years 1850 and 1854. Samuel Wilberforce was first educated by various private tutors, but probably the most powerful influence on his early life was that of his father, who wrote to him constantly, and determined him to look upon the Church as his future profession. In 1823 he went into residence at Oriel College, Oxford, and during his undergraduate career was an industrious reader, an accomplished horseman, and a frequent speaker at the Union. His views were at first Liberal, but a tour in France in 1827 opened his eyes to the activity of revolutionary ideas, and he became a strong Tory. He had taken his degree, with a first in mathematics and a second in classics, in the previous year; and he soon afterwards married Miss Emily Sargent, the daughter of the biographer of Henry Martyn. In 1828 he was ordained, and became curate-in-charge of Checkendon, near Henley. He was under the patronage of Bishop Sumner, a prominent member of the Church section of the Evangelical party. Wilberforce held very much to his opinion, and Sumner's influence is to be seen in his acceptance of the living of Brightstone, in the Isle of Wight (1830), as well as in the subsequent refusal of that of St. Dunstan's, Fleet Street. His stay at Brightstone ended in 1840, and the ten years were important ones in the history of the Church. They witnessed the growth in his own college, and among his most intimate friends, of the "Oxford Movement." From it Wilberforce stood aloof, and when it developed into a distinct party in the Church he protested against it. John Henry Newman eventually declined his contributions to the *British Critic* because he had preached against Dr. Pusey's theory of sin after baptism. During this period Wilberforce's literary activity was great. His monument to his father, *The Life of Mr. Wilberforce*, appeared in 1838, and two volumes of the latter's correspondence were published in 1840. The beautiful allegory, *Agathos and other Sunday Stories*, was published in the same year, and *Eucharistica* (prayers and meditations from the Anglican fathers), to which he wrote a preface. He was now a known man; he had already been select preacher at Oxford, he speedily became in rapid succession Archdeacon of Surrey, Canon of Winchester Cathedral, and rector of Alverstoke. In 1841 he was Bampton lecturer, and shortly after-

wards became chaplain to Prince Albert. In the same year occurred the great sorrow of his life, the death of his wife, but in other respects his career was one of unvarying prosperity. He was beloved by his parish, had a high reputation as a public speaker and university preacher, and was a great favourite at Court. In 1845 he was appointed Dean of Westminster, and in the same year, when only just forty, Bishop of Oxford. In his first appearance in the House of Lords he at once made his mark as an orator of the first rank, and proved in addition a successful administrator of his diocese. In 1847, however, he was involved in the unhappy Hampden controversy, and for many years had to face considerable unpopularity. Bishop Wilberforce had kept clear of the Tractarian Movement; he had severely condemned W. G. Ward's *Ideal of a Christian Church*, and was ready to take any steps against *Tract No. 90*. On the other hand, he was equally opposed to the Broad Church party, of which Dr. Hampden was champion. He therefore signed the protest of the thirteen bishops against his appointment to the diocese of Hereford. Lord John Russell declined to give way. Bishop Wilberforce saw a way out of the difficulty; he hoped to draw from Dr. Hampden a declaration of orthodoxy, and accordingly authorised a prosecution against him. Finding that the prosecution was likely to have no effect, he suddenly dropped it, thereby causing bitter resentment among the High Church party, and anger at Court, where his proceedings were objected to as an attack upon the Crown's right of nomination. Bishop Wilberforce speedily resumed his authority over the High Church party; but only to find that that party had become exceedingly unpopular with the bulk of the nation. The High Church many had now to endure the storm of indignation which had been roused by the Tractarian few. The revival of the Roman Catholic ecclesiastical titles in England by the Pope in 1851, known as the "Papal aggression," kept suspicion alive, and so did the Gorham controversy on the doctrine of baptism. Further, there was the project of the revival of Convocation, which Bishop Wilberforce espoused with all his might, whereby he became further alienated from the Court, and even from his old friend Archbishop Sumner. Bishop Wilberforce had also to endure much personal unpopularity on account of the secessions to Rome of his brother-in-law, Archdeacon Manning, and of his brothers; in fact, so terrible was the latter disaster that he contemplated the resignation of his see. As it was, the various enterprises in which he was interested at this time were somewhat discredited; and his Theological College at Cuddesdon, opened in 1854, was the subject of numerous pamphlet attacks. Wilberforce nevertheless lived down opposition; some of his opponents were

disarmed by the charm of his manner, some were argued into silence, and some disappeared. His diocese, under his great powers of administration, became an organic whole instead of a collection of jarring elements, chiefly through his efforts to increase the efficiency of rural deans. As an instance of his energy it may be mentioned that in the last three years of his Oxford episcopacy he preached 226 times in the parish churches, while the numbers confirmed in his last three years were 20,028, against 14,059 in the three years ending in 1854. Cuddesdon was supplemented in 1857 by a society called the "Spiritual Help Society," for affording assistance to the more necessitous clergy in the maintenance of curates; and in 1860 a society was founded for augmenting the poorest benefices. In the House of Lords his reputation was unequalled. He spoke on secular as well as on ecclesiastical subjects, and his support of the repeal of the Corn Laws drew from the Prince Consort a letter in which that measure was characterised as lying outside the range of subjects upon which a bishop ought to speak. But he was above all things the "Bishop of Society," using his influence as a man of the world for the purpose of modifying those about him for good, and making them serve as his instruments for the furtherance of the objects which he had at heart. He was the most delightful of companions, and the wittiest talker of his time. Nevertheless, his judgments upon his distinguished contemporaries were unpleasantly severe, with the exception perhaps of Mr. Gladstone, for whom he entertained great admiration. Of his extraordinary versatility and extraordinary powers of work it is impossible to speak at length here; but both qualities are abundantly illustrated in his *Life* by Canon Ashwell. The retirement of Bishop Blomfield in 1856 left Wilberforce practically without a rival for the leadership among the English bishops; and he guided the Church during the troubled times that followed. The Evangelical party was conciliated by his opposition to the Broad Church views which were now spreading in the Establishment. In 1861 he condemned *Essays and Reviews* in a powerful contribution to the *Quarterly Review*, and throughout the Colenso dispute he maintained an attitude of the strictest orthodoxy. It was he who urged the bishops to collective action, and at the same time managed that the dispute should be conducted with urbanity. The important convocation of the Pan-Anglican Conference in 1867 was also his work, and he drew up the encyclical in which the Colenso case was reviewed at length. These controversies brought him into peculiarly intimate relations with the colonial clergy, who continually wrote to him for advice. In 1866 the Ritualistic disturbances began, and Bishop Wilberforce drew up the report of the First Ritual Commission, in which coercive mea-

sures were strongly discountenanced, although Ritualism was condemned. He acquiesced in the Disestablishment of the Irish Church, not because he thought that the change was likely to be beneficial, but because he regarded it as settled by the vote of the constituencies. In 1869 he was translated to the diocese of Winchester on the recommendation of Mr. Gladstone; and threw himself into his new work with much of the energy that he had displayed in the old. The span of activity was, however, short; for while riding with Earl Granville near Dorking he was thrown from his horse, and died almost immediately. He was buried by the side of his wife in Lavington churchyard.

Life of Samuel Wilberforce, D.D., the first volume by Canon Ashwell; vols. ii. and iii. by his son, E. G. Wilberforce. Bishop Wilberforce published, besides the works mentioned above, *The Rocky Island*, and *Other Parables* (1840); *History of the Episcopal Church in America* (1844); *Heroes of Hebrew History* (1870). His *Essays Contributed to the Quarterly Review* were collected in 1874. Several series of *Charges*, and *Sermons Preached before the University of Oxford*, have also been republished. [L. C. S.]

Wilberforce, WILLIAM (b. 1759, d. 1833), the celebrated philanthropist, was the son of Robert Wilberforce, a merchant at Hull. At the age of twelve he was subject to deep religious impressions, which returned with varying fervour at different periods of his life, and on which he subsequently wrote in a vein of Calvinistic severity. He entered at St. John's College, Cambridge, in 1776, where he was a general favourite, and he was elected M.P. for Hull in 1780 after a keen contest. He opposed the American War and Lord North's administration, but scarcely ever took any partisan side in politics. In 1787, along with Thomas Clarkson, Granville Sharp, and a few others, he formed a committee to agitate for the abolition of the slave trade. The task was a formidable one, and it was wisely determined to work for gradual abolition. In 1789 he submitted his motion in a brilliant speech, and gained the support of Pitt, Burke, and Fox. After fifteen years' continuous agitation he succeeded in carrying his Bill through the Commons. Thus inspired by partial success, he redoubled his exertions on behalf of the wretched Africans, and in 1807 it finally passed into law. He next took up and became the advocate of negro emancipation. In 1825 length of days forced him to resign the leadership of the party in Parliament to Fowell Buxton, and three days after the Bill abolishing the institution of slavery was carried, he died.

Isaac and Samuel Wilberforce, *Life of Wilberforce*; *Edinburgh Review*, vol. lxxvii., p. 142, and vol. lxxviii., p. 188.

Wilde, SIR F. [TRURO, BARON.]

Wilde, SIR WILLIAM ROBERT WILLS (b. 1796, d. 1869), a distinguished physician, was the son of a doctor of Roscommon, and was

educated at Trinity College, Dublin. He soon established a considerable practice in that city, and became of great repute as an oculist and aural surgeon. In 1864 he was knighted. Sir William Wilde was surgeon-oculist in ordinary to the Queen in Ireland, and vice-president of the Royal Irish Academy. He was the author of *Practical Observations on Aural Surgery* (1853), *Ireland Past and Present* (1864), and a *Memoir of Béranger*, completed by his wife (1880). LADY WILDE, whose maiden name was Elgee, was married to Sir William in 1851, and is well known as the authoress of several translations from the French and German, but more particularly of poems, partly written under the name of "Speranza," of which *Ugo Bassi, a Tale of the Italian Revolution*, appeared in 1857, and *Poems* in 1864. *Driftwood from Scandinavia* was published in 1884.

Wilkes, CHARLES (b. 1801, d. 1877), American sailor, was a native of New York, entered the United States navy as a midshipman in 1816, and became a lieutenant in 1826. He commanded a Government expedition sent for the exploration of the Antarctic regions, and having discovered many new islands and coasts, returned home in 1842. His *Narrative of the United States Exploring Expedition* was published in 1845. In 1861, having obtained the rank of captain six years previously, he caused great irritation between England and the Northern States of America, by seizing the Confederate commissioners, Messrs. Slidell and Mason, on board the British steam-packet *Trent*. His conduct was approved by Congress, but formal amends had to be made by President Lincoln to the British Government. Wilkes became commodore in 1862, and rear-admiral in 1866.

Wilkie, SIR DAVID (b. 1785, d. 1841), one of the most celebrated painters of the English school, was born at Cults, Fifeshire, where his father held the office of minister. His artistic talent developed itself early, and though rather against their will, his parents allowed him to follow his bent for art, and he was entered at the Trustees' Academy in Edinburgh, where, in 1804, he gained a prize for the best painting of *Diana and Callisto*. The following year he came to London, and was admitted as a student to the Royal Academy. In 1806 his *Village Politicians* attracted the attention of the public, and his rapidly acquired fame was increased by the exhibition of *The Blind Fiddler* (1806), *Rent Day* (1807), *The Cut Finger* (1809), *The Village Festival* (1811), *Blindman's Buff* (1813). In 1825 his health gave way, and foreign travel was prescribed as a remedy. He remained abroad about three years, visiting France, Germany, Italy, and Spain, a perceptible change taking place in his art during the time spent on the Continent. Hitherto he had painted with much pathos and humour homely

Scottish scenes, every detail of the surroundings being given with loving accuracy and fidelity; but now he turned to historical subjects, treated in a larger and more ambitious style, where his peculiar genius had not so much scope, and it is hardly surprising that his later pictures never gained the popularity of his earlier ones. After the death of Lawrence (1830) he was appointed painter in ordinary to the King, being made a knight in 1836. In 1840 he undertook a journey to the East with a view to studying especially the localities of the events recorded in Scripture; he was, however, taken ill on his homeward journey, and died near Gibraltar, 1841. In addition to the pictures already mentioned, we may name:—*The Pedlar* (1814); *Reading a Will* (1820); *Reading the Gazette of the Battle of Waterloo* (1822); *The Parish Beadle* (1823); *The Confessional* (1827); *The Guerilla Council of War*, and *The Guerilla's Return to his Family* (1828); *The Preaching of Knox* (1832); *Spanish Monks* (1833); *The Cottar's Saturday Night* (1837); *Mary Queen of Scots escaping from Lochleven Castle* (1837); *Sir David Baird discovering the Body of Tippoo Sahib* (1838); *Benvenuto Cellini and the Pope* (1840).

Allan Cunningham, *Life of Sir David Wilkie*.

Wilkins, WILLIAM, R.A. (b. 1778, d. 1839), architect, was a native of Norwich, and was educated at Gonville and Caius College, Cambridge, graduating as sixth wrangler in 1800. He acquired a taste for architecture while visiting the Continent on the resources of a travelling fellowship. On his return to England he was employed in designing several important additions to the university buildings (for instance, the Fitzwilliam Museum), and in 1808 erected the Nelson monument at Dublin. He was elected A.R.A. in 1825, R.A. in 1826, and professor of architecture in succession to Sir John Soane in 1837. His chief works were the University Club in Pall Mall (1826); University College, Gower Street (1828), of which, however, the wings were completed after his death; and the National Gallery, Trafalgar Square (1838). This edifice was distinctly a failure; but in justice to Wilkins it should be mentioned that he was compelled to introduce into the original plan the portico of Carlton House, and was hampered by Government in countless ways. Among his less important works were St. George's Hospital, Haileybury College, and the plans of Downing College, Cambridge. He was also a writer of repute, and published, among other works, *Atheniemia* in 1816, and *Pro-lusiones Architectonicae* in 1837.

Wilkinson, SIR JOHN GARDNER (b. Oct. 5th, 1797; d. Oct. 29th, 1875), Orientalist, was born at Hardendale, Westmoreland, and educated at Harrow, and at Exeter College, Oxford. When quite a young man he visited Egypt for the sake of his health, and remained

there for twelve years, during which time he devoted himself to the study of Egyptian antiquities. A paper of his on *A Part of the Eastern Desert of Upper Egypt* was read before the Geographical Society in 1830, and was a record of a journey of exploration made with Captain Burton. The paper had been written, however, as early as 1823. In 1827-8 Wilkinson published his *Materia Hieroglyphica*, containing the Egyptian Pantheon and the Succession of the Pharaohs; his *Extracts from the Hieroglyphical Subjects* in 1830; *Thebes and Ancient Egypt* in 1833; and *The Topography of Thebes, and General View of Egypt*, in 1835. His magnum opus, *The Manners and Customs of the Ancient Egyptians* (1837-41; 3rd ed. by Dr. Birch, 1878), is the standard authority on all matters relating to Egyptian art; and its value is enhanced by the beautiful illustrations with which it is enriched by its author. It is written to support no particular theory, but contents itself with picturesque description. It was followed by the very popular *Modern Egypt and Thebes* (1844), and a condensed edition entitled *Handbook for Travellers in Egypt* (1847). Sir Gardner Wilkinson, who had been knighted in 1839, then published a work on *Dalmatia and Montenegro* (1848); and, returning to Egyptology, *A Popular Account of the Ancient Egyptians* (1854), *Egypt in the Time of the Pharaohs* (1857), and *The Architecture of Ancient Egypt* (1860); he also wrote *On Colour and the Necessity of a General Diffusion of Taste* (1858). He also contributed some most valuable notes and illustrations to the Egyptian chapters of Professor Rawlinson's translation of *Herodotus*. Most of his Egyptian collections are in the British Museum, and Sir Gardner Wilkinson also presented Harrow School with a museum of Egyptian art.

William of Brunswick. [Brunswick.]

* **William**, 1st GERMAN EMPEROR and 7TH KING OF PRUSSIA (b. 1797), descended from the Electors of Brandenburg through Augustus William, brother of Frederic the Great, was the second son of Frederic William III. and Louisa of Mecklenburg-Strelitz, and the brother of Frederic William IV., sixth King of Prussia. He had in his early years, through the poverty of the Prussian exchequer, the advantages of a frugal bringing up. At the tender age of seven this soldier-king began his military training under a sergeant of the Guards; these exercises were soon interrupted, and from the time of Jena to the Treaty of Tilsit the Prussian Royal Family had no settled place of abode. In 1807 the young prince was made a second lieutenant, and in the following year he lost his mother, to whom, doubtless on account of the care that his delicate constitution frequently called for, he was deeply attached. He found relief

from this blow in his military studies, and an earthwork traced out by him, and erected under his supervision in 1811, still remains in the park of Babolsberg. Prussia was meanwhile preparing to break the chains that had bound her since the disastrous rout of Jena, and the first blow was struck in the summer of 1813, under the guidance of Blücher. At first Prince William was kept back from active participation in the struggle. On receiving his commission as captain, however, he joined the head-quarters of the Allies at Frankfurt-on-the-Main as aide-de-camp to his father. This was at the end of 1813. He had thus an opportunity, if he chose, of studying Napoleon's art of warfare. He conducted himself in these campaigns with bravery, receiving from the Czar Alexander the Russian "Cross of St. George," and from his father the "Iron Cross," and on the fall of Paris, in 1814, he was promoted to the rank of major for gallantry in the field. After a short stay in Paris Prince William accompanied the Czar and his father to England, where they remained for three weeks, having every honour conferred upon them. Returning home with his father, he shared in the triumphal entry into Berlin. He did not participate in the Waterloo campaign, being at the time engaged in conforming to a practice imposed upon every member of the House of Hohenzollern, viz., the drawing up, previous to confirmation, of a profession of faith. In 1817 he escorted his sister Charlotte to St. Petersburg, whither she was repairing to be married to the Grand Duke Nicholas, who subsequently succeeded Alexander on the throne. In Russia Prince William created a good impression, and on leaving, after a stay of six months, had won golden opinions. In 1818, arriving at his majority, he was made a major-general. In 1821 he visited Italy, and under the guidance of Niebuhr and Bunsen made his acquaintance with all the objects of interest in Rome. In 1819 he married the Princess Augusta of Weimar, sister of the wife of his younger brother Charles, and took up his abode in the new palace on the Linden, where he has continued to reside ever since. The next important event in William's career was his father's death in 1840, for he thereby became heir-presumptive to the throne, his elder brother having no issue. He was appointed by his brother Governor of Pomerania, and on the latter's visit to England in 1842 he acted as regent. In 1844 William, now Prince of Prussia, visited England, and in company with Bunsen studied the working of representative institutions, for at that time there was a constitutional question fronting Prussia. Prince William opposed the demands of what he called "the modern parliamentary spirit," encouraged as it was by the popular risings in France, and by the vacillation of his brother, the King; and so offensive was his opposition

to the people of Prussia, or at any rate of Berlin, that on the outbreak of the revolution of 1848 he received a twenty-four hours' notice to quit Berlin, with the further injunction to go out of the country as soon as he could. He went to England, arriving on March 27th at the Prussian Legation. He was visited by the Prince Consort, the Duke of Cambridge, the Duke of Wellington, and the ambassadors of the European Powers. Meanwhile an agitation was setting up in the Prussian provinces for the prince's recall. The inhabitants of Berlin were against this. They had, however, to give way, and on May 27th, just two months after his arrival in England, he received his recall. In the exciting events that followed his return and marked the struggle then waging between Crown and people, William stood firmly by the side of law and order, and his position is well expressed by the Prussian motto, which he quoted on the conclusion of his speech before the National Assembly made on accepting the Constitution that the King had been pleased to adopt, "With God, for King and Fatherland." After this matters became worse in Prussia, revolts against the constituted authorities were frequent, and it fell to Prince William to restore quiet. Meanwhile his brother's capacity for rule was giving way, and in 1857 William was called upon to act as regent. Thereupon he began to resuscitate the army. He had already succeeded in getting the needle-gun accepted as the weapon for the infantry; now he began to surround himself with officers of whose capacity he was assured, among these being Moltke and Roon. It was Roon who planned the system of army organisation that was adopted. That system was an extension of Scharnhorst's, improved, and adapted to Prussia's altered circumstances, and aimed at increasing the armed strength of the country, and at making that armed strength more speedily available. The leading features of this scheme have been adopted by the chief European Powers, so effective has its practical operation been proved to be. In Prussia the effect of using this plan has been that, in William's own words when he recommended its adoption in 1860, the Prussian army has become the Prussian nation in arms. On Jan. 2nd, 1861, on the death of his brother, William became King of Prussia. His chief difficulty lay in getting the army scheme accepted, and to this end he in 1862 called to his aid Otto von Bismarck (q.v.), whom he placed at the head of the ministry, with Roon as War Minister. It was now Bismarck's duty to thrust this system upon the nation in the teeth of a determined parliamentary majority. This he accomplished by over-riding the Constitution, adopting the scheme and raising the increased expenditure without the consent of the people's representatives. The Schleswig-Holstein question now came to the front, the

Duchies were occupied by Austrian and Prussian troops (1864), a quarrel arose over the spoil, and out of it grew the war of 1866 between Prussia and Austria, which vindicated the unconstitutional conduct of Bismarck and his royal master with regard to army reform. When the nation was still rejoicing over the victories of the Seven Weeks' War, Bismarck seized the moment for passing an Act of indemnity for his unconstitutional courses. The King actively participated in this war, and was ever at hand to be consulted by his generals. The battle of Sadowa he witnessed from a spot within range of the Austrian guns, and at a critical point of the engagement rallied some Prussian forces that were retreating, and sent them back to the front. To Prussia the results of this war with Austria were of great moment; it made her chief of the German States, and enlarged her dominions. King William's importance grew correspondingly. France now became jealous of Prussia's growing power, and sought to neutralise that power by the creation of a Confederacy of the South German States. The efforts of France in this direction were soon to be proved unavailing. A quarrel between these two nations almost broke out over the Duchy of Luxemburg; this, however, was settled by the Treaty of London (1867) declaring the Duchy to be a neutral State. Thereafter King William, with Bismarck, visited the Emperor Napoleon at Paris, during the summer of the Great Exhibition. The Czar was there, as well as the Crown Prince and Princess. These royal personages were brilliantly received and handsomely treated. William and Prince Bismarck had not long returned home when the event that led up to the war of 1870 happened. The Spanish throne was vacant, and there was the question of choosing a candidate. Among the suggested candidates was Prince Leopold, son of the Prince of Hohenzollern-Sigmaringen, of which house King William was the head. In 1870 Prince Leopold agreed to accept the Spanish Crown if the Cortes chose him. Thereupon the war party in France began to denounce Bismarck, in its excitement seeing nothing but some deep design on the part of this arch-schemer, and considering him as the promoter of Leopold's candidature. Military preparations immediately ensued, and notwithstanding the withdrawal of Leopold's candidature war was declared between the two countries. On July 31st William left Berlin on his way to the battle-field, and on taking up the command he made this proclamation to the army:—"All Germany with one mind stands in arms against a neighbouring State, which has surprised us by declaring war against us without any cause. It is our duty to defend our threatened Fatherland, our honour and our hearths. To-day I undertake the command of the whole army, and I advance cheerfully to a struggle which

in former times our fathers, similarly situated, fought out gloriously." An old man of seventy-three advancing "cheerfully" to such a struggle is a fit subject for admiration, especially when it is remembered that nothing of importance was done in the whole campaign without his sanction. The best judge (W. H. Russell) of William's share in the struggle thus speaks:—"So far as I can see, there never was a more real commander-in-chief than this aged king. History will no doubt do him justice. At present his glory is swallowed up or eclipsed in the fame of Moltke and Bismarck; but the King exercises the most active influence and control over the military operations, and is absolutely and entirely paramount in his administration of the army and in his direction of its *personnel*. It was he who created this vast host, and it is he who knows how to use it." It is not possible for us to describe the campaign that William now entered upon and that resulted in a series of disasters to France that could never have been anticipated. By the end of September, 1870, Paris was surrounded by the German army, and by October the King had taken up his quarters at Versailles. Meanwhile the North German Parliament was preparing an address to the King, the purport of which may be gleaned from this extract:—"The North German Parliament, in unison with the Princes of Germany, approaches with the prayer that your Majesty will deign to consecrate the work of unification by accepting the Imperial Crown of Germany." This address proposing the unification of Germany was presented to the King at Versailles on Dec. 18th; he accepted the dignity thus offered him, and on Jan. 18th, 1871, he was proclaimed the German Emperor. At last Paris—the efforts of Gambetta to save her having failed—gave way. On Feb. 26th, 1871, the preliminaries of peace were signed, and Germany recovered Alsace and Lorraine, besides receiving a large war indemnity. On March 1st the German troops entered Paris, the Emperor holding a grand review on the Longchamp race-course in the Bois-de-Boulogne, and on the 7th William left Versailles, reaching his capital a few days later. Later in the same year he met Francis Joseph at Gastein, and it is supposed sowed the seeds of the Austro-German alliance, to which the adhesion of Russia was perhaps also marked by the visit of the Emperor to St. Petersburg in 1873. In the following year he visited Victor Emmanuel at Milan. What happened at these and other imperial and royal interviews is of course purely conjectural, but it can hardly be doubted that they tended to maintain the peace of Europe, to which also the rigid neutrality of Germany during the Russo-Turkish War of 1876-7 materially contributed. At home the fabric of Teutonic unity was completed in 1873 by the inauguration of the great national monument

commemorating the victories of 1864, 1866, and 1870; and with consummate skill Prince Bismarck succeeded in moulding the German Reichstag to suit his master's will. The Emperor's chief diplomatic difficulties were with the Vatican. In 1873 he carried on a vigorous correspondence with Pius IX. as to the Imperial jurisdiction over Catholic subjects in his dominions, and diplomatic relations between the Vatican and the German Court were closed. On the accession of Pope Leo XIII., however, conciliatory advances were made. In 1881 diplomatic relations were reopened, and in 1883 concessions were made to the Ultramontane party that ended the dispute. Another feature that has marked William's reign is the rise of Socialism, which has led to the passing of rather stringent measures. In 1878 his life was attempted twice by professed adherents of that party—first, on May 11th, by a mechanic named Hödel, the second by Dr. Charles Edward Nobiling. Both these attempts failed, and though the octogenarian emperor was severely wounded by Nobiling, he soon recovered his wonted health.

Schmidt and Otto, *Kaiser Wilhelm und seine Zeit* (1878), and the authorities on Prince Bismarck. [W. B. R.]

William II. and III. of HOLLAND. [HOLLAND.]

William IV., KING OF ENGLAND (*b.* Aug. 21st, 1765; *d.* June 20th, 1837), was the third son of George III. and Queen Charlotte. After the dull and inefficient early education which he and his brothers received, he was rated as a midshipman on the *Prince George*, the flagship of Admiral Digby, in 1779. First with the Channel fleet, and afterwards off the North American coast, he saw a good deal of service during the concluding years of the American War. In 1786 he attained the rank of captain, and sailed to the American and West Indian stations, of which the latter was then commanded by his friend Nelson. Returning home without orders, he was never again actively employed at sea, though he still was regularly promoted through all the stages of rank till he became admiral of the fleet in 1801. In 1789 he was made Duke of Clarence, and received from Parliament an income of £12,000 a year. Shortly after, his connection with the famous actress, Mrs. Jordan, began. He lived with her till 1811, and had by her a family of ten children, the eldest survivor of whom, George Fitzclarence, he made Earl of Munster after his accession. A Whig like his elder brother, Clarence adhered to Pitt when the French Revolution broke the Whig connection into two parties; though he afterwards supported Fox in 1806, and showed in later times more sympathies with his old friends than the Prince of Wales. He voted and spoke, however, against the abolition of

the slave trade. From 1811 onwards he several times contemplated marriage, and the death of Princess Charlotte at last drove him and his unmarried brothers to seek wives in great haste. On July 11th, 1818, he married the Princess Adelaide of Meiningen, by whom he had two daughters, both of whom died within a few hours of their birth. His income was now raised by £6,000 a year, an augmentation so much smaller than he desired that he contemptuously rejected it; but finding he could get no more he accepted the advance with arrears. In 1820 his support to his brother in the latter's attempt to obtain a divorce drew upon him a scathing attack from Denman, which with characteristic good nature he afterwards forgave. During George IV.'s reign he proved himself the fast friend of Canning. On the Duke of York's death, in 1827, he became heir-presumptive to the Crown, and the ministry, though not without strong opposition, succeeded in raising his income to £38,500 a year. Soon after, when Canning became Prime Minister, Clarence was appointed Lord High Admiral, but without a seat in the Cabinet, and controlled by a council corresponding to the junior commissioners of the Admiralty. The appointment, continued after Canning's death by Goderich, and afterwards by Wellington, proved a great failure. His fussiness, want of tact, and extravagance, made his continuance in the post impossible. In 1829 he grossly insulted Lord Cockburn, one of his council, and as Wellington supported Cockburn, Clarence had no alternative but resignation. He voted for Catholic Emancipation, and soon after becoming king, on June 26th, 1830, called the Whigs into office, an act which ensured for him great popularity, and the reputation of a reforming monarch. During the next two years William IV. exercised a most important influence on politics, and loyally, though cautiously, supported Lord Grey. In 1831 he overcame his scruples to a dissolution. In 1832 he was ultimately persuaded to give his formal consent to creating enough peers to carry the Reform Bill through the House of Lords. But the timely surrender of the peers saved William from this extreme measure. He soon, however, became tired of the Whigs. He was suspicious of their constant proposals for change. He disliked the abolition of slavery; openly declared his hostility to their Irish Church policy, and particularly to the "appropriation clause," and distrusted Palmerston's foreign policy, and especially his alliance with France to secure the independence of Belgium. In November, 1834, he ventured upon the most daring exercise of prerogative during the whole of his reign. He dismissed Melbourne, and commissioned Wellington and Peel to form a Tory ministry. But the general election proved that the authors of the Reform Bill had not yet lost all their popularity with the

new constituencies. Probably William's rash act had helped them considerably. The Tories came back to Parliament with a large increase of their numbers, but were still in a minority. In April, 1835, William had the mortification of being compelled to ask Melbourne to form another ministry. The Whigs remained in power for the rest of his reign. William died at Windsor, after a short illness, in 1837. He was succeeded by his niece, Queen Victoria. William IV. was not distinguished by the possession of either intellectual or moral qualities of a very high order. Yet he was one of the least unpopular of George III.'s sons. He was very good-natured and kind-hearted in his way; careless of ceremony and etiquette, and with the virtues and vices of a commonplace sailor. His eccentricity was so extreme that many anticipated for him the fate of his father. But the extraordinary freaks which made it impossible for him to be continued in active service, or at the Admiralty, did not further develop as he grew older. Despite the narrowness of his intellect, he had some of the firmness and resolution of George III., qualities which were of material service to the country when placed at the disposal of Grey during the Reform Bill crisis, and which led him, in 1834, to emulate his father's action in 1783 and 1808. But he understood, as his correspondence with Lord Grey shows, the rôle of a constitutional king much better than George III. or George IV. His moderation and occasional Liberal sympathies were of great value in bridging over the gulf between the personal rule of his father and the more tempered exercise of the royal prerogative that had now become necessary.

Pauli, *Geschichte Englands seit den Friedensschlüssen von 1814 und 1815*; Duke of Buckingham, *Courts and Cabinets of William IV. and Victoria*; *Correspondence of Earl Grey with William IV. and Sir Herbert Taylor, 1830-3*; Greville *Memoirs*; Croker *Papers*; *Memoirs of Sir Robert Peel*; Torrens, *Memoirs of Lord Melbourne*; Doran, *Memoir of Queen Adelaide*.

[T. F. T.]

Williams, JOHN (b. 1796, d. 1839), missionary, was a native of Tottenham High Cross, near London, and began life as an apprentice to an ironmonger. In 1816, having been ordained, he repaired to the South Sea Islands, and toiled there until 1834, sowing the seeds of the Gospel and civilisation among the natives. His success as an evangelist was altogether extraordinary, and the record of his labours, *A Narrative of Missionary Enterprises in the South Sea Islands*, was received with great enthusiasm on its appearance in 1837. In the following year he returned to Polynesia, and was murdered on Nov. 20th, 1839, by the natives of the still heathen island of Erromanga.

E. Prout, *Memoirs of the Rev. John Williams*.

* **Williams, Sir Monier, C.I.E., D.C.L., LL.D.** (b. 1819), Sanskrit scholar, the son of the late Colonel Monier Williams, was educated at King's College, London, Balliol College, and University College, Oxford (Boden Sanskrit scholar 1843, and B.A. 1844). He was professor of Sanskrit at Haileybury from 1844-58, a master at Cheltenham College from 1858-60, when he was elected Boden Sanskrit professor at Oxford. His great work at Oxford has been the formation of an Indian Institute, and for the promotion of his object he traversed India on three several occasions. He received the honour of knighthood in 1886, when the institute was opened by the Prince of Wales. The following are among the works of Sir Monier Williams:—*A Sanskrit Grammar* (1846), *An English-Sanskrit Dictionary* (1851), *Rudiments of Hindustani* (1858), *Indian Epic Poetry* (1863), *Indian Wisdom* (1875), *Hinduism* (1877), *Modern India and the Indians* (1878), *Religious Thought and Life in India* (1883).

Williams, Rowland, D.D. (b. 1817, d. 1870), divine, was a native of Halkyn, Flintshire, and was educated at Eton, and at King's College, Cambridge, where he became fellow and tutor. After taking orders he became chaplain to the Bishop of Llandaff, and in 1850 vice-principal, and professor of Hebrew at Lampeter College. Dr. Rowland Williams was select preacher to Cambridge University in 1854, and in 1859 was appointed to the vicarage of Broadchalk, Wilts. He felt it necessary to resign his professorship at Lampeter in consequence of a paper on Bunsen's Biblical Researches, which he contributed to the *Essays and Reviews*, although the condemnatory sentence of the Court of Arches was reversed by the Privy Council. He also wrote *Christianity and Hinduism* (1856), and *The Hebrew Prophets, a New Translation* (1868-71).

Life and Letters, and Stray Thoughts from the Note-books of Rowland Williams, by his widow.

Williams, General Sir William Fenwick, G.C.B. (b. 1800, d. 1883), the hero of Kara, was born at Annapolis, Nova Scotia, where his father, Thomas Williams, was Commissary-General and barrack-master. After a preparatory training at Woolwich, young Williams entered the Royal Artillery in 1825, and became a lieutenant two years later. He was promoted to the rank of captain in 1840, from which year till 1843 he was employed in Turkey as British Commissioner at the conferences preceding the treaty signed at Erzeroum in 1847. In 1848 he was appointed British Commissioner for the settlement of the Turco-Persian boundary, and received the brevet rank of colonel in that year for his military and diplomatic services. In 1854, while the British army was at Varna, he was appointed British Commissioner with the Turkish forces, and in 1855 he received

the local rank of brigadier-general. By his gallant defence of Kara, an episode in the Crimean War, General Williams won a permanent name. In September, 1855, the Turks had repulsed Mouravieff's army, and driven it from the field. Reinforcements for Williams, however, failed to arrive, and after suffering the direst privations he was compelled to capitulate on terms which reflected credit on the magnanimity of the Russian general. The siege lasted from June 16th to Nov. 30th. Williams was at once granted a pension of £1,000 a year for life, with a baronetcy, and many other honours. He entered Parliament as a Liberal, for Calne, in 1856, and retired in 1859 to assume the command of the British forces in Canada. From 1870 to 1875 he was Governor of Gibraltar, and in 1881 he was appointed Constable of the Tower of London, but resigned shortly after.

Times, July 28th, 1883.

* **Williamson, Alexander William, Ph.D., F.R.S., LL.D.** (b. 1824), man of science, studied at the Universities of Heidelberg and Giessen, where he was a pupil of Liebig, and subsequently at Paris. In 1849 he was appointed professor of practical chemistry in University College, London, and in 1855 became, in addition, professor of chemistry. He examined in chemistry for some years for the University of London, and was appointed member of the senate in 1876. In 1876 he was appointed chief gas examiner to the City of London. Professor Williamson has been president of the Chemical Society, and of the British Association (1873); he was elected foreign secretary of the Royal Society in the same year, and treasurer of the British Association in 1874. He is corresponding member of the French Academy, and of the Academy of Science at Berlin, and a fellow of the Berlin Chemical Society. His name is celebrated chiefly in connection with his discoveries concerning etherification and the constitution of salts. These discoveries were published in 1849, and in 1862 he was presented with the royal medal of the Royal Society. Professor Williamson's *Chemistry for Students* is a well-known text-book, and he has published many of his lectures and addresses.

Willis, Nathaniel Parker (b. 1807, d. 1867), American miscellaneous writer, was a native of Portland, Maine, and was educated at Yale College (B.A. 1827). He embraced a literary career, and became editor of *The Legendary and The Token* for S. C. Goodrich ("Peter Parley"). In 1828 he founded the *American Monthly Magazine*, subsequently merged in the *New York Mirror*. In 1831 he visited Europe, was for a while *attaché* to the American embassy at Paris, and settled for some time in England, where he married. There he published *Pencilings by the Way* (1835) and

Inklings of Adventure (1836). In the following year he returned to America, and once more became a power in literature as editor of the *New York Mirror* and *Home Journal* (1846). His writings were of an ephemeral nature, as *Hurrygraphs*, the title of one of them, implies. His sister, SARAH PAYSON WILLIS (b. 1811, d. 1872), was well known as a writer for children under the nom de plume of "Fanny Fern," and married Mr. James Parton, the journalist and *littérateur*.

Willis, THE REV. ROBERT, F.R.S. (b. 1800, d. 1875), scientific and architectural authority, was educated at Caius College, Cambridge, of which foundation, having graduated with honours in 1826, he was elected a fellow. In 1830 he became F.R.S., and in 1837 was appointed Jacksonian professor of natural and experimental philosophy in the University of Cambridge, and subsequently lecturer on applied mechanics at the Royal School of Mines. He was a mechanician of great skill, and invented an acoustic instrument called the lyphone. Mr. Willis is, however, chiefly remembered as a writer on architecture, and among his numerous works may be mentioned:—*Remarks on the Architecture of the Middle Ages* and of *Italy* (1835), *Architectural History of Canterbury Cathedral* and of *Winchester Cathedral*, both written in 1845.

* **Wills**, WILLIAM GORMAN (b. 1828), dramatist, novelist, and artist, was born in Kilkenny, Ireland, and educated at Trinity College, Dublin. He then practised as an artist, and was very successful as a portrait-painter. He next published several successful novels, among which may be mentioned:—*Old Times* (1857); *Life's Foreshadowings* (1859); *Notice to Quit* (1861); *The Wife's Evidence* (1864); *The Three Watches* (1865); and *The Love that Kills* (1867). His *Life of David Chantrey* was published in 1865. Mr. Wills's first play was written in conjunction with Dr. Westland Marston, and was followed by the pathetic *Man o' Airlie*, put on at the Princess's theatre in 1866, with Mr. Hermann Vezin in the title rôle. *Charles the First* was produced at the Lyceum by Mr. Irving in 1872, and still holds the stage; *Eugene Aram* was brought out with great success at the same theatre in the following year. *Marie Stuart* was played at the Princess's, with Mrs. Rousby in the principal part (1874), and *Buckingham* at the Olympic, with Mr. Neville in the chief character. In 1876 *Jane Shore* was brought out at the Princess's, and this fine play received a good rendering, Miss Heath being admirable in the title rôle. *Olivia*, at the Court theatre (1878), was finely acted by a company which included Miss Ellen Terry and Mr. Hermann Vezin; on its revival at the Lyceum Mr. Irving took Mr. Vezin's part of Dr. Primrose (1885). It is founded on an incident in the *Vicar of Wakefield*; and

the materials are handled with great dramatic skill. In 1878 *Vanderdecken*, written in conjunction with Mr. Percy Fitzgerald, was brought out at the Lyceum; and *William and Susan*, founded on Douglas Jerrold's play, *Black-Eyed Susan*, at the St. James's in 1880. *Sedgemoor*, by Mr. W. G. Wills and his brother, Mr. Freeman Wills, was produced at Sadler's Wells in 1881. In 1883 Mr. Wills wrote, in conjunction with Mr. Henry Hermann, the highly successful play *Claudian*, which was produced at the Princess's, with Mr. Wilson Barrett in the principal part. It was a fine play, and had, as it deserved, an enormous run. In 1885 Mr. Wills scored another success by his adaptation of Goethe's *Faust*, which was brought out at the Lyceum with Miss Ellen Terry as Marguerite, Mrs. Stirling as the Nurse, and Mr. Irving as Mephistopheles. Mr. Wills's poem *Melchior* was published in 1886.

Wilson, ALEXANDER (b. 1766, d. 1813), ornithologist, was a native of Paisley, and spent his youth as a weaver and poet. In 1793 he was imprisoned for some satirical verses on a Paisley magistrate, and resolved to emigrate to America. There he became a teacher, and spent his leisure hours in studying ornithology. The first seven volumes of his monumental *American Ornithology* appeared between 1808 and 1813; vols. viii. and ix. were edited by George Ord in 1814, and between 1825 and 1833 Prince Lucien Bonaparte (q.v.) published a continuation. He also wrote *The Foresters*, an account in verse of a visit to the Niagara Falls.

Sir R. Jardine's biographical preface to the *Ornithology*; A. P. Paton, *Wilson the Ornithologist*.

Wilson, SIR ARCHDALE, BART., G.C.B. (b. 1803, d. 1873), British soldier, entered the Bengal Artillery in 1819, and served at the siege of Bhurtpore from 1825-6. From 1848-9 he commanded the artillery with Wheeler's force in the Jullundar Doab, and in 1857 became brigadier-general and commander of the artillery at Meerut. On July 17th, 1857, by the successive deaths of General Anson and General Barnard, and the ill-health of General Reed, Wilson became commander of the small force of 7,000 men which was engaged in the apparently hopeless task of besieging Delhi, being in fact barely able to hold its own ground. General Wilson, however, clung tenaciously to his position on the ridge until the siege train arrived from the Punjab on Sept. 4th, and then proceeding to work with vigour took the town by assault on Sept. 20th. In 1868 he commanded the artillery at the siege of Lucknow. He was rewarded by a baronetcy.

* **Wilson**, SIR CHARLES RIVERS, K.C.M.G., C.B. (b. 1831), was educated at Eton and Balliol College, Oxford (B.A. 1853). He became a clerk in the Treasury in 1856, and

was Private Secretary to the Chancellors of the Exchequer, Mr. Disraeli (1867-8) and Mr. Lowe (1868-73). He acted as Secretary to the Royal Commission on International Coinage of 1868. In 1874 he was appointed Comptroller-General of the National Debt Office, an appointment which he still holds. In 1876 he was sent on a financial mission to Egypt, but speedily returned, owing to a dispute with the Khedive; and was appointed an Administrator of the Suez Canal Company. In 1878 he was a Royal Commissioner for the Paris Exhibition, and in the same year was acting President of the International Commission of Inquiry into the Resources of Egypt. In consequence of its report, a new Egyptian Cabinet was formed in 1878, in which Mr. Wilson was Minister of Finance; but the plan proved unworkable, and the Ministry was dismissed in 1879. Mr. Wilson was created a K.C.M.G. in 1880; and in the same year was appointed president of the International Commission for the Liquidation of the Egyptian Debt.

* **Wilson, Colonel Sir Charles William**, K.C.B., K.C.M.G., F.R.S., D.C.L. (b. 1836), the son of Edward Wilson, Esq., was educated at Woolwich, and entered the Royal Engineers in 1855; in 1864 he became captain, major in 1873, lieutenant-colonel in 1879, and colonel in 1883. From 1858-62 he was secretary to the commissioner employed for marking out the boundary between Canada and the United States, and from 1864-6 was engaged in excavations in Palestine, for the Palestine Exploration Fund. He was a fellow-contributor with Sir Charles Warren to *The Recovery of Jerusalem* (1871), a work to which Dean Stanley contributed a preface; and subsequently edited *Picturesque Palestine, Sinai, Egypt* (1880), with the assistance of the most eminent Palestine explorers, as well as the German translation by Ebers and Guthe (1883). He also translated Baron Kuhn's *Strategical Importance of the Euphrates Valley Railway* (1873). After serving on the ordinance surveys of Scotland and Ireland, Colonel Wilson acted for a time as director of the topographical department of the War Office, and in 1878 acted as a commissioner to mark out the boundaries of Servia. He was consul-general in Anatolia from 1879-82, served in the Egyptian campaign of 1882-3, and as chief director of the survey in Ireland in 1883-4. Colonel Wilson acted as head of the Intelligence Department during the Sudan campaign of 1884-5, and when Colonel Stewart (q.v.) was wounded, he took command of the desert column, which was pressing on to the relief of General Gordon at Khartoum. On Jan. 21st he made a reconnaissance upon Metammeh, but finding the place too strong for attack he embarked with three officers and twenty men on Jan. 24th in two of Gordon's steamers, which had come

down the Nile, and made a desperate effort to reach Khartoum. On Jan. 28th they drew near the city, but were received by a tremendous fire, and the Mahdi's flag on the citadel showed that the place had fallen. There was nothing for it but to return. On the voyage down stream Sir C. Wilson's steamer ran on a rock, and he was rescued from a most dangerous position by Lord Charles Beresford. His account of these thrilling events, *From Korti to Khartoum* (1885), is a brilliant piece of military writing, and does away entirely with the charges of unreasonable delay that were brought against Sir Charles Wilson under the first stress of disappointment. Sir Charles Wilson became D.C.L., Oxford, in 1883.

* **Wilson, Daniel**, LL.D. (b. 1816), archaeologist, was born at Edinburgh, and educated at the University. For some years he was secretary to the Royal Society of Antiquaries in Scotland, but in 1853 went to Canada as professor of history and English literature in the University of Toronto. Dr. Wilson was president of the Canadian Institute in 1859-60, and in 1881 became president of the Toronto University. His chief works are:—*Memorials of Edinburgh in the Olden Time* (1846-8, new ed. 1875); *Oliver Cromwell and the Protectorate* (1843); *The Archaeology and Prehistoric Annals of Scotland* (1851, new ed. 1863); *Prehistoric Man* (1862, revised 1876); *Chatterton, a Biographical Study* (1869); *Caliban, the Missing Link* (1873); and a volume of poems, *Spring Wild Flowers* (1875).

Wilson, The Right Hon. James (b. 1805, d. 1860), financial authority, was a native of Hawick, where his father was a woollen manufacturer. He was educated for the profession of teaching, but adopted the trade of a hatter, and in 1824 set up a business in London. He lost the greater part of his capital in 1836 in speculations in indigo; but the business was re-established, and Wilson retired in 1844. Meanwhile he had become conspicuous as a writer on finance, through his pamphlets, *The Influences of the Corn Laws* (1839), *The Fluctuation of the Currency* (1840), *The Budget* (1843). On the refusal of the editor of the *Examiner* to accept his articles, he founded and edited the *Economist*, which became a powerful advocate of the cause of the repeal of the Corn Laws. In 1847 Mr. Wilson was returned to the House of Commons in the Liberal interest, and became in 1848-52 Secretary to the Board of Control. In Lord Aberdeen's ministry he was Financial Secretary to the Treasury, and held that post until 1858. In the same year he was appointed Vice-President of the Board of Trade, and in the year before his death the first financial member of the Council of India. He died at Calcutta shortly after he had commenced his new work with high hopes and resolutions.

Wilson, Sir James Erasmus, LL.D., F.R.S. (b. 1809, d. 1884), a celebrated surgeon, studied medicine at St. Bartholomew's Hospital, London, and at Aberdeen, and became a member of the College of Surgeons in 1831. He was a very celebrated operator, but is chiefly remembered on account of his highly successful treatment of skin-diseases and blood-poisoning, a study that he took up in the first instance to alleviate the sufferings of the London poor. He was elected F.R.C.S. in 1843, a member of the council in 1870, and its president in 1881, when he was knighted. Sir Erasmus Wilson's gifts to medical institutions were munificent; he founded the Chair of dermatology in the College of Surgeons in 1869, and the Chair of pathology at Aberdeen University in 1881, and erected a new wing to Margate Infirmary (1881), and the master's house at the Epsom Medical College (1872). He also paid for the transport of Cleopatra's Needle from Alexandria to London.

Wilson, John, D.D. (b. 1804, d. 1875), missionary and Orientalist, a native of Berwickshire, was educated at Edinburgh University. In 1828 he was despatched to Bombay by the Scottish Missionary Society, and became a member of the Free Church of Scotland in 1843. During the whole of his life he laboured incessantly in the cause of the Gospel, travelling over the length and breadth of India, founding schools and missions, writing against the slave-trade and the practice of suttee. In 1870 he paid a visit to his native land, having been elected moderator of the Free Church Assembly, but returned to India, and died at Bombay. Dr. Wilson was a linguist of extraordinary powers, and his works on India are full of valuable knowledge of every kind. Among them were: *The Parsi Religion* (1842), *India Three Thousand Years Ago* (1857), *Memoirs in the Caves-Temples of India* (1859), *The Lands of the Bible* (1867), and *Indian Caste* (1877). His son, **Andrew Wilson** (b. 1830, d. 1881), was editor of the *China Mail* for several years, and the author of the popular books, *With the Ever-Victorious Army*, an account of General Gordon's Chinese campaign; and *The Abode of Snow*.

George Smith, *Life of John Wilson, D.D.*

Wilson, John ("Christopher North") (b. 1785, d. 1854), essayist, novelist, and poet, was a native of Paisley. He was educated, first at the University of Glasgow, and subsequently at Magdalen College, Oxford, where he graduated B.A. in 1807, and took his M.A. in 1810. He gained the Newdigate prize for poetry, and left the university with "the reputation of being the best boxer, the highest leaper, the most ardent cocker, and the fastest runner among his fellow-students." In these early days also he was known as a Radical and Democrat of the most advanced type. Wilson was lineally de-

scended on the female side from the great Marquis of Montrose. He inherited from his father, a wealthy manufacturer, a fortune of £40,000, but a great part of it was lost by the failure of a mercantile concern in which it had been embarked, and he was obliged to sell his estate of Ellersay, on Lake Windermere, where he had become intimate with Wordsworth, Southey, Coleridge, and De Quincey. After some letters contributed to Coleridge's *Friend*, he published in 1812 his first work, *The Isle of Palms*, a poem of four cantos in irregular verse. In 1816 appeared *The City of the Plague*. These poems revealed much tenderness and pathos, a lively fancy, and a reverent appreciation of nature. Wilson, who was now resident in Edinburgh, issued, in 1822, his *Lights and Shadows of Scottish Life*, sketches whose scope and purpose are indicated by their title. This work was followed, in 1823, by his exquisite story entitled, *The Trials of Margaret Lyndsay*. At this time Wilson was one of the principal writers in *Blackwood's Magazine*, a periodical with which he was still more closely identified after the removal of Lockhart and Maginn to London. His criticisms in *Blackwood* became as famous for their destructiveness as for their literary style. Wilson was placed in receipt of a fixed income by being elected to the Chair of moral philosophy in the University of Edinburgh, when he had for his opponent Sir William Hamilton, the distinguished logician. The new professor was now as ardent a Conservative in politics as he had formerly been a Radical. In 1825 Wilson wrote his tale of *The Foresters*, and the same year a collective edition of his *Poems and Dramatic Works* appeared. Wilson sustained a severe blow in 1837 by the death of his wife (*née* Miss Jane Penny), to whom he was most devotedly attached, and he never entirely recovered from the shock. It has been pointed out that his writings, subsequent to this bereavement, betrayed more of effort with less of power than his earlier productions. An *Essay on the Life and Genius of Robert Burns* appeared in 1841, and in the following year his *Recreations of Christopher North* were published. The contributions to literature by which Wilson will be best remembered are the papers he contributed to the *Noctes Ambrosianae*, a series of seventy-one imaginary conversations, which appeared in *Blackwood* between the years 1822 and 1835. Wilson's share consisted of thirty-nine of these contributions, which were republished with notes in the edition of Wilson's works issued by Professor Ferrier in 1855-8. The conversations were supposed to take place between Christopher North (Wilson), Tickler (Sym), the Ettrick Shepherd (Hogg), and others, in the blue parlour of a tavern kept by one Ambrose, and situated at the back of Princes Street, close to the Register Office, Edinburgh. But although Ambrose's hotel

had "a local habitation and a name," the true Ambrose's only existed in the prolific brain of Professor Wilson. Though the *Noctes* dealt chiefly with contemporary persons and current topics, many of the conversations deserve to take rank as English classics. Dr. J. Hill Burton edited a selection from the *Noctes*, which appeared in 1876 with an introduction; Wilson sometimes used as a pseudonym in his writings the name of "Mordecai Mullion," which was intended as a personification of the people of Glasgow. An attack of paralysis obliged Wilson to abandon his professorship in 1853, when a pension of £200 per annum was conferred upon him by Lord John Russell. He only enjoyed it for a few months, however, as he died at Edinburgh, April 3rd, 1854. One of Wilson's daughters was married to Professor Ferrier, and another to Professor W. Edmonstone Aytoun, who succeeded Wilson in the editorship of *Blackwood's Magazine*. A third daughter—the wife of Mr. Thomson Gordon, some-time sheriff of Midlothian—published a *Memoir* of her father in 1862. Speaking of "Christopher North's" contributions to *Blackwood*, Sir Archibald Alison has observed that "the whole literature of England does not contain a more brilliant series of articles:" and they likewise drew enthusiastic praise from the judicial Hallam. Other critics, while doing justice to Wilson's splendid and extraordinary powers, which should have made him the very first literary man of his generation, have regretted that much of his prowess went to waste for want of stringent self-regulation.

Christopher North, a memoir of John Wilson, by his daughter, Mrs. Gordon (1862); *The Recollections of Christopher North* (1869). [G. B. S.]

Windham, THE RIGHT HON. WILLIAM (b. 1750, d. 1810), statesman, was born at Felbrigg Hall, in the county of Norfolk, March, 1750, and at twelve years old was sent to Eton, where he remained till he was sixteen. He then passed a year at the University of Glasgow; and in 1767 entered as a gentleman commoner at University College, Oxford. At Oxford he seems to have divided his time pretty equally between literature and those athletic sports in which he was always a proficient, and was already recognised as one of the finest gentlemen of the time. In 1778 he was elected a member of the Literary Club, where he made the acquaintance of Burke, Johnson (to whom he had been introduced the year before), and the whole of that brilliant circle of which they were the chief ornaments. With Johnson and Burke he contracted the warmest friendship, and Johnson, only three months before his death, while he was trying to recruit his strength in a remote part of Derbyshire, relates how Windham came forty miles out of his way to pay him a visit, and to cheer him with literary talk. He was one

of the friends who watched the sage's last moments. He entered Parliament in 1782 for the borough of Norwich, and attaching himself to the Whig party was appointed Secretary to Lord Northampton, the new Lord Lieutenant of Ireland, in April, 1783. It was on this occasion, when Windham expressed doubts of his due fitness for the post, that Johnson told him not to be afraid, he would soon make "a very pretty rascal." He only held his first appointment for six months, being compelled to relinquish it by the state of his health in October, 1783, and two months afterwards followed his friends to the Opposition Benches. During the next ten years there is not much of public interest to be recorded of him. But when the rupture of the Whig party took place in 1794, Windham was one of those who, with the Duke of Portland, Lord Fitzwilliam, and Lord Spencer, joined Mr. Pitt's Government, he himself being appointed Secretary at War, with a seat in the Cabinet (July 11th, 1794). He occupied this position till the year 1801, when he retired with Mr. Pitt; and so zealous was he in the discharge of his duties that in the autumn of 1794 he visited the English headquarters to judge for himself of the wants of the army and the prospects of the war. He himself belonged to the extreme war party, of which Burke was the head, and never thought that enough was done by any of the ministries. Consequently, when the Peace of Amiens (March 27th, 1802) was concluded by Mr. Addington, Windham was one of its fiercest assailants, and a speech which he delivered in the month of April, containing a character of the first Napoleon, is still among our finest specimens of Parliamentary eloquence. Pitt himself admired it very greatly. But the Peace was so universally popular in the country that at the general election in June Windham lost his seat for Norwich. He had already, that is, in July, 1800, made the acquaintance of Cobbett, who had just returned from America, and regarded him with great admiration as a forcible and fearless writer. For some years they continued to be close allies. Windham helped him to start the *Political Register*, the first number of which appeared in January, 1802, and which it cannot be doubted contributed powerfully to the overthrow of the minister whom Windham hated. His zeal, however, occasionally outran his discretion, and we cannot forgive his opposition to the Volunteer movement of 1803, on which he lavished all his powers of sarcasm. But when the object was gained, and Pitt returned to power in May, 1804, Windham remained in opposition with the Grenvilles, rather than consent to the exclusion of Mr. Fox, and was only in office again for a short time under Lord Grenville, when he resumed his position at the War Office, but quarrelled with his old friend Cobbett, whom he had refused to assist in ferreting out some official

scandal. While in office, however, he carried through Parliament some important military reforms, among others a measure for limited terms of service, renewable at the end of seven, fourteen, and twenty-one years. But he went out of office with Lord Grenville in the spring of 1807, and remained in opposition till his death, lamenting to the last the inadequate war policy of the Government, of which he did not live to see the triumphant sequel. It was in the month of July, 1809, that Mr. Windham, walking home to Pall Mall about midnight, observed a house on fire in Conduit Street, in immediate proximity of the house of Mr. Frederick North, his great friend. In helping to save Mr. North's library he fell and bruised his hip. The result in the end was that he was obliged to undergo an operation, from the effects of which he sank, and expired on June 4th, 1810, in the sixty-first year of his age. He is remembered not only as a statesman and an orator, if not in the very first rank, among the very first of the second rank, but as a gentleman, a scholar, and a sportsman, who could have vied with Chesterfield or Bolingbroke in all the graces of demeanour, who could talk on equal terms with Johnson, and who would have held his own in the field or in the ring with Assheton Smith or Osbaldeston. He was equally an enemy to either a foul blow or a false quantity; and represented, in fact, a combination of qualities which has now almost passed away from among us, but which eminently entitle him to the rank of a representative man. [T. E. K.]

* **Windhorst**, **LUDWIG** (b. 1812), German politician, was born at Osnabrück, and having studied law at Göttingen and Heidelberg, began to practise at Osnabrück. In 1849 he entered the Second Hanoverian Chamber, and as chief of the Ministerialists was made President of the Chamber (1851) and Minister of Justice (1851-3). In 1862 he became a member of the reactionary Prussian Cabinet, and pushed on the alliance with Austria which resulted in the annexation of Hanover to Prussia. He then organised the Hanoverian opposition, and was returned to the Prussian Chamber. He was a member of the Catholic Congress of Berlin, which memorialised against the dogma of the infallibility of the Pope's utterances *ex cathedra*; nevertheless, after the creation of the German Reichstag, he became leader of the Ultramontane party, and Prince Bismarck's most able opponent. He addressed himself particularly against the system of repression established in Alsace-Lorraine, and in the Prussian Landtag against the Falk Laws. In 1879, however, when Falk was dismissed, and Prince Bismarck seemed disposed to rest upon Conservative support, Herr Windhorst adopted a more conciliatory attitude. He was thus able to gain important

concessions for the Roman Catholics in 1882 and 1883.

Winslow, **FORBES BENIGNUS**, M.D., F.R.C.P., D.C.L. (b. 1810, d. 1874), physician, was educated in Scotland and at Manchester. He began the study of medicine in New York, and continued it in London. He was for some time a parliamentary reporter to the *Times*, and in 1831 published an essay entitled *Application of the Principles of Phrenology to the Elucidation and Cure of Insanity*. Insanity was his constant theme, and he was often called as a witness in criminal cases where insanity was set up as a plea. He delivered the Lettoman lectures on insanity in 1837, and established two private asylums. In 1835 he passed the College of Surgeons in London; in 1849 graduated M.D. at Aberdeen, and was appointed F.R.C.P. of Edinburgh; in 1859 he became F.R.C.P. of London, and had conferred on him the degree of D.C.L. by Oxford. He published many works, among them:—*Physic and Physicians* (1837); *Anatomy of Suicide* (1840); *Plea of Insanity in Criminal Cases* (1843); *Obscure Diseases of the Brain, and Disorders of the Mind* (1850); *Light, its Influence on Life and Health* (1867); and *Uncontrollable Drunkenness Considered as a Form of Mental Disorder* (1866). He was the founder, and for seventeen years editor, of the *Journal of Psychological Medicine*.

* **Winslow**, **JOHN A.** (b. 1811), American sailor, was born at Wilmington, North Carolina, entered the United States navy in 1827, was made lieutenant in 1839, and commander in 1855. In 1863 he was placed in command of the *Kearsage*, and ordered to the coast of Europe to watch for rebel cruisers. On June 19th, 1864, he met the *Alabama*, under Captain Semmes, off Cherbourg, and sank her after a vigorous engagement. Winslow was promoted to the rank of commodore in 1866, and of rear-admiral in 1870.

Wint, **PETER DE** (b. 1784, d. 1849), artist, was a native of Stone, in Staffordshire, where his father practised as a doctor, and was a pupil of J. R. Smith, the engraver. He also studied at the Royal Academy, where he formed a lifelong friendship with Hilton the painter, whose sister he married in 1810. De Wint first exhibited at the Royal Academy in the same year, also at the Water-Colour Society. Eventually he confined himself to water-colour, and became known as one of the chief exponents of the old and simple style of painting. His scenes were generally taken from the neighbourhood of Lincoln.

Wiseman, **NICOLAS PATRICK** (b. 1802, d. 1865), cardinal-priest and Roman Catholic Archbishop of Westminster, was, according to the German translator of his *Hors Syrie* (1828), "descended from an Irish family, born in Spain, educated in England, consecrated in Italy, Syrian scholar." He entered

the Catholic College at Ushaw, near Durham, in 1810, and was removed to the English College at Rome in 1818. He was made D.D. in 1824, he was promoted to the priesthood in 1825, and became, in 1827, professor of Oriental literature, and afterwards, in 1828, rector of the English College. In 1835 he lectured in the Catholic Chapel at Lincoln's Inn Fields on *The Principal Doctrines and Practices of the Catholic Church*. In 1840 he was chosen bishop-coadjutor to Dr. Walsh, the Vicar Apostolic of the Central District in England, and was consecrated Bishop of Malipotamus in *partibus* at Rome by Cardinal Frenzoni. He soon arrived at Oscott, and presided over St. Mary's College till 1847, when he was removed to the London district. In 1850, on the establishment of the hierarchy, he was nominated Archbishop of Westminster, and was made cardinal-priest of the title of St. Pudenziana. His conciliatory attitude during the storm that followed was highly commended by several of the leaders of the Whig party, and throughout his life he was the object of the deep veneration of all Roman Catholics. Cardinal Wiseman has been characterised as a great Biblical scholar, a profound divine, a judicious critic, an able linguist, and a scientist of note. *The Gentleman's Magazine* for May, 1865, gives a complete list of his works, in which appear:—*The Connection between Science and Revealed Religion* (1836); *Real Presence* (1836); *Lives of Five Saints Newly Canonised* (1839); *Prayers for the Conversion of England* (1840); *Papal and Royal Supremacy Contrasted* (1850); *The Hierarchy* (1850); and *Fabiola* (1854).

G. White, *Life of Cardinal Wiseman*; *Cornhill Magazine*, May, 1865.

* **Witt, HENRIETTE GUIZOT DE** (b. 1829), authoress and translator, the eldest daughter of M. Guizot, became the wife of M. Conrad de Witt in 1850. She has published a number of stories, children's books, and translations, amongst which may be mentioned:—*Contes d'une Mère à ses Petits Enfants* (1861); *Une Famille à la Campagne* (1862); *L'Histoire Sainte racontée aux Enfants* (1865); *Une Sœur* (1874); *Abrégés des Chroniques de Froissart* (1880); *Vieux Amis* (1884); *Normands et Normandies* (1884). She edited from her father's notes *L'Histoire de France racontée à mes Petits Enfants*; *L'Histoire d'Angleterre racontée à mes Petits Enfants*; and *L'Histoire Contemporaine*. Several of her tales have been translated into English by Mrs. Craig.

Wöhler, FRIEDRICH (b. 1800, d. 1882), German chemist, was born at Escherheim, and studied at Marburg and Heidelberg. In 1824 he went to Sweden, and received some lessons from Berzelius. In 1832 he was appointed to the Chair of chemistry at Cassel, and there discovered a new method of obtaining nickel in a state of purity. In 1836 he was appointed to the Chair of medicine at

Göttingen. His great feat was the isolation of aluminium, for which he received many honours and distinctions. Wöhler was the author of an admirable *Treatise on Chemistry: Part I. Organic, Part II. Inorganic*, which has been several times translated.

Wolcott, JOHN, better known as PETER PINDAR (b. 1738, d. 1819), satirist, was born in Devonshire, and educated for medicine, subsequently becoming medical attendant to Sir William Trelawny, the Governor of Jamaica. He united with his medical duties the work of vicar of a living he had received from the governor. On the death of Trelawny he returned to Truro to practise as a physician, and in 1780 he removed to London, where he soon acquired a reputation as a satirist. His chief objects of ridicule were the Royal Academicians of that day (see his *Lyric Odes*), George III., and his ministers. *Peeps at St. James's* and the *Lousiad* are perhaps his best works. His works were collected and published in 4 vols. in 1796, and have been frequently republished since.

Gentleman's Magazine, 1819.

Wolf, CHRISTIAN WILHELM FRIEDRICH AUGUST (b. 1759, d. 1824), the Homeric critic, was born at Hainroda, near Nordhausen, and went in 1778 to study under the philologists of Göttingen, of whom Heyne was then the chief. As a thesis for his Doctor's degree he wrote an essay on the Homeric poems, in which his subsequent theories were foreshadowed. After leaving the university, and acting for a time as a schoolmaster at Ilfeld, where he published his edition of the *Symposium*, he was appointed professor of philosophy at Halle in 1783. In the same year he published an edition of the *Odyssey* and of *Hesiod*. His *Iliad* appeared two years later, and in 1795 the *Prolegomena ad Homerum*, on which his reputation rests. In this treatise he sought to establish, with remarkable acuteness and learning, the theory now for the first time advanced, that the Homeric poems were not the work of one poet, but a collection of the epic songs of rhapsodists or Homeridæ, who had usually chosen the tale of Troy as their theme, and that these separate fragments had been united into the present whole at a comparatively recent date. This supposition excited among scholars a contention that has not yet been laid to rest, the supporters of Wolf trusting chiefly to history and comparative criticism, whilst his opponents appeal to internal evidence, and the unity of the poems as works of art. His old master, Heyne, attacked Wolf's position vigorously, and was answered in the *Letters to Heyne, a contribution to the latest investigations on Homer (Briefe an Heyne, etc., 1797)*. In 1807 Wolf was forced to leave Halle owing to the French occupation, and was invited to Berlin, where he resided till nearly the end of his life, taking a prominent part in the

foundation of the university. He had already displayed his interest in education by advising the establishment of "gymnasiums," and arranging the relations between them and the universities almost on their present footing. Wolf died at Marseilles. Besides the works above-mentioned, he edited several of the classics, as several orations of Cicero (1792-1803), Demosthenes' *Contra Leptinem* (1791), Aristophanes' *Clouds* and *Acharnians* (1811-12), etc.

R. Volckmann, *Geschichte und Kritik der Wolfischen Prolegomena zu Homer* (1874); Matthew Arnold's *Higher Schools and Universities in Germany*.

Wolfe, CHARLES (b. 1791, d. 1823), poet, was a native of Dublin, educated at Trinity College, and took orders in the Established Church in 1817. He became rector of Donaghmore; but his career was short, and he fell an early prey to consumption. The *Burial of Sir John Moore*, the poem by which his name is remembered, first appeared in the *Newry Telegraph*, with his initials, but without his knowledge. It was written in 1817, and a volume of Wolfe's *Remains* was published in 1825.

* **Wolff**, THE RIGHT HON. SIR HENRY DRUMMOND, K.C.B., G.C.M.G. (b. 1830), diplomatist and politician, the son of the celebrated missionary mentioned below, was educated at Rugby, and entered the Foreign Office in 1846. In 1852 he was appointed *attaché* at Florence, and was called upon to act as *chargé d'affaires*. He then acted successively as assistant-secretary to Lord Malmesbury, and secretary to Sir E. B. Lytton. In 1857 he was appointed secretary to the Government of the Ionian Islands, and held that office until 1864, when the British Protectorate was abandoned. In 1874 he was returned for Christchurch in the Conservative interest. In 1878-9 he was British commissioner on the European commission for the organisation of Eastern Roumelia (South Bulgaria). At the general election of 1880 Sir Drummond Wolff was returned for Portsmouth, and was an energetic member of the small body of independent Conservatives who organised themselves under the leadership of Lord R. Churchill (q.v.). In 1885 Sir Drummond was admitted to the Privy Council, and sent as envoy extraordinary and minister plenipotentiary on a special mission to the Sultan. A convention was concluded; and he proceeded to Egypt, where, in conjunction with the Turkish envoy, Moukhtar Pasha (q.v.), he proceeded to elaborate a plan for the reorganisation of the country. Sir Drummond was thus absent from England during the general election of 1885, and to that fact was to a large degree attributable his defeat at Portsmouth.

Wolff, JOSEPH, D.D. (b. 1795, d. 1862), traveller and missionary, the son of a Jewish

Rabbi, was born at Weilersbach, near Bamberg. He determined to embrace Christianity, and after experiencing considerable privations in consequence, was received into the Church of Rome in 1812. Four years later he went to the Eternal City, and was presented to the Pope. In 1818 he was expelled from the College of the Propaganda where he was studying on account of his heretical opinions, and after entering for awhile the Redemptorist Monastery of Val-Sainte, in Switzerland, he came to London in 1819. Wolff was speedily received into the Established Church, and studied Oriental languages at Cambridge before starting as a missionary to the Jews under the direction of the London Missionary Society. His first expedition, described in his *Journal of Missionary Labours*, occupied the years 1821-6, and included Mount Sinai, Jerusalem, Bagdad, Ispahan, and Tiflis. After marrying Lady Georgina Walpole, daughter of the second Earl of Orford, he journeyed through Persia, Bokhara, India, and Egypt (*Journal of Missionary Labours*, 1827-8). The third journey, begun in 1836, included Abyssinia, Arabia, India, and the United States, where he took the degree of D.D. and was ordained priest. In 1843 he went once more to Bokhara to discover the fate of the British envoys Stoddart and Conolly (*Narrative of a Mission to Bokhara*, 1845). On his return he was presented with the living of Isle Brewers, where he died.

Wolff's autobiography, *Travels and Adventures of the Rev. Joseph Wolff, D.D.*

Wollaston, WILLIAM HYDE (b. 1766, d. 1828), chemist, was educated at Caius College, Cambridge, where he took the degree of M.D. in 1793. He practised medicine at Bury St. Edmunds, and in London, but without much success, and finally withdrew from his profession on being defeated for the appointment of physician to St. George's Hospital. Dr. Wollaston betook himself to scientific experiments, and invented an admirable sliding rule of chemical equivalents. His great discovery was the malleability of platinum, for which in 1828 he gained the gold medal of the Royal Society.

Wollstonecraft, MARY. [GODWIN.]

* **Wolseley**, GARNET JOSEPH WOLSELEY, VISCOUNT, G.C.B., G.C.M.G. (b. June 4th, 1833), the son of the late Major Garnet Joseph Wolseley, was born at Golden Bridge House, co. Dublin, and entered the army as ensign in 1850. He served in the second Burmese War of 1853, when he was wounded, during the greater part of the Crimean War, and the whole of the Mutiny, for the most part as a member of the staff of Sir Hope Grant. In 1858 he became major in the 90th Foot, and lieutenant-colonel in 1859. In 1860 he served under Grant in China, as head of the topographical department, and was

despatched to Canada in 1861. In 1868 he became major-general. His first independent command was in the Red River expedition of 1870, which he conducted with complete success. Wolseley received the honour of knighthood, and was appointed assistant-adjutant-general at the Horse Guards (1871). In 1873 he was selected to command the expedition to the Gold Coast for the punishment of the Ashantee king, Coffee Calcali. The campaign was brief; Coomassie, the Ashantee capital, was burnt on Feb. 3rd, 1874, and the Treaty of Fommannah concluded with the king as the army approached the coast. Sir Garnet received the thanks of Parliament, a grant of £25,000, the honour of K.C.B., and the freedom of the city of London. In 1874 he was sent to Natal as administrator of the Government; and by reducing the council, and reorganising the militia, introduced order into the colony. In 1878 he was sent to Cyprus as High Commissioner and Commander-in-Chief, and in May, 1879, after the defeat of our troops by the Zulus at Isandlwana, was despatched to South Africa as Governor of Natal and the Transvaal, and High Commissioner. Before his arrival the Zulu forces had been crushed at Ulundi; and it remained for Sir Garnet to attempt a settlement of the country, which he did by dividing it into a number of petty chiefships, and to reduce the chief Sikukuni, who was still in arms. He also severely rebuked the Boers for wishing to shake off the British connection. From 1880-2 he was quartermaster-general at head-quarters. He was then appointed commander-in-chief of the expeditionary force sent to crush the military revolt of Araby Pasha in Egypt. Sir Garnet landed at Alexandria on Aug. 15th, and after smart affairs at Tell-el-Mahuta and Kassassin, stormed the rebel leader's lines at Tell-el-Kebir on Sept. 13th, with the loss of only thirty-four killed, and 124 wounded. The war speedily ended with the surrender of Araby. Sir Garnet left Egypt on Oct. 14th, and, on his return to England, received the thanks of Parliament, and was raised to the peerage as Baron Wolseley of Cairo, and of Wolseley, county Stafford. He was promoted to the rank of general, and was adjutant-general of the forces from 1882 to 1885, when he was reappointed. Several speeches which he made at this time in defence of the short-service system attracted considerable attention in military circles. In 1884-5 he commanded the Nile expedition sent to crush the Mahdi of the Soudan, and to relieve General Gordon at Khartoum. He left England on Aug. 30th, and, as soon as the expedition could be got ready, started up the Nile, and by the end of December had collected a strong force at Korti. Sir H. Stewart (q.v.) was then sent to march across the desert to Metemmeh, and the column, after several severe actions, arrived before the place, but found it too

strongly occupied to be attacked. Sir Charles Wilson (q.v.), who had taken command, went on by steamer to Khartoum, but found that the place had fallen, and that Gordon was dead (Jan. 28th). Lord Wolseley thereupon sent home for instructions; and, though it was at first determined that Khartoum must be retaken at all costs, received orders to retire upon Korti. Meanwhile, a force under General Earle had been advancing along the Nile, but was now withdrawn by Colonel Brackenbury, General Earle having fallen. Towards the end of May the English forces were withdrawn within the frontier of Upper Egypt. On his return to England Lord Wolseley was elevated to the rank of viscount. In 1886 his hostile comments upon Mr. Gladstone's Irish schemes were the subject of considerable discussion. Lord Wolseley is the author of an invaluable little work, the *Soldier's Pocket-Book for Field Service* (1st ed. 1869, 4th ed. 1882), which conveys scientific instruction of great practical worth in plain and simple language. He is also the author of the *Field Pocket-Book for the Auxiliary Forces* (1873), and a *Narrative of the War in China in 1860* (1861), besides numerous contributions to periodical literature.

C. R. Low, *A Memoir of Sir Garnet Wolseley* (1878).

Wood, Sir Charles (b. 1800, d. 1885), statesman, subsequently created Viscount Halifax, was educated at Eton and at Oriel College, Oxford (B.A., with a double first-class, 1821), and in 1825 was returned to Parliament for Grimsby in the Liberal interest. In 1831 he was returned by Warham, and in the following year by Halifax, which he represented for thirty-two years. In the same year he was appointed Secretary to the Treasury, and in 1835 was transferred by Lord Melbourne to the Admiralty, where he remained until 1839. When Lord John Russell came into office in 1846 Sir Charles Wood was made Chancellor of the Exchequer, and retained that office until 1852. He was a painstaking, but by no means brilliant, financier, and his three Budgets of 1848 were mercilessly quizzed by Mr. Disraeli. In the Aberdeen Ministry he became President of the Board of Control, and in 1853 he introduced a Bill which modified the Government of India. He retained office under Lord Palmerston, and became First Lord of the Admiralty in Lord Palmerston's reconstituted ministry (Feb. 1855-8). In the Palmerston ministry of 1859 Sir Charles Wood became Secretary of State for India, and entered upon a period of honourable activity. In 1860 came his Bill for the reconstitution of the Indian army; in 1861 those establishing High Courts of Judicature in India, and defining the functions of the Legislative Council. Sir Charles Wood began with a deficit, but in 1865 was able to show that the

equilibrium of Indian finance had been nearly restored. In the same year he sustained a serious accident in the hunting-field, and was compelled to resign his office in 1866, when he was raised to the peerage as Viscount Halifax. Lord Halifax spoke very seldom in the House of Lords, although he was Lord Privy Seal from 1870 to 1874, and in 1878 was chosen to move an amendment to Lord Cranbrook's resolution charging the expenses of the Afghan War on the Indian revenues. He will be chiefly remembered as Sir Charles Wood, and as an accurate, punctual, and painstaking official.

* **Wood, ELLEN** (b. circa 1820), a well-known lady novelist, was born in Worcestershire, and married very early in life to Mr. Henry Wood. Her early novel, *East Lynne* (1861), had an enormous success, reaching a fifth edition within a year; and several adaptations have been put on the stage. Other popular works of hers are:—*The Channings* and *Mrs. Halliburton's Troubles* (1862); *The Shadow of Ashlydyat* and *The Foggy Night at Offord* published for the benefit of the Lancashire Fund (1863); *St. Martin's Eve* (1866); *A Life's Secret* (1867); *Roland Yorke*, a sequel to *The Channings* (1869); *Dene Hollow* (1871); *Johnnie Ludlow*, stories reprinted from the *Argosy* (1874–80), a second and third series published respectively in 1881 and in 1885; *Edina* (1876); *Pomeroy Abbey* (1878); *Court Netherleigh* (1881); *About Ourselves*, a religious work (1883). Mrs. Henry Wood has contributed constantly to periodical literature, and is also the editor of the *Argosy*, a monthly magazine. Her well-constructed plots and the dramatic power with which she tells her story have made her a great favourite with the novel-reading public.

* **Wood, GENERAL SIR HENRY EVELYN**, G.C.M.G., K.C.B., V.C. (b. 1838), the son of the late Rev. Sir John Page Wood, was educated at Marlborough College, and entered the Royal Navy in 1852. He served with distinction in the Naval Brigade during the Crimean War as aide-de-camp to Sir William Peel. In 1855 he transferred his services to the army as ensign in the Light Dragoons, and became lieutenant in 1856, captain in 1861, and major in 1862. He served in the Mutiny campaign of 1858–9, and gained the Victoria Cross, distinguishing himself especially as a commander of irregular horse. In 1873 he took part in the Ashantee campaign, and led the advance to the river Prah. He also commanded the right column at the battle of Amoafu, and in the capture of Coomaasie. For these services he was made C.B. In 1874 he was called to the Bar at the Middle Temple. In the Zulu War of 1879 he commanded the fourth column, and advanced until he heard the news of the disaster at Isandlwana, when he entrenched himself at Kambula Kopp. Thence he sent expeditions

to make raids on the neighbourhood, and on April 29th beat off a most formidable attack on his camp. In the final advance upon Cetewayo's kraal, he led the flying column, and played a brilliant part in the battle of Ulundi. He was second in command to General Colley in the Boer War of 1881, and was hurrying up to his aid with reinforcements when he heard of the fatal disaster of Majuba Hill. He then, as commander-in-chief, negotiated an armistice with General Joubert (March 6th), and served on the Commission to determine the Transvaal boundary and the measures for the protection of the natives. In 1882 he was appointed to command the Chatham district, and in the Egyptian expedition of that year commanded the second division of the second brigade. He was commander of the army of occupation in Egypt from 1882–5; commanded the base and lines of communication during the Nile expedition of 1884–5; and in April, 1886, was made major-general of the eastern district of England.

* **Wood, MRS. JOHN**, *née* VINING (b. circa 1845), actress, daughter of Mrs. Henry Vining, an old Surrey favourite, made her *début* at the Southampton Theatre. Shortly afterwards she went to the United States, where she gained a great reputation in burlesque, and became manageress of the Empire Theatre, New York. In 1866 she appeared for the first time before a London audience at the Princess's Theatre, and in 1869 became manageress of the St. James's Theatre, where she appeared with great success as Pocahontas in the burlesque *La Belle Sauvage*, as Georgette in an adaptation of Sardou's *Fernande*, and as Princess Lydia in *The Danischeffs* (1877). During this period she paid a visit to America, and played at the Criterion and other theatres, appearing in 1874 as Mrs. Page in a revival of the *Merry Wives of Windsor*. In 1878 she made a great hit at the Haymarket as Mrs. Denham in *The Crisis*, a version by Mr. Albery of Emile Augier's *Les Fourchambault*. Subsequently she appeared in *Where's the Cat?* at the Criterion (1880), a revival of *The Overland Route* at the Haymarket (1882), and in 1882 was a great success at the Court in Bronson Howard's *Young Mrs. Winthrop* and a dialogue *My Millner's Bill*, in *The Magistrate* (1885), and *The Schoolmistress* (1886).

* **Wood, THE REV. JOHN GEORGE**, F.L.S. (b. 1827), naturalist, was educated at Ashbourne Grammar School, and Merton College, Oxford, where he was elected Jackson scholar, and took his degree in 1848. Ordained in 1852, he was chaplain to St. Bartholomew's Hospital from 1856–62. His chief work is his admirable *Illustrated Natural History* (1st ed. 1853); and *Homes Without Hands* (1865), and *The Natural History of Man* (1868–70), are also books of importance. Among the numerous writings that have made Mr. Wood's name a household word in many

an English home are *Sketches and Anecdotes of Animal Life* (1854-5); *My Feathered Friends* (1858); the delightful *Common Objects of the Country* (1858); *Routledge's Illustrated Natural History* (1859); *The Boy's Own Book of Natural History* (1861); *Glimpses in Pollard* (1863); *Our Garden Friends and Foes* (1864); *Common Objects of the Sea Shore* (1866); *The Modern Playmate* (1870); *Insects at Home* (1872); *Insects Abroad* (1874); *Man and Beast: Here and Hereafter* (1874); *Pollard Revisited* (1884); *Horse and Man* (1885); and *My Back-Yard Zoo* (1886).

Woodward, BERNARD BOLINGBROKE, F.S.A. (b. 1816, d. 1869), librarian to the Queen, was a native of Norwich, and was educated there at a private school, and at London University. In 1843 he became minister of a Congregational church at Wortwell, Norfolk, but resigned his office in 1849, and devoted himself to literature in London. He was elected F.S.A. in 1857, and in 1860 librarian in ordinary to the Queen at Windsor. He was the author of *A History of Wales* (1853); *Windsor Castle, Picturesque and Descriptive* (1870); and an admirable *Encyclopædia of Chronology*, written in conjunction with Mr. W. L. R. Cates (1872).

* **Woolner, THOMAS, R.A.** (b. 1825), a celebrated sculptor, was born at Hadleigh in Suffolk, and placed at the age of thirteen under the tuition of William Behnes. His life-size group, *The Death of Boadicea*, exhibited in Westminster Hall in 1844, attracted much attention, and the fame of the young sculptor was increased by the exhibition of *Puck, Titania, and Eros and Euphrosyne* exhibited in 1848. In 1850 he joined the "Pre-Raphaelite Brotherhood," and contributed to their journal, *The Germ*, a series of poems, which have since been collected in a volume bearing the title, *My Beautiful Lady* (1863), showing the artist to be also endowed with poetic powers of no mean order. He has also published two other poems, *Pygmalion* (1881) and *Silenus* (1884). Among his most celebrated works are:—*Constance and Arthur, Virgilia Bewailing the Banishment of Coriolanus* (the form of Virgilia being in alto, the background in basso relievo), *In Memoriam* (also in relief), *Elaine, Ophelia, Achilles, and Pallas Shouting from the Trenches*. Among his best known statues and busts are those of Carlyle, Dickens, Tennyson, Darwin, Newman, Gladstone, Kingsley, Maurice, Huxley, Sir Bartle Frere, Dr. Whewell, Professor Sedgwick, and Lord Frederick Cavendish (a recumbent figure), exhibited in the Academy of 1885. He was elected A.R.A. in 1871, and R.A. in 1876, and from 1877-9 was professor of sculpture in the Royal Academy.

Portfolio for 1871, article by John L. Tupper.

Wordsworth, THE RIGHT REV. CHRISTOPHER, D.D. (b. 1807, d. 1885), Bishop of

Lincoln, the son of Christopher Wordsworth, master of Trinity College, Cambridge, and a nephew of the poet, was educated at Winchester College and at Trinity College, Cambridge, where after a brilliant undergraduate career, during which he distinguished himself as an athlete as well as a classic, he became a fellow, and in 1836, having taken orders in the meantime, he became public orator at Cambridge. In the same year he became headmaster of Harrow. Dr. Wordsworth soon began to acquire fame as an author by his descriptive works on Greece; *Athens and Attica* appeared in 1836; *Greece, Pictorial, Descriptive, and Historical*, in 1842. In the same year he edited the *Correspondence of Bentley*. In 1844 he was nominated Canon of Westminster by Sir R. Peel. Dr. Wordsworth was now of celebrity as a leader of the Moderate High Church party, and his *Theophilus Anglicanus* (1843) is a well-known manual of Anglican theology. His *Memoirs of William Wordsworth*, his uncle, appeared in 1851. For a quarter of a century Dr. Wordsworth remained Canon of Westminster. His admirable edition of the Greek Testament appeared between 1856 and 1860, and the *Holy Bible, with Notes and Introductions*, between 1864 and 1870. His *Sermons Preached in Westminster Abbey* have gone through many editions. Canon Wordsworth played a prominent part in controversial theology, and in 1864, when Dr. Stanley was appointed Dean of Westminster, he protested against the appointment. Nevertheless, it was on the recommendation of Stanley that Wordsworth became Archdeacon in the following year; and the two men remained perfect friends until 1869, when Dr. Wordsworth was appointed Bishop of Lincoln. He laboured vigorously in the diocese; and in 1883 the new Bishopric of Southwell was founded to relieve him of part of his labours.

* **THE VERY REV. CHARLES WORDSWORTH, D.D.** (b. 1806), Bishop of St. Andrews, the elder brother of the above, was educated at Harrow and Christ Church, Oxford, and took a distinguished degree in 1830, having been a member of the Oxford eight and cricket eleven in the previous year. In 1835 he was appointed second master of Winchester College; Warden of Trinity College, Glenalmond, in 1836, an institution to which he presented the chapel; and Bishop of St. Andrews, Dunkeld, and Dunblane, in 1852. He was one of the Company for the Revision of the Authorised Version of the New Testament, and the author of the well-known *Græca Grammaticæ Rudimenta* (1839), *Christian Boyhood at a Public School* (1846), *The College of St. Mary, Winton* (1848), and *The Outlines of the Christian Ministry* (1872).

Wordsworth, WILLIAM (b. 1770, d. 1850), was the son of a Cumberland lawyer, who died early, leaving a family of five

children scantily provided for. The future poet received the first rudiments of his education at a dame's school at Penrith, from which he was removed in his ninth year to the grammar-school at Hawkshead. In 1787 he went to St. John's College, Cambridge. But his academical career was undistinguished: he was "not for that hour nor for that place." His intellectual food was drawn rather from irregular reading than from application to any definite course of study. After his college career was over Wordsworth spent some years in an unsettled condition. He would bind himself to no profession, and yet he did not possess the means of independent livelihood. In 1790, and again in 1791, he visited France, staying on the latter occasion rather more than a year. He was seized with the full fervour of the revolution, and by his sympathy with the Girondist party even exposed his life to some danger. The progress of the revolution, however, alienated his sympathies. He had no nervous horror of blood, and was ready to pardon considerable excesses; but the disappointment of his hopes for liberty he could not forgive. After his return from France Wordsworth for some years resided here and there with friends who, displeased with his refusal to choose a profession, did not welcome him very warmly. At last, in 1795, he settled at Racedown in Dorset, living henceforth with his sister Dorothy, the only member of the Wordsworth family who exercised any considerable influence over the poet's life. The period of unsettlement was past. He had now definitely chosen poetry as his vocation, and henceforth no life could be more uneventful than his was. A few modest journeys and tours, a few changes of residence, are its only landmarks. The means of living independently had been supplied by a legacy of £900 left by a young man named Raisley Calvert, one of Wordsworth's earliest admirers. For already he figured as a poet, having published in 1792 *An Evening Walk* and *Descriptive Sketches*. These attracted no attention from the public, but Coleridge read them, and declared that they announced "the emergence of an original poetical genius above the literary horizon." Thus interested, Coleridge visited Wordsworth at Racedown; and the latter, to be near his friend, who was living at Nether Stowey in Somerset, removed to Alfoxden. Shortly afterwards Coleridge and Wordsworth undertook a walking tour, memorable because it gave origin to the *Lyrical Ballads*. To defray their expenses each agreed to write a poem. Coleridge's contribution was the *Ancient Mariner*; Wordsworth, though he wrote nothing so important, filled the rest of the volume. The *Ballads* were published in the autumn of 1798 by Cottle of Bristol. Though they were little read, their appearance marks an epoch in English literature. In his contributions to this volume Wordsworth's distinctive poetic

style first appears. In his earlier publications there are strong traces of the influence of a previous generation; but in the *Lyrical Ballads*, in pieces like *We are Seven*, we find unequivocal proof of the working of new forces. The style of uncompromising simplicity, which Wordsworth learnt from Burns and perfected for himself, is already fully developed—sometimes excessively developed; for now, as always, Wordsworth seems unable to distinguish between a noble simplicity and mere poverty and deadness both of thought and language. Soon after the publication of this volume Wordsworth and his sister, still in company with Coleridge, set out for Germany, where they spent the winter of 1798-9. On their return the Wordsworths settled at Grasmere, where they lived till 1808, when they removed to Allan Bank. Except for a temporary residence at Grasmere Parsonage, one more change, in 1813, to Rydal Mount, completes the history of Wordsworth's migrations: in the last-named place he lived till his death. The Grasmere period was poetically by far the most noteworthy of Wordsworth's life. Before it he had only been maturing his powers, afterwards he too often misses his aim, and becomes prosy when he intends to be philosophical; but during these years almost all his work is good, and much of it is excellent. Through all the long period of his residence among the Lakes the record of Wordsworth's life is to be sought in his books. He undertakes a few tours, now to Scotland, now on the Continent, from which he always thriftily contrives to extract poetic capital. But leaving these aside, the events of fifty years can be summed up almost in a sentence. His marriage in 1802 hardly broke the calm; his appointment, in 1813, to the office of distributor of stamps for Westmoreland is important, because it furnished him with a competence; and his accession to the laureateship in 1843, after he had resigned that office, again assured him of a fixed income. External occurrences are not, indeed, lost on him, as is proved, for example, by the impassioned prose essay on the Convention of Cintra; by a number of poems referring to the struggle with Napoleon; and, at a later time, by the stir in his mind over the question of Catholic Emancipation. But the interest he takes in things is at most the interest of an observer, not of an actor, nor of one who might possibly be an actor. The course of "plain living and high thinking" which Wordsworth mapped out for himself was fruitful of books but barren of incident. Of the books, the most remarkable from a biographical point of view is the *Prelude*, in which he traces the history of his own mind up to the point at which he "was emboldened to hope that his faculties were sufficiently matured" for higher things. The *Prelude* was written between the years 1799 and 1805, but was not published till after Wordsworth's

death. From it he passed on to the *Excursion*, a production intended to form part of a more elaborate poem, the *Recluse*, which was to have "for its principal subject the sensations and opinions of a poet living in retirement." This great projected poem Wordsworth likens to a Gothic church, to which his minor poems would "bear the relation of little cells, oratories, and sepulchral recesses." The *Recluse*, however, was never finished, and the *Excursion* appeared in 1814 as a fragment. In the following year the *White Doe of Rylstone* was published. To the years 1814-17 belong chiefly the poems of a classical type, such as *Laodamia*, *Dion*, etc. The choice of subjects is explained by the fact that during these years Wordsworth was led by his interest in the education of his eldest son to read the Latin poets once more. Other poems are sprinkled liberally over the remaining years of his life, but comparatively few of them reach a high standard of excellence. During the eight or ten years preceding his death Wordsworth himself seems to have recognised the failure of inspiration, for in these years he wrote little or nothing. He died of a cold caught in the spring of 1850. Wordsworth has exercised more influence over English poetry than any other man of this century. He has done so mainly by virtue of his originality, for he is pre-eminently original. It is, of course, true that we find among his predecessors, and especially in Burns, anticipations of his style, and, at times, of his mode of thought. It is also true that the spirit of Wordsworth is simply the spirit of his time poetically expressed. Wordsworth gives a poetic exposition of the cry of Rousseau for a return to nature, and in making it less a theory makes it much more profoundly true. But it is just in this that his originality consists. He gives a clear expression to tendencies which before his day had been vague and undefined. To do so he breaks boldly with the past, and enters upon a path of his own, a path which had been missed just because it is so very obvious. Wordsworth's great principle is to be in all things natural, natural in thought, natural in language; to avoid far-fetched ingenuities of fancy and expression, and to trust for success to the force of simple truth. This principle not only pervades Wordsworth's writings but governs his whole life. In obedience to it he retires from the world, convinced that he will find the truth by quiet meditation "on man, on nature, and on human life" rather than by taking an active part in affairs; and in that retirement, also in obedience to this principle, he shuts his books and opens his own mind. These convictions regarding the nature of poetic truth, and the mode of reaching it, are at the root of all that is good and much that is bad in Wordsworth. He was a methodical man, and would not be content with *feeling* what

was beautiful; he must reduce his opinions to a theory. And it is in the attempt to follow out this theory that Wordsworth so often becomes flat and stale; for no great poet has ever written a larger body of worthless stuff, perhaps none has ever written so much. In his later productions especially, and in his longer pieces whenever written, Wordsworth is apt to sink into a dreary, moralising drone, the lamentable result of a too conscious attempt to embody philosophy in poetry. But when he follows his theory instinctively rather than deliberately, Wordsworth's work is nearly perfect. To find him at his best we must turn to his shorter pieces; for in his case the "cells, oratories, and sepulchral recesses" have much more of beauty in them than the main body of the church. But even if we confine ourselves entirely to these less ambitious efforts, there is in their number and variety an ample basis for Wordsworth's fame. In ballads like *Lucy Gray*, in odes like that on *Intimations of Immortality*, in sonnets like the sonnet on the *Subjugation of Switzerland*, and in lyrics such as *I wandered lonely as a cloud*, or *She dwelt among the untrodden ways*, we see the depth and the breadth of Wordsworth's powers. Each of these in its own way is almost faultless; taken together they show a range of power calculated to surprise those, still numerous, who regard Wordsworth merely as the poet of nature in the guide-book sense of the word.

Wordsworth's poems have passed through many editions; but, as little is needed for their elucidation beyond his own notes, all editions which contain these are pretty much on a level. Knight's *English Lake District as interpreted in the Poems of Wordsworth* is a valuable accessory. The poet's life may be read in the *Memoirs* by his nephew, Christopher Wordsworth, which, though uninteresting, are authoritative [H. W.]

Worsley, PHILIP STANHOPE (b. 1835, d. 1866), poet, was a native of Kent, and educated at Cholmely School, Highgate, and at Corpus Christi College, Oxford, where he was elected scholar and subsequently fellow. In 1857 he gained the Newdigate prize, the subject being *The Temple of Janus*, and in 1863 he published a volume of *Poems and Translations*. He is, however, chiefly remembered for his translation of Homer's *Odyssey*, Bks. I.-XII. (1861) and *Iliad*, Bks. I.-XII. (1865) into Spenserian verse, one of the most admirable of the many admirable attempts of the kind in our language. After being for many years a prey to consumption, he died at Freshwater, Isle of Wight, on May 8th, 1866.

Wrangel, FRIEDRICH ERNST, COUNT VON (b. 1784, d. 1877), entered the Prussian dragons in 1796, and fought in the wars against Napoleon. In 1815 he became full colonel. Having risen to the rank of lieutenant-general, he received in 1848 the command of the second corps of the army of the German

Federation in the Schleswig-Holstein campaign. In 1856, having seen sixty years' service, he became field-marshal, and was appointed Governor of Berlin. In 1864 he commanded the Austro-Prussian army in the Danish campaign, and conducted operations with great ability but some barbarity. He was in the month of May replaced by Prince Frederick Charles, and elevated to the title of count. The veteran was present, without a command, at the Bohemian campaign of 1866.

Wraxall, SIR NATHANIEL WILLIAM (b. 1751, d. 1831), traveller, a native of Bristol, in 1769 entered the Civil Service of the East India Company, and acted as Judge-Advocate and paymaster of the forces for the presidency of Bombay. In 1772 he returned to England, and then for several years travelled on the Continent, visiting almost every country from Naples to Lapland. In 1780 he entered Parliament; at first he supported Lord North, subsequently, however, going over to Pitt, and in 1813 he was made a baronet. In 1815 he was brought up on a charge of libelling Count Woronzoff, and was sentenced to a fine and six months' imprisonment. His published writings include:—*History of the House of Valois* (1777), *Memoirs of the Courts of Berlin, Dresden, Warsaw, and Vienna* (1799), *History of France, and Historical Memoirs of my own Time* (1815). It is in this book, which is replete with anecdote, that the libel against Count Woronzoff is contained. Three volumes of *Posthumous Memoirs* were published in 1836. He also published descriptions of several tours. An edition of his historical and posthumous memoirs, edited by H. B. Wheatley, was published in 1884. He is one of the most trustworthy authorities for the period of the Fox and North coalition and the formation of Pitt's first ministry.

Wright, THOMAS, F.S.A. (b. 1810, d. 1877), was educated at Ludlow Grammar School, and at Trinity College, Cambridge. After taking his degree he established himself in London, and wrote quite a hundred books on antiquarian subjects. He was one of the founders of the Camden Society and of the Percy and original Shakespeare Society. His chief works are a *History of Domestic Manners in England in the Middle Ages* (1862) and a valuable *History of Caricature and of the Grotesque in Literature* (1865). He also translated Napoleon III.'s *Histoire de Jules César*.

Württemberg, THE KINGS OF, date from 1805, when the country was raised from an electorate to a kingdom by the treaty of Presburg. The first king was FREDERICK I. (b. 1754, d. 1815); he was the husband of the Princess Royal of England, eldest daughter of George III. His external policy was very clever; he was one of the first of the German princes to attach himself to Napoleon, and in

consequence was raised from a duke to an Elector in 1803, and became a king in 1805; nevertheless, he contrived to be on the side of the Allies during the campaign of 1813, and so kept his honours and gains on the downfall of the Empire. WILLIAM I. (b. 1781, d. 1864), eldest son of the above, was his successor. During his youth he had led a retired life, being angry at his father's pliancy before France; but he fought on the side of the Allies in 1813, and distinguished himself in the campaign. On his accession to the throne William I. was received with enthusiasm, and during a reign of nearly fifty years was looked upon as a liberal and honest prince. In the course of this period many important reforms were introduced: serfdom was abolished in 1818, and in the following year the people received representative institutions. On the Schleswig-Holstein question and German disputes generally his sympathies were wholly Austrian. *CHARLES I. (b. 1823), the eldest son of the above, was his successor. He had married Olga Nicolaiévna, the daughter of Nicholas I., of Russia, in 1846. King Charles was crowned on June 25th, 1864. Two years afterwards came the crisis of the Austrian and Prussian War. Württemberg sided with the former; the king's troops were defeated at Tauberbischofsheim, and peace was concluded in August, Württemberg paying a war indemnity of eight million florins, and forming an offensive and defensive alliance with Prussia. To these terms King Charles was faithful during the Franco-German War of 1870, and his troops greatly distinguished themselves in the campaign.

Stälin, *Württembergische Geschichte*.

Wyatt, RICHARD JAMES (b. 1795, d. 1850), sculptor, was at an early age articled to Charles Rossi, R.A., and prosecuted his studies at the Royal Academy with such success as to merit recognition on more than one occasion. While still a pupil of Rossi's he executed a monument to the memory of Mr. Hughes in the Church of Esher, and another in a chapel at St. John's Wood. In 1821 Wyatt, on the invitation of Canova, who had promised him the use of his studio at Rome, proceeded to Italy, and there continued chiefly to reside, revisiting his native country only once. It was on this occasion, in 1841, that he received the honour of a commission from the Queen, and the result of this was *Penelope*; this, with the *Nymph Entering the Bath*, *Nymph Leaving the Bath*, *Shepherdess with a Kid*, *Musidora*, *Ino and the Infant Bacchus*, and *Glyceria*, are the chief productions of his chisel. He was a most industrious worker, and might be seen wending his way to the Café Greco, a resort for artists, with the rising sun in summer and long before it in winter. There were several other artists of the name, among whom may be mentioned BENJAMIN DEAN WYATT (b. 1775,

d. 1850), architect, the designer of Apsley House and the Duke of York's Column; MATTHEW COTES WYATT (b. 1777, d. 1862), the sculptor who created the equestrian statue of the Duke of Wellington, formerly at Hyde Park Corner, now at Aldershot; and SIR MATTHEW DIGBY WYATT (b. 1820, d. 1875), Slade professor of art at Cambridge, and co-designer with Sir Gilbert Scott of the India Office, Whitehall.

* **Wyndham**, CHARLES (b. circa 1840), comedian, made his first appearance on the stage at the Olympic Theatre, New York, under the management of Mrs. John Wood. During the Civil War he served as a surgeon in the Southern States. In 1866 he made his *début* on the London stage at the Royalty Theatre in *All that Glitters is not Gold*, and in the following year had an engagement at the St. James's. In 1869 he returned to New York, and appeared at Wallack's Theatre with great success as Charles Surface in *The School for Scandal*. After remaining for some years in the United States he reappeared in London at the Royalty, where, in 1878, he appeared as Rover in O'Keefe's *Wild Oats*, a thoroughly finished impersonation. In 1877 Mr. Wyndham became lessee of the Criterion Theatre, and produced a number of successful pieces, chiefly adaptations by Mr. Albery from the French, in which he, as a rule, sustained the principal part. He became known as the most accomplished light comedian since the younger Mathews, and his company attained a uniformity of excellence which was without a rival in London. Among the successful pieces produced by Mr. Wyndham were *Pink Dominoes* (1877); *Truth*, by Mr. Bronson Howard (1879); *Betsy*, by Mr. Burnand (1879); *Where's the Cat?* (1880); *Butterfly Fever* (1881); *Fourteen Days*, by Mr. Byron (1882); *Featherbrain* (1884); and *The Candidate*, by Mr. J. H. McCarthy, M.P. (1885). In 1886 he resumed his admirable impersonation of Rover, ably supported by Mr. David James and other well-known actors; and in November of that year essayed Sothorn's well-known part of David Garrick.

Y

Yakoub Khan. [AFGHANISTAN.]

Yarrell, WILLIAM, F.L.S. (b. 1784, d. 1866), naturalist, son of a newspaper agent in London, to whose business he succeeded, was led by his love of sport to take up natural history as a study; and from 1826, the year in which he contributed his first paper (*Some Rare British Birds*) to the *Zoological Journal*, to his death he continued to be one of the most active naturalists in the country. In 1824 he was elected a Fellow of the Linnean Society, and contributed many papers to their *Transactions*.

He was also one of the originators of the Zoological Society, and took a constant interest in their gardens in Regent's Park. His scientific papers show great dissecting skill, such as could be attained only by frequent practice. Among his discoveries is the one that whitebait is a distinct species of fish, and not, as was long believed, the young of some other species. His chief works are:—*The History of British Fishes* (2 vols., 1836), and *The History of British Birds* (2 vols., 1843). He died from an attack of paralysis at Yarmouth.

* **Yates**, EDMUND HODGSON (b. 1831, son of Frederick Henry Yates (b. 1797, d. 1842), the well-known actor and manager of the Adelphi Theatre during the famous run of *Green Bushes*, was educated at Highgate School, and in Germany. In 1847 he entered the Post Office Service, and was for ten years head of the missing letter branch of the Secretary's office. His first literary engagement (1852) was as dramatic critic to the *Court Journal*. He became a contributor, among other journals, to the *Illustrated London News*, the *Weekly Chronicle*, the *Inverness Courier*, *Illustrated Times*, and dramatic critic of the *Daily News*. In 1855 he became editor of the *Comic Times*, which was started as a rival to *Punch*, and was very short-lived. He afterwards became sub-editor of *Temple Bar*, in which his novel, *Broken to Harness*, was first published. After a visit to America he became the London representative of the *New York Herald*, accepted the editorship of *Tinsley's Magazine* in 1867, and in 1874 established *The World*. *Time*, a monthly magazine, was another of his literary projects (1879). In 1883 he was prosecuted for a libel which unfortunately appeared in the *World*, and sentenced to imprisonment, but his health breaking down he was released before the expiration of the sentence. Among his published writings are:—*Land at Last*; *Broken to Harness*; *The Forlorn Hope*; *Black Sheep*, subsequently dramatised by the author and Mr. Palgrave Simpson (1841); *Kissing the Rod* (1866), which was successfully dramatised by Mr. G. W. Godfrey under the title of *The Millionaire*; *The Rock Ahead* (1868), *A Righted Wrong* (1870), *Castaway* and *Nobody's Fortune* (1872), *The Impending Sword* (1874). They are all works of power, and their place in the fiction of our time is undoubtedly a high one. Other works of his are several farces, of which the best known is perhaps *Double Dummy* (1850); *Celebrities at Home* (reprinted from the *World*, 1877, etc.); *Edmund Yates: his Recollections and Experiences* (1884, 4th ed. 1885). Mr. Yates wrote, in conjunction with F. E. Smedley, *Mirth and Metre* (1855); and subsequently edited Smedley's *Gathered Leaves* with a memorial preface (1865). He also edited Albert Smith's *Mont Blanc* (1860).

* **Yeames, WILLIAM FREDERICK, R.A.** (b. 1835), a well-known painter of modern times, was born at Taganrog on the Sea of Azoff, where his father held the office of British Consul. He studied in England, Florence, and Rome, exhibiting his first picture, *The Staunch Friends*, at the Academy of 1859. This was followed in 1861 by *The Sonnet*, and in 1862 by *The Rescue*, the engraving of which picture has become very popular in England owing to its dramatic character. Mr. Yeames especially excels as an historical painter, treating his subjects with the earnestness and solemnity befitting great national events. As typical examples of his historical paintings we may mention:—*The Meeting of Sir Thomas More with his Daughter after his Sentence to Death* (1863), *La Reine Malheureuse* (1864), *Queen Elizabeth receiving the French Ambassadors after the News of the Massacre of St. Bartholomew* (1866), *The Dawn of the Reformation* (1867), *Lady Jane Grey in the Tower* (1868), *The Fugitive Jacobite* (1869), *Dr. Harvey and the Children of Charles I.* (1871), *Prince Arthur and Hubert* (1882). Other well-known pictures of his are:—*The Buttery Hatch* (1865), *Maundy Thursday* (1870), *Exorcising* (1871), *Amy Robart* (1877), *La Bigolante* (1879), *Il Dolce far Niente* (1881), *The March Past* (1882), *Tender Thoughts* (1883), *The Toast of the Kit-Cat* (1884), *Prisoners of War* (1885). The design on the subject of architecture was executed by him for the frieze of the Albert Hall, and also the figures of Torregiano and Holbein in the series of artists' portraits at South Kensington Museum. He was elected a Royal Academician in 1878.

The Portfolio for 1871, article by Mr. Tom Taylor.

* **Yonge, CHARLOTTE** (b. 1823), a popular authoress, was born at Otterbourne, Hants, and published her first work, *Abbeychurch*, in 1844. Her well-known story, *The Heir of Redclyffe* (1853), achieved remarkable success, passing rapidly through many editions, and being translated into various languages. The proceeds of this work, as also of the hardly less popular *Daisy Chain* (1856), are said to have been set aside by the author for philanthropic purposes. To give a complete list of her books would be here impossible, but among her best known works we may mention:—*Landmarks of History* (1852-3-7-82), *Heartsease and The Little Duke* (1854), *Dynceor Terrace* (1857), *The Young Stepmother* (1861), *The Trial and A Book of Golden Deeds* (1864), *The Clever Woman of the Family* (1865), *The Dove in the Eagle's Nest* (1866), *The Chaplet of Pearls* (1868), *The Pupils of St. John the Divine* (1868), *The Pillars of the House* (1873), *My Young Alcides* (1875), *The Three Brides* (1876), *Stray Pearls* (1883), *The Two Sides of the Shield* (1885), and *A Modern Telemachus* (1886). Miss Yonge

has also published a number of historical books for children, and became the editress of the *Monthly Packet*, in which her *Cameos from English History* originally appeared. Her books, which are especially adapted for the young, are written in a simple and pleasant style, and their tone is pre-eminently healthful and religious. The moral of her stories tends to inculcate the opinions of a high churchwoman.

Yorck, JOHANN DAVID LUDWIG (b. 1759, d. 1830), Prussian soldier, belonged to an English family established in Pomerania. He entered the Prussian army, but was forced to leave it in 1782 in consequence of a duel, and passed into the Dutch service. About five years afterwards, however, he re-entered the Prussian service with the rank of captain. Yorck greatly distinguished himself in the disastrous campaign of 1806, when he covered the Prussian retreat across the Elbe, and offered a brave resistance at the siege of Lübeck. He became one of the hopes of the national party, and was therefore appointed second in command of the corps sent to aid Napoleon in the Russian campaign, under the veteran Graweit, who promptly retired on the ground of illness. Yorck took care to engage the enemy as seldom as possible, and during the autumn retired to Riga. As soon as the news of the ruin of the Grand Army was received he had to decide whether to adhere to the French or to cast in his lot with the Russians. The crisis was a momentous one in the history of Prussia, but Yorck did not hesitate, and on his own responsibility signed a convention with the Russians (Dec. 30th, 1812) by which the Prussian corps was withdrawn from Napoleon, and Königsberg placed in the hands of the Russians. His act was at first disavowed by the feeble King of Prussia: the convention was declared null and void, and Yorck was ordered to be tried by court-martial. Events, however, soon declared in his favour, and Prussia declared war against France (March 4th, 1813). Yorck served under Blücher in the campaign of that year, put Marmont to flight in the attack on Paris (March 30th, 1814), and was created Count of Wartemberg, and commander of the army of Silesia and Posen. On the death of his only son in 1815 Yorck retired from public life.

Droysen, Leben des Feldmarschalls Yorck.

York and Albany, H.R.H. FREDERICK, DUKE OF (b. 1763, d. 1827), the second son of George II., was elected Prince Bishop of Osnaburg, in Germany, in the year after his birth. In 1770 he was made brevet-colonel in the army, and went to study the art of war at Berlin. In 1784 he was created Duke of York and Albany, and on his return from the continent in 1787 took his seat in the House of Lords. In 1789 he fought a duel with Colonel Lennox, afterwards Duke of Richmond, in which he was dangerously wounded. The

Duke of York married in 1791 the Princess Frederika Charlotte, eldest daughter of the King of Prussia. In 1793 he was placed at the head of the British forces sent to oppose the French in Flanders, and proceeded to besiege Dunkirk; but was forced to retreat with the loss of his artillery, and in the following year was defeated at Turcoing. In October he was recalled. He was created field-marshal and commander-in-chief, and appointed to command the English detachment in the joint Russian and English expedition to Holland. The Dutch fleet submitted to him; but he blundered in strategy, failed to act harmoniously with the Russians, and was compelled to return to England under a convention that was little less than a total surrender. In 1809 he was accused in the House of Commons by Colonel Wardle of being influenced by his mistress, Mrs. Clarke, in making appointments. The charge was disproved; the Duke, however, was acquitted by such small majorities that he felt compelled to resign his post of commander-in-chief, but two years afterwards was restored to office. Though anxious to perform his duties thoroughly, the Duke of York was never popular in the army, but towards the end of his life he became the hero of a certain section of the Tory party through his bitter opposition to Catholic Emancipation. His speech in the House of Lords in 1826 obtained the rejection of the Catholic Relief Bill, but on Jan. 5th of the following year he died.

Young, ARTHUR (b. 1741, d. 1820), writer on agriculture, was born at Bradfield in Suffolk, and settled as a farmer in Essex. In 1770 he published the results of his experiences in agriculture in two volumes, and followed them up by some acutely observant accounts of *A Tour through the Southern Counties of England, A Six Weeks' Tour*, and an *Eastern Tour*. In 1772 he commenced his *Farmer's Calendar*, and wrote his *Political Arithmetic*. His *Annals of Agriculture* began to appear in 1784. In 1788 he paid a visit to France, and on his return published the *Agricultural Survey of France and The Example of France a Warning to Britain*, in which he foretold with remarkable prescience the approaching revolution. In 1801 his works were collected by the order of the French Directory, and translated into French. He was for many years Secretary to the Board of Agriculture.

Young, BRIGHAM (b. 1801, d. 1877), the so-called prophet and ruler of the Mormon community, was the son of a New England farmer, without education, and an occasional preacher in Baptist churches. He joined the Mormons in 1832, while they were yet in the State of Ohio, attained the position in their hierarchy of an "apostle," and was sent out to make proselytes, in which labour he was very successful. At this period the Mormon

community was in its infancy, and Smith, the founder, was still at the head. It was commonly looked upon as one of many combinations of fanatics and impostors that would soon die out. [SMITH.] At this time, however, the greatest harm ever done by the Mormons was in local swindling. They set up banks, and flooded the region in which they lived with currency which they never intended to redeem. For practices like this they were driven first from Ohio, then from Missouri, and they settled in Illinois, and built the city of Nauvoo on the Mississippi in 1840. They did not practise polygamy. They preached the early coming of the end of the world. Smith was killed by the people of a neighbouring place in June, 1844. The charter of Nauvoo was repealed by the Legislature, and the Mormons were driven out. At this crisis Young was chosen president of the Mormon community. He was the first man of force and will who had had any relation to it, and saw what might be done; and in his hands it rose from a vulgar nest of sharpers to an organisation that threatened the civilised institutions of modern States. Young led his "Latter Day Saints" in 1846 across the great plains to Salt Lake Valley, which he assured them was the promised land of a special revelation. Salt Lake City was built in 1847, and Young was the absolute ruler of all there. In 1850 the Mormons formed a State, which they called Deseret, and applied for admission to the American Union. This was refused, but the State was organised into a territory of which Young was made governor for four years. In 1852 Young proclaimed polygamy as a divine institution, which he declared had been "revealed" to Smith. Smith's relatives denied this. The truth was that Smith had in 1843 pretended such a revelation in defence of his own practices, but it had caused a scandal, and the Mormon Church then formally declared against polygamy. But the hierarchs had in secret indulged in a plurality of wives, and the institution was openly acknowledged, accepted, and defended as of divine origin, and as the corner-stone of the State, at Young's instigation in 1852. In 1854, upon the expiration of Young's warrant as governor, the President of the United States appointed in his place a man who was not a Mormon. A conflict of authority followed immediately, and the Mormons drove out of the country all United States officers, including the judges. Although there was division in the State, Young's will was absolute, as in addition to being the head of the Church he was also the head of a secret society called the Danites, the members of which were sworn to do the will of their superior. In 1856 the United States Government sent 2,600 troops, commanded by General A. S. Johnston, to accompany the new Governor. The State was occupied as a

military post, and a *modus vivendi* was agreed upon between Young and the national authorities.

T. B. H. Stenhouse, *The Rocky Mountain Saints* (New York, 1873). [G. W. H.]

Young, CHARLES MAYNE (b. 1777, d. 1856), actor, was the son of a celebrated surgeon, who treated him with great cruelty. Part of his boyhood was spent in Denmark, where the king offered to educate him if he would become naturalised. He was educated at Eton and Merchant Taylors' School, and was for awhile a clerk in a West India house, but determined to go on the stage, and in 1798 made his *début* at Liverpool in the character of Douglas. He was then engaged to play leading parts at Manchester, and in 1804, while playing at Liverpool, fell in love with Miss Grimani, who died in the following year. In 1807 he made his first appearance at the Haymarket as Hamlet, and gained a most favourable reception. His style was dignified and classical to a degree, modelled, in fact, on that of Kemble, and in complete contrast to that of Kean. Young played, among other parts, during his first season, Petruchio, the Stranger, and Sir Edward Mortimer in Colman's *Iron Chest*. When the Haymarket was burnt down (1808) Young went to Covent Garden, and in 1811 replaced Kemble, who was ill, as Macbeth, with Mrs. Siddons as Lady Macbeth. In 1812 he played Cassius to Kemble's Julius Caesar, and in 1822 at Drury Lane played Othello and Iago on alternate nights with Edmund Kean. The success of this experiment was complete, and Young again played with Kean at Covent Garden in 1823-4. He declined an offer of £12,000 for a ten months' tour in the United States, and retired from the stage in 1832, appearing for the last time as Hamlet.

Life of Charles Mayne Young, by his son, the Rev. Julian Young.

Young, THOMAS, M.D. (b. 1773, d. 1829), natural philosopher, was a native of Somerset, and received a very considerable education at a London hospital, Edinburgh, Göttingen, and Emmanuel College, Cambridge. In 1800 he established himself as a doctor in London, but becoming the possessor of a considerable fortune, devoted himself chiefly to scientific investigation. From 1801-3 he was professor of natural philosophy at the Royal Institution, and there delivered a *Course of Lectures on Natural Philosophy and Mechanical Arts* (published 1807), in which he made an important addition to the knowledge of the undulatory theory of light by promulgating the theory of interferences. Young was lecturer on science at Middlesex Hospital from 1809-10, and in 1811 became a physician at St. George's Hospital. In 1818 he was appointed secretary to the Board of Longitude. Young's *Miscellaneous Works* were republished

in 1855 by Peacock and Leitch. The last volume contains his ingenious but not altogether successful attempt to decipher the hieroglyphics of the Rosetta Stone.

Zanzibar, THE SULTANS, or more properly **THE SEYYIDS** OF, were originally identical with the Imāms of Muscat, the country forming part of the dominions of those potentates. The founder of the line, AHMED-BIN-SA'ID, was elected Imām in 1741; his grandson, SA'ID-BIN-SULTAN (b. 1791, d. 1856), ascended the throne in 1804, and during his long reign aided the British in joint expeditions against the Wahabees and pirates, making treaties with the Indian Government as a sovereign power; and having transferred the seat of his empire from Muscat to Zanzibar, annexed large portions of country in the interior. He never assumed the title of Imām, but preferred that of Seyyid or Lord. Of his fifteen sons, THUWAINY succeeded at Muscat, and MAJID at Zanzibar, and so the two kingdoms became permanently separated. After a peaceful reign the latter died in 1870, when he was succeeded by his fifth brother, *BURGASH-BIN-SA'ID (b. 1835), who on the death of his father had claimed the throne of Zanzibar, and in consequence was deported to India. He became reconciled to his brother, however, in 1866, and on his death succeeded him without opposition. At first he encouraged the slave trade; but in 1873, after a mission of Sir Bartle Frere on behalf of the English Government, he made a treaty by which he promised to prohibit the trade by sea and the more public sale of slaves in his dominions. In 1875 he visited England, and concluded a second treaty, which he carried out in good faith. Ten years afterwards he was menaced by the colonial enterprises of Prince Bismarck, and thought it advisable to surrender the territory under dispute, which lay between Cape Delgado and the mouth of the Juba river.

Dr. Badger, *Imāms and Seyyids of Omdā*; Sir H. Bartle Frere in *Macmillan's Magazine*, vol. xiii.

* **Zebehr Bahama PASHA** (b. circa 1830), known as the Black Pasha, an Arab slave-dealer. After a youth about which nothing appears to be certainly known, he first appears about 1870 as chief of the slave-dealers in equatorial Africa. He established himself in a position of complete independence of the Khedive of Egypt, his nominal sovereign, who feebly attempted to conciliate him by making him first a bey, then a pasha. Finding that Zebehr would be content with

nothing less than the office of governor-general of the Soudan, the Khedive sent first Sir S. Baker, and then General Gordon into the Soudan to uphold his authority. In 1873, when Gordon was appointed governor of the Soudan, Zebehr, having been deprived of the governorship of Darfour, went to Cairo to plead his cause. There he was detained; but his son, Suleiman, rose against the new governor in obedience to his orders, and was not subdued until after twelve bloody battles. For this act Zebehr was sentenced to death, but the sentence was remitted, and he remained at Cairo. In 1884, General Gordon, who had been sent to Khartoum to effect, if possible, the relief of the Egyptian garrison which was being besieged by the Mahdi, astonished the public by requesting that Zebehr should be sent up to Khartoum as his successor. The Government were unable to comply with so bold a demand. In March, 1885, Zebehr was arrested in Cairo by the order of the British Government for treasonable correspondence with the Mahdi and other enemies, and conveyed to Gibraltar.

* **Zeller, EDUARD** (b. 1814), German philosopher, was born at Kleinbottwar, in Würtemberg, and educated at the Universities of Tübingen and Berlin. In 1847 he was appointed to a Chair in the University of Berne, and two years later to a professorship at Marburg. He became professor at Heidelberg in 1862, and at Berlin in 1872. Herr Zeller is known as the author of numerous and important philosophical works, among which may be mentioned:—*Studies on Plato* (1839); *A History of Greek Philosophy* (1844–52, Eng. trans. 1881); *The Contents and Origin of the Acts of the Apostles* (1854, Eng. trans. 1873); *Strauss and Renan* (1866); *Socrates and the Socratic Schools* (trans. 1868 and 1886); *Stoics, Epicureans, and Sceptics* (trans. 1870 and 1880); *Church and State* (1873); *D. F. Strauss* (1874, trans. 1874); *History of German Philosophy since Leibnitz* (1875); *History of Eclecticism* (trans. 1883); and *Outlines of the History of Greek Philosophy* (trans. 1885).

* **Zimmern, HELEN** (b. 1846), authoress, was born in Hamburg, but at the age of four became a resident in England. Her chief work is the *Epic of Kings: Stories Retold from Firdusi*, which appeared in 1882 in a costly *édition de luxe*, with two etchings by Mr. Alma-Tadema, and a prefatory poem by Mr. Gosse. She tells her stories from the French version of the *Shah Nameh*, and though ignorant of Persian, has been successful in preserving the spirit of the original and the peculiar beauties of Eastern imagery and description. Other works of hers are:—*Stories in Precious Stones* (1873), *Arthur Schopenhauer, his Life and Philosophy* (1876), *G. E. Lessing, his Life and Works* (1878), *Half-hours with Foreign Novelists* (1880), *Tales from*

the Edda, with illustrations by Kate Greenaway (1883), and *Maria Edgeworth*, in the *Eminent Women Series* (1883).

* **Zola, ÉMILE** (b. April 2nd, 1840), the leader of the "naturalist" school of French novelists, the son of an Italian engineer, spent his youth in the South, and completed his studies at the Lycée St. Louis, Paris. He was at first employed by the publishing company of Hachette, but at the same time wrote freely for the press, among other papers for the *Petit Journal*. Already he had made his *début* as a writer of fiction with *Contes à Ninon* (1863), which were very well received. His peculiar bent was first perceived in the "physiological" study, *La Confession de Claude* (1865), followed by *Thérèse Raquin* (1867), *Les Mystères de Marseille* (1868), subsequently republished under the title of *La Famille Cayol*, and *Madeleine Féral*. M. Zola is most notorious, however, for his collection of novels known as *Les Rougon-Macquart*, *Histoire Naturelle d'une Famille sous le Second Empire* (1871–80), and comprising *La Fortune des Rougon*, placed in the time of the *comp d'état*; *La Curée*, based on the irregularities of Parisian high life between 1860–70; *Le Ventre de Paris*, chiefly concerning the *halles*; *La Conquête de Plassans* and *La Faute de l'Abbé Mouret*, the scenes of which are in the South and the subject the priesthood; *Son Excellence Eugène Rougon*, a malignant sketch of M. Rouher (q.v.); *L'Assommoir*, a terrible picture of the evils of drink; and *Nana*, which closes the hideous series and deals with the moral decadence during the last days of the Empire. M. Zola's subsequent works include *Pot-Bouille* (1882) and *Germinal* (1885), the dramatisation of which was forbidden by the censorship on the ground of its Socialistic tendencies, and *L'Œuvre* (1886). He is the author of various plays, of which *Thérèse Raquin* (1873), *Les Héritiers Rabourdin* (1874), and *Le Boulon de Rose* (1878), were not very great successes; but *Nana* and *L'Assommoir*, on the other hand, when dramatised by other writers, had long runs. M. Zola has also published criticisms, such as *Mes Haines*, on literature and art (1866), and a life of the artist *Edouard Manet* (1867). Without doubt M. Zola imagines that he has a mission upon earth; he has given his school the name of "naturalist" rather than "realist," and claims to treat fiction scientifically, representing human life exactly as it is, laying bare its anatomy with the dissecting knife, and teaching by description the hideousness of vice. Unfortunately the lesson is often entirely obscured by the narrative; and, when not nauseating, the author often pays such minute attention to trivialities as to be unutterably dull. Moreover, much of his so-called "naturalism," notably in the *delirium tremens* scene in *L'Assommoir*, is improbable, if not absolutely impossible. At the same

time, it would be unjust to deny the extraordinary power displayed in isolated passages, such as the description of the wanderings of Gervaise through the snow in *L'Assommoir*, and that of the death of Nana while the mob below is shouting "À Berlin."

* **Zorilla**, MANUEL RUIZ (b. 1834), Spanish politician, was born in Castille, and having studied at Valladolid became a lawyer at Madrid, and in 1856 was returned to the Cortes by the Progressist party. After the revolution of 1868 he became a member of the Provisional Government as Minister of Public Affairs. Under Serrano's regency (1869) he was Minister of Justice, and in 1870 President of the Cortes. He advocated the candidature of Amadeus of Savoy, was Minister of Public Works in the King's first ministry (1871), and after serving in most of his Cabinets, accompanied him on his departure from Spain. Zorilla then joined the Republican party, and was in consequence exiled by King Alfonso. He thereupon engaged in numerous conspiracies against the monarchy; and in 1886 representations were made to the French Government for having him expelled from Paris.

Zululand, THE KINGS OF ("The Land of the Heavens"), the rulers over the most important of the Kafir tribes of South Africa, owe their eminence to CHAKA (1810-28), the natural son of the chief of the tribe. Born in 1787, he spent his youth in the army of Dingiswayo, the King of the Umtetwa, who placed him on the throne on the death of his father. Chaka introduced into Zululand the military system of the Umtetwa, who had in turn imitated that of the English at the Cape; and carried his arms into the neighbouring tribes, conquering and annexing large districts of territory. He was a tyrant of the worst possible character, but always kept on friendly terms with the British, and made no opposition to the foundation of the colony of Natal in 1824. DINGAAN, Chaka's brother (1828-40), succeeded him, and maintained his brother's relations with the English in Natal, although claiming to be their king; but with the Boers, who had emigrated from Cape Colony into Natal, he was at loggerheads. Dingaan invited their leaders to a conference, and then massacred them, after which he invaded Natal, and scoured the whole country, destroying every vestige of civilisation. In 1838, however, the Boers, under Andreas Pretorius (q.v.), avenged this defeat by a terrific slaughter of the enemy on the Blood River, and in 1840 Dingaan was defeated by his brother Panda, and slain while attempting to escape. PANDA (1840-72) was less of a man of action than his predecessor, although equally cruel. He placed himself under the control of the Boers, but did not interfere when the British Government abolished the Dutch republic of Natalia,

and made Natal a British colony. For many years harmonious relations prevailed, except on occasions when the traders of Natal encouraged Zulu slaves to escape across the frontier, and the natives in consequence exacted reprisals. During his last years Panda was extremely feeble, and enormously fat. He was troubled by succession disputes, which he settled in 1856 by allowing his sons Umbulazi and Cetewayo to fight the question out on the battlefield. Cetewayo won the day, and during the remainder of Panda's life acted as his regent, the king retaining the emblems of sovereignty. The regent, who had been born in 1821, adopted, at first, a conciliatory attitude towards the people of Natal, who, in turn, did their best to prevent the entrance of Zulu refugees into the colony. He was, however, much harassed by the land-grabbing and cattle-lifting propensities of the Boers of the Transvaal, and in 1862 an English commission of inquiry convicted the latter of fabricating grants of land, and other immoral acts. On the death of Panda CETEWAYO (1873-8; restored 1883, d. 1884) succeeded without opposition, and was formally crowned by an official representing the Natal Government. He appears, at first, to have attempted to govern uprightly as far as his imperfect idea of good government went; but the aggressions of the Boers were a continual source of uneasiness to him, and his relations with the English Government became strained when, by the annexation of the Transvaal republic, we became responsible for the action of that state. In November, 1878, Cetewayo was further alienated by an award of Sir Bartle Frere, the High Commissioner of South Africa, by which the Boer settlers were left in possession of a disputed district of land to the east of the Blood River, and he was compelled to receive a British resident. He became sullen and suspicious, while his Government rapidly developed into undisguised tyranny. A series of petty incidents widened the breach; in December, 1878, an ultimatum was sent to Cetewayo by Sir Bartle Frere; he refused to send a definite answer, and war accordingly began in January, 1879. The Zulus fought bravely; a considerable blow was inflicted upon our prestige by their surprise of the British camp at Isandlwana, but partially avenged by the gallant defence of Rorke's Drift by Chard and Bromhead, and Lord Chelmsford retired into Natal. Wood and Pearson, however, the commanders of the other columns, held their own at Kambula Kop and Ekowe, and the final advance, made in June, resulted in the capture of Cetewayo's kraal at Ulundi. The king fled, but was hunted down, and surrendered on Aug. 28th. He was sent as a prisoner to Cape Town, and his country was divided among thirteen petty chiefs by Sir Garnet Wolseley (q.v.). It was speedily discovered that Zululand was thereby handed over

to anarchy; and the English Government determined to restore Cetewayo. In August, 1882, he was brought to England, stayed for three weeks in Melbury Road, Kensington, and was granted a personal interview by the Queen. He was dissatisfied with the terms of his restoration, by which Usibepu and John Dunn, an Englishman who had formerly acted as his factotum but had deserted him in his troubles, were allowed to retain their lands and authority. His subjects at first received him with enthusiasm (January, 1883), but he tried to drive out Usibepu, was utterly defeated by him, and took refuge in the bush. On Oct. 15th he surrendered to the British resident, Mr. Osborne, and was taken to Ekowe. After an attempt to escape, he died rather suddenly at Ekowe on Feb. 9th, 1884. A state of warfare ensued, in which Usibepu was heavily worsted by the Boers, who professed to be the champions of the cause of Cetewayo's son, Dinizulu. The strength of the nation was thereby utterly broken, and

the Zulus seemed in considerable danger of altogether losing their independence.

Zumpt, CARL GOTTLÖB (b. 1792, d. 1849), scholar, was born at Berlin, educated at the Universities of Heidelberg and Berlin, became professor extraordinary in 1827, and in 1836 ordinary professor of Roman literature. His principal work is his *Latin Grammar*, which appeared in 1818. It has been translated several times into English, the best version being that of Schmitz (1845). His nephew, AUGUST WILHELM ZUMPT (b. 1815, d. 1877), a native of Königsberg, was educated at Berlin, and became, in 1851, professor at the Friedrich-Wilhelm gymnasium of that city. His chief works are:—*Commentationes Epigraphicæ* (1850-4), *The Criminal Law of the Roman Republic* (1865-9), and *The Criminal Process of the Roman Republic* (1871).
